- The five aggregates arise due to the *cetasika* of *phassa, vedanā, saññā*, and *cetanā*. However, all SEVEN *cetasika* (*phassa, vedanā, saññā, cetanā, manasikāra, ekaggatā,* and *jīvitindriya*) are essential ingredients of ANY *citta*.
- **Those 7 *cetasika* arise with all *citta* and thus are universal (*sabba citta sādhāraṇa*) *cetasika*.**
- The above process takes place in all types of sensory experiences. The sound we hear is not the "real sound," but it is "modified" according to one's *gati/anusaya*. The same **is true for all 6 sensory experiences, including smells, tastes, touches, and concepts (*dhammā*.)**

The Same Person Could be Perceived as Likeable or Unlikeable

12. Suppose two strangers (with opposite political views) watch TV in a bar while having their drinks. A famous politician comes on TV.

- At that moment, one person's face gets darkened, and angry thoughts arise in him. Simultaneously, the other person's face brightens up, and pleasant thoughts arise in him.
- How is that possible? It was the same picture that they were looking at.
- The reason is what we discussed above. The "mental image" formed in one person's mind depicts a "bad person." On the other hand, the other person's mind had created a "bad picture" that gave rise to bad thoughts.
- We can think of many examples. I have discussed another example in Ref. 1.

Viññāṇa Is a Magician!

© 2026 Lal A. Pinnaduwage

13. The above description explains why the Buddha called *viññāṇa* a "magician" (Ref. 6). What we experience as *cakkhu, sota, ghāna, jivhā, kāya*, and *mano viññāṇa* DO NOT represent reality. It is like looking at the world with tinted glasses. Depending on the level of defilements in the mind (i.e., *gati/anusaya*), the sensory experience is biased.

- This was explained with examples in the posts, "Amazingly Fast Time Evolution of a Thought (Citta)" (especially see #4 to #6) and "The Amazing Mind – Critical Role of Nāmagotta (Memories)." It is essential to read all relevant posts and understand these fundamental ideas.
- I will continue the discussion in the next post. Please make sure to read all the relevant posts. Otherwise, future posts will not make sense.
- The mind is an amazing entity. It is unbelievably fast. That is why we are fooled into thinking that there are fruitful things that will please us. However, the reality is different. There is unimaginable suffering hidden in enticing "sense pleasures" or *kāma rāga*.
- **That can be seen not with eyes but with wisdom.** That is the *yathābhūta ñāṇa*, the wisdom to "see" the real nature with wisdom. As we discuss further, that real picture will become clear.

3. "Paṭicca Samuppāda – "Pati+ichcha" + "Sama+uppāda""
4. In the "WebLink: suttacentral: *Saṁyojana Sutta* (SN 44.9)," the Buddha explains, "*Seyyathāpi, bhikkhave, telañca* ***paṭicca*** *vaṭṭiñca paṭicca telappadīpo jhāyeyya*" OR "*Bhikkhus*, an oil lamp burns **in dependence** on oil and a wick." An old fashioned oil lamp has a wick partially immersed in oil. That oil soaks the wick, gets to the tip of the burning wick, and sustains the flame. Therefore, oil and wick are compatible and will "*paṭicca*." If one puts a metal rod in oil, the oil will not soak the metal, i.e., they are not compatible and thus would not *paticca*.

9.8 How Are Paṭicca Samuppāda Cycles Initiated?

November 6, 2015; Major revision October 13, 2017; #12 added November 3, 2017; January 8, 2021; March 29, 2023

Paṭicca Samuppāda (PS) cycles have many varieties and can be analyzed in great detail reveal subtle aspects and clarify our understanding of the world we live in.

Two Categories of PS Cycles

1. There are two broad categories of PS cycles.

i. The standard *Paṭicca Samuppāda* describes how our actions (*saṅkhāra*) lead to the generation of new *kammā*. Thus they could be called "*kammā* generating" PS cycles.

ii. The other category of PS cycles is responsible for bringing in *kammā vipāka*, and thus could be called "*vipāka* generating" PS; this type of a PS cycle is labeled in the *Tipiṭaka* as an *avyākata* PS; *avyākata* means "*kammicaly* neutral"; not generating new *kammā*. The Pāli word is *avyākata*, and the Sinhala word is *avyākruta*. But in many places, it is written as *abyākata*.

Sensory Experience Starts With *Avyākata* PS

2. Everything that we INITIALLY EXPERIENCE is due to a *kammā vipāka* and is brought in by an *avyākata* PS. That PS process makes us see, hear, smell, taste, experience bodily sensations, and bring new thoughts to mind.

- However, the feelings (*vedanā*) that we experience due to such sensory inputs are not the same for different persons, except in the case of bodily sensations. Everyone feels the same if getting hit (pain), or getting a good massage (pleasure).
- The other five sensory inputs initially bring "neutral *vedanā*" as *vipāka*. However, mind-made *samphassa-jā-vedanā* are generated depending on the person. For example, a teenager may like a heavy metal song, but his grandfather may not. See "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event."
- In all cases, each person RESPONDS to the sensory input in one's own way. This response may lead to new *kammā* and is described by the "*kammā* generating" PS cycles.

We Don't Have Control Over *Avyākata* PS

3. We do not have control over the *avyākata* PS — which brings *kammā vipāka* by initiating new sense events; once started, they cannot be stopped. Even *Arahants* cannot avoid *kammā vipāka*.

- But the "*kammā* generating" PS cycles that arise as our response to such sense events can be controlled by us based on our *gati* (*saṁsāric* habits). This is the basis of *Satipaṭṭhāna/Ānāpāna* meditations.
- *Avyākata* PS bring *kammā vipāka* when suitable conditions are available; see, "Anantara Samanantara Paccaya."

Avyākata PS May Lead to New *Kamma*

4. Now, depending on what we see, hear, etc due to a *kammā vipāka*, we MAY start making *saṅkhāra*, and a new "*kammā* generating" PS cycle may be initiated; then we make more *kammā vipāka.*

- For example, **when we see** an appealing object, we may generate *lobha* (greedy) thoughts (*apuññābhi saṅkhāra*); **when we see** a distasteful object, we may generate hateful thoughts (*apuññābhi saṅkhāra*). **If we see** a beggar on the street, we may generate *alobha* thoughts (*puññābhi saṅkhāra*), which may lead to a meritorious act (giving some money to that person).

© 2026 Lal A. Pinnaduwage

- All those "seeing events" arose due to *avyākata* PS cycles. But those different responses, generating *saṅkhāra*, were done by "*kammā* generating" PS cycles, that operate based on one's *gati* (*saṁsāric* habits), as will discuss below.

Not All *Avyākata* PS Lead to New *Kamma*

5. **ALL our actions are initiated by *avyākata* PS cycles; but not all *avyākata* PS cycles lead to "*kammā* generating" PS cycles generating new *kammā*.** You may want to think about this and see if it is true.

- Thousands of people see an item on display in a shop. Many glances at it and don't give it another thought. Some will stop and take another look since they like it. There could also be someone who really wanted it, but may not have money, and even think about stealing it!
- There is no "fixed person with *avijjā*." *Avijjā* can arise in any normal human (without *magga phala*), if the sensory input is strong enough! You may also want to read the post "'Self' and 'no-self': A Simple Analysis – Do We Always Act with Avijjā?."
- Whether *avijjā* arises depends on the particular sense input and the person (more correctly, the person's *gati*).

6. We do not even notice most of these sense events. When we travel in a car, we see a million things, but only a few "catch our attention." Only those few events lead to the initiation of "*kammā* generating" PS cycles.

- But even one initiation of a "*kammā* generating" PS cycle can, in turn, initiate many "follow-up" PS cycles. For example, while walking, we may see a house by the road we like (due to a *kammā vipāka*). We may get attached to it (form *taṇhā*), and then start thinking about building a house like that. Then we may remember a nice house that belongs to a friend, and then start thinking about that friend, which could lead to thinking about a common enemy. Suddenly, we have started a stronger "*kammā* generating" PS cycle that could lead to a worse *kammā vipāka*.
- This is the "wheeling process" that we discussed in the post "Nibbāna – Is it Difficult to Understand?" and many other posts; enter the keywords "wheeling process" in the Search box at the top right, and you will get many posts. Our *sansāric* journey is fueled by uncountable "*kammā* generating" PS cycles.

Kamma to *Vipāka* to *Kamma* – *Saṁsāric* Journey

7. This vicious cycle of "*vipāka*" leading to "*kammā*" leading to more "*vipāka*" is the process that binds us to the *saṁsāra* of endless rebirths, or perpetuates our "world" of suffering.

- The Buddha describes this as, "*kammā vipākā vaddanti, vipāko kamma sambhavo, tasmā punabbhavo hoti, evan loko pavattati.*"
- That means, "*kammā* lead to *vipāka*, *vipāka*, in turn, lead to *kammā* and thus to rebirth (*punabbhavo*), and that is how the world (existence) is maintained."
- There "*sambhava*" is "*saŋ*" + "*bhava*," or "adding more existences." Also, "*loka*" is the world, and "*pavatta*" means "maintain."

"Moral" Is Relative – Any Pothujjana Can Act Morally or Immorally

8. We usually call a person "moral" when he/she acts morally in most cases.

However, that does not mean that a "moral person" will not generate immoral thoughts at times. If a "tempting sense input comes in" via any of the six senses, he/she may act with *avijjā* and start an *Akusala-Mūla* PS.

© 2026 Lal A. Pinnaduwage

- Similarly, one labeled as a criminal (because of his prior acts) may see someone in danger and act with kindness, initiating a meritorious deed.
- This is why the Buddha said there is no "unchanging self," but there is no "self" either. What happens at a given moment depends on what kind of PS cycle is "triggered," and the level of *avijjā* triggered. *avijjā* can range from *moha* (morally blind) to just not knowing the *anicca* nature.
- **Any "average human (*pothujjana*) is considered to be "moral" might act with *moha* and commit a severely immoral act if the trigger was tempting enough.**

Stopping the *Saṁsāric* Journey

9. The key point is that unless one has at least attained the *Sotāpanna* stage, one COULD act with *avijjā* at the level of *moha*, and generate *kammā* (*saṅkhāra*) that COULD generate *kammā bhava* corresponding to possible birth in the four lowest realms (*apāyā*).

- In other words, depending on the trigger, it is possible for the *pañcanīvaraṇa* to "cover the mind" and initiate strong *Akusala-Mūla* PS cycles for any human being not yet attained the *Sotāpanna* stage.
- For example, we have heard stories about people with "good moral backgrounds" committing rape, under conditions that led to *kāmacchanda nīvaraṇa* taking over their minds. *Kāmacchanda* comes from "*kāma* + *iccha* + *andha*," where *iccha* is liking, and *andha* is blind; thus, *kāmacchanda* means "blinded by *kāma* or sense pleasures."
- We have also heard stories about murders that were committed by "moral people" who were enraged by the sight of their spouse in bed with another person. Here the second *nīvaraṇa*, *vyāpada*, covered their minds.
- Those two are the strongest *nīvaraṇa*, but we can think about cases when the other three also could lead to immoral acts: *thina middha* (frozen or lazy mind), *uddhacca kukkucca* (tendency to do lowly things with high-mindedness), and *vicikicchā* (tendency to do unwise things due to not knowing the *anicca* nature).

10. When one attains the *Sotāpanna* stage, the COARSE level of *pañcanīvaraṇa* (that can lead to rebirths in *apāyā*) is permanently removed.

- That is why **potent *Akusala-Mūla* PS cycles** — which could lead to rebirths in the *apāyā* — are not triggered for a *Sotāpanna;* see "Key to Calming the Mind – The Five Hindrances."
- One's *gati* permanently changes with *magga phala*. More changes happen at higher *magga phala*.

More Information

11. Different types of PS cycles are discussed in: "Paṭicca Samuppāda Cycles."

- The *avyākata* PS is discussed in the post, "Avyākata Paṭicca Samuppāda for Vipāka Viññāṇa."
- The "*kammā* generating" PS processes can be divided into two broad categories again: those generating "bad *kammā*" and "good *kammā*": "Akusala-Mūla Paṭicca Samuppāda" and "Kusala-mūla Paṭicca Samuppāda."
- Those "*kammā* generating" PS processes where one can see the consequences during this life itself are discussed in "Idappaccayatā Paṭicca Samuppāda."
- There can be many other types too. But one can get a good idea of how PS works in different situations and can be grasped by understanding those key processes.
- A bottom-up approach to PS processes is discussed in "Understanding the Terms in Paṭicca Samuppāda."

© 2026 Lal A. Pinnaduwage

12. Finally, there is another important way that we start generating new *kamma*. This is when we "get random thoughts coming to our minds that get us started on a pleasurable activity."

- For example, we may be doing something, and all of a sudden, we get a thought about watching a movie or even start thinking about an enemy and what can be done to him/her. These are initiated by "*manañca paṭicca dhamme ca uppajjati manoviññāṇaṁ*," where *dhammā* coming to our minds; see, "What are rūpa? – Dhamma are rūpa too!."
- These are also *kamma vipāka*. These are more common than vipāka coming through the other five senses; for example, just seeing an enemy by chance, hearing something one likes, etc.
- In either case, we must always be mindful and catch such "new kamma generations." This is the key to *Ānāpāna/Satipaṭṭhāna Bhāvanā*.

9.9.1 Avyākata Paṭicca Samuppāda for Vipāka Viññāna

October 17, 2017; revised September 15, 2020; December 22, 2023; January 11, 2024

1. First, a word about the nomenclature: The Pāli word is *avyākata* (or *abyākata*) and the Sinhala word is *avyākruta*. It means "not designated as *kusala* or *akusala kamma* that can bring *vipāka* in the future, i.e., *kammically* neutral"; no *javana citta* are involved. See "Purāṇa and Nava Kamma – Sequence of Kamma Generation."

- *Kamma vipāka* are *kammically* neutral. But based on *kamma vipāka*, we initiate new *kamma*; see, "How Are Paṭicca Samuppāda Cycles Initiated?." I recommend reading that first, before continuing to this post.
- Both categories — *kamma vipāka* and *kamma* generation [*kamma viññāṇa*] — can be described by *Paṭicca Samuppāda* (PS).
- Another key point I want to point out is that *avyākata* PS cycles NEVER start with a *pabhassara citta* [pure uncontaminated *citta*]; see below.

2. Our physical body arose due to a past *kamma vipāka*. It can bring sensory inputs via the six senses, and IF we get attached — *taṇhā* — to those sensory inputs, THEN that leads to new *kamma* by us. That is why it is a never-ending process, until one attains *Nibbāna*. After the *Arahanthood*, one will still experience such *kamma vipāka* (until the death of the physical body) but WILL NOT get attached to them, i.e., no new *kamma* will be generated.

This cyclic process can be described in three steps:

i. One sees, hears, smells, tastes, makes body contacts, or a "*dhammā*" comes to one's mind. These do not "just happen"; they happen due to reasons (causes). They come about due to *kamma vipāka*, and those thoughts that arise from them are called ***vipāka citta* OR *avyākata citta,*** since they are *kammically* neutral.

ii. Then, based on one's *gati* (pronounced "gathi"), *āsava, anusaya*, one's mind may automatically get interested in a sensory input (called an *ārammaṇa*), and may get attached to that sensory input. This happens within a billionth of a second, and we DO NOT have control over that initial response either; *mano saṅkhāra* are generated AUTOMATICALLY in one's mind. These are also part of the ***avyākata citta* since they arise AUTOMATICALLY within the same *citta vīthi* (at the beginning of the *citta vīthi*, as explained below.)**

iii. **IF one gets attached, then one starts generating new *kamma*** by thinking CONSCIOUSLY about that sense input (generating *vacī saṅkhāra*), i.e., one starts "wheeling around" accumulating "*saŋ*" that contributes to new *kamma*; see, "Saṅkhāra, Kamma, Kamma Bīja, Kamma Vipāka." That new *kamma* can get stronger if we may also start doing *kāya saṅkhāra* via speech and bodily actions.

3. **All those three steps start even before our minds register that we have started accumulating new *kamma*.** This is because a *citta vīthis* are very fast; see below. But if we are mindful, we can "catch" such "wheeling around" within a few seconds and stop just the *apuññābhi saṅkhāra* (we should not stop *puññābhi saṅkhāra* or moral thoughts).

© 2026 Lal A. Pinnaduwage

- But that requires careful monitoring of our "automatic responses" to such sense inputs, i.e., "being mindful." With practice, one can "catch" them quickly and stop immoral thoughts/speech/actions.
- If we keep doing that, then OVER TIME, our *gati* will change for the better, and our attachments to "bad things" will fade away; see, "Difference Between Taṇhā and Upādāna." What is described in that post is the basis of *Satipaṭṭhāna/Ānāpānasati Bhāvanā*. If one can grasp this concept, and implement it diligently over a few months, one will be able to see for oneself the benefits!
- Also see, "Gati, Bhava, and Jāti" to read about the critical concept of *gati*. **It is incorrect to say we have a "self" or "no-self"; we only have *gati* that can be changed.**
- One can try it with "bad habits" (smoking, drugs, over-eating, etc.) first to see the power of it, and then extend to other *dasa akusala*. This guides the way to the *Sotāpanna* stage because that will make it easier to grasp *Tilakkhaṇa*.

4. It is very important to understand the above steps, and the post "Taṇhā – How We Attach Via Greed, Hate, and Ignorance" is a necessary first read too. What happens is explained in a bit more detail in "Vedanā (Feelings) Arise in Two Ways," "Kāma Assāda Start with Phassa Paccayā Vedanā or Samphassa Jā vedanā," and has been discussed more fundamentally in the subsection: Living Dhamma – Fundamentals."

- Grasping this cyclic process of traversing this suffering-filled rebirth process can be very helpful but one must be willing to spend some time on those posts.

5. All PS processes can be broadly divided into three categories:

i. What we will discuss in this post is how past *kamma vipāka* bring in sense inputs via the *avyākata* (Sinhala: *avyākruta*) PS process, and also automatically generate *mano saṅkhāra*.

ii. Then *Akusala-Mūla* PS processes may contribute to generating new *kamma* that extends the rebirth process. These also start within seconds, but as mentioned above, we can catch and stop them if we are mindful (*Satipaṭṭhāna/Ānāpānasati*).

iii. A *kusala kamma* cannot be described by a PS process. A *kusala kamma* is a *puñña kamma* done with the comprehension of Noble Truths/*Paṭicca samuppāda/Tilakkhaṇa*. That will eventually help us attain *Nibbāna* by following the Noble Path. That is also part of *Satipaṭṭhāna/Ānāpānasati*. See "Sotāpanna Stage via Understanding Perception (Saññā)" for details.

The *Akusala-Mūla* PS process is discussed in: "Paṭicca Samuppāda Cycles." So, this post on *avyākata* (*avyākruta* in Sanskrit) PS process will complete that subsection. As noted below in #15, a *citta vīthi* contains both the *Avyākata* and *Akusala-Mūla* PS processes.

6. Now, we can make the connection between the categories in #2 and the categories in #5.

- The sensory inputs initiation #2 (i), and the initial response to it #2(ii), are generated by the *avyākata* PS process of #5(i).
- Our CONSCIOUS response to those sensory inputs in creating new *kamma* (*apuññābhisaṅkhāra* or *puññābhisaṅkhāra*) in #2(iii), is carried out by the two kinds of PS processes in #5(ii) and #5(iii).

7. This *avyākata* PS process is not discussed in current *Theravāda* texts including *Visuddhimagga*. It is, of course, in the *Tipiṭaka*, and only the Pāli version is available at: "WebLink: suttacentral: Paṭicca Samuppāda Vibhaṅga (Vb 6)" (Section 2.11 on *Abyākata Niddesa* is about three-quarters of the way down from the top).

- I have not seen any current texts or internet sites in English that describe the *avyākata* PS process. But it is needed to complete the picture of how *kamma vipāka* brings in sensory inputs to us AND initiate new *kamma*.

8. Here is the initiation of the *avyākata* PS process per *Tipiṭaka* reference in #7 above: "..*vipākaṁ cakkhuviññāṇaṁ uppannaṁ hoti* ***upekkhā sahagataṁ*** *rūpārammaṇaṁ, tasmiṁ samaye* ***saṅkhāra paccayā viññāṇaṁ, viññāṇa paccayā nāmaṁ, nāma paccayā chaṭṭhāyatanaṁ, chaṭṭhāyatana***

© 2026 Lal A. Pinnaduwage

paccayā phasso, phassa paccayā vedanā, vedanā paccayā bhavo, bhava paccayā jāti, jāti paccayā jarāmaraṇaṁ. Evametassa kevalassa dukkhakkhandhassa samudayo hoti." [Weblink: suttacentral: 2.11. Abyākataniddesa 2.11 Ahetukakusalavipākacitta 2.11.1.1 Ahetukakusalavipākacitta 2.11.1.1.1. Cakkhuviññāṇacitta]

- We can translate the initial part of this verse as, "..when a *rūpārammaṇa* (seeing an object) gives rise to a *vipāka cakkhu viññāṇa* with **neutral feelings** (i.e., just seeing)..."
- Thus, the "seeing" event is a neutral *vedanā*, as are all *vipāka* that come through all senses except the body: Only *kāya viññāṇa* — coming through the physical body — can directly generate *sukha* or *dukha vedanā* due to *kamma vipāka* (as in getting hit by something or getting a massage).
- The other four types of sensory inputs generate only neutral feelings at the moment of receiving (*adukkhamasukha vedanā*). This is an important point to grasp. All these, like seeing, and hearing, could generate "good or bad feelings" based on our *gati*, and those secondary feelings arise moments later (even though we cannot perceive that because it is so quick).
- But we can see that, for example, some may generate "good feelings" and others may generate "bad feelings" upon hearing the same song. Seeing the same politician may cause "good feelings" in his supporters, "bad feelings" in those in the opposite party, and neutral feelings in others.

9. Unless it is pre-planned, a seeing event (any sense event) is initiated by a *kamma vipāka*. (However, deciding to see a movie is a deliberate action, in which case the natural starting point is an idea or a *dhamma* coming to the mind as a *kamma vipāka*; think about it!)

- Again, it is essential to grasp that a seeing event itself is a neutral event (*upekkhāsahagataṁ rūpārammaṇaṁ*) EVEN IF it is the seeing of a suitable object or an undesired object. "Good or bad" is a relative thing depending not on the object but only on one's *gati*, as explained in #8 above.
- One way to think about it is that this initial *cakkhu viññāṇa* is just "seeing," i.e., like taking a picture with a camera.

10. In the same way, *sota viññāṇa* is just the "hearing," *ghāṇa viññāṇa* is just the "smelling," etc. Whether they are "good or bad *vedanā*" depends on the individual.

- When that image is presented to the mind, it instantly matches the image with one's cravings, likes, and dislikes (i.e., *gati*), and *mano saṅkhāra* are generated AUTOMATICALLY, leading to *viññāṇa*.
- Now, this second *viññāṇa* is the *viññāṇa* which has incorporated one's *gati*, not the *cakkhu viññāṇa* captured by the eyes; of course, *cakkhu viññāṇa* is also **registered** in the mind.

11. This is explained in the next step in #8 above, "*tasmiṁ samaye* (at that time) ***saṅkhāra paccayā viññāṇaṁ, viññāṇa paccayā nāmaṁ, nāma paccayā chaṭṭhāyatanaṁ, chaṭṭhāyatana paccayā phasso, phassa paccayā vedanā, vedanā paccayā bhavo, bhava paccayā jāti, jāti paccayā jarāmaraṇaṁ. Evametassa kevalassa dukkhakkhandhassa samudayo hoti.***"

This is the *avyākata* PS due to the *kamma vipāka*.

- Note that this PS process differs from an *Akusala-Mūla* PS process; see the highlighted part of the *avyākata* PS above.
- First, **it does not start with "*avijjā paccayā saṅkhāra.*"** There will be no *kamma* done with *avijjā*. This is just a *kamma vipāka*. However, the mind is contaminated from the beginning. That statement requires a detailed discussion: "Sotāpanna Stage via Understanding Perception (Saññā)."

12. Without going into this complex process, only the person's mindset is changed based on the contact (*phassa*) of the *ārammaṇa* with the *gati* of the individual.

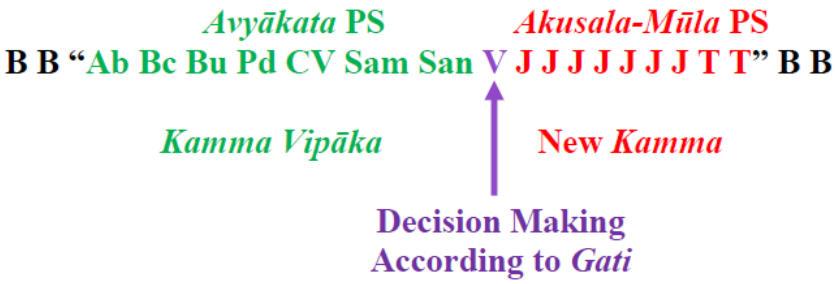
- We note here that there are no "*nāmarūpa*" involved up to this point, but just "*nāma*." This is a deeper point, but the generation of "*nāmarūpa*" involves *javana citta* which performs *kamma*. In this *vipāka*

© 2026 Lal A. Pinnaduwage

cycle, no *kamma* is done by the mind; the mind matches the "picture" received according to one's *gati*, and automatically recognizes if it is an object that one likes/dislikes.

- For example, if an alcoholic sees a bottle of his favorite alcohol, he will be temporarily "born" (*jāti*) as an alcoholic at that instant. But if it were a person who has no such *gati*, this process would end right there (just seeing).
- But if it did lead to the person being born in the "alcoholic state", then a new *Akusala-Mūla* PS process will run inside that *avyākata* PS process starting at the "*bhava paccayā jāti*" step.

13. Therefore, after that *avyākata* PS, new *Akusala-Mūla* PS processes may start. That is the "new *kamma* generation."



- An *Akusala-Mūla* PS process MAY NOT be initiated even in an average human if he/she did not have *gati* to be attached to that sense input (*ārammaṇa*).
- But that does NOT mean that the *avyākata* PS in that case involved "*pabhassara citta*" or "pure uncontaminated *citta*." It just means the person did not have *gati* to be interested in that particular sensory input.

14. Both the initial *avyākata* PS and the subsequent *Akusala-Mūla* PS process will take place within the same *citta vīthi* (in the above example a *cakkhudvāra citta vīthi* with 17 *citta*), which lasts only a billionth of a second!

- Such fast processes are not discernible to any human other than a Buddha. But we can study it and realize that it must be correct. In that sense, we must not focus on just this process, but realize that it fits in nicely with any phenomenon that we experience.
- As one learns deeper concepts, it will be difficult not to be amazed by the capabilities of a Buddha. This is how one builds one's faith (*saddhā*).
- The following discussion will illustrate how the processes that we discussed above fit in nicely with the concept of a *citta vīthi*.

15. The following may not be fully graspable by someone unfamiliar with the details of *citta vīthi*. But read on and try to get the basic idea without worrying about the details.

- The following figure shows a typical thought process (*citta vīthi*) that is started when eyes capture a "seeing event" (*rūpa ārammaṇa* or *rūpārammaṇa*).

B = *bhavaṅga* state, **Ab** = *atīta bhavaṅga*, **Bc** = *bhavaṅga calana*,
Bu = *bhavaṅga upaccheda*, **Pd** = *pañcadvāra vajjana*, **CV** = *cakkhu viññāṇa*,
Sam = *sampaṭicchana*, **San** = *santīraṇa*, **V** = *votthapana*, **J** = *javana*, **T** = *tadārammaṇa*.

B = Life-Continuum, **Ab** = Past *bhavaṅga*, **Bc** = Vibrational *bhavaṅga*,
Bu = Arresting *bhavaṅga*, **Pd** = Five-Door Adverting, **CV** = Eye-Consciousness,
Sam = Receiving, **San** = Investigating, **V** = Determining, **J** = Swift Run (*javana*,)
T = Registration.

Avyākata Paṭicca Samuppāda

Click the following link to download: WebLink: PDF File: Avyākata Paṭicca Samuppāda

- For a discussion on *citta vīthi*, see, "Citta vīthi – Processing of Sense Inputs."

16. In between *citta vīthi*, the mind is in the "*bhavaṅga* state"; see, "Pabhassara Citta, Radiant Mind, and Bhavaṅga." That post is also a bit advanced, and I will try to make a new section on "simple *Abhidhamma*" in the future.

- If you see someone not active and just staring into space (not thinking or concentrating on an idea), then that person's mind is likely to be in the *bhavaṅga* state (**B** in the figure). This is also explained in the post, "Citta vīthi – Processing of Sense Inputs."
- When the mind switches from this *bhavaṅga* state to a picture that is brought to its attention, it takes three thought moments to "break away" from that *bhavaṅga* state and focus the attention on the new sensory input.
- With the **PD** *citta*, the mind sees it coming through the "eye door" (*cakkhu dvāra*) and in the next *citta* captures that picture. This is the initiation of the *avyākata* PS process: "..*vipākaṁ cakkhuviññāṇaṁ uppannaṁ hoti*" in #8 above.

17. Then, during the next two *citta* ("**Sam**" for *sampaṭiccana*, and "**San**" for *santīraṇa*), the mind matches that picture (sense input) with its *gati* and may get attached to it. This is what is described in "*tasmiṁ samaye* ***saṅkhāra paccayā viññāṇaṁ, viññāṇa paccayā nāmaṁ, nāma paccayā chaṭṭhāyatanaṁ, chaṭṭhāyatana paccayā phasso, phassa paccayā vedanā, vedanā paccayā bhavo, bhava paccayā jāti.***"

- Then the person is "temporarily born" in a different state (a person with "alcoholic *gati*" will be born instantly as an alcoholic upon seeing his/her favorite drink), and may start a new *Akusala-Mūla* PS process, as discussed below.
- That decision to act with *avijjā* based on that "matching" happens at the all-important *votthapana* (V) *citta*.

18. Then a new *Akusala-Mūla* (or *Kusala-Mūla*) PS process starts and one starts generating *kamma* with *javana citta* (**J**), as shown in the above figure. So, this new PS process starts with the standard, "***avijjā paccayā saṅkhāra***, *saṅkhāra paccayā viññāṇa*, ***viññāṇa paccayā nāmarūpa, nāmarūpa paccayā saḷāyatana***,…."

- Note that now the PS process starts with "***avijjā paccayā saṅkhāra***" and goes through the standard PS process with ***saḷāyatana***, etc.
- When this initial *citta vīthi* ends, more such *Akusala-Mūla* PS cycles will follow if one gets "attached." Even within a second, thousands of such *Akusala-Mūla* PS cycles could run (each becoming stronger due to the past ones), even before one is fully consciously aware of it.
- But as humans (with the neocortex that slows down this fast processing; see, "Truine Brain: How the Mind Rewires the Brain via Meditation/Habits," we have the ability to stop those *Akusala-Mūla* PS cycles from building up to doing bad speech and bad actions.
- This is the key to *Satipaṭṭhāna/Ānāpānasati Bhāvanā*: to be mindful and catch any "impulsive wrong actions" before they get out of hand. With practice, one can "catch oneself" very early in this process.

19. This is also why *Satipaṭṭhāna/Ānāpānasati Bhāvanā* cannot just be limited to a "sitting meditation session." One needs to be engaged and mindful during all waking hours. Then, with time, our *gati* will improve, and we will stop doing "foolish and damaging things."

- Then, our minds will become pure, and we will be able to grasp more of Buddha Dhamma. It is a gradual process, especially initially.

© 2026 Lal A. Pinnaduwage

- It should also be clear that one will NOT have a "*pabhassara citta*" [pure uncontaminated *citta*] at any time unless one is an *Arahant*. It should be clear that one can never stop that initial *avyākata citta vīthi*. It is gone within a billionth of a second.
- However, we need to stop those *Akusala-Mūla* PS processes, as soon as we become aware of them. Terminology does not matter if one is doing the correct procedure.

20. Don't be discouraged if you find this post too technical. *Paṭicca Samuppāda* can go to very deep levels. Just get the overall idea; things will become clear.

9.9.2 Akusala-Mūla Upapatti Paṭicca Samuppāda

This is an early post; revised May 10, 2018; March 13, 2021; May 10, 2021; May 13, 2021; re-written May 21, 2021; revised August 18, 2021

Akusala-mūla upapatti Paṭicca Samuppāda describes how our present actions dictate the rebirth process among the 31 realms. [***upapatti*** : [f.] birth; rebirth; approach.]

Six Root Causes That Determine Future Births

1. One is born in this world due to the **six root causes**.

- One is born in the *apāyā* or *dugati* (and also subjected to suffering even when born in good realms) due to bad *gati* arising mainly due to ***lobha, dosa, moha***. The two main version of *Akusala-Mūla* PS operate when actions, speech, and thoughts occur with these three root causes; see #2.
- One is born in the remaining "good realms" or *sugati* (and experience mundane sense pleasures) due to good *gati* due to ***alobha, adosa, amoha***. The *kusala-mūla* PS operates when actions, speech, and thoughts occur with these three root causes with the comprehension of the Noble Truths; see "Kusala-Mūla Paṭicca Samuppāda." In particular, that post explains why *puññābhisaṅkhāra* (moral deeds) become *kusala* (i.e., truly *alobha, adosa, amoha*) only with an understanding of the Four Noble Truths/*Paṭicca Samuppāda*/*Tilakkhaṇa*.
- Also, see "Six Root Causes – Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna)."

Two Types of PS Processes Based on *Lobha*, *Dosa*, *Moha*

2. *Akusala-mūla* PS describes the PS process when one acts with *lobha, dosa, moha,* the three root causes that bring "bad outcomes." It is also two-fold:

- The ***upapatti* PS** describes how a "lifestream" or a being makes the *saṁsāric* journey via repeated births in the 31 realms.
- The ***Idappaccayatā* PS** describes the moment-to-moment progression of a "lifestream" or a being. This is discussed at "Idappaccayatā Paṭicca Samuppāda."
- It is important to note that Buddhaghosa (in *Visuddhimagga*) described only the *upapatti* PS. In recent times, Waharaka *Thero* has discussed the *Idappaccayatā* PS in detail.

Upapatti Paṭicca Samuppāda Process

3. Let us now discuss the *upapatti* PS, which describes how the PS cycle goes through a new birth at the end of current life. The steps in this cycle are:

"*avijjā paccayā saṅkhāra; saṅkhāra paccayā viññāṇa; viññāṇa paccayā nāmarūpa, nāmarūpa paccayā saḷāyatana, saḷāyatana paccayā phasso, phassa paccayā vedanā, vedanā paccayā taṇhā, taṇhā paccayā upādāna, upādāna paccayā bhavo, bhava paccayā jāti, jāti paccayā jarā, maraṇa,*

© 2026 Lal A. Pinnaduwage

soka-parideva-dukkha-domanassupāyāsā sambhavan'ti" [Weblink: suttacentral: Majjhima Nikāya 115 Bahudhātukasutta]

And that is how this whole mass of suffering arises: "*Evametassa kevalassa dukkhakkhandhassa samudayo hoti*"

Let us briefly discuss those steps.

Saṅkhāra – Thoughts, Speech, Actions Due to *Avijjā*

4. With ignorance of the Four Noble Truths as a condition, one thinks, speaks, and acts with those "bad root causes" of *lobha*, *dosa*, *moha*. Such thoughts, speech, and actions arise due to *mano*, *vacī*, and *kāya saṅkhāra*. We must note that these are really *abhisaṅkhāra*, i.e., they are strong *saṅkhāra*; "*abhi*" means "strong." See, "Saṅkhāra – What It Really Means."

- We are born without ANYTHING material other than our tiny baby body, which actually started as **a single cell** in the mother's womb. We grow up and start acquiring "stuff" both material and non-material: knowledge, material things, friends, spouse, children, fame, etc.
- While we acquire these "things" we also acquire new habits (*gati*) or strengthen ones that we brought from previous lives; these take place according to the *Idappaccayatā* PS at every moment: "*pati + ichcha sama uppāda*," i.e., we do things that we like and get similar kind of results.
- When we die, we take with us only the *kamma* seeds (both good and bad) from our actions; the habits (*gati*) and cravings (*āsavā*) are embedded in them. **These are in the *manomaya kāya*, and the *manomaya kāya* (or *gandhabba*) leaves the dead physical body with those "updated" *kamma* seeds.** This is basically the "net result" of our life here.
- One of the existing *kamma* seeds (from this life or previous lives) gives rise to the next life, where we acquire more of them BASED ON the *gati* and *āsavas*. So the cycle perpetuates.

Viññāṇa in Upapatti PS Is *Paṭisandhi Viññāṇa*

5. With *saṅkhāra* as a condition, energy for a new *bhava* or a *paṭisandhi viññāṇa* arises.

- This *viññāṇa* of the new life arises according to the nature of the *kamma* seed that gave rise to it. If that *kamma* seed was due to some hateful act(s), then the *viññāṇa* will be matching: "*pati + ichcha sama uppāda*." If it is a seed due to an act of generosity done with loving kindness, it could be the *viññāṇa* of a Brahma.
- Thus the "base level of *viññāṇa*" for animal life is VERY DIFFERENT from that of human life, even for the same "lifestream," i.e., when a human is reborn as an animal the "base level of *viññāṇa*" makes a huge downward transition. This is why it is NOT correct to say that "*viññāṇa* is transferred from life to life." See, "What Reincarnates? – Concept of a Lifestream."

What Are *Nāmarūpa*?

6. With *viññāṇa* as condition, *nāmarūpa* arise.

- *Nāmarūpa* in the *upapatti* PS is different from those come to play in the *Idappaccayatā* PS.
- For clarification of *nāmarūpa,* see "Viññāṇa Paccayā Nāmarūpa."
- A deeper discussion at "Kamma Viññāṇa and Nāmarūpa Paricceda Ñāṇa."

Saḷāyatana Means To Use the Sensory Faculties With a "Unpurified Mind"

© 2026 Lal A. Pinnaduwage

7. With *nāmarūpa* as a condition, *saḷāyatana* arises.

- In *upapatti* PS, *salāyatana* (six sense doors) refers to those that arise for the new existence. For example, six sense doors arise for an animal while just three sense doors (eye, ear, and mind) arise for a *rūpāvacara Brahma*.
- See, "Nāmarūpa Paccayā Saḷāyatana" for details.

Phassa, in This Case, Is "Defiled Contact" or *Samphassa*

8. With *saḷāyatana* as a condition, *phasso* arises.

- The meaning of the root word "*phassa*" is "contact." Any living being sees with eyes, hears with ears, etc.
- **However, in *Akusala-Mūla* PS, *phassa* is really "*samphassa*" or "*saŋ phassa*."** See #9.
- This is why this *Akusala-mūla Paṭicca Samuppāda* is not applicable for an *Arahant* (and also for other *Ariyā* too at most times). An *Arahant* does not generate "*samphassa*" but just "*phassa*" without "*saŋ*."
- Many posts on the website on this important concept; see, "Search Results for samphassa."

Vedanā Is *Samphassa-Jā-Vedanā*

9. With (*saŋ*) *phassa* as condition, *vedanā* arise.

- The root level of *vedanā* arises due to *phassa* for living beings, including *Arahants*.
- It is important to realize that NOT all *vedanā* play a role in *Akusala-Mūla* PS. Only those *vedanā* that arise due to *samphassa* ("*samphassa jā vedanā*") play a role here.
- **When greed, anger, or ignorance take over, a mind generates *samphassa-jā-vedanā*.**
- Such "*samphassa jā vedanā*" depend on the *gati* and *āsavas*: see, "Vedanā (Feelings) Arise in Two Ways." Also, see step #3 in "Taṇhā – How We Attach Via Greed, Hate, and Ignorance."
- We discussed this recently in the post, "Dukkha Samudaya Starts With Samphassa-Jā-Vedanā."

"Attaching" or *Taṇhā*

10. With *samphassa-jā-vedanā* as a condition, *taṇhā* arise.

- *Taṇhā* arise when one gets "attached," or 'fused" into a thing or situation: with *sukha vedanā*, one attaches with greed; with displeasure, one attaches with hate; one also attaches with not knowing what to do (with a highly agitated mind); see, "Taṇhā – How We Attach Via Greed, Hate, and Ignorance."

The Key Step of *Upādāna*

11. With *taṇhā* as condition, *upādāna* arise.

- **At the moment of death,** in the last *citta vīthi*, the dying person gets a *kamma nimitta*. This is normally a vision or a sound that depicts the nature of the strong kamma seed that came to the forefront of the mind.
- For example, if the *kamma* seed that is about to give the next birth was due to killing, then the person may see a gun or hear the sound of it, or even see himself as getting ready to shoot; thus, the person will have the same hateful thoughts arise and just like at the time of the crime, the person embraces that situation automatically (*upādāna*) because one has such "*gati*" or habits.
- I highly recommend the subsection on "Concepts of Upādāna and Upādānakkhandha" that will also clarify the previous steps.

© 2026 Lal A. Pinnaduwage

Kammic Energy Accumulation in the Step "*Upādāna Paccayā Bhavo*"

12. With *upādāna* as condition, a new existence (*bhava*) is grasped at the *cuti-paṭisandhi* moment.

- The next *citta vīthi* starts with the new existence or "*bhava*" matching that state of mind: "*pati + ichcha sama uppāda*." Depending on the *kamma nimitta* that was grasped, a matching existence, a human, animal, *deva*, etc. arise; see, "Paṭicca Samuppāda – "Pati+ichcha"+"Sama+uppāda."
- More details in "Concepts of Upādāna and Upādānakkhandha." A deeper analysis of "Difference Between Taṇhā and Upādāna."

Bhava Paccayā Jāti – Kammic Energy Giving Rise to Rebirth in a New Realm

13. With *bhava* as a condition, *jāti* (new birth) arises. **Note that except for human and animal realms, *bhava* and *jāti* are essentially the same.** See, **"**Bhava and Jāti – States of Existence and Births Therein."

- At this step, a birth matching the *bhava* starts for the human and animal realms. The selected "human/animal *bhava*" will last until the *kammic* energy associated with that *kamma* seed is exhausted, as explained in the above post.
- Thus, if the *kamma* seed has the potential for thousands of years of life, the next birth will still be in the human realm when the current life ends.

Each Birth Ends Up With "Various Types of Suffering"

14. With *jāti* as condition, "*jarā, maraṇa, soka-parideva-dukkha-domanassupayasa sambhavan'ti*".

- *Jāti* inevitably results in decay and eventual death. Therefore, this process describes how *dukkha* arises in the rebirth process.
- No matter where one is born in the 31 realms, one grows old and eventually dies. During that time, one goes through all kinds of suffering, particularly in the human realm and below. Aging and death are certainties.
- And at death, the whole cycle re-starts unless the Arahanthood had not been realized. One WILL BE born somewhere in the 31 realms, and the whole process will continue.

15. The above steps describe the *upapatti* PS. The other aspect, i.e., what happens during a given lifetime, is described in "Idappaccayatā Paṭicca Samuppāda."

- **Of course, ALL *kamma* accumulation happens in the *Idappaccayatā* PS.** The *upapatti* PS explains how rebirths take place according to such accumulated *kammic* energies.
- All the steps in the *Akusala-Mūla Paṭicca Samuppāda* are described in detail in the series: "Paṭicca Samuppāda in Plain English."
- Also, see the new subsection, "Paṭicca Samuppāda – Essential Concepts."

9.9.3 Uppatti Paṭicca Samuppāda (How We Create Our Own Rebirths)

July 6, 2019; revised October 4, 2021; November 3, 2022

Rebirths Arise Due to Our Actions

1. *Uppatti Paṭicca Samuppāda* describes how we create our rebirths. *Idappaccayatā Paṭicca Samuppāda* explains how we make our *kamma vipāka*. The post, "Bhava paccayā Jāti….Jarā , Marana,…." discusses the differences between ***kamma bhava*** and ***uppatti bhava***. [***uppatti*** :[f.] rebirth; coming forth; origin.][***upapatti*** : [f.] birth; rebirth; approach.]

© 2026 Lal A. Pinnaduwage

- Both types of *bhava* or existences arise due to the generation of *(abhi)saṅkhāra* due to *avijjā*. We remember that we do all kinds of *kamma* (*kāya kamma, vacī kamma, mano kamma*) with *saṅkhāra* (*kāya, vacī,* and *mano saṅkhāra*) or "how we think and then act on such thinking."
- **ALL *saṅkhārā* arise in the MIND. As we know, *saṅkhārā* make *kammā* that lead to future rebirths with physical bodies. That is why the Buddha said: "*Mano pubbangamā dhammā*.." or "ALL *dhammā* arise with the mind as precursor..**"
- When we generate *(abhi)saṅkhāra* that creates a "future expectation" or a *viññāṇa*; see, "Viññāṇa Aggregate." That ALWAYS leads to a *kamma bhava*, which is a "seed" to bring about a future existence in this life or future life.
- A *kamma bhava* can become a *uppatti bhava* if it becomes strong enough to give rise to rebirth. For example, killing a parent WILL generate a *uppatti bhava* that WILL bring in birth in an *apāya* in the very next rebirth.

2. That is the crucial difference between *Idappaccayatā Paṭicca Samuppāda* and *Uppatti Paṭicca Samuppāda*; see, "Paṭicca Samuppāda Cycles."

- *Idappaccayatā Paṭicca Samuppāda* generates *kamma* seeds or *kamma bhava* moment-to-moment.
- Those *bhava* (or *kamma* seeds or *kamma bīja*) that bring *kamma vipāka* during a lifetime (whether in this life or WITHIN a future life) are called "***kamma bhava***."
- Some *bhava* are strong enough to bring in a new future existence (whether in a bad realm or a good realm) and are called "***uppatti bhava***."
- Regardless of whether it is a *kamma bhava* or a *uppatti bhava*, **we generate them** every time we act with *avijjā* and make *viññāṇa* via the steps, "*avijjā paccayā saṅkhāra*" and "*saṅkhāra paccayā viññāṇa*."
- Then subsequent *Paṭicca Samuppāda* steps invariably lead to "*bhava paccayā jāti*" and "*jāti paccayā jarā, maraṇa, soka, perideva, dukkha, domanassa, upayāsa sambhavanti. Evametassa kevalassa dukkhakkhandhassa samudayo hoti.*" or "the whole mass of suffering."

Grasping a *Bhava* Happens Automatically

3. We do not have any control over which "*uppatti bhava*" comes at the end of a *bhava* (*cuti*, not *maraṇa*.). The strongest with the most "*upādāna*" associated with it gets to the front automatically. The Buddha gave a simile to explain how this selection of a "*uppatti bhava*" or a potent *kamma* seed happens at the *cuti-paṭisandhi* transition at death.

- Imagine a barn that keeps the cows in for the night. In the morning, all the cows are anxious to get out and roam around. When the gate opens, the strongest cow comes to the front and is out of the gate first. The weaker cows don't even make an effort to go to the gate.
- Just like that, it is the most potent "*kamma* seed" or a "*paṭisandhi bhava*" that wins at the *cuti-paṭisandhi* transition.
- We discussed the case of a teenager in the previous post, "Bhava paccayā Jāti….Jarā , Maraṇa,…". Suppose he created a potent *kamma* seed with an action depicting "animal-like" behavior. In that case, it will bring about an animal's existence at the *cuti-paṭisandhi* transition.

4. A Buddha could analyze such a *paṭisandhi Paṭicca Samuppāda* cycle in detail to pinpoint even the type of animal. That is because a Buddha can see not only a person's whole history in the present life but going back many eons. Thus, he could see which *kamma* seed will bring the following existence and exactly which kind of "*gati*" are associated with that *kamma* seed. We can only discuss the general trends, and here we have discussed only the main ideas of how these *Paṭicca Samuppāda* cycles operate.

© 2026 Lal A. Pinnaduwage

- Going back to the teenager, in this case, it is the *paṭisandhi Paṭicca Samuppāda* cycle that operates, and "*bhava paccayā jāti*" here leads to the birth in a new existence as an animal using that *uppatti bhava*.

Difference Between *Bhava* and *Jāti*

5. It is essential to realize that the *cuti-paṭisandhi* transition DOES NOT necessarily happen when a human dies. They can be reborn many times as humans within a given "human *bhava*"; see, "Bhava and Jāti – States of Existence and Births Therein."

- Once born (*jāti*) in such an animal existence (*bhava*), that animal will grow and then start the old age ("*jarā*") and eventually die ("*maraṇa*").
- Since most violent animals have shorter lifetimes, only a fraction of that *kammic* energy is likely to have been spent. That animal will keep going through many similar births ("*jāti*") until the power of that *kamma* seed is consumed. Many animals keep coming back to the same life many hundreds of times.

6. That is the difference between "*bhava*" and "*jāti*." Once one gets a new existence or "*bhava*," one could have many births ("*jāti*") in that existence until the energy in the *kamma* seed runs out. I keep repeating this because it is essential to understand the difference between "*bhava*" and "*jāti*."

- Thus, we can see that the last step of "*jāti paccayā jarā, maraṇa, soka, parideva, dukkha, domanassa, upayāsā sambhavanti. Evametassa kevalassa dukkhakkhandhassa samudayo hoti.*" will be with that "teenager" for a long time to come. It is not just one birth but many that will correspond to that existence as that animal.
- In general, while in the human "*bhava*" one could be reborn many times before the energy of that "good *kamma* seed" is depleted. That is why some people can recall memories from recent past lives. A human *bhava* can last thousands of years, but each human birth (*jāti*) lasts only about 100 years.
- **However, getting another "human *bhava*" is difficult;** see "How the Buddha Described the Chance of Rebirth in the Human Realm."

How Are Certain Rebirths Stopped?

7. We mentioned earlier that anyone would have accumulated numerous good and bad *kamma* seeds strong enough to give rise to good and bad rebirths. Then the following question arises. Does a person attain the *Sotāpanna* stage by eliminating all those corresponding bad *kamma* seeds?

- While it is possible to reduce the potency of *kamma* seeds and maybe even eliminate some, it may not be possible to remove all. The *Ariya Mettā Bhāvanā* – discussed in the "Bhāvanā (Meditation)" section – can lessen the potency of some *kamma* seeds. Even the Buddha had 11 instances of bad *kamma vipāka*, including a back problem.
- Therefore, it is very likely that we all have many good and bad *kamma* seeds strong enough to energize many good and bad rebirths.

8. What happens at the *cuti-paṭisandhi* moment involves the "*upādāna paccayā bhava*" step in the *uppatti Paṭicca Samuppāda* cycle.

- Suppose a person dies, and that was the last possible human birth for them. Then at the dying moment, that potent *kamma* seed will generate a corresponding *nimitta* (or sign of that *kamma*).
- Whether they will willingly grasp that *nimitta* will depend on whether they still have such "*gati*."

9. Let us again consider the case of the violent teenager discussed in #3 in the previous post, "Bhava paccayā Jāti….Jarā , Maraṇa,...." Suppose he continued his violent acts and built up a "*uppatti bhava*" suitable for a fierce animal. Then, at the dying moment, he could see in his mind (like in a dream), a rival gang member trying to "steal a drug deal"; he would also see a gun close-by. **That is the *nimitta.***

© 2026 Lal A. Pinnaduwage

- If that person still has the same *gati*, he will get angry, grab the gun, and shoot that person by his instincts.
- That is the "*upādāna paccayā bhava*" step for the new existence. That person has willingly grasped the mindset of an animal, and he will be born as an animal.
- This process is explained from beginning to end in detail in the series of posts, "Paṭicca Samuppāda in Plain English."

How Does a *Sotāpanna* Avoid Bad Rebirths?

10. Let us now go back to the question of how a *Sotāpanna* avoids such bad rebirths even if they have many bad *kamma* seeds. Suppose that *Sotāpanna* has the same kind of strong (and bad) *kamma* seed as that teenager (could be from a previous life).

- What happens is that a *Sotāpanna* will not grab the gun and shoot that person even if it is their worst enemy. **His mindset or "*gati*" has permanently changed.** Thus "*upādāna paccayā bhava*" step will not be executed for that *kamma* seed.
- In that case, now the next potent *uppatti bhava* will come to the forefront. If that is also a bad one suitable for rebirth in the lowest four realms, *Sotāpanna*'s mind will reject that too. Eventually, he will grasp a rebirth compatible with his "*gati*" at that dying moment. A *Sotāpanna* has removed the "*gati*" of a being in one of the four lowest realms.
- **All that happens automatically and very quickly. We do not have any conscious control over it.**

11. How one lives this life AND how one lived previous lives can contribute to future rebirths. One would generate "*kamma* seeds" or "*uppatti bhava*" for possible future existences according to how one lives a life.

- **However, bad *bhava* will not result if one has changed one's *gati* PERMANENTLY (via attaining at least the *Sotāpanna* stage).** EVEN IF one had committed bad *kamma* suitable to bring in a "bad *bhava*," one's mind would not grasp a "bad *bhava*"at the *cuti-paṭisandhi* moment.
- That is why *Paṭicca Samuppāda* means "*pati* + *ichcha*" leading to "*sama*" + "*uppāda*." What one grasps willingly and habitually is what one that will operate automatically at the dying moment; see, "Paṭicca Samuppāda – "Pati+ichcha"+"Sama+uppāda."
- It is better to use *Paṭicca Samuppāda* even in English rather than "dependent origination." Most Pāli words have "built-in" explanations (*pada nirutti*). One needs to understand what those Pāli words mean and use them. [***pada*** :[nt.] foot; foot-step; a word; position; place; reason; cause; a line of stanza; the final rest. ***nirutti*** : (f.) [Sk. nirukti, nis+vac] one of the Vedāṅgas (see chaḷaṅga), expln of words, grammatical analysis, etymological interpretation; pronunciation, dialect, way of speaking, expression.]
- I have explained this with *saññā, saṅkhāra*, and *viññāṇa* as well; see, "Mental Aggregates." Those DO NOT have corresponding SINGLE English words. In particular, it is WRONG to translate *viññāṇa* as just "consciousness"; see, "Viññāṇa Aggregate."

Relevance to "Origin of Life" Issue

12. I hope it is clear how we create our future births by doing strong *kamma.* Good *kamma* lead to good *vipāka* and good births. Bad *kamma* leads to bad *vipāka* and bad births.

- We can also avoid bad births (in the lower four realms) by removing our "bad *gati* that could lead to such births." Attainment of *Sotāpanna* stage ensures this.
- In the same way, we can stop births in the human and *deva* realms (remaining realms in *kāma loka*). Removal of "*kāma gati*" or cravings for sense pleasures gets one there. The need to take this step may not become apparent until one attains the *Sotāpanna* stage.

© 2026 Lal A. Pinnaduwage

- Even the higher *Brahma* realms have some form of suffering (especially at the moment of death). Removal of "all *gati*," including craving for *jhānic* pleasures in *Brahma* realms, leads to the cessation of all future suffering. That happens of course at the *Arahant* stage.

13. **It should also be clear that "new lives" do not randomly come into existence.** A new *jāti* based on a new *bhava* arises ONLY as a continuation of an existing lifestream; see, "What Reincarnates? – Concept of a Lifestream."

- A living being automatically grasps a new *bhava* when the current *bhava* ends (except for an *Arahant*.)
- That is how the rebirth process continues. And that is also why there is no "traceable beginning to life."
- A detailed discussion in a new series of posts on "Origin of Life."

14. A deeper description is at "WebLink: suttacentral: *Gatikathā* (KN Ps 1.6)" of the *Tipiṭaka* Commentary *Paṭisambhidāmagga*. [4.1 *Paṭisandhikkhaṇe pañcakkhandhā sahajātapaccayā honti, aññamaññapaccayā honti, nissayapaccayā honti, vippayuttapaccayā honti.* On the moment of rebirth linking (*paṭisandhikkhaṇe*), **the five aggregates (*pañcakkhandhā*)** arise (*honti*) with *sahajātapaccayā* (co-nascence conditions), *aññamaññapaccayā* (mutuality conditions), *nissayapaccayā* (support conditions), and *vippayuttapaccayā* (dissociation conditions). 4.2 *Paṭisandhikkhaṇe cattāro mahābhūtā sahajātapaccayā honti, aññamaññapaccayā honti, nissayapaccayā honti.* On the moment of rebirth linking (*paṭisandhikkhaṇe*), the **four great elements (*cattāro mahābhūta*)** arise (*honti*) with *sahajātapaccayā* (co-nascence conditions), *aññamaññapaccayā* (mutuality conditions), and *nissayapaccayā* (support conditions). 4.3 *Paṭisandhikkhaṇe tayo jīvitasaṅkhārā sahajātapaccayā honti, aññamaññapaccayā honti, nissayapaccayā honti, vippayuttapaccayā honti.* On the moment of rebirth linking (*paṭisandhikkhaṇe*), the **three life biological intention (*tayo jīvitasaṅkhārā*)** arise (*honti*) with *sahajātapaccayā* (co-nascence conditions), *aññamaññapaccayā* (mutuality conditions), *nissayapaccayā* (support conditions), and *vippayuttapaccayā* (dissociation conditions). 4.4 *Paṭisandhikkhaṇe nāmañca rūpañca sahajātapaccayā honti, aññamaññapaccayā honti, nissayapaccayā honti, vippayuttapaccayā honti.* On the moment of rebirth linking (*paṭisandhikkhaṇe*), **the *nāma* and *rūpa*** arise (*honti*) with *sahajātapaccayā* (co-nascence conditions), *aññamaññapaccayā* (mutuality conditions), *nissayapaccayā* (support conditions), and *vippayuttapaccayā* (dissociation conditions). 4.5 *Paṭisandhikkhaṇe ime cuddasa dhammā sahajātapaccayā honti, aññamaññapaccayā honti, nissayapaccayā honti, vippayuttapaccayā honti.* On the moment of rebirth linking (*paṭisandhikkhaṇe*), **this (first) fourteen *dhammā* (*ime cuddasa dhammā*)** arise (*honti*) with *sahajātapaccayā* (co-nascence conditions), *aññamaññapaccayā* (mutuality conditions), *nissayapaccayā* (support conditions), and *vippayuttapaccayā* (dissociation conditions). 4.6 *Paṭisandhikkhaṇe cattāro khandhā arūpino sahajātapaccayā honti, aññamaññapaccayā honti, nissayapaccayā honti, sampayuttapaccayā honti.* On the moment of rebirth linking (*paṭisandhikkhaṇe*), **the four aggregates of *arūpino* (*cattāro khandhā arūpino*)** arise (*honti*) with *sahajātapaccayā* (co-nascence conditions), *aññamaññapaccayā* (mutuality conditions), *nissayapaccayā* (support conditions), and *sampayuttapaccayā* (association conditions). 4.7 *Paṭisandhikkhaṇe pañcindriyāni sahajātapaccayā honti, aññamaññapaccayā honti, nissayapaccayā honti, sampayuttapaccayā honti.* On the moment of rebirth linking (*paṭisandhikkhaṇe*), **the five faculities (*pañcindriyani*)** arise (*honti*) with *sahajātapaccayā* (co-nascence conditions), *aññamaññapaccayā* (mutuality conditions), and *nissayapaccayā* (support conditions). 4.8 *Paṭisandhikkhaṇe tayo hetū sahajātapaccayā honti, aññamaññapaccayā honti, nissayapaccayā honti, sampayuttapaccayā honti.* On the moment of rebirth linking (*paṭisandhikkhaṇe*), **the three causes/conditions/reasons (*tayo hetū*)** arise (*honti*) with *sahajātapaccayā* (co-nascence conditions), *aññamaññapaccayā* (mutuality conditions), *nissayapaccayā* (support conditions), and *sampayuttapaccayā* (association conditions). 4.9 *Paṭisandhikkhaṇe nāmañca viññāṇañca sahajātapaccayā honti, aññamaññapaccayā honti, nissayapaccayā honti, sampayuttapaccayā honti.* On the moment of rebirth linking (*paṭisandhikkhaṇe*), **the *nāma* and *viññāṇa* (*nāmañca viññāṇañca*)** arise (*honti*) with *sahajātapaccayā* (co-nascence conditions), *aññamaññapaccayā* (mutuality conditions), *nissayapaccayā* (support conditions), and *sampayuttapaccayā* (association conditions). 4.10 *Paṭisandhikkhaṇe ime cuddasa dhammā*

sahajātapaccayā honti, aññamaññapaccayā honti, nissayapaccayā honti, sampayuttapaccayā honti. On the moment of rebirth linking (*paṭisandhikkhaṇe*), **this (second) fourteen *dhammā*** **(*ime cuddasa dhammā*)** arise (*honti*) with *sahajātapaccayā* (co-nascence conditions), *aññamaññapaccayā* (mutuality conditions), *nissayapaccayā* (support conditions), and *sampayuttapaccayā* (association conditions). 4.11 *Paṭisandhikkhaṇe ime aṭṭhavīsati dhammā sahajātapaccayā honti, aññamaññapaccayā honti, nissayapaccayā honti, vippayuttapaccayā honti.* On the moment of rebirth linking (*paṭisandhikkhaṇe*), **this twenty-eight *dhammā*** **(*ime aṭṭhavīsati dhammā*)** arise (*honti*) with *sahajātapaccayā* (co-nascence conditions), *aññamaññapaccayā* (mutuality conditions), *nissayapaccayā* (support conditions), and *vippayuttapaccayā* (dissociation conditions).]

Notes:

First Fourteen *dhammā* are [5] **the five aggregates (*pañcakkhandhā*)**, [4] the **four great elements (*cattāro mahābhūta*)**, [3] the **three life biological intention (*tayo jīvitasaṅkhārā*)**, [2] **the *nāma* and *rūpa***.

Second Fourteen *dhammā* are [4] **the four aggregates of *arūpino* (*cattāro khandhā arūpino*)**, [5] **the five faculities (*pañcindriyani*)**, [3] **the three causes/conditions/reasons (*tayo hetū*)**, [2] **the *nāma* and *viññāṇa* (*nāmañca viññāṇañca*)**.

Twenty-eight *dhammā* are **First Fourteen *dhammā*** and **Second Fourteen *dhammā***.

9.9.4 Kusala-Mūla Paṭicca Samuppāda

This is an early post; revised May 10, 2018; re-written February 6, 2021; #2 revised February 10, 2021; May 28, 2022; August 27, 2022; May 4, 2023 (#5); May 5, 2023 (#6 added)
Note: On December 1, 2023 The author put this information: "This post needs to be rewritten."

What Is *Kusala-Mūla Paṭicca Samuppāda*?

1. ***Kusala-Mūla* version of *Paṭicca Samuppāda* (PS) describes the way to *Nibbāna*.** It is not described in even the current *Theravāda* texts, even though it is in the *Tipiṭaka*. Since the time Buddhaghosa wrote Visuddhimagga, all Theravāda texts followed his books instead of *Tipiṭaka*.

- That means the PS process for attaining *Nibbāna* has NOT been described for over 1500 years. No wonder the *Nibbāna* has been hidden for all these years.
- *Kusala-Mūla* (pronounced "moola") PS describes the PS process for acting with *alobha, adosa, and amoha* with an understanding of the Four Noble Truths. **That goes beyond the mundane versions of *alobha*, *adosa*, and *amoha*.** We will discuss that below.
- Of course, the *Kusala-Mūla* PS process is unknown to the world without Buddha's true teachings.
- By the way, the word "*kusala*" comes from "*ku*" (defilements)+ "*sala*" (abandon.) Thus *kusala kammā* leads to the removal/abandonment of defilements (*akusala*.)

Regular Version of *Alobha*, *Adosa*, *Amoha* Keeps One in the Rebirth Process

2. One is born in this world due to the **six root causes**.

- One is born in the *apāyā* or *dugati* (and also subjected to suffering even when born in good realms) due to bad *gati* arising MAINLY due to ***lobha*, *dosa*, and *moha***. The *Akusala-Mūla* PS operates when actions, speech, and thoughts occur with these three root causes; see, "Akusala-Mūla Paṭicca Samuppāda. "

© 2026 Lal A. Pinnaduwage

- One is born in the "good realms" or *sugati* (and also experiences mundane sense pleasures) due to "good *gati*" developed by acting with conventional or mundane ***alobha***, ***adosa***, **and** ***amoha***. For example, one can engage in "good deeds" like giving, helping out others, etc., or cultivate *jhāna*. Those are done with mundane versions of *alobha*, *adosa*, and *amoha* and can lead to rebirths in human, *Deva,* and *Brahma* realms. However, they WILL NOT lead to *Nibbāna*, i.e., stopping the rebirth process.
- It is ONLY when one is acting with ***alobha***, ***adosa***, **and** ***amoha*** **(and comprehension of Four Noble Truths/*Tilakkhaṇa*/*Paṭicca Samuppāda*)** that those actions lead to *Nibbāna* via "Kusala-Mūla Paṭicca Samuppāda" that we are discussing now.
- The above points are also discussed in detail in "Six Root Causes – Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna)."

There Are Two Tiers of *Alobha*, *Adosa*, *Amoha*

3. The uniqueness in Buddha Dhamma reveals two tiers (or levels) of *alobha, adosa,* and *amoha.*

- All religions teach that it is good to act with *alobha*, *adosa*, and *amoha.* Of course, the Buddha advised that too.
- **However, if one is to stop future suffering in the rebirth process, one MUST see the dangers of remaining in the rebirth process.** This can be stated in three different ways of understanding: Four Noble Truths, *Paṭicca Samuppāda*, and *Tilakkhaṇa*.
- With that understanding, *alobha*, *adosa*, and *amoha* elevate to a new level. One is now engaged in "good deeds," not seeking "good rebirths" but to be released from the rebirth process. In other words, now, one's goal is to attain *Nibbāna*.
- Good deeds done without a deeper understanding of the Four Noble Truths are *puñña kammā.* One gets "good rebirths" with *puñña kammā.* When one starts understanding the Four Noble Truths, such actions AUTOMATICALLY become *kusala kammā* and help attain *Nibbāna*.
- This is discussed in detail in "Kamma, Saṅkhāra, and Abhisaṅkhāra – What Is "Intention"?."

Kusala-Mūla Paṭicca Samuppāda **Involves** ***Kusala Kamma***

4. It is the ***Kusala-Mūla*** *Paṭicca Samuppāda* process that leads to *Nibbāna*. That is why this PS process starts with "*Kusala-Mūla paccayā saṅkhāra*."

- As we know, the ***Akusala-Mūla*** *Paṭicca Samuppāda* process maintains the rebirth process. *Puñña kamma* done with mundane versions of *alobha, adosa, amoha* are ALSO included in "*avijjā paccayā saṅkhāra*" in the ***Akusala-Mūla*** *Paṭicca Samuppāda* process. See "Kilesa – Relationship To Akusala, Kusala, And Puñña Kamma."
- **It is critical to understand this distinction.** The mundane versions of *alobha*, *adosa*, and *amoha* still lead to *Akusala-Mūla* PS cycles that keep one in the rebirth process. It is ONLY AFTER one starts comprehending the Four Noble Truths (or the working of the *Paṭicca Samuppāda* processes or *Tilakkhaṇa*) that one will start operating under the *Kusala-Mūla* PS process leading to *Nibbāna*.
- Now we can look at the steps in the *Kusala-Mūla* PS process.

Steps in the *Kusala-Mūla Paṭicca Samuppāda* Process

5. The steps in this *Kusala-Mūla* cycle are (WebLink: suttacentral: Paṭiccasamuppāda Vibhaṅga):

"***kusalamūla*** *paccayā saṅkhāro, saṅkhāra paccayā viññāṇaṁ, viññāṇa paccayā nāmarūpaṁ, nāmarūpa paccayā saḷāyatanaṁ, salāyatana paccayā phasso, phassa paccayā vedanā, vedanā paccayā* ***pasādo****, pasāda paccayā* ***adhimokkho****, adhimokkha paccayā bhavo, bhava paccayā jāti, jāti paccayā jarā maraṇaṁ.* ***Evametesaṁ dhammānaṁ samudayo hoti.***"

© 2026 Lal A. Pinnaduwage

Here I have marked in orange-red the terms different from those in the *Akusala-Mūla* PS. Let us briefly translate the terms. **Here I am describing both *pavutti* and *upapatti* PS together.** [***pavutti*** : [fr. pa+vṛt, cp. Class. Sk. *pravṛtti*] happening, proceeding, fate, event.] **and *upapatti*** [also written as ***upapatti*** which means rebirth]

- With *Kusala-Mūla* as a condition, one accumulates *puññābhi saṅkhāra* WITH the comprehension of the Four Noble Truths. Those may be called *Kusala-Mūla saṅkhāra.*
- Such *Kusala-Mūla saṅkhāra* arises in the mind when doing deeds with *lokuttara alobha*, *adosa*, and *amoha.* THEREFORE, one does not wish for anything other than *Nibbāna* because one's mind automatically rejects anything within the 31 realms.

6. In the above verse, "***dhammānaṁ samudayo hoti***" refers to four types of "special *dhammā*" that arise due to the ***Kusala-Mūla* PS** process.

- As we discussed in the post, "What are Rūpa? – Dhammā are Rūpa too!" ***dhammā*** means "to bear things in this world." When one cultivates the Noble Path as an Ariya (Noble Person), one attains four stages *magga phala*: *Sotāpanna*, *Sakadāgāmi*, *Anāgāmi*, and *Arahant*.
- ***Dhammā*** referred to in the above verse are those that "bear" those four *magga phala.*

Kusala-Mūla Saṅkhāra Lead to *Kusala-Mūla Viññāṇa*

7. With *Kusala-Mūla saṅkhāra* as condition, a *Kusala-Mūla viññāṇa* arises.

- Because the *saṅkhāra* was generated with a *Kusala-Mūla* deed, only a *Kusala-Mūla* viññāṇa arises: "*paṭi +ichcha sama uppāda.*" The characteristic of this *Kusala-Mūla viññāṇa* is the desire (*chanda*, not *kāmacchanda*) for *Nibbāna*.
- The only expectation in one's mind is to attain *Nibbāna* and be free of all future suffering.

Kusala-Mūla Viññāṇa Lead to Corresponding *Nāmarūpa*

8. Such *Kusala-Mūla viññāṇa* lead to corresponding "good" or "*Kusala-Mūla" nāmarūpa* in *pavutti Paṭicca Samuppāda* or in *upapatti Paṭicca Samuppāda.*

- Those "*Kusala-Mūla nāmarūpa"* are the "mental pictures" that arise in mind and are associated with people and deeds relevant to one's efforts in attaining *Nibbāna*. For example, one may think about talking to a Noble friend, and he/she comes to mind. Or, one could be planning an alms-giving, etc.
- At death, the *paṭisandhi viññāṇa* is again according to the *Kusala-Mūla viññāṇa.* Thus a birth in the lower four realms is avoided for a *Sotāpanna*, and a birth in the lower 11 realms (*kāma loka*) is avoided for an *Anāgāmi*, for example.

Kusala-Mūla Nāmarūpa Lead to *Kusala-Mūla Saḷāyatana*

9. With such *nāmarūpa* as a condition, the corresponding *salāyatana* arises.

- They are attuned to only meritorious deeds tailored towards *Nibbāna* in *pavutti Paṭicca Samuppāda.*
- In the case of new (*Ariya*) birth, the new existence's sense faculties arise accordingly. They can never be sense faculties for a realm in the *apāyās*.

Subsequent Steps Arise in the Same Way

10. With a *saḷāyatana* as a condition, *phasso* (contact with that sense faculty) arises.

- Note that this is just "*phassa*" and NOT "*saṇ phassa*" or "*samphassa*" as in "Akusala-Mūla Paṭicca Samuppāda."

© 2026 Lal A. Pinnaduwage

- Contacts with the outside world are attuned to seeking *Nibbāna.* To learn *dhamma* and to practice dhamma.

11. With *phassa* as a condition, *vedanā* arises.
    - Through such interactions, one enjoys contact with *dhamma*, true knowledge, and understanding.

Such Contacts Lead to *Citta Pasāda* Followed by *Adhimokkha* (Instead of *Taṇhā* and *Upādāna*)

12. With such a *vedanā* as a condition, *citta pasāda* arises.
    - The "tranquility of consciousness" is the standard translation for *citta pasāda.* It is of joyous feeling, lightness of heart.

13. With increasing *citta pasāda adhimokkha* results.
    - *Adhimokkha* is normally translated as "decision" or "resolve" where *saddhā* peaks. Here it means the mind is decisively attracted to *Nibbāna*. The mind cools down.

Ariya Bhava and *Ariya Jāti*

14. With *adhimokkha* as a condition, (*Ariya*) *bhava* arises. **Note that an *Ariya bhava* arises via ELIMINATING an *uppatti bhava.*** For example, one is "born" an *Anāgāmi* by eliminating the possibility of rebirths in the 11 realms of *kāma loka*.
    - The resulting existence (or "*bhava*") matches that state of mind: "*paṭi+ichcha sama uppāda*"; one "lives" that experience. In the above example, an *Anāgāmi* does not have the mindset to be reborn in *kāma loka*.
    - If it is a rebirth at *paṭisandhi*, an appropriate "*bhava*" is selected according to the *kamma nimitta*. Here any "*apāyagāmī*" *kamma* seeds acquired in the distant past do not get a chance to come to the forefront, and thus a rebirth in the lower four realms is prevented.
    - **Of course, at *Arahant*'s death, the *Kusala-Mūla* PS process stops (forever) without grasping a new *bhava.***

15. With *bhava* as a condition, *jāti* arises.
    - The appropriate *jāti* (*Sotāpanna, Sakadāgāmi, Anāgāmi*) will result in an appropriate realm.

16. With *jāti* as condition, "*jāti paccayā jarā maraṇaṁ. **Evametesaṁ dhammānaṁ samudayo hoti.***"
    - Any *Ariya* is also subject to decay and death as long as he/she is in one of the 31 realms.
    - But here, the connection to *dukkha* is not shown because one is destined to attain *Nibbāna*. Thus, instead of "*jāti paccayā jarā, maraṇa, **soka-parideva-dukkha-domanassupāyāsā sambhavan'ti***" in the *Akusala-Mūla* PS process, here it ends with "***Evametesaṁ dhammānaṁ samudayo hoti.***"
    - Instead of future suffering, conditions for attaining *Nibbāna* result in the *Kusala-Mūla* PS process.

Difference Between *Adhimokkha* and *Upādāna*

17. In the *Akusala-Mūla* PS that feeds the rebirth process, the critical step of "*upādāna paccayā bhavo*" leads to the creation of the *kamma bhava* (energy to feed future rebirths.)
    - That *upādāna* forces the mind to act with *avijjā* repeatedly and to strengthen that *kamma bhava*. That is explained in detail in "Difference Between Taṇhā and Upādāna."

© 2026 Lal A. Pinnaduwage

- In contrast, in the *Kusala-Mūla* PS, that step is replaced by "*adhimokkha paccayā bhavo*." That *bhava* is an *Ariya bhava* (existence as a Noble Person) that makes any existing *kamma bhava* (created via *Akusala-Mūla* PS processes) ineffective.

9.9.5 Idappaccayatā Paṭicca Samuppāda

Re-written with a new title May 18, 2019; revised May 20, 2019; March 13, 2021; re-written May 10, 2021; added #16 on April 30, 2022; revised April 15, 2023

Akusala-mūla upapatti Paṭicca Samuppāda (that describes future rebirths) is the only version of *Paṭicca Samuppāda* (PS) described in even the current *Theravāda* texts, even though the other versions are in the *Tipiṭaka*. *Idappaccayatā Paṭicca Samuppāda* is a critically important one that describes *kamma* accumulation in real-time. [***upapatti*** : [f.] birth; rebirth; approach.]

Idappaccayatā – At a Given Moment

1. *Idappaccayatā Paṭicca Samuppāda* is another crucial teaching that has been hidden for hundreds of years. The word "*Idappaccayatā"* comes from "*ida*" for "here" and the closest English word for "*paccayā*" is "condition." **Thus *Idappaccayatā* implies "based on this condition at this moment."** [***idappaccayā*** : From an assignable cause, from an ascertained cause.]

- Therefore, *Idappaccayatā Paṭicca Samuppāda* describes how "*pati icca*" leads to "*sama uppāda*" moment by moment based on the conditions present at that moment; see, "Paṭicca Samuppāda – "Paṭi+ichcha"+"Sama+uppāda"."
- The additional "p" in "*idappacayatā*" comes from the combination of "*ida*" and "*paccayā*." This is similar to "*dammacakka*" and "*pavattana*" combined to yield "*dhammacakkappavattana*" in the *Dhammacakkappavattana Sutta*.
- Another crucial point is that "'The first point of ignorance, *bhikkhus*, cannot be seen. **Ignorance can arise at any time when the conditions are right**" or "*Purimā, bhikkhave, koṭi na paññāyati avijjāya: 'ito pubbe avijjā nāhosi, atha pacchā samabhavī'ti. Evañcetaṁ, bhikkhave, vuccati, atha ca pana paññāyati: '**idappaccayā avijjā'ti**.*"
- See "WebLink: suttacentral: *Avijjā Sutta* (AN 10.61)" for details.

Idappaccayatā Versus *Upapatti Paṭicca Samuppāda*

2. As mentioned in earlier posts (see, "Paṭicca Samuppāda"), *Paṭicca Samuppāda* (PS) or "cause and effect" can describe various stages of life in multiple ways. At a deeper level, 16 PS cycles operate inside a thought-moment.

- The Buddha said that the PS is deep as a deep ocean and can apply it to any situation because everything "in this world" obeys the basic principle of cause and effect. It is no wonder that only one PS has been studied for over a thousand years while the true Dhamma remains hidden.
- In the previous post, we discussed the ***upapatti* PS**, which describes that latter process, i.e., how the PS cycle operates between lives; see, "Akusala-Mūla Upapatti Paṭicca Samuppāda."
- The other extreme of a swift PS process involved within a thought moment (*citta*) is very complex, and we do not need to examine it right now. We can learn it, but it can be "seen" only by a Buddha.
- This post will discuss the ***idappaccayatā* PS** cycle, which describes phenomena in real-time without getting into what happens within a *citta* (within a thought moment). This process — just like the PS cycle operates between lives — can also be easily understood by anyone.

Paṭi+icca Leading to *Sama+uppāda*

© 2026 Lal A. Pinnaduwage

3. As mentioned in the introduction to PS, whenever we willingly grasp something, whatever results from that action has a corresponding nature. Because one got attached willingly, similar *bhava* will result: i.e., *pati+icca* leading to *sama+uppāda* or *Paṭicca Samuppāda* (PS). Here, "*icca*" is pronounced "ichcha."

- In the most fundamental sense, a "greedy state of mind" will result when we attach via greed, i.e., one develops **a habit or *gati* or *bhava*** corresponding to that state of mind; a "hateful state" (habit/*gati*/*bhava*) results via hateful attachment; acts of greed and/or hate are always done with ignorance.
- Three examples of *upapatti bhava* for those three cases illustrate the principle: An excessively greedy person is likely to get a "*peta bhava*" and be born as a *peta* (hungry ghost); a person who is often engaged in hateful actions towards other beings is likely to develop a "hateful *bhava*" and is likely to be born in the *niraya* (hell) where there is a lot of hate due to extreme suffering; animal *bhava* has developed with both greed and hate. Since ignorance is always there, animal bhava are cultivated with all three "*saŋs*"; this is the root of the word "*tirisan* = three *saŋs*" for an animal in Sinhala.

An Example of *Idappaccayatā* PS

4. Now, let us look at the *Idappaccayatā* PS, which describes how we develop certain habits or *gati* during a given lifetime and make "*kamma bhava*." That "*kamma bhava*" can become a "*upapatti bhava*" at the *cuti-paṭisandhi* moment of grasping new *bhava*. It is often easier to use an example to illustrate these PS cycles. Let us examine how a teenager becomes an alcoholic.

- The teenager becomes friendly with other teenagers who are into drinking. Initially, he may be reluctant to join in, but due to ignorance, he joins them and starts drinking.
- If a good friend or a family member came to know about the situation, they could have prevented the teenager from associating with such bad company, i.e., ignorance could have been dispelled by explaining to him the adverse effects of drinking but also of associating with such a group.

5. The PS cycle thus starts with "*avijjā paccayā saṅkhāra*" (of course triggered in a party setting). Due to ignorance of the adverse results, the teenager starts drinking with that group (*saṅkhāra* = "*saŋ* + *khāra*" or actions of accumulating, in this case, bad *kamma*).

- The more he is involved with such drinking activities, the more he thinks about it and develops a "mindset" or *viññāṇa* for that activity. This is "*saṅkhāra paccayā viññāṇa*"; see, "Kamma are Done with Abhisaṅkhāra – Types of Abhisaṅkhāra."

6. When he really begins to like drinking, he starts thinking about it even while doing other things. This is "*viññāṇa paccayā nāmarūpa*."

- In this case, *nāmarūpa* are the mental images associated with that *viññāṇa*, i.e., the names and shapes of particular alcohol bottles, the places where he usually drinks, the friends who drink with him, etc.
- He thinks about the next "event" and visualizes the scene; **all these are associated with *nāmarūpa*. Thus, here *nāmarūpa* are the mental images of "things" and "concepts" that one would like to enjoy.**

7. Now, his six senses become "involved" to provide reality to such *nāmarūpa,* to provide the desired sensory pleasures.

- In Pāli, the six *indriya* (senses) become "*āyatana*." For lack of a single English word, I will call an "*āyatana*" an "import/export facility" and get involved in the actions associated with drinking events.
- His mind is often thinking about the next "event" (where, when, with whom, etc), and he makes necessary preparations for the "event" using all six senses (now *āyatanas.*) That happens per the *nāmarūpa* in the previous step, i.e., "*nāmarūpa paccayā saḷāyatana*," where ***saḷāyatana* means the six *āyatana***: the eye is now not merely for seeing; it has become an assistant in the lookout for a "good drink" or a "good friend to chat with," etc.

© 2026 Lal A. Pinnaduwage

8. Thus, we have "*saḷāyatana paccayā phassa*," i.e., all six *āyatana* become actively engaged in making contact with relevant sense objects. His eyes are on the lookout for a favorite drink or person to chat with, etc.

- However, "*saḷāyatana paccayā phassa*" is just the "uddesa" or short version given in the standard PS steps. It needs to be explained in detail; see "Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa."
- Here instead of *phassa*, it is called "*samphassa*" (= "*saŋ*" + "*phassa*"), where "*saŋ*" implies it not just contacting, but a "*saŋ*" contact; see, "What is "Saŋ"? Meaning of Sansāra (or Saṁsāra)."

9. Such "*samphassa*" lead to *vedanā*, i.e., "(*saŋ*)*phassa paccayā vedanā*." He experiences "good (but immoral) feelings" with all those sense contacts.

- Because of such "good feelings," he gets further attached: "*vedanā paccayā taṇhā*"; see, "Taṇhā – How We Attach via Greed, Hate, and Ignorance."

10. Now comes, "*taṇhā paccayā upādāna*." *Upādāna* means "grabbing or pulling it close," like an octopus grabbing its prey with all its eight legs.

- In the present case, the teenager wants to relive this experience. He gets immersed in it; when he is experiencing the event, his mind is fully absorbed; he does not think and does not have the mindset to think about any adverse consequences.
- This is the critical "habit-forming" or "*bhava* forming" step.
- If this habit becomes very strong, it could lead to new *bhava* as an animal via the ***upapatti Paṭicca Samuppāda*** process;see,"Akusala-Mūla Upapatti Paṭicca Samuppāda."

11. So, the next inevitable step is "*upādāna paccayā bhavo*"; this particular state of getting drunk becomes increasingly ingrained in his mind. It becomes "a *bhava*" or "existence" or habit that is important to him. He very much wants to re-live that experience.

- And that is exactly what he gets: "*bhava paccayā jāti*." This "*bhava*" or the *kamma* seed is now well established, and he can be born in that "drunken state" quite easily. All he needs is an invitation from a friend, or even a sight of a bar while traveling, for example.
- It is natural to get into that state or be "born" in that state. So, he gets drunk at every opportunity. See "Bhava and Jāti – States of Existence and Births Therein" for more details.

12. However, like everything else, any birth is subjected to decay and suffering: "*jāti paccayā jarā, maraṇa,… dukkhakkhanda samudhayo hoti*." This happens in many stages, as we describe below.

- But in the case of a single drinking event, that state of intoxication finally ends, possibly with a big headache and a massive hangover. That episode ends with nothing to show for it but a hangover.
- Even worse, now he is "hooked." He has formed a bad habit, strengthening even more if he does it repeatedly. Because each time the PS runs, the *viññāṇa* for that habit gets more fuel, and the *bhava* get stronger.

Uncountable *Idappaccayatā* PS Cycles During a Lifetime

13. It is essential to realize that the above PS cycle does not run to its conclusion when the drinking "event" is over. Instead, the cycle can repeatedly occur unless it is stopped willfully or deliberately.

- And the way to do that is to learn Dhamma and develop good habits and become a "*sampajanno*"; see "Kāyānupassanā – The Section on Habits (Sampajanapabba)."
- However, if the teenager keeps his bad habit, he gets trapped in that *bhava*, the more *jāti* that occurs, i.e., he will be drunk more frequently. When one gets drunk, one tends to behave like an animal without any sense of decency, and the long-term consequences could be rebirth as an animal; see below.

© 2026 Lal A. Pinnaduwage

- Furthermore, such *Idappaccayatā* PS cycles run numerous times, even during the day, whenever we act with *avijjā*.

Memories Can trigger *Idappaccayatā* PS Cycles.

14. And it is not even necessary to participate in a "drinking event" to run another PS cycle. He may be sitting at a desk trying to study and start going through the PS cycle just by recalling a past event or a scheduled future event.

- He would start with *mano saṅkhāra* and *vacī saṅkhāra* (*vitakka/vicāra* or planning), thus generating (and strengthening) the *viññāṇa* for drinking, generating *nāmarūpa* (visuals of places, friends, alcohol bottles, etc.), and thus going through the rest of the cycle: *saḷāyatana, samphassa, vedanā, taṇhā, upādāna, bhava, jāti* ("living it"), repeatedly.
- Thus numerous such PS cycles can run at any time, probably increasing their frequency as the *bhava* or the habit builds up.
- The stronger the *bhava* or habit is, it will be harder to break it. This is why meditation, together with another good habit to work on, should be undertaken to replace a bad habit. While in meditation, one can contemplate the adverse consequences of the bad habit. Developing a good habit will keep the mind away from the bad habit. See "Habits and Goals" and also "Bhāvanā (Meditation)."

Connection to *Upapatti* PS Cycles

15. If the teenager keeps his bad habit, that "*viññāṇa* of a drunkard" will only grow with time. If it stays strong at the *cuti-paṭisandhi* moment (at the end of his human *bhava*), it could lead to a new *upapatti bhava* via the *upapatti Paṭicca Samuppāda* process mentioned in #1 above "Akusala-Mūla Upapatti Paṭicca Samuppāda."

- Such a *viññāṇa* is likely to give rise to rebirth in the animal realm, as mentioned in #13.

16. Details on *Idappaccayatā Paṭicca Samuppāda* in a new subsection, "Paṭicca Samuppāda During a Lifetime."

Note: This post was re-written to replace an early post, "Akusala-Mūla Pavutti (or Pravurthi) Paṭicca Samuppāda." I had not realized at that time that what the Waharaka *Thero* had described in Sinhala as "*Pavutti* (or *Pravurthi*) *Paṭicca Samuppāda*" is really the *Idappaccayatā Paṭicca Samuppāda* in the *Tipiṭaka*.

Bhava paccayā Jāti….Jarā, Maraṇa,…

9.10.1 Introduction – What is Suffering?

Revised June 6, 2021; re-written June 14, 2021; revised November 8, 2022; re-written August 10, 2024

The Buddha taught that the "suffering-free mind" (*pabhassara citta*) is hidden inside the mind of any living being. We are unable to get rid of the ten layers of "dirt" (*saṁyojana*) covering that "suffering-free mind" because of our "built-in false sense of joyful sensations" ("distorted *saññā*") for sensory experiences. Thus, a root cause of suffering is not comprehending that our innate feeling/perception of "pleasurable things" is an illusion.

"*Dukkha Sacca*" Means "The Truth About Suffering"

1. "*Dukkha sacca*" (the latter pronounced "sachcha") refers not only to suffering hidden in the rebirth process but also how to eliminate it.

- **Buddha never denied "pleasures to be had" in this world (even though they are a grand illusion that can only be uncovered by a Buddha, as explained below).**
- But the problem is that ANY given sentient living being spends much more time in the four lowest realms (*apāyās*) than in the human, *Deva*, and *Brahma* realms (in the rebirth process.) For example, at the end of human existence, only a tiny fraction will grasp a "good existence" as a human or a *Deva*. Practically all of them will be reborn in the *apāyās*, including the animal realm. See "How the Buddha Described the Chance of Rebirth in the Human Realm."
- Therefore, there is **net suffering** in the rebirth process by a HUGE margin.

2. Even though there is a palpable sense of happiness in the human or higher existences, any "living being" (or a lifestream) spends a negligible amount of time in such realms compared to the time spent in the *apāyās*. Even that brief sense of happiness is mind-made! It can be compared to the fleeting happiness enjoyed while watching a magic show; see below.

- That is why in the "WebLink: suttacentral: *Rāja Sutta* (Ud 2.2)" the Buddha uttered the following verse:

"Neither the **pleasures of the senses**, "*Yañca **kāmasukhaṁ** loke, yañcidaṁ **diviyaṁ sukhaṁ***;

© 2026 Lal A. Pinnaduwage

nor even **divine happiness**, ***Taṇhakkhaya sukhassete***,
is worth even a sixteenth part ***kalaṁ nāgghanti soḷasin***"*ti.*
of the happiness of craving's end
(*Nibbāna*)."

- **While seeking a brief pleasure in the higher realms (itself an illusion, as discussed below), we acquire "bad *kamma*" to be paid back over long periods when born in the *apāyās*.**
- **That is the Noble truth about suffering!**

A Missing Key Aspect of "Previously Unheard Teachings"

3. We are familiar with the following aspect of Buddha's teachings: *Kammic* energies accumulated with actions based on greed, anger, and foolishness (ignorance) lead to corresponding rebirths, i.e., those associated with harsh suffering, like those experienced by animals.

- In the same way, good deeds based on generosity, kindness, and wisdom (all in the mundane sense) lead to "good rebirths" where suffering is less and "significant pleasures" are present.
- However, the above is not the complete explanation by the Buddha. **The Buddha also explained that whatever "pleasures" living beings experience in the "good realms" are not real; they are "mind-made." This critical aspect has been hidden for centuries and is not discussed in current texts.**
- Let us first discuss one *sutta* that explicitly states this idea. As indicated below, many other *suttās* provide details, which we have discussed in other sections on this website.

Sensual Experiences (*Kāma Assāda*) Are Illusions

4. The Buddha described **"*saññā*" as a mirage** and the ***viññāṇa* as a magician** in the "WebLink: suttacentral: *Phenapiṇḍūpama Sutta* (SN 22.95)." To modify the English translation in the link: "Suppose that in the last month of summer, at noon, a shimmering **mirage** appears. And a person with good eyesight would see it and contemplate it with wisdom. **That person concludes that it is only a mirage and not water**."

- Thus, even if that person is thirsty, he would not run toward the mirage hoping to find water.
- On the other hand, an animal is incapable of realizing that it is a mirage and, thus, will chase it and die of thirst due to exhaustion.
- That animal chases the mirage with joy, expecting its desire will be fulfilled soon. Yet, it will only get exhausted chasing the mirage.
- In the same way, even intelligent humans perceive **sensual experiences (*kāma*) as real. Only a Buddha's highly-purified mind can discern that they are also illusions. This aspect of Buddha's teachings has been hidden for many centuries, even though the teachings are evident in the *suttās*.**

The 'Magic Show" is Based on "Distorted *Saññā*"

5. In the same "WebLink: suttacentral: *Phenapiṇḍūpama Sutta* (SN 22.95)", the Buddha compared *viññāṇa* to a magician as follows: "Suppose a magician was to perform a magic trick at the crossroads. And a person with wisdom would see it and examine it carefully. Upon close inspection, he will see the "trick" involved. **A magic trick always involves an illusion.**"

- We call a magic show good if it is hard to find the "trick" used by the magician.

© 2026 Lal A. Pinnaduwage

- Nature's magic show is the ultimate magic show. It is impossible to find the "trick" within the framework of this world. For example, no matter how many experiments scientists carry out, they cannot "find that trick."
- The magic trick the magician *viññāṇa* uses is the "distorted or made-up *saññā*" (a "mirage"), as explained in #4 above.
- The closest English word for "*saññā*" is perception, but in this case, it is a "distorted perception." With that "wrong or distorted perception," a human feels joy upon seeing an attractive person, eating tasty food, etc. That compels them to engage in immoral deeds (*akusala*), which, in turn, bring further suffering.

6. The Buddha taught that the perception of a "tasty food" or a "beautiful woman" is built into our (physical and mental) bodies via *Paṭicca Samuppāda*. He explained the mechanism in various *suttās*, including the "Mulapariyāya Sutta – The Root of All Things." However, such *suttās* are in the *uddesa* (brief) version; a direct translation can only lead to confusion, and such *suttās* need detailed explanations. See "Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa."

- That is why the "trick" cannot be uncovered by studying the physical body, as done in medical schools by experts in biological sciences.
- All studies on human suffering are focused on curing diseases/injuries/ailments associated with the physical body.
- But the Buddha showed that the **root causes** for all suffering (mental suffering in addition to suffering due to the physical body) **are found in our minds!**
- **Unless explained by a Buddha, we would never think in a million years that "mind-pleasing things" in this world are "not real" and are "made up" by our own minds!**
- Now, let us look a bit deeper to figure out how a defiled mind ("*viññāṇa* magician") causes us to chase a mirage of "pleasurable experiences" based on "distorted *saññā*."

A Different Way of Explaining the Above

7. A "suffering-free mind" (*pabhassara citta*) is hidden inside the mind of any living being. It is covered by ten layers of defilements ("*saṁyojana*.")

- Those ten *saṁyojanās* fall into three categories: (i) *sakkāya diṭṭhi, vicikicchā, sīlabbata parāmāsa* are due to wrong views (*diṭṭhi*.) (ii) *Kāma rāga* and *paṭigha* are due to cravings (*taṇhā*.) (iii) *Rūpa rāga*, *arūpa rāga*, *māna*, *uddhacca,* and *avijjā* are due to "a sense of me/mine" (*māna*.)
- The fundamental reason for all those defilements is the "innate sense" that there are certain things in the world that are appealing: For example, beautiful women/handsome men, music, food, fragrances, and bodily touches.
- Of course, many varieties are within those categories (sights, sounds, tastes, smells, and touches). **This "innate sense of pleasant sensations" is embedded in "*saññā*."** See "Saññā Gives Rise to Most of the Vedanā We Experience."

8. It is undeniable that certain foods are tasty, certain fragrances are appealing, and particular touches bring pleasurable sensations. Those three types are the "close contacts" available only in *kāma loka*. However, the most appeal is for bodily contact with the opposite sex. The desire for tasty food probably comes second; we also need food to sustain the physical body.

- To further enjoy the "innate sense of sex appeal," humans also use the other two physical senses (visuals and sound). They like to see "beautiful/handsome people" and hear their voices.
- The first ten *suttās* in the "WebLink: suttacentral: *Aṅguttara Nikāya* 1" explain that. You should read the subsequent *suttās* by clicking the "next" arrow at the bottom of the screen.

© 2026 Lal A. Pinnaduwage

Kāma Assāda – Only "Pleasures" Known to Humans

9. The relevant point here is that people engage in immoral activities, seeking more of such "pleasurable experiences." These are called "*kāma assāda*" or "pleasurable sensations in *kāma loka*." **In the absence of Buddha's teachings, the only way humans know how to be "happy" is to engage in "sensory pleasures."**

- In today's society, even economies are built upon sex, dining, movies, music, and fragrances. People like to "own" things that provide pleasurable experiences, and that is "*māna*" or the sense of "me/mine."
- With that sense of "me/mine," they tend to attach to those things (*taṇhā*) and will do their best to acquire as much as possible in any way they can.
- Based on "*māna*" and "*taṇhā*," they also generate various "wrong views" (*diṭṭhi*.) The most dangerous of such views is the "*uccheda diṭṭhi,*" or the denial of the rebirth process. If nothing survives the death of this physical body, then it is best to "enjoy life" by any means necessary, including killing, stealing, rape, lying, etc. Thus, one is capable of committing *dasa akusala*. The Buddha explained how such actions lead to much suffering, especially in future lives. See "Ten Immoral Actions (Dasa Akusala)."

Kalahavivāda Sutta – Suffering Is not Restricted to Rebirths

10. However, we can see many "bad consequences" of acting with *diṭṭhi, taṇhā*, and *māna* **in this life itself**. ***Kalahavivāda Sutta* logically explains how conflicts and disputes (including major wars) have their origin in *diṭṭhi, taṇhā*, and *māna*.** Toward the end of the *sutta,* it also explains that "distorted *saññā*" is the root cause (*nidāna*) for *diṭṭhi, taṇhā*, and *māna.*

- It is a good idea to carefully read "Kalahavivāda Sutta – Origin of Fights and Disputes" and the references therein.
- This is a critical point to understand. All our immoral actions are rooted in a **"false sense of pleasant sensations."** I call it "distorted *saññā.*"
- What I described above has not been explicitly explained (using the concept of "built-in distorted *saññā*") by anyone in recent years. However, the concept is described in many *suttās* in the brief or "*uddesa* version." Those *suttās* (such as the *Mūlapariyāya Sutta*, *Sanidāna Sutta*, *Madhupiṇḍika Sutta*, etc.) must be explained in detail. In that context, it is critical to understand that most "deep *suttās*" are in summary ("*uddesa"*) form and need to be explained in detail: "Sutta Interpretation – Uddesa, Niddesa, Patiniddesa."

The Second Key Point About Suffering

11. Most of us are aware of the following aspects of Buddha's teachings: (i) Immoral actions (*akusala kamma*) can bring their results (*vipāka*) in this life and also in future lives. A dangerous outcome of the latter is rebirths in the lowest four realms (*apāyās*.) (ii) Most *akusala kamma* (lying, stealing, killing, raping, taking bribes, etc.) are done to enjoy sensory pleasures of sex, food, etc. (iii) The Buddha explained (with *Paṭicca Samuppāda*) how *akusala kamma* (based on *abhisaṅkhāra*) bring about "suffering-filled rebirths" as well as suffering during lives.

- However, the second aspect of *Paṭicca Samuppāda* has not been pointed out in current texts, even though the concepts are clearly stated in many *suttās*.
- **That second aspect can be stated as follows: The false "innate sense of happiness" for specific sensory experiences is built into our bodies via "*upādāna paccayā bhava*" and "*bhava paccayā jāti*" in *Paṭicca Samuppāda*.**
- We will discuss that in upcoming posts. [Introduction - 2 – The Three Categories of Suffering]

12. The implications of "distorted *saññā*" leading to "mind-made pleasures" are enormous.

© 2026 Lal A. Pinnaduwage

- Previously, one needed to make a great effort to "control one's desire for sensory pleasures." Thus, controlling "*kāma rāga*" and attaining the *Anāgāmi* stage was very difficult.
- However, once one starts understanding that our physical and mental bodies arise (via *Paṭicca Samuppāda*) with built-in "distorted *saññā*," it becomes much easier to control *kāma rāga* or the "desire to enjoy sensual pleasures."
- As the Buddha explained in the *Pheṇapiṇḍūpama Sutta* (SN 22.95), people like to enjoy magic shows. A magic show is appealing only if it seems "real." If one can figure out the "trick" the magician uses, the "magic show" becomes useless. **Since the "distorted *saññā*" is built into our bodies, it is impossible to uncover the "trick."** Only a Buddha can figure out that trick with his highly purified mind. See "Fooled by Distorted Saññā (Sañjānāti) – Origin of Attachment (Taṇhā)."
- **The second part of the "truth about suffering"** is understanding how that **"distorted *saññā*" is built into our bodies via *Paṭicca Samuppāda*.** We suffer in two ways: (i) We spend countless time and effort to make money via legal/moral or illegal/immoral ways, and (ii) all such efforts will not get us any closer to the "suffering-free mind" but will only move us away from it (in addition to bringing their adverse consequences or *vipāka*.) Our efforts are useless, just like the efforts of an animal chasing a mirage. Those efforts will only move us away from the "suffering-free state of mind."

Wisdom (*Paññā*) about the True Nature of the Mind Leads to *Nibbāna*

13. Another way to state the basic idea of #12 above is as follows: A "suffering-free state of mind" (*pabhassara citta*) is hidden underneath ten layers of "bonds of rebirth process" or "*saṁyojana*." See "Dasa Saṁyojana – Bonds in Rebirth Process."

- All ten layers are further strengthened by our efforts to seek "more sensory pleasures." That is why "*avijjā paccayā saṅkhāra*" comes at the start of *Paṭicca Samuppāda.* Our actions seeking illusory pleasures only help strengthen the ten layers of "dirt" covering the "suffering-free mind."
- That is why the Buddha taught that Noble Persons (*Ariyās*) perceive sensual pleasures as suffering!

"What others say is happiness	"*Yaṁ pare sukhato āhu,*
the noble ones say is suffering"	*Tadariyā āhu dukkhato*"

- See "WebLink: suttacentral: *Dvayatānupassanā Sutta* (Snp 3.12)." In the above verse, "*Tadariyā*" is shortened for "*tad Airya*" (where *Ariya* is a Noble Person), and "*pare*" refers to "others."

14. All ten layers of "dirt" can be removed by comprehending that "distorted *saññā*" is the root cause of *rāga*, *dosa*, *moha*, or (to express differently) *taṇhā*, *diṭṭhi*, and *māna*. **That wisdom (*paññā*) will lead to uncovering the "suffering-free state of mind." That is *Nibbāna*!**

- The first *sutta* in *Majjhima Nikāya*, *Mūlapariyāya Sutta* (MN 1), describes the "The Root of All Things" in this world; see "Mulapariyāya Sutta – The Root of All Things."
- I started discussing this concept with the post Uncovering the Suffering-Free (Pabhassara) Mind (with chart B1) on 8/5/23. See the sequence of posts in "New / Revised Posts."
- However, those posts are somewhat advanced. I will try to simplify the concepts by rewriting some of the posts in the "Paticca Samuppāda in Plain English" section. This is the first post there.

9.10.2 Introduction - 2 – The Three Categories of Suffering

June 20, 2021; revised June 10, 2022; October 12, 2002 ; April 21, 2023; rewritten January 4, 2025

The three categories of suffering are *dukkha dukkhatā*, *saṅkhāra dukkhatā*, and *vipariṇāma dukkhatā*.

© 2026 Lal A. Pinnaduwage

Three Categories of Suffering

1. In the previous post, "Introduction – What is Suffering?" we discussed what suffering means in Buddha Dhamma. Here we continue that discussion. The three categories of suffering are stated in the WebLink: suttacentral: *Dukkhatā Sutta* (SN 45.165): "…***Dukkha dukkhatā, saṅkhāra dukkhatā, vipariṇāma dukkhatā***—*imā kho, bhikkhave, tisso dukkhatā*."

- It does not make sense to try to translate the names of the three categories: *Dukkha dukkhatā, saṅkhāra dukkhatā, vipariṇāma dukkhatā.* Instead, it is better to understand the meanings of those three types of suffering. Here, *dukkhatā* means "type of *dukkha*."
- Thus, we can say that the three categories of suffering are ***dukkha-dukkha*, *saṅkhāra-dukkha*, and *vipariṇāma-dukkha.***

2. The three types of suffering are associated with the characteristics of a *saṅkhata,* as pointed out in the *Tipitaka* Commentary *Peṭakopadesa,* "*5. Hāravibhaṅgapañcamabhūmi*:"

"*Tattha tīṇi saṅkhatalakkhaṇāni tisso dukkhatā uppādo saṅkhatalakkhaṇaṁ*, ***saṅkhāradukkhatāya*** *dukkhatā ca saṅkhatalakkhaṇaṁ*, ***vipariṇāmadukkhatāya*** *dukkhatāti aññathattaṁ ca saṅkhatalakkhaṇaṁ*, ***dukkhadukkhatāya*** *ca dukkhatā*, *imesaṁ tiṇṇaṁ saṅkhatalakkhaṇānaṁ*.."

Translation:

"Three *saṅkhata lakkhaṇa* correspond to three types of suffering (*tisso dukkhatā*):

(i.) ***saṅkhāradukkhatāya*** emphasizes the key idea that a *saṅkhata* (any existence in the world) arises due to (*avijjā paccayā*) *saṅkhāra*. That itself takes effort (suffering) and will also lead to future suffering.

(ii.) ***vipariṇāmadukkhatā*** conveys the idea that a mind moves away from the *pabhassara* (pure) mind when *saṅkhāra* accumulation starts. *Vipariṇāma* means "moving away from" the ideal state of the mind. See "Uncovering the Suffering-Free (Pabhassara) Mind."

(iii.) ***dukkhadukkhatāya*** conveys that all existences (during life or in future lives) end up in suffering.

- **All three types of *dukkha* WILL NOT stop until *saṅkhāra*-generation via "*avijjā paccayā saṅkhāra*" stops.**

What Is Suffering Based on?

3. What is our whole world? We sense external *rūpa* through our five physical senses (internal *rūpa*) and then think about them. Thus we can sum up our world as what we experience through our six internal senses (eyes, ears, nose, tongue, body, mind). If our six internal senses stop working or weaken, we suffer.

- Using those sensory faculties, we experience six types of *rūpa* in the external world: visuals, sounds, smells, tastes, touches, and *dhammā*. If those are not to our liking, we suffer. On the sixth type of *rūpa*, see "What are Rūpa? – Dhammā are Rūpa too!" Of course, attachment to those *rūpa* leads to suffering in future lives, too.
- Those twelve (six INTERNAL and six EXTERNAL) make up "our world." Everything is included in those twelve—all 12 lead to suffering, not only in this life but also in future lives.
- First, let us discuss the three types of *dukkha* we experience during a lifetime.

Three Types of *Dukkha* During Lifetime – "Mundane Suffering"

4. Any *saṅkhata* (born to the world) changes (sometimes unexpected) leading to suffering. First, let us consider whether we can keep our physical bodies (internal *rūpa*) and their associated sensory faculties to our satisfaction.

© 2026 Lal A. Pinnaduwage

- We may be able to maintain our five physical senses to our satisfaction for many years, which is why people do not even take the time to think about these concepts.
- We start feeling this hidden suffering when we pass middle age. For example, eyesight, hearing, and taste will get weaker. Our bodies start sagging and the brain becomes weaker too. That is the mundane version of ***vipariṇāma-dukkha***.
- So, what do most of us do? We start looking for ways to "prop them up": We can take temporary measures by wearing glasses and hearing aids, adding more spices/flavor to food, and doing cosmetic procedures to maintain the body's appearance. There is absolutely nothing wrong with some of these "fixes"; for example, we need to see, so we must take precautions to protect our eyes and start wearing glasses. Ditto for hearing aids and even for adding spices to food. Some people resort to cosmetic procedures (coloring their hair, for example) to maintain self-confidence.
- These "remedies" require effort and are part of ***saṅkhāra-dukkha***.

5. Those two types of "mundane *dukkha*" can also arise due to external *rūpa*.

- For example, our houses, cars, or other "valuable things" are also *saṅkhata*, just like our physical bodies. They undergo (both expected and unexpected) change and will cease to exist, contributing to the mundane version of ***vipariṇāma-dukkha.***
- We also need to work to repair them and try to maintain them to our satisfaction. That is also part of ***saṅkhāra-dukkha***.
- During both types of *saṅkhāra* generation, we will generate *kamma* that will lead to *kamma vipāka*. Those manifest as ***dukkha-dukkha***. For example, if a woman gets a "facelift," she must go to a surgeon and pay. If we need to repair a car, we must take it to a mechanic and pay him. All these activities involve ***dukkha-dukkha***.
- **The above-discussed are aspects of "mundane versions" of suffering.** The deeper meaning is associated with moving away from the "suffering-free" state of the mind. See "Uncovering the Suffering-Free (Pabhassara) Mind" and "Recovering the Suffering-Free Pure Mind."

Three Types of *Dukkha* in the Rebirth Process

6. "*Saṅkhāra*" means "*saŋ*" + "*khāra*" or our efforts to accumulate/maintain things in this world (both internal and external) to our satisfaction. Any *saṅkhata* (both internal and external) arises due to such efforts. See "Saṅkhāra – What It Really Means."

- In Buddha Dhamma, our focus is on a specific type of *saṅkhāra*; they are ***abhisaṅkhāra***. But this distinction is not always emphasized (like in "*avijjā paccayā saṅkhāra,*" which is really "*avijjā paccayā abhisaṅkhāra*"). One needs to be able to figure that out.
- No matter how much effort we make, our bodies will fall apart at old age (or even earlier), and when we die, we will have to leave behind all those external "valuables" that we accumulated with much effort. That is why we say (*abhi*)*saṅkhāra* arise due *avijjā*, i.e., "*avijjā paccayā saṅkhāra*." **All our efforts based on "*saŋ*" (greed, anger, and ignorance) are due to *avijjā*!**
- "*Abhisaṅkhāra*" generation is the root cause for the generation of all types of *saṅkhata*, internal and external. That takes place via *Paticca Samuppada*.

Dukkha-Dukkha in the Rebirth Process

7. The worst category of suffering in the rebirth process arises as *kamma vipāka* giving rise to rebirth in the *apāyā*. Beings in the *apāyā* encounter harsher suffering; in the *niraya* (lowest realm), that is all one feels.

- A person who made money by killing another or stealing from another may live well in this life (at least outwardly) but will be subjected to much suffering in the upcoming births. This is the worst category of

© 2026 Lal A. Pinnaduwage

***dukkha-dukkha*, which arises due to past immoral actions. Until the death of the physical body, even an *Arahant* is subjected to** *dukkha-dukkha.*

- Therefore, the third category of suffering, *dukkha-dukkha*, arises from immoral acts (*pāpa kamma/akusala kamma.*) The severity of suffering depends on the severity of the violation. *Paṭicca samuppāda* ("*pati+ichcha*" leading to "*sama*"+"*uppāda*") describes the underlying mechanism; see, "Paṭicca Samuppāda – "Pati+ichcha" + "Sama+uppāda"," where it is briefly discussed how one's actions lead to effects that are similar "in-kind."
- The results of our actions will not be according to our wishes. Instead, they will be according to root causes (*lobha, dosa, moha*) and prevailing conditions at any time. *Paṭicca samuppāda* is Nature's law-enforcing mechanism.

Dukkha-Dukkha in Rebirth Process Is Delayed Results of "Bad *Saṅkhāra*"

8. **All our actions (including speech and thoughts) are initiated by *saṅkhāra.*** Thus, *dukkha-dukkha* arises from the worst forms of *saṅkhāra* (involving *lobha*, *dosa*, and *moha*,) which we call immoral actions (*pāpa kamma/akusala kamma.*) This *dukkha-dukkha* is the main form of suffering discussed in the previous post, "Introduction – What is Suffering?"

- Everything happens due to a reason (causes). Doing a good deed will lead to good results, and evil deeds will lead to bad results. This is the basis of science and also how nature works. "Every action has a reaction." It is guaranteed, sooner or later.
- This is why rebirth is a reality of nature. Some people live lavishly with money earned by immoral deeds. They WILL suffer the consequences in future rebirths.
- It also explains why different people are born with different levels of health, wealth, beauty, etc., and why there are innumerable varieties of animals with different levels of suffering. Those are all results of evil deeds done in previous lives.

Saṅkhāra-Dukkha Gives Rise to All *Dukkha*

9. The "WebLink: suttacentral: *Vicayahāravibhaṅga* (Ne 5)" in the *Petakopadesa* states the following: "*Saṅkhāradukkhatāya pana loko anupādisesāya nibbānadhātuyā muccati, tasmā saṅkhāradukkhatā dukkhaṁ lokassāti katvā dukkhamassa mahabbhayanti.*"

- The meaning is "If ***saṅkhāra-dukkha*** can be overcome, one will get to *Nibbāna.* Therefore, ***saṅkhāra-dukkha*** is the one with **great danger (*mahabbhaya* or *mahā* + *bhaya.*)**"
- An average human perceives the cultivation of (***abhi*)*saṅkhāra*** as "pleasure." An extreme example is raping a woman seeking sensory gratification. That involves *vacī* (planning/thinking) and *kāya* (implementing) *abhisaṅkhāra*. It could be enjoyable at that time. However, he will pay for that brief gratification for millions of years. Unimaginable but true!
- Thus, any such "pleasure" is short-lived (*vipariṇāma dukkha*) and will bring unimaginable *dukkha-dukkha* in the future. **One must "see" the "hidden suffering in sensory pleasures" before getting to the *Sotāpanna* stage.**
- Until then, humans see the cultivation of (***abhi*)*saṅkhāra*** as "pleasure."

We Engage in *Saṅkhāra* Due to *Avijjā*

10. **The suffering we discussed so far arises from one aspect of *anicca***: Anything in this world is subjected to decay and destruction; nothing in this world is exempt from that. That is part of "***viparināma dukkha***," suffering that arises due to changes and decay (both expected and unexpected.)

© 2026 Lal A. Pinnaduwage

- ***Saṅkhāra-dukkha*** is associated with maintaining our internal *rūpa* and acquiring and maintaining external *rūpa*. All such efforts require thinking, speaking, and bodily actions; they involve *mano, vacī*, and *kāya saṅkhāra*. See "Saṅkhāra – What It Really Means."
- ***Dukkha-dukkha*** arises even without us realizing it, while we seek remedies for ***vipariṇāma dukkha*** with various activities involving involve *mano, vacī*, and *kāya saṅkhāra.* That leads to the *kamma* generation. Part of such *kammā* will bring *vipāka* into this life, primarily as physical work.
- As we will discuss, if they involve *abhisaṅkhāra*, those will lead to *kamma vipāka* in future lives.
- Generation of *abhisaṅkhāra* leads to everything in the world, living or inert. All those are *saṅkhata*, meaning "prepared by the mind." A deeper analysis is in "Worldview of the Buddha."

Uppāda (arising,) *Vaya* (cessation,) and *ṭhiti* (Existence)

11. A *saṅkhata* (anything prepared by the mind, which includes everything in the world) has the following three characteristics: *uppāda* (arising,) its existence (*ṭhiti*) before destruction, and *vaya* (*cessation,* i.e., it can be stopped from occurring in the future, not its destruction). These three characteristics are stated in the "WebLink: suttacentral *Saṅkhatalakkhaṇa Sutta* (AN 3.47)."

- These characteristics of a *saṅkhata* are not directly related to the three types of suffering. They emphasize that any *saṅkhata* comes into existence and will be destroyed after some time. Furthermore, because they arise due to mental processes (contaminated with raga, dosa, and moha), they can be stopped from arising again.
- A *saṅkhata* arises due to *Paticca Samuppāda* starting with "*avijjā paccayā saṅkhāra*."
- In contrast, *Nibbāna* is *asaṅkhata*. It is not "prepared by the mind." Instead, *Nibbāna* is attained by stopping the formation of all saṅkhata in the world. That is in the companion *sutta* to the above *sutta*: "WebLink: suttacentral: *Asaṅkhatalakkhaṇa Sutta* (AN 3.47)."

9.10.3 Avijjā Paccayā Saṅkhārā

Revised April 26, 2019; August 29, 2019

***"Avijjā paccayā saṅkhārā"* (Ignorance as root cause for immoral/unfruitful actions and thoughts).** That is the same as saying "*avijjā nirodha*" leads to "*saṅkhāra nirodha*." All following terms in the *Akusala-Mūla paṭicca samuppāda* cycle will stop arising and **thus all suffering stop arising with the complete removal of *avijjā*.**

1. *Avijjā* (loosely translated as ignorance), is defined in many ways: not knowing the Four Noble Truths, not understanding the Noble Eightfold Path, not understanding the Three Characteristics of nature, not understanding *dukkha*, etc.

- All these are correct, but just reading about them is not going to help. The mind needs sees how suffering arises due to immoral and unwise actions (and thoughts).
- The *Paṭicca Samuppāda* cycle clarifies how the three kinds of suffering arise. One does not comprehend the true nature of the world, and think (and do) immoral/unfruitful things.

2. You may be wondering whether I was untruthful when I said this series will be in "plain English." Especially If you have not read the first two posts. I did describe these three terms in plain English, and there is no easy way to get the same meaning across without using Pāli words.

© 2026 Lal A. Pinnaduwage

- So, once I clarify them, I have to use these Pāli terms in order to keep a post to a reasonable length. One can always go back and read previous introductory posts to refresh memory.

3. The standard interpretation of "*avijjā paccayā saṅkhārā"* reads "ignorance leads to mental formations." That does not get the underlying ideas across and also misleading. I believe that "ignorance as root cause and condition for immoral/unfruitful actions" is a better translation, and I will explain why.

First let us look at the difference between immoral acts and unfruitful acts.

- We saw that *dukkha dukkha* in the four lower realms is the worst form of suffering. And we saw the cause of that as the immoral acts done with the ten defilement or *dasa akusala*. Thus worst types of *saṅkhāra* are responsible for *dukkha dukkha* in the lower four realms.
- Why do we do any of such potent immoral acts that give rise to *dukkha dukkha* of the worst kinds in the lower four realms? Because to a very high degree of ignorance of the consequences of such acts. For example, if one does not believe in rebirth, then it is hard to see how such immoral acts can have consequences. After all, there are many people engaged in unethical behavior who seem to be enjoying life.
- Such high level of ignorance is called *moha* (which means totally covered, totally blind mind), and the closest English word is "delusion."
- A murderer who PLANS and kills another human is a good example. He thinks that if he can plan it well, he can avoid "getting caught" by the justice system and then will not have to pay for his actions. There are MUCH WORSE consequences waiting for him, regardless of whether the police catch him or not. He does not know that he is likely to get killed a thousand times in return in future births.

4. Thus **immoral actions** like killing, stealing, etc., are responsible for the worst outcomes, the worst kinds of future suffering; these are the worst forms of *saṅkhārā*.

- On the other side of the spectrum for *saṅkhāra* are the **unfruitful actions** that lead to lower levels of *saṅkhāra dukkha* in this very life. For example, when we get attached to things/people via strong attachments or dislikes, that can lead to mental suffering in this life.
- However, such unfruitful actions can also form bad habits that can grow into more significant problems with time. Someone acting with greed or dislikes habitually can tend to make those stronger and eventually grow into stronger forms of excess greed and hate, leading to immoral acts. We will discuss how this happens via the *Paṭicca Samuppāda* steps.
- Of course the severity of the consequences will be according to the severity and nature of the act: "*pati+ichcha*" leading to "*sama*" + "*uppada*", as we will discuss in detail later. See, "Paṭicca Samuppāda – "Pati + ichcha" + "Sama + uppāda"" for the meaning of *Paṭicca Samuppāda*. When one is even willing to do immoral acts to get what one wants, the consequences will also be stronger and "in-kind." Then there are "unfruitful acts" that can lead to comparatively minor forms of suffering in the near term but can also add up to more significant effects in the long run.
- Thus one has to think beyond the five precepts to understand the origin of *saṅkhāra dukkha.* I know I am repeating some statements, but I want to make sure to get these essential ideas across.

I hope it is clear now why "immoral/unfruitful actions, speech and thoughts" is a better translation for *saṅkhāra* than "mental formations." *Saṅkhārā* are all mental; *kāya* and *vacī saṅkhārā* are those thoughts that LEAD TO actions and speech.

5. Now let us discuss the other erroneous aspect of the translation of "*avijjā paccayā saṅkhāra"* as "ignorance leads to mental formations." For further details, see, "What Does "Paccaya" Mean in Paṭicca Samuppāda?."

- Ignorance (*avijjā*) is not there all the time. Even the worst criminal does not do immoral acts or even unfruitful acts ALL THE TIME. **But when he does**, such actions are done with ignorance as a root cause.

© 2026 Lal A. Pinnaduwage

- It applies to all of us: The more we learn Dhamma, the more we get rid of ignorance. Then will we not think or do either immoral or unfruitful things, i.e., any type of (*abhi*)*saṅkhāra*.

6. **A closely related issue to think about is what kind of control we have over *saṅkhāra*.** There are three types of *saṅkhāra*: *kāya saṅkhāra* (those that lead to physical acts), *vacī saṅkhāra* (those that lead to speech), and *mano saṅkhāra* (those that automatically arise due to our *gati*).

- If we know right from wrong, we can control MOST of our **physical actions and speech**. We may even start saying something terrible and stop ourselves in the middle of the sentence.
- Depending on the emotional state of the mind, it may be not possible to control our actions under extreme stressful situations. Even a normally calm person may get into a rage if he catches his wife engaging in sex with another man. He may even kill that man in the heat of the moment.
- We also know "good people" who were tempted to do immoral things. That is especially true if the "payout or the perceived pleasure" was big enough. That is the danger of "not being free of the four lower realms."
- More information at: "Saṅkhāra – What It Really Means."

7. The third category, *mano saṅkhāra,* are also hard to control by will power instantly. I think we all can think about situations where it was hard to control greedy/hateful thoughts. We may start thinking about something, and the mind takes us all over the place. Such thoughts normally involve "what we could have," and also fantasize about all kinds of sense pleasures. One needs to stop such thoughts and think about their consequences willfully.

- **These can only be lessened and ultimately stopped by changing one's habits ("*gati*") and cravings ("*āsavas*"). That applies to *kāya* and *vacī saṅkhāra* done on "impulse" or "temptations" discussed above.**
- And that comes about by realizing the unfruitfulness of any *saṅkhāra*. That is strongly related to comprehending the Three Characteristics. We will be analyzing this in the upcoming steps of *Paṭicca Samuppāda*.

8. Thus the key is to change one's bad habits over time. Then, gradually, even such *mano saṅkhāra* will STOP FROM ARISING.

- It may be hard to believe, but a significant part of this change of habits and cravings comes from comprehending the Three Characteristics of this world. One would realize that it does not MAKE SENSE to hurt others (including animals) to get sense pleasure for oneself. That makes a BIG DIFFERENCE in one's outlook about what a "good life is."
- Contrary to what most people believe, a life filled with sense pleasures is not a "good, peaceful, life." An extravagant life can eventually become a "burdened life" because our body's ability to accommodate sense pleasures goes down as we age. This realization itself leads to "cooling down" of the mind. Anyway, as we discuss further, and if one contemplates more along with these ideas, these concepts will slowly become apparent.

9. In summary, all three kinds of suffering arise due to *saṅkhāra* that range from highly immoral acts to seemingly innocent unfruitful actions. All *saṅkhāra* arise due to *avijjā*.

- That is why "*avijjā paccayā saṅkhārā*" is the first step in the *Paṭicca Samuppāda* cycle, which ends with "*jarā, maraṇa, soka, parideva, dukkha, ...*" all kinds of suffering.
- At the *Arahant* stage, one has removed *avijjā* (i.e., optimized *paññā*), and thus *abhisaṅkhāra* that lead to rebirth cannot arise; that is *Saupadisesa Nibbāna*. At the death of the physical body, the *Arahant* is not reborn and thus, at that time, all *saṅkhāra* cease to arise (*Anupadisesa Nibbāna* or *Parinibbāna* or "complete *Nibbāna*").
- **That is how "*avijjā nirodha*" leads to "*saṅkhāra nirodha*."**

© 2026 Lal A. Pinnaduwage

Thus we can see in a simple way how suffering arises with immoral/unfruitful actions as causes. One engages in such activities due to ignorance of the true nature of the world: *anicca*, *dukkha*, *anatta*. Here we discussed how ignorance gives rise to *saṅkhāra*. In the next post, we will discuss how *saṅkhārā* leads to *viññāṇa* (or defiled consciousness). That is the next step leading to *dukkha* (suffering).

Next, "Saṅkhāra paccayā Viññāṇa – 1", …….

9.10.4 Saṅkhāra Paccayā Viññāṇa – 1

1. "***Saṅkhāra paccayā Viññāṇa***" is normally translated something like, "with mental formations as condition, consciousness arises." But I will show that a more accurate translation is, "Immoral/unfruitful actions and thoughts as root condition for **defiled consciousness**."

- I will just keep the word *viññāṇa* without translating as "defiled/unfruitful consciousness" (which could become cumbersome to repeat also), because the word "consciousness" cannot fully embody the meaning of *viññāṇa*. Furthermore, *vipāka viññāṇa* (those that arise outside of "*saṅkhāra paccayā viññāṇa*") are "just consciousness"; see #4 below.
- *Viññāṇa* is a step in the *Paṭicca Samuppāda* that describes how suffering arises; thus *viññāṇa* is NOT neutral or innocuous as the word "consciousness" or "awareness" implies; it is DEFILED consciousness, contaminated with immoral mental factors such as greed and hate.
- In contrast, an *Arahant* has undefiled, pure consciousness; thus an *Arahant* experiences the world without any defilements. He/she can see, hear, etc., without making any type of judgement, attachment, or repulsion to what is seen, heard, etc.

Thus we need to realize that *viññāṇa* is DIFFERENT from "knowing" or "being aware", which is what "consciousness" implies. This is very important.

2. For example, two people with opposing political views (A and B) may encounter a politician C on the street who has views compatible with those of A. Person A will be happy to meet C and may go up to C, shake his hand and talk to him enthusiastically. On the other hand, Person B will automatically have irritable thoughts about C and is likely to avoid C. In this case, A and B generated two very different kinds of *viññāṇa* upon seeing the same person.

- On the other hand, suppose there is a fourth person, D, who also knows the politician C AND suppose D is an *Arahant*. Now, person D will recognize C as that politician but will not generate any likes or dislikes about C. That is what "consciousness" is, just recognizing who or what it is without generating any biases.

3. The other main point is that *viññāṇa* is multi-faceted. **It has embedded in it one's memories as well as one's future hopes and plans**, and those lie under the surface. This is what Sigmund Freud called the subconscious. But there is no separate "subconscious"; there is only one *citta* at a time.

- The mind does this with the help of several mental factors (*cetasika*) like memory (*manasikāra*) and perception (*saññā*). We will discuss that in the future.

4. For example, when I am looking at a picture I have what is called *cakkhu viññāṇa*, i.e., "visual consciousness." This is a *vipāka viññāṇa* and is "just consciousness."

However, if I have been planning a trip overseas that is still in the "back of my mind"; if I have been thinking about calling an old friend about whom I just thought of recently, that is also in the "back of my mind." Thus at a given time there may be several or even many *viññāṇa* waiting to come to the surface.

- And some of those "subconscious" *viññāṇa* may disappear, if the reason for it to be there goes away for some reason. For example, if civil war breaks out in the country that I was planning to visit, I will abandon that trip and my "*viññāṇa*" for that will go away. If I stop thinking about my old friend, that

© 2026 Lal A. Pinnaduwage

viññāṇa for calling him up may also go away with time. Thus if a given *viññāṇa* stops getting "its food" it will die off gradually.

- The difference between *kamma viññāṇa* (those that arise due to "*saṅkhāra paccayā viññāṇa*") and *vipāka viññāṇa* is discussed in "Viññāṇa – Consciousness Together With Future Expectations."

5. **Now we can see how "*saṅkhāra paccayā viññāṇa*" works.** The more I think about my old friend, the more *saṅkhāra* I am generating; thus I keep "feeding that *viññāṇa*" and that *viññāṇa* for calling him gets stronger.

- The breaking out of the civil war in that country basically deprived the "*viññāṇa* for making a trip to that country" of any food (i.e., now it is not possible to visit that country), and thus the news effectively killed that *viññāṇa*.
- As always, it is best to think about your own situations and see how "*saṅkhāra paccayā viññāṇa*" works, and also how one can have many types of *viññāṇa* at the same time, even though only one is at the forefront at any given time.

6. **There is another way that *viññāṇa* can be divided into two main categories.** One is the "base level" of *viññāṇa* for an existence or *bhava*. For example, if a deer is reborn as a human, then that lifestream will now have a "higher base level of *viññāṇa*" suitable for a human. Whereas a deer cannot sort out right from wrong, a human can. Thus at the end of a given "*bhava*" (say as a deer), that lifestream gets new, higher "base level" of *viññāṇa*.

- The other main category of *viññāṇa* is the numerous types of *viññāṇa* that arise in a given existence that we discussed above. What we perceive through the six senses (eye, ear, nose, tongue, body, and mind) gives rise to six types of consciousness: vision, hearing, smell, taste, touch, and concepts. Based on those, we can have infinite types of *viññāṇa* as we discussed above. These types of *viññāṇa* are now in accordance with the type of existence or "*bhava*." For example, a deer does not perceive what is seen at the same level of consciousness as a human, even if both are looking at the same thing. Sometimes there may be differences in sense faculties too: a bat cannot see but uses sonar to find its way around. Furthermore, as we discussed above, there are many types of "subconscious" *viññāṇa* as well.
- There are many new concepts introduced in these introductory posts that are critical. One may need to go back to previous posts and re-read in order to grasps these important concepts.

7. Based on those two categories, there are two main *Paṭicca Samuppāda* cycles that describe life "in this world of 31 realms":

- One describes how the "base level" of *viññāṇa* changes at the end of a "*bhava*", say when a deer is reborn as a human. Here a given lifestream can make a transition from a lower base level of *viññāṇa* to a higher (e.g., deer reborn as a human) or vice versa (e.g., human reborn as a deer). This is the "*paṭisandhi Paṭicca Samuppāda*" cycle.
- The other *Paṭicca Samuppāda* cycle describes how a given lifestream accumulates conditions for suffering during a given "*bhava*." This is where we experience *viññāṇa* through our daily activities. This is the "*idappaccayatā Paṭicca Samuppāda*" cycle; see, "Idappaccayatā Paṭicca Samuppāda."

Let us discuss the *viññāṇa* associated with this latter one first.

1. *Saṅkhāra paccayā Idappaccayatā Viññāṇa*

Let us first look at how our consciousness changes basically every moment in an active day. We are being bombarded with pictures, sounds, smells, tastes, body touches, and we think about all sorts of things throughout the day. In each single case, we experience a different *viññāṇa*. This is why *viññāṇa* is very complex and multi-faceted.

1. If we take a simple example of looking at a person, there are multiple events that happens in the mind: the physical eye captures an image of the mind which is processed by the brain and sent to the mind (details of

© 2026 Lal A. Pinnaduwage

this will be discussed in the *Abhidhamma* section later). The mind instantly compares that image with previous experiences and recognizes that it is a close friend. Happy feelings may arise instantly too. If we had not seen him for a while, some old memories associated with him may also instantly pop into our mind. The sum total of all mental factors (feelings, perception, joy, etc.,) associated with that "seeing event" is the "eye consciousness" or "*cakkhu viññāṇa*" at that moment.

- And this is an example of a "*vipāka viññāṇa*." We did not plan to see him, but just bumped into him.

2. But now based on this *vipāka viññāṇa*, we may decide to take some actions. We may run to meet him, give him a hug, and follow-up with even more actions. Most of these could be harmless *saṅkhāra* and our experience, consciousness, or *viññāṇa* is mostly harmless.

- However, if we instead ran into a person with whom we recently had a serious argument, that *vipāka viññāṇa* may lead to a series of "bad *saṅkhāra*" in our minds and thus lead to a totally different *viññāṇa* BASED ON those bad *saṅkhāra*. we may decide to say something bad to that person. Now we are doing *vacī saṅkhāra* that may have adverse consequences. Now our *viññāṇa* is different and we feel differently from the above case. We have an agitated state of mind, and with the slightest provocation from him, we may say or do even more harmful things.

3. When a thought arises in the mind, it has associated with it many mental factors (*cetasika*) which characterize how we feel: joy, sadness, greed, generosity, hate, kindness, etc. *Viññāṇa* encompasses all such relevant mental factors.

- In the previous example of persons A and B meeting the politician C, person A's thoughts embody happiness while person B's thoughts embody dislike.
- For a *viññāṇa* to arise, there must be some interest in the sense object. For example, we are bombarded with millions of sense inputs in a day, but we "pay attention to" only a fraction of those. Each mind has a set of "preferred items" in the background or "in the subconscious" based on the person's habits and cravings.

4. Then, the more we "feed a given *viññāṇa*" by thinking, speaking, doing things related to that, the more strong it gets. Thus we can see how "habit building" is tightly associated with *saṅkhāra*. In the same way, we can "remove a habit" by depriving that associated *viññāṇa* of its food, i.e., by stop thinking or doing things related to it.

- And that can be done only realizing the benefits of a good habit or adverse consequences of a bad habit, which was the first step in the *Paṭicca Samuppāda*, "*avijjā paccayā saṅkhāra*." A bit of thought should make this clear. Comprehending Buddha Dhamma takes time to think deeply about how all these things fit together. Just being able to recite the *Paṭicca Samuppāda* cycle does not bring any benefits.

5. A simple example is "building a *viññāṇa* for getting drunk": A teenager may not like the taste of his first drink, but if he keeps doing it due to "peer pressure", he is likely to build a new *viññāṇa* for it. As he builds this *viññāṇa*, he will keep accumulating *saṅkhāra* to "feed that *viññāṇa*." He will be thinking about it, talking about it, and of course whenever has the chance he will be drinking. The more he does any of those *saṅkhāra*, that *viññāṇa* will grow. AND even when he is doing something else, that *viññāṇa* will be at close to top of the subconscious waiting for an opportunity to come up and induce him to get drunk.

- And it works the same way for any type of activity. A teenager studying for an exam, will have a *viññāṇa* for it. If he is serious about it, he will be thinking about it more, talking about it, and studying hard; all those are *saṅkhāra* too, in this case for his benefit.

The idea is to first not to do any *abhisaṅkhāra* (strong immoral *saṅkhāra*) that could lead to birth in the four lower realms. These kinds of *saṅkhāra* are the immoral acts, speech, and thoughts. We will discuss this in the next post.

9.10.5 Saṅkhāra Paccayā Viññāṇa – 2

If you are reading this without reading the earlier posts, you may be wondering whether I was being untruthful when I said this series will be in "plain English." I did describe any of the terms used here in plain English in the previous posts. There is no easy way to get the same meaning across without using such key Pāli words.

- So, once I clarify them, I have to use these Pāli terms in order to keep a post to a reasonable length, AND readable. One can always go back and read previous posts to refresh memory.

In the previous post, we discussed how *saṅkhāra* can feed and build different types of *viññāṇa* during our lifetime. The *Paṭicca Samuppāda* cycle which describes that process is the *Idappaccayatā Paṭicca Samuppāda* and we discussed the step "*saṅkhāra paccayā idappaccayatā viññāṇa*" for that *Paṭicca Samuppāda*.

- Now we will discuss how such *idappaccayatā viññāṇa* can become strong and be "carried over" to the future lives; not only that, one of such strong viññāṇa can even determine the next birth. That is why such strong *viññāṇa* can become "*paṭisandhi viññāṇa*" by providing the "link" to the next next life (that is what "*paṭisandhi*" means: "*sandhi*" is connection and "*paṭi*" is bond or making the connection).

2. *Saṅkhāra paccayā Paṭisandhi Viññāṇa*

1. When we build *idappaccayatā viññāṇa* during our lifetime as described in the previous post, such *viññāṇa* can get very strong and even get carry over to the next lives.

- In fact, some of the *viññāṇa* that we easily get "attached to" very well could be coming from previous lives.

2. For example, different people have "natural tendencies" for certain tasks (music, art, science, business, basically any type of activity). Similarly, some people are attracted to gambling, drinking, sports, etc., more than others. All these are *sansāric* habits, that have been cultivated by "feeding that *viññāṇa*" over many lives.

- Unless one reduces and eventually gets rid of one's bad habits, they can lead to bad births in the lower four realms where one can get trapped for long times. Similarly, developing good habits can lead to good births, in case one is unable to attain at least the *Sotāpanna* stage in this life.
- This is why it is very important to get rid of "bad habits" and to cultivate "good habits." There are many posts at the site on this important topic. I cannot emphasize enough the importance of this need to change habits.

3. Following the Noble Eightfold Path is all about changing to a "good person" first; doing "*ānāpānasati bhāvanā*" does the same thing. When one does this, one **develops wisdom** to see through the Three Characteristics: *anicca, dukkha, anatta*. And that also leads to the *Sotāpanna* stage, where one is guaranteed to be free of rebirths in the lower four realms.

- By the way, many people are introduced to the wrong concept of "there is no self" (incorrect translation of the term *anatta*). Thus they get stuck, saying the term, "good person", does not make sense (because there is no "self"); that could become a huge obstacle to any progress. While the Buddha rejected the concept of "self", he also rejected the concept of "no-self", because there is definitely some key personal characteristics that "flow" from one life to the next; see, "What Reincarnates? – Concept of a Lifestream."

4. Once one is free of the four lower realms (i.e., attains the *Sotāpanna* stage of *Nibbāna*), only then one will truly realize that it is unfruitful even to wish for or work to seek rebirths in higher realms.

- But, until one attains the *Sotāpanna* stage, one MUST avoid immoral *abhisaṅkhāra* (strong immoral actions) to avoid immoral *viññāṇa* and also engage in moral *abhisaṅkhāra* in order to cultivate moral

© 2026 Lal A. Pinnaduwage

viññāṇa; this will keep one firmly on the Path and to avoid rebirth in the lower four realms until the *Sotāpanna* stage is attained.

5. If we think deeply about the suffering that we encounter in this life, *dukkha dukkha* has arisen due to whatever immoral *saṅkhāra* done in a previous life. An animal suffers more than a human, because the cause for an animal birth was a stronger immoral action done previously.

- *Dukkha dukkha* associated with higher realms (*deva, brahma*) is less than the *dukkha dukkha* for a human life, because the *saṅkhāra* that led to the *deva/brahma* births were merely unfruitful, they were not immoral.

6. Any birth anywhere in the 31 realms is due to a *abhisaṅkhāra*. If it is due to a worst form of *abhisaṅkhāra* (immoral actions) then that leads to a birth in the lowest four realms via a strong and bad *paṭisandhi viññāṇa*. Lesser *abhisaṅkhāra* (unfruitful actions) lead to births in higher realms via "moral" *abhisaṅkhāra viññāṇa*.

- Thus cultivating "immoral" *abhisaṅkhāra viññāṇa* must be avoided by not engaging in immoral activities. Otherwise, "*saṅkhāra paccayā paṭisandhi viññāṇa*" could lead to "bad births", where *dukkha dukkha* is very intense.

7. Vipariṇāma dukkha associated with the current life is also mainly determined by previous action (*abhisaṅkhāra*) that led to this life, and can be analyzed the same way as for *dukkha dukkha.*

- But the *saṅkhāra dukkha* associated with this life is due to actions (*saṅkhāra*) that we do in this life. Also, the same *saṅkhāra* that could cause future *dukkha dukkha* or *vipariṇāma dukkha* can also give rise to *saṅkhāra dukkha* in this life as well. This is an important point to be realized; if not clear, you may want to go back and review the previous posts.
- Therefore, we CAN get rid of part of the *dukkha* (the *saṅkhāra dukkha*) in THIS LIFE by understanding Dhamma and acting and thinking accordingly. We can also stop or reduce ALL types of *dukkha* in FUTURE LIVES by this process.

If you have forgotten what these terms mean, it is a good idea to go back and refresh memory, because otherwise it will be difficult to comprehend the upcoming posts in this series as well. And these terms are critically important for grasping the message of the Buddha. *Avijjā, saṅkhāra*, and *viññāṇa* are key terms that must be comprehended; they do not have corresponding English words.

More on *viññāṇa* can be found at, "3. Viññāṇa, Thoughts, and the Subconscious."

Next, Viññāṇa paccayā Nāmarūpa, ……..

9.10.6 Viññāṇa Paccayā Nāmarūpa

Revised May 19, 2019; May 13, 2021; May 19, 2021 (#10-#12); September 9, 2022

Introduction

1. *Nāmarūpa* can have different but related meanings in different contexts. *Nāmarūpa* in the standard *upapatti Paṭicca Samuppāda* is different from the "*nāmarūpa*" involved in *idappaccayā Paṭicca Samuppāda* which takes place moment-to-moment.

- *Idappaccayā* means "what happens at this moment depending on the conditions at this moment." Thus, it describes "events in real-time" that bring *vipāka* in real-time, in addition to *vipāka* in the future. See, "Idappaccayatā Paṭicca Samuppāda."
- The *upapatti Paṭicca Samuppāda* process describes how *viññāṇa* energies created up to and within this life lead to future births (i.e., *vipāka* in future lives via future births). Here "*uppatti*" means "birth." See, "Akusala-Mūla Upapatti Paticca Samuppāda."

© 2026 Lal A. Pinnaduwage

Nāmarūpa in *Idappaccayatā Paṭicca Samuppāda*

2. Let us first discuss *nāmarūpa* involved in *Idappaccayatā Paṭicca Samuppāda*, i.e., how a *jāti* can arise in the current life based on one's *avijjā* (ignorance) and *saṅkhāra* (thoughts, speech, and actions).

- *Jāti* is not restricted to "births as a human, a *deva*, an animal." Many different *jāti* (births) arise during the current life itself; see "WebLink: suttacentral: *Jātidhammādi Sutta Dasaka* (SN 35.33)."
- We will discuss two examples below which explain how a "thief" and a "drunkard" are "born" during the current life itself.

"*Viññāṇa Paccayā Nāmarūpa*" During a Lifetime

3. "*Nāmarūpa*" involved in *Idappaccayatā Paṭicca Samuppāda* mainly refer to those "visual images" created by the person when making an "expectation" (*viññāṇa*) to achieve/maintain a certain goal.

- Here, "*nāma*" refers to whatever the "name" given to the subject involved in the *Paṭicca Samuppāda* process, and "*rūpā*" are the associated objects themselves. **Thus, the corresponding "*nāmarūpa*" are the mental images of the subjects in question**.

4. Let us take an example. When a thief plans to steal something (say a watch from a store), the process starts with the step "*saḷāyatana paccayā phasso*;" see, "Generating Kammic Energy in the 'Upādāna Paccayā Bhava' Step." That corresponds to him seeing the watch on display and realizing that he could take it without anyone seeing it.

- That is when he starts acting with *avijjā* initiating a PS cycle at "*avijjā paccayā saṅkhāra*"; he starts thinking about the plan because of his ignorance of the consequences.
- Here "*nāma*" or the name is "watch," and "*rūpa*" is the watch itself. **But "*nāmarūpa*" is the mental image of that watch: That is formed in HIS MIND.** In addition, various other types of *nāmarūpa* related to the plan will go through his mind.
- For example, he may also make visuals of how he will be doing the stealing: "*nāmarūpa*" are the visuals he has in his mind to get the job done.
- He starts doing *vacī saṅkhāra* first: thinking to himself about how to go about stealing the watch. This is "*saṅkhāra paccayā viññāṇa*" and that gives rise to *viññāṇa* for stealing the watch.

5. The more he thinks and makes plans (i.e., makes more and more *nāmarūpa* in his mind, that future expectation for stealing that object (i.e., the *viññāṇa* for it) will get stronger.

- Here the *Paṭicca Samuppāda* process runs backward, "*nāmarūpa paccayā viññāṇa*." This is called an "*aññamañña Paṭicca Samuppāda*." [***aññamañña*** : (adj.), mutual.]
- These forward and backward steps may run back and forth while he is planning the robbery, and the Buddha said that both *viññāṇa* and *nāmarūpa* get stronger due to this feedback. **They depend on each other and feed on each other.**
- The more he thinks about it, the stronger those *viññāṇa* and *nāmarūpa*.
- Ven. Sāriputta provided a simile for this inter-dependence between *viññāṇa* and *nāmarūpa* saying it is like two bundles of hay leaning against each other and supporting each other without any other support.

A Second Example

6. Let us take another case of a teenager whose peers influence him to drink alcohol. Because of his ignorance about the consequences, he engages in such activities and also in planning activities: "*avijjā paccayā saṅkhāra*."

© 2026 Lal A. Pinnaduwage

- Here *saṅkhārā* includes not only drinking activities but also planning. Therefore, all three types of *saṅkhāra* are involved: *mano, vacī,* and *kāya saṅkhāra.*
- While he is participating in drinking he is doing *kāya saṅkhāra*; he will constantly talking about having such parties and those are *vacī saṅkhāra*; it is also in the subconscious and many times a day they come back to his mind as *mano saṅkhāra*. All these are included in "*saṅkhāra paccayā viññāṇa.*"

7. Most people do not realize it, but that process of "thinking and talking to oneself" (*vacī saṅkhāra*) can make a big impact on the formation of *nāmarūpa* and the cultivation of *viññāṇa*. Many people spend hours and hours doing that assuming it does not contribute to "*viññāṇa* (or *kamma*) formation"; see, "Correct Meaning of Vacī Saṅkhāra."

- In the above example, even when he is not drinking, such *mano saṅkhāra* comes to the mind automatically, and he starts consciously thinking about drinking activities: he visualizes pictures of "party scenes," including friends, bottles of his favorite drink, any food that goes with it, etc.
- That conscious thinking is also *vacī saṅkhāra*, and those also strengthen the *viññāṇa* via "*saṅkhāra paccayā viññāṇa.*"
- Now those mental pictures that arise during that process are *nāmarūpa* that arise due to "*viññāṇa paccayā nāmarūpa.*" Therefore, *Paṭicca Samuppāda* steps do not just flow in one way. They can run forward and backward.

8. If the teenager keeps his bad habit of drinking, he gets trapped in that *bhava* (state of mind of a drunkard), the more "drunken *jāti*" will result, i.e., more frequently he will be drunk. When one gets excessively drunk, one tends to behave like an animal without any sense of decency. The long-term consequences could be rebirth as an animal.

- Suppose that "*viññāṇa* of a drunkard" stays strong to the time of death (the *cuti-paṭisandhi* moment at the end of his human *bhava*). In that case, it could lead to a new *uppatti bhava* via the *uppatti Paṭicca Samuppāda* process mentioned in #1 above. We will discuss this second type of *Paṭicca Samuppāda*
- The important point is that such a *paṭisandhi viññāṇa* is likely to give rise to rebirth in the animal realm, as mentioned above.

9. In both these examples, it is clear that those reverse steps also occur: "*nāmarūpa paccayā viññāṇa*" can happen, and does happen, together with "*viññāṇa paccayā nāmarūpa.*" The more one visualizes related *nāmarūpa*, the stronger that *viññāṇa* gets.

- As we saw above, this happens in other steps too (for example, "*saṅkhāra paccayā viññāṇa*" and "*viññāṇa paccayā saṅkhāra*") and such is referred to as an "*aññamaññā Paṭicca Samuppāda* step." Here "*aññamaññā*" means "inter-dependent."
- This is especially true also for the "*saṅkhāra paccayā viññāṇa.*" The stronger the *viññāṇa* gets, one is more likely to engage in the same kind of acts, i.e., *saṅkhāra,* i.e., "*viññāṇa paccayā saṅkhāra.*" They feed on each other. This often happens in habit formation; see, "9. Key to Ānāpānasati – How to Change Habits and Character (Gati)."

Viññāṇa Paccayā Nāmarūpa at *Paṭisandhi* (in *Upapatti* PS)

10. At the end of existence (*bhava*), a given lifestream jumps from one kind of existence to another. The easiest to visualize is the case of a *Brahma* to a *Deva* transition. The "*nāma"* part changes from a *Brahma* to a *Deva*, and the "*rūpa*" part changes from 2 *pasāda rūpa* for the *Brahma* to 5 for the *Deva*. [Need to check == *Brahma* to a *Deva* transition???]

- That transition happens in the latter part of the last *citta vīthi* of the life of *Brahma*. At that *cuti-paṭisandhi* moment, the "*Brahma nāmarūpa*" dies and a "*Deva nāmarūpa*" is created by *kammic* energy. This is discussed in a bit more detail in the post "Cuti-Paṭisandhi – An Abhidhamma Description."

© 2026 Lal A. Pinnaduwage

11. For humans (and animals,) the situation is a bit more complex because the first type of "human *nāmarūpa*" created is a human/animal *gandhabba*.

- In the cases of a human or an animal, the second type of *nāmarūpa* forms when that *gandhabba* merges with a zygote in a womb. That *nāmarūpa* is the basis for the physical human body. So, it depends on the particular case at hand.
- Let us consider the case of a human dying and born into a deer. A *gandhabba* is involved in both lives.

Example of a Human to Deer Transition

12. In general, as soon as the *viññāṇa* for the next existence was determined at the last *citta vīthi* by the step "*saṅkhāra paccayā viññāṇa*," the next step of "*viññāṇa paccayā nāmarūpa"* gives rise to the *nāmarūpa* for the next life.

- When human life ends, that "human *gandhabba*" will die, and at that *cuti-paṭisandhi* moment a "deer *gandhabba*" will arise.
- Thus here, "*nāma*" includes the basic level of *viññāṇa* for the new deer's existence, which is much different from the "*nāma*" of a human. The "*rūpa*" is that of a deer and not of a human. Thus "*nāmarūpa*" makes a huge transition at the end of the "*bhava*" from human to a deer.
- Of course, now that "deer *gandhabba*" needs to be pulled into the womb of a female deer (i.e., doe) to be born a deer.

13. I have discussed previously how a "deer *gandhabba*" could be reborn many times as a deer until the *kammic* energy of the "deer *bhava*" is exhausted; see, "Bhava and Jāti – States of Existence and Births Therein."

- In such instances, at the death of the deer, a "deer *gandhabba*" emerges from the dead body and waits for a suitable womb for the "deer mother" to become available. Here the new "*nāmarūpa*" may be somewhat different, but still, that of a deer so any change would be minor.
- Therefore, the "*viññāṇa paccayā nāmarūpa*" gives rise to a new set of "*nāmarūpa*" only at the *paṭisandhi* to a new existence.

Viññāṇa is a key concept in Buddha Dhamma. We can analyze it at various levels, and a deeper analysis is at "Viññāṇa Aggregate."

Next, "Nāmarūpa Paccayā Saḷāyatana", ……

9.10.7 Nāmarūpa Paccayā Saḷāyatana

Revised May 25, 2019; August 31, 2019; major revision May 20, 2021; September 9, 2022

"*Nāmarūpa Paccayā Salāyatana*" step involves different types of *nāmarūpa* and *saḷāyatana* depending on whether it is an *Idappaccayatā* or a *upapatti Paṭicca Samuppāda*.

Āyatana and *Indriya*

1. First, let us discuss the difference between a *āyatana* and an *indriya*.

- We have six sense faculties: eyes (*cakkhu*), ears (*sota*), nose (*ghāṇa*), tongue (*jivhā*), body (*kāya*), and the mind (*mano*). These are the *indriya*.
- Our initial sensory inputs (what we see, hear, etc.) are due to *kamma vipāka* based on this life with a solid, physical body. Unlike *Brahma*'s "energy body," our "solid body" can be exposed to various ailments. At the moment of experience, these sensory faculties act as *indriya.* For example, when we see an attractive person on the road, that is just "seeing the event" with the ***cakkhu indriya***.

© 2026 Lal A. Pinnaduwage

- However, based on those initial sensory experiences, we may INTENTIONALLY use those *indriya* to "enjoy that *ārammaṇa*." Then those *indriya* become *āyatana.* In the above example, if we get attached to that attractive person and keep looking at that person, then we use our eyes as *cakkhāyatana*. In the same way, *sota indriya* becomes *sotāyatana*, and so on for all six.
- They are called *saḷāyatana* since there are six of them.

2. There is no equivalent English word for *āyatana*, so we will keep using *indriya* and *āyatana* from now on.

- **By the way, *pañca indriya* (*saddhā, sati, viriya, samādhi, paññā*) are an entirely different set compared to this set of 6 *indriya*.**
- In general, "*indriya*" means a "dominant faculty." Those that are dominant in the interactions with the external world are the six *indriya* in #1; those dominant in spiritual advancement are the five *indriya* in *pañca indriya.*

Examples of *Indriya* Becoming *Āyatana*

3. For example, I am walking on the road and see a nice house. I just happened to see it, and my eyes (*cakkhu indriya*) were working as *indriya*; they just presented a picture of that house to my mind. It is a neutral event.

- However, if I form an attachment to the house, I start looking at it for a while (with *cakkhāyatana*). I am thinking about how nice that house is and even about building one like that. At that point, I am also using my mind as a *āyatana* (*mana indriya* now becomes *manāyatana*).
- I have formed greedy thoughts about the house and now I am accumulating new *kamma* by generating *vacī saṅkhāra* (talking to myself with *vitakka*/*vicāra*). I use my eyes and mind as *āyatana* (*cakkhāyatana* and *manāyatana*): I keep seeing the house and thinking greedy thoughts.

Indriya Become *Āyatana* With *Abhisaṅkhāra*

4. In many cases, when we experience a sensory event through one *indriya*, we may start using some or all of the *indriya* as *āyatana*. In another example, someone offers us a piece of a tasty cake (a *kamma vipāka*). We get the cake's taste with the tongue (*jivhā*) and like it so much we may use all six *āyatanas* to accumulate more *kamma* (smell and touch it and then ask for the recipe and think about how to make it or where to buy it).

- Those "extra activities" that we do with *āyatana* COULD BE *abhisaṅkhāra* (depending on whether greed was involved.) But just eating a cake is not *abhisaṅkhāra;* see "Kāma Rāga, Rūpa Rāga and Arūpa Rāga."
- Most of the time, we use our sense faculties as *indriya*: we see, hear, etc., many things in a day but ignore most of them. But when we experience something that we have a craving for, we start using our sense faculties as *āyatana*.
- Both types of *Akusala-Mūla Paṭicca Samuppāda* cycles operate only when we use our sense faculties as *āyatana*.
- An *Arahant* ALWAYS uses his/her sensory faculties as an *indriya*. He/she will see, hear, etc just like us, but will not get "attached to" anything.

5. However, we DO NOT use our *indriya* as *āyatana* in most situations. For example, I may become thirsty. Then I need to think about getting a glass of water or asking someone for a glass of water. Both involve *vacī saṅkhāra.* Then I drink water that involves *kāya saṅkhāra* (moving body parts.) Those are *kammically* neutral and NOT *abhisaṅkhāra*.

© 2026 Lal A. Pinnaduwage

- In another example, suppose a robber attacks you with a knife in an isolated place. If possible, you would want to disarm him without killing or hurting him too much in the process. If that is not possible, you may want to try to run away. All those activities involve *kāya saṅkhāra*. But they are NOT *abhisaṅkhāra* that involve greed, anger, or ignorance (*lobha, dosa, moha*.) The INTENTION (*cetanā*) there is to avoid injury to both.

Saḷāyatana Means Different Things in The Two Types of PS

6. *Saḷāyatana* has somewhat different meanings in the *idappaccayatā* and *paṭisandhi Paṭicca Samuppāda* cycles. That is very much like for *nāmarūpa* that we described in the previous post.

- At birth (especially in a new *bhava* or existence), we get a "new set of sense faculties" or *indriya*. For example, if a human is reborn as a *Brahma*. A *Brahma* will have only eyes, ears, and mind. There will be only three *indriya* (or *āyatana*) instead of six for human. But we keep the term "*saḷāyatana*" in the *Paṭicca Samuppāda* as a generic term.
- Thus in *Upapatti Paṭicca Samuppāda*, we are concerned with forming a brand new set of *āyatana* for a new existence (*bhava*).
- However, when we consider the *Idappaccayatā Paṭicca Samuppāda* series, we are concerned with how the six *āyatanas* for a human change from even moment to moment. In particular, the issue is whether they are being used as *āyatana* or *indriya*.

"*Nāmarūpa paccayā Saḷāyatana*" at *Paṭisandhi* (*Upapatti* PS)

7. At the end of existence (*bhava*), a given lifestream makes a "big jump" from one kind of existence to another. At that time, the base level of *viññāṇa* for the lifestream makes a jump, and this is the "*nāma*" of the *nāmarūpa*. The *nāmarūpa* for the new existence also has a different blueprint for the new physical body, the "*rūpa*" part.

- As we did in the previous post, let us consider the case of a lifestream transitioning from a human to a deer. The basic level of *viññāṇa* changes from a human to a much lower level of a deer. This new level of *viññāṇa* together with the blueprint for the deer is in the new *nāmarūpa* of the "deer *gandhabba*" that comes out of the body of the dead human, as we saw before.
- Now when this *gandhabba* descends to the womb of a female deer, that baby deer starts to grow. Six sense faculties (*indriya*) suitable for a deer grow in that womb, which may become *saḷāyatana* **at times** in the future after the birth.

8. In another example, consider a human who exhausted his *kammic* energy for the human *bhava* at death, and became a *Deva* in one of the *Deva* realms. At the *cuti-paṭisandhi* transition in the last *citta vīthi* of that human, the human *gandhabba* dies. In the next moment, a *Deva gandhabba* is born.

- All *devas* are born fully formed. There is no need for a mother's womb. That is an *opapātika* birth.
- When that human dies, his body becomes inert like a log. At that very instant, a fully-formed *Deva* appears in the appropriate *Deva* world.
- That *Deva* will have sense faculties appropriate for a *Deva*. Those are the *indriya* for the new existence. Those *indriya* **can sometimes become** *āyatana* depending on *Deva*'s activities.

"*Nāmarūpa paccayā Saḷāyatana*" During a Lifetime (*Idappaccayatā* PS)

9. During a given lifetime of a deer, human, or a *Brahma*, that lifestream will have a basic set of *indriya* (that become *āyatana* at times) appropriate for that existence: the sense faculties for a human are different from that of a deer or a *Brahma*.

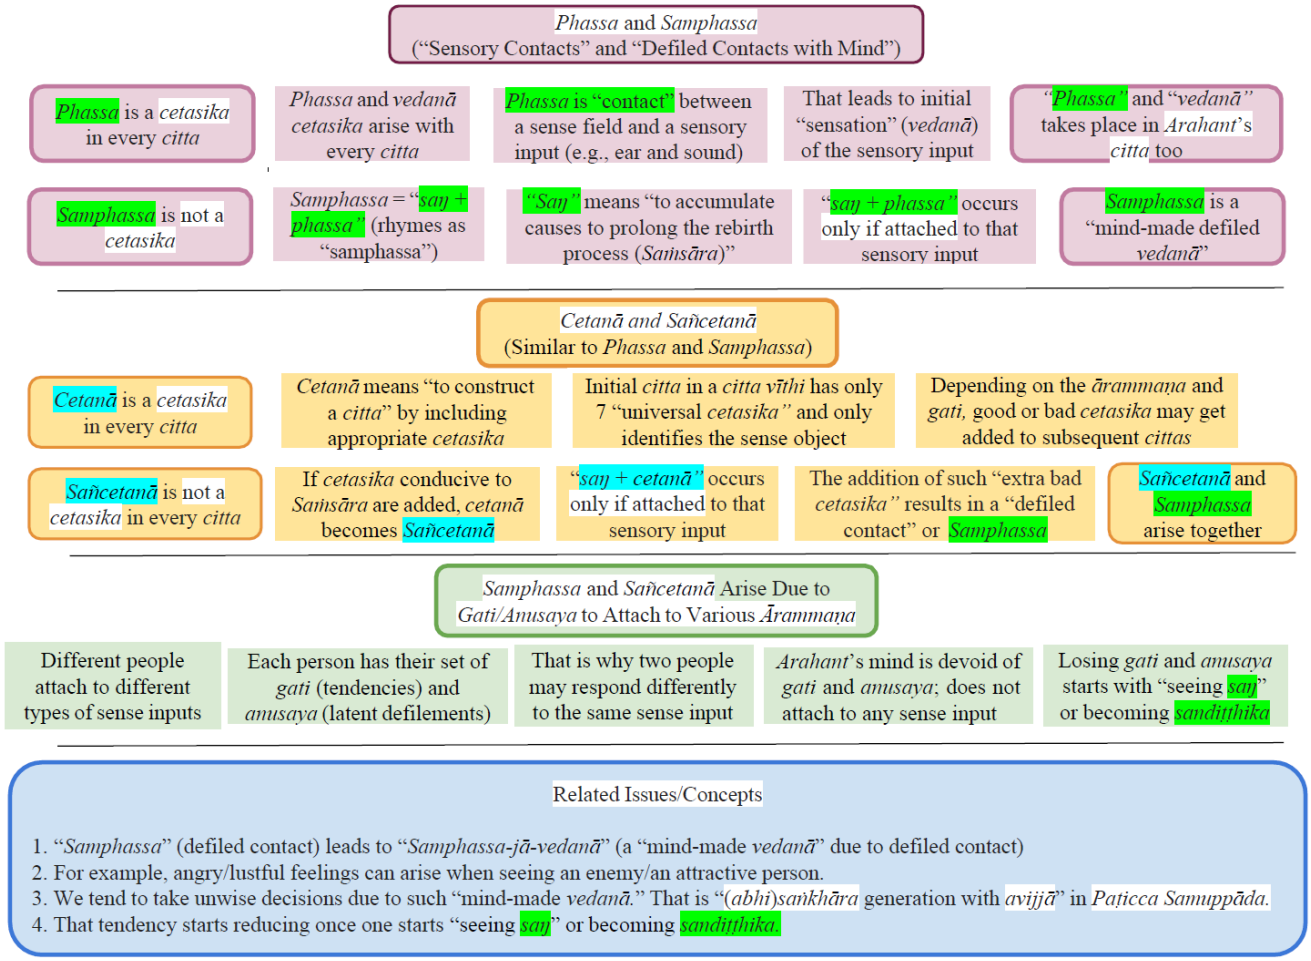
© 2026 Lal A. Pinnaduwage

- But during that lifetime, those *āyatana* will have minor changes (compared to the drastic changes at *paṭisandhi*) depending on the activity. *Idappaccayatā Paṭicca Samuppāda* cycle describes such changes.

An Example in *Idappaccayatā* PS

10. In the previous post, we discussed the case of a thief who is planning a theft; see #4 of "*Viññāṇa Paccayā Nāmarūpa*." His *viññāṇa* about the theft led him to generate appropriate *nāmarūpa* (the visuals in his mind of how the theft is to be carried out).

- When he plans the theft, he will use his sense faculties as *āyatana* to do the "preparatory work." He will read about the place to be robbed, ask for relevant information, etc. Each time he does a specific act (whether thinking, seeing, hearing, etc.), the *Idappaccayatā Paṭicca Samuppāda* cycles operate.
- Now when he is about to steal, his *indriya* becomes *āyatana*. All his sense faculties will be on high alert. He watches and listens carefully for anything unexpected, and his whole body becomes tense, pumped with adrenaline.
- All his *āyatana* will be employed to carry out the task. He will be using his body, eyes, and ears as *āyatana*. The act of stealing the watch is done with *kāyāyatana* (*kāya āyatana*) and involves *kāya abhisaṅkhāra.* It is an *abhisaṅkhāra* because it involves greed.
- In comparison, getting the same watch by paying for it is a *kāya saṅkhāra* where the body is used as an *indriya.* Both times he used his hand to hold the watch. It is the INTENTION (*cetanā*) that determines whether the body was used as an *āyatana* (with *kāya abhisaṅkhāra*) or an *indriya* (*kāya saṅkhāra*.)



Next, "Difference between Phassa and Samphassa", …….

9.10.8 Difference between Phassa and Samphassa

Revised November 6, 2018; June 2, 2019; re-written April 14, 2021; re-written May 7, 2021

"*Samphassa*" must be used for "*phassa*" in "*phassa paccayā vedanā*" in *Akusala-Mūla Paṭicca Samuppāda*.

Buddhism – In Charts: 12. Phassa and Samphassa

Download/Print: "WebLink: PDF Download 12. Phassa and Samphassa"

Phassa and *Samphassa* – Incorrect Translations

1. No differentiation is made between "*phassa*" and "*samphassa*" in most English translations of *Paṭicca samuppāda*. **Both words are translated as "contact" in English translations without making the distinction.**

- For example, the "WebLink: suttacentral: *Paṭiccasamuppāda Sutta* (SN 12.1)" provides the *uddesa* (utterance) version in *Paṭicca samuppāda* as "*saḷāyatanapaccayā* ***phasso***." The *niddesa* version of that (brief description) appears in the following "WebLink: suttacentral: *Vibhaṅga Sutta* (SN 12.2)" as "*cakkhu****samphasso***, *sota****samphasso***, *ghāna****samphasso***, *jivhā****samphasso***, *kāya****samphasso***, *mano****samphasso***."
- However, no distinction is made in the translations of the above links. Both are translated as "contact."
- **As we will see below, "*samphassa*" has a very different meaning than "*phassa*" and makes the connection of how our instinctive reactions to external sense experiences arise based on our "*saṁsāric* habits" or "*gati*."**

Phassa Is in All *Citta*

2. When we see, hear, etc. a *citta* arises that recognize the sensory input. Seven *cetasika* (mental factors) arise with ANY *citta*, and *phassa* and *vedanā* are two. We will have no sensory experience without the *phassa* (contact) *cetasika*.

- When the mind contacts that image of the external object, a series of *citta* arises. We experience only the overall effect of millions of such *cittā* due to that contact.

© 2026 Lal A. Pinnaduwage

- Some of the seven universal mental factors that arise with the *citta* instantaneously identify the object. These include *vedanā* and *saññā*. Both are universal *cetasika*.
- **If *samphassa* takes place, there will be an additional, mind-made *vedanā* called "*samphassa-jā-vedanā*" as discussed below.**

Samphassa – How Does It Arise?

3. An average human will form a like or a dislike for some of the sense inputs (but not for all).

- If a like or dislike is formed, then that sensory contact is "*saŋ phassa*" ("*saŋ*" + "*phassa*," where "*saŋ*" are defilements (greed, anger, ignorance); see, "What is "Saŋ"? Meaning of Sansāra (or Saṁsāra)"). It rhymes as "samphassa."
- This "combination effect" or "Pāli *sandhi*" leads to the pronunciation of many "*saŋ*" words with an "m" sound: "*saŋ*" + "*mā*" to "*sammā.*" In the same way, "*saŋ*" "*yutta*" to "*saṁyutta,*" "*saŋ*" "*bhava*" to "*sambhava,*" and "*saŋ*" "*sāra*" to "*saṁsāra*"; see, "List of "Saŋ" Words and Other Pāli Roots." In English texts, "*Saŋ*" in combined words may be written as *Saŋ*/*San*/*Saṅ*/*Saṇ*/*Sañ*/*Saṁ*/*Sam*. [See "What is "Saŋ"? Meaning of Saŋsāra (or Saṁsāra)"]
- Thus, when one sees, hears, smells, tastes, touches something, whether there will be any likes or dislikes towards that sensory experience depends on that person, or more specifically, the "*gati*" (habits/character) of that person.

Examples of *Samphassa*

4. Let us discuss some examples to illustrate how "*samphassa*" arises. First, let us look at the connection with those people/things in the world that we have special relationships with or what we "*upādāna*," i.e., like to either keep close or stay away from.

- Think about the worst "enemy" you have. When you even think about that person X, you generate unpleasant feelings. But X's family will have loving thoughts about X. Here, you and X's child (for example) would have generated very different "*samphassa*" when thinking, seeing, and hearing about X.
- When you travel by car or bus and look out the window, you may see zillion things, but those are just "seeing"; you don't pay much attention to them. They are "*phassa*." But now, if you happen to see a beautiful house, it piques your interest, and you may even turn back and take another good look at it and even think about how nice it would be to live in a house like that. That is "*samphassa*."

5. A critical point is that one's perception of what is "valuable" can lead to "*samphassa*." Suppose someone inherits a valuable gem from his father. Every time he sees it or even thinks about it, he becomes happy. But his mind is also burdened by it since he is worried that he may lose it; he is keeping it in a safe and has put burglar alarms in the house to protect that gem.

- Suppose one day he asks a professional to evaluate the gem and finds out that it is not a gem but a fake. He may not even believe that initially, but once confirmed, he will become "detached" from it. He will no longer keep it in the safe and may even throw it away in disgust.
- Now he may be generating neutral or hateful thoughts about the SAME OBJECT he once loved. Nothing changed about the "gem"; it is still the same object as before. What has changed is his PERCEPTION of the value of that object. Whereas he generated "*samphassa*" on thinking or seeing that object before, now he may generate just "*phassa*" (neutral feelings) or "*samphassa*" with quite the opposite feelings of disgust.

Phassa/*Samphassa* and *Cetanā*/*Sañcetanā*

© 2026 Lal A. Pinnaduwage

6. *Phassa* and *cetanā* are both universal *cetasika* that arise with every *citta*. A *citta vīthi* starts with an "undominated *citta*" but gets contaminated if the mind gets attached to the *ārammaṇa*. We do not experience individual *cittās* but only the cumulative effect of millions of *cittās* that arise in a second. As *cittās* get contaminated, *asobhana* (defiled) *cetasika* are incorporated by ***cetanā*** *cetasika* it turns into ***sañcetanā.*** That happens simultaneously with ***phassa*** leading to ***samphassa***.

- **If the "intention" does not involve *lobha, dosa*, or *moha* (*avijjā*), it is only a *cetanā* or "intention" to get something done.** Here, ***kamma* done is just an action without *kammic* consequences.** For example, if one walks to the kitchen to get a glass of water, that is done with a neutral *cetanā;* the "intention" is to quench the thirst. It is NOT a ***sañcetanā.*** There is no "defiled contact" or "***samphassa"*** either.
- However, almost all current English translations do not make that critical distinction. For example, *sañcetanā* in the "WebLink: suttacentral: *Sañcetanā Sutta* (SN 27.7)" is translated as "intention," and *samphassa* in the "WebLink: suttacentral: *Samphassa Sutta* (SN 18.4)" is translated as "contact." The translators do not understand the difference between *Phassa*/*Samphassa* and *Cetanā*/*Sañcetanā.*
- A ***cetanā*** becomes a ***sañcetanā*** (***saṇ*** + ***cetanā***) — and ***phassa*** becomes ***samphassa*** — if it involves "***saṇ"*** or ***lobha, dosa, moha* (*avijjā.*)** See "San – A Critical Pāli Root" and "Details of Kamma – Intention, Who Is Affected, Kamma Patha."

Phassa Can Turn to *Samphassa* in an Instant

7. Let us take another example that Waharaka *Thero* gave. This one clearly shows how the transition from "*phassa*" to "*samphassa*" can happen very quickly.

The following happened a long time ago in Sri Lanka. A mother had to go overseas when her son was less than a year old. She had been overseas for many years and returned to see her son. She had not even seen any pictures of the boy, who was now a teenager. When she gets home, she is told that the boy is visiting a neighbor, and she starts walking there. On the way, she bumps into a teenager; she admonishes the teenager for not paying attention and resumes walking. But then another person on the street says, "Don't you recognize your son? Well. How can you? You have been away all this time". Hearing that, she says, "Oh, is that my son?" and immediately runs back and hugs him.

- She saw the boy when he bumped into her and even got upset with him. But at that time, he was just a teenager to her. That "seeing" event involved "*phassa*."
- But when someone pointed out that it was her son, her perception of the boy took a giant leap instantly. Now she looks at the same boy with a new set of "mental baggage." Now it is not just a teenager, but her son; attachment is involved. Now when she looks at him, "*samphassa*" is involved.

8. We can also see how "*samphassa*" leads to an **intensified** *vedanā* or feelings. This is called "***samphassa-jā-vedanā***" or "*vedanā* arising due to *samphassa*." This "**mind-made defiled *vedanā***" is different from the universal *vedanā* as we discussed in #7 above.

- She had neutral thoughts (may be even some annoyance) when the boy bumped into her and apologized. But when she learned it was her son, her feelings instantly turned to joy.
- To take it a bit further, if that teenager got hit by a car after several minutes, that joy would turn instantly to sorrow.
- These different types of "*vedanā*" arise based on the type and level of "attachment" to a given object, in this case, the boy.

Samphassa/*Sañcetanā* – Connection to *Gati*

© 2026 Lal A. Pinnaduwage

9. "*Samphassa*" is intimately connected to one's "*gati*" or habits, most of which come from our past lives, even though some may be strengthened or weakened by what we do in this life. We may even start forming new "*gati*" in this life. Note that "*gati*" is pronounced "ga**thi**," like in "**Th**ief."

- For example, a young lady looking at a dress may form a liking for it. Another person seeing his enemy will form a dislike. Upon hearing a song, a teenager may form a liking/craving for it, etc.
- This "contact with *saŋ*" (or *samphassa*) happens instantaneously. That initial *samphassa* arises automatically purely based on our "*gati*." But since our actions based on that initial reaction take some time, we still have time to control our speech or bodily actions. Even if bad thoughts come to our minds, we can stop speech or bodily actions. That is *Kāyānupassanā* in *Satipaṭṭhāna* meditation or *Ānāpānasati*.
- Many posts on this site discuss "*gati*," and at the fundamental level, both *Ānāpāna* and *Satipaṭṭhāna* meditations are all about removing bad "*gati*" and cultivating good "*gati*"; see, "9. Key to Ānāpānasati – How to Change Habits and Character (Gati)".

An *Arahant* Has *Phassa* but Not *Samphassa*

10. Now, let us consider what happens when an *Arahant* sees or hears similar things (*phassa* or "contact" occurs.) He/she will see or hear the same thing as any other person.

- But an *Arahant* will not be attracted to it or repelled by it. There will be no *samphassa*. Thus, there will be no "*samphassa jā vedanā*" either.
- Put another way, an *Arahant* sees, hears, etc., without bias or *samphassa*. He/she will also generate *vedanā*, but not "*vedanā* due to *samphassa*."
- An *Arahant* has removed all such defiled "*gati*," closely related to cravings or "*āsava*." An *Arahant* has removed all "*āsava*"; this is what is meant by "*āsavakkhaya*" at the *Arahanthood*. This is a technical detail that may not be clear to some; don't worry about it if it unclear yet.
- ***Samphassa* cannot be removed with willpower. It gradually fades away as one attains higher stages of *magga phala*** (starting with comprehending *"saŋ"* by becoming "***Sandiṭṭhika***"; see below.)

Samphassa Leads to *Samphassa-jā-Vedanā*

11. Therefore, now we can see that the step "*phassa paccayā vedanā*" in *Akusala-Mūla Paṭicca Samuppāda* is the "*uddesa* version" and "*samphassa paccayā samphassa-jā-vedanā"* is the "*niddesa* version;" see "Sutta Interpretation – Uddesa, Niddesa, Patiniddesa."

- However, in most English translations, "*phassa paccayā vedanā*" in ***Akusala-Mūla Paṭicca Samuppāda*** is translated as "Contact is a condition for feeling" ("WebLink: suttacentral: *Paṭiccasamuppāda Sutta* (SN 12.1)") and just below that (at the marker 3.6) "*phassa nirodhā vedanā nirodho*" is translated "When contact ceases, feeling ceases." after one attains *Arahanthood*. That INCORRECTLY implies an *Arahant* would not have feelings! However, an Arahant would have "*vedanā*" but NOT "*samphassa-jā-vedanā*."
- For an *Arahant*, there is only "*phassa*" or mere contact with the external sensory input. An *Arahant* will thus "see," "hear," "smell," "taste," or "feel" the same things as any other person. But an *Arahant* will not be attached or repulsed by that sensory experience.
- I have discussed many problems with translators directly translating the "*uddesa* versions" of key verses; see "Word-for-Word Translation of the Tipiṭaka."
- More details on how "*samphassa*" leads to *samphassa-jā-vedanā* at: "Vedanā (Feelings) Arise in Two Ways," "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event," and "Dukkha Samudaya Starts With Samphassa-Jā-Vedanā."

© 2026 Lal A. Pinnaduwage

Samphassa-jā-Vedanā Starts to Fade Away When One Becomes "*Sandiṭṭhika*"

12. The defiled contacts ("*samphassa*") (and also defiled intentions or *sañcetanā*) start fading away when one becomes a *Sotāpanna Anugāmi.*

- That happens when one starts comprehending the Noble Truths/*Paṭicca Samuppāda*/*Tilakkhaṇa or "seeing saŋ*" or "***sandiṭṭhika***" (***saŋ diṭṭhi***.)
- All posts in the new section on "Buddhism – In Charts."

9.10.9 Phassa paccayā Vēdanā….to Tanhā

Rewritten May 25, 2021; rewritten with new title June 3, 2023

"*Phassa paccayā vedanā*" in *Akusala-Mūla Paṭicca Samuppāda* processes is really "*samphassa paccayā samphassa-jā-vedanā*." That automatically leads to attachment or *taṇhā.*

Samphassa Is a "Defiled Contact"

1. In a previous post, we discussed the difference between "*phassa*" and "*samphassa*." See "Difference between Phassa and Samphassa." To summarize:

- "*Phassa*" is pure mental contact. It is just seeing, hearing, smelling, tasting, touching, or just an arbitrary thought that comes to the mind without one's own likes/dislikes. *Phassa* is a universal *cetasika* and is present in ALL *cittā*. Whether it is an average person or an *Arahant*, sensory contact is made with "*phassa*."
- However, that sensory contact can turn into a "defiled contact" (*samphassa*) for an average person. For example, one may walk down the street and see an expensive ring on the road. That initial "seeing" is due to a *kamma vipāka*; that involves only "*phassa*." But now, greedy thoughts arise, and he picks it up and quickly puts it in his pocket. He did that action with "*samphassa*" ("greedy contact.")
- Thus, the *Akusala-Mūla Paṭicca Samuppāda* involves "*salāyatana paccayā samphassa*," even though it is usually written as "*salāyatana paccayā phassa*" in the "*uddesa*" or "brief" statement.
- Only an *Arahant* will always have just "*phassa*" and at no time "*samphassa*."

2. Because of that "defiled contact," a "mind-made *vedanā*" (*samphassa-jā-vedanā*) can arise in an average person but not in an *Arahant*.

- If that "mind-made *vedanā*" is a joyful/pleasant one, then one would instantly attach to that sensory contact with greed.
- If it is an unpleasant *vedanā*, one will attach with anger/displeasure, for example, when seeing a person with disliked.
- One may also attach to a "neutral *vedanā*" if one is unsure about the nature of that sensory input; that can happen due to *avijjā* or ignorance.

Attachment to a Sensory Input (*Taṇhā*) Is Instantaneous

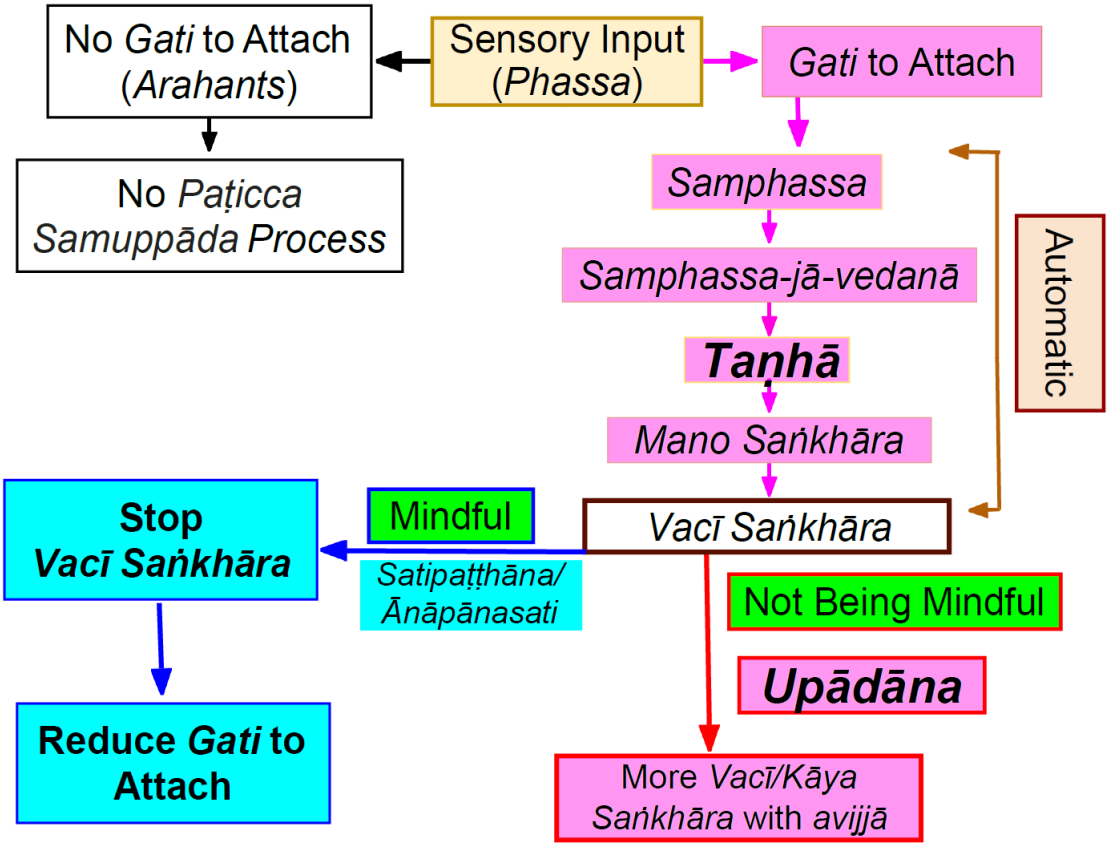
3. In all the above cases, attachment is instantaneous, and it is called *taṇhā.*

- *Taṇhā* means "getting attached." The word *taṇhā* comes from "*thán*" meaning "place" + "*hā*" meaning getting fused/welded or attached (ඇලීම in Sinhala). Note that "***taŋ***" in ***taṇhā*** pronounced like in "**thun**der." See "Pāli Words – Writing and Pronunciation."

© 2026 Lal A. Pinnaduwage

- What do we attach to? We attach to sensory inputs or *ārammaṇa.*
- Sensory inputs (*ārammaṇa*) come in through the six sense faculties, possibly leading attachment via *rūpa taṇhā, sadda taṇhā* through *dhamma taṇhā*: "WebLink: suttacentral: *Taṇhā Sutta* (SN 27.8)." Of course, we don't attach to every sensory input.

4. We attach to specific sensory inputs based on the view/perception that those can provide us happiness (*sukha*), and thus, they are fruitful (*atta*) and worthwhile pursuing. We like (*icca*) to acquire things that can make us happy and want to get rid of those things we dislike; that gives rise to a sense of "*nicca* nature" about the world.



- But the things we like are based on our *gati*. If one has a matching *gati* to attach to a type of *ārammaṇa*, the attachment happens instantaneously with exposure. **It is like a matchstick making contact with the rough surface of a matchbox; the matchstick catches fire instantly.**
- That attachment is automatic based on one's *anusaya*/*gati*.
- *Taṇhā* cannot be removed directly by sheer willpower. The key to eliminating *taṇhā* is gradually reducing our *gati* to attach to certain types of *ārammaṇa.*

Reducing *Taṇhā* Can Only be Done in the *Upādāna* Stage

5. How do we gradually reduce our *gati* to attach to such *ārammaṇa*? The key to reducing such *gati* lies in the next step of *upādāna*, which starts with "*taṇhā paccayā upādāna*."

- Once attached, "knowingly staying attached" to that *ārammaṇa* is *upādāna*. This is where we start accumulating *abhisaṅkhāra* with *mano, vacī*, and *kāya saṅkhāra* in that sequence. We become conscious of "being attached" in the early stage of *vacī saṅkhāra*, where we start "talking to ourselves" without speaking out. See "Correct Meaning of Vacī Saṅkhāra."
- If we get interested, we may start speaking about it; that also involves *vacī saṅkhāra*. If that interest builds up, we may take action with *kāya saṅkhāra*. In other words, we may engage in *vacī* and *kāya saṅkhāra* even for hours.
- **Unlike the instantaneous step of *taṇhā*, the mind stays in the "*upādāna*" stage for a relatively long time.**
- By being mindful, we can break that *upādāna,* which is the key to *Ānāpānasati*/*Satipaṭṭhāna*, as outlined in the chart below.

© 2026 Lal A. Pinnaduwage

Taṇhā is Automatic

Print/Download: "WebLink: PDF Download: Taṇhā is Automatic"

"Unwise *Gati*" Are Cultivated

6. As discussed above, it is an immoral or unwise *gati* that triggers a sequence of events in rapid succession leading to *taṇhā*.

- Understanding how various types of *gati* are formed is critical to understanding *Paṭicca Samuppāda.*
- **Even though *anusaya* moves from birth to birth, various types of *gati* are cultivated during a lifetime.**
- Without the presence of a "*gati* to attach," *taṇhā* cannot arise!
- However, until *anusaya* are eradicated, the possibility of developing *gati* for various sensory inputs remains. Once such a *gati* is cultivated, attachment (*taṇhā*) to corresponding *ārammaṇa* is inevitable.

Removal of *Gati* (By Being Mindful) is the Key to the Eradication of *Anusaya*/*Taṇhā*

7. Each time we attach (*taṇhā*) to *ārammaṇa*, we strengthen the corresponding *gati* and associated *anusaya*. The reverse is true, too: Each time we stop attaching to an *ārammaṇa* at the *upādāna* stage, the corresponding *gati* and *anusaya* reduce too.

- That is why the cultivation of the Noble Path involves *Ānāpānasati*/*Satipaṭṭhāna.*

A Newborn Baby Has *Anusaya*, but Not *Gati*

8. A newborn baby does not have any *gati*. Of course, all types of *anusaya* are hidden in that baby's mind; different types of *anusaya* keep changing but remain with a given lifestream.

© 2026 Lal A. Pinnaduwage

- As the baby grows and the brain develops, various types of *gati* are acquired. The types of *gati* acquired will depend a lot on the environment.
- For example, a child growing up has no interest in drinking alcohol, taking drugs, or getting into fights. However, "*gati*" to engage in such activities can be acquired within a few months. Let us consider an example.

Cultivation of *Gati* to *Taṇhā*

9. Suppose there is a teenager who comes to associate with friends that belong to a street gang. They tell him that one needs to enjoy life and has to do "whatever it takes" to make money to enjoy life. If the parents do not have close contact with the teenager, there is no one to explain the perils of such a way of life, and he embraces this wrong vision or "*micchā diṭṭhi*."

- Thus due to ignorance (*avijjā*), the teenager starts doing things, speaking, and thinking like those gang members: "*avijjā paccayā saṅkhāra*."
- Then what occupies his mind most of the time are defiled thoughts (*abhisaṅkhāra*) and expectations (*kamma viññāṇa*) related to gang activities and seeking pleasures by using drugs and alcohol: "*saṅkhāra paccayā viññāṇa*." Thus, a corresponding "defiled mindset" (*viññāṇa*) occupies his mind at those times. During gang activities, his thoughts are focused on them, and what is in his subconscious during other times is also related to such activities.
- Now the teenager has acquired a new *gati.*

10. **The cultivation of various types of *kamma viññāṇa* is directly related to the cultivation of corresponding *gati*.** As that *kamma viññāṇa* grows, the corresponding *gati* grows too.

- That, in turn, leads to "*viññāṇa paccayā nāmarūpa*". He thinks about and visualizes various gang activities: How to sell drugs to make money and how he will enjoy the rest of the time hanging out with the gang.
- Thus all his six sense faculties become "*āyatana*": they all are used to find ways to optimize the gang activities and to think about ways to "have fun": "*nāmarūpa paccayā salāyatana*." Now the *gati* has matured and is ready to be triggered instantaneously.
- Now, any sensory contact (*ārammaṇa*) related to a gang activity belongs to "*salāyatana paccayā phassa*" or, more explicitly, "*salāyatana paccayā samphassa*." **As discussed above, that leads to *samphassa-jā-vedanā* and *taṇhā* automatically.**
- Further details in "Difference Between Taṇhā and Upādāna."

Gati Can be Broken Only at the *Upādāna* Stage

11. As further discussed in the post, "Difference Between Taṇhā and Upādāna," the "*taṇhā paccaya upādāna*" is a critical step in *Paṭicca Samuppāda*.

- *Upādāna* ("*upa*" + "*ādāna*," where "*upa*" means "close (to mind)" and "*ādāna*" means "pull." Here, it means to "stay on that *ārammaṇa*" by engaging in more *vacī* and *kāya saṅkhāra*.
- That, of course, will lead to further strengthening of the corresponding *kamma viññāṇa* and *gati!*

12. That vicious cycle can be broken only if the teenager understands the dangers of staying on that downward path.

- Someone must explain to him the dire consequences (*ādīnava*) of continuing such activities.
- It will take a considerable effort to "be mindful" and break such habits (*gati.*) But that is the only way.

Note: This post replaces the post "Phassa paccayā Vedanā….to **Bhava**." Don't forget to read the related post, "Difference Between Taṇhā and Upādāna."

9.10.10 Difference Between Taṇhā and Upādāna

October 25, 2018; revised November 4, 2019; December 5, 2019; March 30, 2021; September 8, 2022; May 27, 2023

Taṇhā happens automatically due to "bad *gati*." We have control over "*upādāna*" because that is when we become aware of the "attachment."

Introduction

1. The difference between *taṇhā* and *upādāna* is subtle, and it is critical to understand that difference. It is the key to understanding how to eliminate bad *gati* and cultivate good *gati*. That is the way to *Nibbāna*.

- That understanding is also critically important to get the basic idea behind the *Satipaṭṭhāna* (and *Ānāpānasati*) *Bhāvanā*.

2. *Satipaṭṭhāna* (and *Ānāpānasati*) *Bhāvanā* are about being mindful and catching new immoral/unwise thoughts that arise in one's mind. One should stop such thoughts immediately. If the thought is good (say about a Dhamma concept), one should stay on it.

- The English word "thought" is too simplified. It includes *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa*, each of which is complex; see "Mental Aggregates" and "Viññāṇa – What It Really Means."
- *Saṅkhāra* is especially crucial since *kammic* energy for future *vipāka* is created by the three types of *saṅkhāra*: *mano saṅkhāra, vacī saṅkhāra*, and *kāya saṅkhāra*; see, "Saṅkhāra – What It Really Means."
- Therefore, we will stay with those Pāli words.

Mano saṅkhāra Arise Automatically Due to *Gati*

3. If we get interested in a sensory input (*ārammaṇa*,) *mano saṅkhāra* **automatically** arises in our minds due to sensory input, **based on our *gati***.

- **We don't experience those initial *mano saṅkhāra*, and we only experience them when it comes to the next stage called *vacī saṅkhāra* ("talking to oneself").**
- That is an important point. Even if a single word is not spoken, *vacī saṅkhārā* accumulate if one is "thinking to oneself" about that object. If one gets more interested, one may speak out, and that is still a *vacī saṅkhāra*; see "Correct Meaning of Vacī Saṅkhāra." Both types of *vacī saṅkhāra* involve *vitakka* and *vicāra cetasika*.
- If the interest builds up, one may take bodily action. Such bodily actions are initiated by *kāya saṅkhāra.*
- All three types of *saṅkhāra* arise in mind.
- The strength of *kammic* energy created increases in the following order: *mano*, *vacī*, *kāya saṅkhāra.*

4. We get "attached" to various *ārammaṇa* AUTOMATICALLY based on our *gati*. Then *mano saṅkhāra* arises automatically according to *gati*. That will happen as long as we have *taṇhā* (either via *kāma rāga* or *paṭigha*; *avijjā* is present in both cases). We automatically get attracted; see "Taṇhā – How We Attach Via Greed, Hate, and Ignorance."

- As pointed out in that post, the term "*taṇhā*" means getting attached ("*thán*" meaning "place" + "*hā*" meaning getting welded or attached (ඇලීම in Sinhala).
- That initial attachment arises AUTOMATICALLY based on our *gati*. We don't have direct control over it.

© 2026 Lal A. Pinnaduwage

- **To stop such *mano saṅkhāra* from arising, we need to change our *gati* over time.**

Importance of *Vacī Saṅkhāra*

5. If the attachment is strong enough, the mind will now start thinking about the *ārammaṇa* consciously, i.e., *vacī saṅkhāra* arise, and we become aware of these *vacī saṅkhāra*.

- As soon as we become aware of this "attachment" to something, we CAN BE mindful, think about its consequences, and move away from it. Therefore, we can stop such thoughts at the *vacī saṅkhāra* stage; see "Correct Meaning of Vacī Saṅkhāra."
- However, our minds like to enjoy such *vacī saṅkhāra*. It is easy to do and is very tempting. Many people get their sexual satisfaction from just "daydreaming" about an event in the past or sexual encounters that might occur in the future.

6. In the "WebLink: suttacentral: Na Santi Sutta (SN 1.34)," the Buddha defined "*kāma*" to be this "daydreaming" or "generating more and more thoughts about it": "*Na te kāmā yāni citrāni loke, **Saṅkapparāgo purisassa kāmo**...*"

Translated: "World's pretty things are not *kāma,* **a person creates his/her *kāma* by thinking about those pretty things (*rāga saṅkappa*)**..."

- That is a critical point.
- Furthermore, we "daydream" about not just sex, but other sensory pleasures too. See, "What is "Kāma"? It is not Just Sex."
- Even if one did not physically do anything, one could accumulate a lot of bad *kamma* merely by generating such *vacī (abhi)saṅkhāra*. See "Correct Meaning of Vacī Saṅkhāra."
- The world is full of beautiful things, tasteful foods, sweet smells, etc. Seeing, tasting, and smelling them is not NECESSARILY *kāma*. For example, the Buddha accepted delicious foods but never generated *mano/vacī saṅkhāra* about them. He had removed all *gati*.

Vacī Saṅkhāra Responsible for *Upādāna*

7. Anyone who is not yet an *Ānāgāmi* is likely to generate such defiled *mano saṅkhāra* automatically. Then that leads to generating *vacī saṅkhāra* or "*kāma saṅkappa*" at some level.

- **If we "go with the flow" and go along enjoying this "daydreaming" or generating *vacī saṅkhāra*, that is what is called "*upādāna*."**
- *Upādāna* means "pulling it closer (in one's mind)" ("*upa*" + "*ādāna*," where "*upa*" means "close" and "*ādāna*" means "pull"). [***ādāna*** : (nt.), taking up; grasping.]

8. Therefore, we cannot control the "*taṇhā*" or "initial attachment" step. It happens with *mano saṅkhāra* that arise automatically due to our *gati*.

- And those *gati* cannot be removed just by abstaining from experiencing such sensory events.
- First, we need to reduce our *gati* to attach to that type of sensory input. Stopping *vacī saṅkhāra* as soon as we become aware of them is the way to reduce bad *gati*. *Vacī saṅkhāra* are really "nutrients" or "food/water" for cultivating those *gati*.
- If we keep the bad habit of generating *vacī saṅkhāra*, that *gati* will only get stronger with time. It is essential to stop giving such "mental food" to those bad *gati*.

Killing Bad Habits by Stopping *Vacī Saṅkhāra*

9. The Buddha explained it this way: Humans cannot live more than seven days without food AND water. We will die.

© 2026 Lal A. Pinnaduwage

- But if We stop taking solid food but only water, We can live for several weeks.
- However, one may be tempted to take in a little food. That will break the process and the clock re-starts.

10. That is the analogy for killing a habit. One can kill the habit (or the addiction) relatively quickly by doing the following. Stop *kāya saṅkhāra* (actual act, which is like solid food) and *vacī saṅkhāra* (thinking/talking about it, which is like water).

- But if we stop doing the activities (*kāya saṅkhāra*), but keep generating *vacī saṅkhāra*, then it may NEVER be removed entirely.
- So, the analogy is not that good. ***Vacī saṅkhārā* are almost as bad as *kāya saṅkhāra,*** i.e., *vacī saṅkhāra* are like "snacks" (more than just water in that analogy).
- The more times we break that discipline, the longer it takes to break that habit or *gati*. That is why we must always be mindful of our thoughts, speech, and actions. That is the key to *Ānāpānasati* and *Satipaṭṭhāna Bhāvanā*.

Key to *Ānapānasati*

11. For example, one can break the drug addiction in a shorter time (say a month) if he has the discipline to stop taking it and think about it.

- If he stops taking the drug but enjoys thinking about it (*vacī saṅkhāra*), it will not work. He may go on without using drugs for months and months, but he may lose the resolve and return to drugs one day.
- That happens to many people who are addicted to different things like alcohol, smoking, or even over-eating. They may temporarily stop those activities, but months later they break them. **That is because they had not stopped generating *vacī saṅkhāra* or engaging in *upādāna* for that activity.**
- That is the basis of *Ānāpānasati Bhāvanā*; see "9. Key to Ānapānasati – How to Change Habits and Character (Gati)."

Paṭicca Samuppāda Process Starts With a Sensory Input

12. Most *Paṭicca Samuppāda* processes start with a sensory input making one's mind attached to an *ārammaṇa*. The following chart illustrates the processes involved.

© 2026 Lal A. Pinnaduwage

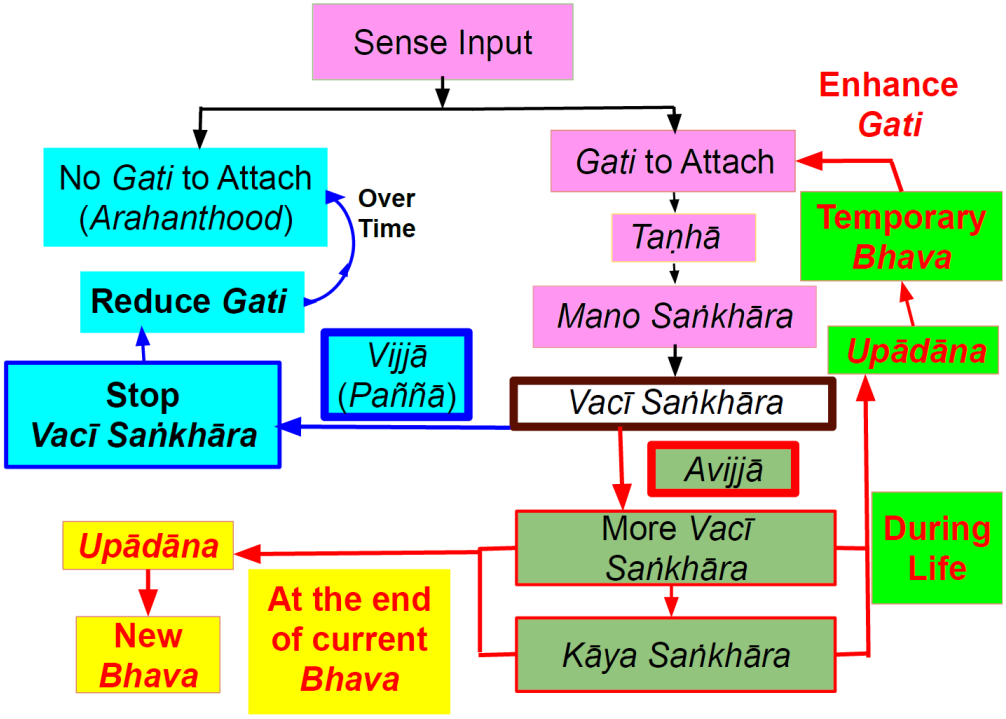

Chart of Taṇhā and Upādāna

For a pdf file for printing: "WebLink: PDF File: Taṇhā and Upādāna."

- **As we can see, the key is to stop generating *vacī saṅkhāra*. As soon as we become aware of "bad thoughts," we must stop them. Then, over time, that "bad *gati*" will reduce in strength and eventually disappear.**
- Therefore, by being mindful and acting with *paññā* (wisdom, which is *vijjā* or the opposite of *avijjā*), one can reduce *upādāna* and gradually get rid of bad *gati*.
- **In addition to contributing to bad *gati*, *vacī saṅkhāra* make one grasp a new "bad *bhava*" at the *cuti-paṭisandhi* moment.**

Basis of *Satipaṭṭhāna* and *Ānāpānasati Bhāvanā*

13. That is the basis of the *Satipaṭṭhāna* (and *Ānāpānasati*) *Bhāvanā;* see, "7. What is Ānāpāna?" and "Mahā Satipaṭṭhāna Sutta."

- If we are mindful, we can immediately become aware of a "bad thought" at the *vacī saṅkhāra* stage. Thereby, we CAN stop the *upādāna* step, i.e., we can decide not to "pull it closer."
- For example, if we see an attractive person, we may automatically start looking at him/her. But once we become aware, we can look away and start thinking about something else.
- In another extreme example, we may get angry with someone and may start saying something harsh. But as soon as we realize that we are going back to our "bad old habit," we can even stop in the mid-sentence. If we realize our mistake even after saying something terrible, we NEED TO apologize for our harsh speech. That may be difficult initially, but that is the only way to eliminate such bad habits.

14. When we start controlling the CRITICAL *upādāna* step, our *gati* will slowly change. Then, with time, the first step of "*taṇhā*" will gradually disappear.

- That is the basis of *Ānāpānasati* and *Satipaṭṭhāna* meditations.

Taṇhā to *Upādāna* to Bad *Gati*

© 2026 Lal A. Pinnaduwage

15. A bottle of poison on a table will not harm us. It can kill someone only if he/she takes it and drinks the contents.

- It is the same with *upādāna*. There could be many "pleasing things" out there in the world. But if we understand the *anicca* nature (that those things will only lead to suffering in the end), our minds will not crave them. That will stop *upādāna*.
- For example, we know that some flies attracted to light get burned. They don't know that even if the shiny light looks attractive, it can kill them. In the same way, a fish sees only the bait. It does not see the hook.
- We don't touch a hot stove that is glowing red because we know that it can burn us.
- But most don't realize that sensory pleasures only lead to suffering. Of course, one must take care of the extreme sensory pleasures first. As I always say, it is a step-by-step process; see, "Is It Necessary for a Buddhist to Eliminate Sensual Desires?."

16. Gradually controlling *upādāna* is the way to reduce bad *gati*, cultivate good *gati*, and eventually get rid of *taṇhā*.

- Removal of *taṇhā* is the same as removing *anusaya*.
- To be more effective, one must also reduce *avijjā* by learning Dhamma and comprehending *Tilakkhaṇa* (*anicca, dukkha, anatta* nature).

Cultivating Good *Gati* via *Vacī Saṅkhāra*

17. Of course, it works in reverse too. We can cultivate "good *gati*" by continually thinking about related things.

- For example, if a Dhamma concept comes to mind, we should cultivate it. **Then it will become a habit to think about Dhamma concepts.**
- Nowadays, when I get up, the first thing that comes to my mind is a Dhamma concept or a problem that I had been thinking about the previous day.

Summary

18. Finally, there are two things one must do to make progress on the Path.

- One is to reduce *avijjā* by learning Dhamma.
- The other is to reduce *upādāna* by controlling *vacī saṅkhāra*, as we discussed above.
- If we do both, the progress will be much faster.

9.10.11 Upādāna Paccayā Bhava – Two Types of Bhava

June 10, 2023; revised January 22, 2024 (#1, #3, #15, #16)

The *"upādāna paccayā bhava"* step in *Paticca Samuppāda* plays a critical role when accumulating *kamma* and also at the moment of grasping a new rebirth. By being mindful, we can break that *upādāna* and avoid bad rebirths. It is also the basis of *Ānāpānasati*/*Satipaṭṭhāna*.

Upādāna – Critical Step

1. *Taṇhā* means "attachment to an *ārammaṇa.*" It is automatic based on one's *anusaya*/*gati*. Once attached, "knowingly staying attached" to that *ārammaṇa* is *upādāna*.

© 2026 Lal A. Pinnaduwage

- As long as one has hidden defilements (*anusaya*) and the tendency to attach to specific sensory inputs (*gati,*) **attachment to a particular *ārammaṇa* (*taṇhā*) is automatic** and instantaneous. **We don't have CONSCIOUS control over that.** It happens in the "*purāṇa kamma*" stage and must be stopped via the deeper version of *Satipaṭṭhāna*, i.e., via understanding "distorted *saññā*"; see "Purāṇa and Nava Kamma – Sequence of Kamma Generation."
- On the other hand, ***upādāna* means "staying attached and responding to that *ārammaṇa* actively."** Within a few seconds, we become aware of that attachment. The initial attachment leads to *mano saṅkhāra* (automatic), but then we start consciously generating *vacī saṅkhāra*, which is when we become aware of the attachment. **At that point, we have control over it.**

2. If we understand the harmful consequences of "staying attached," we can willfully stop generating *abhisaṅkhāra,* i.e., stop generating immoral thoughts and actions. **That means we can stop the *upādāna* process while in the middle of it.** See "Difference Between Taṇhā and Upādāna."

- If we keep breaking the "*upādāna paccayā bhava"* step, that will gradually decrease *taṇhā* via the reduction of the corresponding *gati*.
- In addition, if we start comprehending the Noble Truths (*Paticca Samuppāda*), then we can start removing *anusaya* leading to the removal of *taṇhā.* See "Phassa paccayā Vedanā….to Taṇhā" and #8 in "Loka Sutta – Origin and Cessation of the World (with chart #6)."

Taṇhā Leads to *Kamma* Accumulation (*Kamma Bhava*) and Grasping Rebirth (*Uppatti Bhava*)

3. The "*upādāna paccayā bhava"* step plays a critical role in two cases:

***Idappaccayatā* PS during life:** This is where "*kamma bhava*" ("*kammic* energy") accumulation happens in the "*upādāna paccayā bhava*" step. At this step, the mind starts cultivating more *abhisaṅkhāra* with "*avijjā paccayā saṅkhāra*." See "Difference Between Taṇhā and Upādāna."

***Idappaccayatā* PS at the moment of grasping a birth in a new realm:** This is where the mind grasps a new existence (a "*upapatti bhava*") at the *cuti-paṭisandhi* moment. Here the step "*upādāna paccayā bhava*" happens within a *javana citta* grasping a new existence. That happens when the existing *hadaya vatthu* is dying. With the grasping of a new existence, *kammic* energy creates a new *hadaya vatthu* appropriate for the new *bhava*.

- Both involve "grasping new *bhava*." **The first is a "temporary *bhava*" that may last only minutes to hours.** This leads to the generation of *kammic* energy that can bring future *vipāka*, including rebirth. It is called "***kamma bhava***."
- **The second is a new existence (*bhava*) in a different realm.** This is where that "stored/accumulated *kammic* energy" is grasped to give rise to a new existence. This is "***uppatti bhava***."

Ārammaṇa – Initiates *Taṇhā* and *Upādāna*

4. All *kamma* accumulation — as well as grasping a new existence (*bhava*) — starts with an *ārammaṇa* or a sensory input.

- If the sensory input (*ārammaṇa*) is mind-pleasing, we attach to it with *kāma rāga*. If it is repulsive, we attach to it with *paṭigha*.
- Both involve *avijjā,* and sometimes *avijjā*, by itself, can lead to attachment without *kāma rāga* or *paṭigha*. For example, one may conclude that cultivating (the *anariya* versions of) *jhāna* or *samāpatti* can be beneficial; those are based on *rūpa rāga* and *arūpa rāga*, craving existences in *rūpa* and *arūpa Brahma* realms, respectively.
- All those processes start at the "*purāṇa kamma*" stage; see #1 above.

© 2026 Lal A. Pinnaduwage

Kamma Accumulation – *Kamma Bhava*

5. *Kammic* energies generated with *abhisaṅkhāra* are "deposited" in the *viññāṇa dhātu*. They are in three main categories: *Kama bhava, rūpa bhava*, and *arūpa bhava*.

- *Āneñjābhisaṅkhāra* (generated via the cultivation of *anariya arūpāvacara samāpatti*) accumulates energies in the *arūpa bhava*.
- *Puññābhisaṅkhāra* (generated via the cultivation of *anariya rūpāvacara jhāna* and *puñña kamma*) accumulate energies in the *rūpa bhava* and higher realms of *kāma bhava*, respectively.
- *Apuññābhisaṅkhāra* (generated via the cultivation of *apuñña kamma*) accumulates energies in the lower realms of the *kāma bhava*.
- See "Rebirths Take Place According to Abhisaṅkhāra" for details.

6. These "*kamma bhava*" are the *kamma bīja* or "*dhammā*" that we have discussed in "Rūpa, Dhammā (Appaṭigha Rūpa) and Nāmagotta (Memories) (with chart #14)" and "Where Are Memories Stored? – Viññāṇa Dhātu."

- Such *kamma bīja* or "*dhammā*" automatically are sorted out into the three categories of *kāma bhava, rūpa bhava*, and *arūpa bhava* (and with sub-selections to specific realms) in *viññāṇa dhātu*.

Temporary "Births" in the "*Kamma Bhava*" Stage

7. While doing such *kamma*, one is "temporarily born" in an existence (*bhava*) corresponding to the kind of *kamma.*

- For example, during rape, one would have the mindset of an animal; during that time, one acts more like an animal than a human. Only afterward may they realize the enormity of what was done. *Kammic* energy corresponding to that action is also likely to contribute toward a future birth in the animal realm, i.e., that energy can lead to rebirth as an animal in a future life.
- On the other extreme, while cultivating a *jhāna,* one would have the mindset of a *Brahma*. Furthermore, the *kammic* energy generated will be deposited in *viññāṇa dhātu* and will definitely lead to rebirth in a *Brahma* realm at the moment of death since it is an "*ānantarika kamma;*" see below.

Appropriate *Kamma Bhava* Becomes *Upapatti Bhava* at *Cuti-Paṭisandhi*

8. At the *cuti-paṭisandhi* moment, an appropriate *bhava* selection happens automatically per the following rules.

i. *Kammic* energies accumulated in the *arūpa bhava* and *rūpa bhava* are due to good "*ānantarika kamma,*" i.e., cultivation of *arūpa samāpatti* and *rūpāvacara jhāna.* Thus if a person had cultivated *rūpāvacara jhāna*, he would be born in a *rūpāvacara Brahma* realm. If he had also cultivated *arūpāvacara samāpatti*, he would have been born in an *arūpāvacara Brahma* realm.

ii. *Puñña kamma* (not *jhāna* or *samāpatti*) can lead to rebirths in the higher realms of *kāma loka* (the human realm and the six *Deva* realms).

iii. *Apuñña kamma* (with *apuññābhisaṅkhāra*) accumulate *kammic* energies in the *kāma bhava* also, but they lead to rebirths in the four lowest realms. There are several *ānantarika kamma.*

9. The first category belongs to "good *ānantarika kamma*," and they lead to rebirths in the appropriate *Brahma* realm without exception.

- In category (iii), the strongest would be cultivating a "bad *ānantarika kamma,*" leading to rebirth in an *apāya* in the following life.

© 2026 Lal A. Pinnaduwage

- The BAD *ānantarika kamma* are five: killing one's mother, killing one's father, killing an *Arahant*, shedding the blood of a Buddha, and creating *Saṅgha bheda*. These are listed in the following link in the *Tipiṭaka*: "WebLink: suttacentral: *Ñāṇakathā* (KN Kv 20.6)."
- Details can be found in "Rebirths Take Place According to Abhisaṅkhāra" and "Ānantarika Kamma – Connection to Gandhabba."
- The mind is turned to a new sensory event with an *ārammaṇa*. In contrast, it is customary to say that a "sign of the pending rebirth realm" is brought to mind with a nimitta close to the *cuti-paṭisandhi* moment. Let us discuss that next.

Ārammaṇa Brings a Sensory Event During Life

10. During life, our mind shifts from one *ārammaṇa* to another rapidly.

- We have discussed *ārammaṇa*. See, for example, "Change of Mindset Due to an Ārammaṇa" and "Ārammaṇa Plays a Critical Role in a Sensory Event."
- Some of such *ārammaṇa* are brought as *kamma vipāka*.

Nimitta of a New Existence in the Rebirth Process

11. Strong *kamma bīja* or "*dhammā*" bring rebirth in a new existence/realm at the *cuti-paṭisandhi* moment (with a *nimitta*.)

- A *nimitta* means a "sign" of the place of rebirth or a "re-enactment of a *kamma* done, or a prominent *gati*). For example, those about to grasp a rebirth in the *niraya* may see raging fires in the corresponding *niraya*. If it was a killing of a human, that past scene may come to his mind as a "*kamma nimitta*." Finally, a "*gati nimitta*" is a scene of activity one habitually cultivated. For example, an alcoholic may see "getting drunk and being unable to walk." That is a sign of an animal birth (animals walk on four legs.)

12. Some details of how *kamma bīja* (*dhammā*) brings *vipāka* (during life or while grasping a new rebirth) are discussed in "Anantara and Samanantara Paccayā." In particular, when one attains the *Sotāpanna* stage, the "*samanantara*" to bring rebirth in an *apāya* will not be there. That is why Ven. Aṅgulimāla was not reborn in an *apāya* even though he killed almost a thousand people.

- In some cases, suitable conditions to bring "good *vipāka"* may be effective. In Asian countries, recordings of *paritta* (*sutta* recital) or Dhamma discourses are played. [***paritta*** : [adj.] 1. small; insignificant; little; 2. **protection**; protective charm.]

Grasping a *Nimitta* at *Cuti-Paṭisandhi* Is Automatic

13. Grasping a new rebirth happens in the last *citta vīthi* of the current life. It happens extremely fast, and we don't have any control over it. We can summarize what happens as follows.

- The strongest *kamma vipāka* (from those accumulated in *viññāṇa dhātu*) comes to mind. Suppose one committed an *ānantarika kamma* during the present life; that comes first and will be grasped without exception.
- In other cases, the strongest of all existing *kamma* waiting to bear fruit comes to mind even before the last *citta vīthi.* This process may start even a few days before the impending death. Let us consider an example to illustrate why this happens. Suppose a person has done many highly-immoral *kammas*, some even during this life. However, he has attained the *Sotāpanna* stage in this life. So, all those *kamma vipāka* potent enough to bring rebirth in an *apāya* will be automatically rejected by the mind, one by one. If a *kamma bīja* that can bring rebirth in a *Deva* realm comes next, that will be grasped; in this case, a "sign" of the *Deva* realm will come to mind, called a "*kamma nimitta*." That ***kamma nimitta*** may keep coming to his mind until the moment of death.

© 2026 Lal A. Pinnaduwage

14. In the above example, suppose he did not have a strong enough *kamma bīja* to bring rebirth in a *Deva* realm (the highest realm possible for a *Sotāpanna*.) Then he will be reborn as a human again. In that last case, it is a ***gati nimitta*** because the rebirth is according to his "*Sotāpanna gati*." He could not be reborn in a lower realm.

- The third type of *nimitta* is a "***kamma,***" meaning a specific *kamma* will re-create the scene of the past *kamma* in the mind of the dying person. For example, if he had killed someone during an argument, that complete scene would be re-created in his mind, like in a dream. If his mindset has not changed, his mind will go through the same actions as before (i.e., "*upādāna*" will occur); he will then grasp the corresponding rebirth in an *apāya*.
- Thus, the three types of *nimitta* are: ***gati nimitta***, ***kamma nimitta***, and ***kamma***.

Sequence of Removal of *Upādāna*

15. The correct order is *diṭṭhi upādāna, kāma upādāna, sīlabbata upādāna, attavāda upādāna.*

- One enters the Noble Path by getting rid of *diṭṭhi upādāna* via comprehending the worldview of the Buddha. This can be done only via learning the correct Dhamma.
- Then one contemplates the dangers of *kāma assāda* and gets rid of *kāma upādāna* at the *Anāgāmi* stage.
- An *Anāgāmi* has not removed "*rūpa rāga*" and "*arūpa rāga*." Another way to say this is, "They still crave *jhāna/samāpatti*" OR "They still engage in "ways of *anariya* practices," and that is called "*sīlabbata upādāna*."
- Even after removing "*rūpa rāga*" and "*arūpa rāga,*" there are three more *saṁyojana* (*māna, uddhacca, avijjā*) left in the mind of an *Anāgāmi.* Those are removed when *avijjā* is fully removed by fully comprehending ""Attato Samanupassati" and Sotāpanna Stage." That means the removal of *attavāda upādāna.*
- All types start decreasing in strength at the *Sotāpanna Anugāmi* stage.

Technical Point about the Nomenclature

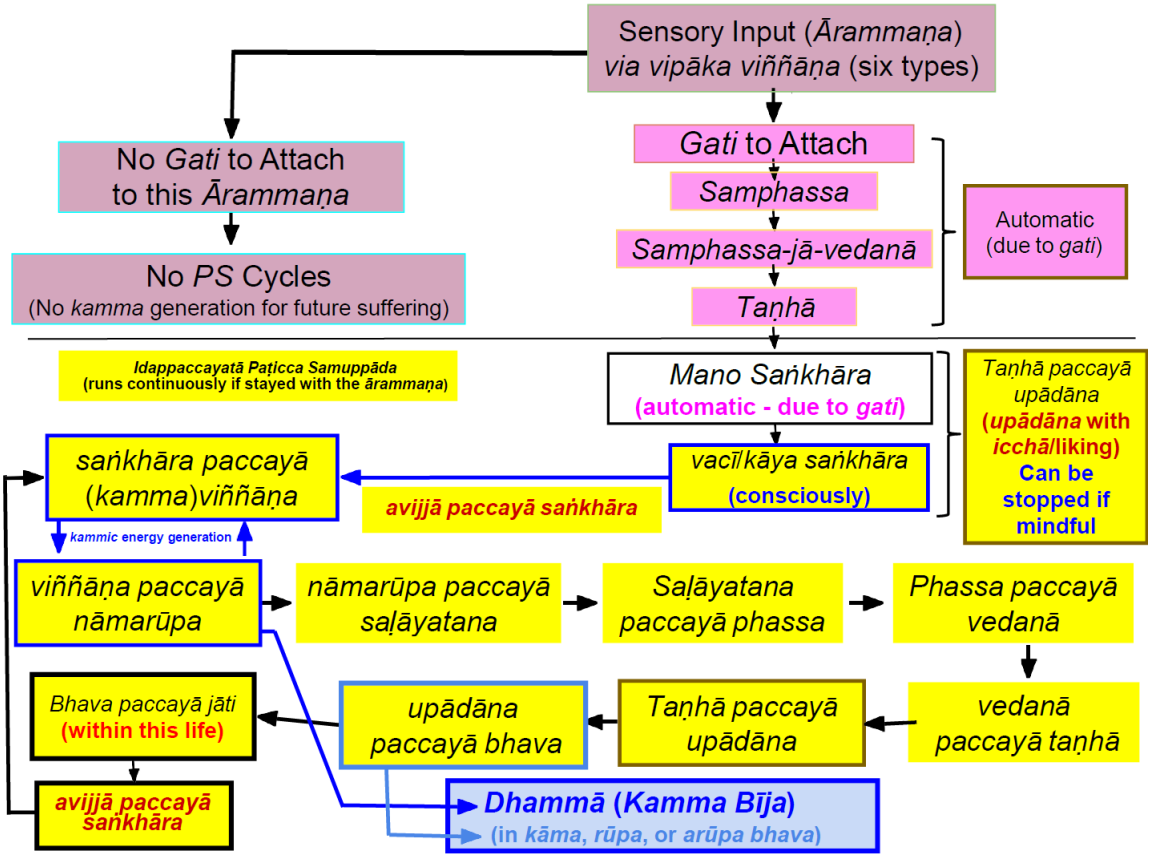
16. There are four types of *upādāna* as stated in the "WebLink: *Upādāna Sutta* (SN 45.173):"*Diṭṭhi upādāna*, *kāma upādāna*, *sīlabbata upādāna*, *attavāda upādāna*.

- However, the *Tipiṭaka* Commentary "WebLink: suttacentral: *Peṭakopadesa* (KN Pe 5)" names the four types of *upādāna* as: "*Kāmāsavo* ***kāmupādānaṁ***, *bhavāsavo* ***bhavupādānaṁ***, *diṭṭhāsavo* ***diṭṭhupādānaṁ***, *avijjāsavo* ***attavādupādānaṁ***, *imehi catūhi upādānehi pañcakkhandhā.*
- The other *Tipiṭaka* Commentary "WebLink: suttacentral: *Nettipakarana* (KN Ne 36)" provides a similar description: "*Tattha kabaḷīkāre āhāre "asubhe subhan"ti vipallāso, phasse āhāre "dukkhe sukhan"ti vipallāso, viññāṇe āhāre "anicce niccan"ti vipallāso, manosañcetanāya āhāre "anattani attā"ti vipallāso. Paṭhame vipallāse ṭhito* ***kāme upādiyati****, idaṁ vuccati* ***kāmupādānaṁ****; dutiye vipallāse ṭhito* ***anāgataṁ bhavaṁ upādiyati****, idaṁ vuccati* ***bhavupādānaṁ****; tatiye vipallāse ṭhito* ***saṁsārābhinandiniṁ diṭṭhiṁ upādiyati****, idaṁ vuccati* ***diṭṭhupādānaṁ****; catutthe vipallāse ṭhito* ***attānaṁ kappiyaṁ upādiyati****, idaṁ vuccati* ***attavādupādānaṁ***."
- Thus, instead of the ***sīlabbata upādāna*****,** both Commentaries have ***bhava upādāna*** listed. They mean the same thing because, as explained in #15, it refers to the craving for existence in *rūpa bhava* or *arūpa bhava*. Those who cultivate *anariya jhāna* or *anariya samāpatti* do that because of their desire to be born in a *Brahma* realm; they follow certain moral conduct (***sīla***) with ***sīlabbata upādāna*** because they have the desire to be reborn with ***bhava upādāna.***

© 2026 Lal A. Pinnaduwage

- Also, *attavāda upādāna* relates directly to the First Noble Truth, i.e., all suffering arises due to the ignorant idea (*avijjā*) that this world is fruitful (*atta* nature) and can provide happiness. Thus, one removes *attavāda upādāna* completely at the *Arahant* stage, when the *anatta* nature is fully comprehended.

9.10.12 Nāmarūpa, Viññāṇa, Dhammā – Closely Related



June 21, 2023

Nāmarūpa, *viññāṇa*, and *dhammā* are closely related. They create *kammic* energies that can lead to rebirth in various existences (*bhava*) based on the types of *saṅkhāra* involved.

Introduction

1. Even though *Paṭicca Samuppāda* (PS) is written as a linear sequence, it does not start at "*avijjā paccayā saṅkhāra*." It starts when an *ārammaṇa* or a sensory input comes to mind. See "Change of Mindset Due to an Ārammaṇa."

- Furthermore, once the PS process starts, it does not proceed linearly. As the chart below shows, the "*taṇhā paccayā upādāna*" step takes it back to the "*avijjā paccayā saṅkhāra*" step. That is because one starts generating *saṅkhāra* only after getting attached to an *ārammaṇa.*

Nāmarūpa, Viññāṇa, Dhammā – Closely Related

Print/Download pdf: "WebLink: PDF Download: Nāmarūpa, Viññāṇa, Dhammā"

2. Furthermore, at the "*viññāṇa paccayā nāmarūpa*" step, before proceeding to the next step, it may go back and forth between "*viññāṇa paccayā nāmarūpa"* and "*nāmarūpa paccayā viññāṇa"* steps as also shown in the chart.

- Even though the 11 steps of PS are stated in a linear sequence for convenience, one must be able to see and understand these interconnections.

© 2026 Lal A. Pinnaduwage

- The main goal is to understand how different types of *kammic* energies (giving rise to rebirths in various realms) are created by different types of one's own actions, i.e., *abhisaṅkhāra.*
- **That helps eliminate the wrong view (*sakkāya diṭṭhi*) that there is an "unchanging self/soul/*ātman*."**

Creation of *Kammic* Energies in the Mind

3. **All the steps in the *Idappaccayatā Paṭicca Samuppāda* (PS) involve ONLY the mind and energies created by the mind.** See "Idappaccayatā Paṭicca Samuppāda – Bhava and Jāti Within a Lifetime."

- **That is why NONE of its steps arise for a living *Arahant*.** It is critical to contemplate this point.
- However, as we have discussed many times, one must not use the *uddesa* version but the *niddesa* version of PS. Otherwise, many seeming contradictions can arise leading to confusion. See "'Elephant in the Room' – Direct Translation of the Tipiṭaka."
- Thus, for example, "*saṅkhāra*" and "*viññāṇa*" refer to "*abhisaṅkhāra*" and "*kamma viññāṇa*." Therefore, a living *Arahant* is fully conscious (has *viññāṇa*) and experiences *vedanā* and *saññā* (*saṅkhāra*.) Furthermore, an *Arahant* does not have *āyatana* but has sense faculties (*indriya*.)

Idappaccayatā and *Upapatti* PS

4. It is the *Idappaccayatā* PS that operates at ANY given time.

- *Kammic* energies generated in *Idappaccayatā* PS processes are **"*dhammā*."** They are "*anidassana/appaṭigha rūpa*" lying below the *suddhaṭṭhaka* level, i.e., they do not belong to the 28 types of *rūpa* in the "*rūpa loka*"; see "Nāma Loka and Rūpa Loka – Two Parts of Our World."
- **It is only at the moment of grasping a new existence (*bhava*) that a set of *rūpa* belonging to the "*rūpa loka*" (i.e., above the *suddhaṭṭhaka* level arises) via the *Upapatti* PS.** That also occurs in an *Idappaccayatā* PS cycle at the moment of grasping a new existence/rebirth. Even those *rūpas* are invisible to us: the *hadaya vatthu* and a set of *pasāda rūpa*.
- **The *Upapatti* PS only describes the overall process** (cumulative effect of uncountable *Idappaccayatā* PS cycles **spanning even eons**.)
- That is a critical point to understand, and we can discuss it at the forum if there are any questions.

Critical Steps Where the Mind Creates *Kammic* Energy

5. Accumulation of *kammic* energy starts with the mind attaching to sensory input (*ārammaṇa*) because one has the wrong view/perception that it can bring future happiness. That initial attachment is automatic and is based on one's *gati*: "Change of Mindset Due to an Ārammaṇa."

- Once attached, the mind starts engaging in various types of *vacī* and *kāya abhisaṅkhāra*, and of course, that is due to the ignorance (*avijjā*) of the Noble Truths/PS, i.e., "*avijjā paccayā saṅkhāra*." See the above chart.
- Thus, now the PS cycle jumps to the "*avijjā paccayā saṅkhāra*" step. Simultaneously, a "*kamma viññāṇa*" arises in the mind, which is an expectation based on *lobha*, *dosa*, and *moha*. "*Kamma viññāṇa*" is more than consciousness (*viññāṇa*); it has *kammic* energy! Some of these "*kamma viññāṇa*" can lead to rebirth and are specifically called "*paṭisandhi viññāṇa*."

Nāmarūpa Formation – A Critical Step

6. With a specific expectation (*kamma viññāṇa*), the mind starts combining "*nāma*" and "*rūpa*", i.e., generating "*nāmarūpa*." **The mind visualizes various scenarios in *javana cittas* generating *kammic***

© 2026 Lal A. Pinnaduwage

energy. This is the origin of "future *hadaya vatthu/pasāda rūpa,*" capable of generating *cittās*! Nothing else in the universe can produce *cittās*. However, since created by the mind, such a set of *suddhaṭṭhaka* has a temporary/transient existence and thus has no value; it is a mirage/ghost. **Thus the name *bhūta* (ghost)** for a *manomaya kāya* is made with a set of *hadaya vatthu/pasāda rūpa.* See "Bhūta and Yathābhūta – What Do They Really Mean" and "The Origin of Matter – Suddhaṭṭhaka."

- Both "*kamma viññāṇa*" and *nāmarūpa* are directly connected to *kammic* energy/*kamma bīja* that remains in *viññāṇa dhātu* to bring *vipāka* in the future. See "Nāma Loka and Rūpa Loka – Two Parts of Our World" and "Where Are Memories Stored? – Viññāṇa Dhātu."
- **Those are critical steps that one will understand at successively deeper levels as one starts comprehending PS.**
- Now the mind may go back and forth between "*viññāṇa paccayā nāmarūpa*" and "*nāmarūpa paccayā viññāṇa*" many times before proceeding to the next step of "*nāmarūpa paccayā saḷāyatana.*" This allows *nāmarūpa* to get firmly established in "*kamma viññāṇa.*" See "WebLink: suttacentral: *Nāmarūpa Sutta* (SN 12.58)."
- All steps in PS are discussed in detail at "Paṭicca Samuppāda in Plain English."
- It is a good idea to read the above links and to understand "*nāmarūpa.*"

Kamma Bhava Depends on the *Ārammaṇa*

7. *Kammic* energies can remain in *viññāṇa dhātu* for a long time. They are categorized into three main categories: *kāma bhava, rūpa bhava*, and *arūpa bhava*. That categorization can be easily seen with the type of *ārammaṇa* initiating the *kamma* accumulation.

- Any immoral deed is done with an *ārammaṇa* in *kāma loka* and thus belongs in the ***kāma bhava***. Engaging in meritorious deeds may lead to rebirth in a *Deva* realm, which also is within the ***kāma bhava***.
- On the other hand, one may focus on a *kasiṇa* object or breath and attain an *anariya jhāna*. That is a *kamma* belonging to "***rūpa bhava***" since it leads to rebirth in a *rūpāvacara Brahma* realm.
- The third type is "***arūpa bhava***," and *kammic* energies accumulating in this category lead to rebirths in an *arūpāvacara Brahma* realm. One must cultivate *arūpāvacara samāpatti* to accrue *kammic* energies in this category.
- All 31 realms belong to one of those three main categories of *bhava*.

8. Each main category has sub-categories according to the realm of possible rebirth. For example, the four realms in the *apāyās*, the human realm, and the six *Deva* realms belong to "*kāma bhava.*" The 16 *rūpāvacara Brahma* realms belong to the "*rūpa bhava,*" and the four *arūpāvacara Brahma* realms belong to the "*arūpa bhava.*"

- I have indicated the three main categories in the above chart.
- Also, note that a given *ārammaṇa* will initiate the accumulation of *kammic* energy in one of the three main *bhava*. See, for example, "WebLink: suttacentral: *Paṭhamabhava Sutta* (AN 3.76)."

Ārammaṇa to *Abhisaṅkhāra* to *Kamma Bhava*/*Dhammā*

9. Most of the *ārammaṇa* we encounter belong to *kāma bhava*. They lead to *apuññābhisaṅkhāra* (immoral deeds) or *puññābhisaṅkhāra* (moral deeds.)

- A few humans cultivate *anariya jhāna* by focusing the mind on a *kasiṇa* object or breath. Those deeds (*kamma*) also belong to the *puññābhisaṅkhāra.* But this type of *puññābhisaṅkhāra* leads to *kammic* energies in the "*rūpa bhava.*"

© 2026 Lal A. Pinnaduwage

- An even smaller number of humans proceed beyond that and cultivate *arūpāvacara samāpatti.* Those involve *āneñjābhisaṅkhāra,* and accumulate *kammic* energies in the "*arūpa bhava.*"
- These are discussed in detail in "Rebirths Take Place According to Abhisaṅkhāra."

10. The critical point is that ***dhammās*** (with *kammic* energy) are created in *Paṭicca Samuppāda* processes that start with "*avijjā paccayā* (*abhi*)*saṅkhāra.*"

- However, we start accumulating new *kamma* (via *abhisaṅkhāra*) when we get attached to an *ārammaṇa* (sensory event.) Thus, the **initiation of PS cycles is not at the "*avijjā paccayā saṅkhāra*" step but the "*(sam)phassa paccayā vedanā*" step**.
- Attaching to sensory input (*ārammaṇa*) with liking (*icchā*) happens first; see the chart above. Also, see "Icchā (Cravings) Lead to Upādāna and to Eventual Suffering."

The Meaning of "*Dhammā*"

11. "*Dhammā*" means "to bear." They bear the *kammic* consequences of one's actions and play a critical role in rebirth.

- **"*Vipāka*-bearing *kammic* energy" of a *kamma* stays in *viññāṇa dhātu* (or *kamma bhava*) as "*kamma bīja*" or "*dhammā*."**
- Just like a *rūpa* can bring in a sensory input via the five physical senses, *dhammā* can directly bring a sensory input (memory of a previous *kamma*) to the mind.
- While the five types of *rūpa* (*vaṇṇa*, *sadda*, *gandha*, *rasa*, *phoṭṭhabba*) belong to the "material world" made of *suddhaṭṭhaka*, "*dhammā*" are below the *suddhaṭṭhaka* stage.
- As we know, a *suddhaṭṭhaka* is the smallest unit of matter in Buddha Dhamma belonging to the 28 types of *rūpa* made with the four elements of *pathavi*, *āpo*, *tejo*, *vāyo*. In contrast, *dhammā* are "*upādāya rūpa.*"

Dhammā Are Energies Below the *Suddhaṭṭhaka* Stage

12. Unlike the other five types of *rūpa*, *dhammā* cannot be seen (*anidassana*) or touched/detected even with most sensitive instruments (*appaṭigha*) and is detectable only with the mind (*dhammāyatana pariyāpannaṁ*). Again, they do not belong to the 28 types of *rūpa* in *Abhidhamma*.

- That is explained in the last verse of "WebLink: suttacentral: *Tikanikkhepa* (Abhidhamma Ds 2.3.1)" in *Dhammasaṅgaṇī* as, "*yañca* ***rūpaṁ*** *anidassanaṁ appaṭighaṁ dhammāyatanapariyāpannaṁ; asaṅkhatā ca dhātu—ime* ***dhammā*** *anidassana appaṭighā.*"
- Also see "Anidassana, Appatigha Rūpa Due to Anidassana Viññāna."
- Therefore, ***dhammās* bear the fruits of *kamma*!** They can bring *vipāka* in the future.
- See "What are Rūpa? – Dhammā are Rūpa too!" for details.

13. All such ***dhammā*** generally appear in two forms: ***dhammā*** and ***adhammā***.

- The word ***dhammā*** generally refers to "**good *dhammā***." Those that arise due to "**bad *kamma***" are "***adhammā***."
- "WebLink: suttacentral: *Dhamma Sutta* (AN 10.182)" provides a direct explanation. "Killing, stealing, sexual misconduct, lying, divisive, harsh, or idle speech, greed, ill will, and wrong view. Those ten are ***adhammā***. Abstaining from such actions (and having the mindset of generating "good *javana* power") leads to ***dhammā***.
- However, both ***dhammā*** and ***adhammā*** belong to the ***dhammā*** category. It is just that ***adhammā*** "bear the fruits of bad *kamma*" and ***dhammā*** "bear the fruits of good *kamma.*"

© 2026 Lal A. Pinnaduwage

- The word "smell" indicates all types of odors, but if someone says "it smells," that means it is a "bad odor." That is the accepted usage. In the same way, ***dhammā*** may sometimes mean the "**good type**" but generally includes both. For example, ***dhammā*** in "*manañca paṭicca* ***dhamme*** *ca uppajjati mano viññāṇaṁ*" includes both types.

What Is Buddha Dhamma?

14. Dhamma (with the upper case "D" and short "a") refers to Buddha's teachings. In contrast, "*dhammā*" with lowercase "d" and long "a") refers to *kammic* energies that can bring *vipāka* in the future.

- Furthermore, Buddha Dhamma makes accumulated *dhammā* ineffective, thus leading to *Nibbāna*. For example, Aṅgulimāla killed almost a thousand people and was heading to rebirth in an *apāya*, but he avoided that because he attained *Arahanthood*.
- The word Buddha comes from "*bhava*" + "*uddha*"; here, "*bhava*" means "existence (in the 31 realms)," and "*uddha*" means "removal" or "making ineffective." Therefore, a Buddha figures out how to stop the rebirth process and thus end future suffering.
- **Thus, "Buddha Dhamma" is "*bhava uddha dhamma*."** It mainly refers to the **teachings of the Buddha** that lead to *Nibbāna*, i.e., to the "stopping of future existence/rebirths."
- Also, see "Dhamma and Dhammā – Different but Related."

"*Sabbe Dhammā Anattā*"

15. I have seen in discussion forums people state, "*sabbe dhammā anattā*" means Buddha Dhamma is also *anattā*!

- As we discussed above, *dhammā* is different from Buddha Dhamma.
- "*Sabbe dhammā anattā*" applies only to *dhammā* (accrued *kammic* energies) and not to Buddha Dhamma.
- Even though "good *dhammās*" lead to rebirth in human, *Deva*, and *Brahma* realms, they are ultimately useless because those existences are only temporary. At the end of such "temporary lives," rebirth in lower realms (*apāyās*) is inevitable unless one starts on the Noble Path by attaining at least the *Sotāpanna Anugāmi* stage.

9.10.13 Bhava Paccayā Jāti….Jarā, Maraṇa,…

Revised June 16, 2019; re-written May 24, 2021; May 29, 2021; revised June 6, 2023

An existence (*bhava*) can result in this life (*kamma bhava*) or future lives (*upapatti bhava*). Both types lead to more suffering in the end. Repetition of *kamma bhava* (i.e., engaging in similar activities) adds to *kammic* energies (*kamma bīja*) that can fuel future *upapatti bhava*.

Kamma Bhava and *Upapatti Bhava*

1. In a previous post ("Nāmarūpa Paccayā Saḷāyatana"), we discussed how repeated immoral actions of a teenager could bring about a specific type of existence (*bhava*) during the current life. That is a "temporary existence" (in that example as a drunkard/alcoholic). Still, it **creates *kammic* energy that will remain as *kamma bhava*.**

- We also discussed how such *kamma bhava* could get stronger with time and become strong enough to lead to a new existence at death. **This is called a *upapatti bhava*.**
- Therefore, there are two types of "*bhava*": those that can bring about "experiences" during the current life (*kamma bhava*) and those that become strong enough to power a whole new existence (*upapatti bhava*).

© 2026 Lal A. Pinnaduwage

- This is explained in the "WebLink: suttacentral: Paticcasamuppāda Vibhaṅga": "*Tattha katamo upādāna paccayā bhavo? Bhavo duvidhena—atthi kamma bhavo, atthi upapatti bhavo*," i.e., "What is *upādāna paccayā bhavo?* Two types of *bhava – kamma bhava* and *upapatti bhava*."
- This is why the Buddha emphasized the importance of the *Idappaccayatā Paṭicca Samuppāda*. *Avijjā* is NOT there all the time. Any unwise action done at a given time is due to *avijjā* present AT THAT TIME. See, "WebLink: suttacentral: *Avijjā Sutta* (AN 10.61)": "*Purimā, bhikkhave, koṭi na paññāyati avijjāya: 'ito pubbe avijjā nāhosi, atha pacchā samabhavī'ti. Evañcetaṁ, bhikkhave, vuccati, atha ca pana paññāyati:* ***'idappaccayā avijjā'ti.***" Thus, ***avijjā* may arise based on the conditions at a given time**, mainly depending on the *ārammaṇa* (sensory input.)
- One's actions (*kamma*) DURING a lifetime lead to the accumulation/growth of different types of "*kammic* energies;" strong ones will lead to rebirths. Of course, in some cases, a single immoral action (like killing a human) can lead to a bad rebirth.

Bhava as a "Seed"

2. Another way to look at the "*bhava*" concept is to treat it as a seed. As we discussed in the previous post, when we act with ignorance (and greed or hate), that helps the **growth of a *kamma* seed (*kamma bhava*.)** With more related *kamma* done, that seed can grow and bring **a new birth (*jāti*) in the future (with *upapatti bhava*.)** This concept of a *kamma* seed is easier to comprehend.

- Just like an ordinary seed **has the potential** to give rise to a plant, **a *kamma* seed (or a "*bhava*") has the potential to bring about a "*jāti*" or a "birth,"** either during this life or in preparing a new life.
- Of course, once the *Arahanthood* is attained, an *Arahant* will not grasp another *bhava* (since there is no *upādāna*.) Thus even if there could be many *kamma* seeds, they don't get to "germinate." Ven. Aṅgulimala's account is a good example. See, "Account of Aṅgulimala – Many Insights to Buddha Dhamma."
- I write it as *jāti* (the conventional "*Tipiṭaka* English"), but it is pronounced "*jāthi*." See, "Tipiṭaka English" Convention Adopted by Early European Scholars – Part 1"

An Example from the Previous Post – *Bhava* and *Jāti* During a Life

3. Let us take the example of the teenager we discussed in the previous post, "Phassa Paccayā Vedanā….to Taṇhā." Because of the influence of his friends, the teenager starts dealing and using drugs and gradually gets drawn into the gang to become a gang member, and eventually starts doing violent acts of beating and killing people.

- When he did the first beating, his friends probably encouraged or even forced him to do it. Let us suppose he did not have a *saṁsāric* habit of doing that violent act. So, when he did the first act, that energized a small *kamma* seed (or a "*bhava*.")

4. The next time he did something similar, this initial *kamma* seed made it easier for him to do the second act. Once he did that, the seed got bigger, and the next time he may not need much encouragement, and so on. The more he does it, the more easily he can get into that "*bhava*," i.e., the stronger the *kamma* seed becomes.

This is none other than many *Idappaccayatā* PS cycles running that start with "*avijjā paccayā saṅkhāra*" (doing immoral deeds due to *avijjā*) and lead to "upādāna *paccayā bhava*," making the corresponding *bhava* (or *kamma* seed) strong.

- This is another way of expressing "habit (*gati*; pronounced "gathi") formation" that I have discussed in many other posts. The more one does actions suitable for a specific "*bhava,*" the *viññāṇa* for similar behavior grows, and it is easier for one to be "born" in a corresponding state; this is "*pati+ichcha*" leading to "*sama+uppāda*" as pointed out in the introductory post, "Paṭicca Samuppāda – "Pati+ichcha"+" Sama+uppāda."

© 2026 Lal A. Pinnaduwage

- Thus, the more the teenager acts violently, the easier it becomes for him to be "born in that state," i.e., easier/habitual for him to do similar acts.
- In other words, repeated *saṅkhāra* leads to strengthening the corresponding mindset or *viññāṇa*, and it propagates down the *Paṭicca samuppāda* series to make "*kamma bhava*."

5. Now let us consider when that *kamma* seed or "*kamma bhava*" gives rise to a "*jāti*" in *Idappaccayatā Paṭicca samuppāda.* One day, his drug deal is sabotaged by a rival gang member, and he gets angry. He is easily "born" in that "animal-like violent state." He starts beating up that guy. This is a "*jāti*" or "birth" in a violent existence.

- When the beating is almost done, that "*jāti*" is almost over with; it is at the "*jarā*" (decay) stage, and when it is done, that is the end or death ("*maraṇa*") of that "*jāti.*"
- Thus when that episode is over, that temporary "*jāti*" of "a violent existence" is over.
- The rest of it, "*soka, parideva, dukkha, domanassa*" or many forms of suffering, comes later in that life or even in future births. The *kamma* seed that helped him do that act itself got even stronger.

6. That violent action now gives rise to another *kamma* seed.

- Now, if during that confrontation with the other rival gang member, he gets beaten up, then that is due to a *kamma vipāka* of that new *kamma.*
- In either case, that "birth" or '*jāti*" (the confrontation with the rival gang member) would give him only misery at the end: "*soka, parideva, dukkha, domanassa."*
- Many such *Idappaccayatā samuppāda cycles* can operate during even a day, and he may be "born" repeatedly in that confrontational state. Some may be minor, like getting mad at his friends, but some could be violent. He has prepared the "*bhava,*" and he can get into "*jāti*" or be "born in that *bhava*" easily.
- Just like when a seed is made, it is easy to get that seed to germinate. Once we prepare a "*bhava*," it is easy to be born in that type of existence.

7. Now, we can see that a "*bhava*" or a "*kamma* seed" is the potentiality for a particular kind of existence or a "state of mind" during the current life itself.

- He can easily transition to that "state of mind" (or *bhava*). For example, he may have a good time with his family and be in a "normal state of mind." Then he gets a phone call from a fellow gang member asking for his help with the gang-related activity.
- He will instantly be transitioned to the "gang mentality" and be born a gang member. Then he will engage in whatever gang activity.
- But any birth (or *jāti*) will come to an end. When that activity is over, he may come home and be part of the typical family life.
- However, that "bad *jāti*" will ALWAYS lead to "*jarā, maraṇa, soka, parideva, dukkha domanassa*." Even if that particular was successful and left there happily, that ACTIVITY will lead to suffering in the future. He had accumulated more *kammic* energy for that "bad *bhava*."

8. But the important thing to remember is that "*bhava paccayā jāti*" **does not mean he is guaranteed to be born in that state.** He will likely be born in that state under suitable conditions, for example, upon urged by friends.

- But if he comes to his senses and realizes the perils of such actions, he can make an effort and slowly degrade the potency of that *kamma* seed. The first thing is to stop doing those more violent acts. If the teenager has enough determination and moral support from his family, he may get into the moral path.
- If he determines to change, it will be challenging in the beginning. It is like trying to stop a moving car. If the car has a lot of speed, it takes a considerable effort to stop. It is easier to stop a slowly moving car

© 2026 Lal A. Pinnaduwage

before it gains speed. In the same way, it is easier to revert if one realizes that one is on the wrong path early.

Same Example – Future *Bhava* and *Jāti* (via *Upapatti* PS)

9. If the teenager does not change his ways but only gets involved more and more with violent activities, then that *kamma* seed (or *kamma bhava*) will grow bigger and can become strong enough to energize a whole new existence (rebirth) or "*upapatti bhava*." Or he can even make a single huge *kamma* seed by killing someone.

- We all likely have acquired several or even many such large bad *kamma* seeds (i.e., many bad "*upapatti bhava*") suitable to yield rebirths in the lowest four realms; we have no way of finding out.
- Of course, we are also likely to have many good *kamma* seeds (i.e., many good "*upapatti bhava*") suitable to yield rebirths in the higher realms.

No Control Over the Next *Bhava* (in *Upapatti* PS)

10. And we do not have any control over which "*upapatti bhava*" is selected at the end of the current *bhava*. The strongest with the most "*upādāna*" associated gets to the front automatically. The Buddha gave a simile to explain how this selection of a "*upapatti bhava*" or a strong *kamma* seed happens at the *cuti-paṭisandhi* transition at death.

- Imagine a barn that keeps the cows in for the night. All the cows are anxious to get out and roam around in the morning. But when the gate opens, it is the most muscular cow that has come to the front and is out of the gate when it is opened. The weaker ones don't even try to be at the front.
- Just like that, it is the most potent "*kamma* seed" or a "*paṭisandhi bhava*" that wins at the *cuti-paṭisandhi* transition.
- Let us get back to the teenager that we discussed above. Suppose the *kamma* seed he nourished during this life as a violent person with "animal-like" behavior is the strongest one of all his accumulated *kamma* seeds. In that case, it will bring about an animal existence at the *cuti-paṭisandhi* transition.

11. A Buddha could analyze such a *upapatti Paṭicca Samuppāda* cycle in finer detail to pinpoint exactly what type of animal it would be. This is because a Buddha can see not only a person's whole history in the present life but going back to many eons; thus, he can see which *kamma* seed will bring the following existence and exactly which kind of "*gati*" are embedded in that *kamma* seed. We can only discuss the general trends, and here we have discussed only the main ideas of how these *Paṭicca samuppāda* cycles operate.

- Going back to the teenager, In this case, it is the *upapatti Paṭicca Samuppāda* cycle that operates, and "*bhava paccayā jāti*" here leads to the birth in a new existence as an animal using that *upapatti bhava*.

Many Births Within a *Upapatti Bhava* – For Humans and Animals

12. Once born in such an animal existence, that animal will grow and then start old age ("*jarā*") and eventually die ("*maraṇa*").

- The *kammic* energy of that *kamma* seed may not deplete in just one birth (this applies only to humans and animals.)
- Since most animals have shorter lifetimes, only a fraction of that *kammic* energy is likely to have been spent. That animal will keep going through many similar births ("*jāti*") until the energy of that *kamma* seed is spent. It is said that many animals keep coming back to the same life many hundreds of times.

© 2026 Lal A. Pinnaduwage

13. This is the difference between "*bhava*" and "*jāti*." Once one gets a new existence or "*bhava*," one could have many births ("*jāti*") in that existence until the energy of the *kamma* seed is spent. See, "Bhava and Jāti – States of Existence and Births Therein."

- Thus we can see that the last step of "*jāti paccayā jarā, maraṇa, soka, parideva, dukkha, domanassa*" will be with "him" for a long time to come. It is not just one birth but many that will correspond to that existence as that animal.
- In general, within the human "*bhava,*" one could be reborn many times before the energy of that "good *kamma* seed" is depleted. This is why some children can recall previous recent lives. However, it is tough to get another "human *bhava*"; see, "Rebirth – Connection to Suffering in the First Noble Truth."
- However, especially in *Deva* and *Brahma* realms, there is only one birth during that existence as a *Deva* or a *Brahma*.

Kamma Seeds Removed for Those With *Magga Phala*? – No

14. Before closing this section, let us discuss another critical point. We mentioned earlier that everyone had accumulated numerous good and bad *kamma* seeds strong enough to give rise to good and bad rebirths. Then the question arises: Does a person attain the *Sotāpanna* stage (i.e., make bad rebirths in the lowest four realms void) by eliminating all those bad *kamma* seeds?

- While it is possible to reduce the potency of *kamma* seeds and maybe even eliminate some, it may not be possible to remove all. The *Ariya Mettā Bhāvanā* may remove many *kamma* seeds, as discussed in the "*Bhāvanā* (Meditation)" section, but there could be leftovers. It is said that the Buddha had 11 instances of bad *kamma vipāka,* including a back problem.
- Therefore, it is very likely that we all have many good and bad *kamma* seeds strong enough to energize many good and bad rebirths.
- What happens at the *cuti-paṭisandhi* moment involves the "*upādāna paccayā bhava*" step in the *upapatti Paṭicca Samuppāda* cycle. As we recall, this is the step responsible for energizing "*upapatti bhava*" to bring in a new existence."
- But this same step is involved in grasping the strongest "*upapatti bhava*" at the end of the current "*bhava*." Suppose a person dies, and that was the last possible human birth for him/her. Then at the dying moment, he/she will willingly grasp something they crave, i.e., matching the dominant "*gati*" of him/her.

15. Let us consider the case of the violent teenager again. Suppose he continued his violent acts and built up a "*upapatti bhava*" suitable for a violent animal. Then at the dying moment, he could see in his mind (like in a dream) a rival gang member trying to "steal a drug deal"; he would also see a gun close by. By his instincts, he will get angry, grab the gun, and shoot that person. This is an example of a "*gati nimitta*."

- That is the "*upādāna paccayā bhava*" step for the new existence. He has willingly grasped the mindset of an animal, and he will be born as an animal. His next thought-moment is in that animal that comes out of the dead body of the teenager as a "*gandhabba*" with an invisible fine body.
- This is described in detail in other posts; it needs more background material in "*manomaya kāya*" to understand the technical details, which is not critical here. However, now we can understand how a new existence is grasped at the end of a "*bhava*" in the *upapatti Paṭicca Samuppāda* cycle.

16. Let us go back to how a *Sotāpanna* avoids such bad rebirths even if he/she has many bad *kamma* seeds. Suppose that *Sotāpanna* has the same kind of *kamma* seed as that teenager (it could be from a previous life) and that it is strong enough to come to the forefront of his/her mind at the dying moment.

- What happens is that a *Sotāpanna* will not grab the gun and shoot that person even if it is his/her worst enemy doing something that could make him/her mad. His/her mindset or "*gati*" has been permanently changed. Thus "*upādāna paccayā bhava*" step will not be executed for that *kamma* seed.

© 2026 Lal A. Pinnaduwage

- In that case, now the next potent *upapatti bhava* will come to the forefront. That will also be rejected if that is also a bad one suitable for rebirth in the lowest four realms (*apāyā*.) Eventually, he/she will grasp a rebirth compatible with his/her "*gati*" at that dying moment, which for a *Sotāpanna* will never be the "*gati*" to be born in an *apāyā*.
- That process happens automatically and very quickly. We do not have conscious control over it.
- Thus one's rebirth will be determined by how one lives (and had lived previous lives). If one lived like an animal, one would be born an animal no matter how much one wishes for a "good birth." As discussed above, the real danger is that we do not know how we lived our previous lives.
- This is why *Paṭicca samuppāda* means "*pati + ichcha*" leading to "*sama" + "uppāda"* or what one grasps willingly and habitually is what one that will operate automatically at the dying moment; see, "Paṭicca Samuppāda – "Pati+ichcha"+" Sama+uppāda."
- Also, see "Bhava and Jāti Within a Lifetime – Example."

9.11 Imasmiṁ Sati Idaṁ Hoti – What Does It Really Mean?

August 5, 2018; revised January 26, 2019; May 2, 2019; July 4, 2022

A Zen Riddle?

1. "*Imasmiṁ sati idaṁ hoti, imassa uppādā idaṁ uppajjati; imasmiṁ asati idaṁ na hoti, imassa nirodhā idaṁ nirujjhatī ti.*" This is a famous phrase that appears in most *suttā* that describe *Paṭicca Samuppāda* (Dependent Origination).

- It is usually translated as, "When there is this that is, with arising of this that arises; when there is not this that is not, with the cessation of this that ceases." That sounds like a Zen riddle!
- But the Buddha never made his *Dhamma* into riddles. He always presented it in the simplest possible way. Some verses have become riddles because people have incorrectly translated them; they did not understand the true meanings or the significance of key Pāli words.
- Another example is, "Anidassana Viññāṇa – What It Really Means."

Sati – Mundane Meaning in the Verse

2. **The keyword in the verse that we are interested is "*sati*."** All English translations that I have seen have left out this keyword!

- There are two meanings to the word "*sati*." One is mundane, meaning "attention."
- It is actually that mundane meaning that should be used in this verse.
- If one set the mind on an immoral task (planning a robbery, assembling a bomb to kill people, etc.) one will start doing immoral deeds with "***apuñña abhisaṅkhāra* (or *apuññābhisaṅkhāra*)**" and initiate ***Akusala-Mūla Paṭicca Samuppāda***. That will lead to rebirth in the *apāyā*.
- At the opposite end, a Noble Person above the *Sotāpanna Anugāmi* stage will try to set the mind on cultivating "***kusala-mūla saṅkhāra***" and initiate ***kusala-mūla Paṭicca Samuppāda***. Here, they will have *Sammā Sati* (mindset focusing on *Nibbāna*). That "*sati*" is the one with deeper meaning.

Sammā Sati – Deeper Meaning of *Sati*

3. **The deeper meaning of "*sati*" should be used in the context of *Satipaṭṭhāna bhāvanā*, for example.**

- That *"sati"* is a *sobhana cetasika*, i.e., a good mental factor. The *sati cetasika* is cultivated by learning *dhamma* and eventually comprehending *Tilakkhaṇa*.
- **However, that *cetasika sati* does not have a counterpart in *asobhana cetasika*, i.e., there is no "*asati*" *cetasika*.**
- In verse, both "*sati*" and "*asati*" are mentioned. **Therefore, "*sati*" in the context of the verse in question does not refer to the *sati cetasika*.**

Mundane *Sati* – Examples

4. The word "*sati*" in "*Imasmiṁ sati idaṁ hoti,..*" is, however, still closely related to the mind. It just refers to keeping the mind focused on the task at hand, whether it is a "good" or "bad" task.

- Suppose a suicide bomber is assembling a bomb that he intends to use to kill many people. He must be paying careful **attention** (or "being mindful") to what he is doing,otherwise, he will blow himself up. That is the **mundane meaning of *sati*** there.

© 2026 Lal A. Pinnaduwage

- Thus, the term "mindful" can apply to the mindset of the suicide bomber while assembling the bomb. He must be mindful of his task. If he makes even a slight mistake, he may trigger the bomb right there.
- Obviously, he is not engaged in *Satipaṭṭhāna*. In fact, someone being mindful of morality/*Nibbāna* would not engage in such an act.

Attention Needed to Do Good or Bad

5. That mundane meaning of "attention" is the meaning that should be used in analyzing the verse in question here: "*Imasmiṁ sati idaṁ hoti,..*"

- **What it means in this context is "to focus the mind on something (X)."** Then that "something" leads to the **creation of "another thing (Y)**." Even though X is ALWAYS mental, Y could be mental (*nāma*) or material (*rūpa*) or a combination of the two (*nāmarūpa*).
- When the mind is set on getting something done, one makes *vacī* and *kāya saṅkhāra* accordingly, i.e., one thinks about getting it done and acts accordingly; that is the "*sati*" that is referred to in that verse.
- When the mind does not focus on something (and does not make plans in mind via *vacī saṅkhāra,* and carries out such plans), that is called "*asati*." In that case, there is no reason that Y would arise.

Good or Bad Deeds Done With Different Types of *Saṅkhāra*

6. As we will see below, making *saṅkhāra* is just the first step in a series of steps.

- We can make the mindset to do good or bad things. Keeping the attention on "good things" will lead to good outcomes (via good *dhamma*). Keeping the attention on "bad things" will lead to bad outcomes (via bad *dhamma*).
- Therefore, both cases (good or bad attention) will lead to a corresponding (good or bad) outcome. That is what is meant by "*Imasmiṁ sati idaṁ hoti"* or "keeping the attention on this will lead to that."
- What *Paṭicca Samuppāda* describes the eventual outcome ("that" is a "*jāti*," the outcome or the result): "*saṅkhāra paccayā viññāṇa*,"….ending up in "*bhava paccayā jāti.*"

7. Of course, if one does not keep the attention on something, one will not be generating (good or bad) *saṅkhāra* about it. Thus, one will not initiate *Paṭicca Samuppāda* cycles: "*saṅkhāra paccayā viññāṇa*,"….ending up in "*bhava paccayā jāti.*"

- Therefore, if there is "***asati***" or "no attention on some task," then there will be **no reason** for there to be an **outcome**: "*Imasmiṁ* ***asati*** *idaṁ* ***na hoti***."
- In other words, the mind will have no reason to generate new *saṅkhāra* to initiate *Paṭicca Samuppāda* processes.

8. Now we can understand half of the verse: "*Imasmiṁ sati idaṁ hoti, "Imasmiṁ* ***asati*** *idaṁ* ***na hoti***." That means "when the mind is focused on X that will give rise to Y when the mind is **not focused** on X that **will not give rise** to Y."

- We have already figured out what is meant by "*imassa uppādā idaṁ uppajjatī*" and "*imassa nirodhā idaṁ nirujjhatī* ."
- This part states that what has **ultimately come to being (*uppajjati*) or the *jāti*** is due to **what first arose in mind (*uppādā*) which are saṅkhāra.**
- Similarly, for something **not to come to being (*nirujjhatī*)**, the corresponding cause **should not arise in mind (*nirodhā*). If there is "*asati*" or "no attention," then nothing will be realized: "no *jāti*"** (because no *saṅkhāra* is generated to trigger *Paṭicca Samuppāda* processes.)

Correct Interpretation of the Verse

© 2026 Lal A. Pinnaduwage

9. So, now we can translate the whole verse: "when the mind is focused on this it will give rise to that, when the mind is **not focused** on this it **will not give rise** to that; **this arising in mind (*uppādā*)** will give rise to that (*uppajjati*), **this not arising in mind (*nirodhā*)** will stop that from coming to being (*nirujjhatī*).

- In straightforward terms, this describes the Buddha's key message: if one does not generate any defilements in mind, then one will not be reborn into this suffering-filled world.
- Furthermore, one MUST understand the anicca/dukkha/anatta nature of this world and set the mind on attaining Nibbāna to stop the rebirth process. That understanding will stop ***apuñña abhisaṅkhāra*** from arising via "*avijjā paccayā saṅkhāra*" in ***Akusala-Mūla Paṭicca Samuppāda***.

10. How anything and everything in this world arises with **the mind as the "creator"** is explained in the doctrine of the cause or effect of *Paṭicca Samuppāda*.

- Even though the process starts with generating *saṅkhāra* ("*avijjā paccayā saṅkhāra*"), it involves many other steps ("*saṅkhāra paccayā viññāṇa*," etc.) before the final thing manifests.
- That is why this verse comes in many *suttā* just before introducing the *Paṭicca Samuppāda* cycle starting with "*avijjā paccayā saṅkhāra*."

Ariyasāvaka Sutta (SN 12.49)

11. What we discussed above becomes clear in the "WebLink: suttacentral: *Ariyasāvaka Sutta* (SN 12.49)." It starts with the statement: "*Na, bhikkhave, sutavato ariyasāvakassa evaṁ hoti: 'kiṁ nu kho—kismiṁ sati kiṁ hoti, kissuppādā kiṁ uppajjati? Kismiṁ sati saṅkhārā honti, kismiṁ sati viññāṇaṁ hoti, kismiṁ sati nāmarūpaṁ hoti, kismiṁ sati saḷāyatanaṁ hoti, kismiṁ sati phasso hoti, kismiṁ sati vedanā hoti, kismiṁ sati taṇhā hoti, kismiṁ sati upādānaṁ hoti, kismiṁ sati bhavo hoti, kismiṁ sati jāti hoti, kismiṁ sati jarāmaraṇaṁ hotī'ti*?."

Translated: "*Bhikkhus*, a noble disciple, is not confused by the question: '[What gives you indeed— (*kiṁ nu kho*—)] What in mind becomes a cause? With the existence of what in mind does what come to being? What in mind becomes a cause for *saṅkhāra*? What in mind becomes a cause for viññāṇa? What in mind becomes a cause for *nāmarūpa*?… What in mind becomes a cause for *jarāmaraṇa*?' ."

12. The next verse: "*Atha kho, bhikkhave, sutavato ariyasāvakassa aparappaccayā ñāṇamevettha hoti: 'imasmiṁ sati idaṁ hoti, imassuppādā idaṁ uppajjati. Avijjāya sati saṅkhārā honti; saṅkhāresu sati viññāṇaṁ hoti; viññāṇe sati nāmarūpaṁ hoti; nāmarūpe sati saḷāyatanaṁ hoti; saḷāyatane sati phasso hoti; phasse sati vedanā hoti; vedanāya sati taṇhā hoti; taṇhāya sati upādānaṁ hoti; upādāne sati bhavo hoti; bhave sati jāti hoti; jātiyā sati jarāmaraṇaṁ hotī'ti. So evaṁ pajānāti: 'evamayaṁ loko samudayatī'ti.*"

Translated: "*Bhikkhus*, the noble disciple knows that what arises is dependent on what is cultivated in mind: 'When this exists in mind, that comes to be; with the arising of this in mind, that arises. When the mind is ignorant (*avijjāya sati*), *saṅkhāra* arise/come to be (*saṅkhārā honti*). When there are *saṅkhāra* in mind (*saṅkhāresu sati*), *viññāṇa* comes to be (*viññāṇaṁ hoti*). When there is *viññāṇa* in mind (*viññāṇe sati*), *nāmarūpa* arise/come to be (*nāmarūpaṁ honti*), ….When the mindset takes that of a certain existence (*bhave sati*), *jāti* comes to be (*jāti hoti*). When there is *jāti* in mind (*jātiyā sati*), *jarāmaraṇa* comes to be (*jarāmaraṇaṁ hotī*). **He understands thus: 'In such a way the world arises (*samudaya*).**' "

13. Next verse is: "*Na, bhikkhave, sutavato ariyasāvakassa evaṁ hoti: 'kiṁ nu kho—kismiṁ asati kiṁ na hoti, kissa nirodhā kiṁ nirujjhati? Kismiṁ asati saṅkhārā na honti, kismiṁ asati viññāṇaṁ na hoti, kismiṁ asati nāmarūpaṁ na hoti, kismiṁ asati saḷāyatanaṁ na hoti, kismiṁ asati phasso na hoti, kismiṁ asati vedanā na hoti, kismiṁ asati taṇhā na hoti, kismiṁ asati upādānaṁ na hoti, kismiṁ asati bhavo na hoti, kismiṁ asati jāti na hoti, kismiṁ asati jarāmaraṇaṁ na hotī'ti*?."

Translated: "*Bhikkhus*, a noble disciple is not confused by the question: '[What gives you indeed— (*kiṁ nu kho*—)]Absence of what in mind would not be a cause? With the cessation of what in mind what would

© 2026 Lal A. Pinnaduwage

be stopped from arising? Absence of what in mind (*kismiṁ asati) saṅkhāra* would not result (*na honti*)? Absence of what in the mind *viññāṇa* (an expectation of a worldly thing) would not result? ..Absence of what in the mind *nāmarūpa* would not result?… Absence of what in the mind *jarāmaraṇa* would not result?' ."

14. And then: "*Atha kho, bhikkhave, sutavato ariyasāvakassa aparappaccayā ñāṇamevettha hoti: 'imasmiṁ asati idaṁ na hoti, imassa nirodhā idaṁ nirujjhati. Avijjāya asati saṅkhārā na honti; saṅkhāresu asati viññāṇaṁ na hoti; viññāṇe asati nāmarūpaṁ na hoti; nāmarūpe asati saḷāyatanaṁ na hoti ... pe ... bhavo na hoti ... jāti na hoti ... jātiyā asati jarāmaraṇaṁ na hotī'ti. So evaṁ pajānāti: 'evamayaṁ loko nirujjhatī'ti.*

Translated: "*Bhikkhus*, the noble disciple knows that what arises is dependent on what is cultivated in mind: 'When this does not exist in mind, that will not come to be; with the cessation of this in mind, that is stopped from arising. When there is no ignorance in mind (a*vijjāya asati*), *saṅkhāra* do not come to be (*saṅkhārā na honti*). When *saṅkhāra* cease to exist in mind (*saṅkhāresu asati*), *viññāṇa* do not come to be (*viññāṇaṁ na hoti*). With the cessation of *viññāṇa* in mind (*viññāṇe asati*), *nāmarūpa* do not come to be (*nāmarūpaṁ na honti*), ….When there is *bhava* absent in mind (*bhave asati*), *jāti* will not come to be (*jāti na hoti*). When there is no *jāti* in mind (*jātiyā asati*), *jarāmaraṇa* do not come to be (*jarāmaraṇaṁ na hotī*). **He understands thus: 'In such a way the world ceases to exist (*nirujjhatī*),** and thus the *saṁsāric* suffering ends.' "

15. Finally, "*Yato kho, bhikkhave, ariyasāvako evaṁ lokassa samudayañca atthaṅgamañca yathābhūtaṁ pajānāti, ayaṁ vuccati, bhikkhave, ariyasāvako diṭṭhisampanno itipi ... pe ... amatadvāraṁ āhacca tiṭṭhati itipī'ti.*

Translated: "*Bhikkhus*, a noble disciple thus understands the origin and the ending of the world. He is knowledgeable about the true nature of this world, has the correct vision, and comes to attain *Nibbāna*."

16. That is the complete *sutta*. It provides the basic reasoning behind *Paṭicca Samuppāda*.

- It is important to realize that all the steps in *Paṭicca Samuppāda* involve the mind up to the *jāti* stage. When the *jāti* stage arrives, the process is complete. That *jāti* that came into being has to evolve naturally to its end.

© 2026 Lal A. Pinnaduwage

9.12 Paṭiloma Paṭicca Samuppāda – Key to Nibbāna

March 15, 2019; revised January 10, 2021; December 23, 2022

January 10, 2021: Renamed from **"Anuloma Paṭiloma Paṭicca Samuppāda – Key to Sotāpanna Stage"** to **"Paṭiloma Paṭicca Samuppāda – Key to Nibbāna"**

Paṭiloma Paṭicca Samuppāda is the "reverse of the standard *Akusala-Mūla Paṭicca Samuppāda* process. That means it is the way to *Nibbāna*.

Introduction

1. Just before his Enlightenment, the Buddha figured out how beings are born endlessly due to their own way of thinking. That knowledge is embedded in *Paṭicca Samuppāda*, translated as, "Dependent Origination."

- It describes the origins of different types of living beings, according to their thought processes (*saṅkhāra*) based on the level of *avijjā* (ignorance of the fundamental nature).
- *Anuloma Paṭicca Samuppāda* describes the forward progression of events leading to eventual suffering. *Paṭiloma Paṭicca Samuppāda* describes the backward progression to see that indeed *avijjā* must be removed (by cultivating wisdom or *paññā*) to stop future suffering from arising.

Anuloma Paṭicca Samuppāda and *Paṭiloma Paṭicca Samuppāda*

2. "WebLink: suttacentral: *Pathama Bodhi Sutta* (Udāna 1.1)" and "WebLink: suttacentral: *Dutiya Bodhi Sutta* (Udāna 1.2)" state how the Buddha comprehended *anuloma* and *paṭiloma Paṭicca Samuppāda* during the night of the Enlightenment.

- Most people are familiar with how suffering originates with the *saṅkhāra* generation due to the ignorance of the Four Noble Truths (*avijjā*), and then go through the familiar steps: "*avijjāpaccayā saṅkhārā, saṅkhārapaccayā viññāṇaṁ*, ..and ends with ".. *Evametassa kevalassa dukkhakkhandhassa samudayo hotī"ti* OR "the whole mass of suffering."

Paṭiloma Paṭicca Samuppāda

3. It is also important to trace the steps backwards and see how future suffering can be stopped by cultivating *paññā*: "***avijjānirodhā*** *saṅkhāranirodho,* ***saṅkhāranirodhā*** *viññāṇanirodho,* ***viññāṇanirodhā*** *nāmarūpanirodho,* ***nāmarūpanirodhā*** *saḷāyatananirodho,* ***saḷāyatananirodhā*** *phassanirodho,* ***phassanirodhā*** *vedanānirodho,* ***vedanānirodhā*** *taṇhānirodho,* ***taṇhānirodhā*** *upādānanirodho,* ***upādānanirodhā*** *bhavanirodho,* ***bhavanirodhā*** *jātinirodho,* ***jātinirodhā*** ***jarāmaraṇaṁ sokaparidevadukkhadomanassupāyāsā nirujjhanti. Evametassa kevalassa dukkhakkhandhassa nirodho hotī'ti***."

- By stopping ***jāti,*** it is possible to **stop suffering from arising** (at the end). Now we go backward: ***Jāti*** (births) stopped by stopping ***bhava***, which is stopped by stopping ***upādāna, taṇhā, vedanā, phassa, saḷāyatana, nāmarūpa, viññāṇa,*** and ***saṅkhāra***. When one gets to the first step: ***saṅkhāra*** cannot be stopped from arising without eliminating ***avijjā*** (and thus getting rid of ALL ***gati***).
- If one contemplates this process, one can get some profound insights.

Nirodha Means "Stop From Arising" – Not Destruction of an Existing Entity

4. It is clear that to stop "the whole mass of suffering", one MUST stop each of those ten factors (***jāti, bhava, upādāna, taṇhā, vedanā, phassa, saḷāyatana, nāmarūpa, viññāṇa,*** and ***saṅkhāra***) from arising.

© 2026 Lal A. Pinnaduwage

- Thus one can see that *nirodha* means "stop from arising."
- One can also see that can be done ONLY by removing *avijjā*, which is the same as cultivating *paññā*.
- The removal of *avijjā* (and cultivation of *paññā*) is done by following the Eightfold path, which has two components; see, for example, "What is Unique in Buddha Dhamma?." There are no shortcuts!

5. We concluded in #4 above that to stop future suffering from arising we must stop those ten terms from arising. This appears not to make sense with some of those terms when we try to reconcile that with the fact that an *Arahant* has stopped those from arising.

- In particular, one could object that *vedanā*, *phassa*, *viññāṇa*, and *saṅkhāra* still arise in a LIVING *Arahant*.
- As I have explained in many posts scattered throughout the website (especially in the "Paṭicca Samuppāda" section), those terms are in the "*uddesa*" version. This is explained in detail in the post, "Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa."
- Let us briefly discuss a few of those terms.

Need for Detailed Explanations

6. Basically all current English translations just provide word-by-word translations of that "*uddesa* version" without any explanation. For example, the English translation of the first sutta in #1 above states, "..because of **consciousness**: mind and body, because of mind and body: the six sense spheres, because of the **six sense spheres**: contact, because of **contact**: feeling, because of **feeling**… because of **continuation**: birth, because of **birth**: old age, death, grief, lamentation, pain, sorrow, and despair all arise, and so there is an origination of this whole mass of suffering.."; see, "WebLink: suttacentral: The First Discourse about the Awakening Tree (UD 1.1)."

- According to the second *sutta*, all those terms (consciousness, six senses, contact, feeling) should not arise in an *Arahant*!
- Furthermore, it is not clear what is meant by "continuation" (for *bhava*), which leads to *jāti* (births), and thus "this whole mass of suffering."

Detailed Explanations of Terms in *Paṭicca Samuppāda*

7. For example, the step, "*avijjā paccayā saṅkhāra*" really should be "*avijjā paccayā abhisaṅkhāra*."

- As is explained in the post, "Saṅkhāra – What It Really Means," an *Arahant* generates *saṅkhāra*, but NOT *abhisaṅkhāra*.
- It is such abhisaṅkhāra that leads to future births and thus future suffering!

8. The next step is written in *suttā* as "*saṅkhāra paccayā viññāṇa*" and that is the *uddesa* version.

- It needs to be explained as "*abhisaṅkhāra paccayā viññāṇa*," where *viññāṇa* means "defiled consciousness."
- An *Arahant* would have "purified *viññāṇa*" and NOT "defiled *viññāṇa*." This is explained in "Viññāṇa Aggregate."

9. Another confusing step could be "*nāmarūpa paccayā saḷāyatana*," where "*saḷāyatana*" or "six *āyatana*" are typically translated as "six sense faculties." **Of course, a living *Arahant* has perfectly good sense faculties (*indriya*).**

- Those six *indriya* (or sense faculties) become *saḷāyatana* when one acts with *avijjā* and uses them to accumulate "*saṇ*"; see, "Nāmarūpa paccayā Saḷāyatana."

© 2026 Lal A. Pinnaduwage

10. In the next step of "*saḷāyatana paccayā phassa*," it is really "*saḷāyatana paccayā samphassa*." When those *indriya* are used as *āyatana*, one "makes contact with a defiled mind," and that defiled contact is "*samphassa*" ("*saṃ*" + "*phassa*").

- This is discussed in, "Difference between Phassa and Samphassa."
- Therefore, an *Arahant* would have only "*phassa*" and NOT "*samphassa*."

11. Now, when those sensory inputs are evaluated with a defiled mind, one generates "mind-made *vedanā*" or "*samphassa ja vedanā*." These are greedy, angry, and jealous, types of *vedanā* generated due to the defilements in mind.

- Such "defiled and mind-made *vedanā*" is absent in an *Arahant*. An *Arahant* will, however, generate *vedanā* due to the contacts with the six *indriya*.
- For example, if someone hits an *Arahant*, he/she will feel pain. Spoiled milk would taste bitter and a piece of cake would taste sweet, etc. But an *Arahant* would not generate angry thoughts about someone offering spoiled milk and would not generate cravings for the cake.
- This is explained in detail in the post, "Vedanā (Feelings) Arise in Two Ways."

12. The subsequent confusion is at the step, "*bhava paccayā jāti*," which is translated in #5 as, "because of continuation: birth." I am not sure what is meant by "continuation" there.

- The correct interpretation is given in "Bhava and Jāti – States of Existence and Births Therein."

Stopping *Abhisaṅkhāra* Is the Key to *Nibbāna*

13. If one can spend some time reading those posts and the links given in them, one should be able to get a good idea of how different types of *jāti* originate via *abhisaṅkhāra* (one's thoughts).

- The Sotāpanna stage of *Nibbāna* is attained by getting rid of the wrong way of looking at one's body (and actions) are due to an unchanging "soul."
- However, one's *bhava* and *jāti* arise due to one's own *abhisaṅkhāra*. We are humans in this life because of good *abhisaṅkhāra* cultivated in a previous life.
- If we do evil (or *apuñña*) *abhisaṅkhāra* in this life, we may be born as animals or worse. If we do good (or *puñña*) *abhisaṅkhāra* in this life, we may be born as *devas*, *Brahmā*, or humans again.

No Birth Among the 31 Realms Will Stop Suffering

14. However, no birth in the 31 realms can bring a permanent state of happiness. Any *Deva* or *Brahma* existence will end, and one could be subsequently born in the *apāyā*.

- A permanent state of happiness (which means the absence of ANY suffering) is attained by stopping this never-ending rebirth process. **That is the key message of the Buddha.**
- When one truly understands that, one has the "vision" of a *Sotāpanna*, i.e., one would have gotten rid of *sakkāya diṭṭhi* (and *vicikicchā* and *sīlabbata parāmāsa* all at the same time).

Further Information

15. More details can be found in the "Paticca Samuppāda" section. The "Living Dhamma" section attempts to provide a systematic approach to learning and practicing Buddha Dhamma (of course, with more details in other sections).

- A systematic approach to Buddha Dhamma at "Buddha Dhamma – A Scientific Approach," which continues in "Understanding the Terms in Paticca Samuppāda."

9.13 Paṭṭhāna Dhamma

October 22, 2016

Paṭṭhāna Dhamma – Connection to Cause and Effect (Hetu Phala)

What Does "Paccaya" Mean in Paticca Samuppāda?

Anantara and Samanantara Paccaya

Āsevana and Aññamañña Paccaya

9.13.1 Paṭṭhāna Dhamma – Connection to Cause and Effect (Hetu Phala)

October 22, 2016; revised October 25, 2016; June 15, 2018; April 11, 2021; June 28, 2022

1. *Paṭṭhāna dhammā* is also cited as *pattāna dhammā* in English.

- The word "\paṭṭhāna" comes from "*paṭṭha*" + "*āna*." I have previously mentioned that "*āna*" means "bringing in" as in "*ānāpāna*" in *Ānāpānasati Bhāvanā*. "*Paṭṭha*" in Pāli or Sinhala means the layer of a tree trunk underneath the outermost layer of bark — *consisting of phloem cells* — which carry food between roots and leaves.
- So, the word "*paṭṭhāna*" here conveys the idea that while the roots (*mūlika hetu*) are critical for the tree's survival, "*paṭṭha*" also plays an important role in the tree's growth. In the case of *Paṭṭhāna Dhamma*, they play an important role in describing the conditions under which *hetu* or causes can bring in effects, as we will see below.
- By the way, "*paṭṭha*" are essential for the tree's survival, just as the tree's roots are. One could kill a tree simply by a process called "girdling" where those phloem cells are removed; see the Wikipedia article: "WebLink: WIKI: Girdling."
- The Buddha frequently used analogies with the workings of a tree. We also need to remember that "*mūla*" is a root in Pāli or Sinhala, so "*mūlika hetu*" means "root causes." So, the tree's survival depends on its roots and its "*Paṭṭha*" containing those critical phloem cells.
- This is the same as saying *Paṭṭhāna Dhamma* describes CONDITIONS are as important as ROOT CAUSES, which are *lobha, dosa,* and, *moha* (for *akusala kamma*), and *alobha, adosa,* and *amoha* (for *kusala kamma*).

2. It is also to be noted that "*paṭṭhāna*" in "*Satipaṭṭhāna*" can be interpreted to mean "providing food" or "*paṭṭha*" +"*āna*" to cultivate *sati* or mindfulness.

- The word "*Paṭṭhāna Dhammā*" has not been discussed that much in English. Therefore, it is good to get started the right way. Buddhaghosa did not discuss it because he did not comprehend *Paṭicca Samuppāda,* and as a result even many people who follow even Theravāda Buddhism are not familiar with *Paṭṭhāna Dhammā.* Ven. Ledi Sayadaw in Burma and Ven. Rerukane Chandawimala in Sri Lanka are clear exceptions. They have discussed *Paṭṭhāna Dhammā*; see the references below.
- However, their interpretations of *Tilakkhaṇa* (*anicca, dukkha, anatta*) are incorrect.

3. In the workings of living things (including plants) — and in mental processes in particular — the mechanism of how causes lead to effects is much more complex than material phenomena involving inert objects.

- In these cases, many conditions need to be satisfied, in addition to having sufficient causes.
- In many cases, such critical conditions are not satisfied even if the causes are there, so there is normally a TIME DELAY between causes and effects, i.e., between *kamma* and *kamma vipāka*.

© 2026 Lal A. Pinnaduwage

- This is why it is hard for people to see the validity of cause and effect (*hetu phala*) involving living things, especially the mind.
- This is what is explained in *Paṭicca Samuppāda*, with the help of *Paṭṭhāna Dhammā*. There are 24 conditions or paccayā discussed in the "*Paṭṭhānapakaraṇa*" in the *Abhidhamma Piṭaka*: "WebLink: suttacentral: 1.1. Nikkhepavāra." Of course, the English translation will likely have many errors, but one can get the basic idea.
- Let us discuss some examples to understand the role of a few of such conditions or *paccayā*.

4. All necessary causes to bring about a tree are embedded in a seed. A seed is a CAUSE for the subsequent appearance of a tree. **Yet, a seed cannot germinate unless suitable conditions are present.** If one keeps a seed in a cool, dry place, it will just sit there for thousands of years without giving rise to a tree.

- However, if one plants the seed in the ground where sunlight is available and provides water and nutrients, it will germinate and grow into a tree.
- The root condition to bring into existence a tree is embedded in a seed. That is in the *anantara paccaya*. But suitable conditions for that seed to germinate are in fertile soil with adequate sunlight and water; this is called *samanantara paccaya*. Therefore, both *anantara* AND *samanantara paccaya* MUST be satisfied to bring a tree into existence; see "Anantara and Samanantara Paccaya" for details.
- So, AT WHAT TIME the seed will germinate will depend on when the *samanantara* condition (fertile soil) is satisfied. *Anantara* condition (presence of a seed) is not enough.

5. Another important condition of *paccayā* comes into play for the germinated seed to grow into a tree: The *āhāra paccayā* (food condition) must be satisfied. If water, sunlight, and nutrients are unavailable after the seed germination, it cannot grow into a tree.

- An essential type of *āhāra* is the "food for *viññāṇa*." When one has bad thoughts about another person, that *viññāṇa* grows as long as one keeps thinking about that person and how bad he/she is. *Viññāṇa āhāra* are *mano sañcetanā.*

6. Another example of such a condition or *paccayā* is "*āsevana paccayā*." *Āsevana* means to "associate with."

- An important example is an association with bad friends. Whether it is a child or an adult, one's behavior will be influenced by who one associates with; see, "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavas)."
- I have discussed several important conditions or *paccayā* in the post, "Micchā Ditthi – Connection to Hethu Phala (Cause and Effect)." Here is that discourse:

  WebLink: Audio Desana: Episode 6 - Micchā Diṭṭhi Connection to Hetu Phala Cause and Effect

  There are 24 such conditions in *Paṭṭhāna Dhamma*. I will discuss them in detail in this subsection on "Paṭṭhāna Dhamma" in a series of posts.
- This is why mental phenomena are so complex. In many cases, several such conditions need to be satisfied for a cause (*hetu*) to lead to a corresponding effect (*phala*).

7. Similarly, the *kammic* energies created by our actions do not disappear. A given action creates a *kamma* seed with energy to bring in its fruits. It is like a seed waiting for the right conditions to germinate and bring a tree into existence.

- Those *kamma* seeds or *kamma bīja* are out there waiting for suitable conditions to bring in their effect.
- Whether they will bring *vipāka,* AND at what strength, AND when, will depend on the conditions or *paccayā*. This is what is described by *Paṭicca Samuppāda* with the help of *Paṭṭhāna Dhammā*.

© 2026 Lal A. Pinnaduwage

- See, "What Does "Paccaya" Mean in Paṭicca Samuppāda?", "Saṅkhāra, Kamma, Kamma Bīja, Kamma Vipāka" and "Nāmagotta, Bhava, Kamma Bīja, and Mano Loka (Mind Plane)" for more details.

8. But some strong *kamma* will bring in *vipāka* without exceptions. Those include *ānantariya pāpa kamma*. They are so strong that they do not require conditions to be just right. They bring *vipāka* mostly at the dying moment, i.e., death of the physical body, and will not be delayed until the *cuti-paṭisandhi* moment. Hence, the delay is only until death.

- Some people inherit wealth unexpectedly and some people die of accidents. These are also strong *kamma vipāka*, though as not strong as *ānantariya pāpa kamma*.
- But in most cases, conditions or *paccayā* play major roles; sometimes, many conditions must be satisfied for *vipāka* to bear fruit.

9. This knowledge — or rather this understanding of — how *kamma* and *kamma vipāka* work — is called *kammassakata sammā diṭṭhi*, and is a REQUIREMENT to attain **mundane *sammā samādhi***. When one fully understands this, it will be easier to see that the rebirth process has a logical foundation.

- This is because one can now clearly see that most of *kamma* or one's actions will have corresponding *vipāka* or results when suitable CONDITIONS appear.
- So, if one does actions suitable to be born in the *apāyā*, one COULD BE born in the *apāyā*, until one REMOVES the ability to for such CONDITIONS to appear.
- When one attains the *Sotāpanna* stage, one will never realize the conditions suitable for a birth in the *apāyā*. This requires another step BEYOND *kammassakata sammā diṭṭhi,* which is the comprehension of *Tilakkhaṇa*.
- Therefore, getting to the *Sotāpanna* stage is a two-step process: first to get to *kammassakata sammā diṭṭhi* and then the comprehension of *Tilakkhaṇa*.
- This is discussed in detail in the *desanā* in #6 above.

10. We see people doing immoral things without being subjected to corresponding punishments, but that does not mean they are getting away with it. Those actions can bring their fruits in future lives if they are not realized in this life.

- There are two ways to overcome *kamma vipāka*. First, such *kamma* seeds will lose their energy with time; they can last at most 91 eons. They are like regular seeds, which lose their power over time.
- The other way is to attain all four stages of *Nibbāna*. That will remove the possibility of making conditions for ANY *kamma* seed from germinating.

11. These conditions or *paccayā* play a critical role in *Paṭicca Samuppāda*. When we say "*avijjā paccayā saṅkhāra*," it means, "we do *saṅkhāra* with ignorance when necessary CONDITIONS are present."

- For example, we do not do immoral acts or *apuññābhi saṅkhāra* all the time. When we are attracted to or repulsed by something that we see (this is an example of *ārammaṇa paccaya*), we may generate craving or dislike, and then it can lead to an immoral action or *apuññābhi saṅkhāra*; see, "What Does "Paccaya" Mean in Paṭicca Samuppāda?."
- This is the reason why *kamma* itself is not deterministic. Just because one has *avijjā* does not mean one will necessarily do an immoral thing, generating (*apuññābhi*) *saṅkhāra*. If we cultivate *Satipaṭṭhāna*, even if we get the urge to do something immoral, we can contemplate the bad consequences and stop that action, speech, or thoughts.
- When one keeps doing *Satipaṭṭhāna* — and avoiding immoral acts — one's *gati* will change for the better, and then even the automatic urge to do something immoral will gradually fade. In other words, one's *avijjā* will reduce. This is why *Satipaṭṭhāna* is so important.

Next in the series, "What Does "Paccaya" Mean in Paṭicca Samuppāda?", ..

9.13.2 What Does "Paccayā" Mean in Paṭicca Samuppāda?

Revised April 27, 2016; August 25, 2019; December 14, 2023 (#3, #8); rewritten October 4, 2025

It is essential to be clear about what is meant by "*paccayā*" (pronounced "pachchayā") in *Paṭicca Samuppāda*. Root causes ("*hetu*") are not enough to trigger a *Paṭicca Samuppāda* cycle; necessary conditions ("*paccayā*") must also be present. *Avijjā* in "*avijjā paccayā saṅkhāra*" must be triggered by '(distorted/*viparīta*) *saññā*' to start a *Paṭicca Samuppāda* cycle or a *pañcupādānakkhandha* process.

Introduction

1. The *Paṭicca Samuppāda* cycle starts as: "*avijjā paccayā saṅkhāra*, *saṅkhāra paccayā viññāṇa*, *viññāṇa paccayā nāmarūpa*, *nāmarūpa paccayā salāyatana*,….".

- And since PS describes the "cause and effect" in Buddha Dhamma, most people think "*avijjā* ***paccayā*** *saṅkhāra*" means "*avijjā* automatically causes *saṅkhāra*" or "ignorance causes a mind to automatically generate *saṅkhāra* (leading to bad *kamma*)."
- As we discuss below, the steps should be translated as follows: "with *avijjā* (ignorance) **as condition**, *saṅkhāra* arise," with *saṅkhārā* as a condition for *viññāṇa*, etc.
- **Now, if *avijjā* has been eliminated from a mind, it cannot become a condition.** Thus, the entire PS sequence comes to a halt for *Arahants* who have eliminated *avijjā* from their minds.
- However, even if ***avijjā* has NOT been eliminated from a mind, it cannot become a condition until it is triggered by '(distorted/*viparīta*) *saññā*.' Therefore, it is possible for a mind to avoid generating *saṅkhāra* by overcoming that '(distorted/*viparīta*) *saññā*.'**
- **The above bullet is the basis of *Satipaṭṭhāna*.** The *Satipaṭṭhāna Sutta* explains how one can overcome the **'(distorted/*viparīta*) *saññā*'** and enter the *Satipaṭṭhāna Bhūmi* (where automatic *saṅkhāra* generation is absent) to cultivate the Noble Eightfold Path.

Root Causes and Their Results – The Role of Conditions

2. The easiest way to understand "*paccayā*" is to consider the following analogy: A seed contains the necessary causes (ingredients) for giving rise to a new tree. However, just because a seed is present, a tree will not come into existence; it must be planted in soil and provided with water and nutrients, i.e., it must be provided with the **necessary conditions** to germinate and grow. If the seed is in a cool, dry place, it can be kept that way for a long time without germinating.

- SUITABLE CONDITIONS must be present for causes to bring about corresponding effects. That is what *paccayā* means.
- When such suitable conditions are present, causes WILL bring about corresponding effects/results.
- **Thus, when such a result is brought about, it is called "*paccuppanna*," i.e., born ("*uppanna*") via suitable conditions ("*paccayā*").**
- All the terms in *Paticca Samuppāda* are **"*paccuppanna*."** Sometimes, "***paṭiccasamuppanna***" is used instead of **"*paccuppanna*."** In #7 below, it is shown that ***avijjā*** itself is ***paṭiccasamuppanna*** and **'(distorted/*viparīta*) *saññā*'** is the necessary condition for it.

© 2026 Lal A. Pinnaduwage

3. A potent seed has all the essentials to give rise to a tree; it has all the necessary ingredients. In that analogy, ***avijjā*** in the **mind** can be compared to the '**necessary ingredients**' in the **seed**.

- Now, if we burn that seed (or break it into pieces), it no longer has the ability to give rise to a tree. What we have done is to destroy the '**necessary ingredients**' in the seed. In the same way, if we can remove ***avijjā*** from the mind, the mind is no longer able to generate *saṅkhāra* and give rise to a *viññāṇa* that is the root cause of future suffering.
- Another way for us to prevent a seed from germinating is to stop providing the **necessary conditions (soil, water, and nutrients)** to it. That way, we can also prevent a tree from arising from that seed. However, as long as the seed is healthy, it can give rise to a tree at a future time if the suitable conditions are provided.
- In the same way, if *avijjā* has not been removed from the mind, it has the possibility of generating *saṅkhāra* and giving rise to a *viññāṇa* that is the root cause of future suffering. Here, the **necessary condition** for triggering *saṅkhāra* generation is **'(distorted/*viparīta*) *saññā*.'**
- Now, we can destroy an apple seed or a mango seed by hitting it with a hammer. But *avijjā* can be removed from the mind ONLY by cultivating *dhammavicaya sambojjhaṅga* while in the *Satipaṭṭhāna Bhūmi* devoid of **'(distorted/*viparīta*) *saññā*.'** (Removal of *avijjā* happens in stages, and is complete when all ten *saṁyojana* have been eliminated). We will get there in the future, but I just wanted to mention for completeness.

Avijjā Must be Triggered to Generate *Saṅkhāra*

4. It will clarify many things if one understands that *Paṭicca Samuppāda* does not refer to a "direct link" between causes (*hetu*) and effects/results. Just because there are root causes DOES NOT mean they WILL bring their results at ANYTIME. Appropriate conditions must be in place to allow root causes to bring about their effects.

- The root causes that concern us are *rāga*, *dosa*, and *moha* (or *avijjā*). Out of those, *avijjā* is the real root cause, since *rāga* and *dosa* arise based on *avijjā*.
- Since an *Arahant* has eliminated all root causes, a *Paṭicca Samuppāda* cycle cannot be initiated regardless of conditions.
- **However, even if *avijjā* has not been eliminated from the mind, the initiation of *Paṭicca Samuppāda* cycles can be temporarily halted in the absence of suitable conditions for *avijjā* to be triggered.**
- **That trigger (or the necessary condition) for '*avijjā*' to manifest is the '(distorted/*viparīta*) *saññā*,' that is built into all living beings.** Thus, it is **automatically generated** with every sensory input. That is why it is so hard to escape from the rebirth process. See "Fooled by Distorted Saññā (Sañjānāti) – Origin of Attachment (Taṇhā)" and "Avijjā is Triggered by Kāma Saññā in Kāma Loka."
- However, **the Buddha figured out a way (cultivating *Satipaṭṭhāna*) to overcome** that **'(distorted/*viparīta*) *saññā*'** and allow a mind to be temporarily free of defilements. That allows a mind to effectively engage in *Vipassanā* (insight meditation) to break *saṁyojana* and to eliminate *avijjā*.

Paccaya Sutta – Role of Conditions

5. *Paccaya Sutta* explains what is meant by *Paṭicca Samuppāda* and also by "*Paṭicca Samuppāda dhammā*."

- Even though several versions of *Paṭicca Samuppāda* are described in the *Tipiṭaka* Commentaries, the *Sutta Piṭaka* (i.e., original *suttās* delivered mainly by the Buddha) discusses only one version: ***Idappaccayatā Paṭicca Samuppāda.***

© 2026 Lal A. Pinnaduwage

- It explains the accumulation of *kammic* energies in real time within the current life. One is "born" in various temporary "existences" many times, even during a day. Understanding that helps clarify how future rebirths arise. All other versions of *Paṭicca Samuppāda* can be derived from this one. See, "Paṭicca Samuppāda During a Lifetime."
- **"*Paṭicca Samuppāda dhammā*"** are the **terms in *Paṭicca Samuppāda*** that **arise at a given moment**, based on **the conditions present at that moment**. **This is a critical point to understand.**

Description of '*Paṭicca Samuppāda*'

6. **First, the "WebLink: suttacentral: *Paccaya Sutta* (SN 12.20)" states what is meant by *Paṭicca Samuppāda***, i.e., the terms (*dhammā*) that arise in day-to-day life that contribute to future suffering.

- The Buddha asks: "What is *paṭicca samuppāda* (dependent origination)?" The English translation provides the correct meaning there: "What arises due to the prevailing conditions?"
- He starts by pointing out that "*jarā*, *maraṇa*" cannot manifest unless there is a *jāti*. That is true in both a **mundane sense** (old age and death cannot materialize unless one is born) and **also in the deeper sense of *jāti*** (of a new *paṭicca samuppāda* cycle); see "Idappaccayatā Paṭicca Samuppāda – Bhava and Jāti Within a Lifetime." **The *sutta* (as most *suttās* do) refers to the latter.**
- At marker 2.3, it states, "Whether a Buddha is in the world or not, this law of nature persists with its specific conditionality. When a Buddha is born in the world, he discovers it and explains it to others."
- Then, at marker 2.7, the *sutta* proceeds through the rest of *paṭicca samuppāda*, concluding with "*avijjā paccayā, bhikkhave, saṅkhārā*" at marker 3.10.
- At marker 3.11, it re-states, "Whether a Buddha is in the world or not, this law of nature persists with its specific conditionality. When a Buddha is born in the world, he discovers it and explains it to others."
- That is the description of the *Paṭicca Samuppāda* process.

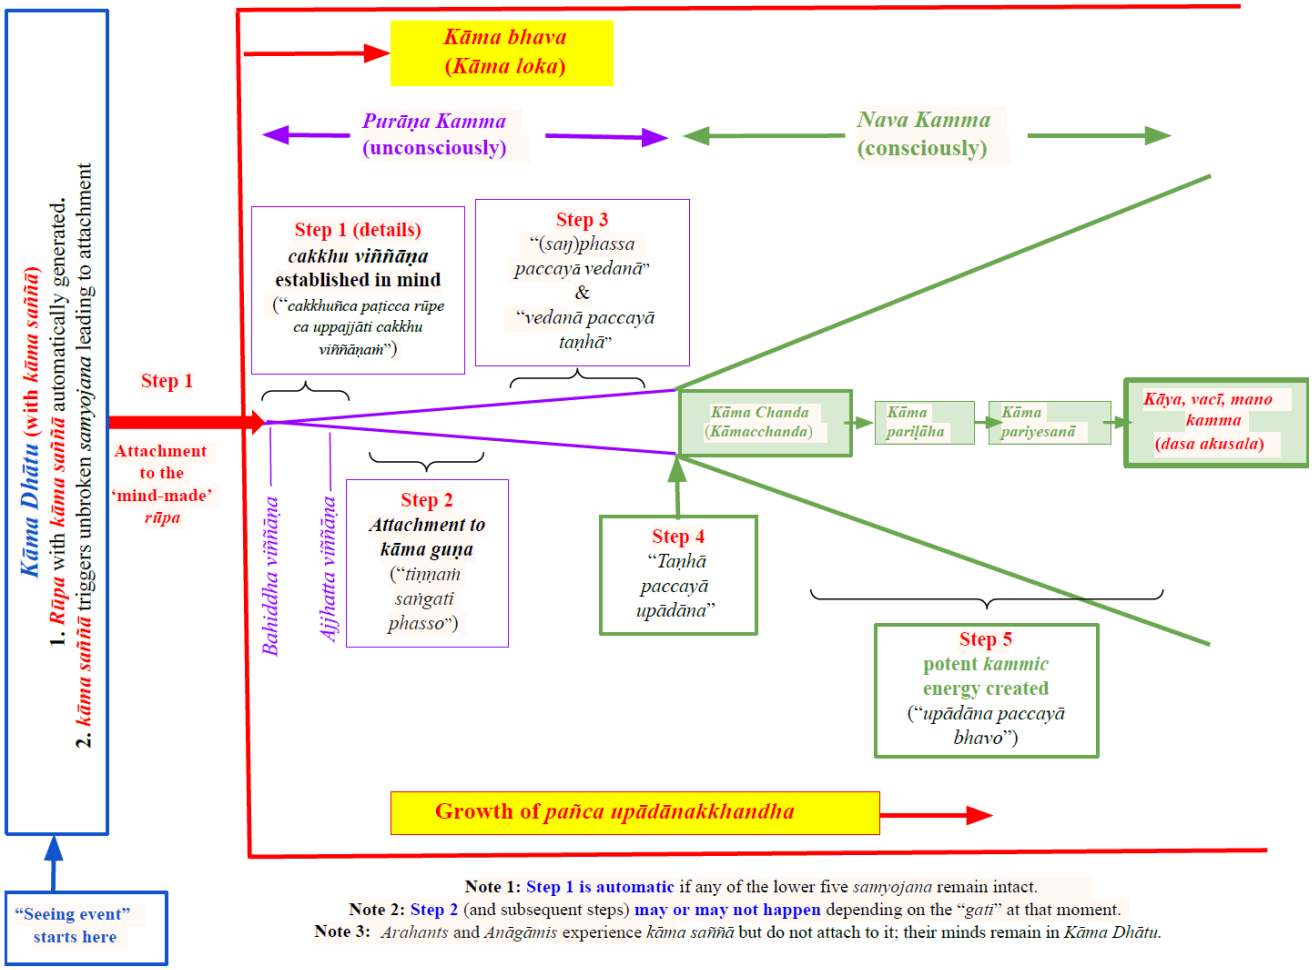
Description of '*Paṭicca Samuppāda Dhammā*'

7. **Then, @marker 4.1, the sutta starts discussing "*Paṭicca Samuppāda dhammā*,"** i.e., the characteristics of each term.

- At marker 4.2: "***Jarāmaraṇaṁ***, *bhikkhave, aniccaṁ saṅkhataṁ paṭiccasamuppannaṁ khayadhammaṁ vayadhammaṁ virāgadhammaṁ nirodhadhammaṁ*" OR "**Old age and death** are of *anicca* nature (*aniccaṁ*), prepared (*saṅkhataṁ*), dependently originated (*paṭiccasamuppannaṁ*), and can be stopped from arising (*khayadhammaṁ vayadhammaṁ virāgadhammaṁ nirodhadhammaṁ*)."
- Then it examines all the terms in *Paṭicca Samuppāda* and asserts that the above holds true for all of them.
- The last term (@marker 4.13) is: "***avijjā*** is of *anicca* nature (*aniccaṁ*), prepared (*saṅkhataṁ*), **dependently originated (*paṭiccasamuppannaṁ*), and can be stopped from arising (*khayadhammaṁ vayadhammaṁ virāgadhammaṁ nirodhadhammaṁ*)**."

8. Therefore, all 12 terms (starting with *avijjā* and ending in *jarāmaraṇa*) arise based on conditions. **That means any term can be stopped from arising at a given time by removing the condition (previous term) that triggers it.**

- As we know, *rāga*, *dosa*, and *moha* (*avijjā*) are the root causes for generating defilements to contaminate a mind.
- However, even *avijjā* must be first triggered by an appropriate condition to start a mind contamination process, which is the same as a *Paṭicca Samuppāda* process or the initiation of a new *pañcupādānakkhandha* generation process.



© 2026 Lal A. Pinnaduwage

- Such a process starts based on a sensory input.
- As we have discussed, ALL sensory processes generate '(distorted/*viparīta*) *saññā*' and that is the condition (or the trigger) to activate *avijjā*!
- I have discussed that process for the *kāma loka* in "Avijjā is Triggered by Kāma Saññā in Kāma Loka."
- **At the end of that post, I also addressed the trivial question:** Why isn't there a term "*saññā paccayā avijjā*" in *Paṭicca Samuppāda*? It is a good idea to read that post carefully, because this is a critical point to understand!

Triggering of *Avijjā* With *Kāma Saññā* in *Kāma Loka*

9. As I have pointed out in so many posts, '(distorted/*viparīta*) *saññā*' is built into all living beings. Thus, at the very beginning of **any sensory input**, *avijjā* is triggered, and thus, **a PS process with "*avijjā paccayā saṅkhāra*" starts without exception.**

- That '(distorted/*viparīta*) *saññā*' is the required condition for *avijjā* to be triggered!
- It is explained in detail for the '*kāma loka*' in "Avijjā is Triggered by Kāma Saññā in Kāma Loka." Here, '(distorted/*viparīta*) *saññā*' that 'fools a mind' is '*kāma saññā.*' This is shown in the chart below.

Growth of Pañcupādānakkhandha

Download/Print: "WebLink: PDF file download: Growth of Pañcupādānakkhandha"

- As mentioned in Note 3 in the chart, the minds of those who have eliminated *kāma rāga saṁyojana* (and all five lower *saṁyojana*) are 'not fooled' by the '*kāma saññā.*' Thus, their minds do not attach to the '*kāma saññā*' and thus, stay in the '*kāma dhātu*' state without entering the '*kāma loka.*'

© 2026 Lal A. Pinnaduwage

- See "Growth of Pañcupādānakkhandha – 'Anusotagāmī'" for further details. The above chart is from that post.

Triggering of *Avijjā* in *Rūpa* and *Arūpa Loka*

10. '*Kāma saññā*' does not operate in '*rūpa loka*' or '*arūpa loka*.' In the '*rūpa loka*,' it is the '*saññā* of *jhānic* pleasures' that triggers *avijjā*. In the '*arūpa loka*,' it is the '*saññā* of *samāpatti* pleasures' that triggers *avijjā*.

- That was discussed in "Saññā In Kāma, Rūpa, and Arūpa Loka" and "Satipaṭṭhāna Bhūmi – Free of Loka Saññā."

Only a Buddha Can Discover This "Trap in the Rebirth Process"

11. The above discussion explains why any living being will automatically be an *anusotagāmī* (one who is trapped in the rebirth process); see "Growth of Pañcupādānakkhandha – 'Anusotagāmī'." As pointed out, a *puthujjana* (any living being not an *Ariya* or a Noble Person) will always attach to a sensory event — due to '(distorted/*viparīta*) *saññā*' — and 'move away from *Nibbāna*.'

- One must comprehend the Noble Truths/*Paṭicca Samuppāda*/*Tilakkhaṇa* to be able to overcome the '(distorted/*viparīta*) *saññā*' and move toward the *Satipaṭṭhāna Bhūmi* to cultivate the Noble Path. Such a person is a *Paṭisotagāmi*. See "Paṭisotagāmī – Moving Toward Satipaṭṭhāna Bhūmi and Nibbāna."
- Only a Buddha can discover how to become a *Paṭisotagāmi* by overcoming the '(distorted/*viparīta*) *saññā,*' which is present in all three *lokas* or all 31 realms!

This Is Why We Experience *Pañcupādānakkhandha* and not *Pañcakkhandha*

12. The above discussion also explains why a *puthujjana* will never experience *pañcakkhandha* (equivalent to the 'pure mind' or the *pabhassara citta*). From the very beginning of a sensory event (the '*dhātu* stage'), the mind is influenced by the '(distorted/*viparīta*) *saññā*,' to convince it that what is experienced is 'really there in the external world.' That is how *avijjā* is triggered!

- It is only at the *Arahant* stage that one can fully realize that one's experience is, in fact, a 'magic show' created by the mind itself through a complex process; see "Fooled by Distorted Saññā (Sañjānāti) – Origin of Attachment (Taṇhā)." Not only each sentient being, but also their environments are generated via *Paṭicca Samuppāda* to generate a '(distorted/*viparīta*) *saññā*,' that automatically triggers *avijjā* and initiates a new *Paṭicca Samuppāda* cycle **with every sensory event.** See "Paṭicca Samuppāda Creates the External World, Too!"
- As we have discussed, even after attaining the *Arahant* stage, the '(distorted/*viparīta*) *saññā*' will still arise in an *Arahant*. That is because it is built into the physical body of the *Arahant*. Thus, unlike those terms in *Paṭicca Samuppāda*, the '(distorted/*viparīta*) *saññā*' cannot be 'stopped from arising.'
- That is why the term "*saññā paccayā avijjā*" is not included in *Paṭicca Samuppāda*, even though *avijjā* arises in a mind due to the presence of that '(distorted/*viparīta*) *saññā*.' See #16 of "Avijjā is Triggered by Kama Saññā in Kama Loka."

Summary

13. *Avijjā* in "*avijjā paccayā saṅkhāra*" must be triggered by '(distorted/*viparīta*) *saññā*' to start a *Paṭicca Samuppāda* cycle.

- That happens with every sensory event because '(distorted/*viparīta*) *saññā*' is built into all living beings via *Paṭicca Samuppāda.*

© 2026 Lal A. Pinnaduwage

- One comprehends how that '(distorted/*viparīta*) *saññā*' arises by becoming a '*Sandiṭṭhiko*'; see "Sandiṭṭhiko – What Does It Mean?"). A '*Sandiṭṭhiko*' can 'see with wisdom' (*dhamma cakkhu*) how to overcome it and enter the *Satipaṭṭhāna Bhūmi* free of '(distorted/*viparīta*) *saññā.*'
- Since the '(distorted/*viparīta*) *saññā*' is absent in the *Satipaṭṭhāna Bhūmi*, *Paṭicca Samuppāda* does not operate there. Furthermore, a *pañcupādānakkhandha* process cannot be initiated either. See "Satipaṭṭhāna Bhūmi – Free of Loka Saññā."
- That process is outlined in the *Mahā Satipaṭṭhāna Sutta*, but must be explained in detail. We have been discussing the key elements/concepts in the new series "Satipaṭṭhāna Sutta – New Series."

9.13.3 Anantara and Samanantara Paccayā

Revised February 12, 2020; August 7, 2022

Critical Roles of Causes (*Hetu*) and Conditions (*Paccayā*)

1. An action or a deed is a *kamma*. That *kamma* was done with an intention and led to creating *kammic* energy that COULD bring *vipāka* in the future. Such *kammic* energies act as causes to bring *vipāka*. But such *vipāka* is not guaranteed.

- There must be suitable conditions (*paccayā*) that must be there for such *vipāka* to materialize.

2. The easiest way is to consider the following example: A seed contains the necessary ingredients (causes) for bringing up a new tree. But just because a seed is there, a tree will not come into existence. If the seed is in a cool, dry place, one could keep it that way for a long time. Or one could burn or crush it, and it will never bring up a tree.

- SUITABLE CONDITIONS must be present for causes to bring about corresponding effects. That is what *paccayā* means.
- If a seed is planted in fertile soil and water and sunlight are provided, it will germinate and give rise to a tree.
- When such suitable conditions are present, causes WILL bring about corresponding effects. Thus when an event takes place under the right conditions, it is called "*paccuppanna*," i.e., born ("*uppanna*") via suitable conditions ("*paccayā*.") Of course, root causes must be there, to begin with.

All *Kamma* Do Not Lead to *Vipāka*

3. That is the reason why *kamma vipāka* is not deterministic. In the post, "What is Kamma? – Is Everything Determined by Kamma?" I mentioned it, and here we will discuss it in detail.

- When we commit a good or an evil deed, the *kammic* potential or energy associated with that deed remains as a *kamma bīja* or a kamma seed. We will eventually get to the question of "where it is stored," but we just need to remember that a *kamma* seed is not a physical seed but energy or potential. This concept is described in the post, "Saṅkhāra, Kamma, Kamma Bīja, Kamma Vipāka."
- The germination of a *kamma* seed, though, has some similarities to the germination of a physical seed, for example, an apple seed. The apple seed has the potential to bring about an apple tree. Still, the seed will not germinate until suitable conditions for germination are present. The seed needs to be in the soil, and water and sunlight must be provided for germination.
- In the same way, *kamma vipāka* (the result of a past *kamma*) can come to fruition only with the conditions for the corresponding *kamma* seed to germinate.

Anantara and *Samanantara* Relations

© 2026 Lal A. Pinnaduwage

4. Let us look at the *anantara* and *samanantara* relations as discussed in the *Paṭṭhāna* Dhamma (book on "Conditional Relations" in Abhidhamma): [***anantara*** : [adj.] next; adjoining; immediately following. ***samanantara*** : [adj.] immediate; nearest.]

- "*An*" means food or in this case the *kamma* seed; "*antara*" means storage, waiting to bear fruit. Thus, *anantara* ("*an*" + "*antara*") means basically a *kamma* seed waiting to germinate. [***antara*** : [nt.] difference. [adj.] inner; inter. ***anto*** : [ind.] inside; within; inner.]
- "*Sama*" means equal or similar. Thus *samanantara* ("*sama*" + "*anantara*") means "matching conditions" with the *antara*.
- Therefore, for a kamma vipāka to materialize, both *anantara* and *samanantara* must be there.
- By the way, *ānantara* with a long "*ā*" (as in *ānantariya kamma*) means something entirely different; see, "Ānantariya Kamma – Connection to Gandhabba."

Some Analogies/Examples

5. Here is one analogy the Buddha gave. If one prepares a plot by preparing the soil, providing water, and if sunlight is also available, the *samanantara* for a seed to germinate is there. However, unless one starts with an apple seed (i.e., if *anantara* is not there), an apple tree cannot grow.

- On the other hand, if one keeps the apple seed in a cool, dry place, it will not germinate since the *samanantara* condition is not met.
- Results appear when both *anantara* and *samanantara* conditions are met. Thus, when one plants an apple seed in a suitable plot, it will germinate and become an apple tree.
- Furthermore, a mango tree will not result from an apple seed. Thus *samanantara* will give rise to a result matching the "seed" in the *anantara*.

6. More examples can be given these days that are related to modern technology. If a radio station is broadcasting a radio program, that is the *anantara*. The seed energy is available anywhere within a specific range. But one cannot listen to the program without a radio. Even if someone has a radio, one cannot listen to the broadcast unless the receiver is tuned to the correct frequency. When those conditions are met, one could hear the program.

- *Kamma vipāka* can bring results via "instant communication" when the conditions become right. All kammic potentials are in "instant contact" with us via a concept similar to that described in quantum entanglement: see, "Quantum Entanglement – We Are All Connected." **Thus all potential kamma seeds are waiting in *anantara* and can bring about instant results when the right conditions (*samanantara*) appear.**

Many Bad *Vipāka* Can be Avoided by Being Mindful

7. By being mindful, we can avoid many past bad *kamma* seeds from coming to fruition. We make sure that *samanantara* conditions are not present. If one goes out at night in a bad neighborhood that provides fertile ground for a past bad *kamma* seed to germinate and the *kamma vipāka* to take place.

- In the same way, we can force "good" *kamma* seeds to germinate by providing the right conditions. For example, even if we have enough merits (i.e., a good *kamma* seed) that could make us pass a test or get a job, unless we make the right conditions (i.e., prepare in advance), we may not get the results.
- But sometimes, one gets an unexpected promotion or better results than anticipated in a test if the *kamma* seeds are potent.

8. From our past innumerable lives, we have accumulated countless *kamma* seeds, both good and bad. Some of the stronger ones bear fruit no matter what we do, especially the *ānantariya kamma vipāka*.

© 2026 Lal A. Pinnaduwage

- But in general, by being mindful (i.e., by NOT providing appropriate conditions), we can avoid many bad *kamma vipāka*. By making the right preparations (i.e., by optimizing *samanantara* conditions), we can exploit those good *kamma* seeds.
- A particularly important case is bringing up a child. The parents and teachers have considerable responsibility for providing the right conditions for that young mind to develop. In particular, association with bad friends can direct a young life in the wrong direction; in the same way, association with good friends and a nurturing environment can bring about a productive, responsible adult.

Importance of Cultivating Good *Gati* (Habits/Character)

9. One important cross-connection is matching "*gati*" with similar "*gati*" that we have discussed before; see "Habits and Goals" and "Sansāric Habits and Āsavas."

- For example, when a *gandhabba* is waiting for a suitable womb, the *anantara-samanantara paccayā* comes into play. A *gandhabba*, who in previous lives had developed a particular habit, say heavy drinking, is attracted to a womb of a woman with similar habits, possibly an alcoholic or a drug user. The concept of a *gandhabba* is in, "Manomaya Kāya (Gandhabba) and the Physical Body," and "Manomaya Kāya and Out-of-Body Experience (OBE)."
- Similarly, a *gandhabba*, who in previous lives led moral lives, is bound to be attracted to a mother's womb in a "good" family. Like in the above case, the *samanantara* for the *gandhabba* (where it can establish itself) is an environment that matches its own "*gati*."
- However, no matter how one is born, one can still change one's destiny by making conditions for other good *kamma vipāka* to come to fruition and by making sure not to create conditions for bad *kamma vipāka* to come to fruition.

In other posts, we will discuss further applications of *anantara-samanantara* relations. One important discussed in "Transfer of Merits (Pattidana)- How does it Happen?."

Next in the series, "Āsevana and Aññamañña Paccayā."

9.13.4 Āsevana and Aññamañña Paccayā

November 20, 2016; revised July 1, 2019 (comment added at the end); March 4, 2021; September 9, 2022; March 28, 2023

Introduction

1. As mentioned in the "Paṭṭhāna Dhamma – Connection to Cause and Effect (Hetu Phala)," there are 24 *paccayā* or conditions that contribute to various steps in the *Paṭicca Samuppāda* (PS) cycles.

- As discussed in the post "What Does "Paccayā" Mean in Paṭicca Samuppāda?," and in the post mentioned above, a given step in a PS cycle **cannot proceed** until one or more conditions are satisfied. **And we have control over most of these conditions.** Therein lies *Paṭṭhāna Dhamma*'s value; we can see how to stop *Akusala-Mūla* PS cycles from proceeding and maintain *Kusala-Mūla* PS cycles.
- This post will discuss two of those 24 *paccayā* or conditions. They are somewhat related to each other and thus are suitable to discuss.

Āsevana Paccayā

2. *Āsevana paccayā* — which can be loosely translated as the "condition of association" — is an important condition that fuels various PS steps at different times.

- In most cases, *āsevana paccayā* has been translated as a "condition of repetition." Even though repetition is relevant, repetition comes via close associations, so the association is primary.

© 2026 Lal A. Pinnaduwage

- The word "*āsevana*" comes from "*ā*" and "*sevana*" or "came to the shade"; when one is staying close to a tree in the hot sun, one is "hanging around" the tree and is benefited from its cool shade.
- Of course, as we will see below, one can be influenced in the wrong direction when associating with bad friends. Therefore, *āsevana paccayā* comes into play in both *Kusala-Mūla* and *Akusala-Mūla* PS.
- When one likes the experience, one tends to keep that association. Sometimes, that eventually leads to harmful consequences, but one still tends to keep bad associations because of the ignorance of such bad outcomes.

3. An important role of *āsevana paccayā* is played in the "*viññāṇa paccayā nāmarūpa*" step in PS, whether it is *Kusala-Mūla* PS or *Akusala-Mūla* PS.

- For example, a teenager who is (unknowingly) cultivating a *viññāṇa* for drinking is heavily influenced by the association with bad friends. He likes to "hang out" with such bad friends and tends to generate a lot of *saṅkappa* or *vacī saṅkhāra* (conscious thinking about how he/she will be having a good time with those friends at parties with a lot of alcohol). The *nāmarūpa* generated in his mind are such "party scenes," visualizing those friends and various favorite drinks.
- On the other hand, when one is on the right path, one constantly thinks about Dhamma Concepts, has Dhamma discussions with good friends, and visualizes such gatherings. Or one could be visualizing some meritorious deeds, like giving or helping out at an orphanage; these are good *nāmarūpa* generated with such a good *viññāṇa*.
- These *nāmarūpa* are different from the *nāmarūpa* that descends to a womb at the *okkanti* moment, i.e., when a *gandhabba* enters a womb. We will discuss that later. So, *nāmarūpa* comes in two main categories.

Āsevana Paccayā – Examples

4. *Āsevana paccayā* can play a role in different types of situations. Let us consider two such examples.

- One such situation is the teenager mentioned above, who cultivates bad *nāmarūpa* by associating with bad friends. The more he/she associates with such bad friends, the more he/she will generate bad *nāmarūpa* of party scenes with a lot of alcohol and/or drugs. Also, there will be other associated *nāmarūpa*: He/she will constantly be visualizing favorite friends, gathering places, appropriate music, etc.
- In such an environment, it is also easy to cultivate other types of "bad *nāmarūpa*" such as gambling, illicit sex, stealing (to sustain those activities), violence, and even killings.
- The teenager could cultivate such *nāmarūpa* and more over time.

5. On the other hand, when one is on either mundane or *lokuttara* Eightfold Path, one will be cultivating "good *viññāṇa*," and one tends to visualize exactly opposite types of *nāmarūpa*.

- One could be planning a Dhamma discussion and thinking and visualizing who will be there and what topics will be discussed. One could be organizing a charity event and making arrangements.
- One could plan to attend a meditation retreat and visualize what activities one may engage in. One could even be thinking about and trying to visualize the suffering endured by poor children in a situation one is familiar with and generating compassion-filled thoughts and *nāmarūpa*.

6. In either case, the "*nāmarūpa paccayā saḷāyatana*" step will then point one's all six *āyatana* or *saḷāyatana* (five physical senses and the mind) towards such thoughts, visuals, and actions.

- Then those associations will become even stronger. When one gets absorbed in relevant activities, when one's mind is occupied with such thoughts and constantly visualizes related activities, people, and objects, those *nāmarūpa* will "grow" in one's mind. Those *nāmarūpa* will be closely associated with one's *gati*.

© 2026 Lal A. Pinnaduwage

- This is also discussed in the post: "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavas)."

Āsevana Paccayā – In a *Citta Vīthi*

7. Another critical application of the *āsevana paccayā* occurs in a *citta vīthi*. When we are generating *saṅkappa* (or *sankalapanā*), we are generating an enormous number of *citta vīthi* in a short time. Each *citta vīthi* will make the next *citta vīthi* stronger (actually make the *javana citta* in the subsequent *citta vīthi* stronger) by association.

- The best example is one we have discussed several times in the "Living Dhamma" section. When we start thinking about an enemy, we start visualizing more and more bad situations that we encountered with that person; we tend to pull out all "past associations" from memory and conjure up "many possible future scenarios" in our minds.
- All these "bad *saṅkappa*" or "conscious bad thoughts" will strengthen the PS steps.
- Our minds can run wild if not controlled with *Satipaṭṭhāna* or *Ānāpāna;* see, "Satipaṭṭhāna Sutta – Relevance to Suffering in This Life."

8. Even in a given *citta vīthi*, each *javana citta* is strengthened by the previous *javana citta* via *āsevana paccayā*. This happens in the time scale of a billionth of a second and is driven by our *gati*.

- The first *javana citta* is weak. But the second *javana citta* gets fuel from the first one and is inevitably generating strength via association. One meaning of the name *javana* is "to run with." The series of 7 *javanas* "run with the object in mind," initially getting stronger until the fifth *javana*. Then the fuel runs out, and the sixth and seventh *javana* become weaker and weaker.
- *Kamma* generated by the first *javana citta* can only bring *vipāka* into this life. But *kamma* done by the second through the sixth *javana citta* (which get stronger by association) are potent enough to bring *kamma vipāka* in many future lives. The seventh *javana* is weak. Thus, it can bring *vipāka* only in the next life and become null if it does not bring *vipāka* in the next life.
- It is unnecessary to learn the complexities of *citta vīthi*, but it is good to have some idea.

9. The association then moves to the next *citta vīthi*. Thus the subsequent *citta vīthi* (and thus the *javana citta* in that *citta vīthi*) will be stronger. And thus, it propagates, which is why one can get "really worked up" even thinking about a hated person.

- This is why *Satipaṭṭhāna* (and being mindful of evil thoughts) is so important. The start of such a hateful mindset is AUTOMATIC (due to our *gati*,) as discussed in the "Living Dhamma" section. But we can stop those initial thoughts BEFORE they get strong and become out of control if we are mindful.
- This can be compared to a seed giving rise to a mighty tree unless one destroys it when it is just a little bud. When a seed germinates and becomes visible as a little plant, that little bud can be easily broken. But if one waits and allows it to grow, it COULD grow into a strong tree that is hard to take down.

10. As we see, *Paṭṭhāna Dhamma* can go into finer details. This is why *Paṭicca Samuppāda* has been compared to an ocean. It is vast and can explain the arising of ANY *saṅkhata* (alive or inert) in this world.

- However, if we start digging deeper, that could become a waste of time since there is no ending regarding how much finer detail one wants to examine.
- Still, it is good to see the depth of Buddha Dhamma. It gives one confidence in following the Path. Unshakable faith comes from realizing that Buddha Dhamma describes our world as it is.

Aññamañña Paccayā

11. Now let us briefly discuss the *aññamañña paccayā,* usually translated as "mutuality condition." This is not a bad translation but could also be translated as "forward and backward condition."

© 2026 Lal A. Pinnaduwage

- Many of the PS cycle's steps go backward and forward. For example, the step we have discussed, "*viññāṇa paccayā nāmarūpa*," runs backward (in the same PS cycle) too.
- Therefore, while *nāmarūpa* are generated AND get stronger by a given *viññāṇa*, the *viññāṇa* itself gets stronger by the cultivation of *nāmarūpa*, i.e., "*nāmarūpa paccayā viññāṇa*" step runs simultaneously too. This is "mutual strengthening."
- In the example of the teenager, the cultivation of "bad" *nāmarūpa* (visuals of party scenes, bad friends, etc.) leads to the strengthening of that bad *viññāṇa* (desire to drink or take drugs), even though the bad *viññāṇa* first leads to the corresponding *nāmarūpa*.

12. The *aññamañña paccayā* — just like the *āsevana paccayā* — is highly effective in the first several steps in PS. While the "*avijjā paccayā saṅkhāra*" step initiates bad actions (or *saṅkhāra*), the continued actions in the same direction then lead to strengthening *avijjā* (or ignorance of the consequences of such actions), i.e., "*saṅkhāra paccayā avijjā*."

- This is why it is essential to stop such conscious *saṅkhāra* (especially *saṅkappa* or the first part of *vacī saṅkhāra*) when one realizes that one is getting on the wrong track. Otherwise, one's *avijjā* will grow, and one's bad *gati* will only grow.
- Such immoral *saṅkhāra* — in the form of *vacī saṅkhāra* — appear to provide us with a sense of satisfaction at that time. For example, when one gets "really worked up" thinking about a bad deed done by an enemy, it gives one pleasure to say bad things about that person to others, or even retaliate directly to that person.

13. However, such actions lead to a "heat" or "*tāpa*" in us in the longer term. Long after that "initial satisfaction" of putting down that person, one will be "burning inside" for a long time, even if one does not realize that. One will be prone to frequent outbursts even with other people.

- Removal of this *tāpa* or "fire" in us is what is meant by the phrase "*ātāpi sampajano*" in the *Satipaṭṭhāna Sutta*. That will help reduce our tendency to get "worked up" at the slightest provocation, i.e., to change our *gati* in the right direction; see "Satipaṭṭhāna Sutta – Structure."
- This is the first type of suffering that many of us don't even realize; see, "Suffering in This Life – Role of Mental Impurities" and other posts in "Living Dhamma."

14. Finally, the *aññamañña paccayā* is not operative starting at the "*saḷāyatana paccayā phassa*" step in the *Paṭicca Samuppāda*.

- We can see that "*phassa* cannot lead to *saḷāyatana*," "*vedanā* cannot lead to *phassa*," etc.

Āsevana and *Asevana* – Different meanings

July 1, 2019: Regarding #2 above, it is essential to note that *āsevana* differs from *asevana*.

- *Sevana* is association. *Āsevana* (*Ā* + *sevana*) is "came to associate with"(as discussed in #2 above).
- *Asevana* (*A* with a short *A* + *sevana*) is "not to associate with," the negation; see #5 of "Associations (Sevana) – A Root Cause of Wrong Views.."

It is imperative to see the difference, which illustrates how Pāli words combine (*sandhi*) to produce other words with very different meanings. Thanks to Tobias Große for bringing this distinction to our attention at today's discussion forum.

10.1 Does "Anatta" Refer to a "Self"?

October 2, 2023

Anatta in *Tilakkhaṇa* (three characteristics of nature) is not about a "self" but about the non-beneficial nature of the world. Understanding the "*anicca*, *dukkha*, *anatta* nature" of the world is critical to attaining *Nibbāna*, the end of suffering.

It is critically important to understand the concept of a "*pabhassara citta*" or a "pure mind" to comprehend the posts in this section.

- Please read the following subsection first: "Recovering the Suffering-Free Pure Mind."

Cognition Modes – Sañjānāti, Vijānāti, Pajānāti, Abhijānāti
Anicca Nature- Chasing Worldly Pleasures Is Pointless
Aniccaṁ Vipariṇāmi Aññathābhāvi – A Critical Verse
Dukkha – Previously Unknown Truth About Suffering
Etaṁ mama, esohamasmi, eso me attā'ti – Connection to Taṇhā, Māna, Diṭṭhi
"Attā" as "Self" – Wrong Translation in Many Suttās
"Attato Samanupassati" and Sotāpanna Stage
Saññā Vipallāsa – Distorted Perception
Saññā – All Our Thoughts Arise With "Distorted Saññā"
Upaya and Upādāna – Two Stages of Attachment

10.1.1 Cognition Modes – Sañjānāti, Vijānāti, Pajānāti, Abhijānāti

September 9, 2023; revised October 13, 2025

Cognition takes place at four levels: *sañjānāti, vijānāti, pajānāti*, and *abhijānāti*. [***jānāti*** : [ñā + nā] knows; finds out; to be aware; understanding. ***sañjānāti*** = *saññā* + *jānāti*; ***vijānāti*** = *viññāṇa* + *jānāti*; ***pajānāti*** = *paññā* + *jānāti*; ***abhijānāti*** = *abhiññā* + *jānāti*.]

Introduction

1. The five aggregates are listed in **the order they arise in sensing a sensory input (*ārammaṇa*)**: *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa*.

- Here "*rūpa*" includes both the "internal *rūpa*" that helps with sensing (*cakkhu*, *sota*, *ghāna*, *jivhā*, *kāya*, *mano*) and the "mental imprints" of the external *rūpa* (*rūpa*, *sadda*, *gandha*, *rasa*, *phoṭṭhabba*, *dhammā*) that arises in mind.
- The contact of the internal *rūpa* with the "mental imprint" of the external *rūpa* gives rise to *vedanā*, registering that contact as a *sukha*, *dukkha*, or neutral (*adukkhamasukha*) *vedanā*.
- Based on that *vedanā* (but simultaneously), "recognition or perception" of that object arises, which is *saññā*.
- Based on both *vedanā* and *saññā* (but simultaneously), certain mental factors (*cetasika*) arise in the mind, for example, greed, joy, etc. Those are collectively called "*saṅkhāra*."
- The totality of all those mental impressions is *viññāṇa*, loosely translated as "consciousness." However, *viññāṇa* is more than consciousness; it also includes "an understanding of the sensory input." **This understanding is wrong if based solely on *saññā***, which is ***sañjānāti***. If an attempt is made to understand it better, an improved understanding could emerge (***vijānāti***.) The first level of a "better

© 2026 Lal A. Pinnaduwage

understanding" comes at the *Sotāpanna Anugāmi* stage, which is ***pajānāti***. The complete understanding, or ***abhijānāti***, comes at the *Arahant* stage.

Sañjānāti, Vijānāti, Pajānāti, Abhijānāti

2. In the following, we will discuss those terms using mainly the *Mahāvedalla Sutta*. I will quote verses from different places in the *sutta* to provide insights as needed. Also, remember that numerous *cittas* arise based on an *ārammaṇa*, and they progressively get further contaminated within seconds. The "thoughts" have already been defiled by the time we realize it.

- For example, we can consider a *citta* that arises when a visual object is seen; it is called *cakkhu viññāṇa*, which arises within a billionth of a second. But it arises already contaminated to some extent. Within seconds, it can become further contaminated and lead to immoral deeds.
- Thus, that *cakkhu viññāṇa* evolves further in subsequent *cittās* as the mind gains a clearer understanding of the object and decides how to respond to that visual input.
- The mind starts generating *kamma* later in the process, but "later" is relative. Committing *kamma* can happen within seconds or even hours after first encountering that *ārammaṇa*.
- But let us start with what happens **in the INITIAL sensory contact, i.e., when *cakkhu viññāṇa* arises upon seeing the object.** The *Mahāvedalla Sutta* does not discuss the time sequence, so I will refer to verses from random places in the *sutta* as needed.

First Step: *Vedanā*

3. The contact of the "mental imprint of the external object" (*rūpa*) with the internal *cakkhu pasāda rūpa* (*cakkhu*) leads to the arising of the *vedanā cetasika*.

- That *vedanā* can be *sukha* (pleasant contact like when lying on a soft bed), *dukkha* (painful like in an injury), or *adukkhamasukha* (neutral like the feel of a slight wind). Those three types arise only with bodily contact, involving *kāya* and *phoṭṭhabba*. All other sensory contacts only lead to neutral *vedanā* in the INITIAL CONTACT, for example, when *cakkhu viññāṇa* arises.
- The "WebLink: suttacentral: *Mahāvedalla Sutta* (MN 43)" describes *vedanā* as follows: "'*Vedanā vedanā'ti, āvuso, vuccati. Kittāvatā nu kho, āvuso, vedanāti vuccatī"ti? "'Vedeti vedetī'ti kho, āvuso, tasmā vedanāti vuccati. Kiñca vedeti? Sukhampi vedeti, dukkhampi vedeti, adukkhamasukhampi vedeti.*" OR "Venerable, why is it called 'feeling'? 'One feels' – therefore, Venerable, it is called 'feeling.' And what does one feel? One feels pleasure, pain, and 'neither pleasure nor pain.'
- Here, *sukha* and *dukkha vedanā* include not only those due to bodily contacts, but also "mental *sukha* (*somanassa*)' and "mental *dukha* (*domanassa*)' due to other sensory contacts (like vision or taste).

Second Step: *Saññā* and *Sañjānāti*

4. Simultaneously, recognition of the object (in the case of a visual object, recognition of a person as attractive, for example) happens.

The "WebLink: suttacentral: *Mahāvedalla Sutta* (MN 43)" describes *saññā* as follows: "'*Saññā saññā'ti, āvuso, vuccati. Kittāvatā nu kho, āvuso,*"***saññāti vuccatī***"*ti*?" " '***Sañjānāti*** *sañjānātī'ti kho, āvuso, tasmā saññāti vuccati. Kiñca sañjānāti? Nīlakampi sañjānāti, pītakampi sañjānāti, lohitakampi sañjānāti, odātampi sañjānāti.'Sañjānāti sañjānātī'ti kho, āvuso, tasmā saññāti vuccatī'ti.*" OR "Venerable, it is said 'recognition/perception.' Venerable, **why is it called 'recognition'**?" " '**One wrongly perceives**' – therefore, Venerable, it is called '***sañjānāti***.' And what does one wrongly perceives? One wrongly perceives blue, yellow, red, and white – therefore, Venerable, it is called '***sañjānāti***.'"'

© 2026 Lal A. Pinnaduwage

- Even though this *sutta* does not go into detail, this is a very critical step in generating *somanassa* and *domanassa* vedanā mentioned above. ***Sañjānāti*** means 'false perception.' The mind generates certain qualities (like attractiveness, tastiness, pleasing sounds or smells, etc.) This automatic response is based on one's "natural *bhavaṅga* state" and may make unwise decisions by attaching to those "mind-generated *saññā*" or "***saññā vipallāsa***." Thus, that attachment is based on "understanding (***jānāti***) with ***saññā***" or "***sañjānāti***" (and not wisdom, as we see below).
- Also see "Fooled by Distorted Saññā (Sañjānāti) – Origin of Attachment (Taṇhā)."

Third Step: Mind Creates Its Version of the External *Rūpa* Based on *Saññā Vipallāsa*

5. Within a split second, the "attached mind" starts creating **its own version of the external *rūpa*** (*rūpāyatana*) based on this "distorted *saññā*" or that happens with an expectation, and thus, the *cakkhu pasāda* becomes "*cakkhu āyatana*" or "*cakkhāyatana*."

- However, potent *kamma* accumulation has not started yet in the initial '*purana kamma*' stage.
- **Potent *kamma* accumulation happens only if the mind starts to attach to this "mind-made *rupa*" with *kāma guṇa*.** That second stage is called the '*nava kamma*' stage.
- For details, see "Purana and Nava Kamma – Sequence of Kamma Generation."
- Again, it is critical to note that many of these events occur before we become aware that we are attached to the *ārammaṇa*. Such a detailed description (taking place in a split second) can be seen only with the mind of a Buddha.

Root Cause of *Sañjānāti* With "Distorted *Saññā*"

6. The "WebLink: suttacentral: *Mūlapariyāya Sutta* (MN 1)" (the first *sutta* in *Majjhima Nikāya*) highlights the root of this "distorted *saññā*" or *"saññā vipallāsa"* of a *puthujjana* (average human) would have for ANYTHING in this world. As mentioned in #4 above and in the post referred to there, **the sweetness of sugar or the attractiveness of a person is NOT an inherent property of the corresponding sensory object (sugar or the person.)** Instead, those are "mind-made distorted *saññā*" that arise automatically based on the "natural *bhavaṅga* state" that one is born with. That is why even an *Arahant* will see a person as attractive/unattractive or a meal as tasty/distasteful.

- **A *puthujjana* with *sañjānāti* attaches to the *ārammaṇa*** perceiving it to be 'real.'
- Even though the same *saññā* can arise in an *Arahant,* their minds will not attach to the *ārammaṇa* since they have fully understood how the "mind-made distorted *saññā*" arises.
- The *Mūlapariyāya Sutta* explains the root cause of that attachment. See, "Mūlapariyāya Sutta – The Root of All Things."

The Buddha says: "*Idha, bhikkhave, **assutavā puthujjano** ariyānaṁ adassāvī ariyadhammassa akovido ariyadhamme avinīto, sappurisānaṁ adassāvī sappurisadhammassa akovido sappurisadhamme avinīto—**pathaviṁ pathavito sañjānāti**; pathaviṁ pathavito **saññatvā** pathaviṁ maññati, pathaviyā maññati, pathavito maññati, pathaviṁ meti maññati, pathaviṁ abhinandati. Taṁ kissa hetu? 'Apariññātaṁ tassā'ti vadāmi*"

- **Translation:** "Take an **unlearned ordinary person** who has not understood the teaching of the noble ones—They **wrongly perceive (with *saññā*) *pathavi*** to be ***pathavi*** (meaning they perceive "solid objects made of ***pathavi dhātu*** to be solid as they appear to be.) Having perceived *pathavi* as solid (***saññatvā***,) one conceives things made of *pathavi* (such as one's physical body) to be "valuable for me" and would consider to be "mine." For what reason? Because they haven't completely understood *pathavi*." (This verse requires a long explanation, but that is the basic idea.)

© 2026 Lal A. Pinnaduwage

Abhijānāti – The Opposite of *Sañjānāti*

7. Later in the "WebLink: suttacentral: *Mūlapariyāya Sutta* (MN 1)" the Buddha states: "*Yopi so, bhikkhave, bhikkhu arahaṁ khīṇāsavo vusitavā katakaraṇīyo ohitabhāro anuppattasadattho parikkhīṇabhavasaṁyojano sammadaññāvimutto, sopi pathaviṁ pathavito* ***abhijānāti****; pathaviṁ pathavito abhiññāya pathaviṁ na maññati, pathaviyā na maññati, pathavito na maññati, pathaviṁ meti na maññati, pathaviṁ nābhinandati. Taṁ kissa hetu? 'Pariññātaṁ tassā'ti vadāmi.*"

- **Translation:** "An *Arahant* has completed the spiritual journey and **knows the real nature** of *pathavi*; they do not conceive things made of *pathavi* (such as one's physical body) to be "valuable for me" and would consider to be "mine." For what reason? Because they have completely understood *pathavi*." They can "see beyond the automatic recognition/perception" because they have understood the real nature of *pathavi* (and *āpo*, *tejo*, and *vāyo*.)

8. Then the Buddha goes through a long list of worldly things made of the four great elements of *pathavi*, *āpo*, *tejo*, and *vāyo* (mainly beings in all the realms in the world.) They have no "solid/permanent existence" because they have their origins in mind (i.e., created via *javana cittās*.) I have discussed the basics in the post "The Origin of Matter – Suddhaṭṭhaka" and details in the series "Origin of Life." The last post on that series is "Origin of Life – One Creates One's Own Future Lives."

- I am starting another series of posts (an extension of the recent series "Recovering the Suffering-Free Pure Mind.") This series will address some finer points not discussed in the "Origin of Life" series.
- Let us briefly discuss the other two terms, ***vijānāti,*** and ***pajānāti,*** that are related to ***sañjānāti*** and ***abhijānāti*** (discussed above.)

Vijānāti – Related to *Sañjānāti*

9. Going back to the "WebLink: suttacentral: *Mahāvedalla Sutta* (MN 43)" it addresses what happens after the arising of *vedanā* and *saññā* in the initial *cakkhu viññāṇa* (in our example taken in #2 above): "*Yaṁ hāvuso, vedeti taṁ sañjānāti,* ***yaṁ sañjānāti taṁ vijānāti***" or "you recognize/perceive (with *saññā, i.e.,* ***sañjānāti***) what you feel (*vedeti*), and you cognize (with *viññāṇa*, i.e., ***vijānāti***) what you recognize/perceive (i.e., ***sañjānāti***.)"

- In other words, *vedeti*, ***sañjānāti***, ***vijānāti*** all take place within a split-second.
- Here, ***vijānāti*** can be an improvement over ***sañjānāti***. Let us discuss that briefly.

10. For most *puthujjanās*, ***vijānāti*** is essentially the same as ***sañjānāti.*** But someone actively learning Buddha Dhamma could be spending time thinking about the "real nature" of the world (i.e., cultivating the *yathābhūta ñāṇa*) made of the four great elements of *pathavi*, *āpo*, *tejo*, and *vāyo*. See "Bhūta and Yathābhūta – What Do They Really Mean."

- Thus, their mental status would be better, and thus, ***vijānāti*** could be an improvement on ***sañjānāti.***

Transition from *Vijānāti* to *Pajānāti* (Understanding with Wisdom)

11. When someone starts comprehending the "real nature" ***vijānāti*** transitions to ***pajānāti*** (understanding with *paññā*; thus "*pa jānāti.*") By the way, ***sañjānāti*** comes from "*sañ jānāti*" and ***vijānāti*** comes from (understanding with *viññāṇa*; thus "*vi jānāti.*") Furthermore, ***abhijānāti*** (discussed above) is when ***pajānāti*** optimizes at the *Arahant* stage. **This is an easy way to remember the terms.**

The "WebLink: suttacentral: *Mahāvedalla Sutta* (MN 43)" describes ***pajānāti*** as follows: "*Neyyaṁ panāvuso, dhammaṁ kena* ***pajānātī****"ti? "Neyyaṁ kho, āvuso, dhammaṁ* ***paññā cakkhunā pajānātī****"ti.* OR "How do you understand the term ***pajānātī*****?** It means to "see with wisdom (***paññā cakkhunā***)"

© 2026 Lal A. Pinnaduwage

Then: *"Paññā panāvuso, kimatthiyā"ti? Paññā kho, āvuso, abhiññatthā pariññatthā pahānatthā"ti.*" OR "What is the purpose of wisdom? The purpose of wisdom is complete understanding leading to ending the rebirth process (by giving up this world.)"

- Sutta Central translation does not provide the correct ideas involved in the above verses because it is a word-by-word translation. But in the subsequent verses, the translation is good enough to get the idea (I made a couple of improvements): "How many conditions are there for the arising of right view with wisdom? There are two conditions for the arising of right view: learning from a Noble Person ("the words of another [*parato ca ghoso*]") and *yoniso manasikāra* ("rational application of mind.")"
- As we know, those two conditions are essential in the four conditions needed to attain the *Sotāpanna* stage: "Four Conditions for Attaining Sotāpanna Magga/Phala."
- Thus, when a *puthujjana* becomes a *Sotāpanna Anugāmi*, ***vijānāti*** turns to ***pajānāti.*** When that *Sotāpanna Anugāmi* cultivates the Noble Path and becomes an *Arahant*, ***pajānāti*** turns into ***abhijānāti***.

Summary

12. An average person (*puthujjana*) makes decisions based on ***sañjānāti*** or ***vijānāti.***

- The understanding of the fundamental nature of any *ārammaṇa* (or the world in general) elevates to the ***pajānātī*** level at the *Sotāpanna Anugāmi.* That happens when a *puthujjana* learns Buddha Dhamma from a Noble Person.
- The ***pajānātī*** level of understanding grows with higher stages of *magga phala* and becomes complete (***abhijānāti***) at the *Arahant* stage.

10.1.2 Anicca Nature – Chasing Worldly Pleasures Is Pointless

September 16, 2023

Anicca is incorrectly translated as mere impermanence. But the primary meaning of *anicca* is that seeking long-lasting happiness in worldly/sensual pleasures is a waste of time. Understanding that is the key to the *Sotāpanna* stage of *Nibbāna*.

An Average Human's Response to Unpleasurable Situations

1. When encountering an "unpleasurable situation/sensory input," an average human (*puthujjana*) knows only two responses: (i) to try to avoid it or (ii) to compensate for it by seeking a "pleasurable sensory input."

- However, no sensory pleasure can satisfy a mind for long. After a while, one gets bored with even the most luxurious vacation; a drug addict gets "saturated" and would want increasingly higher doses with time.
- Furthermore, one's efforts seeking such "pleasurable situations" often involve "immoral deeds" (*akusala/pāpa kamma*). That leads to future rebirths in lower realms (*apāyās*), where there is much more suffering. **This incorrect way of understanding the world is *sañjānāti***; see "Cognition Modes – Sañjānāti, Vijānāti, Pajānāti, Abhijānāti."
- Of course, sometimes people also engage in moral deeds (*kusala/puñña kamma*) out of compassion, and *kamma vipāka* of such "good/moral deeds" lead to rebirth in human, *Deva*, and *Brahma* realms. This category of people (even if they are not exposed to Buddha Dhamma) examine things with an open mind (***vijānāti,***) which is a better understanding than ***sañjānāti.***
- That is essentially the basis of the "*saṁsāric* suffering" or the "cycle of rebirths," mostly filled with suffering. Even though lives in the *Deva* and *Brahma* realms are mostly "pleasurable," such "better rebirths" are rare. Most humans are reborn in the *apāyās* because of the tendency to engage in immoral

© 2026 Lal A. Pinnaduwage

deeds when seeking pleasurable sensory experiences. See "WebLink: suttacentral: *Manussacutiniraya Sutta* (SN 56.102)."

Previously Unheard Teachings of a Buddha

2. The **astonishing truth** discovered by the Buddha can be stated as follows: (i) A "suffering-free" state (*pabhassara citta*) lies deep within a mind; (ii) it is covered by layers of defilements accumulated over an unimaginable time span; (iii) those defilements can be removed and the suffering-free pure mind can be recovered by following the Noble Path; (iv) our actions seeking worldly pleasures only lead to generating more defilements and getting further away from *Nibbāna* (the "suffering-free" pure mind.)

- I discussed those basic ideas in the subsection "Recovering the Suffering-Free Pure Mind."
- In other words, until a Buddha comes to the world and teaches about the "hidden pure mind" (*pabhassara citta*), **humans know of only one way to minimize suffering/depression. That is to seek more sensory pleasures.** But that only causes more future suffering.
- Thus, humans are trapped in the rebirth process filled with mostly suffering until they comprehend the above facts and start seeing the "dangers of sensory pleasures."
- One begins to understand that when becoming a *Sotāpanna Anugāmi* and elevating the understanding to the ***pajānāti*** level. That is when one starts comprehending (or "seeing with wisdom") the "*anicca* nature" of worldly or sensual pleasures. However, as discussed below, even a *Sotāpanna* has not lost the desire to enjoy sensory pleasures. **Note:** *Anicca* is pronounced "anichcha." See "Pāli Glossary – (A-K)."
- Thus, "*anicca* nature" applies to anywhere in the 31 realms of this world: **It is futile (pointless/unproductive) to seek long-lasting happiness in worldly pleasures.**

Analogy for the "Hidden Pure Mind"

3. We work hard most of our lives to get a good job, build a business, etc., and "build wealth." All our efforts are focused on maximizing happiness via "collecting pleasure-generating stuff" like houses, cars, etc.

- But even if one becomes a billionaire and has access to any sensory experience one would like, one's physical body will start decaying in old age. Then, one will leave all that "material wealth" behind at death. Even worse, one could have done many immoral deeds in that process of "building wealth" that could lead to rebirths in the *apāyās*. In other words, there is suffering "hidden in pleasure seeking."
- **All this time, the suffering-free pure mind stayed hidden.** All one needed to do was to start cleansing the mind and recover that pure mind.
- Instead of seeking "pleasure for the moment" (with hidden suffering), one should seek a **suffering-free permanent state** by avoiding excessive sensory pleasure. That is the advice of all the Buddhas.

4. Let us consider an analogy. Suppose a poor farmer only has a small plot of land. He makes a living by growing vegetables there. Unknown to him, there is a deposit of precious gems several hundred feet under his land. Because he is unaware of that, his only option is to work hard in the field to make a living.

- Suppose a person with a "ground-penetrating radar" or a similar gadget surveys the ground in that area and sees a mine of gems under that farmer's vegetable plot. He tells the farmer about his findings. Now, all that farmer has to do is start digging to find those gems.
- Even with that knowledge, sometimes the farmer could be skeptical: What if that mine is not there? If I start digging, I need to take time away from working on the field and also sacrifice a good portion of the land to do the digging.
- The situation with Buddha's teachings is similar. The Buddha says (and shows evidence) that the suffering-free mind stays hidden in all of us. All we have to do is to (i) learn the correct teachings to verify

© 2026 Lal A. Pinnaduwage

that the idea of a "hidden pure mind" makes sense and (ii) start "digging," i.e., practicing the Noble Eightfold Path to get to the "hidden gem."

5. Many people say, "I am busy with my job. I will start looking into it (let alone "digging") when I retire." But sadly, by the time most people retire, their brains do not work as efficiently (or they die soon after retiring.) It is sad to witness this situation. Some of my friends have already passed away without even looking into it. **They were too busy "accumulating wealth"** (starting a new business, trying to get a promotion, etc.)

- Just like the "uninterested farmer" in the above analogy, they focused on making more money. In their mindset, acquiring more material wealth was the only way to happiness.
- Most people can start seeing the truth about the "hidden pure mind" or the "*pabhassara citta*" if they spend a reasonable amount of time learning the teachings of the Buddha.

Anicca – To Realize the Futility of an Effort

6. Children like to build sandcastles. That activity gives them much pleasure. They believe such activities are of a "***nicca* nature**," i.e., fruitful. **Note:** *Nicca* is pronounced "nichcha."

- However, growing up, they lose interest in such activities because they can see that they are suitable only for children without a broader understanding of the world. Instead, they now focus on studying and getting a good job. It is evident to any adult that spending time building sandcastles is an unproductive/useless activity. Any sandcastle they build will be washed away or broken by those walking on the beach.
- Thus, we can say that building sandcastles — even though pleasurable at the time — has no long-term benefit. **Sandcastles are of "*anicca* nature."** They cannot be kept in that likable form for too long.
- The Buddha describes that analogy in the "WebLink: suttacentral: *Satta Sutta* (SN 23.2)." **In that *sutta*, the Buddha defined a "*satta*" (sentient being) as one who craves worldly pleasures; they are like little children building sandcastles.**

7. The **"*anicca* nature"** of this world discovered by the Buddha is the basis of the uniqueness of his teachings. Even highly intelligent people can never realize that on their own.

- Of course, it is necessary to study to get a decent job and live comfortably to lessen the stresses of life. **However, better happiness can be attained by stopping all future suffering that extends beyond this life.**
- **The "*anicca* nature" of this world and the way to overcome it** is not known to humans until a Buddha discovers it.

8. Thus, one must make wise decisions based on one's current status. If one does not have enough resources to live a relatively worry-free, simple life, one must try to learn the necessary skills and get a decent job.

- However, once one has enough to sustain a simple lifestyle, is it wise to try to make millions of dollars instead of uncovering the freely available pure mind (*pabhassara citta*)?
- The pure mind that provides the "ultimate happiness" is there to be uncovered. Any activity related to "trying to build material wealth" is of "*anicca* nature," just like building sandcastles is of "*anicca* nature."
- **That is the basis of Buddha Dhamma:** to realize the "***anicca* nature**" of worldly things or sensory pleasures, including "*jhānic* pleasures."

Seeing the Dangers of Worldly Pleasures

9. Many people say, "What is wrong with enjoying sensual pleasures as long as I don't harm others?" If one understood the above discussion, one would not ask that question.

© 2026 Lal A. Pinnaduwage

- Of course, "living a moral life with sensual pleasures without harming others" is the starting point. One MUST live a moral life to be able to understand Buddha Dhamma. One can do that while being married and sustaining a family well past the *Sotāpanna* stage and up to the *Anāgāmi* stage of *Nibbāna*. "
- See "Is It Necessary for a Buddhist to Eliminate Sensual Desires?"
- The beginning of the Noble Path is to see the "*anicca* nature" of any worldly pleasures. That is the ***pajānāti*** level of understanding (i.e., same as ***Sammā Diṭṭhi*** or getting rid of ***sakkāya diṭṭhi***.) With *Sammā Diṭṭhi,* a *Sotāpanna* has removed wrong views (*micchā diṭṭhi*) that can lead to committing highly immoral deeds suitable for rebirth in the *apāyās*. We will discuss the connection to ***sakkāya diṭṭhi*** in the next post.
- Please feel free to ask questions in the forum. These basic ideas form the foundation of Buddha Dhamma.

10.1.3 Aniccaṁ Vipariṇāmi Aññathābhāvi – A Critical Verse

September 22, 2023; revised #1 March 14, 2024

"*Aniccaṁ vipariṇāmi aññathābhāvi*" is a verse that succinctly states the unfruitfulness of pursuing sensory pleasures. Understanding its true meaning can get one to the *Sotāpanna* stage of *Nibbāna*.

Anicca Nature – Connection to the Five Aggregates

1. In the previous post, "Anicca Nature – Chasing Worldly Pleasures Is Pointless," we discussed that average humans who have not understood Buddha's teachings have only one option to overcome disliked sensory experiences or depressing situations: They seek more sensory pleasures.

- However, as pointed out there, the Buddha has explained a previously unknown option. There is a "suffering-free pure mind" hidden underneath our defiled minds. When we seek worldly/sensory pleasures, our actions tend to conceal the "pure mind" further.
- Thus, we concluded that seeking sensory pleasures, like building sandcastles, is unproductive. Even though children enjoy building sandcastles, growing up, they realize it is unproductive. So, they voluntarily give up that and focus on productive activities like studying or learning a specific trade. **Building sandcastles is of "*anicca* nature," meaning it is unproductive.** The Buddha discussed this analogy in the "WebLink: suttacentral: *Satta Sutta* (SN 23.2)." **In the same way, chasing sensory pleasures is an unproductive (and also dangerous) activity, as we will discuss in this series of posts.**
- The Buddha described how we move away from the "pure mind" when we seek sensory pleasures. Let us discuss that now. The Buddha described sensory experiences in terms of five aggregates (*pañcakkhandha*.) He explained that attaching to sensory experiences is the same as craving/***upādāna*** for ***pañcakkhandha***, i.e., **craving sensory pleasures is the same as *pañcupādānakkhandha***.

Each Sensory Contact Adds to the "Five Aggregates" (*Pañcakkhandha*)

2. Each sensory experience involves two types of *rūpa*: an external *rūpa* (like a visual or a "*vaṇṇa rūpa*") and an internal *rūpa* (like "*cakkhu pasāda rūpa*"; it is not physical eyes that actually "see.") There are six such pairs.

- In a sensory event, an external *rūpa* comes into contact with an internal *rūpa* at *hadaya vatthu* (seat of the mind.) That leads to the rise of a number of mental phenomena: *vedanā, saññā, saṅkhāra*, and *viññāṇa*. Briefly, *vedanā* is the *sukha, dukkha*, or neutral "feeling;" *saññā* is the recognition of the sense object; *saṅkhāra* includes a variety of mental factors (*cetasika*) that arise in the mind; *viññāṇa* is the totality of all those mental phenomena and also a possible expectation regarding the sensory input (whether to seek more or to avoid it.)
- Those five entities — *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, *viññāṇa* — are traditionally called the five aggregates (*pañcakkhandha.*) Here, they are called "aggregates" or "collections" (*khandha*) because

© 2026 Lal A. Pinnaduwage

the mind is not only aware of those entities arising at a given moment but also 11 types of them, including past experiences of them. Thus, *pañcakkhandha* (more correctly, *pañc**upādāna**kkhandha*) provides a measure of our attachment to sensory inputs.

- We can also look at it in a slightly different way as follows.

3. We experience pleasure/joy or displeasure/pain with thoughts, and thoughts arise with sensory input (*ārammaṇa*.) Thoughts arise when an internal *rūpa* comes into contact with an external *rūpa*. The "*rūpa* aggregate" encompasses those two kinds of *rūpa* ever experienced (in the sense that even though we don't recall all of them, our current state of mind is influenced by them.) Thoughts encompass how we understand the external world, i.e., our sensory experiences.

- The "mental factors" (*cetasika*) that arise with our thoughts embed multiple facets of each experience. We feel a sensory input (*vedanā*), recognize and form our perceptions about it (*saññā*), and then "mind-made *vedanā*" (*saṁphassa-jā-vedanā*) arise based on those initial *vedanā* and *saññā*. That is the basis of the *vedanā* and *saññā* aggregates (*vedanākkhandha* and *saññākkhandha*.)
- Various other mental factors (like greed, joy, anger, etc.) arise based on *vedanā* and *saññā*, and the *saṅkhāra* aggregate (*saṅkhārakkhandha*) represents those.
- The total sensory experience is *viññāṇa*; it also includes our expectations regarding what we experience. That is the fifth aggregate of *viññāṇakkhandha*.

Each Sensory Experience Helps Hide the "Pure Mind" or "*Pabhassara Citta*"

4. If we attach to any sensory input (*ārammaṇa*), we start accumulating *saṅkhāra* (or *abhisaṅkhāra*.) That means "*kamma* accumulation."

- That strengthens our *saṁsāric* bonds (*saṁyojana*) and hidden defilements (*anusaya*.)
- Even if they don't accumulate significant *kamma* or add to *saṁyojana* or *anusaya*, an average person (*puthujjana*) can NEVER start "cleansing existing defilements."
- **To put it another way:** A *puthujjana* ALWAYS moves in one direction, away from the "pure mind" or *Nibbāna*, sometimes slowly and other times faster, depending on the level of attachment to sensory inputs. **In Pāli, this is called "*ācayagāmi*"** (pronounced "aachayagaami") **or "moving away from *Nibbāna*."**
- One can go the other way (***apacayagāmi***; pronounced "apachayagaami"; see Ref. 1) only when one becomes a Noble Person (*Ariya*) and starts following the Noble Path.
- **The Buddha gave an analogy in several *suttās*:** A flood ("*ogha*" in Pāli) will carry a person away from refuge. A *puthujjana* (an average human) is like that helpless person, getting carried away by the "flood" or the *saṁsāric* journey. **When one becomes at least a *Sotāpanna Anugāmi*, one can start seeing how to go against the flood and reach safety.** See, for example, "WebLink: suttacentral: *Oghapañhā Sutta* (SN 38.11)."

Adding to the *Pañcakkhandha* Is of "*Anicca* Nature"

5. Therefore, it should be clear by now the following fact: Each time one attaches to a sensory input (*ārammaṇa*), that only helps one move AWAY from the suffering-free "pure mind" or the "*pabhassara citta*." **Any action or anything that causes one to move away from the ultimate release from suffering is unfruitful, i.e., of "*anicca* nature," just as building sand castles is!**

- If one can understand that, one would have made significant progress in reaching the *Sotāpanna Anugāmi* stage.

© 2026 Lal A. Pinnaduwage

- In numerous *suttās*, you have probably seen the Buddha asking a *bhikkhu* the following question: **"*cakkhuṁ niccaṁ vā aniccaṁ vā" ti*?"** The correct translation of that verse is: **"Is the eye (*cakkhu*) of *nicca* or *anicca* nature?"** Then, the question is repeated for the other five sense elements: ear (*sota*), nose (*ghāna*), tongue (*jivhā*), body (*kāya*), and mind (*mano*.) See, for example, "WebLink: suttacentral: *Cakkhu Sutta* (SN 18.1)." (**Note:** The English translation in the link is incorrect, as is the case with many critical translations at Sutta Central and generally with most Engli translations.)
- Depending on the *sutta,* the same question may be asked of the corresponding external *rūpa* (*rūpa, sadda, gandha, rasa, phoṭṭhabba, dhammā*); see, for example, "WebLink: suttacentral: *Rūpa Sutta* (SN 18.2)."
- In other *suttās*, the question is asked of the five aggregates (*rūpa, vedanā, saññā, saṅkhāra, viññāṇa*); see, for example, "WebLink: suttacentral: *Anicca Sutta* (SN 22.12)." Here, all six types of *rūpa* are bundled under "*rūpa*" (i.e., the *rūpa* aggregate or *rūpakkhandha*), and the same is true for the other four aggregates.
- The point here is that every time we attach to a sensory input not only the internal and external *rūpa* come into play, but the *pañc**upādāna**kkhandha* grows too — in the **"*ācayagāmi*"** or the "wrong direction" away from *Nibbāna*.

Aniccaṁ Vipariṇāmi Aññathābhāvi – Correct Meaning

6. The "WebLink: suttacentral: *Cakkhu Sutta* (SN 25.1)" explains how understanding the above leads to the *Sotāpanna* stage. It is a short *sutta*; we can cover its key points.

The Buddha says: "*Cakkhuṁ, bhikkhave, **aniccaṁ vipariṇāmi aññathābhāvi***" which is INCORRECTLY translated in the above link as "Mendicants, the eye is **impermanent**, **decaying**, and **perishing**." Then, the verse is repeated for *sota, ghāna, jivhā, kāya*, and *mano*, the other types of sense faculties or "internal *rūpa.*"

- **The correct interpretation can be understood by seeing that any time *cakkhu* (eye) is used to enjoy sensory pleasures (as a *puthujjana*), one moves away from *Nibbāna* or is carried by the "flood" away from the refuge, as explained in #4.**
- Using eyes to enjoy sensory pleasures is like building sandcastles for a "fleeting momentary pleasure," i.e., it is an unproductive activity. That is the meaning of "***aniccaṁ***" in that verse.
- ***Vipariṇāma*** is the opposite of ***pariṇāma.*** Let us understand the meanings of those two words. In English, evolution (***pariṇāma***) means the time progression of something where it gets better with time. For example, Darwin's "theory of evolution" ("*pariṇāma vāda*" in Pāli/Sinhala) says monkeys progressed with time to become humans. ***Vipariṇāma*** is the opposite of evolution (devolution), where things move in the wrong/opposite direction with time. When one uses the eyes to enjoy sensory pleasures, one moves away from *Nibbāna*.
- ***Aññathābhāvi*** means "to move away from its natural/preferred state," whereas "***aññatha***" means "deviate for the worse" and is the opposite of "***ittha***" or the "stable state of *Nibbāna*." In many *suttās*, the following verse indicates attaining the *Arahanthood*: "*Khīṇā jāti, vusitaṁ brahmacariyaṁ, kataṁ karaṇīyaṁ, nāparaṁ **itthattāyā**" ti abbhaññāsi*." See, for example, "WebLink: *suttacentral: Dutiyaanuruddha Sutta* (AN 3.130)." Thus, ***aññathābhāvi*** is the opposite of "***itthattāya***" and has a very similar meaning to "***vipariṇāmi.***"
- Therefore, the correct meaning of that verse, stated very briefly, is: "*Bhikkhus*, using *cakkhu* to achieve sensory pleasures is like building sand castles; thus *cakkhu* is of *anicca* nature; it will take you away from *Nibbāna* (the pure mind) and toward more suffering (on a downward path)."
- We must never forget that if we don't start "moving TOWARD *Nibbāna"* or become ***apacayagāmi*** (see #4)," **future rebirth in an *apāya* remains open.**

© 2026 Lal A. Pinnaduwage

7. The *suttās* SN 25.2 through SN 25.9 repeat the same verse for various entities that arise in a sensory contact: each of the following entities that arise in such sensory contacts: *rūpa, viññāṇa, phassa* (*saṁphassa*), *vedanā, saññā, cetanā, taṇhā*, and *dhātu*. The last *sutta* in the series (SN 25.10) makes a summary by repeating the verse for the **five aggregates**: *rūpa, vedanā, saññā, saṅkhāra*, and *viññāṇa*.

- That critical error in translating the key verse in #6 appears in almost all conventional English translations. **Unless explained by a Noble Person, that interpretation makes sense for the average human (*puthujjana*) who has not heard the correct explanation.**
- It is essential to realize that **most terms discussed in the *suttās* refer to mental phenomena**. When the Buddha discusses "*cakkhu,*" it is not about the physical eyes but about using the eyes as an "*āyatana*" (i.e., *cakkhāyatana*) for enjoying sensory pleasures; same with the other five "internal *āyatana*." When referring to the six types of "*rūpa,*" it is not about external *rūpa*, but the 'mind-made versions" of them created by the mind, i.e., *rūpāyatana, saddāyatana, gandhāyatana, rasāyatana, phoṭṭhabbāyatana*, and *manāyatana*.
- That should be clear from the above series of *suttās*, which apply the verse in question to strictly mental entities (*viññāṇa, phassa* (*saṁphassa*), *vedanā, saññā, cetanā,* etc.) as well as for the internal and external *rūpa*.

Incorrect Interpretation of "*Aniccaṁ Vipariṇāmi Aññathābhāvi*"

8. In most English translations, the above verse refers to the physical eye or a physical *rūpa*. Thus, many people think it is about the physical body getting old and dying. For example, the English translation of "WebLink: *suttacentral: Cakkhu Sutta* (SN 25.1)" discussed in #6 above translates "***Cakkhuṁ**, bhikkhave, aniccaṁ vipariṇāmi aññathābhāvi*" as "Mendicants, **the eye** is impermanent, decaying, and perishing."

- Most translators mechanically translate the verse for mental attributes such as ***viññāṇa*** the same way. For example, in the "WebLink: suttacentral: Viññāṇa Sutta (SN 25.3)," the verse "***Cakkhuviññāṇaṁ**, bhikkhave, aniccaṁ vipariṇāmi aññathābhāvi*" is translated as "Mendicants, **eye-consciousness** is impermanent, decaying, and perishing."
- However, any ***viññāṇa*** rises and perishes (or a physical body is born and dies). Does a Buddha need to explain such an obvious fact?

Those Who Begin to Understand the Above are, at Minimum, *Sotāpanna Anugāmis*

9. **Continuing with the** "WebLink: suttacentral: *Cakkhu Sutta* (SN 25.1)" **the Buddha says:** "*Yo, bhikkhave, ime dhamme evaṁ saddahati adhimuccati—ayaṁ vuccati **saddhānusārī***.." That means, "If someone understands the meaning of that verse (in #6) with faith (based on understanding), then that person is a ***saddhānusārī.***" (Note: Again, the English translation is not entirely clear). **Then the Buddha further clarifies:** "A ***saddhānusārī*** is incapable of any deed which would make them be reborn in hell, the animal realm, or the ghost realm. Also, they will not die without becoming *Sotāpannās*."

- In the next verse (at marker 2.1), the Buddha says: "*Yassa kho, bhikkhave, ime dhammā evaṁ paññāya mattaso nijjhānaṁ khamanti, ayaṁ vuccati: '**dhammānusārī***.." meaning, "If someone understands the meaning of that verse (in #6) after contemplating with a degree of wisdom, then that person is a ***dhammānusārī.***" Then, the Buddha further clarifies that a ***dhammānusārī*** will also become a *Sotāpanna* before death.
- In the final verse (at marker 2.4), the Buddha states: "*Yo, bhikkhave, ime dhamme evaṁ **pajānāti** evaṁ **passati**, ayaṁ vuccati: 'sotāpanno avinipātadhammo niyato sambodhiparāyano'" ti* OR "A *Sotāpanna* who has fully comprehended the meaning of the above verse is guaranteed to be released from rebirth in the *apāyās*, and is destined to attain the *Arahanthood*."

© 2026 Lal A. Pinnaduwage

- I have discussed ***saddhānusārī*** and ***dhammānusārī*** in the post "Sotāpanna Anugāmi – No More Births in the Apāyā."

Understanding the Above Verse Is One Way to Remove *Sakkāya Diṭṭhi*

10. If one has started comprehending the verse "*Cakkhuṁ, bhikkhave, **aniccaṁ vipariṇāmi aññathābhāvi***" then one has seen (with wisdom) that chasing sensory pleasures is an activity of "*anicca* nature" and will never be able to embark on the Noble Path to go "against the flood" and towards the pure mind. That understanding is the same as the removal of *sakkāya diṭṭhi* and also the other two *saṁyojana* of *vicikicchā* and *sīlabbata parāmāsa*.

- There are many ways of getting to the *Sotāpanna* stage or getting rid of *sakkāya diṭṭhi*. So, there is no need to worry if you had previously not thought about stating the "*anicca* nature" as described above. But once explained, it should be understandable if one had already been a *Sotāpanna*/*Sotāpanna Anugāmi*.

References

1. Those who are unaware of the unique "*Tipiṭaka* English" writing format adopted many years ago, see ""Tipiṭaka English" Convention Adopted by Early European Scholars – Part 1." The English version of the *Tipiṭaka* was written in this format in the early 1900s, and that is the version used today in most English websites, including Sutta Central. It is essential to understand how to pronounce Pāli words correctly.

10.1.4 Dukkha – Previously Unknown Truth About Suffering

September 30, 2023

*Du**kkha*** in Buddhism is not only about the *du**kha** vedanā* or the feeling of pain/depression felt at any given moment. It is about the root causes of future suffering. Even the pleasurable experiences of an average person perpetuate future suffering. That is the "previously unheard" teachings of a Buddha.

Dukha and *Dukkha – Buddha Dhamma* Is About *Dukkha*

1. In a previous post, "Anicca Nature – Chasing Worldly Pleasures Is Pointless," we discussed the fact that average humans (*puthujjana*) who have not understood Buddha's teachings have only one option to overcome disliked sensory experiences or depressing situations: They seek more sensory pleasures.

- However, as pointed out there, the Buddha has explained a previously unknown option. A "suffering-free pure mind" (*pabha**ss**ara citta*) is hidden underneath our defiled minds. When we seek worldly/sensory pleasures, our actions tend to conceal the "pure mind" further.
- If one attaches with *rāga* (liking the sense input based on "*sukha vedanā*"), one may engage in immoral deeds to get "more of it," leading to future "bad outcomes" or "future suffering." Even without immoral deeds, just the attachment itself keeps one bound to "*kāma loka*."
- Attachment due to *dosa* (dislike for the sense input "*du**kha** vedanā*") definitely leads to immoral deeds.
- Even in the absence of *rāga* and *dosa*, one's mind is ALWAYS contaminated with *moha* (ignorance of the "real nature of the world.") Thus, even in the vast majority of cases where "neutral" or "*adukkhamasukha*" *vedanā* arises, there is a subtle attachment based on one's distorted views/perceptions (*diṭṭhi* and *saññā vipallāsa*) about the world. This is harder to see at first.

2. Therefore, each sensory event leads one away from the "hidden pure mind" or the *pabha**ss**ara citta*. Please read the above-mentioned post to ensure you understand that critical point.

- Another way to say the above is as follows: An average person (*puthujjana*) who has not comprehended Buddha's teachings is ALWAYS on a downward path, away from *Nibbāna* (suffering-

© 2026 Lal A. Pinnaduwage

free pure mind.) **In Pāli, this is called "*ācayagāmi*"** (pronounced "aachayagaami") **or "moving away from *Nibbāna*."** That is the tendency to go in the direction of the "*saṁsāric* flood" ("*ogha*" in Pāli.)

- When one starts understanding the world's *anicca*, *dukkha*, and *anatta* nature, one will start losing attachment to sensory inputs. That cannot happen with only willpower. One's wrong views and perceptions (*diṭṭhi* and *saññā vipallāsa*) about the world start to wear away AUTOMATICALLY when one starts comprehending the *anicca*, *dukkha*, and *anatta* nature with wisdom (*paññā*.) When that happens, one starts going "against the flood." See #4 of "Aniccaṁ Vipariṇāmi Aññathābhāvi – A Critical Verse."
- Here, it is critical to note that Buddha's teachings are not about getting rid of painful feelings felt in the present life (*dukkha*) but about **ending** unimaginable suffering in the rebirth process (*Dukkha Sacca*); see "Does the First Noble Truth Describe only Suffering?"

Origin of Suffering – *Dukkha Sutta*

3. The WebLink: suttacentral: *Dukkha Sutta* (SN 12.43) states (Ref. 1 gives the Pāli verse), "*Bhikkhus*, what is the origin of suffering? Depending on *cakkhu* and *rūpa*, eye-consciousness arises. **That *rūpa* may trigger "defiled *gati*" (*saṅgati* or *saŋ gati*)** in mind. **That generates "mind-made *vedanā*." Based on that "mind-made *vedanā*" the mind attaches (*taṇhā*) to that sensory input.** *Bhikkhus,* **that is the origin of suffering."**

- That verse is repeated for the other five senses. **Thus, the Buddha says that the origin of suffering is attachment (*taṇhā*) to sensory inputs.**
- Here is to state that in another way: **Causes for future suffering start with a sensory input coming through one of the six senses: eyes, ears, tongue, nose, body, and mind!**
- It will become clear why I have translated the verse differently than conventional translations. See the two translations at Sutta Central in the above link. As I have explained, some *suttās* need detailed explanations, not word-for-word translations done without understanding the context.

Ending of Suffering – *Dukkha Sutta*

4. Then, in the second part of the *sutta* (Ref. 2 gives the Pāli verse): "*Bhikkhus*, how can this **suffering be ended**? With the contact between *cakkhu* and *rūpa*, eye-consciousness arises. That sensory experience may trigger "defiled *gati"* (*saṅgati* or *saŋ gati*) in mind, i.e., it can generate "mind-made *vedanā*." Based on that "mind-made *vedanā*" the mind may attach (*taṇhā*) to that sensory input. But with the remainder-less fading away and **cessation of that craving (*taṇhā*) comes the cessation of *upādāna* (pursuing such experiences); with the cessation of *upādāna*, cessation of *bhava*; with the cessation of *bhava*, cessation of rebirth (*jāti*)**; with the **cessation of *jāti*, aging-and-death, sorrow, lamentation, pain, displeasure, and despair cease. That is the cessation of the whole mass of suffering."**

- That craving (*taṇhā*) is the ORIGIN of suffering in #3 above. The CESSATION **of craving (*taṇhā*)** leads to the cessation of suffering.
- **Does that mean only the three steps of *upādāna, bhava*, and *jāti* play crucial roles out of the 11 steps** (*avijjā, saṅkhāra, viññāṇa, nāmarūpa, salāyatana, phassa, vedanā, taṇhā, upādāna, bhava*, and *jāti*) **in *Paṭicca Samuppāda*?**
- Discussion of that will provide us with valuable insight that most people are unaware of. **The answer lies in understanding the meaning of *upādāna*.**
- The involvement of those other terms in *Paṭicca Samuppāda* based on *taṇhā* and *upādāna* is explained in "Taṇhā Paccayā Upādāna – Critical Step in Paticca Samuppāda."

The Difference Between Conventional Worldview and Buddha Dhamma

© 2026 Lal A. Pinnaduwage

5. As discussed in #1 above, any human not exposed to Buddha Dhamma can think of only one way to overcome the loss of a mind-pleasing thing or a distressful situation. **That is to seek more sensory pleasures.** One may be able to get temporary satisfaction that way, **but it never leads to the end of suffering!**

- The above description is one aspect of the *anicca* nature: "Anicca – The Incessant Distress ("Pīḷana")." No matter how hard we try, it is impossible to maintain a "fully satisfactory mindset" regardless of how much wealth one has.
- Even if we engage in the most satisfying activity, after a while, it becomes unsatisfactory. Even the most delicious meal, we can eat so much. If we eat that same meal day after day, we get fed up and would like to eat something else. There is a sense of "unfulfillment" or "unsatisfactoriness" (***"pīḷana"*** in Pāli) in our minds.
- The Buddha understood that the root of that issue is *raga, dosa*, and *moha,* which have been with us for a time that cannot be traced back. They have remained with us as *anusaya* or 'hidden defilements." The permanent solution to overcome that is to **get rid of our cravings** for sensory pleasures.
- **That is precisely the opposite approach to that of an average human (*puthujjana*) who has the mindset that sensory pleasures are of the "*nicca* nature."** (The "*anicca* nature" has other meanings than this "*pīḷana* nature;**"** see "Anicca – True Meaning." They all emphasize the futility of seeking sensory pleasures to overcome inevitable suffering inherent in this world.
- That wrong view/perception of a *nicca* nature manifests as *taṇhā* (craving/attachment) for the sensory inputs coming through the six senses.

Six Types of *Taṇhā*

6. The "WebLink: suttacentral: *Vibhaṅga Sutta* (SN 12.2)" defines *taṇhā* as follows. "*Katamā ca, bhikkhave, taṇhā? Chayime, bhikkhave, taṇhākāyā—rūpataṇhā, saddataṇhā, gandhataṇhā, rasataṇhā, phoṭṭhabbataṇhā, dhammataṇhā*."

Translated: *"Bhikkhus*, what is *taṇhā*? There are these six classes of *taṇhā – rūpa taṇhā, sadda taṇhā, gandha taṇhā, rasa taṇhā, phoṭṭhabba taṇhā, dhamma taṇhā."*

- Note that the translation in the above translates "*taṇhā*" as "craving." However, "*taṇhā*" CANNOT be translated to English as one word. "*Taṇhā*" means "to get attached to an *ārammaṇa*."
- An *ārammaṇa* is a "*rūpa*" that comes through one of the six senses. There are six types of *rūpa*: "*rūpa rūpa"* (visuals), *sadda rūpa* (sounds), *gandha rūpa* (smell), *rasa rūpa* (taste), *phoṭṭhabba rūpa* (touch), and *dhamma* (memories) *rūpa.*
- If it comes through the eyes, it is a sight ("*rūpa rūpa."*) Each person attaches to the visuals they crave. That "attachment" can arise because of liking or craving, but one can also via "anger/hate." Therefore, "*rūpa taṇhā"* can arise when one sees an attractive person/thing or a disliked person/thing. **The key point is that sight will trap one's mind, and one will start thinking about it. Then we say "*rūpa taṇhā*" has arisen due to that *rūpa ārammaṇa* (i.e., *rūpārammaṇa*.)** Same for *saddārammaṇa, gandhārammaṇa,* etc.

Kammic Energy Created in *Javana Citta*

7. *Kammic* energy is created in a particular type of *citta* called "*javana citta*." Note that "*citta*" is pronounced as "chiththa." See Ref. 3 on the writing/pronunciation of Pāli words.

- It is easy to see that not all *cittās* (loosely translated as 'thoughts") are the same. If we are not interested in something, our *cittās* on it are weak. On the other hand, if we are passionate about something, we have "strong feelings" that show up even in our tone of voice. That indicates an increase in *javana* power in *cittās.*

© 2026 Lal A. Pinnaduwage

- For example, a child being awakened in the morning to go to school on a rainy day may not be enthusiastic about getting up and going to school. Thus, his *cittās* at that time were weak.
- The same child getting ready to play with his friends will be enthusiastic about it. His *cittās* at that time will have strong "*javana* power."
- However, in Buddha Dhamma, we focus only on *javana cittās* generated with *rāga, dosa,* and *moha.*

8. The idea of "thoughts generating energy" is a novel concept, especially for those in Western countries.

- **However, it is the basis of Buddha Dhamma.** Mind is the precursor to everything in this world: "Manopubbangamā Dhammā.."
- That is also why the Buddha said, "My teachings have never been known to this world." As emphasized in #1 above, humans who have not understood Buddha's teachings have only one option to overcome disliked sensory experiences or depressing situations: They seek more sensory pleasures.
- The critical point to understand is that the tendency to attach to worldly things cannot be blamed on worldly things. In the absence of a Buddha, people can figure out that avoiding such "mind-pleasing things" can lead to a peaceful mind and even *anariya jhāna*. Ancient *yogis* went deep into jungles, away from sensory pleasures, and cultivated *jhāna*. However, avoiding attractive external *rūpa* is only a temporary solution. Just the sight of an attractive woman can make them lose the ability to get into *jhāna*.

- **The permanent way to lose the tendency to attach to worldly things is to cleanse one's mind of such *gati* or tendencies with *rāga*, *dosa*, and *moha*.** That can happen only after hearing (*jānato*) about the true fundamental nature of this world from a Noble Person and comprehending it with wisdom (*passato*).

Critical Implications of *Dukkha Sutta* (SN 12.43)

9. As you can see, in #3 above (the first part of the *Dukkha Sutta*), the Buddha says that all future suffering can be stopped by stopping attachment to the sensory inputs that come through the six senses. Those six senses are the eyes, ears, nose, tongue, body, and mind. I alluded to this point in the post, "Paticca Samuppāda – Introduction."

- Then, in the second part, there is more information on that point. With the verse in #4 above, the Buddha briefly explains how future suffering ceases by the cessation of *taṇhā,* craving for sensory pleasures. He says that cessation of *taṇhā* leads to the cessation of ***upādāna, bhava, and jāti,*** and thus, to the cessation of all future suffering.
- As we can also see, the verse is referring to the *Paṭicca Samuppāda* sequence starting with "*salāyatana paccayā phasso"* and proceeding via *"phassa paccayā vedanā, vedanā paccayā taṇhā, taṇhā paccayā upādāna, upādāna paccayā bhavo, bhava paccayā jāti, jāti paccayā jarā, maraṇa, soka-parideva-dukkha-domanassupāyasā sambhavan'ti."* Sensory inputs come through the six sense faculties or *salāyatana.*
- In the next post, We will continue this discussion by focusing on *anatta* — the logical next step in how the *anicca* and *dukkha* nature leads to the **"*anatta* nature."** Thus, *anatta* is not about a "self."

10.1.5 'Etaṁ Mama, Esohamasmi, Eso Me Attā'ti – Connection to Taṇhā, Māna, Diṭṭhi

October 7, 2023; revised January 19, 2024 (#10); October 24, 2024 (#1, #10); revised November 9, 2024; rewritten with revised title May 24, 2025; added #15, #16 May 25, 2025

Note: (rewritten with revised title May 24, 2025) This is a rewritten version of an old post, "Etaṁ Mama, Esohamasmi, Eso Me Attā'ti – What Does It Mean?"

'*Etaṁ mama*, *esohamasmi*, *eso me attā'ti* is a verse that appears in many *suttās*. It explains how *taṇhā*, *māna*, and *diṭṭhi* arise due to "distorted *saññā*." [See "Sanditṭhiko – What Does It Mean?" under #4 ***Diṭṭhi*, *Māna*, *Taṇhā* – Three Ways of Attachment** and #5 **Ten Saṁyojana that Bind Us to the Rebirth Process**.]

Introduction

1. I will explain the meaning of the verse "'*etaṁ **mama***, *esohamasmi* (*eso ***ahaṁ asmi***), *eso **me attā**'ti samanupassati*" using a few *suttās*. Then I will explain that the verse explains "distorted *saññā*," giving rise to attachment to sensory inputs via *taṇhā*, *māna*, and *diṭṭhi*. [***taṇhā*** = *etaṁ mama* (this is mine); ***māna*** = *esohamasmi* (I am this); ***diṭṭhi*** = *eso me attā* (this is for my benefit)]

- First, a quick description of the Pāli words in the verse. Here, "***mama***" means "mine" and "***ahaṁ asmi***" means "sense of me" (related to *asmi māna*). As shown within brackets, *esohamasmi* is "*eso ahaṁ asmi*."
- The third word, "***me attā***," in this context, means "my benefit" since "***me***" (rhymes like "say") means "for me." We discussed the fact that in many situations, "***atta/attā***" means "benefit" or "of value". See, for example, "Attato Samanupassati" and Sotāpanna Stage.
- That verse expresses **the root causes** for an average person's (*puthujjana*) **attachment to "mind-pleasing" sensory inputs.**

2. That verse appears in the "WebLink: suttacentral: *Etaṁmama Sutta* (SN 22.151)" among many other *suttās*. The **incorrect** English translation in that link is: 'This is mine, I am this, **this is my self**.'

- However, as discussed below, it means 'This is mine, I am (some of) this, **this is for my benefit**.' Here, "this" refers to things in the world, including one's body.
- In those *suttās*, **the Buddha explained that not only *rūpa*, but also *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* that arise in a mind (upon experiencing a sensory input) should not be considered as 'This is mine, I am this, this is for my benefit.'** As we will see, those entities are in the ***pañca upādānakkhandha***. [Download this diagram "**Eighteen Elements (dhātu) to Five Grasping Aggregates (Pañcupādānakkhandha) 25May2025.pdf**" to understand how the **six sensory inputs** generate the ***pañcupādanakkhandha*** via the ***hadaya vatthu*** with the help of the **eighteen elements (*dhātu*)**.]

© 2026 Lal A. Pinnaduwage

Rūpa – Not External *Rūpa*

3. Here (as well as in most *suttās*), "*rūpa*" does not refer to "external *rūpa*" but to those that arise in the mind when experiencing an "external *rūpa.*"

- For example, when seeing the same person X, two people (A and B) may see X as their friend and an enemy, respectively. That is why different types of *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* will arise in A and B (upon seeing X) in that example. The recognition of X (as a friend and an enemy) by A and B is based on the "*saññā*" that arises automatically based on prior experiences.
- That is a critical issue to understand! Please review the following posts to make that clear: "Rūpa – What It Really Means," "Vedanā (Feelings) Arise in Two Ways", "Saññā – What It Really Means, Saṅkhāra – What It Really Means," "Viññāṇa – What It Really Means," "'Diṭṭhe Diṭṭhamattaṁ Bhavissati' – Connection to Saññā," "Sandiṭṭhiko – What Does It Mean?"

Why Is Attachment to Sensory Inputs Bad and Fruitless?

4. For any average person (including intelligent people), it could be confusing to hear why the Buddha taught that "attachment to sensual pleasures" is bad. See "Is It Necessary for a Buddhist to Eliminate Sensual Desires?"

- As pointed out in the above post, **getting rid of sensual desires or *kāma rāga* (including sex, craving for food, etc.) with willpower is unnecessary**.
- As discussed there, enjoying sensual pleasures, by itself, does not lead to future suffering.
- However, the deeper teachings convey the following: (i) as long as one has **sensual desires or *kāma rāga***, it would be impossible to control oneself from engaging in immoral deeds when temptations become strong. For example, while most people do not take bribes, if one is offered a million dollars, that would be hard to resist. (ii) "sensual pleasures" are "mind-made" and are illusions in a deeper sense; see "Fooled by Distorted Saññā (Sañjānāti) – Origin of Attachment (Taṇhā)."
- **When the mind realizes that "sensual pleasures" are mind-made, it will voluntarily give up sensual desires.** This is why rituals (*sīlabbata parāmāsa*) are unnecessary to attain *Nibbāna*. What is needed is to understand the "Worldview of the Buddha."

Hidden Role of (Distorted) *Saññā*

5. To understand those two points (especially the second point), one must understand the concept of "(distorted) *saññā*."

- The "*saññā*" that arises automatically in a *puthujjana* is inherently distorted; that is, it does not convey the real nature.
- **Most of us have heard that the Buddha discovered the "real nature of the world" (*yathābhūta ñāṇa*), but most people are unaware that the Buddha explained it as being due to the (distorted) *saññā* built into our bodies.** Fortunately, there are a number of critical *suttās* that provide enough details for us to recover this "missing piece" of Buddha's teachings.
- Relevant *suttās* include "Mūlapariyāya Sutta – The Root of All Things." The name says it all: "The Root of All Things." It is all about *saññā*!

What is *Avijjā*?

6. Most people (especially those exposed to at least the mundane versions of Buddha's teachings) understand that *rāga*, *dosa*, and *moha* (or *avijjā*) are the root causes for future suffering.

© 2026 Lal A. Pinnaduwage

- They also know that one attaches to sensory inputs with *rāga* and *dosa* because of *avijjā*. Here, *avijjā* has several definitions, but most people have heard that *avijjā* means "ignorance about the Four Noble Truths." That is one explanation of *avijjā*; see "WebLink: suttacentral: *Avijjā Sutta* (SN 56.17)."
- However, over 99% of them do not know other revealing ways to describe *avijjā*. For example, in the "WebLink: suttacentral: *Avijjā Sutta* (SN 22.113)," *avijjā* is explained as follows: "… *assutavā puthujjano* ***rūpaṁ nappajānāti***, *rūpa samudayaṁ nappajānāti*, ***rūpa nirodhaṁ nappajānāti***, *rūpa nirodha gāminiṁ paṭipadaṁ nappajānāti*." The English translation in the link is: "… it's when an unlearned ordinary person **doesn't understand form**, its origin, **its cessation**, and the practice that leads to its cessation." Most people think "*rūpa*" means the "external *rūpa*," and the translator also implies that.
- The correct translation of the verse (that defines *avijjā*) is: "… it's when an unlearned ordinary person **doesn't understand *rūpa* (*rūpa upādāna khandha*)**, its origin, **its cessation**, and the practice that leads to its cessation."

Rūpa – Rūpa Upādānakkhandha

7. Let us discuss why that English translation in the link "WebLink: suttacentral: *Avijjā Sutta* (SN 22.113)" is wrong. **"*Rūpa*" in that verse refers to the "mind-made *rūpa*" that arises in the mind.** For the same "external *rūpa*," different versions of "*rūpa*" arise in the minds of any number of people experiencing the same "*rūpa*" at the same time. That is why different types of *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* arise in them, i.e., people may respond differently to the same sensory input (for example, seeing the same person).

- We already discussed an example in #3 above. In that example, A and B recognize X (as a friend and an enemy) based on the "*saññā*" that arises automatically based on prior experiences. That recognition is a complex process, which requires the minds of A and B to recall prior experiences with X; that means the mind does that scan in a split second!
- It involves "*rūpakkhandha*" or "many prior sights/associations with X." Since their minds attach to the sight of X (with *rāga* and *dosa*), it is not "*rūpakkhandha*" but "*rūpa* ***upādānakkhandha***" that comes to play.
- In other words, upon receiving a "snapshot" of person X, the mind of A or B would instantly scan through past "snapshots of X" to recognize X. It is actually more than that. That mind will also scan emotions (*vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa*) associated with such past encounters; that is, when the mind recognizes X as friend or foe.
- **This is why a sensory event triggers all "five grasping aggregates" or *pañca upādānakkhandha*.** See "Purāṇa and Nava Kamma – Sequence of Kamma Generation."

Rūpa (*Rūpa Upādānakkhandha*) Does Not Arise in Arahants

8. *Arahants* have entirely removed *avijjā* from their minds. So, they must have understood "form" and its origin and **attained its cessation** via the Noble Path, per the "WebLink: suttacentral: *Avijjā Sutta* (SN 22.113)" (see #6 above).

- Now, it must be clear why "*rūpa*" does not refer to the "external *rūpa*" in question (for example, consider "seeing X" discussed above).
- An *Arahant* would also recognize X (if they had past encounters with X). Whether X had been a friend or foe, the *Arahant*'s mind would not form an attachment to it via like or dislike, i.e., *rūpa* (*rūpa upādānakkhandha*) would not arise. **That is what is meant by "*rūpa nirodha*."**
- That is why "seeing by an *Arahant*" is stated as "*diṭṭhe diṭṭhamattaṁ bhavissati*". See "'Diṭṭhe Diṭṭhamattaṁ Bhavissati' – Connection to Saññā," and "Rūpa – What It Really Means."

© 2026 Lal A. Pinnaduwage

- Thus, "***nirodha***" ("**cessation**") in #6 above does not refer to the destruction of an "external *rūpa*" but only to **stopping the arising of *rūpa upādānakkhandha.***

Paṭicca Samuppāda Does Not Operate for an Arahant

9. It should also be clear that not only *rūpa* ***upādānakkhandha***, but all five (*pañca* ***upādānakkhandha***) would not arise in an *Arahant*. Another way to say that is *Paṭicca Samuppāda* cycles do not operate for an *Arahant*. As we know, each sensory input initiates a *Paṭicca Samuppāda* cycle for a *puthujjana*. See #12 of "Loka Sutta – Origin and Cessation of the World."

- To initiate a *Paṭicca Samuppāda* cycle, the mind must automatically and instantaneously attach to the sensory input in the "*purāṇa kamma*" stage. See "Purāṇa and Nava Kamma – Sequence of Kamma Generation."
- As I have emphasized, spending a weekend (or more) going through the above links is necessary to understand the key concepts.
- With that background, we can now go back to discuss the verse, "*etaṁ* ***mama***, *esohamasmi* (*eso* ***ahaṁ asmi***), *eso* ***me attā****'ti samanupassati.*"

Different Emotions Are Not Associated With "External *Rūpa*"

10. As we have discussed above, sensory pleasures involve external *rūpa* in the world coming into contact with the mind, leading to the arising of a set of mental phenomena. The Buddha summarized the mental aspects into four categories: *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa*.

- In the "WebLink: suttacentral: *Avijjā Sutta* (SN 22.113)," (see #6 above) the Buddha stated the requirements to achieve "*rūpa nirodha*." The first is to understand "*rūpa*." As the verse states, **a *puthujjana* does not understand *rūpa* to be *rūpa upādāna khandha*.**
- **A *puthujjana* believes that the "external *rūpa*" brings joy or stress to the mind.**
- In the example discussed in #3 above, A and B recognize X as a friend and an enemy, respectively. So, for A, associating with X will bring more pleasure. On the other hand, for B, even the sight of X brings stress to the mind; thus, he desires to avoid seeing X. In the worst case, in a confrontation with X, B could kill X if things get out of hand!

Different Emotions Arise Due to (Distorted/False) *Saññā*

11. However, the Buddha taught that both A and B are mistaken.

- A sense of joy arises in A upon seeing X, while a dislike arises in B. But both those emotions arise due to *saññā* (which is a "distorted/false *saññā*").
- I have outlined the process that gives rise to the "distorted/false *saññā*." As I emphasized, it is a complex process, but it is the key to understanding Buddha's teachings at the level needed to attain a *magga phala*.
- This critical role of "distorted/false *saññā*" is also discussed in "Saññā Nidānā hi Papañca Saṅkhā – Immoral Thoughts Based on 'Distorted Saññā'." Let us discuss that to make the connection to the verse "*etaṁ* ***mama***, *esohamasmi* (*eso* ***ahaṁ asmi***), *eso* ***me attā****'ti samanupassati.*"

'*Etaṁ Mama, Esohamasmi, Eso Me Attā'ti*

12. A *puthujjana* **seeks** external *rūpa* that can provide *sukha vedanā* via the physical body and *somanassa vedanā* to the mind. A *puthujjana* also **seeks to avoid** external *rūpa* that can provide *dukkha vedanā* via the physical body and *domanassa vedanā* to the mind. In both cases, they attach to the

© 2026 Lal A. Pinnaduwage

"external *rūpa*." They **also attach** via ignorance with *adukkhama sukha* or "neutral feelings." We will focus on the first case to make things simple.

- **A *puthujjana* highly values any external *rūpa* (providing mind-pleasing sights, sounds, tastes, smells, and touches).** That is because they don't understand that they are fooled by the "distorted/false *saññā*." See "Fooled by Distorted Saññā (Sañjānāti) – Origin of Attachment (Taṇhā)."
- Thus, they attach to it and wish to "make it mine." That is the "*etaṁ mama*" part of the verse.
- With repeated such attachments (through the beginningless rebirth process), the "sense of a me" (*asmi māna*) is established.
- Of course, both happen because of the wrong view (*diṭṭhi*) that joy/happiness is in the "external *rūpa*." They believe that "external *rūpa*" is for their benefit, i.e., they are of value (*attā).* That is the last part of the verse, "*eso me attā*." This is discussed in detail in "'Attato Samanupassati" and Sotāpanna Stage." Here, "*attato samanupassati*" means "to view something as *atta/attā*."

13. Of course, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* arising from such experiences are highly valued as well. Those five entities are the five aggregates or *pañcakkhandha*. **Since we tend to crave them and try to keep them close to our minds (i.e., have *upādāna* for them), they always become "*pañca upādāna khandha*" or "*pañcupādānakkhandha.*"**

- Therefore, it is natural to view such *rūpa* and the accompanying *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* as one's own. For example, one likes to own a luxury car and enjoys driving it or even thinking about that car.
- That is essentially the meaning of the verse, "'*etaṁ mama*, *esohamasmi*, *eso me attā'ti*," regarding any one of the ***"pañcupādānakkhandha"*** (or any ***rūpa*, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* that one has attachments to**.)
- Here, "*etaṁ mama*" means "it is mine" (based on *taṇhā*); "*esohamasmi*" means sense of "me" (*māna*) based on that *taṇhā*; and "*eso me attā*" means the wrong view (*diṭṭhi*) that it is fruitful/beneficial for "me."

Connection to *Sakkāya Diṭṭhi*

14. Thus, attachment to sensory inputs occurs with *taṇhā*, *māna*, and *diṭṭhi.*

- The latter (*diṭṭhi*) is specifically *sakkāya diṭṭhi.* One first removes *sakkāya diṭṭhi* (and the associated *vicikicchā* and *sīlabbata parāmāsa*) at the *Sotāpanna* stage.
- *Taṇhā* manifests as *kāma rāga*, *rūpa rāga*, and *arūpa rāga*. *Kāma rāga* (tendency to attach to sensual pleasures and associated *paṭigha*) is removed at the *Anāgāmi* stage. *Rūpa rāga* (craving *jhānic* pleasures) and *arūpa rāga* (craving *arūpa samāpatti* pleasures) are removed at the *Arahant* stage.
- Removal of *kāma rāga* and *paṭigha* stops rebirths in *kāma loka.* Removal of *rūpa rāga* and *arūpa rāga* also stops rebirths in *rūpa* and *arūpa loka*, respectively; those "*jhānic/samāpatti* pleasures" are also mind-made.
- Finally, *māna* (sense of "me") is also removed at the *Arahant* stage.
- At that point, one is fully released from the world of 31 realms (which mostly provides suffering, with infrequent bouts of "pleasures") that we ourselves make (for each of us) based on a false/distorted *saññā*!

Path Must be Cultivated Stepwise

15. Many people are afraid even to think about *Nibbāna*'s final result, which is stopping the rebirth process. That final result is achieved when an *Anāgāmi* realizes there is no "everlasting me" (like the concept of soul in most religions) in ultimate reality.

© 2026 Lal A. Pinnaduwage

- Therefore, contemplating that idea initially is unnecessary and even unwise; focusing on it can lead to stress and even mental issues. We have discussed one such case recently in the forum. Even a *Sotāpanna* does not need to focus on that.
- Think about it this way. **If the idea of a soul-type entity is the actual reality, then no matter how one tries, one would not be able to get rid of it!**
- First, focus on removing *sakkāya diṭṭhi*, attain the *Sotāpanna* stage, and be free of rebirths in *apāyās*, including the animal realm. Then, one must cultivate *Satipaṭṭhāna* to attain the *Sakadāgāmi* and *Anāgāmi* stages and overcome rebirths in *kāma loka.* **Only after that does one need to focus on removing the sense of "me." By then, one will be motivated to do so, not be afraid!**

No Need to Worry About Losing One's Existence

16. The Buddha emphasized that he teaches the following: "**In the past, as today, what I describe is suffering and the cessation of suffering**." See "WebLink: suttacentral: *Alagaddūpama Sutta* (MN 22)." Similar statements are in several *suttās*. See, for example, "WebLink: suttacentral: *Titthāyatana Sutta* (AN 3.61)."

- As a *Bodhisatta*, he strived to find and stop the root causes of suffering, **not whether a "self" or "me" exists in ultimate reality.**
- His investigations led to attaining Buddhahood. That is when he **discovered** the actual reality of existence, **i.e., the fact that there is no "me" in ultimate reality is a byproduct of solving the root causes of suffering.**
- In the same way, one who cultivates the initial steps will eventually conclude that there is no "soul-type" permanent existence in reality.
- **In any case, there is no need to worry about it. If a "soul" really exists (if that is embedded in Nature), how can one lose it?**

10.1.6 "Attā" as "Self" – Wrong Translation in Many Suttās

October 13, 2023

Attā can mean either a "person"/"oneself" (mundane meaning) or "of benefit/value" (deeper meaning as the opposite of "*anatta*" in *Tilakkhaṇa*), depending on the context. In many English translations, it is always used with the mundane meaning. That leads to much confusion.

Ātman/*Anātman* Are Not the Same as *Attā*/*Anattā*

1. *Ātman* and *anātman* are Sanskrit words meaning "self" and "no-self" in Hinduism. Here, a "self" means the same as a "soul" in Christianity, a permanent entity. See "WebLink: encyclopedia.com: Anatman/Atman (No-Self/Self)."

- **That article starts with the following:** "The Vedic Sanskrit term *ātman* (Pāli, *attā*), literally meaning breath or spirit, is often translated into English as self, soul, or ego. Etymologically, ***anātman* (Pāli, *anattā*)** consists of the negative prefix *an,* plus, *ātman* (i.e., without *ātman*) and is translated as no-self, no-soul, or no-ego." That is completely wrong!
- That sentence explains the problem. The *Vedic* "***anātman***" was adopted to explain the meaning of the Buddhist "***anattā***" (in Pāli) in *Mahāyāna* Buddhism that took root in India a mere 500 years after the passing away of the Buddha. It then got incorporated into *Theravāda* Buddhism during the time *Mahāyāna* Buddhism flourished in India. By the time the British Empire took over most of Asia, that interpretation had spread to other Asian countries as well. See "Misinterpretation of Anicca and Anatta by Early European Scholars."

© 2026 Lal A. Pinnaduwage

- Unfortunately, now that incorrect interpretation is everywhere: "WebLink: en.wikipedia.org: Ātman (Buddhism)."
- This has done immense damage to *Theravāda* Buddhism and has blocked the path for many over the past thousands of years.
- In the following, I will point out how that incorrect interpretation leads to inconsistencies in *Sutta* translations.

2. In the previous post, "'Etaṁ Mama, Esohamasmi, Eso Me Attā'ti – Connection to Taṇhā, Māna, Diṭṭhi" I discussed that "*attā*" has two meanings, and the correct meaning must be used depending on the context. Furthermore, I pointed out that **the absence** of an "everlasting soul" or "an unchanging self" is built into the foundation of Buddha Dhamma.

- Even though an "unchanging/everlasting self" does not exist, the Buddha talked about a "person" in a conventional way. The Pāli word for indicating "a person," "myself," etc., in a conventional way, is "*attā*" (with a long "a.")
- The deeper meaning of "*attā*" (and also "*atta*" without the long "a") is "beneficial," "fruitful," "meaningful," etc. The opposite of that is "*anatta/anattā*"or "unfruitful."
- The deeper meaning comes into play in *Tilakkhaṇa* (*anicca*, *dukkha*, *anatta*), where *anatta* is related to *anicca* and *dukkha*. **All three indicate undesirable characteristics of the world of 31 realms.**
- Both usages are discussed in "Atta Hi Attano Natho." A longer discussion in "Anatta – the Opposite of Which Atta?"
- The deeper meaning must be used in the context of the *suttās* SN 22.33 AND SN 35.101 discussed below.

Natumhāka Sutta

3. I will focus on one *sutta* to point out the absurdity of translating *atta*/*anatta* (or *attā*/*anattā*) as "self/no-self" without paying attention to the context. Here is the Pāli version: "WebLink: suttacentral: Natumhāka Sutta (SN 22.33)"

The following is my translation with a few clarifications. You should try to follow it since it is not a long or complex *sutta*. I used the following meanings: *tumha* = you, *tumhākaṁ* = yours, *pajahatha* = to give up (in mind, *pajahatha* does not mean donate.)

At Sāvatthī.

"*Bhikkhus*, give up what's not yours."

- "Giving up (the attachment to) such things will be for your welfare and happiness."

"And what is not yours?

- *Rūpās* (whether internal or external) are not yours: give them up (meaning don't generate *taṇhā*/*upādāna* for them.)
- Giving up attachment to them will be for your welfare and happiness (here, *pahīna* means to "lose attachment)."

"In the same way, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* are not yours: give them up (meaning don't generate *taṇhā*/*upādāna* for them.)

- Giving up attachment to them will be for your welfare and happiness."

"Suppose a person comes to this temple (*jetavane*) and carries off the grass, sticks, branches, and leaves on the temple grounds, burns them or does whatever they want with those grass, sticks, branches, and leaves.

© 2026 Lal A. Pinnaduwage

Would you think: This person is carrying off something of value to us, burning something of value to us (*amhe*)?"

- "There is no reason to say so, *Bhante*."

"Why is that?"

- **@ marker 2.6:** "Because those things (grass, sticks, branches, and leaves on the temple grounds) are **not useful/beneficial (*attā*) or can provide to anything of value (*attaniyaṁ*)**."

"In the same way *Bhikkhus*, *rūpās* (whether internal or external) are not yours: give them up (meaning don't generate *taṇhā*/*upādāna* for them.)

- Giving up attachment to them will be for your welfare and happiness."

"In the same way, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* are not yours: give them up (meaning don't generate *taṇhā*/*upādāna* for them.)

- Giving up attachment to them will be for your welfare and happiness."

That is the complete *sutta*.

Absurd Translation of *Natumhāka Sutta*

4. Here is the Sutta Central link with both Pāli and their English translations: "WebLink: suttacentral: Natumhāka Sutta (SN 22.33)"

- You can read the English translation at Sutta Central in the above link.

5. **The critical verse is @marker 2.6:** "*Na hi no etaṁ, bhante, **attā** vā **attaniyaṁ** vā*"*ti.*

The Sutta Central English translation is: "**Because to us that's neither self nor belonging to self,**" meaning "Because to us that (grass, sticks, branches, and leaves on the temple grounds) is neither self nor belonging to self."

- Does it make sense to say, "Grass is neither self nor belonging to self"?
- Here, "***Na hi** no etaṁ*" means "those things (grass, sticks, branches, and leaves on the temple grounds) are **not**."
- The translation of "***attā vā attaniyaṁ vā***" at Sutta Central is "**neither self nor belonging to self**."
- **This is an excellent example of the tragic outcome of translating** "***attā***" as "**self**." What does it mean to say, "Grass is neither self nor belonging to self"?

6. Thus, the point is that "***attā***" in the context of the *sutta* refers to whether the grass, sticks, branches, and leaves on the temple grounds are **of any value/substance/benefit**.

- A second translation at Sutta Central has the same problem: "WebLink: suttacentral: 22.33. Not Yours (1)."
- There is a longer version in the "WebLink: suttacentral: Paṭhamanatumhāka Sutta (SN 35.101)" at Sutta Central with exactly the same verse translated the same wrong way.
- Here is the translation of that latter *sutta* at another website: "WebLink: accesstoinsight.org: Na Tumhaka Sutta: Not Yours." Translation of the critical verses there are as follows:

"Suppose a person were to gather or burn or do as he likes with the grass, twigs, branches, & leaves here in Jeta's Grove. Would the thought occur to you, **'It's us that this person is gathering, burning, or doing with as he likes'?**"

"No, lord. Why is that? **Because those things are not our self nor do they pertain to our self.**"

© 2026 Lal A. Pinnaduwage

- It appears that they mechanically translate words without even trying to see whether what comes out makes any sense!

Why Shouldn't One Take Things Not "Belonging to Oneself"?

7. The deeper explanation is that nothing in this world (including one's own physical body) truly belongs to "oneself," and thus, one will not have control over such things. Even one's own physical body (and, in general, the five aggregates) arises due to causes and conditions (*Paṭicca Samuppāda*.) Can we stop our bodies from aging, for example? No. A *puthujjana* (average human) tends to think of the physical body as "their own," but that is only an illusion.

- That aspect is described in another version of *Natumhāka Sutta*: "WebLink: suttacentral: Natumhāka Sutta (SN 12.37)."
- The English translation there is not as bad as in the previous case. However, it does not explain the concepts involved.

8. Further explanations are in other versions of *Natumhāka Sutta*: "WebLink: suttacentral: Paṭhamanatumhāka Sutta (SN 35.101)" and "WebLink: suttacentral: Dutiyanatumhāka Sutta (SN 35. 102)."

Those two *suttās* go into even more detail and point out that **it is not wise** to take anything internal (normally taken as one's own, like one's eyes, ears, different types of *viññāṇa*, etc.) as "one's own."

- **I have started discussing those issues in the current series of posts (see the recent update)**: "Does "Anatta" Refer to a "Self"?"

Absurdities When Translating "*Attā*" as "Self" Under All Situations

7. In "WebLink: suttacentral: Attavagga," "*Attā hi attano nātho*" is translated as "Self is indeed the lord of self"! **What does that mean?**

- The title "*Attavagga*" is translated there as "The Self." This does not make sense since there is no "everlasting self" in Buddha Dhamma; see #2 above. The English title should indicate something like "What is Beneficial." What is beneficial is *Nibbāna*, not anything in this world.
- That section of the *Dhammapada* is about what is "beneficial" (of the "*atta*" nature; the deeper meaning) for oneself ("*attā*" with the mundane meaning.)
- Therefore, throughout those verses, both meanings must be used correctly. I have explained the meaning of verse 160 in the post "Atta Hi Attano Natho."

8. There are four translations in that Sutta Central post; the other three translations are better but still do not provide the full meaning. See, for example, WebLink: suttacentral: Dhp 157–166: Attavagga—Bhante Suddhāso (suttacentral.net)

- The main issue is that it is not possible to translate certain verses in the *Tipiṭaka* word-by-word. **There are two main reasons for that:** (i) Some Pāli words cannot be translated as a single word to any language. One must understand the meaning of such a word and use the Pāli word. (ii) When a certain word has a "double meaning," the translator must know the usage of both meanings.
- I have discussed that in a separate section since this problem is a common occurrence, especially in current English translations: "Elephant in the Room 1 – Direct Translation of the Tipiṭaka."

9. While "*attā*" has the mundane meaning of a "person" or "self," **that meaning is never associated with "atta" (with a short "a.")**

- Furthermore, the negation of "*attā*" as "no-self" **is never used** in the *suttās* as "*anattā*" ("*na*" + "*attā*")

© 2026 Lal A. Pinnaduwage

- That negation usage is there only as "*anatta*" or "*anattā*" in relation to *anicca* and *dukkha* in ***Tilakkhaṇa***. There, *anicca*, *dukkha*, and *anatta* describe the **unsatisfactory/dangerous nature of worldly existences**. Let us discuss that now.

Atta/*Anatta* and *Attā*/*Anattā* are About *Tilakkhaṇa*

10. There is a series of *suttās* "WebLink: suttacentral: Anicca Sutta (SN 22.12)," "WebLink: suttacentral: Dukkha Sutta (SN 22.13)," "WebLink: suttacentral: Anatta Sutta (SN 22.14)," and "WebLink: suttacentral: Yadanicca Sutta (SN 22.15)," that clearly show the deeper meaning of *anatta* in relation to the *anicca* and *dukkha* nature of the world. There are more *suttās* in that series that go into further detail.

- The first *sutta* (SN 22.12) says, "*rūpaṁ, bhikkhave, aniccaṁ, vedanā aniccā, saññā aniccā, saṅkhārā aniccā, viññāṇaṁ aniccaṁ*" meaning "*Bhikkhus*, *rūpa, vedanā, saññā, saṅkhārā, viññāṇa* are all of *anicca* nature. Attachment to them will not lead to permanent happiness (i.e., absence of suffering)." The next verse says, "*Evaṁ passaṁ, bhikkhave, sutavā ariyasāvako rūpasmimpi nibbindati, vedanāyapi nibbindati, saññāyapi nibbindati, saṅkhāresupi nibbindati, viññāṇasmimpi nibbindatī*" or "Seeing this, a learned noble disciple will start losing cravings for them."
- The second *sutta* (SN 22.13) repeats the same verses, saying, *rūpa*, *vedanā*, *saññā*, *saṅkhārā*, *viññāṇa* are all of *dukkha* nature (i.e., they lead to suffering), and thus, a learned noble disciple will start losing cravings for them.
- The third *sutta* (SN 22.14) repeats the same verses, saying, *rūpa*, *vedanā*, *saññā*, *saṅkhārā*, *viññāṇa* are all of *anatta* (worthless/unfruitful) nature, and thus, a learned noble disciple will start losing cravings for them. Both "*atta*" and "*attā*" are used in the context of *Tilakkhaṇa* to discuss whether this world of 31 realms can be of benefit or for the permanent removal of suffering. In those cases, "*anatta*" ("*na*" + "*atta*") and "*anattā*" ("*na*" + "*attā*") indicate the negation of the two terms respectively.

11. Then, the fourth *sutta* (SN 22.15) points to the relationship among them: "*Rūpa* is of *anicca* nature. Attachment to them leads to suffering. Therefore, they are of *anatta* (worthless/unfruitful) nature." Then, it is repeated for the other four aggregates:

"*Vedanā* is of *anicca* nature. Attachment to them leads to suffering. Therefore, they are of *anatta* (worthless/unfruitful) nature."

"*Saññā* is of *anicca* nature. Attachment to them leads to suffering. Therefore, they are of *anatta* (worthless/unfruitful) nature."

"*Saṅkhārā* is of *anicca* nature. Attachment to them leads to suffering. Therefore, they are of *anatta* (worthless/unfruitful) nature."

"*Viññāṇa* is of *anicca* nature. Attachment to them leads to suffering. Therefore, they are of *anatta* (worthless/unfruitful) nature."

Absurdity of the Wrong Translations of *Anicca* and *Anatta*

12. The English translation in the "WebLink: suttacentral: Yadanicca Sutta (SN 22.15)" states (describing the relationship among *anicca*, *dukkha*, and *anatta*): "Form is impermanent. What's impermanent is suffering. What's suffering is not-self." Then, it is repeated for the other four aggregates:

"Feeling is impermanent. What's impermanent is suffering. What's suffering is not-self."

"Perception is impermanent. What's impermanent is suffering. What's suffering is not-self."

"Choices are impermanent. What's impermanent is suffering. What's suffering is not-self."

"Consciousness is impermanent. What's impermanent is suffering. What's suffering is not-self."

- Of course, all those five entities are impermanent; anyone can see that, **but only a Buddha can discover the *anicca* nature**.

© 2026 Lal A. Pinnaduwage

- The next part, "What's impermanent is suffering," is **not even true in the mundane sense** (e.g., a headache leads to more suffering if it becomes permanent!)
- Finally, **does it make any sense** to say, "What's suffering is not-self"?

Further details at "Anatta – A Systematic Analysis"

10.1.7 "Attato Samanupassati" and Sotāpanna Stage

October 20, 2023; revised February 28, 2024; rewritten May 30, 2025

Note: (Rewritten with New Title: **"Attato Samanupassati" and Sotāpanna Stage**) This post replaces the old post, **"'Attato Samanupassati' – To View Something to be of Value."**

"*Attato samanupassati*" means "to view something to be of value." Therefore, "*atta*" (in this context) indicates something of value, and "*anatta*" means the opposite. *Anatta* is a natural extension of *anicca* and *dukkha.* One reaches the *Sotāpanna* stage by realizing attachment to "sensory pleasures" (i.e., *pañca upādānakkhandha*) is fruitless and only leads to more suffering.

Introduction

1. We discussed the verse, "'*etaṁ mama*, *esohamasmi*, ***eso me attā'ti***" in the post "Etaṁ mama, esohamasmi, eso me atta'ti – Connection to Taṇhā, Māna, Diṭṭhi."

- That verse encapsulates the comprehensive view of the Buddha's worldview. **The concepts embedded in it are fully comprehended only by an *Arahant*. However, one can become a *Sotāpanna* by understanding the last part of that verse.**
- The last part of that verse, "***eso me attā'ti***" (related to "*diṭṭhi*" or "wrong views"), is discussed in this post with a related verse, "***attato samanupassati***." Understanding the current post is the first step in the journey to fully comprehending the whole verse, "*etaṁ mama*, *esohamasmi*, *eso me attā'ti.*"
- Once the issue of "*diṭṭhi*" becomes clear at the *Sotāpanna* stage, the first and second parts of the verse ("*etaṁ mama*" and "*esohamasmi*") can be fully understood at the *Anāgāmi* and *Arahant* stages, respectively. They are related to *taṇhā* (attachment to sensory inputs) and *māna* (sense of "me").
- Thus, in this "step-by-step" process, one must first understand the worldview of the Buddha ("***pubbe ananussutesi Dhamma***" or "**previously unheard teachings**"), which is very different from conventional worldviews of scientists and philosophers. **While the Buddha focused entirely on mental phenomena, others focus on material phenomena.**

In the *Suttās*, *Rūpa* Does Not Refer to "Things in the External World"

2. We all have an innate tendency to interpret "*rūpa*" as material objects. In almost all English translations, "*rūpa*" is translated as "form," conveying the idea that it is a "material form."

- However, by "*rūpa*," the Buddha meant "**mental impressions** of an external sensory input (sights, sounds, tastes, smells, and touches)."
- Thus, **the same "external *rūpa*" can lead to very different "*rūpa*" (which is "*rūpa upādānakkhandha*")**; see #6 through #8 in "Etaṁ mama, esohamasmi, eso me atta'ti – Connection to Taṇhā, Māna, Diṭṭhi.")
- The following example is discussed in that post: When seeing the same person, X, two people (A and B) may perceive X as a friend and an enemy, respectively. That is why different types of *vedanā*, *saññā, saṅkhāra*, and *viññāṇa* (i.e., *vedanā* ***upādānakkhandha***, *saññā* ***upādānakkhandha***, *saṅkhāra* ***upādānakkhandha***, and *viññāṇa* ***upādānakkhandha***) will arise in A and B (upon seeing X) in that

© 2026 Lal A. Pinnaduwage

example. The recognition of X (as a friend and an enemy) by A and B is based on the "*saññā*" that arises automatically **based on prior experiences; that is why it involves *khandhās* or "aggregates."**

- It was also discussed that ***pañcakkhandha*** never arises in anyone below the *Arahant* stage. It is always the ***pañca upādānakkhandha*** that occurs in response to a sensory input.

3. **It is critical to understand** that whenever ***rūpa*, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa*** are discussed in the *suttās*, they invariably refer to the respective ***upādānakkhandha*.**

- (**Note:** In *Abhidhamma*, the origin of "material *rūpa*" — via *suddhaṭṭhaka* — is also discussed; see "The Origin of Matter – Suddhaṭṭhaka.")
- **But in the *suttās*, "*rūpa*" refers to *rūpa upādānakkhandha* in almost all cases.** Whenever the **physical body** is discussed in the *suttās*, it is referred to as "*cātumahābhūtika kāya*" (meaning it is composed of the "four great elements": *pathavi*, *āpo*, *tejo*, and *vāyo*). See "WebLink: suttacentral: Assutava Sutta (SN 12.61)."
- Before proceeding with the discussion, it is also essential to note the following.

"Things in the External World" Are Not Illusions

4. It is also critical to note that the Buddha never taught that the "external world is an illusion." The world around us is real.

- It is just that our bodies (in all 31 realms except the *asañña* realm where no *cittās* arise) arise (via *Paṭicca Samuppāda*) to provide "false perceptions" or "distorted *saññā*."
- **Because of this, a *puthujjana*'s mind will automatically attach (via *rāga*, *dosa*, or *moha*) to all sensory inputs;** realization of this is one aspect of becoming a *Sotāpanna* or "*sandiṭṭhiko*": **"Sandiṭṭhiko – What Does It Mean?"** This is why all thoughts (*cittās*) never arise based on "pure/undefiled *pañcakkhandha*" but based on defiled *pañca upādānakkhandha.*
- **Here is a summary of what happens with a sensory event:** (i) image of an "external *rūpa*" is received by the mind, (ii) to recognize the sensory input, the mind scans through past experiences (there are records of past occurrences of similar *rūpa*) and that is why *rūpa upādānakkhandha* comes into play; furthermore, emotions associated with them (i.e., other four *upādānakkhandhas*) are also experienced by the mind, (iii) the mind automatically attaches to them and, thus, the new event also is added to the ever-growing *pañca upādānakkhandha.*
- This is why *pañca upādānakkhandha* is infinite; all our past experiences (in previous lives) remain intact as *nāmagotta*, but we can recall only a tiny fraction, even from the current life. However, a few people in the world can remember all their past experiences (in this life) in great detail: "Recent Evidence for Unbroken Memory Records (HSAM)."
- **The subtle (and deeper) point** is that all such emotions are generated due to (distorted) *saññā*, but **that *saññā* is built into our bodies**; therefore, **those emotions are not illusions.** See "Fooled by Distorted Saññā (Sañjānāti) – Origin of Attachment (Taṇhā)." **By comprehending how that (distorted) *saññā* arises, we can train the mind not to attach those emotions!**
- Now, we can proceed to discuss the verse "*attato samanupassati.*"

Attato Samanupassati – What Does That Mean?

5. "*Atta*" (like *anicca* and *anatta*) is a Pāli word with multiple meanings. In the current context, it means something like "beneficial" and "meaningful." **Note:** *Anatta* is the opposite of this *atta*. Also, see "Atta Hi Attano Natho."

- In Pāli, the same word is modified to change the tense, make it a noun or verb, or use it in other ways.
- Here, "*attato*" means "(["*to*" means "from"] something) as beneficial or meaningful."

© 2026 Lal A. Pinnaduwage

- Here, "*passati*" means "to see (with wisdom)" and "*samanupassati*" (*sama anupassati*) means "to see as such." [***samanupassati*** = *saŋ* + *anu* + *passati* = "*anu*" means "through the understanding of *tilakkhaṇa*" and "*passati*" means "to see (with wisdom)" = to see with wisdom (through the understanding of *tilakkhaṇa*) with regards to *saŋ* (*lobha*/*rāga*, *dosa*, *moha*/*avijjā*).]
- Thus, "*attato samanupassati*" means "to see [from] something as beneficial or meaningful." Therefore, the implication is that it is worthwhile to strive to get more of it.
- The Buddha explained that a mind tends to view the "value of things" at four levels; "*attato samanupassati*" is the strongest level of attachment.

Four Levels of Attachment (Based on *Sakkāya Diṭṭhi*)

6. In the "WebLink: suttacentral: Samanupassana Sutta (SN 22.47)" the Buddha described the wrong way of contemplation of a *puthujjana* regarding worldly things: "*Idha, bhikkhave,* ***assutavā puthujjano*** *ariyānaṁ adassāvī ariyadhammassa akovido ariyadhamme avinīto, sappurisānaṁ adassāvī sappurisadhammassa akovido sappurisadhamme avinīto* ***rūpaṁ attato samanupassati, rūpavantaṁ vā attānaṁ; attani vā rūpaṁ, rūpasmiṁ vā attānaṁ***."

- The first part of the verse means: "An **ordinary person who has not heard/understood** the Noble teachings from a Noble Person thinks about *rūpa* in four ways.
- Those four ways are at four levels, starting with the strongest (***rūpaṁ attato samanupassati***). The fourth (***rūpasmiṁ vā attānaṁ***) indicates the least attachment. Those four levels also depend on the person (some hold strong wrong views compared to others) and also on the type of sensory input (*ārammaṇa*).
- **Then, the verse is repeated for the four mental aggregates:** *vedanā, saññā, saṅkhāra*, and *viññāṇa.* For example, "***viññāṇaṁ attato samanupassati, viññāṇavantaṁ vā attānaṁ; attani vā viññāṇaṁ, viññāṇasmiṁ vā attānaṁ***."
- Thus, we could summarize by stating, "*pañc****upādāna****kkhandhā* ***attato samanupassati,*** **etc.**" The reason for using *pañc****upādāna****kkhandhā* instead of *pañcakkhandhā* was discussed in "'Etaṁ mama, esohamasmi, eso me atta'ti – Connection to Taṇhā, Māna, Diṭṭhi," and also below.

7. The four levels of attachment can be briefly stated as follows:

(i.) The "value/benefit" of a given *rūpa* cannot be expected from another; the perceived value is **intrinsically associated** with that *rūpa* or a mental entity based on that *rūpa* (***rūpaṁ attato samanupassati***, ..)
(ii.) some (external) *rūpa* can be substituted for those in (i) in some cases (***rūpavantaṁ vā attānaṁ***, ..),
(iii.) some *rūpa* that are in a specific category (***attani vā rūpaṁ***, ..) is good enough, and
(iv.) any *rūpa* that seems to provide happiness, i.e., even with a way one had not contemplated before (***rūpasmiṁ vā attānaṁ***, ..).

- As you can see, the emphasis on a specific *rūpa* decreases from (i) to (iv) above. "
- Note that the English translation in the link (and in most other translations) provides a very different interpretation. **Those translators mechanically/blindly use the other meaning of "*attā*" explained in** "'Atta' as "Self" – Wrong Translation in Many Suttas."

Simple Analogies to Grasp the Meanings

8. The following are simple examples to help get an idea about the four categories:

(i.) Suppose person A falls in love with B. The attachment is so strong that A says, "I would rather die if I don't get to marry B." In A's mind, B's *rūpa* is the same as future happiness. Any *vedanā, saññā, saṅkhāra*, and *viññāṇa* arising based on B cannot be separated from future happiness. This is an example of "***rūpaṁ attato samanupassati***" through "***viññāṇaṁ attato samanupassati***."

© 2026 Lal A. Pinnaduwage

(ii.) Another person, C, falls in love with D but finds out that D is married. Now, C is actively seeking someone who resembles D. This is an example of "*rūpavantaṁ vā attānaṁ*," i.e., C believes that someone who looks like D can bring happiness.

(iii.) In another case, person E believes that if a suitable partner can be found and married to such a person, it will lead to happiness. Thus, E is looking for someone but does not have a specific type of person in mind. This is "***attani vā rūpaṁ***," i.e., there could be a *rūpa* that can be of value.

(iv.) Finally, person F had not been thinking about marriage but runs into G and starts thinking, "Marrying G could bring happiness." This is "***rūpasmiṁ vā attānaṁ***" or seeing possible value in this particular *rūpa*. Here, F may adopt A's mindset in case (i) above if the attraction to G becomes strong.

- Additionally, the "WebLink: suttacentral: Pālileyya Sutta (SN 22.81)" **describes the four categories in more detail.**

No Need to Memorize Any Categories

9. Since each of the FIVE entities in *pañca upādānakkhandha* (*rūpa*, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa*) can have those FOUR categories/levels, the above is known as "twenty types of wrong views associated with *sakkāya diṭṭhi*." See "Sakkāya Diṭṭhi – Getting Rid of Deeper Wrong Views" for a detailed discussion on the twenty types.

- While analyses such as those discussed above can help explain the concept of *sakkāya diṭṭhi*, **memorizing such descriptions or categories is unnecessary.**
- **A *Sotāpanna* may not even be aware of such categories.** Different *Sotāpannās* describe their understanding of the concept of *sakkāya diṭṭhi* in various ways. Once, a *bhikkhu* went around asking other *bhikkhus* who had declared the attainment of the *Sotāpanna* stage how to describe it. Each one provided a different description of the *Sotāpanna* stage.
- That *bhikkhu* got confused and complained to the Buddha. The Buddha gave an analogy of asking someone to describe a tree that had a unique trunk (black), unique flowers (bright red, resembling pieces of red meat), and unique leaves (a specific, distinctive shape). Some people would identify the tree by its unique trunk, while others would describe it by its flowers or leaves. But they all had seen the tree! See "WebLink: suttacentral: Kiṁsukopama Sutta (SN 35. 245)."
- The critical point is to understand the "*anicca* nature" of this world, i.e., that it will not be possible to stop suffering by chasing worldly pleasures. See "Aniccaṁ Vipariṇāmi Aññathābhavi – A Critical Verse." Understanding the *anicca* nature leads to comprehending *dukkha* and *anatta* nature; see #10 of "'Atta' as "Self" – Wrong Translation in Many Suttas."
- ***Sakkāya diṭṭhi* can manifest in different ways if one does not comprehend that "ANY pleasure in this world" cannot provide a permanent relief from suffering.**

Attato Samanupassati and *Uccheda Diṭṭhi*

10. The strongest attachment for most people **is associated with one's physical body** as "***rūpaṁ attato samanupassati***." That person would also have the view that **any mental phenomenon arising from that physical body** is also "mine" and is firmly associated with "me" (***vedanāṁ, saññaṁ, saṅkhāre, viññāṇaṁ attato samanupassati.***)

- Usually, **this view represents the extreme view of *uccheda diṭṭhi*; it is not possible to separate the physical body from the idea of "me."** When the physical body dies, that is the end of "me."
- Inherent in this view is another perspective that "life" ends when the physical body dies, often referred to as a "materialistic view." They believe that mental phenomena arise in the brain, and thus, all five aggregates "end" with the death of the physical body.
- Those five wrong views (i.e., *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* are all of "***attato samanupassati***" nature) represent five out of twenty wrong views associated with *Sakkāya Diṭṭhi.*

Other Three Cases Associated with *Sassata Diṭṭhi*

© 2026 Lal A. Pinnaduwage

11. Those who believe in a "permanent soul" or "an *ātman*" (in Hinduism) realize that life does not end with the death of the physical body. They believe in a soul-type permanent entity that goes from life to life. For Christians, that endpoint is either heaven or hell, i.e., one will forever live in happiness in heaven or forever live in agony in hell. In Hinduism, the permanent state (*ātman*) is realized when born in the *Mahā Brahma* realm.

- Therefore, they do not consider the present physical body to be the same as "ultimate happiness" as those with *uccheda diṭṭhi.*
- They only believe that a "soul-type entity" is associated with the physical body, but it will survive the death of the physical body. Thus, they see a value in the physical body only to a certain level: "***rūpavantaṁ vā attānaṁ; attani vā rūpaṁ, rūpasmiṁ vā attānaṁ***."
- For them, the same is true for the mental entities (*vedanā, saññā, saṅkhāra*, and *viññāṇa).* Those are beneficial only for cultivating the path to heaven or the *Mahā Brahma* realm. That leads to fifteen types of wrong views associated with *Sakkāya Diṭṭhi.*
- In other words, they believe that the five aggregates are not the "ultimate refuge," but one cannot get there without them.

Difference Between *Sakkāya Diṭṭhi* and *Asmi Māna*

12. It is also essential to see the difference between ***sakkāya diṭṭhi*** (a wrong view that any "pleasures" or "existences" in this world can end suffering, i.e., one can find refuge somewhere in this world) and ***asmi māna*** (perception of "me.")

- Any average human (*puthujjana*) has the wrong view of *sakkāya diṭṭhi* (a *diṭṭhi vipallāsa*; distorted view). They also have the wrong perception (*saññā vipallāsa*; distorted perception) that it is fruitful to perceive (with *saññā*) some things in this world as "mine" and that is *taṇhā*. Both solidify the third category of "*asmi māna*" or the "sense of me."
- That *diṭṭhi vipallāsa* goes away at the *Sotāpanna* stage. Even though a *Sotāpanna* has **seen (with wisdom)** the dangers of sensual/worldly pleasures, the distorted perception of worldly pleasures (and, thus, *taṇhā*) remains.
- Therefore, *taṇhā* (based on *saññā vipallāsa*) is much harder to remove and completely disappears only at the *Arahant* stage. Even an *Anāgāmi* has removed only *kāma rāga* and *rūpa rāga, arūpa rāga* remain. The latter two are removed at the stage of *Arahant*.
- Finally, "*asmi māna*" or the "sense of me" is also removed at *Arahanthood*. This is unimaginable for even a *Sotāpanna*.

13. The following account from the *Tipiṭaka* of **Ven. Adhimutta (an *Arahant*)** explains *asmi māna.*

- A band of bandits captured him. In those days, some people believed in making sacrifices to the Gods.
- They were taking him to be sacrificed, but were astonished to see that the *Thero* was not afraid of being killed. Usually, their victims would be screaming and begging for their lives.
- **The following account starts with the bandits asking him why he is not scared:** "WebLink: suttacentral: Adhimuttattheragatha."
- *Thero*'s response is from marker 3.1 through 15.4. He explains to them why he is not afraid of dying **(he had broken all ten *saṁyojana*, including *asmi māna* or the "sense of me")**; in fact, he is looking forward to *Parinibbāna* to be free of even a trace of suffering.
- As stated there, in the end, some of the bandits became *bhikkhus* and eventually attained *Arahantship*.

An "Evolving Self" Exists Until the *Arahant* Stage

© 2026 Lal A. Pinnaduwage

14. The Buddha never denied the existence of a "person" if that is what is meant by a "self." It is totally fine to say "me," "my car," "my body," etc. But one must also understand the "deeper truth" that "I" will not be in this form (even the human form) for too long. Our lifecycles had taken the form of animals and hell-beings, as well as *Devās* and *Brahmās*, in the past. See "What Reincarnates? – Concept of a Lifestream."

- The Buddha explained that the concept of a "permanent self" (one that can live forever in a *Deva* or *Brahma* realm) is incorrect.
- Any "lifestream" evolves according to the same principles dictated by *Paṭicca Samuppāda*: "*avijjā paccayā saṅkhāra*" through "*jāti paccayā jarā, maraṇa, soka-parideva-dukkha-domanassupāyāsā sambhavan'ti.*" **Those are all generic terms that apply to all types of life forms. Your lifestream will evolve, dictated by those same steps as that of another person, an animal, or a *Deva*.** Understanding that, without a doubt, eliminates *sakkāya diṭṭhi.*
- However, eliminating *sakkāya diṭṭhi* is the first step. That only eliminates the **incorrect views**. But the "**perception of a me**" will be there until the *Arahant* stage. Yet, eliminating *sakkāya diṭṭhi* will liberate one from future rebirths in the *apāyās*.

15. However, even an *Arahant* (who has removed the perception of "me," "I," etc.) would still speak using words like "**I** am eating," or "**I** scraped **my** arm," etc.

- See "WebLink: suttacentral: Arahanta Sutta (SN 1.25)." An *Arahant* cannot live in this world and communicate with others without using such words.
- Of course, *Arahant* will not be reborn at the death of the physical body (*Parinibbāna*); there was no "soul/*ātman*" associated with the *Arahant*.
- Therefore, instead of getting hung up on words, one must try to understand the meanings of the Pāli words depending on the context.

Attachment Is to *Pañca Upādānakkhandhā* and Not to *Pañcakkhandhā*

16. Also, note that in #2 above, I did not state, "***pañcakkhandhā attato samanupassati,* etc.**" but "***pañcupādānakkhandhā attato samanupassati,* etc.**" above.

- Since the mind never attaches to something that is not of interest, *pañcakkhandhā* NEVER comes into play in *Paṭicca Samuppāda.* Even from the first step of making sensory contact, it is *pañc**upādāna**kkhandhā* that comes into play.
- Even for those sensory inputs that may not trigger attachment, our minds perceive them with *moha* or *avijjā* (*sañjānāti*); see "Cognition Modes – Sañjānāti, Vijānāti, Pajānāti, Abhijānāti." Thus, the mind of an average person will always reach at least the "*purāṇa kamma*" stage, where the mind attaches unconsciously: "Purāṇa and Nava Kamma – Sequence of Kamma Generation." It will get to the "*nava kamma*" ("new *kamma*") stage **only if** it is consciously attached to it.
- **Based on a sensory input (an *ārammaṇa*), *cittās* arise already contaminated (i.e., as *pañca upādānakkhandha*), and a second stage of stronger attachment may occur only if the *ārammaṇa* is strong** (as discussed in the above post).

10.1.8 Saññā Vipallāsa – Distorted Perception

October 27, 2023; revised September 21, 2025; January 16, 2026

Saññā vipallāsa means "distorted perception." Our perceptions about this world are distorted and wrong. Modern science has reached the same conclusion 2,600 years after the Buddha.

Our Bodies Are Not "Solid" – Wrong Perception (*Saññā Vipallāsa*) [Wrong Perception That the Bodies is Solid]

© 2026 Lal A. Pinnaduwage

1. We perceive worldly things as made of "solid, concrete matter." Our physical bodies appear to be "solid," and the houses and cars we value, as well as mountains, trees, etc., appear to be "solid."

- One of the startling discoveries science has made is that what we **perceive with our senses (*saññā*)** can be astonishingly deceptive. Even though our bodies seem "solid," in reality, they are mostly "empty space," as illustrated in the video above. Diamond is the hardest known substance on Earth, and diamond atoms are virtually empty, too.
- Initially, in the 1800s, scientists concluded that matter is composed of atoms. But then, in the early 1900s, they found that atoms are "mostly empty" (with a tiny nucleus in the middle with most of the mass and an "electron cloud" surrounding it. The astonishing fact is that if the nucleus is compared to a peanut, the whole atom would be the size of a stadium, as pointed out in the above video. Try to make that picture in your mind. It is mind-boggling!
- However, that was just the beginning. More progress was made with the advent of quantum physics in the 1920s. The following video is from the physicist Richard Feynman.

2. **In the middle of the 1900s, scientists found that even the nucleus is not "solid"; it is made of a variety of "fundamental particles."** They had to build enormous particle accelerators to try to understand the nature of those elementary particles.

- The astonishing conclusion was that the "ultimate particle" that keeps everything together ("Higgs boson") is not really a "particle" but more like a "packet of energy" (confirmed within the past ten years.) The following video, "The Surprising Truth About the Higgs Boson's "Discovery" at CERN," explains that.

  WebLink: youtube: The Surprising Truth About the Higgs Boson "Discovery" at CERN

- That leads to two conclusions: (i) our perceptions based on the data from the five physical senses can be misleading (i.e., they lead to distorted perceptions or *saññā vipallāsa*), and (ii) at the very fundamental level, there is nothing that can be called "solid matter;" everything is just "energy."
- The Buddha taught all that 2600 Years Ago! He called such distorted perceptions about the world (e.g., "solidity" of matter) "*saññā vipallāsa*" or "*sañjānāti*" to denote "wrong understanding based on '*saññā*.'

Science Has Embraced Several of Buddha's Worldviews

3. While quantum physics led to the above understanding of the microscopic nature, astronomical studies over the past five centuries also verified Buddha's views about the **large-scale universe.**

- Western science (as well as religions) believed in a "geo-centric world" for thousands of years until the time of Galileo. Even a few hundred years ago, most people believed our Earth was at the center of the universe: "WebLink: wikipedia.org: Geocentric model."
- However, the Buddha taught 2600 years ago that our solar system is just one of an uncountable number of such systems in the universe. The universe consists of an uncountable number of star/planetary systems (*cakkavāla*) like our solar system. See, for example, "WebLink: suttacentral: Cūḷanikā Sutta (AN 3.80)."
- Buddha's view was confirmed by science through powerful telescopes observing the sky (following Galileo's initial reports). That approach of "extending the capabilities of our crude sensory faculties" revealed that, indeed, there are an uncountable number of "star systems" (just like our Solar system) in the universe. The following is a high-resolution picture of just our Milky Way galaxy. There are countless galaxies in the universe! See "Dhamma and Science – Introduction" for details.

© 2026 Lal A. Pinnaduwage

4. Therefore, the "wrong perception" (or "*sañjānāti*" or "*saññā vipallāsa*" in Buddha's terminology) about the Earth being at the center of the universe was another wrong conclusion humans came to based on our crude sensory faculties.

- Scientific investigations using telescopes have vastly extended the capabilities of our senses, and we have been able to obtain a much clearer picture of what is truly in the skies above us. The Buddha called such "mundane logic/investigation" or "*vijānāti*." ; these terms are discussed in #7 and #8 below.
- (However, there is more to be discovered by science. The current scientific theory is that the universe came into being only about 15 billion years ago and that there was "nothing" before that. **This "Big Bang Theory" will be proven wrong, too.** The Buddha described a different scenario where only a cluster of "star systems" (*cakkavāla*) get destroyed at a time but will be re-formed over time. The universe has existed "forever," and there is no "discernible beginning" to life. See "Buddhism and Evolution – Aggañña Sutta (DN 27).")

Elusive Nature of Matter

5. The Buddha taught that our bodies, as well as anything else in this world, are made of *bhūta* that are hard to pinpoint. As scientists probed smaller and smaller particles, they noticed that it is not possible to measure a particle's speed if its location is pinned down; if they try to measure its speed, its location becomes unspecified. It is not possible to "pin down" or "specify everything" about a microscopic particle. That is called the "Heisenberg uncertainty principle." [#1: **Heisenberg's Uncertainty Principle** states that there is inherent uncertainty in the act of measuring a variable of a particle. Commonly applied to the **position** and **momentum** of a particle, the principle states that the more precisely the position is known the more uncertain

© 2026 Lal A. Pinnaduwage

the momentum is and vice versa. #2: ***Heisenberg's uncertainty principle*** states that it is impossible to measure or calculate exactly **both the position and the momentum of an object**.]

- Because of that, the Buddha used the word *bhūta* (ghost) to describe the elusive nature of matter at the microscopic scale, a "ghost" in the sense that it is "hard to pin down."
- Furthermore, such "elementary particles" arise out of "mental energy" (created in the *javana citta*). Understanding that requires a good knowledge of *Abhidhamma*.
- However, a basic explanation is in "Bhūta and Yathābhūta – What Do They Really Mean." *Yathābhūta* means the true nature of matter (or the true nature of *bhūta*,) which arises via the MIND.

6. **To summarize: Everything in this world is made of pure energy at the fundamental level.** The perception of "solidity" is an illusion, i.e., the fundamental nature of "matter" is elusive. However, it is an illusion only in the 'ultimate reality' uncovered by the Buddha. **Still, new scientific studies (as those mentioned above) are beginning to confirm the 'ultimate reality' uncovered by the Buddha.**

- This wrong perception of "solidity" (distorted *saññā* or "*saññā vipallāsa*") is one reason that we tend to place "value" on worldly things, i.e., "***rūpaṁ attato samanupassati, rūpavantaṁ vā attānaṁ; attani vā rūpaṁ, rūpasmiṁ vā attānaṁ***" or "*rūpās* are of value."
- The above verse also conveys a deeper meaning, too. For example, as we saw above, a rock or even a diamond is not really 'solid.' They are mostly empty space! Even the perception of 'space' is a 'mental construct' in the 'ultimate reality' uncovered by the Buddha. See #12 of "Saññā In Kāma, Rūpa, and Arūpa Loka."
- That distorted perception also leads to placing value (*atta/attā*) on mental entities arising when thinking about some of those *rūpās*: *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa*. See "'Attato Samanupassati" and Sotāpanna Stage."
- These are deep insights built into Buddha Dhamma. **However, just getting the basic idea is enough. There is no need to study particle physics.**

Mundane Approaches versus Buddha's Approach – Exactly Opposite

7. According to the Buddha, there are two **mundane ways** of understanding the world, i.e., those based on (i) **human perception** or "*saññā*" leading to "*sañjānāti*," and (ii) **logical mundane investigations** (*vitakka* and *vicāra*) leading to "*vijānāti*."

- The Buddha referred to the method of drawing conclusions based solely on perception, as "*sañjānāti*." This is how people have come to conclusions about the external world solely based on our crude five physical senses (based on essentially a "hunch.")
- On the other hand, scientists used investigations using scientific instruments and logical reasoning, which the Buddha called "*vijānāti*."
- Both are based **solely on materialism**, assuming we can understand the world by looking at its material properties.

8. **However, Buddha's teachings are based on an entirely different approach.** It is entirely a **mind-based approach** to discovering the truth about nature; he did not have to do any "experiments" with fancy instruments or billion-dollar particle accelerators. Furthermore, his investigations revealed that it is the mind that leads to the existence of matter (in a much "subtle form" than anyone had ever imagined until the discoveries discussed in the two videos above.)

- He taught that one cannot understand the fundamental nature of this world by either trying to perceive with our five senses or by using scientific instruments to study the composition/interactions of material entities that make up the "visible world."

© 2026 Lal A. Pinnaduwage

- **The problem is two-fold:** (i) We cannot "see" (with eyes or even scientific instruments) everything in the external world (that is why science does not realize the existence of the other 29 realms; their instruments cannot probe the "*suddhaṭṭhaka*" stage of matter), and (ii) everything in the external world arises due to collective "mind power" or "*javana* power" that can arise only in minds. One begins to understand the Buddha's worldview at the *pajānāti* stage as a *Sotāpanna*, and that understanding becomes complete (*abhijānāti* or *pajānāti*) at the *Arahant* stage.
- I briefly discussed the terms *sañjānāti, vijānāti, pajānāti,* and *abhijānāti* in "Cognition Modes – Sañjānāti, Vijānāti, Pajānāti, Abhijānāti."

Buddha Dhamma Is All About the Mind

9. The Buddha taught that there is no point in investigating external objects in the world. Such investigations can never lead to the "ultimate truth" about life. He said one must focus only on one's own mind. **All the terms in *Paṭicca Samuppāda* (the basis of Buddha Dhamma) are mental entities.**

- All the terms in *Paṭicca Samuppāda* are "mental entities," and NONE refers to anything **material and visible** in the outside world. For example, "*āyatana*" (in *salāyatana*) does not refer to physical sensory faculties (like the eyes or ears) but to the use of such sensory faculties to "collect more information" once attached. An *Arahant* does not have *āyatana* but can see or hear; they would not use their eyes and ears to enjoy sensory pleasures.
- Several terms in *Paṭicca Samuppāda* (*viññāṇa*, *nāmarūpa*, *bhava*, and *jāti*) have "energy" associated with them. Only "*jāti*" has anything that can be called "subtle matter" (invisible) because it leads to the arising of a subtle "*manomaya kāya*" with a few *suddhaṭṭhaka* (the "elementary particle" in Buddha Dhamma.) People usually think about the birth of a baby as "*jāti*," but that is not correct. In *Paṭicca Samuppāda*, the "*bhava paccayā jāti*" step leads to the "birth of a human *gandhabba*." Then, that human *gandhabba* can be reborn many times with a physical human body during its existence for many thousands of years; see "Bhava and Jāti – States of Existence and Births Therein."
- **That is why ALL the terms in *Paṭicca samuppāda* cease to arise once the *Arahant* stage of *Nibbāna* is reached.** The *Paṭicca Samuppāda* process does not operate for a living *Arahant*.

Summary

10. We have discussed the true meaning of *atta*/*attā*/*anatta* (concerning *anicca* and *dukkha*) in the subsection "Does "Anatta" Refer to a "Self"?"

- Those posts are based on a series of earlier posts (as outlined in the above link) on the "hidden pure mind" or "*pabhassara citta*." One needs to make sure to understand those fundamental concepts.
- This discussion continues in "Sensory Experience – A Deeper Analysis."

10.1.9 Sensory Experience – A Deeper Analysis

November 3, 2023

The Buddha understood the true nature of this world by meticulously analyzing the sensory experience. The following posts provide a deeper analysis of the mental processes occurring within a short time of receiving a sensory input.

Saññā – All Our Thoughts Arise With "Distorted Saññā"

Upaya and Upādāna – Two Stages of Attachment

© 2026 Lal A. Pinnaduwage

10.1.9.1 Saññā – All Our Thoughts Arise With "Distorted Saññā"

November 4, 2023

Saññā is a critical mental entity in Buddha Dhamma. All our thoughts arise with "distorted *saññā,*" and that helps hide the suffering-free "pure mind" or *pabhassara citta*.

Basic Definition of *Saññā* – To Identify/Recognize

1. The basic idea of "*saññā*" is in the following verse from the "WebLink: suttacentral: Mahāvedalla Sutta (MN 43)": "'*Sañjānāti sañjānātī'ti kho, āvuso, tasmā saññāti vuccati. Kiñca sañjānāti? Nīlakampi sañjānāti, pītakampi sañjānāti, lohitakampi sañjānāti, odātampi sañjānāti*," which is translated there as "It's called perception because it perceives. And what does it perceive? It perceives blue, yellow, red, and white."

- That is the basic definition of "*saññā,*" and the translation there is correct in that context.
- That definition also includes not only color but also familiarity with an object to recognize the meanings of words such as a fire, house, or a person associated with a name like John.
- These basic ideas are discussed in "Saññā – What It Really Means." It is a good idea to read this post.
- *Arahants* have this type of "pure, uncontaminated *saññā*" when they are in *Arahant-phala samādhi*.

Deeper Meanings Appearing in Most *Suttās*

2. However, *saññā* of a living being below the *Arahant* stage may arise with **"defiled *saññā*" due to "*saññā vipallāsa*"** rooted in *anusaya/saṁyojana* (or ingrained defilements.) **Thus, many *cittās* (loosely translated as thoughts) arise with "defiled *saññā*."**

- Another way to say is: For anyone below the *Arahant* stage, *ārammaṇa* (sensory inputs) are comprehended with "*sañjānāti*" ("recognize with defiled *saññā*") and corresponding *vijānāti* ("defiled consciousness".)
- However, as one proceeds on the Noble path with *magga phala*, more and more *ārammaṇa* are grasped with "*pajānāti* or *abhijānāti*" (with refined awareness) instead of "*sañjānāti* and *vijānāti*." That is because some of the *anusaya/saṁyojana* are either weakened or eliminated with *magga phala*.
- Now, before we discuss such "defilements," we need to address another critical aspect: the arising of a **"distorted *saññā*"** due to being born in the *kāma loka*. This arises also in *Arahants*; **it is not defiled but only distorted**.

Distorted *Saññā*

3. Furthermore, a **"distorted *saññā*"** arises automatically in all those who are born in *kāma loka*; thus, it arises in *Arahants* experiencing sensory inputs via the five sense faculties (i.e., unless they are in a *samāpatti*.)

- All of us are born with an "*uppatti bhavaṅga*." That is the "mindset" grasped at the beginning of this human *bhava*. **That never changes, even after *Arahanthood*.**
- If the mind is dormant (i.e., not actively pursuing an *ārammaṇa*, as while sleeping), it falls back to that "*uppatti bhavaṅga*." When an *ārammaṇa* comes to mind, a series of *cittās* (*citta vīthi*) arises based on that "*uppatti bhavaṅga*."
- That is the reason that the mind sees an *ārammaṇa* with a **"distorted *saññā*"** automatically.
- I will discuss this further in upcoming posts, but it is good to review the post "Bhava and Bhavaṅga – Simply Explained!"

© 2026 Lal A. Pinnaduwage

Defiled *Saññā*

4. The problem is that as soon as we see, hear, taste, smell, touch, or think about something (upon getting a sensory input or an *ārammaṇa*), we may attach to it — instantaneously — if the mind recognizes it as "something of interest."

- **That attachment is based on the "distorted *saññā*" that we discussed in #3 above.** Even though *Arahants* also generate that "distorted *saññā*" their minds will not be attached to it since they have removed all *anusaya*/*saṁyojana* from their minds. Depending on the particular sensory input, for anyone below the *Arahant* stage, that **"distorted *saññā*" may** automatically lead to **"defiled *saññā*."**
- The verses we discussed recently in the posts "Etaṁ Mama, Esohamasmi, Eso Me Attā'ti – Connection to Taṇhā, Māna, Diṭṭhi" and ""Attato Samanupassati" – To View Something to be of Value" discuss why the mind attaches to worldly things instantaneously. The main reason is the ingrained **wrong views** and **"distorted *saññā*"** that those things can be beneficial to us. Such view/*saññā* leads to giving priority to keeping engaged in the rebirth process, hoping to overcome suffering by seeking "things that provide enjoyment." **That is the origin of "*rāga*."**

Wrong Views and Defiled *Saññā* Lead to *Rāga*

5. Because of that idea ingrained in our minds (that worldly things can bring us happiness and overcome suffering), our minds generate "*chandarāga*" ("*chanda*" means "liking") or simply "*rāga,*" which can be of three main types: *kāma rāga*, *rūpa rāga*, *arūpa rāga*. Other words can also be used to describe such attachments. See "Lobha, Rāga and Kāmacchanda, Kāmarāga."

- As pointed out in #3 of that post, the correct "*pada nirutti*" (etymology) of "*rāga*" comes from "*rā*" + "*agga*" where "*rā*" means to "travel (in the *saṁsāric* journey)" and "*agga*" is to "give priority." Thus, "*rāga*" means to "willingly engage (in the *saṁsāric* journey.) That is why the Buddha divided the world into *kāma loka*, *rūpa loka*, and *arūpa loka*, where *kāma rāga*, *rūpa rāga*, and *arūpa rāga* dominate respectively.
- All three types of *rāga* can lead to "Saññā Vipallāsa – Distorted Perception."

6. "WebLink: suttacentral: Saññā Sutta (SN 27.6)" states, "*Yo, bhikkhave,* ***rūpasaññāya chandarāgo, cittasseso upakkileso***" or "**desire and greed** for **perception of *rūpa*** is a **defilement that arises in a *citta***."

- Such ***chandarāga*** can also arise for sounds, smells, tastes, touch (*phoṭṭhabba*), or *dhammā* (that comes directly to mind.)
- Based on such attachments (via ***chandarāga***), "defiled *cetanā*" (*sañcetanā*) arises in the mind as stated in the "WebLink: suttacentral: Sañcetanā Sutta (SN 26.7)." The English translation there translates "*Yo kho, bhikkhave,* ***rūpasañcetanāya*** *uppādo*" as "Mendicants, the arising of **intentions regarding sights**." This is another example of mechanically inserting a mundane meaning everywhere.
- That short verse should be translated as "*bhikkhus*, the arising of **defiled intentions regarding sights**."
- There, ***rūpasañcetanā*** (***rūpa saŋ cetanā***) does not merely indicate ***cetanā*** but "***saŋ cetanā***" or "**defiled *cetanā***." As we know, "***saŋ***" indicates defilements; see "What is "Saŋ"? Meaning of Saṇsāra (or Saṁsāra)."

"*Saŋ*" Maybe Spelled Differently [See "What is "Saŋ"? Meaning of Saṇsāra (or Saṁsāra)"]

7. It is to be noted that the Pāli word ***saŋ*** may be written with the Latin alphabet as "***saṇ***" or "***saṁ***" in various word combinations.

© 2026 Lal A. Pinnaduwage

- In the "WebLink: suttacentral: Bhikkhaka Sutta (SN 7.20)," the phrase "***Saṅkhāya** loke carati*" means "(a *bhikkhu*) lives in the world engaged in wearing out defilements." Here, "**saŋ khāya**" means to "wear our defilements." The English translation in the link **incorrectly** translates that verse as "and wanders having appraised the world." Also, it is disrespectful to translate "*bhikkhu*" as a "mendicant" because "mendicant" usually means "a beggar." **The actual meaning is explained in this sutta!** It is true that "*bhikkhati*" can mean "to beg," but the *sutta* explains why a *bhikkhu* should not be called a beggar even though he gets food from others. These are examples of instances where inappropriate meaning could lead to confusion.
- "*Khaya*" may mean "to end or to wear out," as can be seen in the last part of the opening verse "..*āsavānaṁ **khayaṁ** pāpenti*" in the "WebLink: suttacentral: Dutiyakāla Sutta (AN 4.147)." That verse is **correctly** translated there as "..they **gradually lead to the ending** of defilements.; there, "*pāpenti*" means "lead to."
- Therefore, "**saŋ khāya**" means to "wear our defilements."

Ārammaṇa – Start of a Sensory Event

8. To examine in detail the critical role of *saññā* in a sensory event, we must start at the beginning of the process. It all starts when the mind attaches to a sensory input (*ārammaṇa*) via one of the six sense doors.

- Starting with this post, I will elaborate on some critical issues related to *saññā* in the new subsection "Does "Anatta" Refer to a "Self"?" within the main section "Is There a "Self"?" I have also re-arranged the subsections in "Is There a "Self"?" as follows.
- Two subsections precede the subsection "Does "Anatta" Refer to a "Self"?"
- First is "Does "Anatta" Refer to a "Self"?." It provides the background on the "hidden pure mind" (*pabhassara citta*).
- The second new subsection is "Sensory Experience – Basis of Buddha's Worldview." It is a series of old posts on the events occurring in the mind upon receiving a sensory input (*ārammaṇa*.) This subsection was taken from another section ("Worldview of the Buddha" in the "Origin of Life" section) to provide the necessary background for a new subsection.

Response to an *Ārammaṇa* – Arahant, *Sekha*, and a *Puthujjana*

9. There is a HUGE difference between what happens in the mind of an *Arahant* versus an average human (*puthujjana*) when a sensory input (*ārammaṇa*) comes to mind. We will discuss this in detail in upcoming posts, but the following *sutta* provides the basic idea.

- The "WebLink: suttacentral: Upavāṇasanditṭhika Sutta (SN 35.70)" states, "*Idha pana, upavāṇa, bhikkhu cakkhunā rūpaṁ disvā **rūpappaṭisaṁvedī** ca hoti **rūparāgappaṭisaṁvedī** ca*" OR "Upavāna, take the case when a *bhikkhu* sees a sight with their eyes and also generates the **desire** for the sight." [As one develops good habits and gets rid of bad ones, one becomes more and more "sensitized" and catch even minor mistakes. This is what is meant by "*paṭisaṁvedī*" ("*paṭī*" + "*saŋ*" "*vedī*"), i.e., becoming aware of "getting attached to a wrong mindset". See "Kāyānupassanā – The Section on Habits (Sampajānapabba)". ***Paṭisaṁvedī*** means "becoming acutely aware/sensitive" of one's mistakes. See "How Habits are Formed and Broken – A Scientific View"]
- Here, the Buddha refers to the case of a *bhikkhu* **(who is above the *Sotāpanna* stage but not an *Arahant*, i.e., a *Sekha*)** and is attached to a specific sensory input. That *bhikkhu* knows that he saw the sight, but he also KNOWS that he has attached to it (generated *rāga*.) The subsequent verse states: "*Santañca ajjhattaṁ rūpesu rāgaṁ 'atthi me ajjhattaṁ rūpesu rāgo'ti pajānāti*" OR "They realize that desire for that sight has arisen in them ("'*atthi me **ajjhattaṁ** rūpesu rāgo'ti pajānāti*"). Here, "*atthi me **ajjhattaṁ***" means "has (arisen) in me."

© 2026 Lal A. Pinnaduwage

10. A *puthujjana* will not even know that there is a difference; they will only experience ***rūparāgappaṭisaṁvedī***, i.e., **when they see the sight, they are already attached (if it is something of interest.)**

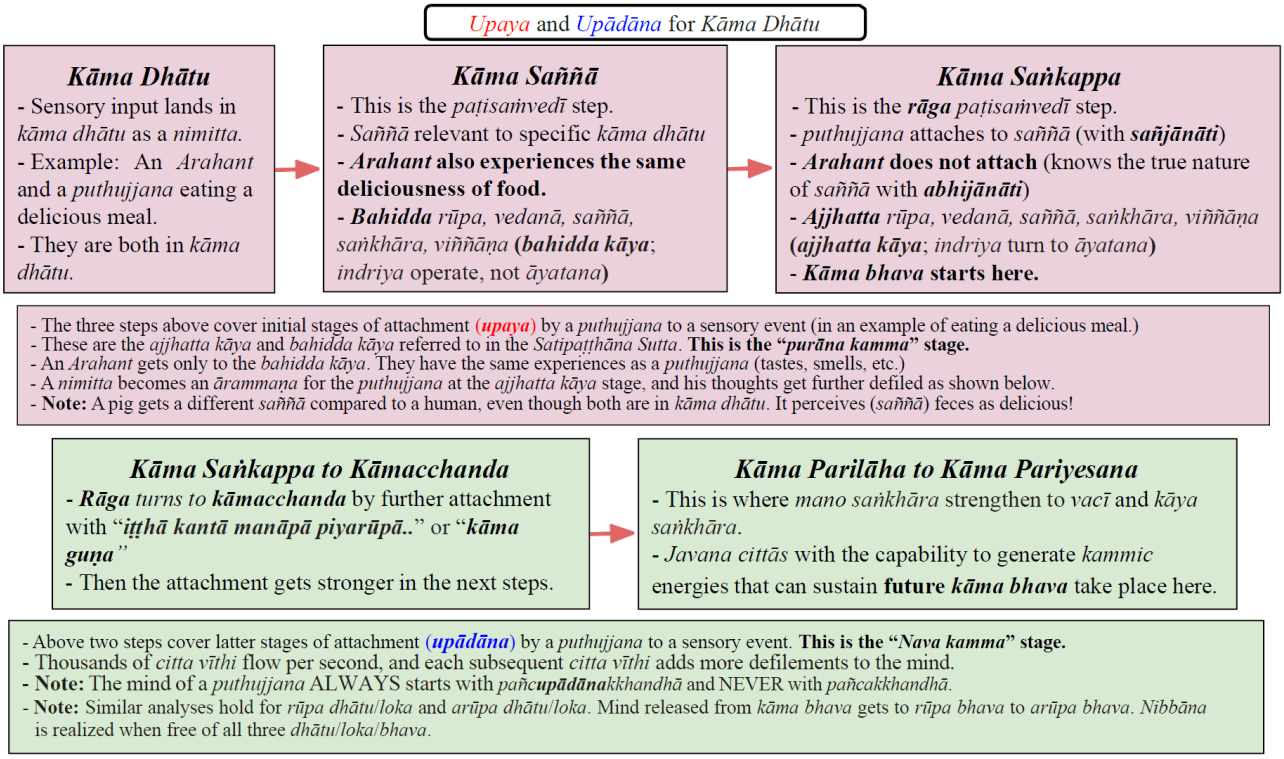
- In the verse "***rūpappaṭisaṁvedī"*** means "***rūpa paṭisaṁvedī***" and "***rūparāgappaṭisaṁvedī***" means "***rūpa rāga paṭisaṁvedī***." Just seeing (without attachment) happens with "***rūpa paṭisaṁvedī***," and the attachment happens with "***rūpa rāga paṭisaṁvedī***."
- Thus, an *Arahant* will only go through the "***rūpa paṭisaṁvedī***" but NOT the "***rūpa rāga paṭisaṁvedī***" step.
- Depending on what types of *anusaya*/*saṁyojana* left in a *Sekha* (a Noble Person below the *Arahant* stage,) they may go through the "***rūpa rāga paṭisaṁvedī***" step, but they would know afterward that they did. By being mindful, they try to stop it from happening again.

Rāga Paṭisaṁvedī – Happens Automatically

11. The critical point here is that when the "second step" of ***rāga paṭisaṁvedī*** takes place, it happens within a split-second after the first step of ***paṭisaṁvedī***. **That second step is dictated by one's "defiled *gati*" evident at that moment (NOT *anusaya* or *saṁyojana*).**

- Let us try to understand that with the following example. Take the case of a *puthujjana* (X) who is in a "calm state of mind." Suppose X accidentally does something that aggravates another person Y, and Y yells at X. Hearing the angry words from Y does not cause anger in X since he was in a calm state of mind; he tries to explain that it was an accident. However, Y (who was in a bad mood anyway) keeps verbally abusing X and then pushes X.
- During that time, X's mindset changed. His "state of mind" gradually gets worse, and at some point, he gets to the "***rāga paṭisaṁvedī***" step. In this particular case, it is not "***rāga***" but "***dosa***" or "***paṭigha***."
- However, if X were an *Arahant*, his mindset would not change no matter how much Y yells, pushes, or even hits him.
- If it is a *Sekha,* the response would be somewhere between the response of X and the *Arahant*.

12. I have discussed this sequence of events in the subsection "Sensory Experience – Basis of Buddha's Worldview" (especially the posts numbers two to four there) but not discussed the initial steps ("*Cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññāṇaṁ,* ***tiṇṇaṁ saṅgati phasso***.") in finer detail.



- Essentially, "*Cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññāṇaṁ*" is the "*rūpa paṭisaṁvedī*" step and "***tiṇṇaṁ saṅgati phasso***" is the "***rūpa rāga paṭisaṁvedī***" step. See "Difference between Phassa and Samphassa."
- To fully understand how "*saññā vipallāsa*" arises, we need to examine even the first "***rūpa paṭisaṁvedī***" step in detail in the upcoming few posts. We have never discussed that before.
- It will be good to review the sections and posts mentioned above to keep up with the upcoming posts. Please don't hesitate to ask questions in the forum since it is critically important to grasp that background material. No question is a wrong question!

10.1.9.2 Upaya and Upādāna – Two Stages of Attachment

November 11, 2023; revised February 26, 2024 (#5); September 26,2024 (#2, #3, #5, #12)

Upaya is the first stage of attachment of a mind to a sensory input. If the initial attachment is strong, it will keep attaching with the subsequent "*upādāna*" step. A *nimitta* (sensory input) becomes an *ārammaṇa* (attached sensory input) when getting to the *upādāna* step. [See "Upaya Sutta (SN22.53)". ***upaya*** : [m.] attachment. ***nimitta*** : [nt.] sign; omen; portent; cause. ***ārammaṇa*** : [nt.] a sense-object.]

© 2026 Lal A. Pinnaduwage

Upaya and Upādāna

Print/Download: "WebLink: PDF Download: Upaya and Upādāna."

Difference Between *Kāma Dhātu* and *Kāma Bhava*

1. The Buddha described this difference in the "WebLink: suttacentral: Sanidāna Sutta (SN 14.12)": "*Kāmadhātuṁ, bhikkhave, paṭicca uppajjati kāmasaññā, kāmasaññaṁ paṭicca uppajjati kāmasaṅkappo, kāmasaṅkappaṁ paṭicca uppajjati kāmacchando, kāmacchandaṁ paṭicca uppajjati kāmapariḷāho, kāmapariḷāhaṁ paṭicca uppajjati kāmapariyesanā.*" OR "**Attachment to *kāma dhātu*** leads to *kāma saññā*, attachment to *kāma saññā* leads to *kāma saṅkappa,* attachment to *kāma saṅkappa* leads to *kāmacchanda*..and so on to *kāma pariyesanā.*"

- That verse explains why *Arahants* and *Anāgāmis* also have *kāma saññā.* That step does not involve "*rāga*, *dosa*, *moha*," or "*saŋ*" (alternatively written as "*sañ*" or "*saṅ*"). Here, "*kāma*" does not refer to "*assāda*" (or "placing a value on sensual pleasures") but only to be associated with "*kāma loka*." This is discussed below.
- But *Arahants'* minds don't go through the rest of the steps in that verse: *kāma saṅkappa*, *kāmacchanda*, *kāmapariḷāha*, *kāmapariyesanā. Kammic* energies are generated in these steps.
- However, the mind of anyone below the *Arahant*/*Anāgāmi* stages may attach and automatically generate *kāma saṅkappa.* **That is the "*upaya*" step.**

2. If that *ārammaṇa* is strong enough, the mind may keep attaching to it repeatedly (remember that thousands of *citta vīthi* run through a mind in a second), leading to *kāmacchanda*, *kāmapariḷāha*, *kāmapariyesanā.* **That is the "*upādāna*" step.**

- Strong attachment starts at the *kāmacchanda* stage; then, the mind becomes agitated and wants to pursue the *ārammaṇa* urgently (*kāma pariḷāha*); then it starts thinking, speaking, and doing things seeking maximum pleasure (or avoiding any hindrance) at the *kāma pariyesanā* stage (here, *pariyesanā* means "to investigate/actively engage.")
- **The above chart summarizes those steps and points to key concepts (like *ajjhatta kāya*/*bahiddha kāya*, *purāṇa kamma*/*nava kamma*, etc.** that we will discuss in upcoming posts. **Please print this chart and have it ready when reading any post in this section.**

© 2026 Lal A. Pinnaduwage

- **Critical Point (added on September 26, 2024):** All sensory inputs trigger a mind to go through the **"*upaya* stage" (boxes in red in the above chart), which is the same as the "*purāṇa kamma* stage."** However, unless a mind attaches further at the *kāmacchanda* step, it will NOT get to the **"*upādāna* stage" (boxes in blue in the above chart), which is the same as the "*nava kamma* stage" and generate potent *kamma* via *vacī* and *kāya saṅkhāra*.** Also, see "Purāṇa and Nava Kamma – Sequence of Kamma Generation."

3. "**Attachment to *kāma dhātu***" in the above verse does not imply "attachment with a defiled mind" but rather a consequence of still living with a "human body," i.e., "living in the human realm." *Dhātu* is usually an entity's "barebone" initial state. [***dhātu***: [f.] an element; **natural condition**; a relic; root of a word; humour of the body; faculty of senses.]

- That can be easily explained with the concept of *bhavaṅga*. A living *Arahant* is still with the "*uppatti bhavaṅga*" (or the "natural state of mind") that they were born with human birth. When exposed to a sensory input (*ārammaṇa*), a *citta vīthi* flows starting with that "*uppatti bhavaṅga*," and the initial *saññā* arises according to that "*uppatti bhavaṅga*." See "Bhava and Bhavaṅga – Simply Explained!"
- Those unfamiliar with the concept of *bhavaṅga* do not need to worry. Just keep this fact in mind that while *Arahants* are in ***kāma dhātu* (with "*kāma saññā*")**, they are NOT in ***kāma bhava***. They are free of all three *bhava* (*kāma*, *rūpa*, and *arūpa*.)
- It is a good idea to examine the sequence of events in mind upon receiving sensory input. A sensory input "before attachment" is a *nimitta*.

An *Arahant* Is in *Kāma Dhātu* but Not *Kāma Bhava*

4. An *Arahant* has been released from all three *bhava*: *kāma bhava* (or *kāma loka* with 11 realms), *rūpa bhava* (or *rūpa loka* with 16 *rūpāvacara Brahma* realms), and *arūpa bhava* (or *arūpa loka* with the 4 *arūpāvacara Brahma* realms.)

- However, an *Arahant* was born into the *kāma bhava* (human realm); thus, until the death of the physical body, he has to live in "*kāma dhātu*." **That means living in the *kāma loka* (human realm) without generating "*saŋ*" (*rāga*, *dosa*, *moha*).**
- When a sensory input comes in for any living being, the mind starts in one of the three *bhava*/*lokās*. A human's or an animal's mind starts at the corresponding *uppatti bhavaṅga* state (in the *kāma dhātu*) in which they were born. A *rūpāvacara Brahma*'s mind will start at corresponding *uppatti bhavaṅga* (in *rūpa bhava*), etc.

Kāma Dhātu to *Kāma Bhava* Transition Requires a *Kamma* (*Saṅkappa*)

5. Generating "*kāma saññā*" at this initial "*kāma dhātu* stage" does not mean one is already in the "*kāma bhava*." Generating "*kāma saññā*" happens just before *kāma bhava* while in the "*kāma dhātu*" stage. **An *Arahant*'s mind does not go beyond the "*kāma dhātu*" stage; even though it experiences "*kāma saññā*" it does attach to it and generate *kāma saṅkappa*. A *kamma* (with defiled intention or *sañcetanā*) must happen (i.e., must generate *kāma saṅkappa*)** to get to the *kāma bhava*, as the Buddha explained in the "*Paṭhamabhava Sutta* (AN 3.76)."

- The "WebLink: suttacentral: Paṭhamabhava Sutta (AN 3.76)" states "*Kāmadhātuvepakkañca, ānanda, kammaṁ nābhavissa, api nu kho kāmabhavo paññāyethā"ti?*" OR "**If no *kamma* took place** (*kammaṁ nābhavissa*), **would the transition from *kāma dhātu* to *kāma bhava* come about**?" The answer was "no."
- That *kamma* happens in the "*kāmasaññaṁ paṭicca uppajjati kāmasaṅkappo*" step in #1 above. As we know, *kamma* is done with (*abhi*)*saṅkhāra* and "*saṅkappa*" means "*citta saṅkhāra*."
- As the verse in #1 shows, "*kāma saṅkappa*" arises (*kāma saññaṁ paṭicca uppajjati kāma saṅkappo*) in the second step. Let us carefully go through the steps involved.

© 2026 Lal A. Pinnaduwage

Kāma Dhātu to *Kāma Bhava* = *Nimitta* to *Ārammaṇa*

6. A *nimitta* (sensory input) COULD trigger *rāga*, *dosa*, or *moha* in the mind according to the types of *anusaya/saṁyojana* associated with that mind. If that *nimitta* is grasped/embraced, it becomes "*nimittaggāhī hoti*" and is an *ārammaṇa*.

- An *Arahant*'s mind will **not** latch onto a *nimitta* ("***na*** *nimittaggāhī hoti*.") Anyone below the *Arahant* stage may or may not grasp a *nimitta*, depending on the *nimitta* and one's remaining *anusaya/saṁyojana*.
- The key to stop "grabbing hold of defiled *nimitta*" is to gradually ease up on one's tendency to attach to sensory inputs. That is cultivating moral discipline or "*indriya saṁvara*." See, "WebLink: suttacentral: Saṁvara Sutta (AN 4.14)."

7. When a *nimitta* (sensory input) comes in, the mind breaks loses from the *uppatti bhavaṅga* (or the "temporary *bhavaṅga*") and instantaneously attaches to the *nimitta* if at least one *saṁyojana* makes it possible.

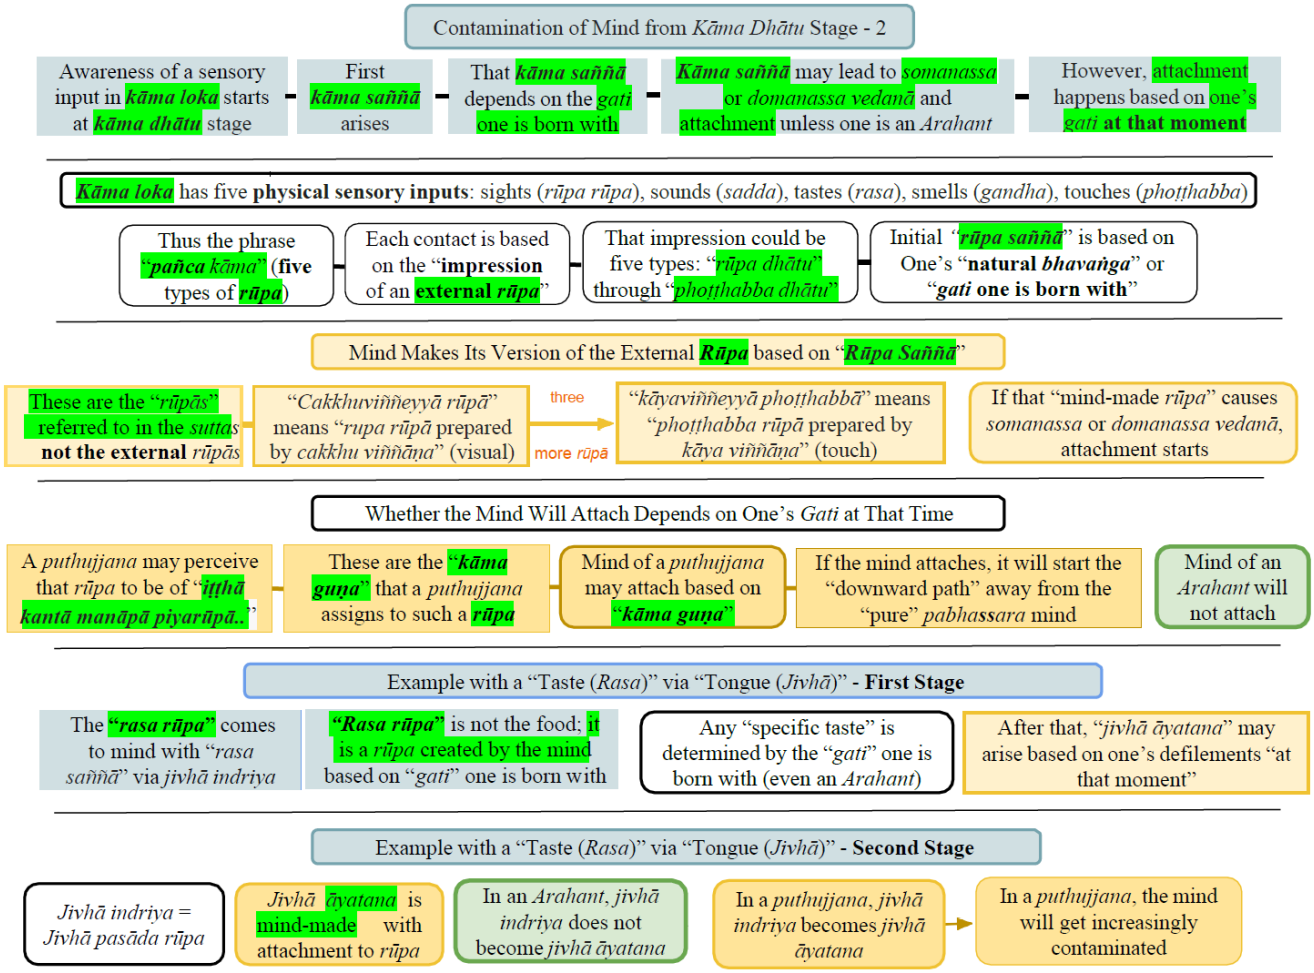
- Since *Arahant's* mind is devoid of any *saṁyojana*, it will not grasp ANY *nimitta*.
- We can get a good indication of possible attachment by looking at the type of *vedanā* generated by the *nimitta*.

Only Bodily *Vedanā* Are "Real" – Others Are "Mind-Made"

8. As discussed in #6 of the post, "Contamination of a Human Mind – Detailed Analysis," only bodily feelings (***sārīrika vedanā***) are real *vedanā* felt by the physical body. Those are the *sukha* and *dukkha vedanā* that even the Buddha experienced.

- **The other sense doors cannot cause bodily *sukha* and *dukkha vedanā.*** They come in as "*adukkhamasukkha* (neither *sukha* nor *dukkha*)" *vedanā*.
- **The above facts are pretty clear in *Abhidhamma*; all sense doors other than the physical body (i.e., eyes, ears, nose, tongue, mind) initially generate *adukkhamasukha vedanā* (Ref. 1).**
- **A *nimitta* coming through the other sense doors can generate various types of *saññā* depending on the realm, and those give rise to *somanassa* (mind-made pleasant) and *domanassa* (mind-made unpleasant) *vedanā*.**
- For example, a human will experience a horrible taste and a foul smell of rotting meat. For pigs, it is the other way around! **Both taste and smell are generated purely with *saññā*.** However, both humans and pigs experience the same *dukkha vedanā* upon being injured. **Only bodily contact leads to real *dukkha* and *sukha vedanā*.**
- The minds of different beings in different realms in the *kāma loka* are naturally built to generate various types of "*saññā*" according to the "*gati*" corresponding to that realm. Thus, the *saññā* of a pig and that of a human for rotting meat or feces is exactly the opposite. A pig would generate *somanassa vedanā,* and a human would generate *domanassa vedanā*. An *Arahant* will have the same unpleasant *saññā* for rotting meat (as an average human) but will not generate *domanassa vedanā*. Furthermore, an *Arahant* will experience the physical *dukkha vedanā* from an injury but will not generate *domanassa vedanā* because of it (unlike an average human.)

Nimitta Turning to an *Ārammaṇa*



9. **Based on ANY sensory input and the *uppatti bhavaṅga*, a mind will start at a particular DEFILED STATE (with *mano saṅkhāra*) unless one is an *Arahant*. Even if an average human may not strongly attach to a sense input, "distorted *saññā*" is automatically generated; the reason is not realizing the *anicca* nature, but we will discuss that later.**

© 2026 Lal A. Pinnaduwage

- Therefore, any mind (other than that of an *Arahant*) will be somewhat contaminated, even from the beginning, due to wrong views and defiled *saññā* associated with that mind. Thus, the "suffering-free pure mind" (*pabhassara citta*) ALWAYS remains hidden. I had discussed this in a separate section earlier and have extracted relevant posts to "Recovering the Suffering-Free Pure Mind" under the main section "Is There a "Self"?"
- In other words, any attachment is to ***pañcupādānakkhandha*** and NEVER to ***pañcakkhandha.***
- The sequence of events after a sensory input becomes an *ārammaṇa* has been discussed in "Sensory Experience – Basis of Buddha's Worldview " **(Extracted from "Origin of Life")**
- In the current new subsection, "Sensory Experience – A Deeper Analysis" we discuss how a *nimitta* becomes an *ārammaṇa* (It is the same as the "*kāma dhātu*" to "*kāma bhava*" transition.)
- It is a good idea to follow the flow in the re-arranged main section, "Is There a "Self"?"

10. I discussed some of the concepts in this post in the subsection "Recovering the Suffering-Free Pure Mind." In particular, see "Contamination of a Human Mind – Detailed Analysis."

- I have revised the main chart in that post slightly to follow the discussion above.

Contamination of Mind from Kāma Dhātu Stage - 2

Download/Print: "WebLink: PDF Download: Contamination of Mind from Kāma Dhātu Stage – 2."

Upaya Means "Birth" in *Kāma*, *Rūpa*, or *Arūpa Bhava*

11. The 31 realms in this world are divided into three "*bhava*" or existences: *kāma bhava*, *rūpa bhava*, and *arūpa bhava.*

© 2026 Lal A. Pinnaduwage

- The mind of anyone born in the *kāma bhava* is generally "triggered" by sensory input in *kāma dhātu.* Thus, even an *Arahant*'s mind starts at the *kāma dhātu* stage (which is free of defilements.) Only after attaching to a sensory input with "defiled *saññā*" does a mind reach the "*kāma bhava*" stage.
- In another example, a *rūpāvacara Brahma*'s mind starts at the "*rūpa dhātu*" stage. Only after getting attached to "defiled *rūpa saññā*" does it get to the "*rūpa bhava.*"
- Similarly, *arūpāvacara Brahma*'s mind starts at the "*arūpa dhātu*" stage. Only after getting attached to "defiled *arūpa saññā*" does it get to the "*arūpa bhava.*"
- That is clearly stated in the "WebLink: suttacentral: Paṭhamabhava Sutta (AN 3.76)."

12. Furthermore, within each *bhava*, one will get into one's unique "*bhava*" according to the "*gati*" (or "*uppatti bhavaṅga*") one is born with.

- For example, if we consider a human and a pig, both are in *kāma bhava*. However, they have very different *gati* (or "*uppatti bhavaṅga.*")
- Therefore, upon seeing a pile of feces, a pig's mind automatically gets a "likable *saññā,*" and a "*somanassa* (mind-made joyful) *vedanā*" arises.
- An *Arahant* and a *puthujjana* (average human) **were** born in the "human *bhava.*" Therefore, upon seeing the same pile of feces, "unpleasant *saññā*" arises in both. However, a "*domanassa* (mind-made distressful) *vedanā*" arises ONLY in the average human, whose mind automatically dislikes the pile of feces. Even though the *Arahant* was born in the human *bhava*, he/she does not belong to the "human *bhava*" or any "*bhava.*" Thus, no "attachment with *somanassa* or *domanassa*" happens to the *Arahant*.
- **In other words, while *Arahant*'s mind reaches the "*kāma dhātu*" stage, it will never reach "*kāma bhava.*"**
- I repeated that to make sure I got the point across. Understanding these concepts is critical if one wants to fully understand the *Satipaṭṭhāna Sutta* and also have a deeper understanding of *saññā vipallāsa* and *anicca* nature.

10.2 Sensory Experience - Basis of Buddha's Worldview

November 3, 2023

The Buddha understood the true nature of this world by meticulously analyzing the sensory experience. The following posts provide an overview of his analysis of a sensory experience.

Buddhist Worldview – Introduction
Contact Between Āyatana Leads to Vipāka Viññāṇa
How Do Sense Faculties Become Internal Āyatana?
Indriya Make Phassa and Āyatana Make Samphassa
Citta – Basis of Our Experience and Actions
Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event
Kāma Guṇa – Origin of Attachment (Taṇhā)
Vision Is a Series of "Snapshots" – Movie Analogy
Do I Have "A Mind" That Is Fixed and "Mine"?
Chachakka Sutta – Six Types of Vipāka Viññāṇa
Sakkāya Diṭṭhi in Terms of Attā or "Self" or "Ātma"
An Apparent "Self" Is Involved in Kamma Generation

10.2.1 Citta – Basis of Our Experience and Actions

September 22, 2019; revised November 14, 2019; November 30, 2022; July 7, 2024

What we conventionally call a "thought" is the cumulative effect of billions of *citta*. A *citta* is the fundamental unit of cognition in Buddhism.

Introduction

1. We have been discussing the first few verses of the "WebLink: suttacentral: Chachakka Sutta (MN 148)" in the series on, "Buddhist Worldview – Introduction." It is a good idea to take a break and look at what we have learned from a different point of view.

- The Buddha called himself a "*vibhajjavādi*." That means he explained things in great detail by diving into and subdividing a given entity or concept to examine it at more fundamental levels.
- That is very much like what the scientists are doing today. They first explained the matter in terms of molecules and then atoms. Later, they found that an atom has a nucleus and electrons in orbitals around it. Then they probed the nucleus and discovered that more fundamental particles (with names like gluons and quarks) make up the nucleus.
- By probing deeper, physicists also came up with Quantum Mechanics. Matter and energy are "quantized" on a small scale. That means they come in "packets" or "quantā" (the singular is "quantum.")
- More than 2500 years ago, the Buddha taught that matter and energy are quantized. The smallest "quantum" in Buddha Dhamma is a *suddhaṭṭhaka*. But that is not relevant to the present discussion.

Sensory Experience is Quantized – It comes in "Packets"

2. I am not going to discuss Quantum mechanics here. But I want to look at the "Chachakka Sutta (MN 148)" from a different point of view. That will break the tradition of providing boring translations of *suttā*, and I hope will also provide better insights into the material in the *sutta*. This discussion would be beneficial before we move to the next section of the *sutta*.

© 2026 Lal A. Pinnaduwage

- As you will see below, scientists are just beginning to take mental phenomena seriously. They have made a bit of progress. But they are not even close to having a detailed analysis of mental phenomena that the Buddha did over 2500 years ago.
- Mental energy is also quantized, even though we may feel like thoughts are continuous. The smallest unit in Buddha Dhamma is a "*citta*." A *citta* lasts less than a billionth of a second. **We cannot experience a single *citta*.** Even though it is conventionally translated as "a thought," that is incorrect.
- What we usually think of as a "thought" consists of billions of *cittā* (The plural of *citta* is *cittā,* but sometimes I tend to write that as *cittā* just because that is easier for most people.) By the way, *citta* is pronounced "chiththa."

What is a Thought?

3. Let us first see the progress that science has made over the past 50 years. Science is still at a very early stage regarding the mind. But they have made some progress recently, and we will show them to be entirely consistent with Buddha Dhamma. Those findings help explain more profound concepts in Buddha Dhamma.

- Only fifty years ago, scientists thought computers could "become conscious" by increasing processing speeds. Now some computers are much faster, but they do not have consciousness. We will discuss later why computers will never become conscious.
- The following is a presentation entitled, "What is a Thought?" by Henning Beck, a scientist studying brain phenomena.

  WebLink: youtube: What is a Thought? How the Brain Creates New Ideas | Henning Beck | TEDxHHL

A Computer Does Not Have Perception (*Saññā*)

4. At 4:00 minutes, we see a "face" made up of fruits and vegetables. Even though it is not a natural human face, it takes us just a second to realize that it represents a face.

- But as Mr. Beck points out, a computer will never be able to recognize the representation of the human face depicted there.
- At 9:20 minutes, he starts discussing the identification of a chair. Again, a computer has difficulty identifying "less obvious" structures that can serve as chairs.
- In both these instances, what the computer is missing is *saññā* (loosely translated to English as "perception"). Even animals can recognize objects relevant to their survival. A dog, for example, can instantly recognize its owners and any other pets living in the house. It can recognize foods that it likes, etc. See "Saññā – What It Really Means."

Vedanā, *Saññā*, Joy, Sadness, etc. Cannot Arise in a Brain

5. Around 6:00 minutes, Mr. Beck starts talking about human thought. All he (and other scientists) know right now is that our thoughts rise very fast. But they do not explain how thoughts with feelings (*vedanā*), perception (*saññā*), joy, etc., can arise from a brain made of inert atoms and molecules.

- A brain is not that different from a computer because atoms and molecules are the building blocks of both. Both can process information. But a brain processes information in a very different way compared to a computer. It involves billions of neurons working as a team. Scientists are not even close to figuring out how the brain processes information.
- In the future, scientists may be able able to figure out how those neurons can process information much faster than a computer with a thousand times higher processing speeds.
- However, they will still NOT be able to figure out how a human or animal can recognize their surroundings AND generate emotions (happy, sad, etc.)

© 2026 Lal A. Pinnaduwage

- Around 11:00 minutes, he discusses the difference between learning and understanding. That is an excellent point.

Vedanā, *Saññā*, Joy, Sadness, etc. Arise in the "Mental Body"

In a previous post, "Contact Between Āyatana Leads to Vipāka Viññāṇa," I mentioned that plants and trees have a basic form of *vedanā* and *saññā* (see #3,#4 there.) However, plants and trees CANNOT generate emotions like joy and sadness. A tree does not have a mind or a "mental body" created by kammic energy.

6. Similarly, a brain cannot generate a thought. How can feelings and emotions come from an entity made of inert atoms and molecules? The "mental body" of a living being is created by *kammic* energy.

- There has to be a LIVING BEING to generate a *citta*, the basic unit of consciousness. For a human being, the essence of that LIVING ENTITY is not the physical body but the mental body.
- **That "mental body" is alternatively called a *manomaya kāya* or *gandhabba*.** It consists of a *hadaya vatthu* (seat of mind) and five *pasāda rūpa* located around it (for seeing, listening, smelling, tasting, and touching.) The mental body is not like the "physical body." It is more like an "energy body" that gives life to the inert and dense physical body.
- A *manomaya kāya* may be visualized as an "energy field" within the physical body with the *hadaya vatthu* and five *pasāda rūpa* overlapping the region of the physical heart.

7. Our brains cannot identify objects. It cannot generate emotions like joy and sadness. As discussed in #4 above, animals without brains can identify things and generate feelings and emotions.

- It is the **mental body (*manomaya kāya* or *gandhabba*)** that generates emotions like joy and sadness as well as *vedanā*, *saññā*.
- More precisely, those mental phenomena arise in the ***hadaya vatthu* (seat of mind)** of the gandhabba.

8. The details are not critical, but the primary mechanism is essential to understand. A brain does not see, hear, smell, taste, or touch. The seat of the mind (*hadaya vatthu*) experiences all those. A *hadaya vatthu* can be created ONLY by *kammic* energy.

- That is why the human body is just a shell that supports the mental body (*manomaya kāya* or the *gandhabba*). At the death of the physical body, that *manomaya kāya* leaves the body instantly. When we touch a dead body, it is evident that there is no "life."
- **A living body is like a "live wire" with an electric current flowing through.** One will get an "electrical shock" by touching it. But if there is no electric current, it is just a metal wire.
- **In the same way, a *manomaya kāya* gives "life" to an inert physical body.**

The *Manomaya Kāya* Changes from Existence to Existence

9. What happens to the ***manomaya kāya*** at the end of existence? To clarify, let us take the case of a *Brahma* dying and getting a human existence. That transition from a *Brahma* to a human happens at the moment of death of that Brahma. It is called the **"*cuti-paṭisandhi*" moment** ("*cuti*" means dying and "*paṭisandhi*" means getting a new existence.)

- A *Brahma* has a seat of the mind (*hadaya vatthu*) and two *pasāda rūpa* (for seeing and hearing). On the other hand, the new humans existence would have five *pasāda rūpa* (for seeing, listening, smelling, tasting, and touching). Furthermore, the *hadaya vatthu* of the human would be different from that of a *Brahma*.
- Therefore, the *manomaya kāya* of the new human existence differs from that of the *Brahma.*

© 2026 Lal A. Pinnaduwage

- Suppose that at the end of that human existence, that human gets an animal existence. Then at that "*cuti-paṭisandhi*" moment, that new animal existence would have its own set of *hadaya vatthu* and five *pasāda rūpa*.

10. Those three existences are very different, even though it is the same "lifestream." So, what can be taken as a "soul" or a "self"?

- That is why the Buddha said there is no "soul" or a "self" or a "*ātma*" going from one birth to another. In the above example, the same "lifestream" that started as a *Brahma* became a human, and then an animal. **What is the ESSENCE that defines a "soul" or a "self" or a "*ātma*"?**
- The details are in the section "Sensory Experience – Basis of Buddha's Worldview." First, let us look into the mechanism of *citta* generation.

A *Citta* Has *Vedanā*, *Saññā*, and Many Other "Built-In" Mental Factors

11. A *citta* is the fundamental unit of cognition, which we do not feel by itself. It comes in bunches of 12 or more *cittā*. Those "bunches" or series of *cittā* are *citta vīthi*. What we "feel" or "experience" is the cumulative effect of numerous such *citta vīthi*.

- Any *citta vīthi* that arises due to sensory input from one of the five physical senses has 17 *cittā*. It is a *pañcadvāra citta vīthi*.
- On the other hand, a *citta vīthi* arising directly in mind (due to *dhammā*) may have varying numbers of *cittā*, with a minimum of 12 *cittā*. That is a *manodvāra citta vīthi*.

12. What we usually call a "thought" is the cumulative effect of billions of such *citta vīthi* that arise PER SECOND.

- Each of those *cittā* has at least seven mental factors (*cetasikā*). Those universal *cetasikā* include *vedanā* and *saññā*. *Vedanā cetasika* makes one FEEL a sensory input. The *saññā cetasika* is the one that recognizes that sensory input.
- **Only a living being can generate that fundamental unit of cognition (*citta*) within a billionth of a second, with built-in seven or more *cetasikā*.**
- That is why a computer or a robot will NEVER become conscious. **Only *Kammic* energy can create a *manomaya kāya* with the seat of the mind (*hadaya vatthu*).**
- That is why there will NEVER be true Artificial Intelligence (AI)! There can only be sophisticated robots capable of, for example, autonomous driving.

Important Role of the Brain

13. Even though the brain cannot generate *citta*, it plays a critical role in getting the information about the sense object to the *hadaya vatthu*. More details at "Brain – Interface between Mind and Body." Let us briefly discuss the series of events following the capture of an image by our eyes.

- The retinas at the back of the eyes send the captured image to the visual cortex in the brain through the optical nerve. That part of the brain then analyzes the signal to a form the mind can understand. That information is sent to the *cakkhu pasāda rūpa* in the *manomaya kāya*. Then the *cakkhu pasāda rūpa* makes contact with *hadaya vatthu*, which vibrates 17 times due to that "impact."
- Those 17 vibrations of the *hadaya vatthu* correspond to the generation of a *citta vīthi* with 17 *cittā*. That is the origin of a *cakkhudvāra citta vīthi*. It is not necessary to learn those details. But those interested can find details at "Does any Object (Rūpa) Last only 17 Thought Moments?."
- Sensory inputs coming through the other four physical senses (ears, nose, tongue, and the body) work the same way.

© 2026 Lal A. Pinnaduwage

14. Remember that the sensory input comes to a *pasāda rūpa* in the mental body AFTER the brain processes the sensory signal. For example, when we see a tree, the image of the tree received by the eyes is processed by the brain first.

- Then the brain transmits that processed signal to the *cakkhu pasāda rūpa*, which, in turn, transfers it to the *hadaya vatthu.*
- It is the *hadaya vatthu* that "feels" or "experiences" that image and "sees" the tree.
- But even a sensory experience that we "feel" arises from a series of "sensory packets." For example, when we see a tree, that image does not come in continuously. It comes in "packets" or "snapshots."
- That is similar to how a video camera or a movie film works. We will discuss that in the post "Vision Is a Series of "Snapshots" – Movie Analogy."

The complete set of posts at "Origin of Life."

10.2.2 Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event

September 29, 2019; revised November 15, 2019; August 28, 2022; August 5, 2023; August 31, 2023; September 22, 2023

Vedanā arises with a sensory input or an *ārammaṇa.* A sensory input may give rise to two types of *vedanā*: *vipāka vedanā* (unavoidable) and "*samphassa-jā-vedanā*" which may arise if the mind is attached to that sensory input.

All Our Activities Start With a Sensory Trigger

1. We know we are alive because we experience the external world. We can see an object, hear a sound, smell an odor, taste food, and feel the touch of something or someone. Furthermore, we can recall past events (part of *dhammā*).

- All our sensory experiences start with a "trigger event" that comes through one of our six sense faculties. If we see, hear, smell, taste, or touch something that grabs our attention, we start thinking, speaking, and taking action on that particular sight, sound, odor, taste, and touch.
- Also, a thought about a past event or a planned event (*dhammā*) may come to our mind, and we could get started that way too.

2. We usually go through our daily chores based on what we do routinely. We get up in the morning and prepare for work (school) on a working day. Those " to do tasks" come to our minds automatically as *dhammā*.

- Such a "planned or routine day of work" could be disrupted by an unexpected event. One may get a phone call from the boss asking to go to a meeting at a different location. A child may have a fever, and a hospital visit may be required. Again, a sensory trigger is there.
- We may also set an alarm to get up at a particular time. When the alarm goes off in the morning, we wake and recall having to get ready for a specific task.
- It is a good idea to contemplate what one goes through during the day. We can see that all activities start with "sensory triggers."

A Sensory Trigger is an "*Ārammaṇa*"

3. Each activity starts with a "trigger," a sensory event. **That is a "*ārammaṇa*" in Pāli.** We consciously and deliberately start looking at an object when we become interested in that object. Then it becomes a new "*ārammaṇa*." That may prompt us to take further action.

© 2026 Lal A. Pinnaduwage

- For example, a short interaction with a person may trigger an interest in that person. Then that may lead to further contact.
- We get exposed to many sensory inputs as we go through the day. But only specific sensory inputs catch our attention and make us think about them. A strong sensory input that gets our attention is a *ārammaṇa*.
- If X listens to the television in the background while eating, X focuses on the meal. However, if X hears on the TV that a terrorist attack just took place in a large city, X's attention would focus on that news story. X may stop eating and go and watch the television to get more information. That is a new *ārammaṇa*.

4. There is always an "*ārammaṇa*" to initiate an action, and **there are only six types of *ārammaṇa*** per "Chachakka Sutta (MN 148)."*Cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññāṇaṁ, sotañca paṭicca sadde ca uppajjati sotaviññāṇaṁ, ghānañca paṭicca gandhe ca uppajjati ghānaviññāṇaṁ, jivhāñca paṭicca rase ca uppajjati jivhāviññāṇaṁ, kāyañca paṭicca phoṭṭhabbe ca uppajjati kāyaviññāṇaṁ, manañca paṭicca dhamme ca uppajjati manoviññāṇaṁ*."

- For example, the second on the list says that "ear-consciousness (*sota* ***viññāṇa***) happens when ears (more precisely *sota pasāda*) come to contact with a sound (*sadda*)." In the above example, X heard about a terrorist attack.
- That sensory event could then start a whole series of new actions. In the example of #3 above, X stopped eating and went to the television to watch it.
- You should think about this basic idea of how a sensory event (seeing, hearing, etc. leads to a whole set of actions during a given day. This idea was first introduced in the post, "Contact Between Āyatana Leads to Vipāka Viññāṇa."

Two Different Meanings of *Paṭicca*

5. We translated the verse, "*cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññāṇaṁ"* as "*..cakkhu viññāṇa* arises when a *rūpa* makes contact (*Paṭicca*; pronounced "patichcha") with *cakkhu pasāda rūpā.*" See, #7 of "Contact Between Āyatana Leads to Vipāka Viññāṇa." That was further elaborated in the next post, "Indriya Make Phassa and Āyatana Make Samphassa."

- Some English translations state that as "dependent on the eye and forms, eye-consciousness arises." They translate *Paṭicca* as "dependent on," presumably because *Paṭicca Samuppāda* is translated as "Dependent Origination."
- But *Paṭicca* is a Pāli word with somewhat different meanings depending on the context. Let us clarify that first.

6. It is fine to translate *Paṭicca Samuppāda* as "Dependent Origination." That is because the steps in *Paṭicca Samuppāda* are CONDITIONAL statements. For example, "with *avijjā* (ignorance) as **condition**, *saṅkhāra* arise." One could also state that the "arising of *saṅkhāra* is dependent on the presence of *avijjā."* However, conditionality comes from the word "*paccayā*," not from "*Paṭicca."* See, "What Does "Paccayā" Mean in Paṭicca Samuppāda?."

- Therefore, "*cakkhuñca* ***paṭicca*** *rūpe ca uppajjati cakkhuviññāṇaṁ"* should not be translated as "**dependent on the** eye and forms, eye-consciousness arises." **It is more than just dependence**. It is "coming together" or "coming to contact" of *cakkhu* and *rūpa* that gives rise to *cakkhu viññāṇa*. **"*Paṭicca*" happens with only those events that grab our attention.**
- **There is also a deeper meaning of *Paṭicca* in *Paṭicca Samuppāda***, where it combines the two words "*paṭi*" + "*icca*" (pronounced "ichcha.") When one attaches willingly to moral (or immoral) deeds, one ends up with corresponding "births" ("*sama*" + "*uppada*.") See, "Paṭicca Samuppāda – "Pati+ichcha" + "Sama+uppāda"." That is why I do not translate *Paṭicca Samuppāda* as "Dependent Origination." There is more than "just dependence" in *Paṭicca Samuppāda*.

© 2026 Lal A. Pinnaduwage

- However, in verse "*cakkhuñca **paṭicca** rūpe ca uppajjati cakkhuviññāṇaṁ,*" *Paṭicca* means "coming together" or "contact." Here there is no "intention." It is *cakkhu* and *rūpa* making contact. That is very clear in SN 12.53 and SN 12.54, in verse, "*telañca paṭicca vaṭṭiñca paṭicca telappadīpo jhāyeyya.*" OR, "an oil lamp (*telappadīpo*) burns while the wick (*vaṭṭiñca*) is together with oil (*telañca*)." The wick will burn out quickly if one does not add oil to the lamp. There is no involvement of the mind there. Thus, the "*pati*" + "*icca*" etymology does not apply here.

Where Does *Paṭicca* Happen?

7. It is essential to remember that "*cakkhu*" (or *cakkhāyatana*) is not physical eyes (the Pāli word for the physical eye is "*nayana*"). The brain processes an image the eyes receive and then sends it to the **"*cakkhu.*"** We discussed in the post, "Contact Between Āyatana Leads to Vipāka Viññāṇa,"

- "*Cakkhu*" could be taken as the *cakkhu pasāda rūpa* (or *cakkhu indriya*) that lies close to the *hadaya vatthu* (seat of the mind) and *hadaya vatthu* in some cases. However, the "eye faculty" or *cakkhu indriya* becomes *cakkhāyatana* when one is looking at a *rūpa* with attachment to it. Then, the "mental impression" of an external *rūpa* ("*cakkhuviññeyyā rūpā*") is not a true version of the external *rūpa*; see #10 of "Contamination of the Human Mind Based on a Sensory Input."

The "WebLink: suttacentral: Cakkhu Sutta (SN 25.1)" says "***Cakkhuṁ**, bhikkhave, aniccaṁ vipariṇāmi aññathābhāvī*"

- Here, **"*cakkhu*"** is the "defiled eye faculty" or the "*cakkhāyatana.*" Both have "*aniccaṁ vipariṇāmi aññathābhāvi*" nature. See "Aniccaṁ Vipariṇāmi Aññathābhāvi – A Critical Verse" for details.
- Furthermore, as pointed out above, the "*rūpa*" is a "mind-made version" of the external object (*rūpa āyatana*).
- When that *rūpa* makes contact with the *cakkhu*, that contact gives rise to the *cakkhu viññāṇa* in mind: **"*Cakkhuñca paṭicca rūpe ca uppajjāti cakkhuviññāṇaṁ.*"**
- Therefore, that sensory experience arises in the mind close to the physical heart. It does not occur in the brain (or in the eyes)! You may want to refresh your memory by reading #12 of the post, "Buddhist Worldview – Introduction."

8. The example discussed in #3 involves an *ārammaṇa* coming through as a sound (*sadda rūpa*). Here the "sound *rūpa*" received by the *sota pasāda rūpa* (shortened to just "*sota*") is the "*sadda*" in "*sotañca paṭicca sadde ca uppajjati sotaviññāṇaṁ.*"

- Any external sensory input is a form of energy. That is why they are all *rūpa*. There is some confusion because most times, a "*rūpa rūpa*" or a "*vaṇṇa rūpa*" is just written as a "*rūpa.*"
- A sound is a *sadda rūpa*. You can figure out the other three: *rasa rūpa, gandha rūpa*, and *phoṭṭhabba rūpa*.
- A thought coming directly to the mind is a "*dhammā*" or a "*dhamma rūpa.*" There is no separate "*pasāda rūpa*" for *dhammā,* which directly contacts the *hadaya vatthu*.
- All those entities (*cakkhu*, *sota*..., *mano* and *rūpa*, *sadda*,..*dhamma*) are all defiled versions as discussed in "Contamination of the Human Mind Based on a Sensory Input."

Vipāka Vedanā Arise With That Initial *Vipāka Viññāṇa*

9. Let us consider "hearing a sound." That is "*sotañca paṭicca sadde ca uppajjati sotaviññāṇaṁ.*" This *sotaviññāṇa* is a *vipāka viññāṇa*, as we discussed in "Contact Between Āyatana Leads to Vipāka Viññāṇa."

- As we have discussed, *vedanā* and *saññā* arise with each *citta*. Therefore, there are a *vedanā* and *saññā* associated with that *sota viññāṇa* (which is a *citta*.) In other words, we know that we heard the

© 2026 Lal A. Pinnaduwage

sound (*vedanā*), and we recognize what the sound is (*saññā*). **The *vedanā* that arises with that *vipāka viññāṇa* is a *vipāka vedanā*.**

- At this stage, the mind receives the sensory event. All *vedanā* associated with that initial sensory event (other than the physical body) is a neutral (*upekkhā*) *vedanā*. However, some *somanassa* or *domanassa vedanā* arise due to *kāma guṇa* (even in an *Arahant*.). The following post, "Kāma Guṇa – Origin of Attachment (Taṇhā)," will discuss this issue. However, no *dukkha/sukha vedanā* arise in this step of, "*sotañca paṭicca sadde ca uppajjati sotaviññāṇaṁ*." That also holds for other sensory faculties, except for the physical touch (*kāya*.)
- Therefore, the only exception is "*kāyañca paṭicca phoṭṭhabbe ca uppajjati kāyaviññāṇaṁ*." The sensory contact through the physical body can generate a *dukkha vedanā* due to an injury. It can lead to a *sukha vedanā* due to a body massage.
- Below, we will discuss *sukha*, *dukkha*, *somanassa*, *domanassa,* and *upekkhā vedanā* below.

The Second Type of *Vedanā* is "*Samphassa jā Vedanā*"

10. In the post, "Indriya Make Phassa and Āyatana Make Samphassa," we looked further into the "Chachakka Sutta (MN 148): "***Cakkhuñca paṭicca rūpe ca uppajjati cakkhu viññāṇaṁ, tiṇṇaṁ saṅgati phasso, phassa paccayā vedanā.***" There we discussed the second type of vedanā due to "***phassa paccayā vedanā.***" There we discussed how the second type of *vedanā* arises due to "*samphassa.*" It is a good idea to review that post.

- That second type of *vedanā* is due to "contact with defilements in mind" or "*saṇ*" or "*anusaya*." And that depends on each person, i.e., how strong a *taṇhā* is generated via greed, anger, or ignorance. **Therefore, this "*samphassa-jā-vedanā*" is mind-made.**
- An *Arahant* would experience the first type of *vedanā*, the *vipāka vedanā*. The second type of *vedanā* would NOT arise in an *Arahant* because he/she does not have a defiled mind.
- Now, we can categorize *vedanā* using a different scheme. That will show that *dukkha/sukha vedanā* arises ONLY due to the physical body. Other types of sensory contacts lead to unpleasant/pleasant *vedanā* (*domanassa/somanassa*) in the MIND.

Sārīrika Vedanā Are *Vipāka Vedanā*

11. As we saw above, ALL *vedanā* belong to those two types discussed above: *vipāka vedanā* and *samphassa-jā-vedanā*.

- The painful or pleasurable *vedanā* felt by the physical body are *sārīrika vedanā*; they are *vipāka vedanā,* and *Arahants* also feel them.
- On the other hand, *samphassa-jā-vedanā* are "mind-made" and arise when a mind attaches to an *ārammaṇa* with *rāga, dosa*, or *moha*.
- **Note (August 5, 2023):** In the previous versions, I had used the term *kāyika vedanā* to represent *vedanā* felt by the physical body. However, "*kāya*" is used in other contexts, too, for example, as "an aggregate." Furthermore, the following *sutta* specifically used *sārīrika vedanā* to describe the physical pain felt by the Buddha with an injury: "WebLink: suttacentral: Sakalika Sutta (SN 1.38)."

Three Types of *Sārīrika Vedanā*

12. Then the ***sārīrika vedanā*** can be three types: ***dukkha vedanā, sukha vedanā, adukkhamasukha vedanā***.

- We can see that ***dukkha vedanā*** due to injuries, body aches, etc. are *sārīrika vedanā*. Those *vedanā* are felt AT A LOCATION in the body. We feel a finger cut at the finger. Similarly, a back massage gives a ***sukha vedanā*** on the back.

© 2026 Lal A. Pinnaduwage

- We remember that *vedanā* means "becoming aware of." So, those *vedanās* due to bodily contacts that do not generate *dukkha* or *sukha* (i.e., neutral) are "*adukkhama asukha*" (neither painful nor pleasant), and that rhymes with "*adukkhamasukha*."

Three Types of "Mind-Made *Vedanā*" (*Samphassa-jā-Vedanā*)

13. *Samphassa-jā-vedanā* similarly belong to three major types: *domanassa vedanā*, *somanassa vedanā*, and *upekkhā vedanā*.

- The word "*domanassa*" comes from "*do* + *manasa*" or "a depressed mind." Similarly, "*somanassa*" comes from "*so* + *manasa*" or "a pleasant mind." Of course, *upekkhā vedanā* is neither *domanassa* nor *somanassa.* It is neutral, and we feel that sensory input.
- Note that while the *adukkhamasukha vedanā* is associated with body touches, *upekkhā vedanā* is associated with all other sensory inputs.

Relationship to *Vipāka Vedanā* and "*Samphassa-jā-Vedanā*"

14. Therefore, *vedanā* can be either *vipāka vedanā* or "mind-made *vedanā*."" i.e., "*samphassa-jā-vedanā*."

- As we have discussed, *samphassa-jā-vedanā* depends on the person's mindset (more precisely, on one's *anusaya* or *gati*.) Three people looking at the same person X may generate different types of *samphassa-jā-vedanā*. A friend of X will generate a *samphassa-jā-vedanā* that is of *somanassa* type. An enemy of X will generate a *samphassa-jā-vedanā* that is of *domanassa* type. A third person who does not know X may only feel a *samphassa-jā-vedanā* of *upekkhā* type.
- Since there are six types of *samphassa-jā-vedanā*, we can see that 18 types of *vedanā* could be associated with them. Each one could be *domanassa*, *somanassa*, or *upekkhā*.
- In the "WebLink: suttacentral: Aṭṭhasata Sutta (SN 36.22)," the Buddha has discussed 108 types of *vedanā*. But for many situations, the above types of *vedanā* are sufficient for our discussions.

10.2.3 Kāma Guṇa – Origin of Attachment (Taṇhā)

October 6, 2019; revised October 9, 2022; August 5, 2023; rewritten January 19, 2024; chart in #3 replaced July 7, 2024; chart in #3 replaced March 29, 2025; revised December 17, 2025

Kāma guṇa refers to "false, mind-made characteristics" that an ignorant mind assigns to sensory inputs (visuals, sounds, odors, tastes, touches, and *dhammā*.) Because of *kāma guṇa,* we attach (*taṇhā*) to worldly things, thinking they can bring us happiness. Minds of *Arahants* do not generate *kāma guṇa.*

Most *Vedanā* Are Mind-Made

1. In the post, "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event," we first categorized *vedanā* into two types: *vipāka vedanā* (*sukha, dukkha*, and *adukkhamasukha vedanā*) and *samphassa-jā-vedanā* (*somanassa* and *domanassa vedanā*.) **The latter category is mind-made and absent in *Arahants*.**

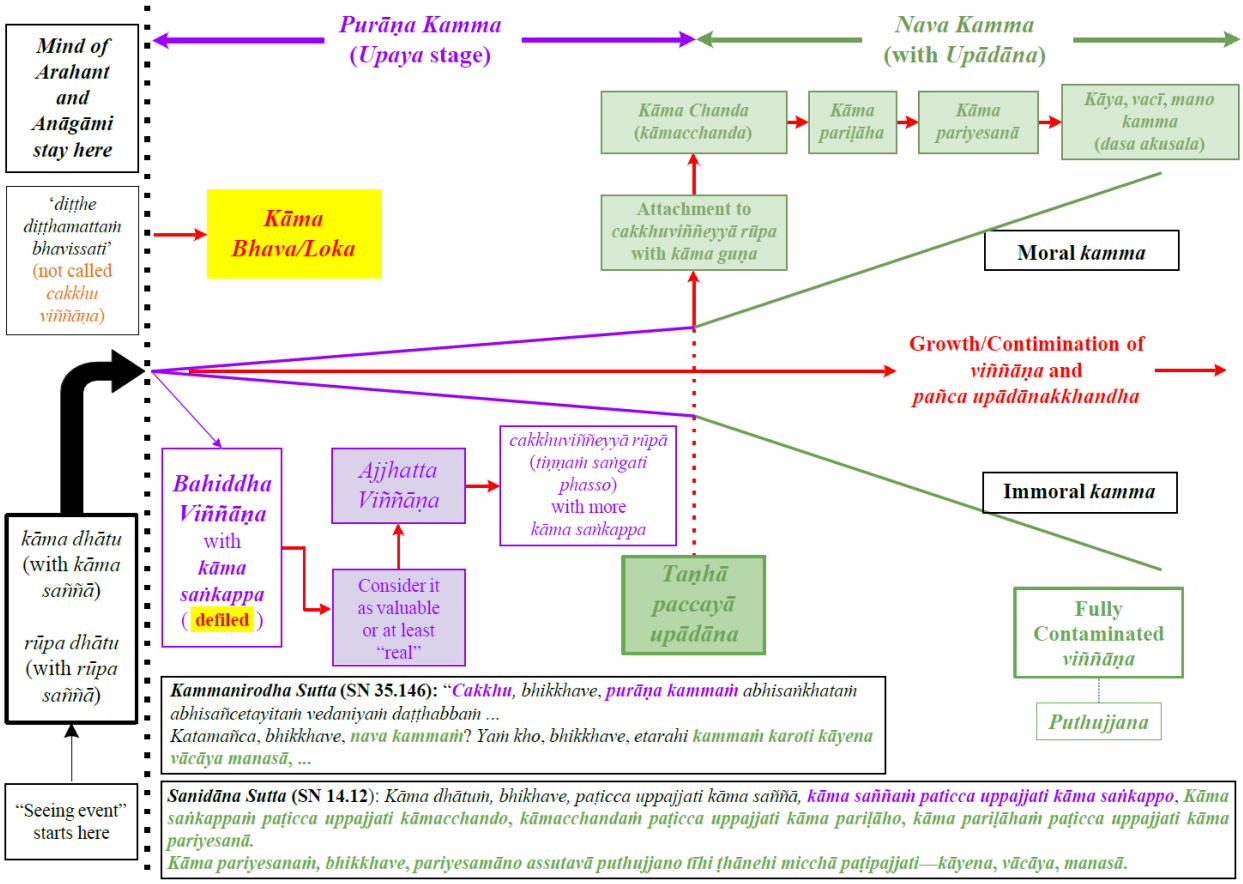
- *Sukha* and *dukkha vedanā* are felt ONLY in the physical body; they are ***sārīrika vedanā*** ("*sārīra*" means "physical body.") *Sārīrika vedanā* can also be "neutral" or *adukkhamasukha vedanā.* Anyone born with a physical body (including *Arahants*) experiences them; the following *sutta* specifically used *sārīrika vedanā* to describe the physical pain felt by the Buddha with an injury: "WebLink: suttacentral: *Sakalika Sutta* (SN 1.38)."
- **All other sensory inputs of sights, sounds, tastes, smells, and memories (*dhammā*) only lead to *adukkhamasukha vedanā.***

© 2026 Lal A. Pinnaduwage

- However, based on those three types of initial *vedanā*, a mind could generate "mind-made" *samphassa-jā-vedanā.*
- **We recently identified the origin of such "mind-made" *samphassa-jā-vedanā* to be "distorted" *saññā.*** Sensory inputs of sights, sounds, tastes, smells, and memories generate likable or repulsive "distorted" *saññā,* and a mind may attach to such *saññā* and generate *samphassa-jā-vedanā.*
- **For example, the "sweetness of sugar" and the "bad smell of feces" are "distorted *saññā*" and not *vedanā.* But they can lead to *samphassa-jā-vedanā.*** Furthermore, *sārīrika vedanā* may also give rise to mind-made *samphassa-jā-vedanā.* For example, in the case of an injury, in addition to physical pain, there is usually "mental pain" when one worries about recovering from that injury.

Samphassa-jā-Vedanā Have Their Origins in "Distorted *Saññā*"

2. The concept of "distorted *saññā*" is discussed in detail in "Sotāpanna Stage via Understanding Perception (Saññā)." There, it was shown **that sensations like "sweetness of sugar, attractiveness of a person, the smell of a rose, etc." are not *sukha* or *dukkha vedanā*. They are "distorted *saññā*."**



- Anyone born in *kāma loka* automatically generates specific "*kāma saññā*" for a given sensory object. Thus, such "distorted *saññā*" arise in *Arahants* as well as in average humans (*puthujjana*.)
- However, while the mind of a *puthujjana* will automatically attach to such "distorted *saññā,*" the mind of an *Arahant* would not.
- When the mind of a *puthujjana* attaches to such "distorted *saññā,*" that is immediately followed by "mind-made *vedanā*" or *samphassa-jā-vedanā.*
- This sequential (and rapid) attachment process is discussed in detail in several posts, the last being "Purāṇa and Nava Kamma – Sequence of Kamma Generation."

Steps in *Kamma* Accumulation

3. Attachment to an *ārammaṇa* does not happen in "one-shot." For example, when looking at an external object, our eyes capture the image not in a single image (as a camera would), but in many snapshots, each providing only an incomplete picture. That process is described in "Vision Is a Series of "Snapshots" – Movie Analogy" and "Seeing Is a Series of 'Snapshots.'"

- However, it happens so fast that we feel like we see an object in "one-shot." The Buddha analyzed that process on an even faster time scale. That is an "ultra-fast process" (occurring within a billionth of a second) and is discernible only to the mind of a Buddha. Let us first examine the temporal sequence described by the Buddha in several *suttās* and the *Abhidhamma*. **They provide a self-consistent picture compatible with recent scientific findings.**
- The steps are as follows: *Kāma dhātu* TO *kāma saññā* TO *kāma saṅkappa* TO *kāmacchanda* TO *kāma pariḷāha* TO *kāma pariyesanā*, which leads to *kamma* accumulation via the mind, speech, and body, i.e., *mano, vacī*, and *kāya kamma*. These steps were briefly discussed using the chart below in the post "Purāṇa and Nava Kamma – Sequence of Kamma Generation."

© 2026 Lal A. Pinnaduwage

Purāṇa and Nava Kamma - 2 (revision 4)

Download/Print: "WebLink: PDF file download: Purāṇa and Nava Kamma -2-revision 4"

Steps in *Kamma* Accumulation Stops Automatically for *Arahants*

4. The chart shows that the mind starts at the "*kāma dhātu*" stage upon receiving an *ārammaṇa* (**Note:** I have revised the previous chart to indicate the difference in "*viññāṇa* expansion" for two types of *ārammaṇa*.) The sequence of *kamma* accumulation is in the "WebLink: suttacentral: *Sanidāna Sutta* (SN 14.12)" and was discussed in detail (especially the beginning steps) in the post "Upaya and Upādāna – Two Stages of Attachment." **I highly recommend reading it again. At the time of its posting, many people probably did not understand it.** That sequence is:

- "*Kāma dhātuṁ, bhikkhave, paṭicca uppajjati kāma saññā, kāma saññaṁ paṭicca uppajjati kāma saṅkappo, kāma saṅkappaṁ paṭicca uppajjati kāmacchando, kāmacchandaṁ paṭicca uppajjati kāma pariḷāho, kāma pariḷāhaṁ paṭicca uppajjati kāma pariyesanā.*" OR "**Attachment to *kāma dhātu*** leads to *kāma saññā*, attachment to *kāma saññā* leads to *kāma saṅkappa,* attachment to *kāma saṅkappa* leads to *kāmacchanda*..and so on to *kāma pariyesanā.*"

5. The critical point that needs to be pointed out is the following. "*Kāma saṅkappa*" starts arising only AFTER the "*kāma saññā*" step. As stated in the "WebLink: suttacentral: *Nibbedhika Sutta* (AN 6.63)" *kāma rāga* arises ONLY with *kāma saṅkappa*: "***Saṅkappa rāgo** purisassa **kāmo***" OR "*kāma rāga* is defined as *kāma saṅkappa* (*mano saṅkhāra* contaminated with *rāga*.)"

- Such *mano saṅkhāra* arise within a billionth of a second without us realizing it. **The arising of *kāma rāga* cannot be avoided if "*kāma rāga anusaya/saṁyojana*" is intact.**
- Since *Arahants* and *Anāgāmis* have eliminated "*kāma rāga anusaya/saṁyojana,*" that second step DOES NOT occur for them. Thus, their minds DO NOT proceed beyond the *kāma saññā* step. The remaining steps apply only to those below the *Anāgāmi* stage.

© 2026 Lal A. Pinnaduwage

6. The reason for *Arahant*'s mind not proceeding beyond the "*kāma saññā*" step was discussed using a different way in the post "Saññā – All Our Thoughts Arise With 'Distorted Saññā'." See #9 – #12 in that post. The following is a brief overview.

- The "WebLink: suttacentral: *Upavāṇasandiṭṭhika Sutta* (SN 35.70)" states, "*Idha pana, upavāṇa, bhikkhu cakkhunā rūpaṁ disvā* ***rūpappaṭisaṁvedī*** *ca hoti* ***rūparāgappaṭisaṁvedī*** *ca*" OR "Upavāna, take the case when a *bhikkhu* sees a sight with their eyes and also generates the **desire** for the sight."
- In the verse "***rūpappaṭisaṁvedī"*** means "***rūpa paṭisaṁvedī"*** and "***rūparāgappaṭisaṁvedī"*** means "***rūpa rāga paṭisaṁvedī."*** Just seeing **(without attachment, but still with "distorted *saññā*")** happens with "***rūpa paṭisaṁvedī***," and **the attachment happens** with "***rūpa rāga paṭisaṁvedī."***
- Thus, an *Arahant* will only go through the "***rūpa paṭisaṁvedī"*** but NOT the "***rūpa rāga ppaṭisaṁvedī"*** step. A *bhikkhu* below the *Arahant*/*Anāgāmi* stages goes through both steps in the above verse. **Note that "*rūpa*" here means all five types of *rūpa* present in the *kāma loka*** and does NOT refer to "*rūpa loka*."

Steps in *Kamma* Accumulation for a *Puthujjana*

7. **The first two steps in #3 and #4 take place simultaneously in the mind of a *puthujjana* upon receiving the sensory input, i.e., in the first *citta vīthi*.** Thus, at the step "*Kāma dhātuṁ, bhikkhave, paṭicca uppajjati kāma saññā"* in the "WebLink: suttacentral: *Sanidāna Sutta* (SN 14.12)" BOTH "***rupapaṭisaṁvedī"*** and "***rūpa rāga ppaṭisaṁvedī"*** occur for a anyone with "*kāma rāga anusaya*/*saṁyojana.*"

- Therefore, the two *suttās* ("WebLink: suttacentral: *Sanidāna Sutta* (SN 14.12)" and the "WebLink: suttacentral: *Upavāṇasandiṭṭhika Sutta* (SN 35.70)") state the same thing but in different ways.
- Let us now discuss the "expansion of *viññāṇa*" for a *puthujjana* in the subsequent steps, as shown in the chart above.

Two Stages of "*Viññāṇa* Expansion"

8. The increasing contamination of a mind (*viññāṇa*) with time is shown as two "expansions" (represented by two "cones" in the above chart):

i. In the "*purāṇa kamma*" stage, contamination occurs gradually, and we are not yet aware of sensory input.

ii. The contamination is stronger in the "*nava kamma*" stage, where *kamma* accumulation happens consciously (with *javana citta*.)

- That second stage of expansion occurs ONLY IF we consciously attach to the *ārammaṇa* with the mindset that it can provide us with happiness. **That is where "*kāma guṇa*" comes into play.**
- First, let us clarify the emergence of "*bahiddha viññāṇa*" and "*ajjhatta viññāṇa*" in the "*purāṇa kamma*" stage using the chart above.

Arising of "*Bahiddha Viññāṇa*" and "*Ajjhatta Viññāṇa*"

9. As we noted above, the mind of a *puthujjana* gets attached to ANY sensory input (*ārammaṇa*) in *kāma loka* at the very first instance. At the outset of that process, a "defiled *viññāṇa*" arises as "*bahiddha viññāṇa*" and strengthens to "*ajjhatta viññāṇa*" via only "*kāma saṅkappa"* which are "*mano kamma."* **No *javana cittās* arise at these steps.**

- The first instance of "weak attachment" is said to occur with "*bahiddha viññāṇa*."

© 2026 Lal A. Pinnaduwage

- In the next step of "*kāma saññaṁ paṭicca uppajjati kāma saṅkappo"* that *viññāṇa* gets a bit stronger at the "*ajjhatta viññāṇa*" stage; see the chart above.
- Right after the "*ajjhatta viññāṇa*" stage, the mind starts attaching to "its version of the external *rūpa*" **("*cakkhuviññeyyā rūpa*" means a "*rūpa* prepared by *cakkhuviññāṇa*.")**

Transition to the "*Nava Kamma*" Stage with *Kāma Guṇa*

10. If that **"*cakkhuviññeyyā rūpa*"** is tempting to the mind, it will examine whether that **"mind-made *rūpa*"** has enough **"*kāma guṇa*,"** i.e., whether it is "enticing enough." **Note that "*kāma guṇa*" is NOT in the external object.**

- The "WebLink: suttacentral: *Kāmaguṇa Sutta* (AN 9.65)" states: "*Pañcime, bhikkhave, kāmaguṇā.*" It is misleading to translate that as "There are five *kāma guṇā."*
- Here, "***pañca kāma guṇa**"* does not mean "five types of ***guṇa.**"* The **five refers to the five types of *kāma*** (sensual pleasures with five physical senses [eye, ear, nose, tongue, and body]) **available in *kāma loka.*** There are **six types of "*guṇa.*"**
- Those six types are: "*iṭṭhā, kantā, manāpā, piyarūpā, kāmūpasaṁhitā*, and *rajanīyā*."

11. The concept of *kāma guṇā* and the six types are discussed in #10 through #13 in the post "Kāma Rāga, Rūpa Rāga and Arūpa Rāga." and quoted below.

- The first one, *iṭṭhā* means "promise of fulfillment," which goes with our perceived "*nicca* nature of this world." However, the world is of *anicca* nature, and thus, this "*iṭṭhā* characteristic" is based on the ignorance of the fundamental nature.
- The three characteristics *kantā*, *manāpā*, and *piyarūpā* express similar meanings: desirable, agreeable, and pleasant (and emphasize the *iṭṭhā* characteristic.) The fifth, "***kāmūpasaṁhitā***," means "**induce sensuality**." The last one, "***rajanīyā***," means "**generating defilements**" and thus can make one do immoral things to fulfill one's desires.
- The last two clarify that "*kāma guṇa*" refers mainly to the ***kāma loka***.

Kāma Guṇa Come Into Play After "*Ajjhatta Viññāṇa*"

12. At the "*ajjhatta viññāṇa*" stage, a specific person's "*gati*" comes into play. **"*Ajjhatta*" means "one's own."**

- While the "*bahiddha viññāṇa*" is triggered with *kāma raga anusaya/saṁyojana*, the "*ajjhatta viññāṇa*" also depends on one's *gati* at that time.
- Furthermore, even for the same person, "*kāma gati*" will manifest at different levels depending on the conditions. While watching an erotic movie, "*kāma gati"* will be strengthened, but while listening/reading Dhamma, it will be non-existent.
- Depending on the strength of the **"*kāma guṇa*" generated for that sensory input (*ārammaṇa*),** it leads to further contamination of the *viññāṇa.* **This is where the "second cone" starts in the chart above, signifying the "*nava kamma*" stage.**

Mind Starts Consciously Accumulating *Kamma* in the "Nava *Kamma*" Stage

13. As shown in the chart, **attachment to the "mind-made *rūpa*" strengthens with "*kāma guṇa*" and "*kāmacchanda*" (or *kāma chanda*) arising in the mind.**

- That means one is firmly attached, and now the mind is in a "state of agitation" ("*kāma pariḷāha*") until its desire to enjoy "more of it" is satisfied. Thus, it starts investigating ways to fulfill that desire, i.e., one engages in "*kāma pariyesana.*"

© 2026 Lal A. Pinnaduwage

- That is when one begins to perform *kamma* through speech and actions; at that point, one is fully engaged in *mano, vacī*, and *kāya kamma*.

An Example

14. For example, consider person X going to a meal at a friend's house. X is offered a dish he has not tasted before and finds it quite tasty.

- The taste of the food was the "*kāma saññā*" (in this case, "*rasa saññā*") that triggered *kāma saṅkappa* automatically (the first step generating "*bahiddha viññāṇa*.") As more *kāma saṅkappa* arise, his "*jivhā indriya*" becomes "*jivhā āyatana*" at the second of "*ajjhatta viññāṇa*." See the above chart.
- If the dish is enticing (i.e., if it triggers strong "*kāma guṇa*"), X's mind will attach to the "*rasa rūpa*" created in his mind by the "tasty dish." That is the "*kāma chanda*" stage in the chart.
- Now, X wants to know more about the dish and starts asking the friend how to make it or where to buy it. These involve the remaining steps leading to *kāya, vacī*, and *mano kamma*.
- If X got really attached to that meal, he may tell others about it the next day and even try to make it himself. All those involve *vacī* and *kāya saṅkhāra*. If that is the case, the "*viññāṇa*" (expectation of enjoying the meal again) that arose in his mind was strong.

Kāma Rāga Means Getting Attached to "Mind-Made *Vedanā*"

15. The human world has abundant enticing sights, sounds, tastes, odors, and bodily comforts. Those are not *kāma*. They are *kāma guṇa* that we created by being born with this physical body; **this birth occurred only because we had craved such a body in the past.** Comprehending that requires understanding how the "*bhava paccayā jāti*" step in *Paṭicca Samuppāda* led to the birth of the present physical body. That is *vipassanā*!

- This physical body is created by *kammic* energy to provide that "distorted *saññā*." That is why even an *Arahant* will taste the "sweetness of a tasty meal." **But his mind has fully comprehended how that "distorted *saññā*" arises and that it is a "mirage" or a "magic show."** The Buddha called *saññā* a mirage and *viññāṇa* magician in the "WebLink: suttacentral: *Pheṇapiṇḍūpama Sutta* (SN 22.95)," and we discussed that in the post, "Sotāpanna Stage and Distorted Saññā."
- Therefore, the next step of generating *kāma saṅkappa* and getting to the "*ajjhatta viññāṇa*" stage does not occur for an *Arahant*.
- Anyone not released from the *kāma loka* will get to the first steps of generating "*bahiddha viññāṇa*" and the "*ajjhatta viññāṇa*" stages, i.e., will go through the "*purāṇa kamma*" stage.
- But the second stage of "*nava kamma*" will be initiated only if the *ārammaṇa* is strong enough to trigger the conscious attachment (*taṇhā*) to that "mind-made *rūpa*." If that happens, then the "standard *Paṭicca Samuppāda*" process will kick in at the "*taṇhā paccayā upādāna*" step, leading to a "rapid and strong expansion of *viññāṇa*"; see the chart above.

First Step for Removing *Kāma Rāga* Is To Remove *Kāma Guṇa*

16. First, one must stop the "*nava kamma*" stage from starting. That requires eliminating *kāma guṇa* by losing one's attachment to "sensual sensory events" or mind-pleasing *ārammaṇa.*

- The "WebLink: suttacentral: *Yogakkhemi Sutta* (SN 35.104)" states that the Buddha has cut-off *kāma guṇa* at their roots. Of course, that is true for *Arahants* and *Anāgāmis* too.
- That becomes easier when one realizes that all mind-pleasing *ārammaṇa* are "fake" or a "magic show" as explained in #15.

10.2.4 Vision Is a Series of "Snapshots" – Movie Analogy

October 13, 2019; revised November 15, 2019; April 4, 2022; January 13, 2023; May 16, 2023; August 19, 2023 (#3)

It is essential to understand that the mind can capture only one sensory input at a time. This helps one understand that no "person" is involved in *Paṭicca Samuppāda* in an ULTIMATE SENSE.

Vision – How Do We See an Object?

1. Vision or "seeing" appears to us as continuous. We see people moving around, vehicles moving, animals running around, etc. However, in reality, "seeing" happens due to a series of "snapshots" our physical eyes take. Please bear with me as I set the stage with the following Pāli terms. Knowing these Pāli terms in detail is unnecessary; try to get the basic idea. If you have not read the post, "Seeing Is a Series of 'Snapshots,'" it could be helpful to read that first.

- A key idea behind Buddha Dhamma is that we experience only one *citta* (loosely translated as a thought) at a time and that *citta* focuses on ONE ***ārammaṇa***. In other words, while the mind registers a visual event, it cannot hear, smell, taste, or feel a touch. The keyword *ārammaṇa* was introduced in the post, "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event."
- "Seeing" does not happen continuously since the mind can process only one *cakkhudvāra citta vīthi* (with 17 *cittā*) at a time.. The mind processes that *cakkhudvāra citta vīthi* with three more *manodvāra citta vīthi*. At the end of those *citta vīthi*, the mind has captured a "snapshot" of the object and recognized it. Those four *citta vīthi* define one "snapshot" of a moving object.
- Our "seeing of a moving external object" involves many "snapshots" within seconds. Our perception of a moving object results from many such "snapshots." We do not see the individual "snapshots."

Movie Analogy – Series of Snapshots

2. We can simplify and understand the above process using an analogy. What I stated above is — in principle — what happens when we watch a movie.

- **To make a movie, a video camera captures many static pictures (snapshots) of a scene.** Then those snapshots are projected to a screen at a specific rate. If the playback speed is too slow, we can see individual pictures, but above a certain "projection rate," it looks like natural motion. Here is a video that illustrates this well:

  WebLink: youtube: Animation basics: The optical illusion of motion - TED-Ed

- A movie projector projects static pictures to the screen at a rate of about 30 frames a second, and we see the movie as a continuous progression of events. If the projection rate is low, we can see it frame by frame or as individual "snapshots." We do not perceive those static pictures when projected at 30 frames a second, instead, we perceive a continuous progression without any gaps.
- More details in the post, "Citta and Cetasika – How Viññāṇa (Consciousness) Arises."
- **That is why the Buddha said that the mind (or *viññāṇa*) is a magician.** We perceive a streamlined world, even though the reality is that our sensory faculties detect only a series of "snapshots," **It is the mind that conceals the reality and gives us a perception of a continuous progression of events.**

© 2026 Lal A. Pinnaduwage

- It is critical to understand this point. It helps get rid of *sakkāya diṭṭhi*; see "Chachakka Sutta – Six Types of Vipāka Viññāṇa."

Mind and the Brain – Two Different Entities

3. In an early post on this series, I pointed out that ***cakkhāyatana* and *cakkhu pasāda rūpa* are not the physical eyes.** Visual signals received by eyes are processed by the brain and detected by ***cakkhu pasāda rūpa*;** see #12 of "Buddhist Worldview – Introduction."

- That *cakkhu pasāda rūpa* (or simply *cakkhu*) is part of the *gandhabba*, our "mental body." The *gandhabba* has the seat of the mind (*hadaya vatthu*) surrounded by the five *pasāda rūpa* corresponding to vision, hearing, taste, smell, and touch.
- When our physical eyes capture an image of an external object, that image goes to the visual cortex in the brain. The signal is processed there and then transmitted to the *cakkhu pasāda rūpa*, making contact with the *hadaya vatthu*. That contact (*phassa*) leads to the arising of *cakkhu viññāṇa* at the *hadaya vatthu*. More details in "Brain – Interface between Mind and Body."
- By the way, that is the step, "*cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññāṇaṁ*" discussed in #7 in the post, "Contact Between Āyatana Leads to Vipāka Viññāṇa."

4. Therefore, the brain works like a computer. It converts the image from the eyes to a form "processable" by *hadaya vatthu* (seat of the mind.) Therefore, vision involves a somewhat complex process.

- Similar processes take place for the other four sensory events. For example, when the physical ears capture a sound, that signal goes to the auditory cortex in the brain for processing. That signal then goes to the *sota pasāda rūpa*, which makes contact with *hadaya vatthu to* transfer. That gives rise to *sota viññāṇa* via, "*sotañca paṭicca sadde ca uppajjati sotaviññāṇaṁ.*"

Reviewing the Whole Series Could Be Helpful

5. It may need some effort to understand this sequence of events. But it is necessary to comprehend the overall process before we get to the next post.

- It is good to print all the posts in the "Worldview of the Buddha" subsection and review them carefully.
- It is unnecessary to understand the DETAILS of #6 and #7 below. But it is good to get the general ideas involved. I am providing this information to illustrate the following. New findings in science are not only compatible with Buddha Dhamma but also help explain critical concepts in Buddha Dhamma.

The Brain Processes Visual Signals at About 30 Frames per Second

6. A recent study has reported that the minimum time to recognize a static picture is about 13 milliseconds (Ref. 1). That means we should be able to see such snapshots projected at 77 frames per second at the highest rate. However, that is probably "pushing it" and uncomfortable for the brain to handle. That is why movies use a projection rate of about 30 frames per second, as mentioned in #2 above.

- Interestingly, the time for neural information to reach the brain takes about 15 to 30 milliseconds (References 49, 50 in Ref. 2). Therefore, a projection rate of 30 to 50 frames is compatible with that measurement too.
- A millisecond is a thousandth of a second.
- Also, note that the eyes do not capture an image "in one shot." It takes many frames taken via automatic "saccadic movements of the eyes." See the Wikipedia article "WebLink: wikipedia.org: Saccade."

The same Analysis Holds For the Other Four Physical Senses

© 2026 Lal A. Pinnaduwage

7. A similar set of rules are valid for hearing as well. Another recent study (Ref. 2) found that sounds could be recognized at rates up to 30 sounds per second. That corresponds to a "sound packet" of about 33 milliseconds that can be detected and recognized.

- However, people speak at a much slower rate of 150 words per minute. That is about two words per second, much less than 30 possible words per second that would be possible according to the above study. So, there is no problem with hearing what other people speak, even if someone talks faster than the average rate.
- Currently, no studies are available from science for the other three sensory events (taste, smell, and body touches). But the same process holds for those as well.

Aside – Cognition (*Saññā*) Requires More Than Detection

The following points (#8, #9) are "asides." It is not necessary information, but it could help those familiar with *Abhidhamma*.

8. We must remember that "experiencing a sensory input" is much more complex than just receiving that sensory input. For example, the mind needs to see an object or hear a sound, recognize what it is, and generate a *vedanā*.

- For example, upon hearing the sound "apple," the mind needs to know what an "apple" is. Someone who does not speak English would not know what is meant by the word "apple." But those who speak English AND have had an experience eating apples would have MEMORIES of those. Therefore, the mind must compare the received sensory with memories to recognize it!
- The mind does that very fast with the help of the *manasikāra cetasika*. As you may know, *manasikāra* is one of the seven universal *cetasika* that arises with each *citta*. Thus, the mind can recognize a sensory input instantaneously, as soon as it receives a "data packet."
- More details in "Citta and Cetasika – How Viññāṇa (Consciousness) Arises."

Aside – Process In Abhidhamma Language

9. Actual "seeing" or vision takes place at *hadaya vatthu*. Same for the other four types of sensory events. For example, consider a "packet of data" sent from the physical eye to the brain. The brain processes that information and transmits it to the *cakkhu pasāda*. As you may remember, the five *pasāda rūpā* (*cakkhu*, *sota*, *ghāna, jivhā*, *kāya*) surround the *hadaya vatthu.* Now the *cakkhu pasāda* makes contact with the *hadaya vatthu* by hitting it. That causes the *hadaya vatthu* to vibrate 17 times, like a gong struck by an iron rod vibrating for a certain fixed number of times.

- The 17 vibrations of the *hadaya vatthu* correspond to the 17 *cittā* in a *citta vīthi*. Such a *citta vīthi* is a *pañcadvāra citta vīthi* because one of the five physical senses or *pañcadvāra* ("*pañca*" or five + "*dvāra*" or "door") initiates it.
- Imagine a blade clamped at one edge and hit on the un-clamped side. The blade will vibrate. It vibrates a certain FIXED number of times. For a given material, that is a fixed number.
- The same happens when a *pasāda rūpa* strikes the *hadaya vatthu.* The *hadaya vatthu* vibrates 17 times, with each vibration leading to the arising of a *citta*. **That is the origin of a *citta vīthi* with 17 *cittā*.** Those 17 *vibrations* are a form of energy called *a* ***hadaya rūpa***.

10. The misconception that any *rūpa* has a lifetime of 17 thought moments arose because of not understanding the difference between a ***rūpa*** (the image of an external object) and a ***hadaya rūpa*** (which is just the 17 vibrations of the *hadaya vatthu*).

- In other words, this information packet is received and processed by the *hadaya vatthu* within the 17 *cittā*. The information is complete by the fourth *citta* (fourth vibration of the *hadaya vatthu*), and then the rest of the *citta* in that *citta vīthi* deal with this information. Three more *citta vīthi* run by the

© 2026 Lal A. Pinnaduwage

hadaya vatthu itself completes the process. The additional *citta vīthi,* initiated by the mind, are *manodvāra citta vīthi.* Here, *manodvāra* means the "mind-door."

- Details of #9 and #10 at "Does any Object (Rūpa) Last only 17 Thought Moments?."

The mind is Fast, and the Brain is Slow

11. Thus, we can see a vast **difference** in time between the two processes involved. The physical body acquiring data takes time of the order of 10 milliseconds. The mind processes that information within a billionth of a second (using one *pañcadvāra citta vīthi* and three *manodvāra citta vīthi.*) [Read WebLink: PDF Download: Process Of Consciousness And Matter – Bhaddanta Dr. Rewata Dhamma in **Chapter III – Mind-Door Cognitive Process (*Manodvāra Vīthi*)** under the topic **Consequent Mind-Door Process (*Tadanuvattika-manodvāra Vīthi*)**.]

- Even if the five senses keep sending data continuously, the mind is "just sitting there" most of the time. Let us examine this in more detail: Suppose the brain keeps sending data from the eye non-stop. Since each "packet" takes, say ten milliseconds, then in a second, there will be 100 "data packets" of vision coming in. If the brain is going at full speed, it can send at most 500 (=100×5) "data packets" from all five physical senses in a second. **Then the mind will spend less than a millionth of a second processing all that data. Thus, if we add actual "active times of the mind" for a movie that lasts two hours, it is probably less than a second.**
- In other words, the brain spends a lot of energy processing the data streams during a two-hour movie. But the "seat of the mind" or the *hadaya vatthu* absorbs that information at an unimaginable speed. That is why we might only get a headache watching too many movies.

12. During those "gaps," the *hadaya vatthu* also interacts (both ways) with the *mana indriya* in the brain. **In particular, it gives instructions to the brain (via *mana indriya*) on how to control the physical body in response to sensory inputs.**

- **Thus, for the most part, the mind (or, more precisely, the *hadaya vatthu*) is sitting there idly.** That "idle state" of the mind is the "*bhavaṅga*" state.
- **A key point here is that the mind spends only a VERY SHORT TIME experiencing the SENSORY INPUTS. There is no "self" watching a movie.** The mind gives the illusion that a "self" is watching the movie. Details are in the next post, "Chachakka Sutta – Six Types of Vipāka Viññāṇa."
- The above is a very brief discussion. Of course, there are more details, but one can hopefully get the basic idea. Please ask questions if something is not clear. It is critical to understand this post.

Summary

13. The critical point embedded in the WebLink: suttacentral: *Chachakka Sutta* (MN 148) is **that there is no "self" experiencing the external world**. It is just a series of events, and the mind MAKES IT APPEAR that a "person" is watching a movie. We discussed the initial steps in sensory events addressed by that *sutta*.

- The key message in the *sutta* is that the mind DOES NOT experience the external world CONTINUOUSLY. Instead, the mind is active only for brief periods when receiving inputs from the five *pasāda rūpa*. As mentioned above, the brain is "on" much longer than the mind. **Once the brain processes information packets, the mind absorbs that information within a "blink of an eye."**
- On the other hand, the brain has a heavy workload while watching a movie. It has to process audio and video inputs rapidly for the movie's duration. One could get a headache if one watches two movies at a stretch. But even during that time, the mind is mainly in the *bhavaṅga* state. There is no "self" watching the movie. It is just a series of events taking place. **The mind is "putting all those "events" together and giving the appearance of a continuous progression of events.** Thus, one perceives "I am watching a movie" and NOT "watching a series of static pictures."
- Details are in the next post, "Chachakka Sutta – Six Types of Vipāka Viññāṇa."

© 2026 Lal A. Pinnaduwage

- **Later , we will discuss why it is also incorrect to say there is "no-self."** As long as *Paṭicca Samuppāda* is not understood, there is a "self" or a "person" going through the rebirth process and experiencing much suffering!

10.2.5 Do I Have "A Mind" That Is Fixed and "Mine"?

August 30, 2018; revised October 3, 2022; November 28, 2022

You may first read the post, "Amazingly Fast Time Evolution of a Thought (Citta)" to have the proper background.

1. Let us systematically see what happens when we "see" a tree for example. Please don't just read through, but stop and think about each point. This post condenses much information (as for most posts, but especially this one).

- Light reflected off the tree falls on our eyes and forms an image of that tree on the retina in the back of the eye. As you can imagine, that image is tiny. But we "see" its numerous leaves, individual flowers, and fruits in great detail. How is that possible?
- Anyway, that image is transmitted to the brain through a chemical signal. How does the brain "see" the tree?
- Jeff Hawkins has thought a lot about this issue, is actively engaged in artificial intelligence. His book, "WebLink: PDF Download: On Intelligence" discusses current scientific knowledge on vision and other sensory inputs.

2. Starting on p. 55 of his book, Hawkins discusses how the image that falls on the back of the eye is transmitted to the brain: "Visual information from the outside world is sent to your brain via a million fibers in your optic nerve...",

- "You can visualize these inputs as a bundle of electrical wires or a bundle of optical fibers..." and "The inputs to the brain are like those fibers, but they are called axons, and they carry neural signals called 'action potentials' or 'spikes,' which are partly chemical and partly electrical...."
- As discussed, not only visual signals but all sense inputs (sounds, taste, smell, and body touch) to the brain are the same type. You hear a sound, see the light, and feel pressure, **but inside your brain, there isn't any fundamental difference between these different types of neural signals**. An action potential is an action potential.
- Scientists have not figured out how the brain distinguishes those different types of signals. Moreover, they have no idea how the mind "sees the light" or an image of that tree.

3. To quote more from that book: "There is no light inside your head. It is dark in there. There is no sound entering your brain either; it is quiet inside. The brain is the only part of your body that has no senses itself. A surgeon could stick a finger into your brain, and you would not feel it. All the information that enters your mind comes in as spatial and temporal patterns on the axons."

- **So, it is a mystery how the mind senses those chemical and electrical signals coming to the brain as vision, sound, taste, smell, and body touch.**

© 2026 Lal A. Pinnaduwage

- Scientists are trying to solve this puzzle by looking for answers in the brain. They have come to the end of the line here.
- Now let us see how the Buddha described these processes.

4. **Actual "seeing" (and hearing, smelling, etc) goes on at the *hadaya vatthu* located in the *gandhabbā* or the mental body.** The *gandhabbā* is like a fine mesh overlapping the physical body, with the *hadaya vatthu* located close to the physical heart. That is what gives life to the physical body.

- At the death of the physical body, that fine *gandhabbā* is pulled off the physical body like a ghost. It is so fine that we cannot see it. But we all know that a body can be alive one moment and become inert (like a piece of wood) at death a moment later.
- Of course, when the *gandhabbā* comes out **temporarily (as in the case of those who can do astral travel or in the case of out-of-body experiences)**, it is still "attached" to the physical body and keeps the physical body alive. In "astral travel" terminology, the mental body is attached to the physical body via an invisible "silver cord."
- Such cases are discussed in "Manomaya Kāya and Out-of-Body Experience (OBE)."

5. Another critical point is that in the subtle body of the *gandhabbā*, there are five "*pasāda rūpa*" located around the *hadaya vatthu*: *cakkhu, sota, ghāṇa, jivhā,* and *kāya*, that correspond to seeing, hearing, smelling, tasting, and touch. **Here is the "missing part" of the puzzle that scientists will never be able to solve just by dealing with the brain:**

- The brain is like a very sophisticated computer that analyzes those chemical and electrical signals discussed in #2 and #3.
- **Those chemical and electrical signals (which come in packets of about 10 millisecond duration per scientist) are converted to electromagnetic (EM) waves and are transmitted through the air to the *pasāda rūpa* located around the *hadaya vatthu*.**
- This is what the Buddha taught 2000 years ago, and until scientists make this connection, they will not be able to proceed too far from where they are now.

6. The Buddha did not explain it in terms of EM waves. These waves are called "*kiraṇa*" in Pāli or Sinhala.

- This is explained in the post "Citta and Cetasika – How Viññāṇa (Consciousness) Arises" and other posts in the following subsection: "Mind and Consciousness."
- It takes a real effort to understand the details. But it will be worthwhile for those who are serious about learning *Abhidhamma*. Otherwise, try to get the basic idea.

7. As an example, let us consider seeing a tree. A continuous series of "data packets" (chemical and electrical signals per #3, #4 above) that come to the brain from the eyes are processed by the brain and converted to EM waves (*kiraṇa*).

- Those waves then travel to the *cakkhu pasāda* situated close to the *hadaya vatthu*. These waves from the brain to the heart area of the body travel in the air much faster than those chemical/electrical signals traveling from the eyes to the brain via axons.

8. When an EM wave (*kiraṇa*) packet arrives at the *cakkhu pasāda*, it hits the *hadaya vatthu* and "transfers" that visual information about the tree to the mind. **The mind is born momentarily during this transition for the duration of that signal.**

- This is what is meant by "*cakkhuñca paṭicca rūpe ca uppajjati cakkhu viññāṇaṁ*." Here *cakkhu* is the *cakkhu pasāda rūpa* **(not the physical eye)**, and *rūpa* (in "*rūpe ca*") **is the signal from the brain that carries the visual signal about the tree (not the actual tree!)**. [***uppajjati*** : [u + pad + ya] to be born; **arises**.]
- See "Chachakka Sutta – Six Types of Vipāka Viññāṇa."

© 2026 Lal A. Pinnaduwage

9. This is CRITICALLY important to realize. What is meant by a "*rūpa*" is NOT the same as what our visual object is. We DO NOT see a man, a woman, or a tree. What comes to the mind is a "*rūpa* signal" that is generated by the brain. That signal has all the INFORMATION about that visual object.

- The reception of the visual signal (***rūpa***) by the *cakkhu pasāda* (***cakkhu***) happens at the very moment that the *cakkhu pasāda* transfers that signal to the *hadaya vatthu* by "hitting it." **And at that very moment, *cakkhu viññāṇa* arises**: "*cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññāṇaṁ*."

10. These are critical points to understand, even if all the details are not comprehended by modern science yet. Visual consciousness arises **briefly** when that information about the visual object is transferred to the mind.

- However, within that split second, not only the object (the tree in this case) is recognized, but also *vedanā*, *saññā* (recognition), and other mental factors also arise.
- For example, if we have seen that tree in the past, the *manasikāra cetasika* can feed that information too, so that we will know the name of the tree instantly; see "Amazingly Fast Time Evolution of a Thought (Citta)."

11. In another example, let us consider what happens when we tap a glass with a spoon. Of course, we will hear the tapping sound.

- Where did that sound come from" Was it in the glass? No. Was the sound in the spoon? No.
- The sound was emitted as a result of the spoon hitting the glass. If the spoon did not hit a glass, there would not be a tapping sound.
- In the same way, unless a "*rūpa*" or an image taken in by the eyes came to *cakkhu pasāda* and made it hit the *hadaya vatthu*, there would not be a "seeing event" or a *cakkhu viññāṇa*.

12. **So, there is no "entity" called an ever-present mind.** The mind arises when we receive sensory inputs via the five physical senses, as described above.

- What we loosely call the "mind" is the *viññāṇakkhandha* that arises in a billionth of a second after going through a fast process of *citta, mano, mānasaṁ*, ..: See "Amazingly Fast Time Evolution of a Thought (Citta)."
- We can not only hear the tapping sound, but we can also see the glass and the spoon simultaneously. But those two events do not happen "at exactly the same time." They just appear to be simultaneous.
- What comes to the mind is a series of sense inputs (via all five physical senses) in rapid succession. We perceive it all to happen at the same time.

13. How this is possible is explained in the post, "Citta and Cetasika – How Viññāṇa (Consciousness) Arises" and other posts in the following sub section: "Mind and Consciousness."

- As explained there, the process is similar to how a motion picture works. When making a movie, the producers take many static pictures (with a video camera) and then play them back at a fast enough speed. If the playback speed is too slow, we can see individual pictures, but above a specific "projection rate," it looks like actual motion. Here is a video that illustrates this well:

  WebLink: youtube: Animation basics: The optical illusion of motion - TED-Ed

14. When we see the outside world, what happens is very similar to the above. At the end of the video it is stated that the "movie" we see is an illusion. **As the Buddha explained, that holds for real life as well.** When we see someone coming toward us, a series of "static pictures" or *citta* is projected at a very fast rate in our minds, giving us the illusion of a "movie like experience."

- The mind is very fast. The Buddha said that nothing in this world is faster than the mind. That is why we feel that all types of sense inputs come to "one's mind" simultaneously. **In reality, they are discrete snapshots, just like movie frames!**

© 2026 Lal A. Pinnaduwage

- But just like we see a continuous movie (a large number of individual picture frames), **we feel like we have a continuous mind.**

15. Now to the second issue about the mind. Why do we experience the outside world our way, and have our feelings and perceptions about a given sense input (love or anger when seeing the same person, for example)? That is why we feel like "I have **my own mind**."

- The key is to realize that our response to the external sense inputs is unique because we have our "own way" of perceiving and evaluating those sensory inputs based on the set of *gati* we have.

16. As we discussed in the previous post, "Amazingly Fast Time Evolution of a Thought (Citta)," **our feelings and initial responses, reflect our personality or *gati*.**

- There we also discussed why the type of sensory input also plays an important role. So, our INITIAL response to an external sensory input depends on BOTH one's *gati* AND the type of sensory input.
- That was an important post, so it may be beneficial to review it again. In this series of posts, I will try to highlight some critical features of Buddha Dhamma that will help get rid of *sakkāya diṭṭhi*. That is the key to the *Sotāpanna* stage.

17. Our "state of mind" depends on our *gati* and the sensory inputs we receive. Furthermore, we don't have "a fixed mind"; it can change rapidly.

- If you think back, I am sure you can remember times when you felt like your mind was filled with greed; other times with love, yet another time with anger, etc.
- As one progresses on the Path, these extreme swings of "one's mind" will become less, which is the key to *nirāmisa sukha*, eventually leading to *Nibbāna*.
- Each of us does not have a fixed mind. That means we don't generate "our own" *saññā, vedanā, saṅkhāra, viññāṇa.* In other words, we do not have our *saññākkhandha*, *vedanākkhandha*, *saṅkhārakkhandha*, and *viññāṇakkhandha*.
- Moreover, it is not fruitful to take any of them as "mine." That perception is part of *Sakkāya diṭṭhi.*

18. *Sakkāya diṭṭhi* can be stated as the following wrong assumptions. "I am my body", "I am my *vedanā*," "I am my *saññā*," "I am my *saṅkhāra*," and "I am my *viññāṇa*." The last four can be lumped together as "I am my mind." But a better way to remove *Sakkāya diṭṭhi* is to realize that: "All those entities are not worthwhile to be taken as mine."

- We tend to think automatically that "I have my own body," "I have my own mind," and "it is fruitful to be taken them as mine."
- Let us first analyze the mind and see whether that statement is true. In the next post, we will address "I have my own body" and "it is fruitful to be taken as mine."
- The Buddha analyzed **how the mind arises** step-by-step, by breaking down the process. That is why he called himself a "*Vibhajjavādī*"; see, "WebLink: suttacentral: *Subha Sutta* (MN 99)": "*Vibhajjavādo kho ahamettha, māṇava; nāhamettha ekaṁsavādo*.." or "Young man, I am a *Vibhajjavādi* (one who analyzes from many aspects by dividing a given process to parts), I do not hold a fixed view based on just one aspect."

In the next post, we will discuss why it is not fruitful to take one's body as "one's own." But it is essential to know that the perception of "me" goes away only at the Arahant stage; see, "Sakkāya Diṭṭhi – "Not Seeing the Unfruitful Nature of the World"."

10.2.6 Chachakka Sutta – Six Types of Vipāka Viññāṇa

October 19, 2019; revised #12 on September 28, 2020; April 3, 2021; Title revised December 30, 2021; August 29, 2022; August 2, 2024 (#2);; May 4, 2025

[Old Title : Chachakka Sutta – No "Self" in Initial Sensory Experience]

© 2026 Lal A. Pinnaduwage

Cha chakka – Six Sets of Sixes

1. We have finished discussing the six steps in the *Chachakka Sutta*. See "Worldview of the Buddha." Let us briefly summarize the "six sets of sixes" (*Cha chakka.*)

- The *sutta* first lists the "six sets" or "six collections." "*Cha ajjhattikāni āyatanāni veditabbāni, cha bāhirāni āyatanāni veditabbāni, cha viññāṇakāyā veditabbā, cha phassakāyā veditabbā, cha vedanākāyā veditabbā, cha taṇhākāyā veditabbā.*"

That means: "One needs to understand the following "six sets of sixes": Six **internal *āyatana***, six external *āyatana*, six classes of **(*vipāka*) *viññāṇa***, six classes of ***phassa***, six classes of ***vedanā***, six classes of ***taṇhā***. Let us briefly state what they are. I have explained them in detail in the preceding posts.

- Six internal *āyatana* are: "*Cakkhāyatanaṁ, sotāyatanaṁ, ghānāyatanaṁ, jivhāyatanaṁ, kāyāyatanaṁ, manāyatanaṁ.*"
- Six external *āyatana* are: "*Rūpāyatanaṁ, saddāyatanaṁ, gandhāyatanaṁ, rasāyatanaṁ, phoṭṭhabbāyatanaṁ, dhammāyatanaṁ.*"
- Six classes of (*vipāka*) *viññāṇa* are: "*cakkhuviññāṇa, sotaviññāṇa, ghānaviññāṇa, jivhāviññāṇa, kāyaviññāṇa, manoviññāṇa.*"
- The six classes of *phassa*: "*Cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññāṇaṁ, tiṇṇaṁ saṅgati phasso*" and similarly for the other five **(i.e., they are six types of "*saŋ phassa*")**,
- Six classes of *vedanā*: "*phassa paccayā vedanā*" arising from each of the preceding six types of "*saŋ phassa.*"
- Six classes of *taṇhā*: "*vedanā paccayā taṇhā*" due to the preceding six types of *vedanā*.
- It could be a good idea to print out the Pāli version of the *sutta* so that you can track which section of the *sutta* a verse under discussion is.

Chachakka Sutta Describes Initial Sensory Experiences Based on a New Ārammaṇa

2. About the first fourth of the "WebLink: suttacentral: *Chachakka Sutta* (MN 148)" discusses the following steps: "*Cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññāṇaṁ, tiṇṇaṁ saṅgati phasso, phassa paccayā vedanā, vedanā paccayā taṇhā.*" (**repeated for all six sense faculties**.)

The *sutta* describes the automatic and instantaneous response to a new *ārammaṇa*. In several posts, we discussed all those steps in detail. Very briefly, those steps are (just focusing on the *cakkhu viññāṇa*):

- With the coming together (contact) between *cakkhu* (or *cakkhu pasāda rūpa*) and a *rūpa* (which is a "snapshot" of that external *rūpa* created in the mind according to one's *saṁyojana*/*anusaya*), *cakkhu viññāṇa* arises. **Cakkhu is NOT the physical eyes, and *rūpa* is not the "external *rūpa*."** See "Purāṇa and Nava Kamma – Sequence of Kamma Generation" and other posts in the "Sotāpanna Stage via Understanding Perception (Saññā)" section.
- If that *rūpa* triggers *kāma guṇa*, one may become interested in it (if one has the corresponding "*san gati*"). The next step only occurs if one has such matching *gati* for that *rūpa* or that *ārammaṇa*. See "Kama Guṇa – Origin of Attachment (Taṇhā)" in the same section.
- If one has matching "*saŋ gati*," then a corresponding "*samphassa-jā-vedanā*" arises AUTOMATICALLY. See, "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event."
- The next step, "***vedanā paccayā taṇhā*,"** happens if that "*samphassa-jā-vedanā*" is strong enough to take further action. We discussed that last step in, "Kāma Guṇa – Origin of Attachment (Taṇhā)."

A *Ārammaṇa* triggers sensory Experiences

© 2026 Lal A. Pinnaduwage

3. Therefore, the *sutta* describes the events that occur when a new *ārammaṇa* comes to mind via one of the six internal sense bases (internal *āyatana*).

- **It is essential to see that ALL these activities happen AUTOMATICALLY and INSTANTANEOUSLY. They do not require CONSCIOUS thinking. There is no INTENTION involved.**
- That is a critical point to understand. You might say, "I can use any sensory faculties (internal *āyatana*) anytime I want to." That is true. But think about any event, and you can ALWAYS trace it back to a *ārammaṇa* that comes to mind on its own.
- For example, you may see and hear many things when walking down a crowded street. But one sight or sound could stop you and start doing something else. You may see an eye-catching item in a store window, stop to look at it, and then go inside to buy it. That was triggered via, "*cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññāṇaṁ*." **The *sutta* describes what happens ONLY at the MOMENT that you saw the item.** Once you get "attached to it," you start generating *vacī saṅkhāra* (consciously thinking about the item) and *kāya saṅkhāra* (going inside the store). That is the "*kamma* generation" stage. We will discuss that in later posts.
- Even in the middle of a discussion, one may get a new idea, and then everyone may start talking about that new idea he/she presented. The conversation changes to a new topic with the new *ārammaṇa*. That happened with a *dhammā* (an idea) that came to the mind via "*manañca paṭicca dhamme ca uppajjati manoviññāṇaṁ.*"

Chachakka Sutta Describes Only *Kamma Vipāka*

4. All the steps in #2 above happen within a fraction of a second. There is no conscious thinking involved. **They are all *kamma vipāka*.**

- Of course, that process describes only those events immediately following the INITIAL sensory contact. One can deliberately experience that sensory contact again and again after the initial experience. For example, one may keep looking at an interesting sight or keep listening to a pleasing sound. **That is when one accumulates a new *kamma* (if done with greed, anger, or ignorance).** We will discuss those steps in future posts involving *Paticca Samuppāda*.
- **Results of past *kamma* automatically lead to *kamma vipāka*. Based on them, we create a new *kamma*. That is how the rebirth process continues.**

Sensory Inputs – One "Packet" At a Time

5. As I discussed in detail in the previous post, the brain first processes all our sensory inputs in "packets." The brain can process those six types of data in parallel (at the same time). Each "packet" lasts about one-hundredth of a second (10 milliseconds) in duration. Those processed signals arrive at the seat of the mind (*hadaya vatthu*) located on the mental body (*manomaya kāya* or *gandhabba*). The mind, in turn, analyzes only ONE packet of information at a time. See the previous post, "Vision Is a Series of "Snapshots" – Movie Analogy."

- For example, while the mind is processing a "sight" or *rūpa rūpa*, it CAN NOT process a "sound" or a "*sadda rūpa*." After analyzing that "snapshot" of sight the mind switches to another sensory input. **Of course, our eyes and ears do not "die" momentarily. It is just that "*cakkhu*," for example, is ALIVE (or ACTIVE) only while the mind is processing input from the physical eyes.**
- Therefore, ONLY ONE internal *āyatana* is "ALIVE" at a given moment. Our "*cakkhu*" comes alive while the mind receives a "snapshot" of an external rūpa. The "*sota*" is alive (or active) only during a brief moment of receiving a "bit of sound" like just a word. **They come to the mind in "packets," not as a continuous stream. But it SEEMS that we experience them all simultaneously since the mind processes all inputs very quickly.**

© 2026 Lal A. Pinnaduwage

- The following example may help to get the basic idea. We have seen those signposts where a message runs one letter at a time, but at a fast rate. Only one letter is on display at a given moment. But within a fraction of a second, that letter turns off, the next letter turns on, and so on. Since it happens fast, we can read the message.
- The mind is swift. It can — not only put together such a stream of incoming signals — but also separate the six sensory inputs. In the previous post (see #8 there), I briefly mentioned that the mind does this with the help of the *manasikāra cetasika*.
- More details in "Citta and Cetasika – How Viññāṇa (Consciousness) Arises."

If *Cakkhu* Is "*Attā*," It Must Be Alive (or Operational) All The Time

Now let us discuss the next verse in the *sutta.* It helps understand what is meant by the critical Pāli words *attā* and *sakkāya diṭṭhi.*

6. We perceive a "self" that sees, hears, tastes, smells, touches, and recalls *dhammā* all simultaneously.

- However, we do not experience all six sensory inputs simultaneously. The mind receives only a brief "snapshot" at a time even with just one sensory input. See, "Vision Is a Series of "Snapshots" – Movie Analogy."
- In other words, our six internal *āyatana* of *cakkhu*, *sota*, *ghāna, jivhā, kāya, and mano* arise ONLY if a corresponding *ārammaṇa* appears. As I have emphasized, our physical eyes, ears, nose, tongue, and body are not our internal *āyatana.* See, "Buddhist Worldview – Introduction."
- Therefore, "one's self" is not in ANY of those 36 entities. **All those come into existence momentarily and pass away. That happens from time to time only when a *ārammaṇa* is registered.**
- **That is a critical conclusion that is related to "*anattā*." It will also become clear that *anattā* differs from *anatta* (without the long "*ā*").** Let us discuss ***anattā*** in detail now.

A "Self" Is Not Involved in The Preceding Processes

7. After going through the steps in #2 above, the next part of the *sutta* starts with the verse, "'*Cakkhu attā'ti yo vadeyya taṁ na upapajjati.* ***Cakkhussa uppādopi vayopi paññāyati.*** *Yassa kho pana uppādopi vayopi paññāyati, 'attā me uppajjati ca veti cā'ti iccassa evamāgataṁ hoti.* ***Tasmā taṁ na upapajjati: 'cakkhu attā'ti yo vadeyya.*** *Iti cakkhu anattā.*"

Loosely translated: "If anyone says, 'The *cakkhu* is self,' (or "seeing" is mine or "it is I who sees") that is not tenable. The **arising and disappearing of *cakkhu* (not the physical eye) is evident.** If *cakkhu* is 'self,' that would imply: 'my self arises and disappears' OR 'I come into being momentarily and disappear.' **That is why it cannot be argued that 'The eye is self.'** Thus *cakkhu* is 'not-self' or '*anattā.*" ("*na attā*" for "not *attā*" rhymes as "*anattā,"* just as "*na āgāmi*" rhymes as "*Anāgāmi.*")

- That verse is then repeated for the other five entities related to *cakkhu*, i.e., *rūpa*, *cakkhu viññāṇa*, *cakkhu samphassa*, *cakkhu samphassa-jā-vedanā, taṇhā* (due to *cakkhu samphassa-jā-vedanā.*) The last verse in that series is, "*Iti cakkhu anattā, rūpā anattā, cakkhuviññāṇaṁ anattā, cakkhusamphasso anattā, vedanā anattā, taṇhā anattā.*"
- Then that is repeated for the six entities associated with *sota*, *ghāna, jivhā, kāya, and mano* (6 x 6). The last verse is, "*Iti mano anattā, dhammā anattā, manoviññāṇaṁ anattā, manosamphasso anattā, vedanā anattā, taṇhā anattā.*" At this point, we are about halfway through the text in the *sutta*.
- Therefore, no "self" can be found in any of those.
- Now let us discuss two other *suttā* briefly to make those points clear.

Bāhiya Sutta – "Diṭṭhe Diṭṭhamattaṁ Bhavissati"

© 2026 Lal A. Pinnaduwage

8. In the "WebLink: suttacentral: *Bāhiya Sutta* (Udāna 1.10)," the Buddha tells Bāhiya, "*Tasmātiha te, bāhiya, evaṁ* ***sikkhitabbaṁ***: '*diṭṭhe diṭṭhamattaṁ bhavissati, sute sutamattaṁ bhavissati, mute mutamattaṁ bhavissati, viññāte viññātamattaṁ bhavissatī'ti.*

Translated: "Bāhiya, **you should train yourself the following way.** At any moment, what you see (*diṭṭhe*) is just a snapshot (*diṭṭhamattaṁ* is literally, "trace of a sight.") What you hear (*sute*) is a brief sound (*sutamattaṁ*.) What you experience with taste, smell, and touch (*mute*) is a trace of that (*mutamattaṁ*.) Your *viññāṇa* (*viññāte*) is a trace of *viññāṇa* (*viññātamattaṁ*.)

Then the Buddha further explains, "***Yato kho te, bāhiya, diṭṭhe diṭṭhamattaṁ bhavissati****, sute sutamattaṁ bhavissati, mute mutamattaṁ bhavissati, viññāte viññātamattaṁ bhavissati,* ***tato tvaṁ, bāhiya, na tena****; yato tvaṁ, bāhiya, na tena tato tvaṁ, bāhiya, na tattha; yato tvaṁ, bāhiya, na tattha, tato tvaṁ,* ***bāhiya, nevidha na huraṁ na ubhayamantarena****. Esevanto dukkhassā" ti.*

Translated: "**Since what you see (*diṭṭhe*) is just a snapshot** (and similarly for others), Bāhiya, **there is no "you" (involved) there**; because of that, Bāhiya, you should not get attached (*na tattha*); if you do that, **Bāhiya, "you" are not in this existence (*nevidha*) or another existence (*na huraṁ*) or in between those two (*na ubhayam antarena*.")** That (understanding) is the end of suffering (*Esevanto dukkhassā" ti.*)

My comments:

- **That means it is incorrect to say there is a "self" experiencing those traces of sensory events. Those are just results (*vipāka*) of past *kamma*, i.e., causes bring corresponding results.** We will explain this further with the *Mālukyaputta Sutta* below.
- **However, the above description may give the impression that everything is deterministic. That is not so, and that will become clear when we address what happens following the initial "vipāka stage."**
- Many people incorrectly translate "*mattam*" to English as "only." For example, most current translators translate "*diṭṭhe diṭṭhamattaṁ*" as "seeing is only seeing."
- *Diṭṭhamatta* means "a snapshot" (literally a "trace of seeing."). For example, *appamatta* means "insignificant." "*appa*" means "little" and "*matta*" means "a trace." *Matta* is "*mātra*" in Sanskrit and "මාත්‍ර in Sinhala. As we discussed in the previous post, the mind (or the viññāṇa) gives us the illusion of a continuous sensory experience implying an "experiencer." That is why the Buddha said that *viññāṇa* is a magician. See #2 of, "Vision Is a Series of "Snapshots" – Movie Analogy."

Mālukyaputta Sutta – Same Verse In More Details

9. Those above verses in #8 are also in the "WebLink: suttacentral: *Mālukyaputta Sutta* (SN 35.95)," where the Buddha tells *bhikkhu* Mālukyaputta, "*Ettha ca te, mālukyaputta, diṭṭhasutamutaviññātabbesu dhammesu* ***diṭṭhe diṭṭhamattaṁ bhavissati, sute sutamattaṁ bhavissati, mute mutamattaṁ bhavissati, viññāte viññātamattaṁ bhavissati.*** *Yato kho te, mālukyaputta, diṭṭhasutamutaviññātabbesu dhammesu diṭṭhe diṭṭhamattaṁ bhavissati, sute sutamattaṁ bhavissati, mute mutamattaṁ bhavissati, viññāte viññātamattaṁ bhavissati; tato tvaṁ, mālukyaputta, na tena.* ***Yato tvaṁ, mālukyaputta, na tena; tato tvaṁ, mālukyaputta, na tattha. Yato tvaṁ, mālukyaputta, na tattha; tato tvaṁ, mālukyaputta, nevidha, na huraṁ, na ubhayamantarena. Esevanto dukkhassā***"ti**.**

- That is very similar to *Bāhiya Sutta* above. However, now *bhikkhu* Mālukyaputta recounts what he understood. That is very informative.

Mālukyaputta Sutta – What Happens If One Gets Attached

© 2026 Lal A. Pinnaduwage

10. *Bhikkhu* Mālukyaputta then says that he understood what the Buddha meant by the above verse. He explains his understanding:

'*Rūpaṁ disvā sati muṭṭhā,*
Piyaṁ nimittaṁ manasi karoto;
Sārattacitto vedeti,
Tañca ajjhosa tiṭṭhati.

Tassa vaḍḍhanti vedanā,
anekā rūpasambhavā;
Abhijjhā ca vihesā ca,
cittamassūpahaññati;
Evaṁ ācinato dukkhaṁ,
ārā nibbāna vuccati.'

Translation:

"When one sees a form (*rūpa*) without mindfulness (i.e., without knowing that it is just a trace of "seeing"),
one gets attached to that (*nimitta* or *ārammaṇa*),
One experiences it with an infatuated mind (with greed)
And **remains** bound to it.

"Many feelings flourish within,
Originating from the mind thinking about many related *rūpa* (*anekā rūpasambhavā*);
Greed and anger as well
By which one's mind becomes disturbed;
For one who accumulates suffering thus
Nibbāna is far away.

Mālukyaputta Sutta – What Happens If One Does Not Get Attached

11. *Bhikkhu* Mālukyaputta then says the following about how one needs to train oneself to attain *Nibbāna*:

'*Na so rajjati rūpesu,*
rūpaṁ disvā paṭissato;
Virattacitto vedeti,
tañca nājjhosa tiṭṭhati.

Yathāssa passato rūpaṁ,
sevato cāpi vedanāṁ;
Khīyati nopacīyati,
evaṁ so caratī sato;
Evaṁ apacinato dukkhaṁ,
santike nibbāna vuccati.'

Translation:

"When one sees a form with mindfulness (with proper understanding)
One is not inflamed by lust for forms;
One experiences it with a dispassionate mind
And does not hold on to it tightly.

"For one acting mindfully in such a way
Without attaching to the form,
Even while one experiencing those feelings;
Suffering is exhausted, not built up
For one not piling up suffering thus,
Nibbāna is near.

© 2026 Lal A. Pinnaduwage

- **May 4, 2025:** A deeper and detailed analysis of both the *Bāhiya Sutta* and the *Mālukyaputta Sutta* is in "'Diṭṭhe Diṭṭhamattaṁ Bhavissati' – Connection to Saññā."

Next Post

12. From what *bhikkhu* Mālukyaputta stated above, we can see that it is not correct to say that it is "no-self," either. After the "*vipāka* stage" that comes with a new *ārammaṇa* is over, it is possible to "take control" of the sensory experience. **That is possible ONLY IF one comprehends that *anattā* nature is involved in the *vipāka* stage. Without that understanding, one would have *sakkāya diṭṭhi* as the *sutta* points out next.**

- **Aside from those who are anxious to see why it is not correct to say that it is "no-self," either:** At the end of the *vipāka* stage (at the step, "*vedanā paccayā taṇhā*"), a new phase of the sensory experience starts. That is the "*kamma* accumulation" stage. That new phase could last long if the mind is firmly attached to that *ārammaṇa*. One may think about more ways of enjoying that *ārammaṇa*, speak about it, and do things to pursue that *ārammaṇa*. **All those are *saṅkhāra*, and they lead to *kamma viññāṇa* via, "*saṅkhāra paccayā viññāṇa*."**
- However, *Chachakka sutta* starts at the *vipāka* stage (with a sensory experience) and shows how one starts accumulating kamma ONLY IF one has *saṅgati* (if one has the corresponding "*saŋ gati*"). See #2 above. That decision to "get attached" is made at the *votthapana* stage of a *citta vīthi*. See, #15 of "Avyākata Paṭicca Samuppāda for Vipāka Viññāṇa."
- That is what *bhikkhu* Mālukyaputta explained in #10 and #11 above. We will discuss that in detail after finishing the discussion on the *Chachakka Sutta*.
- Details of that "*kamma* accumulation" process will depend on whether one still has *sakkāya diṭṭhi*. That means one does not realize that there is no "self" or "*attā*" involved in that initial sensory experience due to *kamma vipāka*.

10.2.7 Sakkāya Diṭṭhi in Terms of Attā or "Self" or "Ātma"

October 26, 2019; revised November 1, 2019; October 9, 2022

Summary of *Chachakka Sutta* Up to This Point

1. The *Chachakka Sutta* (MN 148) describes in detail what happens when a new *ārammaṇa* (thought object) comes to the mind. The mind may "attach" (*taṇhā*) to that *ārammaṇa* via greed, anger, or ignorance. Let us briefly summarize those steps. All relevant posts are at, "Origin of Life."

- First, depending on the specific internal *āyatana* involved, one of six *vipāka viññāṇa* arises. Those are *cakkhu, sota, ghāna, jivhā, kāya*, or *mano viññāṇa*. Such a *viññāṇa* does not create *kammic* energy. It is just "seeing," "hearing," "smelling," "tasting," "touching," or "recalling a memory or an idea."
- Then the mind "makes contact" with "*saŋ gati*." If one has *gati* to attach to that *ārammaṇa* via greed, anger, or ignorance, then the mind GENERATES corresponding *somanassa, domanassa*, or *upekkhā vedanā*. They are *samphassa-jā-vedanā* or mind-made *vedanā*.
- The mind "attaches" to that *ārammaṇa* if such a "mind-made" *vedanā* arises. One can attach (*taṇhā*) via greed, hate, or ignorance.
- The keyword *ārammaṇa* was introduced in the post, "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event."

The Unique Situation For an *Arahant*

© 2026 Lal A. Pinnaduwage

2. Only the first step happens in an *Arahant*. There is no attachment to any *ārammaṇa*. Only the experience of *kāma guṇa* (such as the sweetness of sugar or the bitterness of lemon) is there. See, "Kāma Guṇa – Origin of Attachment (Taṇhā)."

- However, an *Arahant* would also feel *sārīrika* (bodily) *vedanā* due to injuries, sicknesses, etc. Those are *dukkha, sukha*, or *adukkhamasukha vedanā*. Note that an *Arahant* does not experience *somanassa/domanassa vedanā* (*Samphassa-jā-vedanā*)) based on those *sārīrika* (bodily) *vedanā*.
- **[Note (August 5, 2023):** In the previous versions, I had used the term *kāyika vedanā* to represent *vedanā* felt by the physical body. However, "*kāya*" is used in other contexts, too, for example, as "an aggregate." Furthermore, the following *sutta* specifically used *sārīrika vedanā* to describe the physical pain felt by the Buddha with an injury: "WebLink: suttacentral: *Sakalika Sutta* (SN 1.38)."]
- Anyone other than an *Arahant* MIGHT attach to a particular *ārammaṇa*. Whether or not that attachment happens depends on the "*saŋ gati*." It is not that everyone attaches to every *ārammaṇa*.

Deeper Aspects of the *Chachakka Sutta*

3. We also discussed the "deeper aspects" involved in those steps.

- Only one of the six types of *viññāṇa* arises in mind at any moment due to a specific *ārammaṇa*. When we see, do not hear, smell, taste, touch, or think AT THAT BRIEF MOMENT. That is because only one *citta vīthi* focused on one sensory input can be present at any moment. Put another way, **only one *pasāda rūpa* can contact the *hadaya vatthu* (seat of the mind) at a given time**. The mind analyzes that sensory contact with four *citta vīthi* JUST FOCUSED ON that particular sensory input.
- For example, when the mind analyzes a "packet of sound," it focuses on that sound. The mind DOES NOT and CANNOT see, taste, smell, etc. during that brief time. Thus sensory inputs are analyzed in "packets." Each "packet" is only one of six possible types (sight, sound, taste, smell, touch, or recall of *dhammā*.)
- We analyzed that in terms of recent findings from modern science. The mind takes "snapshots" of each sensory input separated by about a hundredth of a second (10 milliseconds.) Since that happens very fast, we "feel like" we are "seeing continuously." That is an illusion created by the mind, just like we perceive a set of snapshots as a continuous movie. See, "Vision Is a Series of "Snapshots" – Movie Analogy."
- Not only that, but we feel that we are seeing, hearing, tasting, smelling, touching, and thinking simultaneously. But the reality is that the mind receives only one "snapshot" at a time. The mind has the astounding capability to combine "data packets" from the "six doors" without mixing them up!

What is *Ghana Saññā*?

4. The fast mind gives the illusion that there is a "person" or a "self" or an "*attā*" experiencing those sensory events. That incorrect perception is "*ghana saññā*" or a "perception of solidity."

- I had not used the term "*ghana saññā*" previously. It is a word that describes the illusion that the mind creates by taking a series of "snapshots" and linking them together to provide a "continuous sensory experience."
- As we discussed, that happens when we watch a movie too. The illusion of continuous motion results in the projection of a series of "static pictures." See, "Vision Is a Series of "Snapshots" – Movie Analogy."

5. **Any sensory event is just a brief "snapshot." It lasts a brief moment and goes to the past. That is the critical point to understand.** Bāhiya understood that point instantly and attained *Arahanthood*. But he had cultivated the path almost to the end and needed a "little push" to get there. We discussed that in the previous post, "Chachakka Sutta – Six Types of Vipāka Viññāṇa."

© 2026 Lal A. Pinnaduwage

- The mind has the astounding capability to recall preceding "snapshots," and to put it all together to present a "continuous sensory experience." That is why the Buddha called *viññāṇa* a magician.

6. We also have a "*ghana saññā*" about our physical body. We perceive our bodies as solid, but as I have explained in a previous post, our bodies are "mostly empty." That is because those atoms and molecules which make up our bodies are mostly empty. see, #7 – #10 of the post, "Mystical Phenomena in Buddhism? ."

- I keep summarizing the discussion since there is a lot of material embedded in those verses. Now, let us discuss the next verse in the *sutta*.

Next Verse in the *Chachakka Sutta – Sakkāya Samudaya*

We have discussed up to the verse which ends with, "*Iti mano anattā, dhammā anattā, manoviññāṇaṁ anattā, manosamphasso anattā, vedanā anattā, taṇhā anattā.*" Now we are getting to the critical conclusion reached from those earlier verses.

7. The next verse in the *sutta* starts with, "*Ayaṁ kho pana, bhikkhave,* ***sakkāyasamudayagāminī paṭipadā—cakkhuṁ 'etaṁ mama, esohamasmi, eso me attā'ti samanupassati; rūpe 'etaṁ mama,*** *esohamasmi, eso me attā'ti samanupassati*; …"

- *Sakkāya* here refers to *sakkāya diṭṭhi*. *Samudaya* ("*saṃ*" + "*udaya*") means "arising (due to) *saṃ*." *Gāmini* means "path." *Patipada* means an "action plan" or simply one's behavior. Thus, ***sakkāyasamudayagāminī paṭipadā*** means, "**the behavior that leads to the arising of *sakkāya diṭṭhi***."
- **Then it says, *sakkāya diṭṭhi* arises because one believes that "*cakkhu* is mine, *cakkhu* is what I am, *cakkhu* is my "self."**
- The *sutta* then repeats that for all other five entities associated with "seeing." They are *rūpa*, *cakkhu viññāṇa*, *cakkhu samphassa, cakkhu samphassa-jā-vedanā,* and *taṇhā* (that results from *cakkhu samphassa-jā-vedanā.*)
- Then it is repeated for the other five internal *āyatana*: *sota, ghāna, jivhā, kāya, mano.*

Re-cap on the Initial Sensory Experience Due to *Kamma Vipāka*

8. All our discussions on the first half of the *sutta* led to the CRITICAL conclusion in the above verse. In simple terms, "there is no EXPERIENCER" experiencing those initial sensory inputs. As we remember, those INITIAL sensory inputs come in as *kamma vipāka*.

- Let me emphasize this point. Any sensory experience starts without direct initiation by the "experiencer." For example, one FIRST sees an object via "*cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññāṇaṁ."* But that does not happen by chance. It is ALWAYS a *kamma vipāka*.
- **A *kamma vipāka* experienced through the physical body (*kāya*) can be comforting (*sukha*), painful (*dukkha*), or neutral (*adukkhamasukha*).** For example, one gets to lie on a comfortable bed due to a good *kamma* done in the past. A bad *kamma* done in the past leads to an injury. Both happen via "*kāyañca paṭicca phoṭṭhabbe ca uppajjati kāyaviññāṇaṁ."*

9. **All other INITIAL sensory EXPERIENCES START with *adukkhamasukha vedanā*.** We see, hear, smell, taste, or a thought comes to the mind. The last one is, "*manañca paṭicca dhamme ca uppajjati manoviññāṇaṁ*." All those generate *adukkhamasukha vedanā* (neutral feeling).

- **However, based on all six initial sensory contacts, we may instantly generate *somanassa* or *domanassa vedanā* due to *kāma guṇa*.** For example, it is natural for a human (including *Arahants*) to experience an appealing taste when tasting sugar or seeing an attractive person.

© 2026 Lal A. Pinnaduwage

- Based on those are "mind-made" feelings or "*samphassa-jā-vedanā*." They are different from *dukkha/sukha vedanā* associated with sensory contacts with the body (*kāya*.)
- Now, based on such ***somanassa* or *domanassa vedanā* due to *kāma guṇa,*** an average human MAY generate ***samphassa-jā-vedanā***. That will happen IF the mind "get stuck" (*taṇhā*) on that sensory input. Of course, an *Arahant* WILL NOT generate those ***samphassa-jā-vedanā*.**
- That was discussed in, "Kāma Guṇa – Origin of Attachment (Taṇhā)."

Taṇhā Leads to *Upādāna* via *Paṭicca Samuppāda*

10. That is a critical step in *Paṭicca Samuppāda,* not discussed in the *Chachakka Sutta.* That *sutta* explains only the *KAMMA VIPĀKA* stage. That step of "*taṇhā paccayā upādāna*" starts the "new *kamma* GENERATION" process.

- I hope you can see that ALL of our *kamma* generation activities start when a new *ārammaṇa* comes to mind. That starts with the "*salāyatana paccayā phasso*" step in the *Paṭicca Samuppāda* cycle. It is the "*taṇhā paccayā upādāna*" step that starts a new *Paṭicca Samuppāda* cycle with "*avijjā paccayā saṅkhāra*."
- That is a CRITICAL point. I will take the time to explain this "*taṇhā paccayā upādāna*" step. That way, one can get insights into how *Paṭicca Samuppāda* operates. Then one can begin to get an idea of the importance of understanding key concepts of Buddha Dhamma.

A New *Paṭicca Samuppāda* Process Starts Only if One Starts Acting with *Avijjā*

11. Next, The *Chachakka Sutta* states the REASONS why a given person may START to going through the *kamma* generation stage starting with *avijjā*. See, "Chachakka Sutta – Six Types of Vipāka Viññāṇa."

- **One would pursue a given *ārammaṇa* (the sight, sound, etc.) ONLY IF one perceives that it is worthwhile or beneficial to him or her.** That perception comes from the wrong view that those sensory experiences are one's own. As we discussed, that wrong view is *sakkāya diṭṭhi.*
- One with *sakkāya diṭṭhi* does not realize that those experiences are just results of causes from the past. That they are *kamma vipāka*. Then one tries to get control of the situation by either trying to maintain a "good experience" or avoid a "bad experience." **Therefore, it is POSSIBLE for ANYONE with *sakkāya diṭṭhi* to go through the "*taṇhā paccayā upādāna*" step.**
- However, a *Sotāpanna* (who has removed *sakkāya diṭṭhi*) may still do immoral deeds. A *Sotāpanna* would NOT do *apāyagāmī* deeds. But he/she may still do less-strong immoral deeds. That is because a *Sotāpanna* still has wrong perceptions (*viparita saññā*.) **At the *Arahant* stage, one would have removed both wrong views and perceptions.** I will explain this in a future post after concluding the discussion on the *Chachakka Sutta*.

12. **However, not everyone with *sakkāya diṭṭhi* will go through the "*taṇhā paccayā upādāna*" step.** Different people "attach" to different types of *ārammaṇa*.

- For example, if a beautiful woman starts working at a workplace, everyone will see her as beautiful. But only a few will get "attached" and start thinking about asking her for a date. There could even be a person who may "fall in love head over heels" at first sight of her.
- That is why we cannot say there is "no-self" either. Until one attains *Arahanthood*, there will be a "dynamic self" who gets attached to some things in this world. I say a "dynamic self" because there is no "fixed self" in the sense of a soul or a "*ātma*." See "What Reincarnates? – Concept of a Lifestream."

Attachment (*Taṇhā*) Can Happen Due to Greed, Anger, or Ignorance

© 2026 Lal A. Pinnaduwage

13. In the above example, we discussed getting attached to the sight of a beautiful woman. But as we have discussed, one can "attach" to a *ārammaṇa* via anger or ignorance.

- Seeing an enemy, one will instantly generate anger in mind via the steps in the *Chachakka Sutta*. Here, the *samphassa-jā-vedanā* generated is a *domanassa vedanā*. It is a stressful *vedanā*. But still one "attaches" to that *ārammaṇa*, and will start making bad *vacī saṅkhāra* (i.e., conscious thoughts of anger) in mind.
- On the other hand, the *samphassa-jā-vedanā* generated in the example discussed in #12 above (upon seeing a beautiful woman) is a *somanassa vedanā*. That person is "attached" via greed.
- In some situations, there could be confusion on how to respond to a *ārammaṇa* and still get "stuck." That is due to *avijjā*.

Taṇhā Leads to *Upādāna* Depending on One's Level of *Avijjā*

14. Having one or more of the following views leads to *sakkāya diṭṭhi*.

- The physical body (*kāya*) is mine, it is what I am, and it is my "self." Furthermore, all associated bodily functions are mine; they are what I am and my "self." Those are: seeing or *cakkhu*, hearing or *sota*, tasting or *jivhā*, smelling or *ghāna*, touching or *kāya*, and thinking or *mana.* See #6 above.
- Then one also tends to associate some external *rūpa* the same way. Those are *rūpa rūpa* (or *vaṇṇa rūpa* or simply *rūpa*), *sadda rūpa, gandha rūpa, rasa rūpa, phoṭṭhabba rūpa*, and *dhamma rūpa* or *dhammā*. For example, "this is my house; my song; this is my cake; my favorite scent; my comfy bed; these are my thoughts."
- One may also perceive that all of one's mental aspects (*cakkhu viññāṇa*, *cakkhu samphassa, cakkhu samphassa-jā-vedanā,* and *taṇhā*) are all one's "self." Of course, the same with other mental aspects associated with other sense faculties. There are 36 (6 X 6) such entities that the *sutta* lists. See, "Chachakka Sutta – Six Types of Vipāka Viññāṇa."

Pañcupādānakkhandhā as *Sakkāya Diṭṭhi*

15. Those 36 entities are also known as "*pañcupādānakkhandhā*." **Here, *Pañcupādānakkhandhā* comes from *"pañca"* + *"upādāna"* + *"khandha"* or the five aggregates, to which one gets attached.** See "Chachakka Sutta – Six Types of Vipāka Viññāṇa."

- If you carefully look at those 36 entities, they include *rūpakkhandha, vedanākkhandha, saññākkhandha, saṅkhārakkhandha*, and the *viññāṇakkhandha*. However, one does not consider all of those to be "mine." For example, out of all the houses in this world, one may claim to own one or a few homes. Out of all humans, one may have a set of people that one considers "mine." For example, my parents, wife, children, friends, etc.
- Therefore, only a tiny fraction of the *pañcakkhandha* one has "attachments to." Those attachments can vary from very strong (my body is the strongest) to decreasing levels for friends, neighbors, etc.
- Thus, *pañcupādānakkhandhā* is a small fraction of the *pañcakkhandha*.
- The "WebLink: suttacentral: *Sakkāyapañhā Sutta* (SN 38.15)" **DEFINES *sakkāya* as *pañcupādānakkhandhā***: "'*Sakkāyo, sakkāyo'ti, āvuso sāriputta, vuccati. Katamo nu kho, āvuso,* ***sakkāyo****"ti? "****Pañcime, āvuso, upādānakkhandhā sakkāyo*** *vutto bhagavatā, seyyathidaṁ—rūpupādānakkhandho, vedanupādānakkhandho, saññupādānakkhandho, saṅkhārupādānakkhandho, viññāṇupādānakkhandho. Ime kho, āvuso, pañcupādānakkhandhā sakkāyo vutto bhagavatā"ti.*

Other Ways of Describing *Sakkāya Diṭṭhi*

© 2026 Lal A. Pinnaduwage

16. It is possible to describe *sakkāya diṭṭhi* in somewhat different ways. However, all of those are inter-consistent. The following posts discuss some of those. Please let me know if you find any inconsistencies (lal@puredhamma.net) or we can discuss it at the discussion forum.

- Sakkāya Diṭṭhi – "Not Seeing the Unfruitful Nature of the World"
- Sakkāya Diṭṭhi and Tilakkhana
- Sakkāya Diṭṭhi – Getting Rid of Deeper Wrong Views

Wrong Views of *Nicca* and *Sukha* Lead to the Wrong View of *Attā*

17. **One gets attached to things one perceives to be *nicca* and *sukha*.** *Nicca* (pronounced "nichcha") means we believe we can keep them in the way we want or like. *Sukha* means we think we will be happy by getting "ownership" of them.

- Then one takes "ownership" of them. One considers those to be "one's own" or "*attā*." That attachment can vary from very strong to less intense. One's own body and mental qualities (*vedanā, saññā, saṅkhāra, viññāṇa* regarding one's own body) give the strongest sense of *attā*.
- Then comes one's spouse, children, house, cars, etc., relatives and friends, etc.
- Therefore, the hardest thing to remove is the sense of *attā* about one's body.
- IT CANNOT be removed by willpower. It comes only from understanding this world's *anicca*, *dukkha*, and *anatta* nature. What we discussed up to now plays a significant role in that understanding. There is no "experiencer." A sensory input comes in as a result (*kāma vipāka*) of a previous cause (*kamma*.)

10.2.8 An Apparent "Self" Is Involved in Kamma Generation

November 2, 2019; revised November 6, 2019; September 10, 2022; October 14, 2022 (#18); February 3, 2023

Introduction

1. Here, we will discuss why someone with *sakkāya diṭṭhi* believes in a "self" (knowingly or unknowingly) and **accumulates *kamma* with that wrong view**.

- In previous posts in this series, we discussed why there is no "Experiencer." Thus, there is no need for the existence of a "self" to describe an INITIAL sensory experience.
- However, anyone with *sakkāya diṭṭhi* has the wrong view of a "self" experiencing sensory inputs. Based on that mistaken view, steps are taken to maintain a "good experience" or to stop a "bad experience." Therefore, we could say there is a wrong view of a "Doer" as long as there is *sakkāya diṭṭhi*. **That is why it is incorrect to say that there is "no-self" either.**
- That does not mean we do not need to take action to prevent bad outcomes. The key idea is to realize the unfruitfulness of doing immoral deeds (including conscious thoughts and speech) in response to sensory inputs.
- The *Chachakka Sutta* (MN 148) describes in detail what happens when a new *ārammaṇa* (thought object) comes to the mind. **The mind may "attach" (*taṇhā*) automatically** to that *ārammaṇa* via greed, anger, or ignorance. Let us briefly summarize those steps. It is critical to follow these steps. All relevant posts are at "Worldview of the Buddha." The main subsection is "Origin of Life."

Posts on the Background Material

© 2026 Lal A. Pinnaduwage

2. In earlier posts, we discussed that INITIAL sensory experiences DO NOT require a "self." However, they do not happen arbitrarily or randomly either. Those sensory experiences have causes (or reasons); they are *kamma vipāka*.

- Some *kamma vipāka* bring in suffering, such as injuries, sickness, etc., while other *vipāka* results in pleasurable experiences, such as good food, comfortable living, etc. Those are ALL experienced via the physical body (*kāya*.) They are NOT illusions. There is real suffering (and some pleasures too.)
- All other INITIAL sensory experiences do not DIRECTLY lead to pain or pleasure. Seeing, hearing, smelling, tasting, and recalling memories are "neutral" sensory experiences at that moment.

3. However, based on those sensory inputs, *somanassa* or *domanassa vedanā* arise automatically in mind. Those are "mind-generated" *vedanā* based on "*kāma guṇa*." All humans (including *Arahants*) experience the sweetness of sugar or bitterness of some medicines. These are not "*samphassa-jā-vedanā*." However, for others, "*samphassa-jā-vedanā*" arise due to such *somanassa* or *domanassa vedanā*. See "Kāma Guṇa – Origin of Attachment (Taṇhā)."

- Thus, based on *somanassa* or *domanassa vedanā* due to "*kāma guṇa*," a given person may attach (*taṇhā*) to that particular sensory event (*ārammaṇa*) and generate *samphassa-jā-vedanā*. Only an *Arahant* is guaranteed not to attach.
- That is the summary of about a fourth of the Pāli text in the *Chachakka Sutta* (MN 148). That completes the six sets of six.

No "Self" Involved in the Initial Sensory Experiences

4. As we have discussed, the next verse in the *sutta* is, "'*Cakkhu attā'ti yo vadeyya taṁ na upapajjati.* ***Cakkhussa uppādopi vayopi paññāyati.*** *Yassa kho pana uppādopi vayopi paññāyati, 'attā me uppajjati ca veti cā'ti iccassa evamāgataṁ hoti.* ***Tasmā taṁ na upapajjati: 'cakkhu attā'ti yo vadeyya****. Iti cakkhu anattā*."

Loosely translated: "If anyone says, '*cakkhu* is self,' (or "seeing" is mine or "it is I who sees") that is not tenable. **An arising and ceasing of *cakkhu* (not the physical eye) is evident.** If *cakkhu* is 'self,' that would imply the following: 'my self arises and ceases' OR 'I come into being momentarily and cease to exist.' **That is why one cannot argue that '*cakkhu* is self.'** Thus *cakkhu* is 'not-self' or '*anattā*." ("*na attā*" for "not *attā*" rhymes as "*anattā,"* just as "*na āgāmī*" rhymes as "*Anāgāmi."*)

- Then the next fourth of the Pāli text in the *Chachakka Sutta* (MN 148) states that the above conclusion holds for all 36 entities ("six sets of sixes") involved in the initial sensory experience. Six **internal *āyatana***, six **external *āyatana***, six classes of **(*vipāka*)** *viññāṇa*, six classes of ***phassa***, six classes of ***vedanā***, six classes of ***taṇhā***.
- See, "Chachakka Sutta – Six Types of Vipāka Viññāṇa" for details on that.
- Then we discussed the following verse in the sutta starting with, "*Ayaṁ kho pana, bhikkhave,* ***sakkāyasamudayagāminī paṭipadā..***"

Attā Translated as "Self" Is Not Correct

5. The Pāli word "*attā*" does not mean "self," even though I used that translation above. That translation is quite common these days. **We will go with that until we finish discussing *Paṭicca Samuppāda* because it does help to get the idea of *sakkāya diṭṭhi* across below.** If I try to discuss the real meaning of *attā* right now, that could lead to confusion.

That is why the Buddha refused to answer Vaccagotta's question about whether or not there is an "*attā*." See "WebLink: suttacentral: *Ānanda Sutta* (SN 44.10)."

© 2026 Lal A. Pinnaduwage

- Vacchagotta comes to the Buddha asked "*kiṁ nu kho, bho gotama, atthattā" ti?*" OR "Master Gotama, is it correct to say that there is an "*attā*"?".
- **Note that "*atthattā*" is "*atthi attā*" where "*atthi*" means "exists." Vacchagotta meant in this case "*attā"* to be "self."** Thus, Vacchagotta meant: "Is it correct to say that a "*self*" exists?"
- The Buddha remained silent, and Vacchagotta asked the question in the negative form. The second time, he asked: "*Kiṁ pana, bho gotama,* ***natthattā***" *ti?*" or, "Master Gotama, is it **not** correct to say that there is a "self"?". The Buddha refused to answer his question, so Vacchagotta got up and left.
- **Note that "*natthattā*" is made up of three words: "*na atthi attā,*" which negates "*atthattā*."** Just as these days, many people are confused about the Pāli word "*attā*" and the Sanskrit word "*ātma*." The latter meaning is closer to a "soul"
- I will discuss this *sutta* when I will discuss "*attā*" in detail, after discussing *Paṭicca Samuppāda.* By the way, Vacchagotta understood the concept later on and became an *Arahant* too.

The Origin of the Wrong View of *Sakkāya Diṭṭhi – Sakkāya Samudaya*

6. The *sutta* then states that the wrong view of *sakkāya diṭṭhi* arises BECAUSE one does not realize the above facts. Without knowing those facts, one tends to BELIEVE that a "self" is experiencing those first sensory events.

- Then, if it were a "good experience," one would try to maintain that pleasant experience and also plan to experience it again in the future. In the case of a "bad experience," one would do the opposite to avoid such "bad experiences."
- The more one engages in either activity, the wrong VIEW of a "self" (*sakkāya diṭṭhi*) grows.

7. That explanation is in a short verse starting with, "*Ayaṁ kho pana, bhikkhave,* ***sakkāyasamudayagāminī paṭipadā—cakkhuṁ 'etaṁ mama, esohamasmi, eso me attā'ti samanupassati; rūpe 'etaṁ mama, esohamasmi, eso me attā'ti samanupassati***; …"

- We discussed this verse in detail in the last post, "Sakkāya Diṭṭhi in Terms of Attā or "Self" or "Ātma."
- So far I have summarized the discussion up to now. Now, we can discuss the next verse of the *sutta*.

Next Verse in the *Chachakka Sutta – Sakkāya Nirodhaya*

The verse in #7 above explains how *sakkāya diṭṭhi* ARISES. The new verse below explains HOW *sakkāya diṭṭhi* WILL STOP FROM ARISING.

8. The next verse in the *Chachakka Sutta* (MN 148) starts with, "*Ayaṁ kho pana, bhikkhave,* ***sakkāyanirodhagāminī paṭipadā—cakkhuṁ 'netaṁ mama, nesohamasmi, na meso attā'ti samanupassati. Rūpe 'netaṁ mama, nesohamasmi, na meso attā'ti samanupassati***…"

The word ***Nirodha*** comes from "*nir*"+"*udaya,"* where "*nir*" means to stop and "*udaya*" means "arise." Thus *nirodha* means to prevent something from arising.

- *Gāmini* means "path." *Paṭipadā* means an "action plan" or one's behavior. Thus, ***sakkāyanirodhagāminī paṭipadā*** means, "**the behavior that leads to STOPPING the arising of *sakkāya diṭṭhi*.**"
- **Then it says, that will happen when one "SEES" that "*cakkhu* is NOT mine, *cakkhu* is NOT what I am, *cakkhu* is NOT my "self."** Here, "*netaṁ*" means "*na*" + "*etaṁ*" or "it is not."
- That is because, in reality, there is no "self" or a "soul" or a "*ātma*" that is associated with a living being. The sensory experiences arise due to past causes. Yet, we cannot explain the response of an average human to those sensory experiences without the assumption of a "self." The response of an average

© 2026 Lal A. Pinnaduwage

human to such sensory inputs can only be explained by taking into account his/her mindset of believing in a "self."

- (Once we discuss ***Paṭicca Samuppāda,*** it will become clear why future suffering arises BECAUSE of that wrong view of *sakkāya diṭṭhi*. **That is how *sakkāya diṭṭhi* can be removed. Only then can we also understand the real meaning of *atta*/*attā* (and *anatta*/*anattā*.)** I do not want to get into that issue right now because that will confuse many people.)

9. The *sutta* repeats that for all other five entities associated with "seeing." They are *rūpa*, *cakkhu viññāṇa*, *cakkhu samphassa, cakkhu samphassa-jā-vedanā,* and *taṇhā* (that results from *cakkhu samphassa-jā-vedanā*.)

- Then it is repeated for the other five internal *āyatana*: *sota*, *ghāna*, *jivhā*, *kāya*, and *mano*. Please go through those verses.
- **However, it may NOT be easy to "see" that no "self" is involved in sensory experiences.** We have had the wrong view of *sakkāya diṭṭhi* virtually forever! That is why we are in this never-ending rebirth process.
- **To remove that strong *diṭṭhi*, we need to see the "true nature," i.e., we need to cultivate "*yathābhūta ñāṇa*."** A big part is realizing that there is no "experiencer," as we have discussed in detail using the movie analogy. There are only causes and results. But, of course, the feelings are real; any suffering is real. But those results are according to the causes AND conditions at the time of bringing the results. That is *Paṭicca Samuppāda*. See, "Vision Is a Series of "Snapshots" – Movie Analogy."
- We will focus on that in detail in upcoming posts. However, this *sutta* briefly states the primary process.

Sakkāya Nirodhaya Starts With *Vedanā*

10. The key to arriving at that UNDERSTANDING is stated in the following verse of the *sutta*, starting with, "*Cakkhuñca, bhikkhave, paṭicca rūpe ca uppajjati cakkhuviññāṇaṁ, tiṇṇaṁ saṅgati phasso, phassapaccayā uppajjati* ***vedayitaṁ*** *sukhaṁ vā dukkhaṁ vā adukkhamasukhaṁ vā*."

Translated: "*Bhikkhus*, dependent on the eye and forms, eye-consciousness arises; then the mind makes contact with "*saṇ gati*"; that contact with "*saṇ gati*" leads to the arising of "mind-made" feelings **felt as** pleasant or painful or neither-painful-nor-pleasant."

- Regardless of the sense faculty, those "mind-made" *vedanā* or "***samphassa-jā-vedanā***" CAN ARISE based on *kāma guṇa* AND one's *gati*.
- We discussed this part of the verse already in the posts, "Indriya Make Phassa and Āyatana Make Samphassa," "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event," and "Kāma Guṇa – Origin of Attachment (Taṇhā)."

Getting Attached to *Vedanā* Leads to the Growth of *Anusaya*

11. Then the subsequent verses introduce a critical word, ***anusaya***. Based on ***sukha vedanā*, *dukkha vedanā*, and *adukkhamasukha vedanā*, three corresponding types of *anusaya* result: *rāgānusaya*, *paṭighānusaya*, and *avijjānusaya*.**

- Let us start with the verse that explains the origins of ***rāgānusaya:* "*So sukhāya vedanāya phuṭṭho samāno abhinandati abhivadati ajjhosāya tiṭṭhati. Tassa rāgānusayo anuseti*."**
- **Translated:** "When one experiences a ***sukha vedanā***, if one delights in it, welcomes it, and thinks and speaks highly of it, gets absorbed in it, then the underlying tendency for *rāga* (***rāgānusaya***) gets stronger (i.e., *rāgānusaya* will grow)."
- Here, *rāgānusaya* comes from "*rāga*" + "*anusaya*." Now we need to get an idea about the meaning of *anusaya* first.

© 2026 Lal A. Pinnaduwage

What is *Anusaya*?

12. ***Anusaya*** is usually translated as "**latent tendencies**." That does give the basic idea. Such "latent tendencies are in our *gati*. *Anusaya* and "*gati*" are closely related. See, "The Law of Attraction, Habits, Character (Gati), and Cravings (Asavas)" and "Āsava, Anusaya, and Gati (Gathi)."

- Everyone has a set of *gati* (habits/character qualities). Each person has his/her own set of things/activities that she likes and dislikes. Some of these are not moral or immoral.
- But we also have moral (ethical) *gati* and corrupt (bad) *gati*. Here moral/immoral have a wide range, and we will discuss that later. But those deeds have *kammic* consequences. Those are the *gati* that are relevant.

13. **By the way, notice that now we are talking about a "person" or a "self" who has *sakkāya diṭṭhi* (and *gati* and *anusaya*)!** That is why it is incorrect to say that there is "no-self" either.

- When we keep doing what we are used to, that habit will only GROW. That also means ***anusaya*** will grow and that growth due to the activity is "***anuseti.***"
- *Arahants* do not have moral/immoral *gati* but *kammically* neutral *gati* (habits). Such practices include doing things in specific ways.

Rāga Anusaya Grows by Getting Attached to Mind-Made *Sukha Vedanā* or *Somanassa Vedanā*

14. What the *sutta* states in verse #10 are the following. When a "pleasing *ārammaṇa*" comes to the mind, it may delight in that *ārammaṇa*. If so, it will welcome that *ārammaṇa* and "get absorbed in it." That means the person would think highly about it, speak highly about it, and act on it to sustain that *ārammaṇa*.

- For example, if X sees an object that X likes, X will keep looking at it and start thinking about how good it is. X may tell another how good it is. Even later on, X may plan to experience that sight again. Those activities involve *vacī* and *kāya saṅkhāra*.
- That is how the *Paṭicca Samuppāda* starts with "*avijjā paccayā saṅkhāra*" and "*saṅkhāra paccayā viññāṇa*."
- Here, *avijjā* is the ignorance of believing that there is a "self" experiencing that sensory input.

Those *Viññāṇa* Are *Kamma Viññāṇa*

15. We remember that there could be six types of *viññāṇa* in the INITIAL sensory event that takes place due to *kamma vipāka*. Those are *cakkhu*, *sota, ghāna, jivhā, kāya,* or *mano viññāṇa.* They are ALL *vipāka viññāṇa*, which makes one aware of the sensory input.

- **However, *viññāṇa* in "*saṅkhāra paccayā viññāṇa*" generates *kamma viññāṇa*.** Such *saṅkhāra* are specifically *abhisaṅkhāra*. Such *kamma viññāṇa* can ONLY be *mano viññāṇa*, i.e., they involve only the mind. They have embedded energy because that person has decided to take further steps to enjoy that sensory experience again and again.
- In the *Abhidhamma* language, *saṅkhāra* have *javana* power. They create *kammic* energy for that *kamma viññāṇa.*
- In other words, that "person" has to spend time and effort to enjoy that sensory experience again. He has now created a "*kamma bīja*" or expects a specific outcome.

16. For example, if a person X saw and "attached" to an expensive item in a store, X would talk about it with the spouse and make plans to come up with the money to pay for it. Until X buys that item, that "*viññāṇa*" will be there. The critical point here is that X already HAD a *rāga anusaya* for it, and by engaging in those follow-up activities, X "added" more energy to that. That addition is "*anuseti*."

© 2026 Lal A. Pinnaduwage

- Different people have different types of *anusaya*. That is why not everyone attaches to a given *ārammaṇa*. Furthermore, each person's levels of *anusaya* CAN change with time. That *anusaya* can be REMOVED too, which is the way to *Nibbāna*.
- As you can imagine, the other two types of *anusaya* will "build up" the same way. With a "bad" *ārammaṇa*, *dosa* or anger arises, and *paṭighānusaya* (*paṭigha anusaya*) strengthens.
- Finally, the ***avijjānusaya*** (*avijjā anusaya*) builds up when acting with *avijjā*. We will discuss more of that in the next post.

Difference Between *Diṭṭhi Vipallāsa* and *Saññā Vipallāsa*

I do not want to leave this post without clarifying the following point.

17. In the discussion forum at puredhamma.net, a legitimate question was asked: "Since a *Sotāpanna* has removed *sakkāya diṭṭhi*, why is that a *Sotāpanna* would still value sensory pleasures, and may even commit some immoral deeds?"

- As we know, a *Sotāpanna* is incapable of doing ONLY "*apāyagāmi*" deeds that could lead to rebirths in the *apāyā* (plural of *apāya*.)
- There is a difference between "SEEING" (*diṭṭhi*) the real nature of this world and having corresponding PERCEPTIONS (*saññā*) about that real nature. It is essential to understand what is meant by *saññā;* see "Saññā – What It Really Means."
- The Pāli word "*vipallāsa*" means "confusions" or "distortions." Wrong views lead to *diṭṭhi vipallāsa* and wrong perceptions lead to *saññā vipallāsa*. More details at "Vipallāsa (Diṭṭhi, Saññā, Citta) Affect Saṅkhāra."
- With that terminology, a *Sotāpanna* has removed *diṭṭhi vipallāsa* but still has *saññā vipallāsa*.

18. In other words, the wrong views about a "self" (*sakkāya diṭṭhi*) go away at the *Sotāpanna* stage. But the perception of a "self" (*asmi māna*) goes away in stages and disappears only at the *Arahant* stage.

- *Saññā vipallāsa* goes away at the *Anāgāmi* stage, and *citta vipallāsa* (together with *asmi māna*) is removed at the *Arahant* stage. See "Vipallāsa (Diṭṭhi, Saññā, Citta) Affect Saṅkhāra."
- **That is also why we CAN NOT say that "there is no-self."** Until the attainment of *Arahanthood*, there is a perception of a "self."
- **The critical point is that It is wrong to approach the analysis of sensory experiences based on a "self" or "no-self." Instead, we can explain everything regarding causes and effects or *Paṭicca Samuppāda*.**
- Then it will also become clear that the Pāli word "*attā*" does not really mean a "self" or a "soul" or a "*ātma*."

11.1 Dhamma and Philosophy – Introduction

1. One may ask the question: "What does Buddhism have to do with philosophy?".

The Merriam-Webster online dictionary defines philosophy as:

- the study of ideas about knowledge, truth, the nature and meaning of life, etc.
- a particular set of ideas about knowledge, truth, the nature and meaning of life, etc.
- a set of ideas about how to do something or how to live

Other dictionaries and books define philosophy in a similar manner.

2. The origin of the word "philosophy" comes from the Greek words "phila" (meaning love) and "sophia" (meaning wisdom). Thus philosophy is "love of wisdom". It is said that Pythagoras (570 BCE) coined the term, and that is the basically the time the Western philosophers started looking for "natural explanations" instead of accepting that a Creator needed to be invoked to explain phenomena that we see around us.

- This method of "acquiring knowledge" was supposed to be based on reason, argument, and observation. **But as we discuss at this website, any knowledge gained by that method is necessarily limited, because we have senses faculties that are very limited, and whatever deductions we make with unpurified minds are faulty and incomplete**; see, "Dhamma and Science" section for an introduction. Science actually branched off from philosophy, first as "natural philosophy".
- Therefore, Buddha Dhamma has a lot to say about philosophy, even though there is no such thing as "Buddhist philosophy"; there is only "Buddha Dhamma" which describes the nature. The Buddha did not speculate on anything like philosophers. He said he experienced everything that he taught. One time a *Brahmin* asked the Buddha whether he believed *devas* and hell beings exist. The Buddha said he KNOWS they exist and could see those beings.
- Buddha Dhamma can sort out the philosophical arguments that have gone back to the Buddha's time (in the Western world); philosophical views have evolved over the intervening time, but Buddha Dhamma has not. Ironically, "the pure form of Dhamma" had been left out of the discussion mainly because "Mahāyāna forefathers" like Nagarjuna, Asanga, and Vasabandhu made up a "Buddhist philosophy".

3. Since Buddha Dhamma is a complete set of nature laws only for its faithful followers, it is logical to present it as a philosophy to those who are not familiar with it or who have not seen enough evidence to believe that claim. In presenting Buddha Dhamma as a philosophy the second definition is a more valid one, because these are not evolving ideas; rather, they were laid down 2500 years ago, and have been documented in the *Tipiṭaka*, the Pāli Canon.

- It is a set of ideas about knowledge and truth not only about human existence, but ALL that exists in the seen and unseen parts of "this world", which also encompasses not only the Solar system, but an infinite number of such planetary systems.
- This may sound as an arrogant claim, but it is not. One could scan different sections of this site and see that there is a complete theory about the whole existence; it may take another year or more to get even the "basics" of the Dhamma published. As of mid-2015, I have not yet been able to present even a fraction of the Abhidhamma material.

4. My basic incentive for creating this section is to make a request to the philosophy community: It is time to take a close look at Buddha's world view, and see how it compares with existing philosophical arguments on various topics. No one has done a serious study on the worldview of the Buddha.

- It has been difficult to make a true assessment of what the "real Buddha Dhamma"is, because there are so many different versions out there.

© 2026 Lal A. Pinnaduwage

- I hope to make a logical presentation to convince the philosophy community. Please make any comments/requests, and I will try to address any serious request.

5. Perhaps as important, I want anyone reading the site to appreciate the significance of what the Buddha told us 2500 years ago. Compared to the pure Dhamma, all philosophical theories are at very early stages. Any interested reader can learn about the current philosophical arguments (and those going back to the early Greek philosophers) and then compare with Buddha Dhamma presented at this site.

6. Within the framework of the Buddha Dhamma all standard philosophical questions have been answered.

- These include, "the relation between the brain and mind", "the nature of death", "whether we have free will", etc. Thomas Nagel's short book listed below gives an introduction to some of such topics.
- Most existing literature on Buddhist philosophy says some of these questions are in the category of "questions that the Buddha refused to answer", which itself is an incorrect statement; see, "Misconceptions on the Topics the Buddha "Refused to Answer". The Buddha refused to answer questions posed by a person who was not capable of comprehending the answers. But he has given the answers in other places.
- We will discuss how Buddha Dhamma provides answers to these philosophical questions one by one, as sufficient background material is added to site.

REFERENCES

For those who are interested on the subject, here are some references (both for philosophy in general and also on "Buddhist philosophy"; not in any particular order). Among those on "Buddhist philosophy", I have not read a single book that provides a true description of the Buddha's world view.

For those who are not familiar with the subject, I would recommend the first two introductory books on philosophy:

"What does it all mean?" by Thomas Nagel (1987) – Excellent introductory book and only 100 pages.

"The Making of a Philosopher", by Colin McGill (2003) – Another excellent introductory book.

"Buddhist Philosophy – Essential Readings", ed. by William Edelglass and Jay L. Garfield (2009).

"Mahāyāna Buddhism: The Doctrinal Foundations", by Paul Williams (2009)

"Buddhism as Philosophy", by Mark Siderits (2007).

"Buddhist Philosophy – A Historical Analysis", by David J. Kalupahana (1976).

"Causality: The Central Philosophy of Buddhism", by David J. Kalupahana (1975).

"A History of Buddhist Philosophy", by David J. Kalupahana (1992).

"Nagarjuna – The Philosophy of the Middle way", by David J. Kalupahana (1986).

"Causality and Chance in Modern Physics", by David Bohm (1957).

"Conversations on Consciousness", by Susan Blackmore (2006) – input from a number of philosophers.

"Mind – A Brief Introduction", by John R. Searle (2004).

"The Character of Consciousness", by David J. Chalmers (2010).

"Consciousness Explained", by D. C. Dennett (1991).

"The Quest for Consciousness: A Neuroscientific Approach", by C. Koch (2004).

"Rocks of Ages: Science and Religion" by Stephen Jay Gould (2002).

"The Self and Its Brain", by Karl R. Popper and John C. Eccles (1977).

Next, "Philosophy of the Mind", …….

© 2026 Lal A. Pinnaduwage

11.2 Philosophy of the Mind

1. One nice thing about Buddha Dhamma is that there are no separate theories for the mind, meaning of existence, the physical world, or ANYTHING in this world. Thus I can refer to the section on "Buddha Dhamma" when I talk about the mind, the same way I refer to that section when I discuss "Dhamma and Science."

2. There seems to be three basic problems that the philosophers are trying to tackle regarding the mind (there are many others, but let us start with these):

- How does the mental experience arise in a physical body? Most scientists and philosophers say that it originates in the brain, but they have not been able to make the connection. This is the "mind-body problem".
- How can non-physical mental states of consciousness cause something in the physical world? For example, how can your intention ever cause a movement of your hand? This is the "problem of mental causation". Yet, the case for "physicalism" — that everything in this world is matter-based — is made with this as a premise.
- Finally, how your thoughts refer to something that is happening (or happened) in a distant city? This is called the "problem of intentionality". If you are thousand miles away from home, you can take "tour" of the home, room by room, in your mind.

3. The philosophers are divided into two camps in addressing the above problems:

- One camp says the "physical" and "mental" are two distinct realms. They do not think "mental" can arise from 'physical"; This camp is mostly religious and attribute the "mental" to the concept of a "soul". They are "dualists".
- The other camp is 'materialistic": they say the 'mental" arises from "physical". In the worst case, some materialists deny even the existence of a mental reality, even though I cannot quite understand what that means. Because they are obviously thinking about these concepts, which is "mental".

4. Let us look at the current status of these two camps:

- Following the extreme dualism of Rene Descartes, there have been many dualists, including Stephen Jay Gould whose "non-overlapping magisteria" in the late 1990's put matter and mind into non-overlapping disciplines: matter can be handled by science and morality and mind can be left to religion. However, these days only dualists left seem to be those who hold a dualist view for religious reasons, i.e., a soul.
- These days most philosophers are materialists. With the amazing progress of science and technology, it is hard for most people to believe anything that is not "confirmed' by science. And they think science, based on a purely materialistic approach, should be able to explain everything about 'this world". They believe that it is only a matter of time before brain activity will be able to explain the workings of the mind; see the reference list in "Dhamma and Philosophy – Introduction."
- The inadequacy of the materialist approach is detailed in a comprehensive manner by Thomas Nagel in his recent book, "Mind and Cosmos" (2012); it is an easy read with no fluff and only 128 pages. I was impressed by how close he came to advocating a "mind first" approach, just like in Buddha Dhamma (apparently he does not know anything about Buddha Dhamma and does not even mention it).

5. **Mind is the ultimate cause of everything in this world. The Buddha said, "*mano pubbangama dhamma, mano setta manomaya*…". "Mind precedes all dhamma, all dhamma are mind made…". But Buddha's is not a dualist world view. Mind and matter are intimately connected.**

- This is in sharp contrast to both the "dualistic" and "materialistic" views.
- Most people translate the above Pāli verse as, "mind precedes all mental phenomena….." So, we need to examine what "dhamma" means here.

© 2026 Lal A. Pinnaduwage

- Dhamma explains how anything and everything in this world comes about "dhamma" means "to bear" or "to explain" or "how anything "comes about". Nothing happens without (multiple) causes.
- In the *Sabba Sutta*, the Buddha clearly defines what "*sabba*" or "all" that in "in this world": It is everything that can be experienced via the five physical senses and the mind. Specifically, eye and visible objects, ear and sound, nose and smells, tongue and tastes, body and touch, and the mind and concepts (these are the six internal and corresponding six external "*āyatanas*"), this is "the all".
- Is there anything that is not included within those 12 *āyatanas*? There is nothing else in the whole world that is not included in those 12 *āyatanas*. Six of those are "internal"; eye, ear, nose, tongue, body, and mind, and the other six are external, they exist "out there".
- Therefore, it is NOT correct to say that "dhamma" in the above verse includes only mental phenomena, as many translators of the *suttā* have done. This is why I keep saying that we need to check consistency all the time. If one thing is not defined properly, then that error propagates and lead to contradictions.
- This "all" can also be expressed as the 31 realms of existence; of those 31 realms, normal humans experience only two realms (human and animal); see, "The Grand Unified Theory of Dhamma". But it is possible to experience other realms via developing mental power, i.e., *jhānā*: see, "Power of the Human Mind – Introduction" and the follow-up posts. Thus, the Buddha's world view is much more expansive than the ones that are subjected to current scientific and philosophical investigations.

6. According to Buddha Dhamma, the ultimate realities in this world are just 28 types of *rūpa* (matter), *citta*, and 52 types of *cetasika*. Then different combinations of the *cetasika* in *citta* gives rise to 89 (121) types of *citta*.

- Of course *citta* and *cetasika* constitute the mind, and 28 types of *rūpa* constitute matter.
- Another way to state the same thing is in terms of the six *dhātus*: *pathavi, āpo, tejo, vāyo, ākāsa* (space), and *viññāṇa*. The 28 types of *rūpa* mentioned above (including *ākāsa dhātu*) are derived from the *cattāro mahā bhūta*: *pathavi*, *āpo*, *tejo*, *vāyo*. *Viññāṇa* constitutes of *citta* and *cetasika*.
- All inert things and plants in this world (31 realms) are made of *rūpa*. All sentient beings "are made of" *rūpa* and have *viññāṇa* (*citta* and *cetasika*), i.e, a mind.
- As I will explain in a separate post, *rūpa* are ultimately caused by the mind; see, "The Origin of Matter – Suddhaṭṭhaka." But rūpa are inherently unstable (this is basically the root cause for suffering in the material world), and there is a fundamental law in physics which states the fact that matter is unstable and the universe itself "runs down"; see, "Second Law of Thermodynamics is Part of Anicca!."
- When the mind is released from the material body, one attains *Nibbāna,* i.e., one is never reborn "in this world". It is the material body that is subject to decay and death, and lead to suffering.

7. The reason that I started this website is that it is not possible to provide a reasonable explanation of the Buddha's world view in an essay or even in several essays. At the website, I can make references to related posts. I hope it would be a rewarding experience for anyone who is willing to allocate some time to read AND contemplate.

- Another reason to start the website is that I want to have it all out in the open, so anyone can challenge any inconsistency. I want to find the truth myself, and the only way to do that is to get as many as possible to look at the emerging picture and make corrections to any errors anyone can find.
- Therefore, I would appreciate any comments pointing to any errors or inconsistencies anywhere on the site, in addition to suggestions for relevant topics to discuss.
- There is more to follow. This is an introduction.
- How "physical" arises from "mental" in the most fundamental sense is really complex and we may not get to that for a while. First we will concentrate on how physical bodies of the living beings arise *with causes from* the "mental". I will be building up the Abhidhamma section and then will refer frequently to that section as we proceed.

© 2026 Lal A. Pinnaduwage

8. It is time to make a paradigm change: Consciousness is not only ontologically fundamental, it takes precedence over matter. Mind can create matter. Right now we have evidence that the mind can change the brain; see, "Truine Brain – How the Mind Rewires the Brain via Meditation/Habits." **If the brain creates the mind, how can the mind alter the brain?**

9. Here are a couple of papers on the subject related to the "mind body problem" for those who are interested (click on them to open):

© 2026 Lal A. Pinnaduwage

11.3 Is Buddha Dhamma (Buddhism) a Religion?

October 21, 2015; revised November 8, 2015; rewritten December 7, 2022

Buddhism (Buddha Dhamma) is a self-consistent worldview. That worldview explains the origin of suffering in this world and the way to be liberated from suffering. In that sense, it can be called a religion too.

Buddha Dhamma – A Self-Consistent Worldview and a Religion

1. It is best to learn (or even scrutinize) Buddha Dhamma with a mindset pretty much the same as when trying to learn about a new concept, say in mathematics or science. Some key assumptions (axioms) are involved, which cannot be proven but do make sense, especially if one takes time to contemplate. That is the approach followed in mathematics and science as well.

- That worldview has embedded in it the root causes and conditions for suffering to arise and the way to stop that suffering. In that sense, it is a religion, too, even though without the concept of a Creator.
- That is contrary to conventional religions, which are rooted in a "Creator God" based entirely on faith.
- The foundation of Buddha Dhamma, *Paṭicca Samuppāda*, describes the entirety of this world (including mental phenomena).
- However, if one needs to treat Buddha Dhamma (teachings of the Buddha) as a worldview, then learning *Abhidhamma* would be required. Finer details are in Abhidhamma.

What Is a Religion?

2. Merriam-Webster defines "religion" as:

- The belief in a Creator God or a group of Gods
- An organized system of beliefs, ceremonies, and rules used to worship a god or a group of gods
- An interest, a belief, or an activity that is very important to a person or group

The Oxford dictionary has the following definitions:

- The belief in and worship of a superhuman controlling power, especially a personal God or gods
- A particular system of faith and worship
- A pursuit or interest to which someone ascribes supreme importance

Buddhism Is an "Atheistic Religion"

3. Thus, the word "religion" invokes the idea of a Creator God in most people's minds. Even though this is correct for most major religions of the world, it is not correct for Buddha Dhamma.

- The foundation of Buddha Dhamma is that the world has existed "forever" (no First Cause, and thus it was not created). Planetary systems like our Solar system (*cakkavāla*) come and go, but there have always been living beings. See "Buddhism and Evolution – Aggañña Sutta (DN 27)."
- It may appear inconsistent with the current "Big Bang Theory," which says our universe started some 14 billion years ago in a "Big Bang". Religions embraced the idea of the Big Bang when it was first proposed since it had connotations of creation. However, the inflationary theory that describes the Big Bang (proposed in the 1990s) says there could be multiple parallel universes. Thus, the hope for a unique "event of creation" fizzled. The point is that modern science has no clear picture of how the universe behaves.
- Of course, the "Big Bang Theory" is a theory; it is not yet proven. Some scientists do not believe everything "popped up" suddenly in a Big Bang. They believe that universes are cyclic, i.e., transform and

© 2026 Lal A. Pinnaduwage

evolve; see, for example, "Endless Universe – Beyond the Big Bang" by P. J. Steinhardt and N. Turok (2007).

4. Buddha Dhamma does not count as a religion if one takes the first two definitions from either Merriam-Webster or Oxford dictionary. Yet, it can be included in the category of #3 above.

- **One could say that the prominent religions are theistic**, i.e., based on the belief in a Creator.
- Buddha Dhamma can be categorized as an **atheistic religion** because there is no assumption of a Creator, yet it can lead to the end of suffering.
- It must be noted that in Buddha Dhamma, there are beings called "*Devā*" (sometimes translated as "gods") in other realms; they cannot affect our lives in a significant way, much less than creating universes.

Buddha Dhamma Is the Grand Unified Theory Sought by Science

5. However, I prefer to label Buddha Dhamma as the "ultimate science." It encompasses all of nature's laws, not only about material phenomena but also about the mind. It is the Grand Unified Theory that scientists strive to discover, but they only focus on the material aspects. See "The Grand Unified Theory of Dhamma."

- Scientists are beginning to realize the importance of the mind. Many scientists are attempting to connect quantum theory and the mind. This will NOT work because any "matter-based theory" cannot explain the mind. Mind is the forerunner: "Manopubbangamā Dhammā.. ."
- The mind takes precedence over matter; see the "Abhidhamma" section. Those who can spend time and learn Abhidhamma will realize no scientist can ever come close to a Buddha.
- The presence of innumerable planetary systems in our universe was known to the Buddha and is described in the *Tipiṭaka* even though science discovered that only within the past two hundred years; see "Dhamma and Science."

Current Debates Between Philosophers and Theologians

6. When I listen to current debates between those who believe in a Creator and those who don't (atheists), I think the following summarizes the key ideas from each group:

- Atheists correctly point out that there is no evidence supporting the idea of a Creator God. Our ancestors could not fathom the workings of our complex world and envisioned a Creator who was supposed to have created humans and a suitable habitat for them. But many "mysteries" of our world have been resolved with the advancement of science, and these findings contradict key ideas in prominent religions.
- Those on the other side insist that the idea of a "totally physical world" goes against our experiences and innate feelings that cannot be denied. That there must be something in addition to a physical body, i.e., a "conscious experience" cannot be attributed to atoms and molecules in our bodies. Furthermore, they point out that science has not been able to explain even the working of a single living cell.
- I have discussed that in detail at the beginning of the "Origin of Life" section.

Buddha Dhamma Has the Explanatory Power and Is Self-Consistent

7. Buddha Dhamma addresses both of those critical points. First, on the side of the atheists, there is no need for a Creator. Natural processes can account for not only what happens on Earth but an uncountable number of habitable planetary systems in a vast universe.

- On the other hand, science can account for only how the material world evolves. As the theologians argue, there is something other than inert matter in this world, and that is consciousness. Consciousness cannot be derived from inter matter.

© 2026 Lal A. Pinnaduwage

- However, consciousness was not imparted by a Creator either. Furthermore, contrary to what most theologians believe, animals are also conscious (even though their ability to make decisions is much lower than humans).
- Introductions are at "Buddha Dhamma: Non-Perceivability and Self-Consistency" and "Gödel's Incompleteness Theorem."
- This is why one could say Buddha Dhamma is an "atheistic religion." It describes the way to liberation (from suffering) without the concept of a "Creator God."

8. Some people tell me that Buddha Dhamma is not that different from other religions because certain "assumptions" need to be believed "on faith," for example, that there is a rebirth process.

- However, the axiom of a rebirth process is not be taken as a belief, like in the case of the Ten Commandments. It is up to oneself to examine and accept or reject that concept. Even a Buddha cannot make anyone be "forced to believe" in anything. See "Evidence for Rebirth."
- Thus, there is a difference in what is meant by "faith" in Buddha Dhamma compared to that in theistic religions. In any theistic religion, one has to accept the idea of a Creator without question; it is THE basis of any prominent theistic religion.
- Furthermore, mathematics and sciences have built-in assumptions too. New theories must be developed if new findings contradict a given assumption. Buddha Dhamma (represented by the Tipiṭaka) has not changed over the past 2500 years.
- Buddha Dhamma describes the nature of this world; The Grand Unified Theory of Dhamma has some fundamental axioms, like geometry or the theory of relativity. These "assumptions" can be verified to be correct if one takes the time to examine the evidence.

9. Buddha Dhamma has the explanatory power to explain anything in this world, ranging from the existence of innumerable planetary systems (which was only accepted within the past few hundred years by science) to how morality comes about without a Creator; see, "Dhamma and Science" and "Origin of Morality (and Immorality) in Buddhism."

- It took us the workings of many brilliant scientists, from Galileo to Newton to Einstein, to realize the vastness of this universe, which the Buddha described 2500 years ago.
- But the even more astounding fact is that the Buddha described in detail how consciousness arises in a living being, in addition to describing the material world. Science is still under the "wrong view" that consciousness can arise in the brain out of inert matter.
- See the "Origin of Life" and "Abhidhamma" sections for details.

Main Points Against Both Materialism and "Creator-Based" Religions

10. There are many videos on YouTube explaining the shortcomings of modern science (based on a materialistic world) and "Creator-based" religions. Both sides are correct about the shortcomings of the other side. I will highlight only one key obstacle to be overcome by each side.

- The critical issue with "Creator-based religions" is why a Creator would let the man he created suffer. He could have created a suffering-free world. See "Wrong View of Creationism (and Eternal Future Life) – Part 2."
- On the other hand, modern science cannot explain how human life begins or prove that consciousness originates in the brain. See "Views on Life – Wrong View of Materialism."

Arguments Against a Creator (Prominent Religions)

11. For those who would like to look into arguments on why theistic religions do not make sense, below is a compilation of arguments by Sam Harris, a prominent atheist.

© 2026 Lal A. Pinnaduwage

??? unavailable ??? WebLink: youtube: Sam Harris: Best Arguments against Religion #1

WebLink: youtube: Sam Harris: Best Arguments against Religion #1

First segment (up to 2 minutes): Buddha Dhamma is incompatible with any other religion.

Second segment (up to 5 minutes): Buddha Dhamma agrees with Mr. Harris' points.

Third segment (up to 10 minutes): Buddha Dhamma agrees with Mr. Harris' points. Some assumptions of prominent religions have no basis. However, science does not explain everything either.

Final Segment: Yes. God's will has nothing to do with the suffering present in this world.

- I will skip the other videos in the series, which do not have anything contradictory to Buddha Dhamma.
- In the third video, at one point, he mentions Buddhism by name, clumped with other religions. That is because he has not been exposed to the correct version of Buddhism. Just because Mr. Haris has practiced "breath meditation" does not make him knowledgeable on Buddha Dhamma. As I have explained, *Ānāpānasati* meditation in Buddhism is not "breath meditation." See "Is Ānāpānasati Breath Meditation?"

Arguments Against Materialism

12. Modern science can explain many phenomena involving inert matter. But it cannot explain mental phenomena, including the origin of consciousness. The following video provides critical arguments against "materialism" because it cannot explain the origins of the human body's complex biology (the video starts at 30 minutes, where this point is discussed.) Dr. Stephen Meyer believes in a "Creator God," but his arguments against materialism are valid. (Some scientists have moved to the "creation" camp simply because they cannot explain such phenomena any other way; they are unaware of the correct version of Buddhism.)

WebLink: youtube: James Tour: The Mystery of the Origin of Life

- Modern science cannot also explain when or how sentient life begins in a zygote; see, "Buddhist Explanations of Conception, Abortion, and Contraception." This is why I am saying that science is incomplete; it does not know about the "*gandhabba* state" of a human. By the way, a "*gandhabba*" is not a soul; see, "Ghost in the Machine – Synonym for the Manomaya Kāya?."
- Regarding the mind, science is still at the same stage as it was 400 years ago regarding the material world. Before Galileo discovered the existence of planets, stars were believed to be embedded in a celestial sphere around the Earth; see "Dhamma and Science – Introduction."

Buddha Dhamma can explain all the aspects being debated by both sides. It can fully explain the material world and mental phenomena, including consciousness. See "Origin of Life."

11.4 The Infinity Problem in Buddhism

July 15, 2017; Revised February 5, 2018; Re-written March 23, 2021; revised August 13, 2022; August 14, 2022; re-written September 24, 2022; revised May 8, 2025 (#2, #4, #5, #8); last revised December 7, 2025

The infinity problem in Buddhism is the following. "Each of us" has been in the rebirth process for an infinite time. Thus, "each of us" has been exposed to Buddha Dhamma countless times, i.e., made infinite attempts to attain *Nibbāna*. How is it possible that all of "us" have not attained *Nibbāna*?

Introduction – "Infinite Monkey Problem"

1. The question is based on the following statement in several *suttā* in *Anamatagga Saṁyutta* starting with the "WebLink: suttacentral: *Tiṇakaṭṭha Sutta* (SN 15.1)": "There is no discernible beginning to the rebirth process." **The above statement has two critical implications:**

i. **Consciousness cannot be created.** All living beings that exist now have existed forever. A sentient being can only move from one existence to another among some of the 31 realms. That process can end only upon attaining *Arahanthood*. **These are core tenets in Buddha's teachings.** The 'switching of consciousness' from one existence to another can be stopped only by breaking the ten *saṁyojana* (*saṁsāric* bonds), and that can start only by attaining the *Sotāpanna* stage with the breaking of the first three *saṁyojana*. **No matter how many lives we have, it does not matter until one grasps Buddha's worldview at the *Sotāpanna* stage.** This actually is the key to addressing the 'infinite monkey theorem' discussed in this post under (ii) below.

ii. We have had an infinite time to attain *Nibbāna* (because an infinite number of Buddhas must have been born too). **So, why have we all not attained *Nibbāna* yet?"** Again, the key to resolving that is also in (i) above.

2. The second issue above has been discussed in discussion forums without a conclusion. See "WebLink: dhammalwheel.com: The problem of infinity in Buddhism" at Dhamma Wheel and "WebLink: suttacentral: The infinity problem in Buddhism" at the Sutta Central forum in 2017.

- This question seems to have its origin in the "WebLink: wikipedia.org: Infinite Monkey Theorem," also see "WebLink: grokipedia.com: Infinite monkey theorem – Grokipedia"), which states that a monkey hitting keys at random on a typewriter keyboard for an infinite amount of time will almost surely type any given text, such as the complete works of William Shakespeare.
- By the way, this infinite monkey theorem is another evidence of how unimaginably large infinity is: "Infinity – How Big Is It?."

Detailed Analysis of the Infinite Monkey Theorem

3. The monkey theorem is based on a monkey typing on a keyboard and generating random letters. It is assumed that the same monkey will keep typing on the keyboard nonstop for an infinite time.

For example, the probability that the monkey will come up with the word "banana" would be **less than 1 in 15 billion, but not zero.** Thus it is a theoretically **possible** outcome, even though improbable.

- But the enormity comes to view when you realize that you must get a WHOLE TEXT correctly without making too many errors at a stretch (in one continuous period.) For example, to get TWO words correctly, like "yellow banana," the probability is the product of the probabilities of getting each word right. The probability that a monkey gets those two words correctly is less than one billion-billion (1 in 10^18). That is extremely small.

4. The above Wikipedia article says: "..the probability that **monkeys filling the entire observable universe** would type a single complete work, such as Shakespeare's *Hamlet*, is **so tiny that the chance of**

© 2026 Lal A. Pinnaduwage

it occurring during a period hundreds of thousands of orders of magnitude longer than the age of the universe is *extremely* low (but technically not zero)."

- That is because scientists estimate the age of our current universe to be only about 14 billion years. Infinity cannot be assigned a number. Any large number you can think about CAN NOT BE the largest number because you can just add 1 to that number to make it bigger. There is no ending! Thus, given an infinite time, it is theoretically possible that a monkey could type out the complete works of William Shakespeare.
- However, as we see below, the rebirth process involving a "lifestream" can not be compared to the **same monkey** typing on a keyboard for an eternity.

Two Relevant Issues

5. We will discuss **TWO aspects of this issue**.

- **First**, we will show that the infinite monkey theorem's MECHANISM does not apply to the rebirth process. **The rebirth process DOES NOT involve a "person/soul/*ātman*"** traveling the *Saṁsāra* **(like a single monkey typing for an infinite time.)** Nothing like a soul "moves" from this life to the next. Even the next moment in life arises from causes and conditions that prevail in the present moment, i.e., via the *Paṭicca Samuppāda* process. Once the root causes *(rāga*, *dosa*, *moha*) are removed from a mind, that process stops, and one attains *Arahanthood*/*Nibbāna*.
- **Second**, we will show that even if an infinite number of living beings have attained *Nibbāna,* there will still be an endless number left!

First Issue

There Is No "Person" Traveling the Rebirth Process

6. Various forms of life manifest during the rebirth process. Even though we live human lives now, we have lived in most of the 31 realms described by the Buddha. **We have been born countless times as a *Deva*, a *Brahma*, an animal, a hell-being, etc.!**

- The Buddha described the concept of a "lifestream" moving from life in one realm to another (rather than a soul incarnating or appearing in different forms). See "What Reincarnates? – Concept of a Lifestream."
- **There is no "unchanging/permanent essence" like a soul moving from one life to the next.** If that were the case, stopping the rebirth process and attaining *Nibbāna* would be impossible! How can a permanent entity cease to exist?
- What is taken to the next life is *anusaya*/*gati*/*saṁyojana*. None of those is permanent. Each one can change even momentarily!
- Furthermore, all those entities are associated with suffering. Elimination of *anusaya*/*gati*/*saṁyojana* is the end of suffering, not the end of an entity like a soul or an *ātman*. See "Yamaka Sutta (SN 22.85) – Arahanthood Is Not Annihilation but End of Suffering."

7. When one understands that by comprehending "Paṭicca Samuppāda, Tilakkhaṇa, Four Noble Truths," one becomes a *Sotāpanna* by removing significant parts of *anusaya*/*gati*/*saṁyojana*. **That is getting rid of the wrong view of a "soul/*ātman*" or "*sakkāya diṭṭhi*."** See "Sakkāya Diṭṭhi and Tilakkhaṇa."

- As a *Sotāpanna* progresses on the Noble Eightfold Path, more of the *anusaya*/*gati*/*saṁyojana* are removed. See **"**Kilesa – Relationship to Akusala, Kusala, and Puñña Kamma**"** and **"**Anusaya, Gati, Bhava – Connection to Manomaya Kāya (Gandhabba).**"**
- With the attainment of the *Arahant* stage, ALL *anusaya*/*gati*/*saṁyojana* will be lost from the mind. At the *Arahant*'s death, nothing is left that can initiate another birth, and thus, the rebirth process stops.

© 2026 Lal A. Pinnaduwage

Path to *Nibbāna* Is Not a Mechanical Process

8. Therefore, reaching *Nibbāna* CANNOT be considered a mechanical process and, thus, CANNOT be compared to a monkey hitting arbitrary keys on a keyboard to generate Shakespeare's *Hamlet*.

- We can consider a monkey typing a single letter to a living-being hearing the correct Buddha Dhamma. Therefore, we can call that a "single-shot" at *Nibbāna*, corresponding to a single keystroke by a monkey.
- However, a mathematician could still say there will be an infinite number of such "single-shots" by a living being over an INFINITE time.

9. But the key issue is that it is NOT **the same person** who heard the correct Buddha Dhamma infinite times!

- Therefore, the problem is with the question itself. The infinity problem in Buddhism is phrased as follows: **"Each of us"** has been in the rebirth process for an infinite time. How is it possible that all of us have not attained *Nibbāna*?
- **That question assumes that a fixed person/soul/*ātman* is repeatedly reborn!** *Paṭicca Samuppāda* explains that there is no such permanent entity that is repeatedly reborn. See "What Reincarnates? – Concept of a Lifestream."
- Continuation of a lifestream can be stopped by removing the root causes of that process; **those root causes of *rāga, dosa*, and *moha* arise only because of our ignorance about how our cravings for "worldly pleasures" are based on "distorted *saññā*."** See "Fooled by Distorted Saññā (Sañjānāti) – Origin of Attachment (Tanhā)." Detailed discussion in ""Worldview of the Buddha'."
- We went through the above discussion to show that the two processes cannot be equated. Now, we address the SECOND issue mentioned in #4 above.

Second Issue

Infinite Number May Have Attained *Nibbāna*

10. It is indeed possible that an infinite number of living beings HAVE ATTAINED *Nibbāna* in the past.

- Not only that, but **an infinite number of living beings may have attained *Buddhahood* in the past.** Of course, reaching *Buddhahood* is infinitely more difficult than achieving *Arahanthood*.
- Therefore, the infinite set of living beings who have attained *Nibbāna* is "much larger" than the infinite set of living beings who have attained *Buddhahood*.
- **The key to this puzzle is to realize that "many levels of infinity" exist.** Mathematicians revealed this within the past hundred years, thanks to the pioneering work of the mathematician George Cantor. See "WebLink: storyofmathematics.com: George Cantor – The Man Who Founded Set Theory." The following video provides good insights too.

  WebLink: youtube: Cantor's Infinity Paradox | Set Theory

A Nice Visualization of Infinity Within Infinity – The Infinite Hotel Paradox

11. The following video explains why there can be "smaller infinities" within infinity. In particular, the set of positive integers is a "smaller infinity." Those who have attained *Nibbāna* fall under that category. Regardless of how many have attained *Nibbāna*, more could attain *Nibbāna*.

© 2026 Lal A. Pinnaduwage

- The following video discusses an infinite number of buses filled with an infinite number of guests arriving at an infinite hotel. The hotel can accommodate all of them and more!

  WebLink: youtube: The Infinite Hotel Paradox - Jeff Dekofsky

- I have set the video to stop at 2:10. It is enough to see that the hotel can accommodate an infinite number of guests at any time. During the presence of a *Buddha Sāsana*, only a finite number of living beings (humans, *Devas*, and *Brahmas*) attain *Nibbāna*.
- The rest of the video is more mathematical and shows that even an infinite number of buses. Each carrying an infinite number of passengers, can be accommodated! You can watch the whole video by clicking "watch on Youtube."

Other Related Issues

12. Several other questions now arise: Where do all these infinite numbers of living beings live? Do they all live in our Solar system? It will take many more future posts to explain these fully, but we can summarize them as follows.

- Brief answers to those questions are as follows: According to the Buddha, an uncountable number of planetary systems in the universe are populated with living beings. While an uncountable number of living beings live in our Solar system, there are an uncountable number of such planetary systems (*cakkavāla*) in the world. Each cluster of 10,000 such *cakkavāla* can have a Buddha appearing periodically. Thus, there could have been an infinite number of Buddhās.
- Such details are in suttas in the *Tipiṭaka*, mainly in the *Dīgha Nikāya*. I briefly discussed one *sutta*: "Buddhism and Evolution – Aggañña Sutta (DN 27)" and "Aggañña Sutta Discussion – Introduction."

Summary/Additional Resource

13. Infinity is a very complex concept. There are many levels of infinity, and infinity minus infinity can still be infinity.

- Therefore, even as there have been an infinite number of Buddhās and an even higher infinity of those who attained *Arahanthood*, there are still an infinite number of living beings (including us) who have not yet attained *Nibbāna*.
- Even more importantly, there is no contradiction per the "infinite monkey theorem" because the premise/assumption of that theorem does not hold for the rebirth process.
- **Thus, there is no contradiction in either case.**

11.5 Free Will in Buddhism – Connection to Saṅkhāra

November 3, 2018; revised July 6, 2019; June 11, 2022; November 20, 2022; June 21, 2024; rewritten April 4, 2025

Free will is at the core of Buddhism (Buddha Dhamma). Without free will, attaining *Nibbāna* is not possible. This post discusses the difference between automatic /unconscious and deliberate/willful *saṅkhāra* generation.

Introduction

1. Free will is at the core of Buddhism (Buddha Dhamma). If one does not have free will (and, thus, determination), one cannot attain *Nibbāna*.

- The applicability of free will should be evident in a mundane sense. Free will determines (within certain limits) whether one will become a successful businessman or a master thief.
- When I say "within limits," we can only compare situations for two people born with comparable capabilities. For example, one born with an "*ahetuka* birth" (e.g., born with brain defects) will never be able to achieve much success.
- However, a person born with a "normal level of intelligence" (*tihetuka* or *dvihetuka* births) can make decisions that can lead to various possible outcomes in the future. For example, one could become a great scientist or a ruthless dictator. Both require a "sharp mind." See #6 of "Sutta Interpretation – Uddesa, Niddesa, Patiniddesa."

2. In the following video by Sam Harris, we can see where modern philosophers get stuck on the issue of free will.

WebLink: Youtube: Sam Harris on the Illusion of Free Will

- He agrees that things happen due to causes, **but he cannot figure out the causes of many things.** He says, "You don't pick your parents; you don't pick your body…". Yet, we do that via the rebirth process, which is not in Harris's materialistic worldview. **That is explained with *Paṭicca Samuppāda* in Buddha Dhamma.** Rebirths are determined by the causes and conditions associated with a lifestream; see "What Reincarnates? – Concept of a Lifestream" and "Uppatti Paticca Samuppāda (How We Create Our Own Rebirths)."
- As long as he does not believe in rebirth, Sam Harris will never be able to understand those "missing causes." The rebirth picture provides those "missing causes." **Laws of *kamma* (causes and effects) operate over many rebirths. One cannot analyze one's current life in isolation.**

Background Material in Buddha Dhamma

3. To fully explain the laws of *kamma*, we must include rebirths in all possible existences, including animal and *Deva* realms**.**

- Nature treats every sentient being fairly, according to what they have done in the past.
- Based on one's *gati* at the moment of death, one is born into a given existence (human, animal, *Deva*, etc.), a family (good, bad), and different conditions (healthy, handicapped, poor, etc.) See "WebLink: suttacentral: *Gati Sutta* (AN 9.68)."
- **One's *gati* is based on the types of *saṅkhāra* that one cultivates (basically how one thinks, speaks, and acts).**

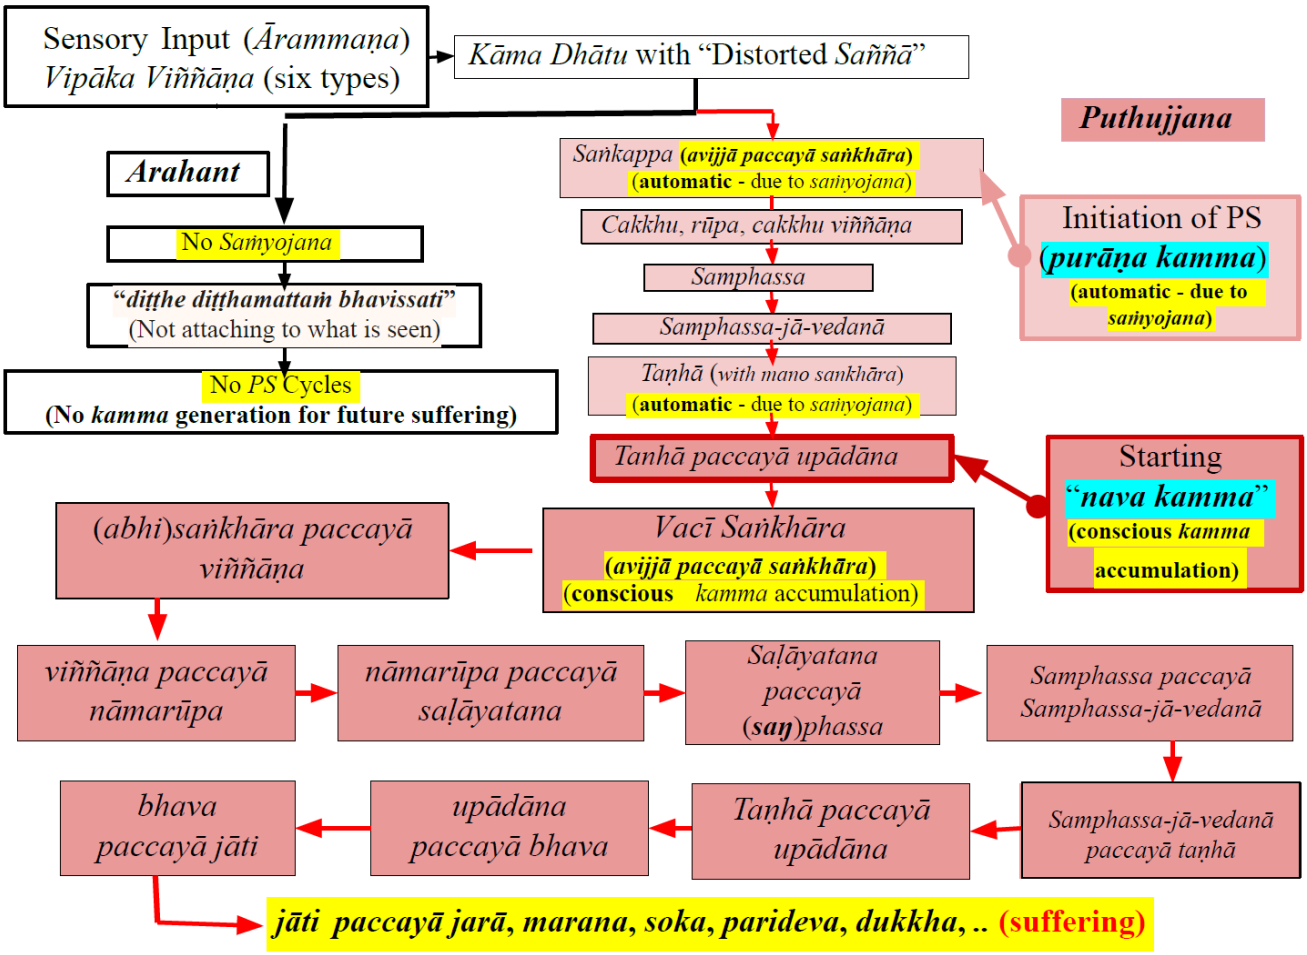
4. Another key point is that "*kammic* energy" that leads to future results (*vipāka*) is generated in one's ***javana citta***. Don't be put off by that word. ***Javana cittās*** are thoughts that arise in one's mind when generating **conscious thoughts** about speaking/doing **moral or immoral deeds.**

© 2026 Lal A. Pinnaduwage

- ***Mano*, *vacī*, and *kāya saṅkhāra* lead to *mano*, *vacī*, and *kāya kamma* that can lead to future *vipāka* (including rebirths), ONLY IF those actions or speech are either moral (good *vipāka*) or immoral (bad *vipāka*).**
- See "Saṅkhāra – What It Really Means."

Conscious and Automatic *Saṅkhāra* Generation

5. *Mano saṅkhāra* are conscious defiled thoughts. *Vacī saṅkhārās* are responsible for our defiled speech (either out loud or just to ourselves). When we engage in moral/immoral actions, we move our bodies with *kāya saṅkhāra* that arise in our mind (basically in the *gandhabba*). **We have control over all three types and generate them consciously.**



- In contrast, **thoughts arising automatically with a sensory input are *saṅkappa*.** They are a weak form of ***saṅkhāra*** called **"*abhisaṅkhāra*."**
- That is the difference between ***saṅkappa*** (which arise without our DIRECT control) and *mano*, *vacī*, and *kāya saṅkhāra* (which we have control over) that lead to ***mano*, *vacī*, and *kāya kamma***.
- There is no significant *javana* power (to bring *vipāka* in future rebirths) in ***saṅkappa***. In contrast, ***mano*, *vacī*, and *kāya saṅkhāra*** generate *javana* power. The strength of *kammic* energy created increases in the following order: *mano*, *vacī*, *kāya saṅkhāra*.

Purāṇa and *Nava Kamma* Stages of a Sensory Event

6. **Weak *Kamma*** generation (**with initial *abhisaṅkhāra* called *saṅkappa***) occurs in the **"*purāṇa kamma*" stage**. They are weak and cannot bring *vipāka* in the future.

- **Strong *kamma* that can bring future *vipāka* (including rebirth)** will occur only if *javana cittās* arise within the **"*nava kamma*" stage** where ***mano*, *vacī*, *and kāya kamma*** are done.
- The following chart provides the basic concepts of the "*purāṇa kamma*" and "*nava kamma*" stages (which is another representation of the *Paṭicca Samuppāda* process). **They do not occur in an *Arahant*.**
- The chart is discussed in "Purana and Nava Kamma – Sequence of Kamma Generation." A systematic analysis is in the section "Worldview of the Buddha."

© 2026 Lal A. Pinnaduwage

Purāṇa and Nava Kamma - 1

Download/Print: "WebLink: PDF File Download: Purāṇa and Nava Kamma – 1 - Revised."

7. Only ***Saṅkappa*** arise in the **"*purāṇa kamma*" stage**. They occur automatically due to bonds to the rebirth process (*saṁyojana*).

- Thus, the *saṅkappa* generation does not happen (and *Paṭicca Samuppāda* does not operate) for an *Arahant* who has broken all *saṁyojana*. Once the *saṅkappa* generation stops, the *mano*, *vacī*, and *kāya saṅkhāra* generation stop, too, as we can see from the above chart.
- The ten *saṁyojanās* are directly related to the five *gati* discussed in the "WebLink: suttacentral: *Gati Sutta* (AN 9.68)." For example, when the first three *saṁyojana* are eliminated, the first three types of *gati* (that lead to rebirth in the *apāyās*) are also removed.
- What is summarized above is a deeper aspect of Buddha's teachings. ***Saṅkappa*** generation occurs in the **"*purāṇa kamma*"** stage in a sensory event, and ***mano, vacī,* and *kāya saṅkhāra*** generation (leading to ***mano, vacī,* and *kāya kamma***) occurs in the **"*nava kamma*"** stage.

Saṅkhāra Can Arise With or Without Conscious Thinking

8. As we have discussed before, the word "*saṅkhāra*" comes from "*saṅ*" + "*khāra*" or actions that involve "*saṇ*"; see, "What is "Saṇ"? Meaning of Saṇsāra (or Saṁsāra)."

- "*Saṇ*" is responsible for getting things done to live the current life (even everyday activities).
- **However, if they involve conscious moral/immoral thoughts, that can bring results (*vipāka*) in future lives.**
- ***Kammās* are actions with a defiled mind (done with *saṅkhāra* that arise in mind).** Actions **without** *rāga*, *dosa*, or *moha* in mind are **not** called *kamma*.

© 2026 Lal A. Pinnaduwage

- Such moral or immoral **strong *kamma*** — done with ***mano*, *vacī*, and *kāya saṅkhāra*** — are the ones that lead to ***kamma vipāka* in the future** (either in this life or in future lives).
- ***Saṅkappās*** are a weak form of ***saṅkhāra*** called **"*abhisaṅkhāra*."** I may have labeled **"*abhisaṅkhāra*"** as "strong *saṅkhāra*" in some old posts, and that is incorrect. However, **repeated generation** of ***abhisaṅkhāra*** occurs in ***mano*, *vacī*, and *kāya saṅkhāra*, making them potent.**

Key Idea: *Mano*, *Vacī*, and *Kāya Saṅkhārās* are Willful

9. Let us look at some examples now.

- Thinking about going to the bathroom is NOT a *vacī saṅkhāra* because it is *kammically* neutral, i.e., no defiled thoughts involved. Walking to the kitchen to get a glass of water is NOT a *kāya saṅkhāra* because it does not involve a defiled mind with *rāga, dosa,* or *moha*.
- Thinking about killing a human being involves *vacī saṅkhāra* with high *kammic* consequences; actual killing is made with *kāya saṅkhāra*. Those can lead to rebirth in the *apāyās* because both are based on immoral or *apuñña abhisaṅkhāra* (or *apuññābhisaṅkhāra*).
- On the other hand, thoughts responsible for good speech and actions or *puñña abhisaṅkhāra* (or *puññābhisaṅkhāra*) have good *kammic* consequences and can lead to "good births" (human, *Deva*, or *Brahma*). Even more importantly, they are essential for making progress on the Path.
- Details in "Six Root Causes – Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna)."

Connection Between *Saṅkhāra* and *Cetasika*

10. I keep repeating these because it is imperative to understand these fundamental ideas.

- All *saṅkappa* and *saṅkhāra* arise in the mental body (*gandhabba*) and NOT in the brain.
- Then, the brain helps to put those into action/speech (i.e., moving body parts).
- Good *kamma* that will have good *vipāka* in the future is done with *saṅkhāra* that have ***sobhana cetasika* (compassion, non-greed, etc.)**. Bad *kammā* that will have the corresponding bad *vipāka* in the future is done with *abhisaṅkhāra* that have ***asobhana cetasika* (anger, greed, etc.)**; see "Cetasika (Mental Factors)."

Saṅkappa Arise Automatically (Without Conscious Thinking)

11. ***Saṅkappās*** automatically arise in the mind due to a sensory input based on one's unbroken *saṁyojana* (bonds to the rebirth process); see the above chart.

- **We don't consciously experience those initial *saṅkappa*** that arise in the "***purāṇa kamma***" stage. **We only experience *mano*, *vacī*, and *kāya saṅkhāra* that arise in the "*nava kamma*" stage**.
- The processes involved in the **"*purāṇa kamma*"** and **"*nava kamma*"** stages are summarized in many *suttās*. See, for example, "WebLink: suttacentral: *Saññānānatta Sutta* (SN 14.7)." This *sutta* is discussed in #7 through #9 in "Contamination of a Human Mind – Detailed Analysis."

Saṅkappa Arise Based on *Saṁyojana*

12. As we discussed many times, we get "attached" to something AUTOMATICALLY (**"*purāṇa kamma*" stage**) based on our *gati* and arise as ***saṅkappa***. It is essential to understand the concept of "*gati*" (character/habits); see "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavā)."

- (*Gati* is closely related to *saṁyojana*. As the ten *saṁyojana* are eliminated, the five main *gati* are eliminated too: "WebLink: suttacentral: *Gati Sutta* (AN 9.68).")

© 2026 Lal A. Pinnaduwage

- If the attachment in the **"*purāṇa kamma*" stage** is strong enough, the mind will start thinking about it consciously in the **"*nava kamma*" stage,** and ***mano, vacī,* and *kāya saṅkhāra*** arise (and we become aware of them.)
- Now, we can be mindful, think about the consequences of such thoughts, and stop them as soon as we become aware of this "attachment" to something. Therefore, we can stop such thoughts at the *vacī saṅkhāra* stage; see "Correct Meaning of Vacī Saṅkhāra."

Bypassing the *Purāṇa Kamma* Stage

13. To stop ***saṅkappa*/*saṅkhāra*** generation in the ***purāṇa kamma*/*nava kamma*** stages, we must stop ***saṅkappa*** generation in the ***purāṇa kamma*** stage.

- However, as discussed above, we cannot control the **"*purāṇa kamma*" stage**, which runs automatically based on the "distorted *saññā*." See "Fooled by Distorted Saññā (Sañjānāti) – Origin of Attachment (Taṇhā)."
- Yet, the Buddha figured out how to bypass the ***purāṇa kamma*** stage by controlling the ***nava kamma*** stage. That requires learning key concepts like the Four Noble Truths, *Paṭicca Samuppāda, Tilakkhaṇa*, etc.
- When one understands that, one becomes a *Sotāpanna* ("*Sandiṭṭhiko*"); see "Path to Nibbāna – Learning Dhamma to Become a Sotāpanna" and "Sandiṭṭhiko – What Does It Mean?."

14. Please read #13 again. That is the key to understanding why we have "free will" and how we can stop suffering altogether.

- We have total control over the **"*nava kamma*" stage, even though we don't have direct control over the "*purāṇa kamma*" stage**. Controlling the **"*nava kamma*" stage** leads to stopping the **"*purāṇa kamma*" stage**.
- However, one must be in the human realm or higher to exercise this "free will." Even those humans with an "*ahetuka* birth" do not have enough wisdom to exercise free will.
- Those in the *apāyās* also have "*ahetuka* births" and, thus, do not have free will.

Key Concepts in *Satipaṭṭhāna* and *Ānāpānasati*

15. Therefore, the concept of free will becomes clear if one can understand the concepts of unconscious ***saṅkappa*** and conscious *mano*, *vacī*, and *kāya saṅkhāra*.

- To have a firm grasp of *Satipaṭṭhāna* and *Ānāpāna* meditations, it is essential to understand what is meant by "mindfulness," which happens in the **"*nava kamma*" stage** where **we have control over *mano, vacī,* and *kāya saṅkhāra* generation**.
- Even though we don't have control over the ***saṅkappa*** generation in the **"*purāṇa kamma*" stage**, the Buddha found a way to bypass that stage. See "Path to Nibbāna – The Necessary Background ."

16. The bottom line is this: **Once we become aware of an action we are about to take, we have the freedom to proceed or stop it.**

- We should stop any wrong actions we are about to do and continue with any good ones. That is the basis of *Satipaṭṭhāna* and *Ānāpāna* meditations.
- We must cultivate the habit of "catching one's response early enough." "Being mindful" is just that; see, "6. Ānāpānasati Bhāvanā (Introduction)" and "Mahā Satipaṭṭhāna Sutta."
- Once we have reasonable control of the **"*nava kamma*" stage**, we can contemplate the key concepts (Four Noble Truths, *Paṭicca Samuppāda, Tilakkhaṇa*, etc.) in Buddha's teachings and bypass the **"*purāṇa kamma*" stage** to get to the **"*Satipaṭṭhāna Bhūmi*"** and bypass the **"distorted *saññā*." It**

© 2026 Lal A. Pinnaduwage

is the "distorted *saññā*" that makes us make wrong decisions about sensory inputs. [***bhūmi*** : [f.] ground; earth; region; stage; plane.]

- See #1 of "Path to Nibbāna – The Necessary Background."

Libet Experiments on Free Will

17. Scientists misinterpret the experiments on the famous "Libet experiments" simply because they believe that the mind resides in the brain. Therefore, they wrongly conclude that the "brain activity starts" before one makes a decision; see, "Neuroscience says there is no Free Will? – That is a Misinterpretation!."

- Libet's experiment is straightforward: A person randomly decides (with no pre-planning) to press a button at some point, and scientists monitor that person's brain activity. They conclude that the brain starts the "finger moving" process before the person decides to move the finger!
- Buddha's teachings explain this simply: It is the *gandhabba* ("mental body") that decides to press the button. Brain activity starts with our conscious decision to press the button.
- **The time lag is for that instruction to reach the brain and then for the brain to get the necessary muscles to move.** See "Brain – Interface between Mind and Body."

18. *Gandhabba,* or the "mental body" or the "*manomaya kāya*," is a critical concept neglected in the current *Theravāda* texts.

- The physical body is just a shell controlled by the mental body.
- The death of the physical body is not the end of life. The mental body comes out of the dead physical body and can get into a womb to make another physical body.
- See "Buddhist Explanations of Conception, Abortion, and Contraception."
- Several subsections on the website discuss the *gandhabba*, or the "mental body" concept: "Mental Body – Gandhabba," "Gandhabba (Manomaya Kāya)," and "The Grand Unified Theory of Dhamma."

11.6 Book Reviews

"Why Does the World Exist?" by Jim Holt"

"Waking Up" by Sam Harris"

"The Language of God" by Francis Collins"

"Spark" by John Ratey"

"The Life of the Buddha" by Bhikkhu Ñāṇamoli"

11.6.1 "Why Does the World Exist?" by Jim Holt

Revised October 1, 2021

1. I started writing this post while reading the popular book "Why Does the World Exist? – An Existential Detective Story" by Jim Holt (2012). It is a good book with many thought-provoking questions. Here I would like to point out that most of those questions have answers in Buddha Dhamma.

- On p. 269, equating the *Nibbānic* bliss to the annihilation of a person, he asks, "…But how can you enjoy something if you do not exist?". To address this question, I initially started the post with the title, "Does Nibbāna Mean Annihilation of a "Person"?". Still, I started addressing other issues in the book and eventually changed the title to be the same as the book title.
- Even many Buddhists are terrified of the idea of *Nibbāna*, thinking that it means destruction. That is why even many *Bhikkhus* like to give "blessings" to the effect, "May you attain *Nibbāna* at the end of much pleasures in the heavenly worlds". That illustrates a total lack of understanding of the profound message of the Buddha.

2. The problem is in the question itself. If a person is to be annihilated, a "person" needs to exist in the first place. Now this is a very deep issue that needs some knowledge of Buddha Dhamma to understand. As the Buddha said in his first sermon, his Dhamma is, "*pubbe ananussutesu dhammesu*....." or "a concept that has not been known to the world before..."

- To annihilate, something "concrete" must exist. The Brahmins of the day of the Buddha believed there is a permanent "*āthma*" associated with a prson (a "soul" in the present day.). It is very difficult for all of us to get rid of the perception of "me" or "myself". **In fact, that perception is totally removed only at the Arahant stage of Nibbāna; it keeps decreasing as one advances on the Path.**
- Thus as long as one "belongs to this world of 31 realms", one always thinks in terms of "me" and "the external world". This is why the Buddha rejected the concept of "no-self" even though most people incorrectly translate *anatta* as "no-self"; see, "The Grand Unified Theory of Dhamma."
- On the other hand, the Buddha said that it is also incorrect to say there is "self". This is because any "person" changes even moment-to-moment; see, "What Reincarnates? – Concept of a Lifestream."
- In rejecting both "self" and "no-self" extremes, the Buddha said, "this changing being" or "a lifestream" changes moment-to-moment due to changes in the causes that support that lifestream. This is not something that I can explain in one essay and is explained via many posts at the site, including the important section on *Paṭicca Samuppāda*.
- In the book there is a separate chapter on, "The Self – Do I Really Exist?". I will discuss that chapter below, and point out a few more related facts.

3. The book's main theme is "why is there something rather than nothing?" or "how did the world got started?". It summarizes most of the arguments that have accumulated over thousands of years, and of course, come to the inevitable question on "the nature of the Creator God who would not need a cause for being there".

© 2026 Lal A. Pinnaduwage

- However, regarding the two questions on existence as expressed above, the Buddha's answer is the simplest: The world has existed forever and it is not possible to pinpoint a specific first cause. The proof is very simple: Suppose there is a first cause; then what caused that? QED.
- Thus in the scientific basis of cause and effect, the absence of a first cause is built in.
- On p. 82 of the book, Jim Holt did point out, "*..Scientific thinkers, by and large, have not shared such qualms about eternity. Neither Galileo nor Newton nor Einstein had any problem conceiving of a universe that was infinite in time. Indeed, Einstein added to his field equations a fudge factor – the infamous "cosmological constant" – to ensure that they would yield a universe that was static and eternal.*"
- And a few philosophers have discussed the problem with "first cause" arguments, as Jim Holt noted. Talking about the late philosopher John Mackie on p. 206, "*..Obviously, as Mackie observed, no explanation in terms of a "first cause" could answer the ultimate question of existence, for such an explanation would merely raise the further question of why that first cause -whether it be God, an unstable chunk of false vacuum, or some still more exotic entity- itself existed*".

4. If one accepts that the world has existed forever, then many other questions discussed in the book do not even arise. Thus 100% of the questions discussed are answered if we start off with the premise that the world has existed forever AND the root causes (greed, hate, and ignorance) for the existence of the world given by the Buddha.

- For example, on p. 7, Leibniz's Principle of Sufficient Reason is discussed: For every truth, there must be a reason why it is so and not otherwise; and for every thing, there must be a reason for that thing's existence. This is basically "cause and effect". The Buddha said that the world exists because of greed, hate, and ignorance; and those causes have no beginning.
- This is related to the issue of the mind taking precedence over matter, and I am slowly building evidence for that in the website. There are some introductory posts in the "Abhidhamma" and "Dhamma and Philosophy" sections.
- On p. 188, Jim Holt discusses the fact that all science says about the "stuff that makes up our world" is that mass is equivalent to energy, "*....but it gives us no idea of what energy really is...*". This is exactly what is explained in Abhidhamma, and I will get to it eventually. He goes on to say, "*...As Bertrand Russell noted in his 1927 book, The Analysis of Matter, when it comes to the intrinsic nature of the entities making up the world, science is silent*".
- He also briefly discuss another big issue in philosophy on p. 192: "*The conclusion of the philosophers ……that there is more to consciousness than the mere processing of information. If this is true, then science, insofar as it describes the world as a play of information states, would seem to leave out a part of reality: the subjective, irreducibly qualitative part*". Actually, as we will see, Buddha's answer solves both this and the issue above in one fell swoop.
- A world without a beginning also gives an answer to the question of "why do I exist" (p. 18). We all have "existed" forever; there is no beginning so the question has no meaning. Another frequently asked question is, "what is the meaning of life?". There is no meaning to life: The bottom line is that we all suffer in this existence ON THE AVERAGE, IN THE LONG TERM while we meander aimlessly among the 31 realms of existence; see, "Evidence for Rebirth."

5. Now the only critical question is how do we know that the Buddha's world view is correct? The answer is that it can explain the complex world around us; it has the "explanatory power". Also see, "Vagaries of Life and the Way to Seek Good Births" and "Good Explanations – Key to Weeding out Bad Versions of Dhamma," among many other posts.

- Furthermore, one can EXPERIENCE the truth of Buddha's teachings and the results for oneself. I have described part of my experience in following the Path in, "11. Magga Phala via Cultivation of Saptha Bojjanga." Do not be discouraged by the title of the post.

© 2026 Lal A. Pinnaduwage

6. Now let me briefly discuss the late chapter on, "The Self – Do I Really Exist?". Here Jim Holt comes across the answer himself (p. 256): Talking about Descartes' famous phrase, "I think, therefore I exist", he says, "... ..*Did Descartes here infer more than he was entitled to? As many commentators have pointed out (beginning with Georg Lichtenberg in the eighteenth century), the "I" in his ultimate premise is not quite legitimate. All Descartes could assert with certainty was "there are thoughts". **He never proved that thoughts require a thinker*....." (bold face mine).

7. This is exactly what the Buddha said. There are thoughts, but no REAL thinker; there is the PERCEPTION of a thinker in "one's mind" until one's mind is purified to the level of an *Arahant* and it becomes clear that there is no "thinker". However, the irony is that until that wisdom is gained, "one's suffering" is real. The suffering is there simply because one thinks there is a real thinker!

- But one cannot honestly say, "there is no-self" as most people try to do unless one is an *Arahant*; one is just trying to fool oneself in saying that. When something bad happens to "anything that belongs to oneself" one INEVITABLY feels the pain associated with it; see, "Anatta and Dukkha – True Meanings."
- When the mind is purified (i.e., is absent of greed, hate, and ignorance) perception of "self" goes away at the *Arahant* stage, then the suffering associated with "one's stuff" is not there anymore. When one comprehends the concept of *anicca* to some extent, this will become clear to some extent. In other words, *Nibbānic* bliss or *nirāmisa sukha* increases as one advances on the Path, with the mind being purified at each step; see, "Three Kinds of Happiness – What is Nirāmisa Sukha?," and "Nirāmisa Sukha."
- Thus we cannot forcibly get rid of the sense of "I". Only through the true understanding of the Three Characteristics of this world, *anicca, dukkha, anatta*, that one can slowly start getting rid of that sense of "I" or "self". Until then there is neither a "self" nor "no-self", but just a stream of thoughts; see, "What Reincarnates? – Concept of a Lifestream." Only at the death of an *Arahant* that stream of thoughts is ended and the mind becomes free of any attachment to the material world of the 31 realms; see, "Nibbāna – Is it Difficult to Understand?," and "What are Rūpa? Relation to Nibbāna."

11.6.2 "Waking Up" by Sam Harris

Revised August 28, 2022; January 31, 2023

Sam Harris, "Waking Up: A Guide to Spirituality Without Religion" (2014).

1. I am quite encouraged by the fact that many people are beginning to see through something contrary to basic human instincts: That it is possible to find a different and more permanent form of happiness that is not related to material things.

- Right at the start of the book, when he talks about his first "meditation retreat" at the age of 16 under harsh conditions in the wilderness, the author says he was puzzled by the positive reaction of the older people in the group, "...*How could someone's happiness increase when all the material sources of pleasure and distraction had been removed?*" (p.2).
- But now, with many years of experience in meditation and studies on human nature as a neuroscientist, he can understand it: "..*Unlike many atheists, I have spent much of my life seeking experiences of the kind that gave ride to world's religions. Despite the painful results of my first few days alone in the mountains of Colorado, I later studied with a wide range of monks, lamas, yogis, and other contemplatives, some of whom had lived for decades in seclusion doing nothing but meditating. In the process, I spent two years on silent retreat myself (in increments of one week to three months), practicing various techniques of meditation for twelve to eighteen hours a day*" (pp. 13-14).

2. Harris, like many others, has found that something about human life cannot be explained away just in terms of the workings of the material world. But he cannot pinpoint the source of that "something extra."

© 2026 Lal A. Pinnaduwage

- As Harris explains, modern science has obliterated the concept of a "divine influence" as has been put forth by various religions. So I was interested to see his conclusion on the "source of this extra something."

3. On p.8, he makes a very valid statement: "*Spirituality must be distinguished from religion – because of people of every faith, and of none, have had the same sorts of spiritual experiences….Nothing that a Christian, a Muslim, and a Hindu can experience – self-transcending love, ecstasy, bliss, inner light – constitutes evidence in support of their traditional beliefs, because their beliefs are logically incompatible with one another. **A deeper principle must be at work***". (my highlighting).

- This is precisely what I have been trying to emphasize on this website.
- In the very following paragraph, he says what he found that more profound principle to be: "*That principle is the subject of this book: The feeling that we call "I" is an illusion*" (p. 9). This is probably the "no-self" theory that is erroneously presented as Buddha's concept of "*anatta*"; see, "Anicca, Dukkha, Anatta – Wrong Interpretations."
- However, on that same page, he also summarizes most of my conclusions about religions in general, including "Buddhism," as it is practiced by most in both Theravāda and Mahāyāna sects.

4. I will quote the relevant sentences from pp. 9-10: "*I am often asked what will replace religion. The answer, I believe, is nothing and everything. Nothing need replace its ludicrous and divisive doctrines….But what about love, compassion, moral goodness, and self-transcendence? Many people will imagine that religion is the true repository of their virtues. To change this we must talk about the full range of human experience in a way that is as free as the best science already is*".

- And through the rest of the book, he goes through that process. I agree with most, except that while "Buddhism" may be a religion, Buddha Dhamma is certainly not (if religion is defined as providing salvation via following set rituals or having blind faith in an entity or a supreme being).

5. The key to Mr. Harris's not understanding Buddha Dhamma becomes apparent on p. 28: "*We can also grant that Eastern wisdom has not produced societies or political institutions that are any better than their Western counterparts. In fact, one could argue that India has survived as the world's largest democracy only because of institutions that were built under British rule. Nor has the East led the world in scientific discovery. Nevertheless, there is something to the notion of uniquely Eastern wisdom, and most of it has been concentrated in or derived from the tradition of Buddhism*".

- The problem is that Mr. Harris has not been exposed to Buddha Dhamma, the "non-religious" original teachings.
- The focus of Buddha Dhamma, as delivered by the Buddha, was not on enhancing mundane life and on building a better society. It was focused on the fact that it is a "waste of time" to try to build large cities, develop technology, and in general, to spend too much time on "making things better for this life" because this life is only a brief stop-over in a much longer journey.

6. If one understood the primary message of the Buddha, one would see that this life is too short to be "wasted" on such things. This is due to three critical foundational aspects of Buddha Dhamma:

- Even though wrought with some suffering, human life is the best in all of the 31 realms of this world for attaining Nibbāna. It takes an effort to understand the Buddha's broader worldview; see "Origin of Life" and "The Grand Unified Theory of Dhamma."
- In the process of rebirth, we spend only a tiny amount of time in this life of about 100 years; see "Evidence for Rebirth."
- And immersing in mundane sense pleasures becomes only a hindrance to attaining the "true and permanent happiness" of *Nibbāna*; see "Three Kinds of Happiness – What is Nirāmisa Sukha" and "Nirāmisa Sukha?".

© 2026 Lal A. Pinnaduwage

- Of course, the Mahāyāna version of "Buddhism," or even the Theravāda version, has veered away from this crucial message of the Buddha.

7. Yet, I must hasten to point out two additional points:

- The Buddha stated that not everyone could comprehend this key message. Thus, he did provide advice for those who did not wish to pursue *Nibbāna* and asked for advice on how to live a moral and fulfilling family life while enjoying sensual pleasures. In Chapter IV of Bhikkhu Bodhi's popular book, "*In the Buddha's Words*" (2005), such advice from different *sutta* has been extracted into one place; this book also has other categories separated like good rebirths, mind, etc.
- The Buddha never tried to change or influence the political systems that were in place, even though he praised the democratic system that was in place in the tiny autonomous region of *Vajji* , which was a republic similar to the one we have now in the United States. Other than openly criticizing the caste system, he stayed away from politics.

8. I am impressed that Mr. Harris has been able to catch at least a glimmer of the uniqueness in Buddha Dhamma even though he has not been exposed to the correct teachings of the Buddha: "*Buddhism in particular possesses a literature on the nature of the mind that has no peer in Western religion or Western science. Some of these teachings are cluttered with metaphysical assumptions that should provoke our doubts, but many aren't. And when engaged as a set of hypotheses by which to investigate the mind and deepen one's ethical life, Buddhism can be an entirely rational enterprise*" (p. 29).

- The author is highly impressed with the Buddhist "*vipassanā*" meditation. However, what he describes in just breath meditation or "*Samatha* meditation"; see, "Bhāvanā (Meditation)".

9. And he has the concept of Enlightenment (*Nibbāna*) all wrong (this says a lot about the *Mahāyāna* "Buddhism" that he has been exposed to): *"...the state of "full enlightenment" – is generally described as "omniscient." Just what this means is open to a fair bit of caviling. But however narrowly defined, the claim is absurd*" (p. 43).

- To understand the concept of *Nibbāna*, one must understand the worldview of the Buddha as described in the posts mentioned above. Then, one needs to read other posts on this site describing *Nibbāna* (just search with the keyword Nibbāna at the box on the top right on Keyword Search).

10. Interestingly, there is no mention of purifying the mind of defilements, which is key to true Buddhist meditation; see "The Importance of Purifying the Mind."

- I do not blame the author, of course, but it is sad to see how far "Buddhism" has veered off from the original message of the Buddha.
- It is these three root causes of greed, hate, and ignorance (and the counterparts of non-greed, non-hate, and wisdom) that clarify the basis of morality that he has puzzled over in two other books, "*The Moral Landscape*" (2011) and "*Free Will*" (2012).
- As Mr. Harris correctly points out in "*The Moral Landscape*," '*there is no such thing as Christian or Muslim morality*." There is no "Buddhist morality" either. Morality is universal and comes out naturally based on benevolence, compassion, and wisdom having precedence over greed, hate, and ignorance; see "Origin of Morality (and Immorality) in Buddhism."

11. Chapter 2 is on consciousness. The author has a good introduction, and his thinking about consciousness may be expressed here: "*I am sympathetic with those who, like the philosopher Colin McGinn and the psychologist Steven Pinker, have suggested that perhaps the emergence of consciousness is simply incomprehensible in human terms*" (p. 57).

- The Buddha has fully explained consciousness. Consciousness is NOT an emergent property, it is a fundamental entity. I have several introductory posts on consciousness on the site; see "What is Consciousness?" and follow-up posts.

© 2026 Lal A. Pinnaduwage

- I hope those who are interested will read the comprehensive description of the mind provided by the Buddha in the *Abhidhamma* section of this site, which may not be ready for a comprehensive analysis for several more months. But there are a few introductory posts there.

12. The rest of the book is about the author's experience of trying different meditation types. It is too bad that he was not exposed to real Buddhist meditation. On the other hand, even in countries where *Theravāda* Buddhism is practiced, breath meditation is widely taught.

- Overall, I am impressed that even with the minimum exposure Mr. Harris had to Buddha Dhamma, he has been able to see that "there is something hidden there." I am glad to say that the Buddha did teach a much deeper doctrine, and I am sure he and many others in the West will be enthusiastic about finding the actual message of the Buddha.
- The author knows that as an atheist, he was treading into unknown territory in talking about spiritual experiences: "*……many of my fellow atheists consider all talk of spirituality to be a sign of mental illness, conscious imposture, or self-deception. This is a problem, because millions of people have had experiences for which spiritual and mystical seem the only terms available*" (p.11).
- However, once one understands the correct message of the Buddha, one can see that there is nothing in his doctrine that goes against the beliefs and convictions of most atheists; Buddha Dhamma describes Nature's laws at a fundamental level.
- The only difference between science and Buddha Dhamma is that science assumes that mental phenomena can be derived from material phenomena. In Buddha Dhamma, the mind is at the forefront; see "Philosophy of the Mind."

13. I encourage those interested to read the book because the author has not only contemplated the subjects of morality, questions on existence, world religions, etc. but has also tried to experience different meditation techniques. I only wish he had been exposed to the true teachings of the Buddha so that he could perhaps make more assertive statements about the value of the Buddha Dhamma in addition to finding much more benefits for himself.

11.6.3 "The Language of God" by Francis Collins

Revised August 9, 2019; August 28, 2022; January 25, 2024

This is a top-rated book (published in 2007), as apparent from many reviews on Amazon. The author is a respected scientist and director of the National Institutes of Health (NIH).

- I have read numerous books to find solid arguments for believing in a Creator. The author has put together the best case using previous ideas of C. S. Lewis and others. The main points in the book can be summarized as follows (not in the order presented in the book):

1. God is responsible for the "Big Bang," i.e., the creation of the universe, and for creating the just right physical parameters (fine-tuning) that enabled human life on planet Earth.

2. The "Intelligent Design" theory must be abandoned since it may undermine the case for God's existence (a scientist actually says that!)

3. Darwin's theory of evolution does account for leading to the appearance of a "human-like" creature, even though the theory explains the evolution of more complex animals.

- He leaves it open whether this creature further evolved to be human or whether at some point, God directly instilled a conscience in it.
- Either way, God is responsible for the existence of morality in humans. He prefers to call "BioLogos" the theory of "Theistic Evolution."

© 2026 Lal A. Pinnaduwage

4. The existence of "Moral Law" (the ability to differentiate right from wrong) is the fundamental basis for his belief in God.

5. The issue of "pain and suffering" was problematic for C. S. Lewis, and the present author also encountered difficulties addressing it.

My comments are as follows:

1. Stephen Hawking, whose book "A Brief History of Time" the author quoted to make a case for God's role, has since published a new book, "The Grand Design" (2010). In that book, he clearly states that the need for a Creator God is no longer there based on new evidence.

- Also, in the inflationary theory, Big Bangs occur constantly, and there is no need to invoke a fine-tuning of physical parameters; see "The Beginning of Infinity" by David Deutsch.

2. Actually "Intelligent Design" is a somewhat better theory than the hypothesis of a God because its proponents have put forth some formidable arguments for it. For example, see Stephen C. Meyer's "Signature in the Cell," which provides a scientific analysis.

- Of course, I do not subscribe to that theory (which some say is making a case for a Creator God without admitting it). However, Collins does not make a better case for the Creator God hypothesis.
- The problem with the "Intelligent Design" theory is that, of course, the question arises about how that designer came into being! Many people say it is the same as the God hypothesis.
- If anyone is interested in learning about the "Intelligent Design" theory, a good book is "Signature in the Cell" by Stephen Meyer (2009).

3. The question is, "In this sequence did God instill moral values in the evolving creature?". Is there a clear-cut transition from a robotic animal to a human with moral values?

- The "uniqueness of a human," according to the author, is the ability to know right from wrong. Humans indeed have this quality stronger than animals. Some animals also have at least a glimpse of this quality. If you have a pet, especially a dog, you know that it has feelings and even its mind to do things, i.e., it is not like a robot.
- While people sometimes sacrifice their own lives to save others, people like Hitler and Pol Pot have committed unmentionable atrocities. And that was with planning (not just on impulse).
- In Buddha Dhamma, both moral and immoral choices are in the "human psyche"; based on many complex factors (*sansāric* habits or "*gati*," family, friends, associates, etc.), people choose to be moral or immoral at different times depending on the situation. Of course, greed, hate, and ignorance play a significant role; see, "Living Dhamma."

4. Now on the existence of "moral law": From #3 above, it is clear that even though morality is in the human psyche, it does not have a "binding effect" on humans. Humans are, in general, more "moral" than animals. But within the broader world described by the Buddha Dhamma, other sentient beings (*Devas* and *Brahmā*) are more "moral" than humans.

- If the man is to be judged by just one life, why is everyone not given the same chance (including "same morality")? People are born poor, rich, healthy, unhealthy, etc., and some die even before getting a chance to prove their worthiness.
- These apparent "vagaries of life" are a strong argument for the case that this life is only one of many. Furthermore, the diversity that we observe is due to the effects of past actions (*kamma vipāka*); see "Vagaries of Life and the Way to seek "Good Rebirths."
- The basis of morality (and immorality) comes naturally in Buddha's Dhamma. See "Origin of Morality (and Immorality) in Buddhism."

© 2026 Lal A. Pinnaduwage

5. Of course, according to Buddha Dhamma, "pain and suffering" — not only in this life but also in the cycle of rebirths — is the fundamental problem of existence.

- **Again, the "pain and suffering" issue is unexplainable by any approach based on just one life.** Like modern science, Buddha Dhamma has a foundation in "causes and effects." Suffering and happiness arise due to past causes, and since most of these effects (e.g., disability at birth, poverty) are even apparent at birth, "past" means past lives.

11.6.4 "Spark" by John Ratey

Early post of 2014; revised August 28, 2019

1. There is a good book, "Spark: The Revolutionary New Science of Exercise and the Brain" by John J. Ratey (2013). It discusses new findings on the effects of regular exercise on the brain as well as the body. (Most of the books I review are likely to be available at public libraries).

2. The book discusses how exercise can keep the brain working at higher efficiency and lower stress and anxiety. Also, regular exercise can rid of addictions, and even Attention Deficit Hyperactivity Disorder, ADHD. It also talks about women's hormonal changes and aging too.

3. The key is to engage in a moderate exercise program up to 6 days a week. And to ratchet it up to high-intensity once-in-a-while, even for a minute at a time. For example, if you jog, try to run fast for 30 seconds to 1 min once-in-awhile. That is called "interval running."

- The maximum heart rate for a person is 220-AGE.
- low-intensity exercise: 55%-65% of max rate
- moderate: 65%-75%
- high intensity: 75%-90%

4. There are "wristwatch type" heart rate monitors available. But you basically "know" when you are at low intensity (walking), moderate (jogging/slow running), and high (dashing to catch a bus or running a 100-meter race).

- Should not do high intensity unless you have been active for a while.
- In the anaerobic range (high intensity), the brain releases human growth hormones (HGH). **That is a natural way to "get high."**
- Even low-intensity workouts release many other beneficial chemicals. But in high-intensity workouts, they all get a boost. All these are good for the sustenance/growth of neurons so that your memory can be improved.
- But should not do high-intensity regularly unless one is in great shape.
- He also mentions yoga as an enjoyable activity. Any exercise, i.e., just walking, is better than none.
- He discusses how children in a school district in PA are avoiding obesity and health problems and getting good grades because the schools have good exercise programs.
- I find that the best time to meditate is after a good workout and a shower. The body and the mind are refreshed and alert.

5. We are born with a body and a mind that are results of specific *kamma vipāka* in the past. But we are not bound by either; we can improve both. That does not mean we should try to "beautify" the body; we should make it healthy. The physical body is a "temporary shell" that will be with us for about 100 years, and if we do not take care of it, that will lead to much discomfort.

© 2026 Lal A. Pinnaduwage

- We can make conditions conducive to get "good *kamma* seeds" and to prevent "bad *kamma* seeds" from bearing fruits; see, "Anantara and Samanantara Paccaya." Do not be discouraged by those Pāli words. The post is easy to understand.

6. Exercise and meditate! That is key to a long healthy life as well for "cooling down" in the sense of getting some long-lasting peace-of-mind or attaining one of the four stages of *Nibbāna*.

- As we get old, it is imperative to keep both body and mind in good condition. It is hard to concentrate, let alone meditate, with an aching body or a defiled mind.
- Walking a mile or two a day can keep one reasonably healthy. For the mind, solving word puzzles or reading a book is better than watching television.

11.6.5 "The Life of the Buddha" by Bhikkhu Ñāṇamoli

October 13, 2018; revised November 15, 2020

"The Life of the Buddha" Is a Good Resouce

1. "The Life of the Buddha" by Bhikkhu Ñāṇamoli is good to read and even to keep as a reference (page numbers quoted are for the 2001 First BPS Pariyatti edition). It is a good book for two reasons:

- A chronological record of the Buddha's life (after the Buddhahood),
- Detailed accounts of events that are not in the *suttā* (taken from the *Vinaya Piṭaka*).

Need to Consult All Three *Piṭaka*

2. The Buddha said that if there is any doubt or a concept that is not clear, one should check with *Sutta*, *Vinaya*, and *Abhidhamma*. These basically refer to the *Tipiṭaka* (three baskets) of *Sutta Piṭaka, Vinaya Piṭaka*, and *Abhidhamma Piṭaka*.

- Most people refer to the *Sutta Piṭaka* and forget about the other two. *Abhidhamma Piṭaka* is a bit hard to understand, and without a firm grasp of basics it is harder.
- Most people think that the *Vinaya Piṭaka* is just for the *bhikkhus* and *bhikkhunis*. But there are sections in the *Vinaya Piṭaka* that have details that are not in the *suttā*. Furthermore, those sections in the *Vinaya Piṭaka* are easy to understand, as we see below.

An Example

3. I will provide the following as an example of what is in this book that is not available in any *sutta*. It describes how the five ascetics attained the *Sotāpanna* stage over several days with the delivery of the *Dhammacakkappavattana Sutta*.

Here is a direct quote from p. 45 of the book (starting from the point where the Buddha had just finished the first delivery of the *Dhammacakkappavattana Sutta*):

"Then *Aññata Koṇḍañña*, who had seen and reached and found and penetrated the *Dhamma*, whose uncertainties were left behind, whose doubts had vanished, who had gained perfect confidence and became independent of others in the Teacher's Dispensation (**My Comment**: i.e., became a *Sotāpanna*), said to the Blessed One: "Blessed One, I wish to go forth under the Blessed One and to receive the full admission?"

"Come, *bhikkhu*," the Blessed One said, "The *Dhamma* is well proclaimed. Live the holy life for the complete ending of suffering." And that was his full admission.

Then the Blessed One taught and instructed the rest of the *bhikkhus* with a talk on the *Dhamma*. As he did so, there arose in the venerable Vappa and the venerable Bhaddiya, the spotless, immaculate vision of the

© 2026 Lal A. Pinnaduwage

Dhamma (**My Comment**: i.e., became *Sotāpannas*). All that is subjected to arising is subjected to cessation. They, too, asked for and received the full admission.

These, having seen *dhamma*, attained *dhamma*, knowing *dhamma* … having attained without another's help to full confidence in the teacher's instruction, spoke thus to the Blessed One: "May we, Blessed One, receive the going forth in the Blessed One's presence, may we receive ordination?"

Then living on the food they brought to him, the Blessed One taught and instructed the rest of the *bhikkhus* with a talk on the *Dhamma*. All six lived on the food brought back by the three of them. Then there arose in the venerable Mahānāma and the venerable Assaji the spotless, immaculate vision of the *Dhamma* (**My Comment**: i.e., became *Sotāpannas*), and they too asked for and received the full admission".

Important Deductions

4. We can learn several important facts from the above account.

- Only Ven. Koṇḍañña attained the *Sotāpanna* stage in the first round in the first night of the delivery of the *sutta*. It actually took several days for all five ascetics to attain the *Sotāpanna* stage.
- Buddha actually did not just recite the *sutta* as it appears in the *Tipiṭaka*. That recital would have been finished within 15 minutes!
- So, we can see that what is in the *Tipiṭaka* are HIGHLY CONDENSED summaries of those discourses and possibly many discussions.

Many *Suttā* Provide Only Concise Summaries

5. What we see as the *Dhammacakkappavattana Sutta* today is a highly condensed version of the material that was taught by the Buddha over several days, as is clear from #3 above.

- It appears that the Buddha himself summarized the material in each *sutta* in a short concise way to a limited number of verses that were suitable for oral transmission (easy to remember). **A *sutta* is supposed to be explained in detail;** see, "Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa."
- We must remember that all the *suttā* in the *Tipiṭaka* were transmitted down several generations over about 500 years before it was written down. It was not even remotely possible to include all that was discussed over those several days!

Word-by-Word Translation is a Terrible Practice

6. What happens these days is that even highly condensed *suttā* are translated word-by-word into English. This is a terrible practice. It is no different from just reciting a *sutta*!

- One can finish reading a *sutta* in 15 minutes, and ONE would not understand any of the deep concepts embedded in the *sutta*.
- **Then how could one understand the *sutta* by just reading a word-by-word translation of a *sutta*?**

7. In fact, this could be why many people to believe that one can attain *Nibbāna* by just reciting a *sutta* or a set of verses. This practice is sometimes called "*mantra* chanting." But there is no basis for that belief.

- *Nibbāna* can be attained ONLY by cleansing one's mind.
- The MENTAL stress arises ONLY due to *lobha, dosa, moha* in one's mind.
- As one cleanses one's mind, the mental stress will decrease. This decrease is gradual in the beginning. It will have significant drops at the *Sotāpanna Anugāmi* stage and then more drops at *Sotāpanna, Sakadāgāmi, Anāgāmi* stages.

© 2026 Lal A. Pinnaduwage

- An *Arahant* does not have any mental stress. He/she may have physical suffering, but that also will end at death. No more physical or mental suffering!

There is Value in Chanting Suttā

8. Of course, there is a value in even chanting a *sutta*. They have been formulated in a format to "calm down the mind," even if one did not understand the meaning; see, "Buddhist Chanting."

- It would be much better if one understood the basic message of the *sutta*.
- One could get to the *Sotāpanna* stage ONLY BY fully understanding the concepts discussed in a major *sutta* like the *Dhammacakkappavattana Sutta.*

But Some verses Need Detailed Explanations

9. A related key point is that upon attaining the *Buddhahood*, the Buddha wondered whether the humans will ever be able to understand the deep *Dhamma* he had just uncovered.

- This is stated on p. 37 of this book. The Buddha was really doubtful whether humans will comprehend his *Dhamma*, and *Brahma Sahampati* made an invitation to the Buddha, saying that many beings in the world can understand Buddha Dhamma. He would know because he had become an *Anāgāmi* by listening to Dhamma by a previous Buddha.
- So, the point is that if one thinks one can make progress on the Path by just chanting *suttā* or even learning the word-by-word translations, one would be very much mistaken.
- **In some cases, it can take a book to really do justice in explaining a single verse in some of the deep suttā!**
- However, some long *suttā*, especially in the *Dīgha Nikāya*, can be translated word-by-word for the most part, since there may not be any deep concepts discussed there.

Other Good Aspects of the Book

10. Another good aspect of the book is that it provides the background for delivering of some major *suttā* or verses.

- For example, there is a detailed account (pp. 55-60) of how the Buddha had to perform even a few miracles to convince Uruvela Kassapa, his two brother, and 1000 of their followers before they agreed to listen to the *Aditta Pariyaya Sutta* or the Fire Sermon.
- So, we can see that it was not easy in those early days for the Buddha to even convince some of the ascetics who had their own beliefs of what *Nibbāna* was about.

11. The subsequent chapters provide a good chronological account of what happened until the *Parinibbāna*. One can get a sense of which major *suttā* were delivered at around what time.

- There are accounts on the two chief disciples, and short accounts of other important personalities such as Anāthpiṇḍika, Aṅgulimāla, Visākha, etc. Chapter 7 describes the formation of the order of *bhikkhunis*.
- Several encounters with the *Māra Devaputta* are scattered throughout the book.
- One paragraph on p. 109 is on how the Buddha visited the *Tāvatimsa deva* realm and delivered *Abhidhamma*. A summary was conveyed to Ven. Sāriputta, who expanded it with the help of his students, to the form that we have today.
- There is a chapter on Devadatta, which describes events that are not found in *suttā*, how he attained (*anariya*) *jhānāa* and *iddhi* (super-normal powers) powers, how he appeared on the lap of Prince Ajatasattu as a baby using his *iddhi* powers.

© 2026 Lal A. Pinnaduwage

- It provides a good account of Devadatta's efforts to take the life of the Buddha, and how he lost all those super-normal powers and *jhānā* at the end.

12. There is a relatively long chapter on "The Doctrine", including the Four Noble Truths and the Noble Eightfold Path.

- Then, there is another relatively long chapter on the final year of the Buddha's life, including *Parinibbāna*.
- The final chapter is on the First Buddhist Council (*Sangāyanā*) that took place 3 months after the *Parinibbāna* of the Buddha.

XII Bhāvanā (Meditation)

Buddhist meditation is about removing greed, anger, and ignorance (of the world's true nature) from the mind.

This section is pre-2016; revised on May 25, 2024 (start of the "Meditation – Deeper Aspects" section)

Meditation – Deeper Aspects

- Attaining Nibbāna Requires Understanding Buddha's Worldview
- Vipassanā – Buddhist Meditation
- Sakkāya Diṭṭhi – "Not Seeing the Unfruitful Nature of the World"

12.1 Meditation – Deeper Aspects

June 1, 2024

Deeper aspects of Buddhist meditation (*Bhāvanā*) are discussed.

Attaining Nibbāna Requires Understanding Buddha's Worldview
Vipassanā – Buddhist Meditation
Sakkāya Diṭṭhi – "Not Seeing the Unfruitful Nature of the World"
Loka Sutta – Origin and Cessation of the World
Mind Operates Like a Machine According to Nature's Laws
Abhidhamma Piṭaka – Deeper Analyses of Concepts
Saññā Gives Rise to Most of the Vedanā We Experience
Taṇhā – Result of Saññā Giving Rise to Mind-Made Vedanā
Āhāra - Food for the Mental Body
Introduction – What is Suffering?
Citta, Mano, Viññāṇa – Nine Stages of Mind Contamination
Is Ānāpānasati Breath Meditation?
Buddhist Theory of Matter – Fundamentals

12.1.1 Attaining Nibbāna Requires Understanding Buddha's Worldview

October 12, 2024

Nibbāna cannot be reached by following a set of rituals. It requires understanding how the Buddha described the world that we live in. That worldview vastly differs from all the worldviews known to humans. Attaining *Nibbāna* requires a mindset (or paradigm) change.

Too Many Myths/Misconceptions About *Nibbāna*

1. Many versions of Buddhism or Buddha Dhamma are being practiced today.

- One common misconception is that if one can follow the five (or eight) precepts and engage in "meditation," one can attain *Nibbāna.* Some equate meditation to chanting and many consider "meditation" to refer explicitly to "breath meditation."
- A good example is the "*Vipassanā* meditation" method by the late S.N. Goenka. We have had many discussions on the forum regarding this program. See, for example, "WebLink: Pure Dhamma Forums: About Vipassanā-insight technique taught by teacher S.N. Goenka" and "WebLink: Pure Dhamma Forums: Goenka's Vipassanā."The first one is enough to get the idea.
- Here, I will describe the framework of the path to *Nibbāna* according to the *Tipiṭaka*, the Pāli Scriptures written down by a group of *Arahants* at the Fourth Buddhist Council two thousand years ago. See "Historical Background."

Rāga, *Dosa*, *Moha* – Root Causes of a Stressed Mind

2. Many people become faithful believers in "breath meditation" because it helps calm the mind; chanting could do the same. For those who have experienced that calming effect, it provides solid evidence that one can control one's mind and make it calm.

- However, the negative aspect of that experience is that people get addicted to it and **do not realize that it is only a temporary solution to a long-term problem**.
- To investigate this issue further, let's examine the root causes of a stressed mind.

© 2026 Lal A. Pinnaduwage

3. Think about the state of our minds while going through life. When we are attracted to something, our minds become agitated because there is a nagging feeling of the need to fulfill that desire. In other words, greedy thoughts make a mind agitated. The root cause is "*rāga*" or "craving for worldly things."

- If one gets angry, his mind gets heated, and the anger shows in the face, too. The result is an uncomfortable, heated mind. Usually, the origin of that anger is craving something and not getting it. For example, people argue over the ownership of a piece of land (or any other item); some lead to violence. Here, the root cause for an unsettled mind is *dosa* or anger/hate.
- Then, there are situations where a mind becomes dull, lazy, and depressed. The root cause here is *moha* or *avijjā*, which we will clarify below.

Rāga, *Dosa*, *Moha* Lead to Suffering in Future Lives Too

4. Thus, we can see how the three root causes of *rāga, dosa*, and *moha* are responsible for suffering in this life. The Buddha pointed out that in addition—and even more importantly — **our actions based on *rāga*, *dosa*, and *moha*** also dictate suffering in future lives.

- To attain *Nibbāna* is to become free of both types of suffering (you may want to read the "Nibbāna" section for details).
- Both aspects can be explained via the laws of *kamma* (or *Paṭicca Samuppāda*.) Our actions with *rāga, dosa*, and *moha* in mind lead to immoral deeds (called *apuñña* or *pāpa kamma*) that can bring adverse results (*kamma vipāka*) in this life or future lives.

5. **But how can we stop such thoughts with *rāga*, *dosa*, and *moha* rising in our minds?**

- That requires a lengthy explanation. However, the first stage is to understand that the problem of suffering is not restricted to this life. We must understand how and why suffering does not end at death and continues into future lives via a rebirth process.
- This website provides evidence of the rebirth process and other details. This post summarizes **the framework of the "big picture"** necessary to get **a preliminary idea of Buddha's teachings.**
- The " Search " box at the top right will return more posts related to any word or concept, for example, "rebirth."

An Analogy of a Glass of Water

6. The Buddha used various analogies to describe how a mind becomes agitated, heated, or lethargic under different conditions.

- A "stress-free mind" is like a tall glass of pure water. Such a suffering-free mind is called a "*pabhassara* mind." Thoughts arising in a *pabhassara* mind are like clear water poured from that glass of pure water. They are not immoral or moral, just neutral.
- The mind of a *puthujjana* (average human) is like a tall glass of water with fine mud particles. If left undisturbed, all the mud will settle at the bottom of the glass, and the water on top will look clean. If we gently pour some water, it will look like pure water. In the same way, when in a calm situation (e.g., while in breath meditation), our thoughts appear to be "neutral" without causing stress.

7. However, that water can be disturbed by stirring it with a straw, and then some mud at the bottom comes up, making the water muddy. Pouring some muddy water out is analogous to generating "defiled thoughts" in a mind agitated by sensory inputs.

- In the same way, a mind can be agitated by sensory inputs.
- **The easiest two ways are via attractive or repulsive sensory inputs; the first leads to greedy thoughts, and the latter to angry thoughts.**

© 2026 Lal A. Pinnaduwage

- **In that analogy, layers of mud accumulated at the bottom of the glass are analogous to defiled gati or "*saṁsāric* bonds" ("*saṁyojana*") in Buddha's teachings.**

Saṁyojana and *Gati* – Root Causes Triggering *Rāga*, *Dosa*, *Moha*

8. The Buddha taught that all living beings have a suffering-free ("*pabhassara*") mind. However, it is hidden by ten layers of "*saṁsāric* bonds" called *saṁyojana* (the reason for calling them "*saṁsāric* bonds" will become clear later.) They are analogous to the mud sitting at the bottom of a water glass in #6, #7 above. While the mind can be agitated by a straw (#7), *saṁyojanās* can be triggered by enticing sensory inputs (called *ārammaṇa* in Pāli).

- Three of the ten layers lead to wrong views (*diṭṭhi*, part of *moha/avijjā*), five to *rāga*, and three solely to *moha/avijjā*. We attach to "worldly things" with *taṇhā* based on the *diṭṭhi* and *rāga*.
- **Thus, our defiled thoughts arise due to *taṇhā* and *avijjā*, as explained in some *suttās*.**

9. These ten *saṁyojanās* stay hidden until a tempting (e.g., attractive or repulsive) sensory input is encountered. Depending on the sensory input, all or some of the ten *saṁyojana* can be "triggered" by that sensory input. For example, seeing a beautiful woman can trigger *kāma rāga saṁyojana* in a man. The sight of an enemy can trigger the *paṭigha saṁyojana* and generate anger.

- Instead of using the ten *saṁyojanās*, we could also say the same using five "**defiled** *gati*" (pronounced "gathi.") The closest translation of "*gati*" is "character/habits." One attains *Nibbāna* by removing all five *gati*. But those five *gati* can be split into various types. The main point here is that one's habits (based on character) determine one's actions, i.e., *kamma* generation.
- For example, an "animal *gati* of anger" (which is in all *puthujjana*) can be triggered by seeing a person disliked; greedy "*peta gati*" can be triggered by seeing delicious food.
- Many Dhamma teachers today do not understand the critical concept of "*gati*." See "The Law of Attraction, Habits, Character (Gati), and Cravings (Asavas)" and "Habits, Goals, and Character (Gati)." Ten *saṁyojanās* are discussed in "Dasa Saṁyojana – Bonds in Rebirth Process."

Temporary Calm Versus Permanent Calm (*Nibbāna*)

10. Thus, a mind can get to "*samādhi,*" or a "peaceful state of mind," if it is prevented from being exposed to sensory experiences of daily life.

- The longer one can stay in such an "isolated environment" (like a meditation retreat), the longer the experience can last. This is why ancient *yogis* went into deep jungles to be away from sensory inputs that can trigger "*saṁyojana*" or "*gati*" and trigger *rāga, dosa,* and *moha* defilements to come to the surface.
- It is only by understanding the reasons for those "*saṁyojana*" or "*gati*" to exist that we can start breaking the "*saṁsāric* bonds" or "*saṁyojana*" (equivalently to get rid of various "defiled *gati*").

11. When one starts grasping Buddha's worldview (and understanding how suffering arises), the first three *saṁyojanās* are permanently removed at the *Sotāpanna* stage. This involves the removal of *sakkāya diṭṭhi* and two other *diṭṭhi saṁyojana*.

- At the subsequent two stages of *Sakadāgāmi* and *Anāgāmi*, one would comprehend how *kāma rāga* (and *paṭigha* or *dosa*) arises due to "distorted/false *saññā*" (associated with existences in *kāma loka*) that we discuss briefly below.
- Two more types of *rāga* (*rūpa rāga* and *arūpa rāga*) are removed by an *Anāgāmi* by contemplating the "distorted/false *saññā*" associated with the *Brahma* realms. *Avijjā* and two other *saṁyojanās* associated with *avijjā* are also removed at the *Arahant* stage.
- The removal of the ten *saṁyojanās* is equivalent to the removal of five *gati* types, as discussed in #9.

© 2026 Lal A. Pinnaduwage

Analogy of a Glass of Pure Water

12. Once all ten *saṁyojanās* are broken (and the five major **defiled *gati*** removed), that is like permanently removing the mud at the bottom of a glass in the analogy of #6 above.

- As we saw in #11 above, removing the ten *saṁyojanās* at various stages of *Nibbāna* is analogous to removing layers of mud at the bottom of the glass.
- Once all the mud in the glass is removed, the water will remain pure no matter how much one tries to stir it with a straw.

13. In the same way, the mind of an *Arahant* cannot be agitated by any sensory input. He can live among the most beautiful women, and no sensual thoughts will arise. That is also true for an *Anāgāmi* who has removed *kāma rāga* and *paṭigha saṁyojana*.

- A *Sotāpanna* has only understood the basic framework and **would still attach** to the "distorted/false *saññā*" associated with sensual sensory inputs in *kāma loka*, i.e., they still have *kāma rāga*.
- However, since they have removed the three *diṭṭhis* (especially *sakkāya diṭṭhi*), their minds cannot be disturbed to the extent of committing "*apāyāgāmi kamma*," which can lead to rebirths in the *apāyās*. Thus, they are permanently free of rebirths in the four lowest realms (*apāyās*.)

14. When using analogies, we must be careful not to take them literally. Analogies are given to clarify a central aspect; there can be differences in other aspects.

- The removal of mud from a glass of water is a **physical** process.
- On the other hand, removing the ten *saṁyojanās* is a **mental** process.
- The *saṁyojanās* (or "defiled *gati*") can be removed only by cultivating *paññā* or wisdom, **which means understanding the Buddha's new worldview**.

Saṁsāric Bonds (*Saṁyojana*) Can be Removed Only with Wisdom (*Paññā*)

15. The Buddha taught that all those root causes can be traced back to *avijjā* (or *moha*), generally translated as "ignorance." **The "ignorance" is not to realize the world's true nature.**

- Average humans (*puthujjana*) believe that external things can bring happiness. That wrong view ("*sakkāya diṭṭhi*") is rooted in our wrong/false perceptions (Buddha used the Pāli word "*saññā*") about the world. We will discuss that basic framework in the next post.
- This is critical because attaining *Nibbāna* (or becoming free of suffering) requires comprehending Buddha's worldview (how suffering arises) and dispelling *avijjā*.

16. **Thus, attaining *Nibbāna* critically depends on cultivating wisdom (*paññā*) by understanding the root causes of *avijjā*. Even though living a moral life is necessary, *Nibbāna* cannot be reached just by following a set of rituals.**

- **In the analogy of the glass of water, the mud can be removed by a physical process (by scooping it out or filtering using a filter).**
- **However, the defilements in mind (*saṁyojana*/*gati*) can be removed only by wisdom (*paññā*.)**
- That requires understanding how our minds are tempted/defiled by sensory inputs (*ārammaṇa*.) The concept of "distorted/false *saññā*" plays a critical role here; **we have an innate (built-in) tendency** to attach to that *saññā*. We will discuss that in the next post.

© 2026 Lal A. Pinnaduwage

12.1.2 Vipassanā – Buddhist Meditation

May 26, 2024; revised August 2, 2024 (#4(ii))

Vipassanā is an essential part of Buddhist meditation. One cannot meditate properly unless one knows/understands (*jānato/passto*) "what to meditate on." Buddhist meditation is certainly not "breath meditation."

Mundane Breath Meditation

1. I asked Grok (Musk's AI), "How to meditate?" **The answer below is almost identical to those by other AIs or a Google Search.**

"To start meditating, follow these simple steps:

1. Find a quiet place where you won't be disturbed. This could be a room in your home, a park, or even a quiet corner in your office.
2. Sit in a comfortable position. You can sit on a chair with your feet flat on the ground, or cross-legged on the floor. Make sure your back is straight, but not stiff. You can also lie down if sitting is uncomfortable for you.
3. Set a timer for the duration of your meditation. Start with a short time, like 5 or 10 minutes, and gradually increase the duration as you become more comfortable with the practice.
4. Close your eyes and focus on your breath. Don't try to control your breathing, just observe it. Feel the air moving in and out of your nostrils or the rise and fall of your chest.
5. If your mind wanders, gently bring your focus back to your breath. This is normal and happens to everyone. Don't get frustrated or judge yourself for it. Just return your focus to your breath and continue.
6. When the timer goes off, slowly open your eyes and take a moment to re-orient yourself. You can do this by noticing your surroundings, feeling your body in the space, and taking a few deep breaths."

Buddhist Meditation

2. That type of "meditation" was done even before the Buddha. Even some *bhikkhus* practiced it while the Buddha was alive. Once, the Buddha admonished a *bhikkhu* named Sandha not to meditate like a lazy mule (*assa khaḷuṅka*) but like a horse trained for battle (*assa ājānīya*.) See "WebLink: suttacentral: *Sandha Sutta* (AN 11.9)." We discussed it in the previous post, "'Jānato Passato" and Ājānīya – Critical Words to Remember." [***khaḷuṅka*** : (1) poor horse, Rough horse. (Ti) (2) Like a bad horse - rough horse - he.] [Confirmed with BJT the *sutta* name should be Sandha Sutta.]

- In the days of the Buddha, part of a good army was a battalion of well-trained horses (called *assājānīya* = *assa ājānīya*, where "*assa*" refers to a horse and "*ājānīya*" refers to "excellent quality"). Such horses don't crave food but are always ready to learn and practice. Of course, here, the word "*ājānīya*" is used in a mundane sense to describe a horse with superior training.
- A mule (*assakhaḷuṅka – assa khaḷuṅka*) is the offspring of a male donkey and a female horse. It looks like a horse but is of inferior quality and never can be trained for battle; here, "*khaḷuṅka"* refers to "inferior quality," and thus an "*assa khaḷuṅka*" is an "inferior horse." It wants to eat well and sleep all day.

3. As we discussed in "Jānato Passato" and Ājānīya – Critical Words to Remember," those who practice breath meditation are of "inferior quality" (***purisa khaḷuṅka***, where "*purisa*" refers to a "person.") **That is because their efforts are "easy and superficial" (how hard is it to focus on the breath?) and may provide a "temporary relief" but do not lead to "end suffering."**

© 2026 Lal A. Pinnaduwage

- **On the other hand, Buddhist meditation requires a deep understanding of Buddha's teachings and will lead to the permanent ending of all suffering.**
- Most effort in Buddhist meditation is to acquire that deep understanding of the nature of this world.
- **Those who cultivate that deeper understanding (with "insight meditation" or *Vipassanā*)** are Noble Persons (*Ariyas*) or ***purisa ājānīyo.***
- It is a good idea to read that post to refresh your memory.

"What to Meditate On" Must Come First

4. Focusing one's attention on breath does help to calm the mind because it forces the "wandering mind" to stay away from greedy, hateful, or ignorant thoughts. That provides "temporary relief." Furthermore, if you go to a mundane meditation retreat (like a Goenka program) and spend several days doing that, that "peaceful mindset" seems stable. Yet, after coming back, it wears away. Then, they feel the urge to go to another retreat and get that experience back.

- **However, Buddhist meditation (*Ānāpānasati*/*Satipaṭṭhāna*, the correct versions) involves "insight meditation" or *Vipassanā* and focuses on "purifying the mind."**
- **That happens in two stages:**

(i) One must first learn the worldview of the Buddha, the true nature of this world with 31 realms of existence, and a rebirth process where one is reborn among those realms. At the end of this process, one becomes a *Sotāpanna* by removing wrong views (*sakkāya diṭṭhi*, *vicikicchā*, *sīlabbata parāmāsa*) about the world. We could also say a *Sotāpanna* has removed *diṭṭhi anusaya, diṭṭhi saṁyojana*, or *diṭṭhi vipallāsa*; they all state the same. Each way of describing involves different approaches. The result is the same, i.e., getting rid of wrong views. **In this series, we will focus on the *vipallāsa* aspect. *Vipallāsa* means "distortion," and thus, "*diṭṭhi vipallāsa*" means "distorted views."**

(ii) Once the "distorted views" are eliminated, the next step is to eliminate the tendency to attach to the "distorted *saññā*" or **"*saññā vipallāsa.*"** I have already done the analysis here: "Sotāpanna Stage via Understanding Perception (Saññā)." **In this series of posts, I will try to explain how this "distorted *saññā*" is built into our physical bodies via *Paṭicca Samuppāda.*** Most of our cravings arise via **"*saññā vipallāsa.*"** The Buddha directly called ***saññā* a mirage** in the "WebLink: suttacentral: *Pheṇapiṇḍūpama Sutta* (SN 22.95)," and we discussed that in the post, "Sotāpanna Stage and Distorted Saññā" and "Fooled by Distorted Saññā (Sañjānāti) – Origin of Attachment (Taṇhā)." This realization has helped me immensely in getting rid of *kāma rāga*.

Removal of "*Diṭṭhi Vipallāsa*" Comes First

5. Removing "*diṭṭhi vipallāsa*" involves one aspect of *Paṭicca Samuppāda*. This involves grasping the Buddha's fundamental worldview, which involves existence in 31 realms and a rebirth process based on *Paṭicca Samuppāda*.

Then, one would realize that the two dominant worldviews humans have are incorrect:

(i.) One with *uccheda diṭṭhi* believes that there is no rebirth, and with the death of the physical body, nothing remains or continues.

(ii.) The other extreme is to have "*sassata diṭṭhi,* "i.e., to believe that there is a "permanent soul/*ātma*" associated with a person.

- **Those are the only two views about existence that anyone can come up with without a Buddha pointing out a "previously unknown explanation."**

© 2026 Lal A. Pinnaduwage

- The Buddha rejected both those extreme views. A "person" exists as long as that "lifestream" is sustained via *Paṭicca Samuppāda* (i.e., until the root causes of greed, hate, and ignorance exist in mind.) Conditions brought about by sensory inputs trigger those root causes.

6. At the *Sotāpanna* stage, one can see that there is no "unchanging self" (a soul in Christianity/or "*ātma*" in Hinduism). Our experiences arise based on root causes (and conditions for triggering them).

- Removal of "*diṭṭhi vipallāsa*" leads to the automatic stopping of the mind from engaging in "extreme immoral deeds" or "*pāpa kamma*" (stronger versions of *akusala kamma* that can lead to rebirths in the *apāyās*.) Thus, a *Sotāpanna* will never be reborn in an *apāya*. Thus, we could say that rebirths in the *apāyās* (the four lowest realms, including the animal realm) are due to "*diṭṭhi vipallāsa.*"
- *Paṭicca Samuppāda* explains how various rebirths among the 31 realms originate from *kammic* energies produced via various kinds of *akusala kamma*. See "Paṭicca Samuppāda Cycles."
- The next step is to stop rebirths in the higher realms of "*kāma loka*" (the human realm and the six *Deva* realms.)

Removal of "*Saññā Vipallāsa*" Comes Next

7. **Rebirths in "*kāma loka*" can be stopped only by losing cravings for sensual pleasures or "*kāma assāda.*"**

- Why do we ever want to remove "sensual pleasures"? Most people have a hard time understanding that. **The quick answer is:** "Until craving for sensual pleasures is removed, it is impossible to stop suffering too." **Pleasure and pain are like two sides of a coin**; one cannot be removed without removing the other. Furthermore, a coin has a certain thickness; the faces cannot be there without some thickness. That "depth of the coin" can be compared to ignorance (*avijjā*.) Removal of the two faces of the coin requires making the depth zero, i.e., removal of the whole coin. In the same way, pleasure and pain are "bound together" by *avijjā* and can be removed only by removing *avijjā* from a mind. Also, see "Is It Necessary for a Buddhist to Eliminate Sensual Desires?"
- When the root causes (greed, hate, and ignorance) disappear, no external sensory input, under no circumstance, can trigger generating attachment/repulsion to that sensory input. **The key is the following: When one understands this at the *Paṭicca Samuppāda* level, ignorance disappears, and that will make greed and hate disappear, too.**
- It is impossible to stop greed/hate from arising without eliminating ignorance (*avijjā*) by comprehending *Paṭicca Samuppāda.* **That happens in stages**, and *avijjā* is entirely dispelled at the *Arahant* stage.

Origin of "*Saññā Vipallāsa*" Is Also Explained by *Paṭicca Samuppāda*

8. **How does *avijjā* lead to cravings? That is the second aspect of the "puzzle of existence" explained by *Paṭicca Samuppāda.***

- Removal of cravings for sensual pleasures can, in rare cases, come with the removal of "*diṭṭhi vipallāsa.*" In fact, for those born with a "higher level of wisdom" (*ugghaṭitaññū*) like Ven. Bāhiya Dārucīriya, that is possible and even may not require much effort. The Buddha described four types of people in the short "WebLink: suttacentral: *Ugghaṭitaññu Sutta* (AN 4.133)." They are *ugghaṭitaññū* (one who understands immediately), *vipañcitaññū* (one who understands with brief explanation), *neyyo* (one who understands with detailed explanation), and *padaparamo* (one who will not fully understand.)
- Most people born today fall into the last two categories. Craving for sensual pleasures is hard to be removed by forceful restraining (i.e., willpower), and it could lead to the agitation of the mind (*paṭigha*). It would be easier to remove cravings if one can understand that **cravings arise due to a mirage ("distorted *saññā*")**, as the Buddha pointed out in the "WebLink: suttacentral: *Phenapiṇḍūpama Sutta* (SN 22.95)" among others: "Sotāpanna Stage via Understanding Perception (Saññā)."

© 2026 Lal A. Pinnaduwage

9. I realized that explanation last year. This has not been explicitly described by anyone in the present day. However, many Noble Persons of the present day (including Waharaka *Thero*) would have understood it, even without realizing/describing it explicitly **(i.e., that "distorted *saññā*" is built into our physical bodies via *Paṭicca Samuppāda*.)** I am certain any such person would agree with this analysis. In any case, I would appreciate all comments (in the forum or via email to lal@puredhamma.net), whether in agreement or disagreement. In the latter case, please provide evidence from the *Tipiṭaka* that contradicts my analysis. I have already done an analysis without explaining how our physical bodies (with "distorted *saññā*" built-in) arise via *Paṭicca Samuppāda*: "Sotāpanna Stage via Understanding Perception (Saññā)."

- **The rise of "distorted *saññā*" can be explained by *Paṭicca Samuppāda*. Each rebirth occurs with "distorted *saññā*" built-in by *kammic* energy!**
- Each realm has a different "distorted *saññā*" according to *Paṭicca Samuppāda*. That is why our minds generate the "sweetness of sugar" (and we like that taste), but a pig would not get that *saññā*. A pig feels a "built-in *saññā* of a good taste" for rotten food!
- **An *Arahant* also gets the "distorted *saññā*" because it is "built-in" to human birth.** But *Arahant*'s mind will not be "fooled by it." See, for example, "Fooled by Distorted Saññā (Sañjānāti) – Origin of Attachment (Taṇhā)."
- In this new series, I will try to explain how that "distorted *saññā*" gets built into our physical bodies via *Paṭicca Samuppāda*. **If one is unaware of that analysis, it is hard to believe that the "sweetness of sugar" or the "beauty of a woman" is a mirage**, even though the Buddha explicitly taught that.

12.1.3 Mind Operates Like a Machine According to Nature's Laws

June 14, 2024; revised February 16, 2026

The mind operates like a machine based on nature's laws, which comprise a specific set of rules. The Buddha discovered those specific rules.

Mind and Matter – Very Different

1. Any mind works the same way according to nature's laws. Scientists have discovered some of nature's laws governing the behavior of matter (such as the laws of gravitation). However, they do not know that the mind also works according to nature's laws.

- **Nature's laws governing the motion of inert objects are easier to discover because those rules apply the same way regardless of the location of the experiments or the person conducting the experiments.** For example, a rocket launched from anywhere in the world can reach the Moon if the correct principles are applied. A stone thrown up will ascend the same distance regardless of the location or who throws it.
- **On the other hand, it is impossible to conduct "mind experiments" and get the same result.** That is because each person's mind works uniquely; even the same person is likely to respond differently to the same "mind experiment" at different times. For example, a person who normally behaves morally could be tempted to engage in immoral activity after getting drunk.
- In another example, **two people meditating for a fixed period may get vastly different results:** (i) One engaging in "breath meditation" will temporarily relieve stress. (ii) Another may attain the *Sotāpanna* stage in a *Vipassanā* session and be free of the worst suffering forever.

Scientific Studies Point to a Correlation Between Brain Activity and Thoughts

2. Scientists believe thoughts arise in the brain. **Despite many years of scientific efforts, they have been unable to show that the brain is where thoughts arise.**

© 2026 Lal A. Pinnaduwage

- Of course, they have proved a **correlation** between thoughts and brain activity. They can monitor the changes in brain activity as a person's thoughts change. They have also documented the impact of brain injuries on cognitive functions. See, for example, "Patient H.M. – Different Roles of Brain in Memory." The full set of posts in "Brain and the Gandhabba."
- The Buddha explained that while the brain plays a major role in the mind's working, **the seat of the mind (where thoughts arise) is not in the brain or anywhere else in the physical body.** A "mental body" (or *gandhabba*) pervades the physical body, and the brain merely collects sensory data and transmits it to the mental body.
- All scientific studies to date are consistent with the Buddha's explanation of how the mind works. I have discussed those points at length here: "Brain and the Gandhabba."
- In this new series of posts, I will explain the details of Buddha's teachings on the mind in simple terms.

"Mind in the Brain" Hypothesis Cannot Account for Rebirth and NDE Accounts

3. Most people in Western societies are not familiar with the concept of rebirth. However, that is changing as evidence is emerging, and scientists and philosophers are beginning to take it seriously.

- **The main reason is the mounting evidence that the mind can exist outside the physical body, i.e., that the mental body (*gandhabba*) can detach from the physical body under certain conditions.**
- Systematic studies are being conducted to document and verify Near-Death-Experiences (NDEs) and Out-of-Body Experiences (OBEs). See "Near-Death Experiences (NDE): Brain Is Not the Mind" and "Out-of-Body Experience (OBE) and Manōmaya Kāya."
- That is in addition to an enormous database of rebirth accounts by children common to all cultures and regions worldwide. See "Evidence for Rebirth."

One White Crow Is Enough to Disprove the Hypothesis, "All Crows Are Black"

4. **If even a SINGLE rebirth account or an NDE is valid, then the hypothesis "consciousness arises in the brain" is false.** American philosopher William James stated the following, which is widely quoted today ("WebLink: journals.sfu.ca: After the White Crow: Integrating Science and Anomalous Experience," Jerry E. Wesch (click on the link to download pdf)):

"*In order to disprove the assertion that all crows are black, one white crow is sufficient.*"

- That is a logical statement. **It is unnecessary to prove that all or even many rebirth accounts/NDE accounts are true.** Even if just one account is valid, that is enough to conclude that the brain is not where thoughts arise!
- In the following short video, a physician describes how he became convinced of Near-Death Experiences. One of his patients had watched him talking to her friend while in a coma:

  WebLink: Youtube: Are near-death experiences real? Here's what science has to say. | Dr. Bruce Greyson for Big Think

Basic Picture of the "Mind"

© 2026 Lal A. Pinnaduwage

5. The workings of the mind are detailed in the thorough analyses of *Abhidhamma*. Even though the subject of *Abhidhamma* is not easy to tackle, we all can understand the basic concepts. I have tried and will continue, to describe the essentials in easy-to-grasp terms. Relevant posts are in the "Abhidhamma" section and spread among others.

- The mind of any sentient being (from those in the *apāyās* to the highest *Brahma* realms) has the same "structure." Thoughts (*cittās*) arise in the "mental body" (*manomaya kāya*) in ANY living being. Even though our physical bodies are infinitely heavier, all thinking occurs in the *manomaya kāya*. *Brahmās* do not have dense physical bodies and have only the invisible *manomaya kāya*.
- Specifically, *cittās* arise in an unbelievably tiny entity (*hadaya vatthu*) in the *manomaya kāya* created by *kammic* energy (or "nature") according to specific rules. The *manomaya kāya* may also have a few more similar-sized entities (*pasāda rūpa*) that act as "doors" through which the mind receives up to five types of sensory information (sights, sounds, tastes, smells, and body touches) from the external world.

6. In humans, the manomaya kāya is trapped inside the physical body.

- All sensory information must first enter the physical body via the five physical sense faculties: eyes, ears, tongue, nose, and the body. Those signals get transmitted to the brain via chemical/electrical signals. They are first processed by the brain, which converts them into a form understandable by the *hadaya vatthu* in the *manomaya kāya.* Then the brain transmits those signals to the *hadaya vatthu* via the five *pasāda rūpa* around the *hadaya vatthu*.
- A key factor here is that the brain transmits those signals to the *hadaya vatthu* one packet at a time (via the five *pasāda rūpa*). That is described in the post "Vision Is a Series of "Snapshots" – Movie Analogy."

The World – *Kāma Loka*, *Rūpa Loka*, *Arūpa Loka*

7. **First, let us look at the "big picture"** of the Buddha. **While learning about the other "unseen realms" may not be directly relevant to understanding the Noble Truths, it is quite informative when it comes to understanding the mind.** The Buddha divided the world (*loka*) into three major categories: (i) *kāma loka* with all five physical senses (four *apāyās*, human realm, and six *Deva* realms), (ii) *Rūpa loka* (sixteen *rūpāvacara Brahmās* realms) with three senses (seeing, hearing, and thinking), and (iii) *Arūpa loka* (four *arūpāvacara Brahma* realms) with only the mind for thinking.

- *Brahmās* in 20 of the 31 realms have mostly the *manomaya kāya.* Since "dense physical bodies" are needed to "bring in" the sensory inputs of taste, smell, and physical touch (including sex), *Brahmās* cannot experience taste, smell, or touch.
- The craving for sensual pleasures (*kāma rāga*) arises based on taste, smell, and touch (sex). Most *akusala kamma* are done with *kāma rāga*.
- **That leads to two critical consequences: (i) *Brahmās* cannot commit most of *akusala kamma*, and (ii) *Brahmās* are immune to *kamma vipāka* that can manifest only via the physical body.**
- Discussing those two effects can be informative, so let us do that.

*Brahmā*s Are Incapable of Committing Most of *Akusala Kamma*

8. Since *Brahmā*s in those 20 realms do not have physical bodies, they cannot taste, smell, or feel any body touches.

- Humans generate greedy thoughts while focusing on taste, smell, and touch (sex plays a major role here). If you think carefully, you will be able to see that most *akusala kamma* (killing, stealing, lying, sexual misconduct, etc.) are done while seeking those "sensory pleasures" or "*kāma assāda*."
- Another way to state the above: *Brahmā*s without physical bodies cannot do any *kāya kamma* (stealing, killing, sexual misconduct) or *vacī kamma* (lying, gossiping, etc.). Also, there is no reason to steal

© 2026 Lal A. Pinnaduwage

anything if you don't need it. There is no need to crave sex if you have no idea about sexual activities. *Brahmās* without dense bodies or sex organs have no idea what sex is.

- Out of the 11 realms in *kāma loka*, we can see only the human and animal realms where the physical bodies are prominent. We cannot see the *petas* in the *peta* realm or the *Devās* in the six *Deva* realms because they have "much less dense" (or subtle) physical bodies. However, all beings in *kāma loka* can experience all five senses: sights, sounds, tastes, smells, and touch.

9. A critical observation from the discussion in #8 above is that the number of possible *cittās* in *kāma loka* is 54. In contrast, those in the *rūpa* and *arūpa loka* are much less (15 and 12, respectively.) As explained in #8, **many types of *cittās* that can arise in *kāma loka* (for example, immoral thoughts) do not arise in *rūpa* or *arūpa lokās*.**

- There is an easy way to remember the number of *cittās* in *rūpa* and *arūpa loka*. Those correspond to the *cittās* humans experience while in *rūpa jhāna* and *arūpa samāpatti*.
- In the *Abhidhamma* analysis, the four *jhānās* in the *suttās* become five (the first *jhāna* is split into two to make the analysis more precise.) The five *jhānic* states are characterized by five *jhāna* factors or mental concomitants: *vitakka* (initial application), *vicāra* (sustained application), *pīti* (zest), *sukha* (happiness), and *ekaggatā* (one-pointedness). All five factors are present in the first *jhāna*, and as one moves to higher *jhānā*, these factors are lost one by one, and in the fifth *jhāna*, only *ekaggatā* is left.
- You don't need to memorize any of those details, but it is good to have a general idea. You can always look up the details if necessary. See "The 89 (121) Types of Citta."
- **The main point is that the same human mind can access the mindset of *Brahmās* in the *rūpa loka* by cultivating *jhāna*.** Then, by making further progress (cultivation of *arūpa samāpatti*), they can access the mindset of *arūpa Brahmās*.

*Brahmā*s Are Immune from Some *Kamma Vipāka*

10. Now, let us look at the second consequence of *Brahmās* not having physical bodies, as mentioned in #7 above. Since *rūpa* and *arūpa loka Brahmās* lack physical bodies, they cannot be injured or sick.

- Thus, even *anariya Brahmās* are immune from such *kamma vipāka* while living a *Brahma* life.
- That principle holds in other realms, too. For example, human bodies cannot be subjected to the harsh "punishments" experienced by beings in the *apāyās*, especially in the lowest realm of *niraya*. A "*niraya* being" can be cut into pieces, and their bodies re-assemble instantly, making them susceptible to such cuttings repeatedly. A human body cannot withstand such suffering for more than a split second.
- In the same way, human bodies cannot experience the "subtle but enhanced pleasures" enjoyed by the *Devās* in *Deva* realms.
- That highlights the importance of "conditions" in bringing *kamma vipāka*. A given sentient being (or "lifestream") may have accumulated innumerable *kammic* energies that can bring good and bad *vipāka*. Only a fraction of those can manifest in a given realm. The harshest *vipākās* manifest in the *apāyās*, and the better *vipāka* can manifest in the higher realms. See "What Does "Paccaya" Mean in Paṭicca Samuppāda?"

Kāma Rāga, Rūpa Rāga, Arūpa Rāga

11. The Buddha divided the "world" into three sections (*kāma*, *rūpa*, and *arūpa loka*) because, at different stages in their *saṁsāric* journey, a living being gives priority to three types of "pleasures."

- The etymology ("*pada nirutti*") of "*rāga*" comes from "*rā*" + "*agga,*" where "*rā*" means to "travel (in the *saṁsāric* journey)" and "*agga*" is to "give priority."

© 2026 Lal A. Pinnaduwage

- *Kāma rāga* means prioritizing sensory pleasures arising from "close contact" of taste, smell, and touch (including sex).
- Those *yogis* who have cultivated *jhāna* have seen the drawbacks/dangers of *kāma rāga*. They prefer "*jhānic* pleasures" and have some "*rūpa rāga*" left (this "*rūpa rāga*" is somewhat different from "*rūpa rāga*" in connection with the *kāma rāga*; it means attachment to the remaining types of *rūpa* once *kāma rāga* is removed; this is a subtle point.)
- At the next higher level, those who cultivate *arūpa samāpatti* have seen that *arūpa samāpatti* are better and longer lasting. They have *arūpa rāga*. Here, no "dense *rūpa*" of any type is experienced since all five physical senses are absent. See, "What are rūpa? – Dhamma are rūpa too!"
- Thus, "*rāga*" means to "willingly engage (in the *saṁsāric* journey) with *kāma rāga*, *rūpa rāga*, *or arūpa rāga.* One loses all three types of *rāga* at the *Arahant* stage; that is, "*virāga*" or "absence of all three *rāga*."

Awareness of Physical *Rūpa* Is Absent in *Arūpa Loka*

12. As we saw above, awareness of sensory inputs of taste, smell, and touch is absent in the *rūpa loka*. The *rūpa loka* (*rūpāvacara*) *Brahmās* are unaware of those sensory inputs. They don't have dense bodies to physically contact food, odor particles, or other dense objects. But they can "see" the subtle bodies of other *Brahmās* and "hear" what they say. Such "seeing" and "hearing" do not require physical eyes and ears. By the way, that is how human *gandhabba* see and hear. A relative of mine can leave her physical body with her *gandhabba*, and she says she can see things much more clearly with that *manomaya kāya*.

- When a human *yogi* transcends the fifth *jhāna* (the same as the fourth *jhāna* in the *suttās*), the ability to see and hear also disappears. Then, the *yogi* effectively has only the mind (unaware of the physical body), just like an *arūpa loka Brahma*.
- Once getting to the first *arūpa loka samāpatti* on infinite space (*Ākāsānañcāyatana*), a mind will be devoid of any *saññā* of any *rūpa*. The mind is fixed on the "infinite space." Now, the infinite *viññāṇa dhātu* is merged with that infinite space, and that is why the Buddha stated *viññāṇa dhātu* is "infinite." (see "Anidassana Viññāṇa – What It Really Means.")
- When a *yogi* transcends *Ākāsānañcāyatana* and enters the second *arūpa samāpatti* of infinite consciousness (*Viññāṇañcāyatana*), *viññāṇa dhātu* becomes separated from "infinite space." We don't need to get into these details, but I wanted to show how deep these concepts are. Those interested can find more information in #9 of "The 89 (121) Types of Citta."

Summary

13. We can widen our understanding of nature by looking deeper into Buddha's teachings.

- That "broader worldview" will help convince oneself of the validity of the Buddha Dhamma.
- As we proceed, more pieces of the "puzzle of existence" will fall into place. That will help immensely with insight meditation or *Vipassanā*.

12.1.4 Saññā Gives Rise to Most of the Vedanā We Experience

July 6, 2024

Saññā gives rise to most of the *vedanā* we experience, including taste; they are "mind-made *vedanā*" or "*samphassa-jā-vedanā*." For example, the sweetness of sugar is not a direct *sukha vedanā* but a mind-made *somanassa vedanā* based on a *saññā* generated by our bodies.

Saññā – The Ability of the Mind to Recognize Things/People

© 2026 Lal A. Pinnaduwage

First, it is helpful to learn how to pronounce "*saññā*":

WebLink: Listen to the Pāli word "saññā"

1. **"*Saññā*" is the ability of the mind to recognize a person or any object instantaneously.** See "Saññā – What It Really Means."

- For example, just by seeing a person's back at a distance, one may be able to identify the person. Even when seeing an old friend one has not seen for many years, one may be able to recognize the person based on his mannerisms, body shape, etc.
- When you see a basket of fruits, it hardly takes a split second to discern the names of those fruits. You don't need to think about it. The "*saññā*" about a given fruit comes to mind instantaneously.
- **Thus, a fundamental aspect of *saññā* is the mind's unique, amazing ability to "recognize" a person or an object instantly.** See #4 of "Amazingly Fast Time Evolution of a Thought (Citta)" for an example.
- This post will discuss how *saññā* leads to "mind-made *vedanā*."

A Newborn Cannot Recognize Many Things (*Saññā* Not Developed)!

2. Our thoughts arise in the mental body (*gandhabba*) trapped inside the physical body. The five physical senses (eyes, ears, nose, tongue, and the nerves on the physical body) act as "doors" and take in the sights, sounds, smells, tastes, and touches. Those signals are sent to the brain, and the brain converts them into a form that can be understood by the mental body. The details are in "Gandhabba Sensing the World – With and Without a Physical Body" and "Gandhabba in a Human Body – an Analogy."

- When a baby comes out of a womb, its brain is not fully developed. It takes about seven years for the brain to be "fully functional." **Therefore, "*saññā*" is not fully developed until seven years of age.**
- A newborn learns to recognize various things day by day. It may take a few days to recognize one's mother and father and several months to gradually recognize other things the baby can see, hear, taste, smell, and touch.
- The parents (or whoever cares for the baby) must teach the baby to identify things and name them. Even after recognizing different colors, the baby must learn from someone that a particular color is called "red." It will not be called "red" but a different name in another language. Thus, a baby develops the "*saññā*" to recognize something; it also will learn what to call it.

Vedanā – Becoming Aware of a "Feeling"

3. The definition of *vedanā* in Buddha Dhamma is: "Becoming aware of a sensory contact (*ārammaṇa*.)"

- That awareness comes with a *sukha*, *dukkha*, or a *adukkhamasukha* ("*adukkha asukha*" or "neutral") *vedanā*. For example, the following are examples of each in that order for bodily contact: getting a relaxing body massage, being hit by a cane, and feeling a little breeze.
- **Other types of sensory contacts (coming through eyes, ears, tongue, and nose) do not generate *sukha* or *dukkha vedanā*; they only lead to "*adukkhamasukha*" or "neutral" *vedanā*.**
- See #2 of "Vedanā and Samphassa-Jā-Vedanā – More Than Just Feelings," which also discusses this critical point. Do not read the rest of that post yet.
- **However, sensory contacts coming through the eyes, ears, tongue, and nose can lead to "mind-made *vedanā*" based on *saññā*!**
- That can be easily understood by considering how a newborn baby's mind develops.

A Newborn Can Only Feel *Vedanā* Due to Bodily Contacts

© 2026 Lal A. Pinnaduwage

4. A newborn can only feel bodily contact in the first few days. It will cry if given an injection or coming into contact with a hard object. It does not show much emotion based on sights, sounds, or smells. It can taste only milk, and that is to quench hunger.

- A newborn does not show any particular emotions upon seeing or hearing even her mother. That is because seeing and hearing lead ONLY to "neutral *vedanā*."
- That holds also for tastes and smells. A newborn only generates "neutral *vedanā*" based on sights, sounds, tastes, and smells.
- **It has not yet developed "*saññā*" to recognize things based on sights, sounds, tastes, and smells.**

A Newborn Will Develop "*Saññā*" for Various Things with Time

5. Within a few days to a few weeks, the baby will start recognizing its mother and father (or whoever is taking care of it, but let us consider a baby growing up with her parents.) That is the first "*saññā*" a baby develops.

- Once the baby starts tasting fruit or vegetable "pastes," it will develop "*saññā*" for various food flavors.
- Such initial developments of "*saññā*" for food will accelerate as the baby's brain grows and is exposed to various foods. It will start developing preferences for different tastes.

Saññā Giving Rise to "Mind-Made" *Vedanā*

6. A baby can identify the parents, especially the mother, after a few days. It will show signs of happiness seeing the mother. By this time, the baby has developed a "*saññā* of the mother" and can readily identify the mother (and show happiness upon seeing the mother).

- That is an excellent example of **"mind-made *vedanā*" or "*samphassa-jā-vedanā*." That *vedanā* [mind-made *vedanā*] does not arise for a baby until it can identify the mother. Therefore, that *vedanā* is caused by the "*saññā* of the mother."**
- The baby gradually realizes that her mother is taking care of her, feeding her, and cuddling her most of the time. That is why the moment she sees the mother, her mind becomes joyful, i.e., that joyful feeling arose because of the instant identification/recognition of the mother.
- As the father also gets involved by feeding the baby with a bottle or other foods, the baby will start recognizing the father, too. That *saññā* will also grow with time.
- Thus, in a few months, the baby will readily recognize the parents and be happy when they interact with her. She will also show distress (and may cry) if she does not see the parents, especially the mother.
- For another discussion on ***vedanā*** and **"*samphassa-jā-vedanā*"** see "Vedanā and Samphassa-Jā-Vedanā – More Than Just Feelings."

Baby's *Saññā* for Other Sensory Inputs (*Ārammaṇa*) Will Also Grow With Time

7. After several weeks/months, the baby can identify colors, objects, and people who come into contact with her. In all those cases, the baby's brain must be "taught" what those things are.

- The "learning process" or "developing *saññā* for various objects and people" will pick up speed after the baby learns to speak.
- For example, the baby must be shown different colors and repeatedly point out which color is red or how to identify the two pets as a cat and a dog.
- It is the same for identifying people with names or relationships: "This is cousin Joe," etc.

© 2026 Lal A. Pinnaduwage

- Such identification and labeling are made via "pattern recognition neural nets" in the brain. This is the same technique used by researchers in Artificial Intelligence (AI) nowadays. They "train" their "artificial neural net," for example, by feeding pictures of dogs to the AI to identify different types of dogs.

Vedanā Arises Only for Bodily Contacts

8. As discussed above, sights, sounds, tastes, and smells do not give rise to *vedanā*. Only bodily contact (like being touched or injured) can lead to *vedanā*.

- All other sensory contacts (sights, sounds, tastes, smells) only give rise to neutral *vedanā* (not *sukha* or *dukkha vedanā*) in the language of the Buddha Dhamma.
- When we see an object we like, it gives rise to "pleasure" in the mind. In the case of the newborn baby, it did not recognize the mother initially and would not show any emotion. However, once the brain's neural connections are made to identify the mother's face, the sight of the mother automatically generates "mother *saññā*" in the baby's mind. She automatically becomes happy since she mentally connects the mother's face with the feeding.
- **The Buddha called that a "mind-made *vedanā*" or a "*samphassa-jā-vedanā*."**

9. Let us take another example. Even a year-old child may not have the "fire *saññā*," i.e., that fire can burn and hurt. By that time, the child may know a flame is red. That is the "color *saññā*." But she would not have the "flame will burn *saññā*" unless someone specifically teaches her that.

- Even if someone had told her that a flame should not be touched because it will burn, a child may be tempted to feel a flame since the reddish color of a flame is attractive. If that happens and the child gets burned, she will permanently have that "flame will burn *saññā*," i.e., that a flame will burn the skin and cause injury. That "flame will burn *saññā*" will be there for the rest of the child's life.
- **Other types of *saññā* arise naturally as a child grows up**. Let us discuss that briefly.

Types of *Saññā* Associated with a Human Birth

10. **Some types of "*saññā*" naturally form in a growing human baby.** Generating those types of "*saññā*" for sights, sounds, tastes, and smells happens naturally because human bodies are "formed" via *Paṭicca Samuppāda* to "enjoy certain types of sensory inputs."

- For example, even from a few weeks, the brain has grown enough for the child to discern that some foods are more "tasty" than others. The baby will show happiness when eating "tasty foods" and displeasure if bitter food is given. Other than in some exceptional cases, all humans prefer certain foods over others. For example, all humans taste sugar to be sweet, lemon to be sour, and rotten meat to be yucky.
- In the same way, a baby will automatically like soothing music and be frightened by harsh sounds. It will gradually learn to like pleasant smells and be repulsed by odors that all humans are repelled by.
- However, those will take time to develop. **But the brain is fully developed by seven years, and such "*saññā*" will be fully established and arise automatically.**

11. **Then, more types of *saññā* will arise in the teenage years, specifically to be attracted to the opposite sex.**

- Below a certain age, a child may not show any particular interest in the opposite sex. However, the physical body is designed to generate "puberty hormones" starting around age ten.
- This will not only lead to changes in the child's physical body but also start the child to generate a "sexual/lustful *saññā*" to be attracted to the opposite sex. For example, a girl may be attracted to a certain boy and be happy to see him. That "happiness" or "joy" is due to the "*saññā*" developed for him. Any other girl may not generate happiness upon seeing the same boy.

© 2026 Lal A. Pinnaduwage

- There are many such "specific *saññā*" developing over the years. Girls and boys have different interests.

12. Another relevant point is that *saññā*, for some sensory inputs, could be different in the animal realm compared to the human realm.

- For example, while a human will experience (*saññā*) a foul smell of rotten meat, a pig will like that smell. Also, the *saññā* generated in a pig indicates that rotten meat is tasty.
- Even among different animals, *saññā* generated by the same sensory object could be very different. For example, cows see grass as tasty food, while lions do not.
- All humans and animals, however, will feel pain when injured (i.e., with bodily contact.) ***Vedanā* due to bodily contact does not involve "*saññā*."** That is why only bodily contact can lead to *sukha* or *dukkha vedanā*, as explained in *Abhidhamma*.

Abhidhamma Provides a Clear Explanation

13. *Abhidhamma* provides the following analysis regarding the types of *vedanā* experienced when sensory signals come through the five physical senses.

- Our sensory experiences arise as *kamma vipāka*. However, each sensory experience cannot be assigned to a single *kamma* done in the past; instead, a human body is born due to *kamma vipāka,* and our sensory experiences "come to that *vipāka* body."

Such *vipāka* can be put into two categories: some arise as *akusala vipāka* and others as *kusala vipāka*. They can be summarized as follows:

i. *Akusala vipāka* via the physical body lead to *dukkha vedanā* and *kusala vipāka* via the physical body lead to *sukha vedanā*.

ii. Both *kusala* and *akusala vipāka* coming through all other four senses (eyes, ears, tongue, and the nose) lead to neutral ("*upekkhā sahagata*" meaning "with neutral") *vedanā*, i.e., they are NOT either *dukkha* or *sukha vedanā*.

- Those who are interested can see the full description on pp. 40-43 in "WebLink: PDF download: Bhikkhu_Bodhi-Comprehensive_Manual_of_Abhidhamma," by Bhikkhu Bodhi (2000); click the link to open the pdf.

14. *Abhidhamma* assigns different names for the pleasant and unpleasant feelings arising from **"mind-made *vedanā*" or "*samphassa-jā-vedanā*."**

- "Pleasant feelings/emotions" arising via "*saññā*" are called "*somanassa vedanā*" (instead of *sukha vedanā*), and the unpleasant ones are "*domanassa vedanā*" (instead of *dukha vedanā*). The terms *sukha* and *dukkha vedanā* are reserved for those arising via bodily contact.
- Here, "*somanassa"* means "*so mana assa*" or "mind becoming elated/joyful." The opposite of that is "*domanassa"* is "*do mana assa*" or "mind becoming distressful."
- See "Feelings: Sukha, Dukha, Somanassa, and Domanassa" for more details.

Summary

15. Two types of *vedanā* can arise in mind: (i) Due to bodily contacts *sukha, dukkha,* or neural (*adukkhamasukha*) *vedanā* arise. (ii) Due to all other sensory contacts (sights, sounds, tastes, and smells), only neural (*adukkhamasukha*) *vedanā* can arise.

- *Saññā* is the ability of a mind to recognize people and objects. **In addition to "recognition," *saññā* makes some sensory inputs desirable and others undesirable.** The Buddha called *saññā* a mirage because of that second aspect. Our bodies (including both the physical body and the mental body (*gandhabba*) are formed by *kammic* energy to provide that "distorted *saññā*." **Note that "distorted**

© 2026 Lal A. Pinnaduwage

***saññā*" is not defiled, i.e., it is generated in anyone (including a Buddha or *Arahants*) who is born human. That "distorted *saññā*" is built into the human body.** Different types of *saññā* are built into the "bodies" of sentient beings in other realms, **according to the kinds of *gati* associated with each realm.**

- **In the *suttās*, only the word "*saññā*" is mentioned without specifying it is a "distorted *saññā*" that arises in our minds in many situations. I use that term to emphasize that aspect because it gives much insight.** We attach to some sensory inputs (*rūpa paṭisaṁvedī, sadda paṭisaṁvedī*, etc.) because of that "distorted *saññā*."
- That "distorted *saññā*" leads to "mind-made *vedanā*" or "*samphassa-jā-vedanā*."
- Based on such "mind-made *vedanā,*" we automatically attach to that "distorted *saññā*" with *rāga, dosa, moha,* which leads to *rūpa* ***rāga*** *paṭisaṁvedī, sadda* ***rāga*** *paṭisaṁvedī*, etc.
- The above are the critical steps that defile a mind within a split second when encountering a sensory input. See "Saññā – All Our Thoughts Arise With 'Distorted Saññā'"
- **That is the root cause of all our attachments to things in this world!** See "Saññā Nidānā hi Papañca Saṅkha – Immoral Thoughts Based on "Distorted Saññā"

12.1.5 Taṇhā – Result of Saññā Giving Rise to Mind-Made Vedanā

July 13, 2024; revised December 13, 2025

Taṇhā (tendency to get stuck in sensory inputs) happens because of "mind-made *vedanā*" arising via "distorted *saññā*." Other than the *sukha* and *dukkha vedanā* coming to the physical body, all others are mind-made *somanassa* and *domanassa vedanā* due to "distorted *saññā*." In particular, "*kāma rāga*" is triggered with "distorted *saññā*."

Saññā of Anyone Living Is Always a "Distorted *Saññā*"

1. In the post "Saññā Gives Rise to Most of the Vedanā We Experience," we discussed the fact that most of the *vedanā* we experience are **"mind-made *vedanā*" or "*samphassa-jā-vedanā*."** Let us first summarize the relevant critical points from that post.

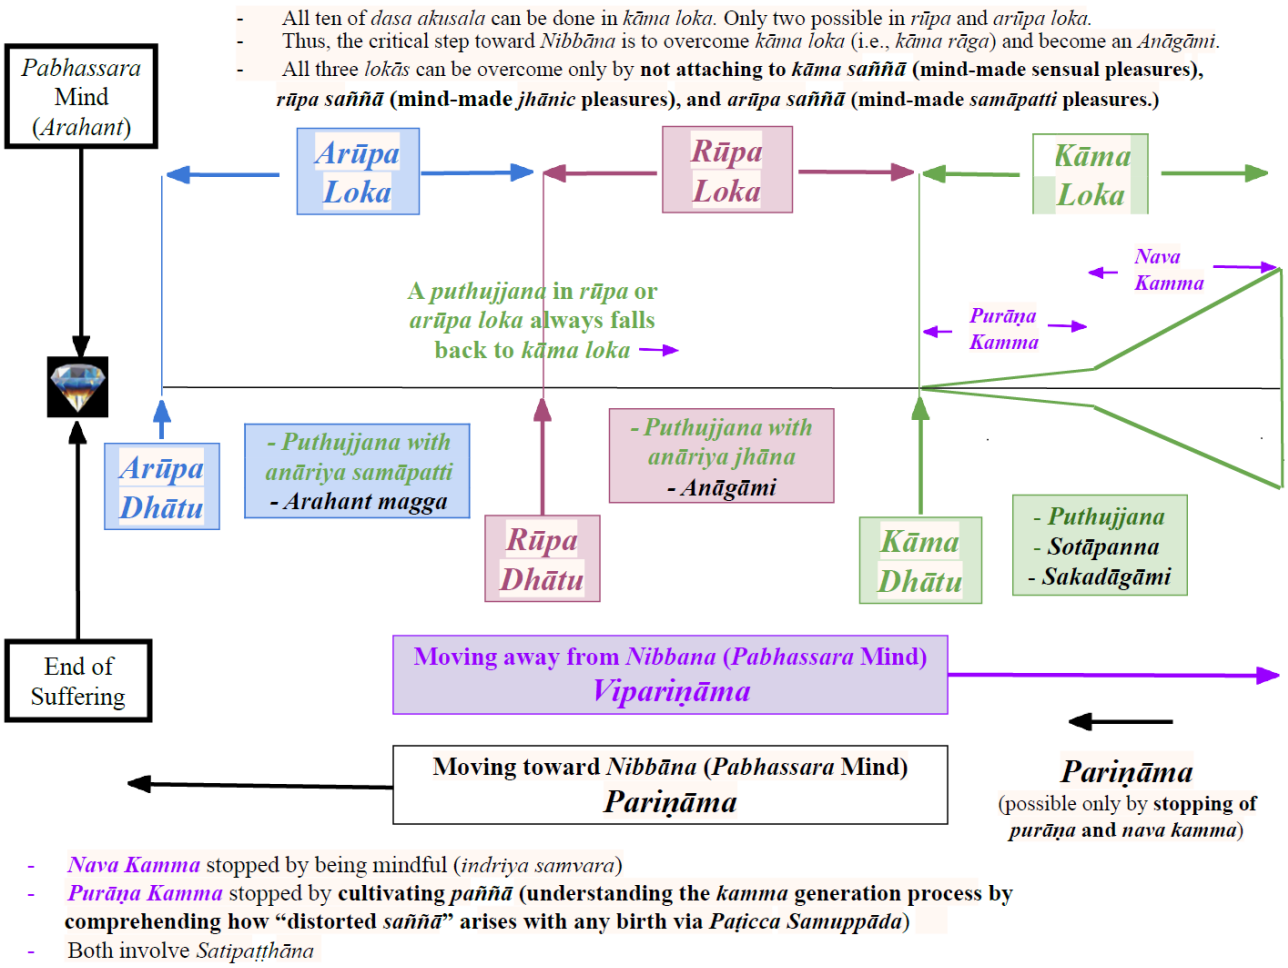
- *Saññā* is the mind's ability to recognize people and objects. **In addition to "recognition," *saññā* gives rise to a "false impression" that some sensory inputs are desirable and others undesirable.** The Buddha called *saññā* a mirage because of that second aspect. See "Fooled by Distorted Saññā (Sañjānāti) – Origin of Attachment (Taṇhā)."
- Our bodies, including both the physical and the mental body (*gandhabba*), are formed by *kammic* energy to provide that "distorted *saññā*." **Note that "distorted *saññā*" is not defiled. For example, *kāma saññā* (e.g., sugar is sweet or a particular woman is more attractive than another) arises in anyone (including a Buddha or an *Arahant*) who is born human. That "distorted *saññā*" is built into the human body.**
- Different types of *saññā* are built into the "bodies" of sentient beings in other realms, **according to the kinds of *gati* associated with each realm.** For example, while a human will experience (*saññā*) a foul smell of rotten meat, a pig will like that smell. Also, the *saññā* generated in a pig indicates that rotten meat is tasty.
- **Another aspect of this is that since "*kāma saññā*" (the main category of "distorted *saññā*" in *kāma loka*) does not arise in *rūpa* and *arūpa loka Brahmās*, they do not accumulate significant levels of new *kamma*.** Clarifying that can be beneficial in understanding the concept of "distorted *saññā*."

No New (*Nava*) *Kamma* Accumulated While in *Rūpa* and *Arūpa Lokā*s

© 2026 Lal A. Pinnaduwage

2. The world (*loka*) can be divided into three main categories: *kāma loka, rūpa loka*, and *arūpa loka*. While in *kāma loka*, a sentient being can experience all five physical sensory inputs. Those in *rūpa loka* (*rūpāvacara Brahmās*) can experience only two (sights and sounds), while those in the *arūpa loka* cannot experience those either (they have only the mind.)

- Therefore, "*kāma saññā*" (for sensory experiences on taste, smell, and touch) **can not arise** in either the *rūpa loka* or the *arūpa loka*. Although ***anariya*** *Brahmās* in either *rūpa* or *arūpa loka* retain the *kāma rāga anusaya/saṁyojana* intact, it cannot be triggered. Thus, "*kāma saññā*" and "sensual thoughts" cannot arise in them.
- However, *rūpa loka Brahmās* automatically receive "*rūpa saññā*" or "*saññā* of the respective *jhāna*." For example, those in the lower realms receive the "*saññā* of the first *jhāna*," and those in the higher realms receive the "*saññā* of the corresponding higher *jhāna*." However, they only generate *saṅkhāra* to "enjoy such distorted *saññā*" but do not generate new *kamma* (with *abhisaṅkhāra*) that can generate new *kammic* energy that can lead to rebirths. Once the *kammic* energy for that *Brahma* existence is exhausted, they die and are reborn in the human realm first, and subsequently in any other realm.
- A similar process holds for the *anariya arūpa loka Brahmās*. No new *kamma* can be generated (to a significant extent) while in that existence. It is like taking a "long vacation" and returning home. **Typically, the *abhisaṅkhāra* generation begins with '*kāma saññā*' (in *kāma loka*), as discussed in #7 below.**



3. However, the *jhānic* or *samāpatti* "pleasures" that *rūpa loka* and *arūpa loka Brahmās* experience also arise due to "distorted *saññā*." Then why do such "distorted *saññā*" **not** lead to the accumulation of new potent *kamma*?

- **The reason is simple.** The types of "distorted *saññā*" that arise in *kāma loka* are due to sensory interactions with external objects. Specifically, they involve foods (taste), fragrances (smell), and tactile sensations, including sexual contact. One may need to engage in *kāya kamma* (stealing, killing, and sexual misconduct) when seeking such experiences. That also leads to associated *vacī kamma* (lying, gossiping, harsh speech, and slandering); they arise via associated immoral thoughts (greed for others' belongings, anger/hatred, and the ten wrong mundane views). See "Ten Immoral Actions (Dasa Akusala)."
- In contrast, *jhānic* or *samāpatti* "pleasures" that *rūpa loka* and *arūpa loka Brahmās* experience DO NOT involve external objects. **They arise within one's own mind! There is no need to steal, kill, or associate with other people to enjoy *jhānic* pleasures**; also, there is no need to engage in *vacī kamma* (lie, gossip, etc.)—furthermore, there is no need to have greed for others' belongings or anger/hatred toward others.

4. Thus, once born a *Brahma* (in either *rūpa loka* or *arūpa loka*), they do not need to engage in *akusala kamma*. Also, there are no "sensual objects" in those two *lokās* to trigger *kāma rāga anusaya/saṁyojana*. **Thus, they do not accumulate any significant "new *kamma*."**

- **Because of that, the following figure does not have "expanding cones" in the *rūpa* or *arūpa loka*.**
- **That is why the *kāma dhātu* is labeled as "*hīna dhātu*" (where "*hīna*" means "inferior") in some *suttās*.** Most *akusala kamma* (especially those that can bring rebirth) are generated while in *kāma loka*. That is especially true for the human realm since *Devās* have fewer reasons to engage in *dasa akusala*.

© 2026 Lal A. Pinnaduwage

Nibbāna and the Three Lokās – Basic

- The above figure from "Vipariṇāma – Two Meanings." You can read the discussion there.

Pabhassara Mind Not Present in an *Arahant* All the Time

5. **The above figure may give the wrong impression that an *Arahant* always has a "*pabhassara* mind."** The "*pabhassara* mind" is experienced only when attaining the *Arahant-phala*. Then the mind "falls back" to the "*kāma dhātu*" for that *Arahant*. However, that mind will never reach the "*kāma loka*" and will always remain at the "*kāma dhātu*" stage until *Parinibbāna*.

- What is the difference between a "*pabhassara* mind" and the mind of an *Arahant* in "*kāma dhātu*"?
- **A "*pabhassara* mind" does not have the "distorted *saññā*."** All seven mental factors (*cetasika*) in a "*pabhassara* mind" are **without any distortions or defilements.**
- On the other hand, **a living *Arahant*'s mind is at the "*kāma dhātu*" stage, with the "*uppatti bhavaṅga*" mindset with which the *Arahant* was born.** Thus, an *Arahant* will experience 'distorted *saññā*' during daily life.
- As I have emphasized many times, anyone born with a human body will automatically generate "*kāma saññā*" ("distorted *saññā*") because it is "built-in" to a human existence via *Paṭicca Samuppāda*. Even though *Arahants* and *Anāgāmis* (born with a human body) also get the "distorted *saññā*," their minds will not attach to it. That is because they have "heard and understood" (*jānato passato*) the mechanism of how that "distorted *saññā*" arises via *Paṭicca Samuppāda*.

6. When living an everyday life, *Arahant*'s mind is in the "*uppatti bhavaṅga*" state (i.e., in *kāma dhātu*) when not focused on a sensory input.

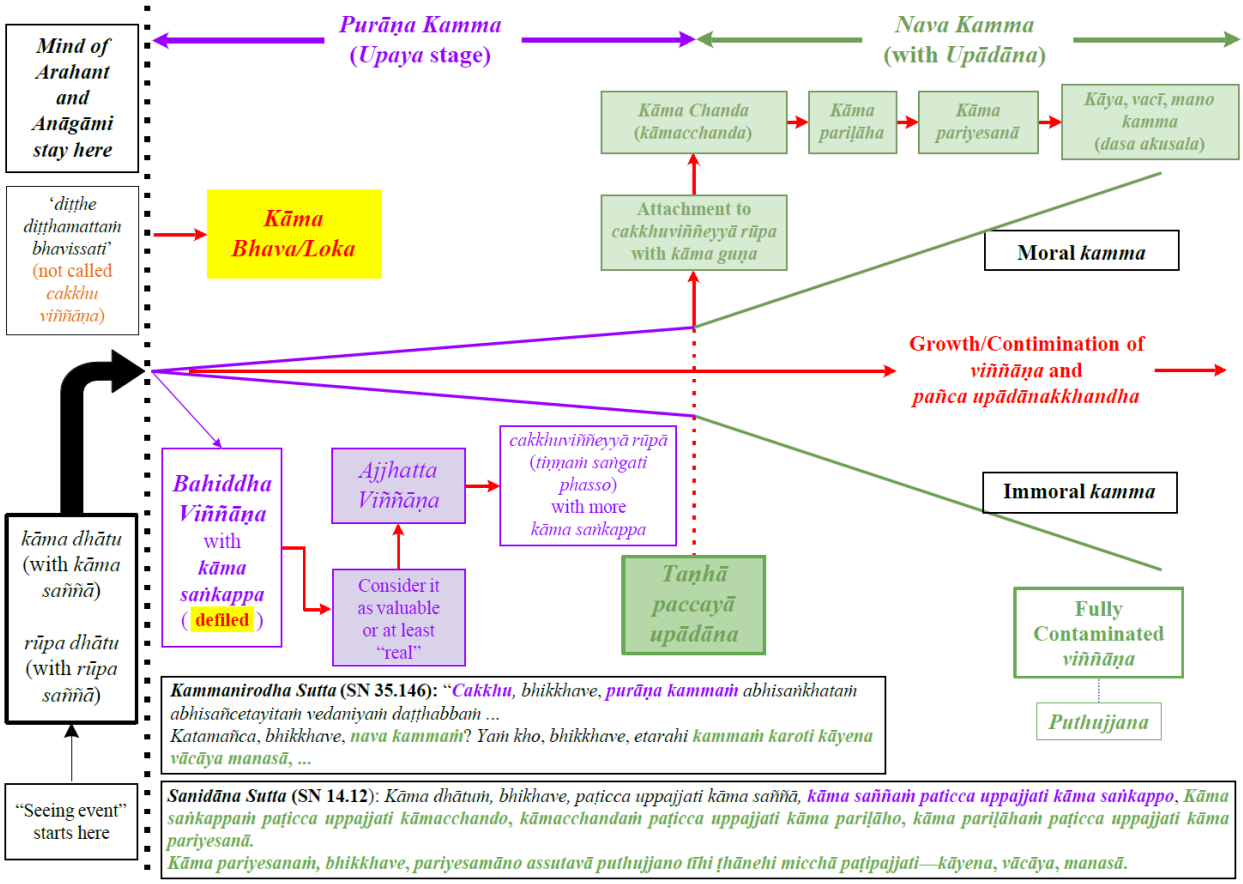
- When a sensory input comes in, it detaches from the "*uppatti bhavaṅga*" state and focuses on it: '*Kāma dhātuṁ paṭicca uppajjati kāma saññā*.' See "WebLink: suttacentral: *Sanidāna Sutta* (SN 14.12)."

© 2026 Lal A. Pinnaduwage

Thus, the *Arahant* receives the "distorted *saññā*" as anyone else in *kāma loka*, and the mind is still in *kāma dhātu.* However, it will not move to '*kāma loka*.' A better chart is in #6 of "Purāṇa and Nava Kamma – Sequence of Kamma Generation."

- Thus, *Arahant*'s mind **will not go beyond the *kāma dhātu* and get to the "*kāma bhava*"** in the next step of *"kāma saññaṁ paṭicca uppajjati kāma saṅkappo*." That happens only if the *kāma rāga anusaya/saṁyojana* is intact by automatically generating "*kāma saṅkappa*."
- Since an *Arahant* (or an *Anāgāmi*) has eliminated the *kāma rāga anusaya/saṁyojana*, their minds will not get to the *"kāma bhava"* stage by generating *kāma saṅkappa* or "defiled thoughts about that sensory input." **Thus, an *Arahant* will taste sugar to be sweet or see a beautiful woman as such but will not be attached to it to generate *kāma saṅkappa*.**
- We discussed the above time sequence in #10 of "Purāṇa and Nava Kamma – Sequence of Kamma Generation"; also see #7 below.
- However, some *Arahants* may experience the "*pabhassara* mind" while in **"*Arahant phala samāpatti.*"** See Note 1 below.

"Distorted *Saññā*" Leads to "*Ajjhatta Viññāṇa*" for Anyone Below *Anāgāmi* Stage



7. Now, let us consider the mind of anyone below the *Anāgāmi* stage.

- "Distorted *saññā*" can lead to a defiled mind (and *kamma* accumulation) in the higher seven realms (human and *Deva* realms) in *kāma loka*. **Let us focus on the human realm in *kāma loka*.**
- **"Distorted *saññā*" ("*kāma saññā*" in this case)** leads to a defiled mind (at different levels of defilement) for anyone below the *Anāgāmi* stage via the *"kāma saññaṁ paṭicca uppajjati kāma saṅkappo*" step. That occurs automatically in anyone with *kāma rāga anusaya/saṁyojana* and leads to the generation of "*kāma saṅkappa*." **This is the "weak and initial stage" of *kamma* accumulation. This is the "*ajjhatta viññāṇa*" stage, and the mind is now in "*kāma loka*."**
- For details, see "Origin of Attachment – Raga Triggered by Saññā."
- Let us discuss how a mind can become further contaminated, especially if it reaches the "*taṇhā paccayā upādāna*" step. These steps are NOT automatic and depend on the mindset (*gati*) at that moment. That is why it is possible to control and even stop further contamination beyond the "*ajjhatta viññāṇa"* stage.

Time Sequence in Further *Kamma* Accumulation in *Kāma Loka*

8. The complete time sequence is shown in the figure below.

© 2026 Lal A. Pinnaduwage

Purāṇa and Nava Kamma - 2 (revision 4)

Download/Print: "WebLink: PDF file download: Purāṇa and Nava Kamma -2-revision 4"

9. As we discussed in #6, the *bahiddha viññāṇa* has "distorted *saññā*" but no defilements of *rāga, dosa, moha*. The mind of an *Anāgāmi* or *Arahant* stops here, i.e., no further *kamma* accumulation.

- *Bahiddha viññāṇa* becomes an *ajjhatta viññāṇa* in a split second for anyone with the five lower *saṁyojana*, as we discussed in #7.

10. Once getting into the "*ajjhatta viññāṇa*" stage, a mind can **further contaminate rapidly** via several stages, as shown in the above chart and discussed in the post "Purāṇa and Nava Kamma – Sequence of Kamma Generation." We discuss it further now.

- Up to the "*taṇhā paccayā upādāna*" step, the expansion is slow, i.e., *kamma* accumulation is slow. First, with the "defiled *ajjhatta viññāṇa,*" the mind will create its own version of the "external *rūpa*." For example, when seeing an external object, that "mind-made *rūpa*" is called a "*cakkhuviññeyyā rūpā.*" See "Contamination of the Human Mind Based on a Sensory Input" and "Contamination of a Human Mind – Detailed Analysis."
- Now the attachment becomes stronger as the mind generates *kāma guṇa*: See "Kāma Rāga, Rūpa Rāga and Arūpa Rāga" and "Kāma Guṇa – Origin of Attachment (Taṇhā)."
- However, at the "*taṇhā paccayā upādāna*" step, one begins to accumulate potent *kamma* consciously (through *mano*, *vacī* and *kāya kamma*.) **That is why it is called the "*nava* (new) *kamma*" stage.** *Kammic* energies to bring *vipāka* in future lives are generated here.
- As shown in the chart, *kamma* accumulation accelerates with *kāmacchanda, kāma pariḷāha*, *kāma pariyesanā*, etc., ending with *dasa akusala* done with *kāya*, *vacī*, and *mano kamma*.
- Although we discussed these as a sequence of steps, all of them can occur within a few seconds.

© 2026 Lal A. Pinnaduwage

- See "Taṇhā Paccaya Upādāna – Critical Step in Paṭicca Samuppāda" for further details. **It will require careful reading of relevant posts to understand these concepts fully.** One way to systematically follow the sequence of posts is to start with the post of 05/08/23 [August 05, 2023] on "Uncovering the Suffering-Free (Pabhassara) Mind (with chart B1)" in "New / Revised Posts" and read up to the current post. Taking notes as you proceed is advisable.

Mind Is Not Active All the Time – *Bhavaṅga* State

11. A critical point to remember is the following: Our minds are in a "holding state" (*uppatti bhavaṅga* state) until a sensory input (*ārammaṇa*) comes in via one of the six "doors" (five physical). Of course, regardless of "which door" they come through, the mind analyzes all sensory inputs.

- While in the "holding state," a mind is not active. This is analogous to a car in neutral gear. It is "alive" but not active. Once the vehicle is put in gear, it starts moving. In the same way, a mind is sitting idle in the *bhavaṅga* or holding state.
- When an *ārammaṇa* comes in, the mind detaches from the "neutral" *bhavaṅga* state, **becomes aware** of the *ārammaṇa* (*vedanā*), and automatically **receives the "*saññā*"** associated with that *ārammaṇa.*
- If the mind "becomes interested" in an *ārammaṇa*, it will go through the stages shown in the second figure above. If the *ārammaṇa* (and the *saññā* that accompanies it), then the mind will not get into the "*taṇhā paccayā upādāna*" step. That is true most of the time. We see (or hear, taste, smell, or touch) innumerable things during the day but we will focus on only a tiny fraction!
- That can be stated as follows: A mind may get into the "*bahiddha viññāṇa*" AND "*ajjhatta viññāṇa*" stages numerous times but may not get to the "*taṇhā paccayā upādāna*" step in most cases. Furthermore, even after reaching the "*taṇhā paccayā upādāna*" step, it is possible to stop that, disengage from the *ārammaṇa* if one is being mindful!

"*Bahiddha*" and "*Ajjhatta*" Stages

12. "*Bahiddha*" comes from "*bahira*" + "*iddha*," where "*bahira*" is external and "*iddha*" means "get established." Note that "*iddhi*" is different and means "supernormal powers."

- The meaning of "*iddha*" as "established" is in the "WebLink: suttacentral: *Gavesī Sutta* (AN 5.180)" and "WebLink: suttacentral: *Cetiya Sutta* (SN 51.10)."
- Thus, "*bahiddha saññā*" is a *saññā* that arises due to external sensory inputs and automatically gets "established" or 'manifested' in a sentient being. *Kāma saññā* (like the taste of food or the beauty of a woman) is built into our human bodies. They give rise to "mind-made *vedanā*" or "*samphassa-jā-vedanā*."
- *Puthujjana* (or even a *Sotāpanna*) may attach to such "mind-made *vedanā*" because they do not understand that *saññā* are not "real" at a deeper level. Once that mechanism is understood, one realizes one has been "tricked" by nature! That is why the Buddha called *saññā* a mirage or an illusion in the "WebLink: suttacentral: *Pheṇapiṇḍūpama Sutta* (SN 22.95)" as we discussed in "Fooled by Distorted Saññā (Sañjānāti) – Origin of Attachment (Taṇhā)."

13. The "*bahiddha saññā*" evolves into "*ajjhatta saññā*" for all those who have not fully grasped the above.

- Here "*ajjhatta*" comes from "*ajjha*" + "*atta*" where "*ajjha*" means "oneself" and "*atta*" means "beneficial/meaningful."
- Those below the *Anāgāmi* stage (who have not fully grasped how "*bahiddha saññā*" arises, would automatically be attached to that "*bahiddha saññā*," thinking it would benefit oneself.

Note 1

© 2026 Lal A. Pinnaduwage

Some *Arahants* can get into the "*jhāna samāpatti*" and during that time, of course, the mind is not in the "*kāma dhātu*" stage. While in a *rūpāvacara jhāna samāpatti*, the mind is in the "*rūpa dhātu*," and while in an *arūpāvacara samāpatti*, it is in "*arūpa dhātu*."

- Some *Arahants* can get to the "*Arahant phala samāpatti,*" where the "*pabhassara* mind" remains for the duration of the *samāpatti*. **Here, the mind is freed from all three *dhātus* belonging to the 31 realms, as seen in the figure above. This is the only time an *Arahant* lives without the "distorted *saññā*."**
- Even fewer *Arahants* can get into "*nirodha samāpatti*," where even the *pabhassara* mind ceases to exist. That is the identical situation when the *Arahant* attains *Parinibbāna*, i.e., the death of the physical body and is detached from the world of 31 realms. There is **no awareness** in "*nirodha samāpatti*," where the mind stops altogether. **The status of the mind can't be shown in the above figure. It is just "missing" from this world.** When an *Arahant*'s physical body dies, it has the same status.

12.1.6 Āhāra - Food for the Mental Body

July 20, 2024; rewritten March 22, 2025 (revised #7 same day)

Āhāra in Buddha Dhamma refers to "food" for the mental body, not the physical body.

Āhāra Means "Mental Food"

1. As discussed on this website, a human has two bodies: physical and mental. The "mental body" (*manomaya kāya* or *gandhabba*) is where thoughts arise; it is made of a few *Suddhaṭṭhaka*, the smallest unit of matter in Buddha Dhamma; see "The Origin of Matter – Suddhaṭṭhaka." In the *suttās*, the physical body is called "*cātumahābhūtikassa kāya*" or the "body made up of the four great elements of *pathavi*, *āpo*, *tejo*, *vāyo*; see, for example, "WebLink: suttacentral: *Assutavā Sutta* (SN 12.61)." In some Commentaries it is referred to as "*karaja kāya.*"

- Both these bodies need food to survive.
- We eat physical food (like bread, rice, etc.) to sustain our physical bodies, but the Buddha did not teach about those foods.
- Buddha's teachings are all about the mind. **A mind attaches to "pleasurable things in this world" and consumes four types of food to live.** The consumption of *āhāra* stops only when all ten *sansāric* bonds (*saṁyojana*) are eliminated.
- **A special category of food called "*kabaḷīkārā āhāra*" is available only in *kāma loka*.** Three more types of foods are needed in all three *lokās* (*kāma*, *rūpa*, and *arūpa loka*). **They are *(saṇ)phassa*, *mano sañcetanā*, and *viññāṇa āhāra.*** See "WebLink: suttacentral: *Āhāra Sutta* (SN 12.11)." ***Brahmās* in 20 *Brahma* realms have only the "mental body," and their minds only consume the latter three types of *āhāra.***
- Therefore, **the mental body of a human** (human *gandhabba*) **consumes all four types of food**. In the *suttās*, *āhāra* NEVER refers to food for the physical body.

Nibbāna = Cessation of All Four *Āhāra*

2. **All four *āhāra* to the mental body stop when one becomes an *Arahant***, i.e., when attaining *Nibbāna*; see "WebLink: suttacentral: *Āhāra Sutta* (SN 12.11)."

- However, the mental body of the *Arahant* can live without *āhāra* until the death of the physical body. Thus, with the death of the physical body, the mental body also dies, and the *Arahant* attains *Parinibbāna* ("full *Nibbāna*") at that point.

© 2026 Lal A. Pinnaduwage

- Food is essential for all living beings. If one stops eating physical food (including water) for about seven days or so, one's physical body will die.
- However, a *puthujjana*'s mental body (*gandhabba*) will not die with the physical body. It comes out of the dead physical body and lives in "*gandhabba loka*" until pulled into a womb to be born again with a physical body.
- A human *gandhabba* also has a finite lifetime. It also dies at the end of its lifetime, but another mental body (associated with one of the 31 realms) will immediately be created by the *kammic* energy associated with that lifestream. See "What Reincarnates? – Concept of a Lifestream."

Nibbāna and *Parinibbāna*

3. Even though all four *āhāra* to the mental body cease when one becomes an *Arahant*, **his/her mental body (*gandhabba*) cannot die as long as it is attached to a living physical body.**

- At the death of the physical body, *Arahant*'s *gandhabba* comes out of the dead body. Now, it must be sustained by one or more of the *āhāra.* Since all four *āhāra* have ceased, it will die at that instant.
- In other words, **even if *Arahant*'s *gandhabba* had not reached the end of its life, it would die instantly at the death of the physical body.** Unlike the physical body, the subtle mental body cannot survive even a moment without food (once it is separated from the physical body).
- Now the question is: "Why doesn't the *Arahant*'s mind grasp another mental body (i.e., another existence) at that moment (like for other beings)"? That process is called "*cuti-paṭisandhi,*" where ***cuti* is the death of one mental body, and *paṭisandhi* is the grasping of another**. *Paṭisandhi* ("*paṭi*" is to "bind," and "*sandhi*" is a "joint" in Pāli or Sinhala.) Thus, *paṭisandhi* means joining a new life at the end of the old. That happens a thought-moment after the last *citta* of the current existence (*bhava.*)

4. Two conditions must be satisfied to generate a new mental body at the *cuti-paṭisandhi* moment: (i) There must be a *kamma bīja* available to grasp, and (ii) One's mind must willingly grasp that *kamma bīja*.

- We all have accumulated numerous *kamma bīja* even in previous lives, so the first condition is always satisfied for anyone. **Therefore, the second condition — grasping a new existence (*bhava*) at the *cuti-paṭisandhi* moment — is the condition that stops the rebirth process.**
- With each stage of *magga phala*, the possibility of grasping another existence decreases as the number of *sansāric* bonds (*saṁyojana*) are eliminated. For example, a *Sotāpanna*'s mind will not grasp a *bhava* (existence) in the *apāyās* with the removal of the first three *saṁyojana*; A *Sakadāgāmi*'s mind will not grasp human existence. In addition, an *Anāgāmi* will not grasp any *bhava* in the *kāma loka* with the removal of the first five *saṁyojana,* and an *Arahant* (with all ten *saṁyojana* eliminated) will not grasp any existence in any realm.
- The *saṁyojanās* are broken at each stage as follows: *Sotāpanna* (3), *Anāgāmi* (2), and *Arahant* (5). See "Dasa Saṁyojana – Bonds in Rebirth Process." **They can broken only via cultivating *paññā* (wisdom).**

5. An excellent example from the *Tipiṭaka* is Ven. Aṅgulimāla. He killed almost a thousand people and had accumulated enough strong *kamma bīja* (in that last life itself) to be reborn in an *apāya*.

- Just after meeting the Buddha, he attained the *Sotāpanna* stage. At that moment, the possibility of rebirth in an *apāya* was removed with the breaking of the first three *saṁyojana*.
- After several months, he attained *Arahanthood*, and all ten *saṁyojana* were eliminated; thus, he was not reborn in any realm when his physical body died.
- See "Account of Aṅgulimāla – Many Insights to Buddha Dhamma."

Weakening and Elimination of *Āhāra* With *Magga Phala*

© 2026 Lal A. Pinnaduwage

6. All four types of *āhāra* intake weaken at each stage of *magga phala*.

- For example, "*kabaḷīkārā āhāra"* is responsible for generating *kāma rāga*. **It is weakened at the *Sotāpanna* and *Sakadāgāmi* stages and eliminated at the *Anāgāmi* stage.** As we can see, removing the *kāma rāga saṁyojana* is the same as stopping the intake of *kabaḷīkārā āhāra.* Note that a *Sotāpanna* only eliminates the three *diṭṭhi saṁyojana*, but that weakens the *kāma rāga* (and *paṭigha*) *saṁyojanās.*
- The remaining three types of *āhāra* (***samphassa, mano sañcetanā*, and *viññāṇa āhāra***) also weaken with each stage of *magga phala.* However, they are eliminated only at the *Arahant phala* with the breaking of the remaining five *saṁyojanās.*
- Thus, the "lifestream" for an *Arahant* in this world of 31 realms ends with the death of the physical body. See "What Reincarnates? – Concept of a Lifestream"

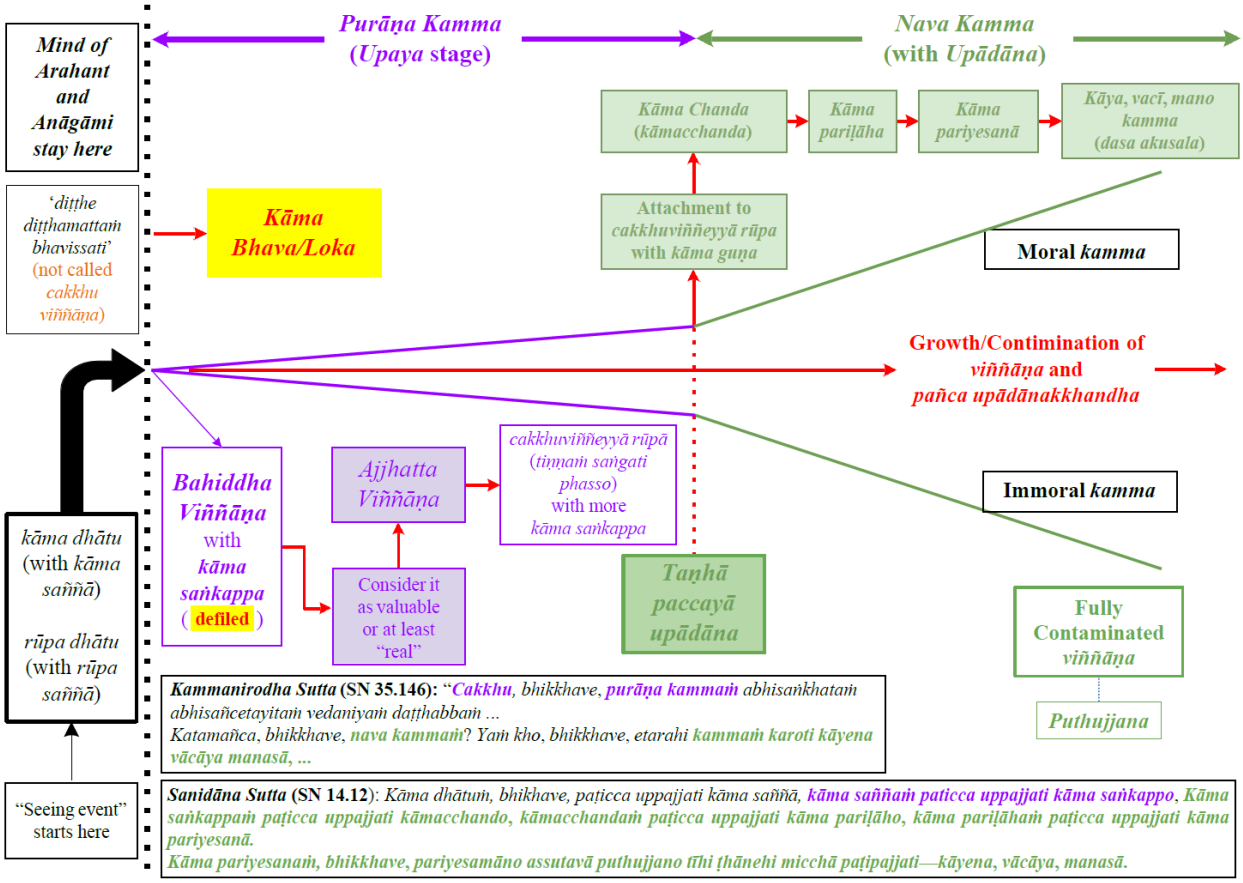
Kabaḷīkārā Āhāra – Only in *Kāma Loka*

7. Sensual pleasures with "close contacts" of smell, taste, and bodily contacts (touch, especially sex) are available only in the realms of *kāma loka. Kabaḷīkārā āhāra* is closely associated with the **six types of "*kāma guṇa*"** available in *kāma loka.* See "Kāma Guṇa – Origin of Attachment (Taṇhā)."

- ***Kabaḷīkārā āhāra*** means **craving for** mind-pleasing odors, tastes, and body touches (including sex).
- *Rūpāvacara Brahmās* in "*rūpa loka*" experience only two of the five physical senses (sight and sound), and they have "***rūpa rāga***" (and mainly crave "*jhānic* pleasures.")
- *Arūpāvacara Brahmās* in "*arūpa loka*" do not experience the five physical senses. They only have the mind or *mano* (sensing *dhammā*) and have only "***arūpa rāga***" (and mainly crave "*arūpa samāpatti* pleasures.")
- **Therefore, *kabaḷīkārā āhāra* is the strongest because it triggers the accumulation of "*apāyagāmi kamma*," leading to rebirth in the *apāyās*.** This is why the "*nava kamma*" stage is absent in the *rūpa* and *arūpa Brahma* realms.
- For details, see "Kāma Rāga, Rūpa Rāga and Arūpa Rāga."

Paṭicca Samuppāda Does Not Start Without *Āhāra*

8. There is yet another way to look at this mechanism of grasping a new *bhava* at the *cuti-paṭisandhi* moment. In the *uppatti Paṭicca Samuppāda* (PS) cycle, a certain *bhava* is grasped at "*upādāna paccayā bhava*."



- When we trace the cycle backward, we see that PS starts at "*avijjā paccayā saṅkhāra*" and "*saṅkhāra paccayā viññāṇa.*" (*Abhi*)*saṅkhāra* generation starts at the "*purāṇa kamma*" stage unconsciously, but potent *kammic* energies that can bring more rebirths occurs only in the "*nava kamma*" stage with the conscious accumulation of *kāya*, *vacī*, and *mano kamma*.
- Cessation of all four types of *āhāra* means the cessation of *avijjā* and thus the cessation of all subsequent terms in *Paṭicca Samuppāda*: (*abhi*)*saṅkhāra*, (*kamma*)*viññāṇa*, *nāmarūpa*, *salāyatana*, (*saŋ*)*phassa*, (*samphassa-jā-*)*vedanā*, *taṇhā*, *upādāna*, *bhava*, *jāti*, and *soka*, *parideva*, …("the whole mass of suffering.")
- **No *Paṭicca Samuppāda* cycle can be active for an *Arahant*.** Thus, at the *cuti-paṭisandhi* moment, it cannot grasp any existence in this world.

Two Critical Roles of *Viññāṇa*

9. Therefore, the word *viññāṇa* represents much more than just consciousness. Even a "*vipāka viññāṇa*" (which is *bahiddha viññāṇa*; see "Purāṇa and Nava Kamma – Sequence of Kamma Generation")

© 2026 Lal A. Pinnaduwage

is defiled. That happens automatically due to unbroken *saṁyojana.* For example, a *puthujjana*'s mind will automatically get to the *bahiddha viññāṇa* in the "*purāṇa kamma*" stage. On the other hand, the mind of an *Arahant* will stay in *kāma dhātu,* as indicated in the chart below (taken from the above post).

Purāṇa and Nava Kamma - 2 (revision 4)

Download/Print: "WebLink: PDF file download: Purāṇa and Nava Kamma -2-revision 4"

- A "seeing event" for an *Arahant* is not called a *cakkhu viññāṇa*. It is called "***diṭṭhe diṭṭhamattaṁ bhavissati***" or **"seeing without *rāga, dosa, moha* arising in mind."** This critical point is discussed in detail in the above link.

10. **"*Viññāṇa*" is one of the four "foods" (*viññāṇa āhāra*)** for accumulating new *kamma bījā* and also provides "food" or "fuel" for grasping a new existence (*bhava.*)

- *Viññāṇa* is the opposite of *ñāṇa* (pronounced "gñāna") or wisdom. When one cultivates *ñāṇa*, one's *avijjā* is reduced, and certain types of *viññāṇa* are concomitantly reduced.
- Pronunciation of *viññāṇa*:

  WebLink: Listen to the pronunciation of "viññāṇa".
- Pronunciation of *ñāṇa*:

  WebLink: Listen to the pronunciation of "ñāṇa".
- As one attains the four stages of *Nibbāna*, *avijjā* is removed in four stages, and the strength of *viññāṇa* is accordingly reduced. *Viññāṇa* manifests until all ten *saṁyojana* are removed from the mind at the *Arahant* stage. After that, "seeing" and "hearing" are not called "*cakkhu viññāṇa*" and "*sota viññāṇa*", but "*diṭṭhe diṭṭhamattaṁ bhavissati* and *sute sutamattaṁ bhavissati.*" See "Purāṇa and Nava Kamma – Sequence of Kamma Generation."

© 2026 Lal A. Pinnaduwage

- This pure level of consciousness — without any defilements and thus any cravings — is called *pabhassara citta*; see "Uncovering the Suffering-Free (Pabhassara) Mind" and "Pabhassara Citta, Radiant Mind, and Bhavaṅga."
- In other words, an *Arahant* can experience the world with a purified mind that is not blemished by even a trace of greed, hate, or ignorance. Therefore, at death, his purified mind will not grasp an existence (*bhava*).

Viññāṇa Āhāra = *Nāmarūpa* Formation

11. As long as a mind generates *nāmarūpa,* the expectation of a worldly outcome remains with the mind, and one will be born somewhere in the 31 realms. This is an advanced subject; see "Nāmarūpa Formation." This is why *viññāṇa* is called a type of food for the mental body.

- As one proceeds at successive stages of *Nibbāna*, one will crave fewer and fewer things in this world. For example, at the *Anāgāmi* stage, one would have lost all cravings for sensual pleasures — removing a big chunk of *nāmarūpa* formation.

Sañcetanā Āhāra = Defiled *Cetanā*

12. *Kamma viññāṇa* is cultivated by thinking, speaking, and acting in such a manner. Thinking, speaking, and acting are done based on *mano*, *vacī*, and *kāya saṅkhāra* which arise due to *sañcetanā* ("*saŋ*" + "*cetanā*" or defiled intentions; *cetanā* is pronounced "chethanā").

- For example, an alcoholic regularly thinks about drinking, likes to speak about it, and likes to drink. The more he does those, the more that *kamma viññāṇa* will grow.
- It is easy to see how a gambler, smoker, etc, grow their corresponding *viññāṇa* the same way.
- The ability to generate such *viññāṇa* can lead to other immoral activities, such as the tendency to lie, steal, and even murder.
- Therefore, all activities done in cultivating such *viññāṇa* are based on *mano sañcetanā*. That is why *mano sañcetanā* are also food for the mental body.

Phassa Āhāra = *Samphassa Āhāra*

13. The triggers for such *sañcetanā* are **defiled sensory contacts** or ***samphassa***. These are not mere sensory contacts but those arising with "*saŋ*" (*rāga, dosa, moha*), i.e., with "defiled intentions." It gives rise to "*samphassa-jā-vedanā*."

- The distinction between *phassa* and *samphassa* is explicitly made in *Abhidhamma*. **However, in suttās, "*phassa*" almost always refers to "*samphassa*" and never refers to "mere sensory contact."** As we have discussed, *Abhidhamma* was not developed at the time of the Buddha; he summarized *Abhidhamma* theory to Ven. Sāriputta, and it took over 200 years for the *bhikkhus* of "Sāriputta lineage" to finalize the "*Abhidhamma Piṭaka*." See, "Abhidhamma – Introduction."
- When one looks at something, thoughts arise via *phassa*. **But if one looks at it with greed or hate (and ignorance) in mind, that is *samphassa* ("*saŋ*" + "*phassa*," which rhymes like "*samphassa*")**; see, "Vedanā (Feelings) Arise in Two Ways."
- This is why **defiled sensory contacts** or ***samphassa*** are food for the mental body. Such sensory contact can lead to thoughts about immoral actions and give rise to future *kammaja kāya*.
- Therefore, one must avoid sensory contact with sense objects that one has *taṇhā* for. We need to remember that *taṇhā* is attachment to something via greed or hate; see "Taṇhā – How We Attach Via Greed, Hate, and Ignorance."

© 2026 Lal A. Pinnaduwage

- So, it is a bad idea for a gambler to visit casinos, an alcoholic to make visits to bars, etc. **Furthermore, one needs to avoid friends who encourage such activities, too.**
- It is best to avoid any "defiled contact" (*samphassa*) that can lead to sense exposures that provide "food" for the mental body, i.e., get us started thinking about those destructive/immoral activities.

14. Now we can see how those three types of food act in sequence to feed the mental body: **Defiled sensory contacts (*samphassa*) can lead to mano *sañcetanā*, which in turn cultivates *viññāṇa*.** That happens even in the "*purāṇa kamma*" stage with the (unconscious) *abhisaṅkhāra* generation.

- *Abhisaṅkhāra* generated only with *mano saṅkhāra* does not lead to potent *kamma* that can bring rebirth.
- **In the "*nava kamma*" stage, the *abhisaṅkhāra* generation occurs for defiled speech and bodily actions.** Those are the potent *kamma* that can bring rebirth.
- In other words, *samphassa* automatically starts *mano abhisaṅkhāra*; then, we start thinking and speaking with a defiled mind, i.e., we start *vacī abhisaṅkhāra* (consciously generating defiled speech). Then, when the feelings get strong, we will start doing immoral deeds (with *kāya abhisaṅkhāra*).
- It is essential to realize that *mano abhisaṅkhāra*, *vacī abhisaṅkhāra*, and *kāya abhisaṅkhāra* are all generated in the mind: *vacī abhisaṅkhāra* are conscious defiled thoughts that can lead to immoral speech; *kāya saṅkhāra* are conscious defiled thoughts that move the physical body for immoral deeds.
- All three types of *saṅkhāra* arise due to *mano sañcetanā*. We cannot think, speak, or do things without generating appropriate *mano sañcetanā*.

Mental Body (*Gandhabba*) Is Primary

15. As we have discussed, the physical body is just a shell controlled by the mental body (*gandhabba*). See "Manomaya Kāya (Gandhabba) and the Physical Body."

- Sensory contacts come through the physical body, are processed by the brain, and passed onto the mental body where *samphassa* occurs. When the mind (in the *gandhabba*) attaches to *samphassa* (defiled contacts), it generates *mano sañcetanā* and thinks, speaks, and acts accordingly, developing various types of *viññāṇa*.
- It is *kabaḷīkārā āhāra* (available only in *kāma loka*) that triggers a mind to engage in accumulating the worst types of *kamma* by speech and the physical body; thus, they occur only in *kāma loka*. However, the other three types of *āhāra* must trigger all attachments present in all three *lokās*.
- That is why all four types of food are for the mental body.

12.1.7 Buddhist Theory of Matter – Fundamentals

October 5, 2024

Buddhist theory of matter is a comprehensive description of matter with and without "life," i.e., everything in the world. In contrast, modern science starts with matter without life and tries (and fails) to show life (or consciousness) arises out of "lifeless matter."

Modern Science – Matter Is Primary

1. Since the time of the early Greek philosophers, modern science has been based on the assumption that everything in the world has origins in matter. Since physics is the field of modern science that studies the fundamental properties of matter, the expectation is that physics will be able to explain everything about the world, including consciousness!

© 2026 Lal A. Pinnaduwage

- I am a physicist with a PhD. in atomic physics. I became a physicist because I was fascinated with physics. However, after learning Buddha's teachings after retirement, it became clear that Buddha's worldview is logical and that consciousness will never be proven to arise from inert matter. My thought process for that conclusion is described in the section "Origin of Life."
- As physicists probed the matter, they discovered that matter at a small scale behaves quite differently from matter at the scale we deal with in our daily activities. The ground-breaking experiments conducted around 1900 led to the invention of quantum mechanics.
- Even though quantum mechanics revealed fascinating and unexpected aspects of the behavior of matter at the microscopic level (at and below the scale of atoms), it was unable to make any connections to mental phenomena or consciousness. See "Will Quantum Mechanics Be Able to Explain Consciousness?"

Matter and Energy are Related

2. Although quantum mechanics was unable to make a breakthrough in the issue of how consciousness arises from matter, it led to the discovery that matter and energy are related. Matter can be converted to energy and *vice versa*!

- That observation by scientists will help us understand Buddha's teachings more easily. Defiled minds (with *rāga*, *dosa*, *moha*, or equivalently, *taṇhā* and *avijjā*) create subtle energies (*kammic* energy).
- Such subtle *kammic* energies maintain everything in the universe, including all inert matter and all living beings! It is a complex subject fully discernible to a Buddha's mind, but we can get a rough idea of that "bigger picture," which is truly fascinating!

Buddha's Teaching – Mind Is the Origin of Matter

3. Everything is made based on a single fundamental entity called *suddhaṭṭhaka.* Just like all programming languages are based on two digits of zero and one, all living and non-living things are made of *suddhaṭṭhaka* with eight subunits. Just like combinations of two digits can handle the complexity of programming, various combinations of the eight constituents of *suddhaṭṭhaka* — together with internal rotation (*paribbramana*) and spin (*bramana*) — are enough to describe the highly complex world.

- *Suddhaṭṭhaka* ("*suddha*" for "pure" or "fundamental" + "*aṭṭha*" or "eight") means a unit of matter consisting of eight fundamental entities (usually translated as the "pure octad," for example, in Bhikkhu Bodhi's book per below.) Those eight constituents are in two categories: *pathavi*, *āpo*, *tejo*, *vāyo*, and *vaṇṇa*, *gandha*, *rasa*, *oja.* The reason for the two categories will become apparent below.
- *Suddhaṭṭhaka* is not even mentioned in many *Theravada* Texts, especially in the *Sutta Piṭaka*. It is discussed in "WebLink: PDF Download: Bhikkhu_Bodhi-Comprehensive_Manual_of_Abhidhamma," by Bhikkhu Bodhi (2000); see pp. 246, 253-254. I have discussed it in several posts, including "The Origin of Matter – Suddhaṭṭhaka," "Bhūta and Yathābhūta – What Do They Really Mean," and "31 Realms Associated with the Earth."
- However, I suggest reading through this post first so that you can get the basic idea. After that, you should read the references, including those above, for further details. A rough idea is sufficient even if you don't fully understand the above posts. **We need to realize the critical importance of the role of the mind.** A mind contaminated with *rāga, dosa, moha* (equivalently, *taṇhā* and *avijjā*) maintains the rebirth process and associated suffering. See "Manopubbaṅgamā Dhammā.. ."

Avijjā and *Taṇhā* – Origin of a *Suddhaṭṭhaka*

4. A *suddhaṭṭhaka* is a "packet of energy" and the basic building block of matter. Furthermore, *hadaya vatthu* (seat of the mind) and the five *pasāda rūpa* each is also a *suddhaṭṭhaka*. We are all familiar with modern science's concepts that everything is made of atoms and molecules. When scientists probed the

© 2026 Lal A. Pinnaduwage

composition of matter into deeper and finer levels, they discovered a set of "subatomic fundamental particles" that the atoms are made of. A *suddhaṭṭhaka* is smaller than any of those.

- How can such a variety of "things" (e.g., rocks, trees, animals, people, etc.) exist based on just one "fundamental composite particle"?
- The proportion of the eight constituents dictates any specific entity. For example, the Earth's crust is made of "hard things" like rocks. Those are made of *suddhaṭṭhaka* with mainly the *pathavi* element, which determines the "hardness."
- Water and most liquids are made of *suddhaṭṭhaka* with predominantly the *āpo* element. Similarly, air (wind) and fire have *suddhaṭṭhaka* made predominantly with the *vāyo* and *tejo* elements.
- **This set of four constituents (*pathavi*, *āpo*, *tejo*, *vāyo*) is added to *suddhaṭṭhaka* due to *moha* (or *avijjā*).**

5. The other four constituents (*vaṇṇa*, *gandha*, *rasa*, *oja*) are added to *suddhaṭṭhaka* due to *rāga* and *dosa*, both of which arise based on *taṇhā*.

- In simple terms, "*rāga*" means to crave things in the world; living beings in *kāma, rūpa*, and *arūpa loka* have *kāma rāga*, *rūpa rāga*, and *arūpa rāga* respectively. As we have discussed, "*kāma rāga*" means craving "close contact sensory inputs" (especially taste, smell, and touch, including sex); "*rūpa rāga*" means craving *jhāna* experiences, and "*arūpa rāga*" means craving *arūpāvacara samāpatti* experiences.
- The mental pollutant/defilement *dosa* (anger) arises only in *kāma loka* when deprived of sensory pleasures. Thus, it is associated with *kāma rāga.*
- Another way to say that is that **the four constituents (*vaṇṇa*, *gandha*, *rasa*, *oja*) arise due to craving (*taṇhā*)** *kāma assāda* (close-contact sensory pleasures), *jhānic* pleasures, or *samāpatti* pleasures.

6. The four components of *vaṇṇa*, *gandha*, *rasa*, *oja* get incorporated into *suddhaṭṭhaka* because of the craving for sense experiences.

- For example, the "*rasa*" component originates from our craving for tasty foods. Thus, greedy thoughts based on the taste of honey, for example, would create *suddhaṭṭhaka*, leading to the availability of honey. Honey would have a dominant presence of the *rasa* component; since it is a liquid, it would also have a significant *āpo* component.
- In another example, a cake or a ripened fruit would have significant *rasa*, *gandha,* and *pathavi* components.
- On the other hand, gasoline would have *suddhaṭṭhaka* with the dominant presence of *āpo* (it is liquid) and *tejo* (it is highly combustible).

Two Types of *Suddhaṭṭhaka*

7. When one generates greedy thoughts based on the taste of honey, for example, two types of *suddhaṭṭhaka* are created via *javana citta*: (i) One type of *suddhaṭṭhaka* will contribute to the sense faculty of taste (*jivhā pasāda rūpa*) in future existences. (ii). The other type of *suddhaṭṭhaka* will contribute to the process of generating honey in the external world; that includes generating plants bearing flowers (so that bees can make honey).

- **Thus, *suddhaṭṭhaka* generation leads to two effects:** (i) Generating *kammic* energy to create sensory faculties for each person's future existences. (ii) Formation of the external world via the collective effort of all sentient beings.
- I hope you get the basic idea. Also see "The Origin of Matter – Suddhaṭṭhaka."

© 2026 Lal A. Pinnaduwage

World = Suffering

8. Thus, we can summarize the above discussion as follows. **Defiled minds generate the fundamental unit of matter (*suddhaṭṭhaka*) and sustain the "suffering-filled world"!**

- **The above-highlighted statement summarizes the basis of Buddha's teachings at a deep fundamental level.**
- **Buddha explained that suffering will persist as long as one is associated with world**; see "Loka Sutta – Origin and Cessation of the World."
- A *puthujjana* (average human) willingly attaches to the "world" or the rebirth process. That attachment (*taṇhā*) arises because our minds and the external world arise to provide a "distorted view and perception" about our sensory experiences.
- Once we understand the Buddha's worldview (explained with *Paṭicca Samuppāda*), we can understand the root causes of *taṇhā*. That is how we can dispel *avijjā* (ignorance about the true nature of the world) and eliminate *taṇhā* as well. **That is the way to *Nibbāna*!**

Summary

9. I made this a short post to summarize the basis of Buddha's core teachings using a logical approach. Understanding the following basic ideas is critical, even if the details are unclear.

- Minds generate the building blocks of the whole world, *suddhaṭṭhaka.*
- The types of *suddhaṭṭhaka* created by a **particular mind** (i.e., a given living being) determine its possible future existences.
- On the other hand, the **collective accumulation** of *suddhaṭṭhaka* created by all living beings leads to the sustenance of the "external world."

10. The origin of a *suddhaṭṭhaka* is the mind. Specifically, a mind contaminated with *rāga*, *dosa*, and *moha* (or *avijjā*) can generate *suddhaṭṭhaka.* Of course, there are details (in other posts), but I am only presenting the fundamental concepts in this post.

- *Moha* (or *avijjā*) means "to be ignorant about the world's true nature."
- Ignorance is not to realize that the attractiveness of sensory inputs (sights, sounds, tastes, etc.) is an illusion, as the Buddha explained in the "WebLink: suttacentral: *Pheṇapiṇḍūpama Sutta* (SN 22.95)." I discussed that *sutta* briefly in the following posts: "Sotāpanna Stage and Distorted Saññā" and "Fooled by Distorted Saññā (Sañjānāti) – Origin of Attachment (Taṇhā)."

11. Each person accumulates *suddhaṭṭhaka* that can contribute to their future existences and also to the maintenance of the external world via *Paṭicca Samuppāda* processes. Each *Idappaccayatā Paṭicca Samuppāda* process is initiated by a sensory input; **it does not happen if one does not attach to a sensory input with *taṇhā* based on *avijjā*!**

- Note that the accumulation of *suddhaṭṭhaka* is the same as the accumulation of *kammic* energy.
- The basic idea of the role of the *Paṭicca Samuppāda* is discussed in "Paṭicca Samuppāda – "Pati+ichcha" + "Sama+uppada"."

What Is the Reason to Discuss Concepts Not in *Sutta Piṭaka*?

12. This approach to learning Buddha Dhamma is not in the *Sutta Piṭaka*. Only a basic framework of *Abhidhamma* was available at the time of the Buddha. See "Abhidhamma – Introduction."

© 2026 Lal A. Pinnaduwage

- The *Sutta Piṭaka* does not even mention *suddhaṭṭhaka.* It is also true that many people attained various stages of *Nibbāna* during the time of the Buddha without learning *Abhidhamma* details.
- Those people born as humans during the time of a living Buddha had done most of their work (i.e., fulfilled *pāramitā*) in their previous lives. They only needed a "little push."
- However, most people today are still fulfilling their *pāramitā*, and it takes more effort to "get there."

13. Another way to say that is as follows. The Buddha described four types of people in the "WebLink: suttacentral: *Ugghaṭitaññū Sutta* (AN 4.133)." They are *ugghaṭitaññū* (one who understands immediately), *vipañcitaññū* (one who understands with brief explanation), *neyyo* (one who understands with detailed explanation), and *padaparamo* (one who will not fully understand in this life.) See "Vipassana – Buddhist Meditation."

- Those born with a "higher level of wisdom" (*ugghaṭitaññū*) like Ven. Bāhiya Dārucīriya may not require much effort. Most people who attained *magga phala* during the time of the Buddha were *ugghaṭitaññū* and *vipañcitaññū.* **In contrast, most people today** fall into the latter two categories of *neyyo* (one who understands with detailed explanation) and *padaparamo* (one who will not fully understand in this life; nonetheless, they also must strive to fulfill *pāramitā.*)
- I will discuss this further in the next post. [See "Attaining Nibbāna Requires Understanding Buddha's Worldview."]

12.2

1. Introduction to Buddhist Meditation

Revised September 7, 2019; March 16, 2021; June 20, 2022

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

Rāgakkhayo Nibbānan, Dosakkhayo Nibbānan, Mohakkhayo Nibbānan

1. Buddhist meditation is based on gradually reducing greed, and anger/hate, developing wisdom by getting rid of wrong views, and following the Noble Eightfold Path.

- We can get an idea of what "Buddhist Meditation" is by looking at the Path described by the Buddha to achieve various stages of *Nibbāna*. *Nibbāna* is not an esoteric concept many people believe. That is why I like the synonyms "*niveema*" or "cooling down." *Nibbāna* can be EXPERIENCED even in the early stages.

2. The Buddha defined *Nibbāna* as "*Rāgakkhayo Nibbānan*, *Dosakkhayo Nibbānan*, *Mohakkhayo Nibbānan*." ***Nibbāna* is the removal of greed, anger, and ignorance from one's mind.** That gives the essence of how this "cooling down" results. [SN 38.1 A Question About Extinguishment - Nibbānapañhāsutta "Friend, the ending of greed, hate, and delusion is called extinguishment." "*Yo kho, āvuso,* ***rāgakkhayo dosakkhayo mohakkhayo****—idaṁ vuccati* ***nibbānan***"*ti.*]

- The more one gets rid of greed, hate, and ignorance, the more one experiences *Nibbāna* or "*niveema*" or "cooling down."
- One does not, and one cannot, get rid of greed, hate, and ignorance in a few days. It is a gradual process. One can experience the "cooling down" to the extent one can purify the mind. And there will be ups and downs, especially in the early days. Thus ONE MUST HAVE THE RESOLVE to stay on the Path.
- **Some people stay with breath meditation for "stress reduction" and avoid anything to do with *Nibbāna*.** They equate *Nibbāna* with extinction, but there is no need to worry; one has that mindset means that one is nowhere close to *Nibbāna*. I am not saying this in a derogatory way, but just as a fact. Until one experiences some "cooling down" and gets some idea about *anicca*, *dukkha*, and *anatta*, it is tough to get an idea of what *Nibbāna* is.

3. Meditation provides ways to achieve this "cooling down" for any person. There are three types of people who are interested in meditation:

- Many people want to practice some basic meditation that the Buddha advocated for achieving some "inner peace."
- Some are convinced about the rebirth process but are mainly concerned about getting a "good birth" in the next life.
- This site's main goal is to provide enough material for one to attain the first stage of *Nibbāna*, the *Sotāpanna* stage. After that, one does not need outside help to complete the rest of the journey. However, many people are either not ready to take that task yet. They have doubts about the existence of 31 realms, the process of rebirth, or *Nibbāna*.

Nibbāna Is Cooling Down

4. In several posts, I have tried to explain what this "cooling down" is. You may want to read them. They vary from a basic description to more in-depth details. They all deal with reducing greed, hate, and ignorance from our minds.

© 2026 Lal A. Pinnaduwage

- The words greed and hate are clear, but many do not understand what is meant by ignorance. The post, "What is Avijjā (Ignorance)?" gives a bit deeper description. But since it is essential, I want to say a few words here about ignorance.
- The "traditional method" for achieving some "cooling down" or "calming sensation" is to do "breath meditation" or "*kasiṇa* meditation." **As I questioned in several posts, how can greed, hate, or ignorance be removed via concentrating on one's breath or some *kasiṇa* object?** Such meditation techniques DO NOT remove ignorance and only SUPPRESS greed and hatred.

5. We need to start gradually reducing greed and hate from our minds; this is called "*sīla*" (pronounced "seela") or moral living. Then one's mind becomes clear, and one starts feeling the *nirāmisa sukha*. Then it will become easier to grasp Dhamma concepts and get rid of *avijjā*.

- Buddha Dhamma is for the wise; it is not to be followed by blind faith but with understanding. One needs to learn and "see" Dhamma first. A sustained "Cooling down" cannot be attained via following a set procedure like watching the breath.
- One could go a long way (up to the *Sotāpanna* stage) just by learning Dhamma and comprehending the key concepts. When one grasps the key concepts, it dawns on one that it does not make sense to be too greedy. Or hate someone with a level of hatred that makes one's heart "heat up" to uncomfortable degrees.
- Thus through a better understanding of Dhamma (i.e., removing ignorance), one automatically "cools down." Removing ignorance via learning Dhamma leads automatically to reducing greed and hate.

Correct World View is Critical

6. That is why "*Sammā Diṭṭhi*" or "Correct Vision" comes first in the Noble Eightfold Path. **Actually "*sammā*" means "*saŋ*" + "*mā*" or "removing defilements"; but for brevity, we will use the word "correct."** But keep in mind that "*sammā diṭṭhi*" means "removing defilements through correct vision." I cannot emphasize enough the importance of learning Dhamma. That is the first BIG step. Without understanding the message of the Buddha, how can one follow his Path?

- When one starts to understand the key Dhamma concepts, one regularly thinks about such ideas and how they should be kept in mind while going through daily chores. That is "*sammā saṅkappa*" or "correct concepts." That automatically leads to "*sammā vācā*" (correct speech), "*sammā kammanta*" (correct action), and *sammā ājīva* (correct livelihood).
- When those five steps, one becomes attuned to correct mindfulness ("*sammā sati*"). Yes. There is "incorrect mindfulness" ("*micchā sati*," pronounced "michchā sathi") too, like when a master thief plans a robbery. One needs to be "engaged" or focused on accomplishing any task, either good or bad.

7. With cultivated "*sammā sati*," one will be able to "see" the consequences of any action very quickly. Then one can decide whether to go ahead with it (since only good can come out of that action) or to abandon it (because it is not beneficial for oneself or to others).

- When one sees the benefits of these steps (i.e., "cooling down"), one will be motivated to work harder on all these steps, i.e., one cultivates "*sammā vāyāma*" (correct effort).
- The culmination is "*sammā samādhi*" (correct calm state of mind). Yes. There is a "*micchā samādhi*" too. When that master thief is planning a big robbery, he gets into a kind of *samādhi* also. He feels a sense of calm too, but that will have terrible consequences down the road.
- The latter three develop at the same time. One could get into "*sammā samādhi*" just via "*sammā diṭṭhi*." When one listens attentively to a Dhamma talk or gets absorbed in reading about a key Dhamma concept, one could get into "*samādhi*." A *jhānic* state is a deeper *samādhi* state.

Reading About Concepts Is Not Enough

© 2026 Lal A. Pinnaduwage

8. That is why I recommend everyone to read these posts during quiet time. One will absorb more, and just by contemplating the material while reading, one could quickly get into *samādhi*. That is what meditation is all about. "Absorbing the good" will automatically force the "bad" out, and one gets into *samādhi* automatically; we will talk about this "*ānāpāna*" process in the following posts.

- It may get to the point where one can sit down and get into a *jhāna* within a minute or two. But not all can get into *jhāna*, and that is not necessary either. Any *jhāna* attained will be *anariya jhāna*, until one attains the *Anāgāmi* stage. What is necessary is to get to *samādhi* or "calmed mind."
- I hope you will experience the LONG TERM benefits from the procedures we discuss in this post and the follow-up posts. Initially, it will be a bit slow. But if one sticks with it for a few months, one should see a change in oneself that is not merely temporary relief. For some, it will be faster.

9. In this life, we feel two kinds of suffering: bodily pains and aches and various diseases and mental distress (disappointments to depression).

- Bodily ailments take time to recover. But even those can be reduced by careful planning and being mindful too. If one engages in physical activity (ranging from walking to rigorous exercise) and be cognizant of what one eats, many such ailments will reduce over time.
- Mental suffering could have direct causes in greed, hate, and ignorance. While some are due to past *kamma*, most can be avoided or reduced by being mindful of what one thinks, speaks, and does. Any thought, speech, or bodily action arising from a greedy, hateful, or ignorant view will cause mental anguish sooner or later.
- The easiest way to determine whether any action is inappropriate is to contemplate the consequences. An action rooted in greed, hate, or ignorance can harm oneself or another being.

Buddhist meditation Is The Noble Eightfold Path

10. Thus, Buddhist meditation is basically to cultivate the Noble Eightfold Path.

- By preventing killing, stealing, verbal abuse, etc., what we are effectively doing is to "put out existing fires" in our minds and prevent such "future fires" from starting. That is "*niveema*" or "cooling down" or *Nibbāna*.
- We should also do things conducive to a calm mindset — associating with like-minded people, actively engaging in moral behavior that makes the heart joyful, etc.
- The most important thing is to learn Dhamma to "see" how all this will permanently liberate one's mind. Then the change will become "permanent".

11. When perfected, one will be doing meditation all day long while doing daily chores. That is what is stated as "*āsevitāya, bhāvithāya, bahuleekathāya*." That means, "associate and use what is good, and do that as much as possible."

[See, AN 8.1 Mettāsutta *āsevitāya bhāvitāya bahulīkatāya*

"Friends, the emancipation of heart's (*cetovimutti*) by loving-kindness (Metta) expected eight good results: **associated, developed, and practiced frequently, made a habit of, made a basis of (practised thoroughly), has been implemented, acquainted with, and thoroughly undertaken**.

"*Mettāya, bhikkhave, cetovimuttiyā* ***āsevitāya bhāvitāya bahulīkatāya yānīkatāya vatthukatāya anuṭṭhitāya paricitāya susamāraddhāya*** *aṭṭhānisaṁsā pāṭikaṅkhā.*

cetovimutti : [f.] emancipation of heart.

āsevita : [pp. of āsevati] associated; practised; frequented.
bhāvita : [pp. of bhāveti] increased; cultivated; developed.
bahulīkata : [pp. of bahulīkaroti] took up seriously; increased. (adj.), practised frequently.

© 2026 Lal A. Pinnaduwage

yānīkata : [adj.] made a habit of; mastered.
vatthukata : [adj.] made a basis of; practised thoroughly.
anuṭṭhita :a. [anuṭṭhahati's pp.] has been implemented, has been affected, has been experienced (to).
paricita : [pp. of paricināti] practised; attended; acquainted with; accumulated; accustomed.
susamāraddha : [pp.] thoroughly undertaken.

ānisaṁsa :[m.] profit; merit; good result.
pāṭikaṅkha :[adj.] to be desire or expected.]

- In a formal meditation session, one does the same. It is best to read a post or two on a given Dhamma concept before (or during) the meditation session and then contemplate those ideas. It is important to compare those concepts with one's life experiences. Then things will become clear with time. For example, why it is unfruitful to "live life lavishly, especially if that involves hurting oneself or others."
- You will be surprised that this process itself will get you to *samādhi*, and even *jhānā* in the long term. But we will discuss some other variations too.
- As I have mentioned in several posts, one could even get to the *Sotāpanna* stage just by comprehending the key Dhamma concepts to some extent.

Mind Is At The Forefront

12. Buddha Dhamma is all about the mind; Anything we say or do also starts with a thought. The Buddha said, "*manopubbangamā dhammā…*", "the mind takes precedence over everything else..".

- It should be clear from the above discussion that Buddha's meditation techniques are compatible with Nature's laws. Regardless of whether one has a religious background or is an atheist, one can follow those guidelines.
- One becomes a "*Bhauddhayā*" or a "Buddhist" in his/her mind. If one understands some basic Dhamma concepts and lives by them, then one is automatically a Buddhist. When one gets started on the Path with a firm determination, Dhamma will guide one to be on the right path. ("*Dhammo have rakkhati dhammacāriṁ*.")
- The foremost goal is to live a moral life without causing harm to oneself or others and to seek some "peace of mind" from the hectic modern life. That is our starting point.

13. I also recommend listening to the following discourse for anyone seriously considering Buddhist meditation (You may need to adjust the volume control on your computer):

"**The Hidden Suffering that We All Can Understand**"

WebLink: Download to Listen to Discourse: The Hidden Suffering that We All Can Understand

That is in the post "Starting on the Path Even without Belief in Rebirth" in the "Living Dhamma Overview" subsection of the "Living Dhamma" section.

12.3

2. The Basics in Meditation

Revised August 17, 2019; March 16, 2021; June 29, 2022

We discuss EIGHT elements of a firm foundation for Buddhist meditation. These are EIGHT steps to be followed at all times, not just during formal meditation.

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

1. Those who are doing breath meditation or "watching the stomach rise and fall" know that it is relatively easy for some to calm the mind compared to others. Some cannot even keep a calm mind for more than a few minutes; distractions start "popping up."

- This "popping up" is due to the five hindrances (*pañca nīvaraṇa*) that I have described in "Key to Calming the Mind – The Five Hindrances.". These are the "residues" or "gunk" that we have deep inside our minds that start bubbling up to the surface when we sit down to meditate.

2. Let us take the simile of water well contaminated with all the rotten stuff fallen into it over many years; our minds have accumulated gunk over repeated births, not just in this life. When we are engaged in stressful day-to-day activities, those activities stir up the "gunk," and the mind gets clouded. It is like taking a long pole and stirring the well water; the "gunk" at the bottom comes up.

- The two "primary rotten things" we have are the first two on the list of the five hindrances: *kāmacchanda* (excessive greed) and *vyāpāda* (deep hate). Even though the word *vyāpāda* is commonly used, the correct Pāli word is *byāpāda*.
- *Vicikicchā* is the uncertainty about how to properly respond to external stimuli (sensory inputs.) The natural tendency is to attach to mind-pleasing stimuli and do whatever it takes to enjoy them. One does these because of the ignorance of *anicca*, *dukkha*, and *anatta*. *Vicikicchā* is sort of like a "favorite list" from the main ingredients of excessive greed and deep hate, the first two hindrances. ***Kaṅkhā vicikicchā* is a worse form of *vicikicchā* manifested as having doubts about the Buddha's teachings (because they discourage such attachments.)**
- *Thina middha* or inability to concentrate on *Dhamma* concepts; one feels lethargic when reading/listening to *Dhamma*. That is because one does not understand the basic concepts of Buddha Dhamma. An "unsettled" or "excited" mind (*uddhacca-kukkucca*) is also personal and arises when one feels "superior" or "inferior" compared to others.
- The five hindrances are discussed in "Key to Calming the Mind – The Five Hindrances."

3. When we engage in day-to-day activities, we see, hear, smell, taste, touch, and also think about all sorts of things. If such things cause *kāmacchanda* or *vyāpāda* to arise, then some combination of five hindrances can burden our minds. All these are "external stirrers" that make our minds look like whirlpools. All these gang up to get the mind to stress out and "heat up." That is the tension that we feel on a busy day. We need to "cool down"; we need "*niveema.*"

- One way to "cool down" is to turn off those external stirrers temporarily. Some people do this in a "breath meditation" session: One goes to a quiet place and closes their eyes; this will turn off mainly the five physical senses (i.e., we do not see, hear, smell, taste, or touch). That helps to calm the mind of some people, especially if they have practiced it.
- But it is not possible to turn off the sixth one, the mind itself. The mind likes to move around and not to be focused. Many people try to fix their minds on one object, say the breath or the rising of the stomach. That provides only a temporary solution. See, "8. The Basic Formal Ānāpānasati Meditation."
- Some people try to "turn off the mind" or try to stop thoughts from arising. That is DANGEROUS. We need to PURIFY the mind, not turn it off. The Buddha had a perfectly pure but very active mind. When one follows the Path, one's mind will become sharper, not inactive.

© 2026 Lal A. Pinnaduwage

The "Big Eight" to Avoid

4. However, if our minds have too much gunk (defilements), then they can disturb/stress our minds even without the aid of "a stirrer." It is like an abandoned old well. It has dirty water, and one needs to REMOVE the existing dirty water first.

- Similarly, if one is engaged in immoral behavior, then the mind is like a well that has dirty and turbulent water. That is due to the **BIG EIGHT defilements**: killing, stealing, sexual misconduct, lying, gossiping, slandering, harsh speech, and constantly thinking about "mind-made" or "planned" sensual or immoral activities.
- Good examples of the last one: "making up sexual activities" or "how to retaliate to an enemy." it is VERY important to stay from silently engaging in generating angry/lustful thoughts. Many people tend to do that because they think "I am not hurting anyone." But that is not true. You are hurting yourself! A deeper analysis of this issue in "Correct Meaning of Vacī Saṅkhāra."

5. **The mind calms down (or gets to *samādhi*) when one lives a moral life (*sīla*.)** Stopping the BIG EIGHT is the start of a moral life (sīla.) With that calmed mind (*samādhi*), one can comprehend deeper aspects of Buddha Dhamma and cultivate wisdom (*paññā*.) That is the initial order: *sīla*, *samādhi*, *paññā*. See, "Sīla, Samādhi, Paññā to Paññā, Sīla, Samādhi."

- However, one must take a gradual approach: "Is It Necessary for a Buddhist to Eliminate Sensual Desires?".
- Just focusing the mind on one object, like the breath, **cannot remove** those defilements. It can only **suppress them temporarily**. That is the fundamental problem with "breath meditation."

6. **Thus, it would be hard to achieve calmness even with breath meditation if one is actively engaged in the BIG EIGHT.**

- What we discussed above is a simple version of *Kāyānupassanā*, the first step in *Satipaṭṭhāna*; see, "Satipaṭṭhāna – Introduction."
- If one is habitually engaged in one or more of those eight activities, the first thing to do is try to get rid of them. First, start with the worst habit and proceed gradually until all are bad habits removed. It is like emptying the well of the dirty water.
- That is a BIG STEP. It may take a little while, depending on how much "gunk" is there. But one thing is not to rush out and try to do much. That could be stressful too. The best thing to do is abstain from one or two big ones and experience the "cooling down" that results from it.
- Vain talk is a habit that should be gotten rid of early. It does not do any good for oneself or others. One will inevitably say something inappropriate (possibly slandering and lying too, which are also in the BIG EIGHT) when one gets carried away during the vain talk. Getting rid of it will help with being able to calm the mind quickly.
- The mind needs to see the benefits of doing something before it gets on board. That is why, initially, it may take a firm determination to stick with the plan.
- It is important NOT to get used to "breath meditation." If you are used to it, I urge you to gradually stop and try the procedures described here at least for a couple of months. We want LONG TERM results. Many people get addicted to "breath meditation" to get temporary relief. THAT IS A MISTAKE.

7. Getting rid of bad old habits and installing new good habits is a KEY in the meditation practice; we will talk about habits ("*gati*," which become "*āsavas*" over time) in more detail in the next section. Here are some basic ideas that would be helpful:

- To form a new habit takes some effort initially. I tried it out by making a new habit of peeling oranges with my left hand (I am right-handed). Initially, it was hard, and the main problem was that I kept forgetting to use my left hand. I had to set the alarm to remind myself first. But after a few days, I started

© 2026 Lal A. Pinnaduwage

remembering, and after a week or two, the new habit was working. Now I automatically do it, and now it is a bit strange to try to peel oranges with the right hand!

- When we make a new habit, a set of neurons in the brain start to wire together for that task; the more we do it, the stronger the neural connections become. That is what happens when we learn to ride a bike, drive a car, or zillions of other things that we do without even thinking about it; see, "Truine Brain: How the Mind Rewires the Brain via Meditation/Habits" and "How Habits are Formed and Broken – A Scientific View."
- In breaking a habit, one needs to do the reverse. When one starts to smoke less and less, the neural connections for that task will become weaker. After a while, it will become more natural NOT TO smoke. The brain will stop giving that signal. So it is critical to have the determination to hold off the urge in the beginning. Try to replace that activity with something else at that time. One can remove any bad habit that way. It is the same principle.

8. The primary formal meditation technique is in the next section. Those who need time to get rid of the BIG EIGHT can also monitor the progress by doing such formal meditation sessions. It is essential to realize that all defilements (bad habits) are removed only at the *Arahant* stage. So, there is no point in getting discouraged if it takes time to stop bad habits; **the key is to make progress and not go backward.**

- Sometimes when one starts on the *Ariya Bhāvanā*, things may look worse before getting better. It is like trying to cool a hot iron by sprinkling water on it when all that smoke comes out and may appear to be getting worse. But one needs to be persistent. One needs to keep in mind that uncountable beings have attained "cooling down" by having faith in the Buddha.

Next, "3. The Second Level – Key to Purify the Mind", ……..

© 2026 Lal A. Pinnaduwage

12.4 3. The Second Level – Key to Purify the Mind

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

1. Let us go back to the example of the abandoned well. Now we have done a decent job of cleaning the dirty water that had been there for a long time, i.e., we have reduced at least some of the main immoral acts, the BIG EIGHT.

- Now we need to make sure that things do not fall into the well while we try to make the water even more cleaner; if there is no barrier around it, when it rains mud water can fall into the well. As with the well, we need to make sure that we keep those BIG EIGHT out of our minds as much as possible. **This is "*sīla*" (pronounced "seela") or moral living.**

2. In order to make sure that we will not drift back to the old ways, we need to cultivate moral mindfulness ("*sati*"): we need to be on the "lookout" for any temptations to break the BIG EIGHT. But there is a catch that most people do not comprehend: bad habits and cravings or "*gati/āsavas*" that we have are not only from this life, but possibly from previous lives as well.

3. Again, we can use the old water well as an example: When we drained the water out of the well, the well starts filling up with water from underground fresh water oozing through cracks (from underground aquifers) which is pure.

- However, if there is a rotten stuff at the bottom of the well that had been there for a long time, then that pure water gets contaminated. Our bad habits (*gathi/āsavas*) are like the dirt at the bottom of the well.

4. The water in the above well will now look relatively more clear if it is undisturbed, i.e, when we let the water to settle down. **This is effectively what we do in breath meditation or any such *samatha* meditation.** When someone is abstaining from the BIG EIGHT, it is relatively easy to calm the mind by going to a quiet place, closing the eyes, and then focusing one object, say the breath.

- Such meditations are *anariya* meditations; they provide only temporary relief. One could also get into *anariya jhānā* this way, with lots of practice, especially if one could live a secluded life. Ancient *yogis* who lived moral lives and stayed away from other humans in forests could attain higher *jhānā*.
- What happens here is that the five hindrances are kept SUPPRESSED. It is like the rotten stuff kept undisturbed at the bottom of the well.
- If one takes a long pole and stir the well, those contaminants start coming up.

5. In the same way, when someone comes out of the quiet place, one gets "disturbed" with external sense stimuli (i.e., when a particularly strong sense object is presented). For someone with a lot of lust, it could be a picture of an attractive person. If someone has a lot of hate towards another, then hateful thoughts can come to the surface just by someone mentioning that person's name.

- This "bubbling up of bad stuff to the surface" is called "*anusaya*." To stop such *anusaya*, those *gathi/āsava* need to be removed (gradually).
- These terms are explained in, "Gathi (Gati), Anusaya, and Āsava."
- This is why people who have a very calm and peaceful experience at a meditation resort come back to regular hectic life and see that experience fade away gradually. That is because it WAS a temporary solution. **What we have in mind here is a more permanent solution. But this approach takes a bit more time.**

6. So, how do we really clean the well? It is not enough to let the gunk to sink back to the bottom; we need to remove the gunk that has accumulated at the bottom of the well. There could even be toxic things down there. Thus it takes an effort to remove all those. Once those are removed, there is nothing down there that

© 2026 Lal A. Pinnaduwage

can contaminate the fresh water coming out. When the well fills up we only need to make sure that things do not fall back in to contaminate the well.

- Similarly, what we need to do with our minds is to remove the bad habits (*gathi/āsavas*) that have been accumulated over countless past lives and reinforced in this life. If we have hate in our minds, that hate can triggered easily. This is why some people are prone to "flare-ups" than others. If we have extreme greed, we can be tempted easily to act immorally for sense satisfaction through any of the six senses.
- Even though the main ones are greed and hate, there are uncountable number of combinations (when included with ignorance). That is why we see uncountable number of habits/personalities/tendencies in different people. **No two persons are alike, even identical twins.**

7. Looking at the five hindrances, the main culprits are of course, greed, hate, and *vicikicchā* (the particular set of things one has a liking for, which can be things liked or disliked). The other two help bring out these: the "lazy mind" will not take any effort to suppress bad thoughts; the "dispersed mind" is too dispersed to be focused, to think clearly. All these are intimately connected to the habits (*gati/āsavas*).

- By the way, if one can remove all the *gati/āsavas*, that is when one attains *Nibbāna*. The Buddha realized the "*āsavakkhaya nana"* just before attaining the Buddhahood. *Āsavakkhaya* is "*āsava*"+"*khaya*" or removing the temptations; "*khaya*" is the getting rid of "*saŋ*"; see, "What is "Saŋ"? – Meaning of Sansāra (or Saṁsāra)."
- Here we are trying to remove some easily removable less potent habits, and at least try to reduce the big ones. The good news is that we can EXPERIENCE the relief or "cooling down" or "*niveema*" each time we either remove a small bad habit or lessen the severity of bigger ones. We don't have to remove ALL bad habits/cravings in order to experience the "cooling down".

8. After making a commitment to abstain from the BIG EIGHT as much as possible, we need to sort out our bad habits.

- Make a list with little things on the top and more serious things towards the bottom. We all have greed and hate; those are the "big ones"; what we need to do here is try to remove easily identifiable smaller bad habits; for example, explosive temper, stinginess, seeking too much sense pleasures (i.e., being addicted to alcohol, drugs, even excess eating).
- It is important to get rid of the ones at the top (the easy ones), and that will provide incentive to continue. If one tries to tackle the big ones straight away, one might get discouraged and give up the whole effort.

9. Of course, focusing on the BIG EIGHT is very important. If one is engaging in killing animals for pleasure (eg., fishing), then that needs to be stopped if one is serious about meditation. If one is making a living by stealing from others, that needs to be stopped. If one is engaged in sexual activities with other married people, that needs to be stopped, etc.

- Those are common sense things too. If one looks at one's actions and see that it can cause harm for oneself AND/OR others, then one needs to seriously start thinking ways to initially reduce and eventually to stop such actions.

10. There are several posts on habits and *gati/āsavas*; you may want to find and read them. And contemplate on those ideas. An English discourse on this topic is given in the post, "How Are Gati and Kilesa Incorporated into Thoughts?."

- As I emphasized at the beginning, one has to make an effort; even the Buddha could only show the way. We need to examine what he suggested, think through to make sure they make sense. Then the mind gets on-board, especially when it starts seeing the benefits, even small benefits.
- The key is to get started; when one accomplishes even a small goal that provides the fuel to go further.

11. One could and should use the "four bases of mental power (*cattāro iddhipāda*)" in accomplishing these goals. Tackle one goal at a time. As you accomplish more and more goals, the *iddhipāda* (*chanda, citta,*

© 2026 Lal A. Pinnaduwage

viriya, vīmaṁsā) will grow as well. These are the critical factors that the *yogis* used to cultivate mundane (*anariya*) *jhānā* and gain extraordinary mental powers too.

- *Chanda* is the desire to achieve the goal. *Citta* is the determination one makes and the *viriya* is the effort that one puts in to get it done. *Vīmaṁsā* is careful examination of the benefits of breaking the habit and the possible repercussions of keeping the habit. As the four *iddhipāda* grow (with accomplishment of more and more goals), the *vīmaṁsā* faculty grows in particular; this is a facet of wisdom (*paññā)*.

12. In trying to remove any bad habit, it is essential to look at the negative repercussions or bad consequences (called *ādeenava* or *ādīnava*) from that activity. Let us take the bad habit of getting into a rage as an example:

- Think about the unpleasant feeling of getting "heated up" in a moment of rage. Of course, at the moment of rage one may actually enjoy it: In extreme cases, this is why there are people dead with 30-40 stab wounds, when all it takes to kill a person a couple of stabs; such is the danger of getting into a rage. One feels bad about it only later, and then it is too late.
- Even worse are the *saṁsāric* consequences: If rage becomes a dominant characteristic of one's personality, it is possible that this is what will be grasped at the moment of death and a birth of a "similar kind" could result, i.e., birth in a burning hell (this is the principle of *Paṭicca Samuppāda*: "*pati+ichcha*" leading to "*sama+uppada*").

13. Let us take a few examples to see how some bad habits can be tackled:

- Many people have bad temper (which could develop into hate) which is a result of *vyāpāda*. Yes. This is a *sansāric* habit, and unlike many other habits, this one is hard to control when triggered. This is one that needs to be dealt with when the anger is absent. The best is do the *Mettā Bhāvanā*. We will use the *Ariya Mettā Bhāvanā* later. For now, one could close the eyes at a quite time, and sincerely say, "May all beings be free of suffering, free of ailments, free of anger, and be happy". If you have a particular person that you are not in good terms, repeat with his/her name. We cannot remove the anger in the mind of that person. We can only remove the anger within ourselves. Do this a couple of times a day and if you do it sincerely it will give results (for YOU to have a peace of mind).
- If you are a person with cravings for sense pleasures (I do not mean necessities), your mind is likely to be frequently seeking such things. Try to cut down on such activities, and also try to do more giving. Donate to charities, give a few dollars to a homeless person. All these will make you feel better; this is called *pīti* ("*preethi*" in Sinhala or joy).
- Also, when you simplify your life, the burden on your mind will be less, and you will get a different kind of joy than that from sense pleasures; this is "*niveema*" or "cool down," or *nirāmisa sukha*; see, "Nirāmisa Sukha."
- Alcohol or cigarette addiction is another example. Instead of trying to stop such a habit "cold turkey," it is better to cut down gradually. But one MUST have the discipline (the importance of cultivating the *iddhipāda* comes here) to stick to the plan, and not go back. It also helps to find a replacement activity at that time (taking a less potent drink or chewing a gum, etc). One of the four *iddhipāda* that is essential here is *citta* or determination.

14. Now we are at a point where I can introduce the real *ānāpānasati bhāvanā* that was described by the Buddha.

Next, "4. What do all these Different Meditation Techniques Mean?", …….

12.5 4. What do all these Different Meditation Techniques Mean?

Revised April 11, 2020; September 4, 2022

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help to gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

1. Buddha Dhamma is focused on purifying the mind of greed, hatred, and ignorance. As the mind is purified, it gains *nirāmisa sukha* which can be experienced at various levels from the beginning. If one can "stick to" this program for a couple of months, one can look back and see the change in oneself. One should have a more peaceful, calm mind that has "cooled down".

- A mind is impure because it attaches to "things in this world" with the misconception that things in this world (31 realms) can be maintained to one's satisfaction, i.e., with the perception of ***nicca***. Thus the prevailing mindset is that happiness (***sukha***) should be attained by employing any means. And once attained it can be maintained and thus one is in total control of one's affairs (***atta***).
- These three misconceptions of *nicca*, *sukha*, and *atta* are the three culprits that keep us bound to "this world" of 31 realms, i.e., the endless rebirth process or *saṁsāra*. The Buddha showed that the actual reality of "this world" is described by the three characteristics of *anicca*, *dukkha*, and *anatta*: No matter how hard we try, we cannot maintain things to our satisfaction in the long term (***anicca***). Thus we get distraught (***dukkha***), and thus we are not in control and become helpless when born in bad realms like the animal realm (***anatta***).
- More details in the first discourse at, "Tilakkhaṇa – English Discourses."

2. I am NOT saying that one should not work hard to get a good education and job. That MUST be done. It is impossible to have peace of mind if one is hungry and homeless. But we also need to be aware of the FACT that all mundane achievements are temporary. Even if we get to live this life without a major catastrophe, we have to leave all behind when we die.

- One acts with greed, hate, and ignorance and makes the mind impure because of the wrong perceptions of *nicca*, *sukha*, and *atta*. Then one is capable of immoral acts to get some temporary satisfaction because the bad consequences of such actions may not be clear. However, when one truly understands the reality (i.e., *anicca, dukkha, anatta*,) such immoral actions become unlikely.
- For that stage to be reached, one has to train one's mind to "take in the good" and "reject the bad". For that, a change in one's habits (with *Ānāpānasati* meditation) is necessary.

The following is a logical sequence for meditation:

3. First, one must sort out what is good and bad and the consequences of good and bad actions. This is why the vision, *Sammā Diṭṭhi*, comes first in the Noble Eightfold Path. To get to *Sammā Diṭṭhi*, one needs to "sort out the good from the bad."

- *Vipassanā* (*vi+passa* means "to see clearly" and discard. Here, where "*vi*" means "special" and "*passa*" is to "see." *Vidassana* (*vi+dassana* means sort out by clear vision, whereas "*dassana*" means the vision) means the same thing. Understanding Buddha Dhamma and acquiring the vision are needed to sort out the "good" from the "bad".
- I cannot emphasize enough the importance of *vipassanā* (*vidassana*) or insight meditation. Without the "correct" vision, one could strive for the whole life and not get anywhere: one has to understand the true nature of this world (*anicca, dukkha, anatta*), the Four Noble Truths, and the Noble Eightfold Path. It is not memorization, but understanding that counts.

4. A huge amount of defilements are removed from one's mind with this insight meditation. The key is to understand the "*anicca* nature of this world". It is the first type of meditation that is needed. One can attain the *Sotāpanna* stage without doing any other types of meditation discussed below.

© 2026 Lal A. Pinnaduwage

The Buddha once took a bit of soil to a fingertip and told the *bhikkhus* that, "if the amount of defilements a *Sotāpanna* needs to get rid of is comparable to this amount of soil, then a normal human being has to get rid of an equivalent to the soil in the whole Earth".

- That is not a misprint or an exaggeration. A *Sotāpanna* is bound to attain *Nibbāna* within a maximum of seven "*bhava*." A normal human being could be trapped in the rebirth process for trillions of years to come. We have been through the rebirth process for countless trillions; see "Infinity -How Big is It?".
- Many say, "I do like my life. Why would I not want to be reborn?". **The problem is, that future rebirths may not be in the human realm.** We have no idea what we have done in our past lives. Thus even if we live a perfectly moral life, there are no guarantees that we will get a good rebirth. This is why understanding *kamma*, rebirth, etc via insight meditation is important.

5. How does one do insight meditation? Listening to discourses and reading Dhamma concepts are the two main forms of getting the correct information. Then one could contemplate those concepts in sitting meditation. But reading up on Dhamma concepts during a quiet time is meditation; also see, "How to Cultivate the Anicca Saññā" and the follow-up post.

- Once some understanding is reached via *vipassana* (*vidassana*) *bhāvanā* or insight meditation, one can start the next two key steps. *Mettā bhāvanā* and various forms of *anupassanā bhāvanā.*
- Once one understands the true status of affairs in the wider world of 31 realms, one can really comprehend the amount of suffering that has been hidden. With that understanding, one can engage in the *Ariya mettā bhāvanā*, an excellent way to pay back our old debts to other beings. **This is the second way to purify our minds too.**
- I hope I have conveyed the idea that the bulk of work can be done with just insight meditation, contemplating "*anicca, dukkha, anatta*." However, doing the other two types of *bhāvanā*, i.e., *mettā bhāvanā* and *ānāpānasati*, can be helpful for insight meditation too.

6. **The last and third way to purify the mind is via *anupassana.*** *Anupassana* means "discard according to the principles learned" ("*anu*" means according to, and "*passana*" means to "see." Another meaning of "*anu*" is defilements, which is "to be able to see one's defilements"). *Anupassanā* can take various forms.

- *Ānāpānasati bhāvanā* is the foundation. Once "*ana*" and "*pana*" are sorted out by *vipassana* (*vidassana*), one needs to engage in *Ānāpānasati* all the time. This means one needs to be mindful of what one is about to do and ensure it is the "right thing to do".
- When one starts understanding *anicca*, *dukkha*, and *anatta*, one can start doing the *aniccānupassanā, dukkhānupassanā*, and *anattānupassanā*, and four more related "*anupassanā*". I will elaborate on this later.
- *Satipaṭṭhāna bhāvanā* (with *kāyānupassanā, vedanānupassanā, cittānupassanā*, and *dhammānupassanā*) includes all the *bhāvanā* techniques that we have discussed so far. It is THE ultimate encompassing everything needed to attain stress relief. It can take one to *Arahanthood. Ānāpānasati* (not breath meditation) is essentially the same as *Satipaṭṭhāna*, and that is the first step to attaining the *Sotāpanna stage*. See "Elephant in the Room 3 – Ānāpānasati."

7. Thus one could make things simpler by just doing insight meditation, *Ānāpānasati*, and the *mettā bhāvanā*. That is all one needs to do to have a "better state of mind" or even to become a *Sotāpanna*.

8. The problem with meditation techniques taught even in *Theravāda* schools these days is the following. They are either breath meditation or chantings. How can one remove defilements by watching the breath? Even though it can calm the mind, there are no long-term benefits. Watching the breath CANNOT reduce defilements from the mind.

- Another popular technique is just to contemplate impermanence. They keep repeating, "my body is impermanent; it is subjected to decay and death." Has anyone achieved any progress doing that for even

© 2026 Lal A. Pinnaduwage

twenty, or thirty years? A Buddha does not need to tell us that. All people, belonging to any religion, know impermanence is a fact of life!

- Yet another popular "chanting" is to contemplate the "foulness of the body". That is not what the Buddha meant by the "*patikula manasikāra bhāvanā*." Again, everyone knows that our bodies are subject to decay and death; see "Mahā Satipaṭṭhāna Sutta."

5. Ariya Mettā Bhāvanā (Loving Kindness Meditation)

Revised February 11, 2020

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section are on possible meditation subjects. They can be used to clarify unresolved questions, and to get to *samādhi*. The first 11 posts should be followed in that order, at least initially.

Introduction

1. We all have acquired innumerable "bad *kamma vipāka*" in this cycle of rebirths (*saṁsāra*) that has no beginning. There is a very simple recipe for stopping many of such "bad *kamma vipāka*" from coming to fruition by "wearing out" and ultimately removing the "*kamma* seeds" (*kamma bīja*) associated with them.

- We acquire a bad "*kamma* seed" when we do something wrong to a living being, and we become indebted to that being. Just like we can become "debt-free" by paying off debts, we can pay off that debt. The problem is that we have become indebted to innumerable beings in previous rebirths. In the *Mettāsahagata Sutta* (SN46.54) and other *suttā*, the Buddha has explained how much of this debt can be paid off by doing the *Ariya metta bhāvanā* and also by transferring merits to "all beings" when we do a good deed; see, "Transfer of Merits (Pattidana) – How Does it Happen?."
- Here we focus on the *Ariya Mettā Bhāvanā*. First some background material to clarify what this means. Also see, "Karaniya Mettā Sutts – Mettā Bhāvanā."

Mundane *Mettā Bhāvanā*

2. The standard or mundane *Mettā bhāvanā* (loving kindness meditation) goes something like, "May myself and all beings be free of suffering, healthy, happy, and be free of all suffering", or some similar (longer) passages.

- Any type of such meditation is of course good. It makes your own mind calm down, and makes you think about the (mundane) welfare of the other beings.

Ariya Mettā Bhāvanā

3. However, the *Ariya Mettā Bhāvanā* has a much more deeper meaning. It is done with at least some idea of the complexity of "this world" with 31 realms and the status of the beings in those realms. In order to cultivate true compassion and loving-kindness one NEEDS TO FEEL the possible suffering in all those realms; see, "The Grand Unified Theory of Dhamma":

- The beings in the lowest four realms (*apāyā*) undergo unimaginable suffering, both physical and mental.
- In the lowest five realms (the *apāyā* and the human realm), beings have physical bodies that are subject to sicknesses, body aches, and getting old before dying.
- The sixth through eleventh realms are that of the *devas*. They have spontaneous births with fully formed (but less dense) bodies that are not subjected to sickness, aches and pains. There are no visible signs of old age until close to death. But they also have all five physical senses just like the lower five realms. But their physical bodies are much more dense, "Body Types in 31 Realms – Important of Manomaya Kāya."
- The higher 20 realms that include *rūpa loka* and *arūpa loka* have even less dense bodies than the *devas*, and do not have the physical sense faculties for taste, smell, and body touch. Thus any suffering they have is all mental, and not as intense as in the lower realms.

The Difference With the *Sotāpanna* stage

© 2026 Lal A. Pinnaduwage

4. Therefore, no living being is free of FUTURE suffering in any of the 31 realms, because unless the *Sotāpanna* stage of *Nibbāna* has been attained, even the beings in the highest realm can end up even in the *apāyā* (lowest four realms) in future rebirths.

- And the only way to attain the *Sotāpanna* stage of *Nibbāna* is by comprehending the Three Characteristics of this world of 31 realms: *anicca, dukkha, anatta.*
- The first level of understanding of *anicca, dukkha, anatta* leads to the *Sotāpanna* stage; when one attains the *Sotāpanna* stage, one becomes free from the *apāyā* FOREVER. This happens via the inability of the mind of a *Sotāpanna* to generate certain *cittā* with "*apāyagāmī*" *kammic* power; see, "Akusala Citta – How a Sotāpanna avoids Apayagami Citta" and "Conditions for the Four Stages of Nibbāna".

Higher Stages of *Magga Phala*

5. When the next stage of *Nibbāna* (*Sakadāgāmī* stage) is attained, one becomes free of births in the lower five realms where suffering due to physical ailments and diseases are possible. Thus one PERMANENTLY becomes "healthy" by attaining the *Sakadāgāmī* stage.

- At the *Anāgāmī* stage, one removes more *akusala citta* (and other fulfill other conditions; see, "Conditions for the Four Stages of Nibbāna"), and will never be born again in *kāma loka* including the *deva* realm. Thus one becomes PERMANENTLY free of any physical suffering.
- Then at the *Arahant* stage, all defilements are removed from the mind, and one will never be reborn in any of the 31 realms. The mind truly becomes free and one attains permanent *nirāmisa sukha*; see, "Three Kinds of Happiness – What is nirāmisa sukha?" and other posts on *nirāmisa sukha*.
- As you can see, the *Ariya Mettā Bhāvanā* is similar in structure to the conventional one, but the words have deeper meanings. For example, by saying "be healthy" now it is meant to be healthy forever. That means not to be born ever with a body that is subject to diseases and old age.

Elements of the *Ariya Mettā Bhāvanā*

6. **Now we can see how the *Ariya Mettā Bhāvanā* is formulated**:

- "May myself and all living beings attain the *Sotāpanna* stage and be free from suffering in the *apāyā* forever"
  "May myself and all living beings attain the *Sakadāgāmī* stage and be healthy forever".
  "May myself and all living beings attain the *Anāgāmī* stage and be content (attain peaceful happiness) forever".
  "May myself and all living beings attain the *Arahant* stage and be free from all suffering and attain the full *Nibbānic* bliss".
- All four *Brahma Vihāra* (*mettā, karuṇā, muditā, upekkhā*) cultivate with this *bhāvanā*.
- Off course, the *Bhāvanā* becomes increasingly effective as one starts to comprehend *Tilakkhaṇa* better.

Just Chanting Is Not Enough

7. What matters is not the particular set of word used, but what is felt in one's heart. In order to do that one needs to truly comprehend that there is REAL SUFFERING in this world, not only at the human or animal realms but in many other realms.

- The impact of the *Mettā Bhāvanā* increases gradually with an increased understanding of *anicca, dukkha, anatta,* because then one realizes the dangers and suffering that all living beings face in future lives.

© 2026 Lal A. Pinnaduwage

- The potential of the *Mettā Bhāvanā* is enormous. The Buddha said one could attain the *Anāgāmī* stage by correctly doing the *Mettā Bhāvanā*. But that entails understanding *anicca, dukkha, anatta*, i.e., attaining the *Sotāpanna* stage or at least embark on the path to *Sotāpanna* stage.
- However, even before attaining the *Sotāpanna* stage, one could reap many benefits by doing this correct *Ariya Mettā Bhāvanā*; see, "Kamma, Debt, and Meditation."

Essential of Meditation

8. It is best to do *Ariya Mettā Bhāvanā* and *Vipassanā Bhāvanā* (meditation on *anicca, dukkha, anatta* and other dhamma concepts) in a sitting meditation session every day; see, "4. What do all these Different Meditation Techniques Mean?."

- Initially, 10-15 minutes would be good for formal meditation. That time will automatically increase as the *nirāmisa sukha* sets in one starts seeing the benefits. Later on, one could stay in meditation for hours.
- Of course, *Ānāpānasati* needs to be practiced the whole day. *Ānāpānasati* means being aware of what is "taken in" (*āna*) and what is "discarded" (*āpāna.*) See, "7. What is Ānāpāna?" and other related posts in the meditation section.
- Listening to discourses and reading about Dhamma are also forms of meditation. That should be done during quiet times so the key concepts can be absorbed.

Results Will Grow With Better Understanding

9. The *Ariya Mettā Bhāvanā* is one of the most POTENT tools that we have. It is a simple concept, but the main difficulty is with the "*Ariya*" part. One needs to comprehend *anicca, dukkha, anatta* for the *bhāvanā* to be fully effective.

- Still, even the mundane version stated in #2 above is a good start. As one follows the Path and understands the concepts better (not the book knowledge), the *javana* power in one's thoughts become strong, and the *bhāvanā* becomes stronger and more effective.
- In the *Abhidhamma* language, the most potent *kusala citta* is the "*somanassa sahagata ñāṇa sampayutta asaṅkhārika citta*," i.e., the "thought that arises with joy and wisdom automatically". This thought also gets stronger with increasing wisdom and gets stronger as one gets to *Sotāpanna magga*, *Sotāpanna phala*, etc and optimum only at the *Arahant* stage.
- Yet even when one is following the mundane eightfold path, this *citta* is there, at a lower strength. One needs to be cultivate it. See, "Buddha Dhamma – In a Chart," and "What is Unique in Buddha Dhamma."

12.7

6. Ānāpānasati Bhāvanā (Introduction)

Revised July 22, 2020

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

1. I hope that several key points are clear from the discussion in the post, "3. The Second Level – Key to Purify the Mind":

- Bad habits (*gati*/*āsava*) are associated with one more immoral or unworthy acts, speech, or thoughts. We need to discard those.
- To counter the bad habits, one needs to cultivate good habits. For this, we need to improve moral behavior by engaging in ethical activities that bring joy to the heart.
- AND we need to do this all the time; we cannot let bad habits come back, which means we need to be on the lookout for any lapses in our practice. And we need to be on the lookout for opportunities to do moral acts that are beneficial for oneself and others.

2. In a general sense the Pāli word *ānāpāna*, "*āna"* includes anything that needs to "taken in" for the betterment of life, and "*āpāna"* the opposite. For example, we should eat only foods that are good for the body and stay away from or discard bad foods.

- Nowadays, "*āna*" is taken to be "breathe in" and "*āpāna*" is assumed to be "breathe out." Now, "*sati*" means mindfulness, and thus, the word "*ānāpānasati"* interpreted as "mindfully breathing in and mindfully breathing out." That is the mundane (or "*padaparama*") interpretation of "*ānapāna*."
- Buddha meant something deeper that would help cleanse the mind.

3. The Buddha described *bhāvanā* as follows: "*āsevitāya, bhāvitāya, bahuleekathāya,…*" or "keep close association, use often, and use all the time (what is good)……". When one is making an effort to form a new habit, one should be thinking about it and doing things to support that whenever possible. Trying to do it in a formal meditation session will not be enough.

- We discussed the current scientific explanation of how repeated acts help form habits by strengthening a set of neural connections in the brain. See, "Truine Brain: How the Mind Rewires the Brain via Meditation/Habits." The same thing works to break bad habits by NOT doing it whenever that comes to the mind. Then existing neural connections will get weaker.
- What is to contemplate: To be mindful to "take in good things (*kusala* or moral things), and to "discard bad things (*akusala* or immoral things)." That is the real meaning of *ānāpānasati* bhāvanā.

4. Now, with all the discussion we have had up to this point, how can just a process of "breathing in" and "breathing out" mindfully GET RID OF either the bad habits (*gati*/*āsāvā*) or the five hindrances?

- Of course, that is not possible.
- But it CAN do one thing, as we mentioned before. If we sit in a quiet place with the eyes closed (i.e., turn off the five physical senses in effect), AND fix the mind on the breath, we can get the five hindrances to settle down and not come up (assuming that we are staying away from committing the BIG EIGHT immoral acts).
- However, this calming down or getting to *Samatha* is a TEMPORARY solution. The moment we come back to the real world with all its distractions and temptations, those habits take over.

5. The breath meditation needs to be used appropriately, with the understanding that it can provide only temporary relief. This breath meditation is the same meditation that was used by the Hindu *yogis* to attain mundane (*Anariya*) *jhānā* even before the Buddha.

© 2026 Lal A. Pinnaduwage

- Since the time Buddhaghosa's Visuddhimagga was accepted as the basis of Theravāda Dhamma (in the fifth century CE), this "literal interpretation" of the *ānāpānasati* has been used.
- The real *ānāpānasati bhāvanā* is not described in the *Visuddhimagga* and is not described in any Mahāyāna or even Theravāda texts today. One needs to go directly to the *Tipiṭaka* to find it; it is described in many *suttā*, for example, the *Assāsa sutta*. I could not find an English translation of this *sutta*. Another one *Arittha Sutta*, and the translation published at the Access to insight site is not complete, even though it does contain Buddha's admonition to Ven. Arittha that in and out-breathing is only one version of *Ānāpānasati* (in the *sutta* it says it is NOT the *Ariya* or Noble version) : WebLink: ACCESSTOINSIGHT: Arittha Sutta: To Arittha
- Arittha Sutta: To Arittha (On Mindfulness of Breathing)

6. Thus there are two interpretations of the *Ānāpānasati Bhāvanā*. One is the conventional "breathing" version and the other is the real version recommended by the Buddha, which has a wider interpretation, including breathing to a minor extent.

- The correct meaning is in many suttā. Of course, the main sutta is "WebLink: suttacentral: *Ānāpānasati Sutta* (MN 118)."The *Ānāpānasati sutta* is the condensed version of the Buddha's discourses on *Ānāpānasati Bhāvanā*. As with most main *suttā*, the discourse was condensed into the form for easy transmission. Other *suttā*, mostly by Ven. Sāriputta, have explained the terms like "*āna*" and "*āpana*" in detail (like the *Assāsa Sutta*).
- I have discussed the *sutta* at a bit deeper level in "7. What is Ānāpāna?" and "8. The Basic Formal Anāpānasati Meditation."
- See, "Is Ānāpānasati Breath Meditation?," where I provide a detailed discussion based on the *Tipiṭaka*.
- Furthermore, Sinhala commentaries (*Atthakathā*) were also written to explain the main *suttā*. Unfortunately, these *atthakathā* were burned down shortly after Buddhaghosa wrote his Visuddhimagga and other books. However, three important ones (*Paṭisambhidā Magga Pakarana*, *Pitakopadesa*, and *Netthipakarana*) have survived because they had been included in the *Tipiṭaka*. What I describe here is from those books in the *Tipiṭaka*.
- Buddhaghosa was a Hindu before converting to be a Buddhist later on; see, "The Life and Work of Buddhaghosa" by B. C. Law (1927). Some say he became a Buddhist in order to introduce Hindu concepts to Buddha Dhamma. Either that or he just used whatever he understood to be the *Ānāpānasati* without any malicious intentions. Either way, the correct interpretation had been hidden for all these years; see, "Buddhaghosa's Visuddhimagga – A Focused Analysis."

7. The key message of the Buddha was that we need to remove the greed, hate, and ignorance that we all have in our minds, and by doing that we can experience the *nirāmisa sukha* that is of better quality and of permanent nature. Let us now discuss the basic meditation technique that will start us on the correct path to achieve lasting happiness.

- More evidence from the *Tipiṭaka*: "Is Ānāpānasati Breath Meditation?."

Next, "7. What is Ānāpāna?", ……..

12.7.1 Arittha Sutta - To Arittha (On Mindfulness of Breathing)

SN 54.6
PTS: S v 314
CDB ii 1768
Arittha Sutta: To Arittha
(On Mindfulness of Breathing)
translated from the Pāli by
Thanissaro Bhikkhu
© 2006

At Savatthi. There the Blessed One said, "Monks, do you develop mindfulness of in-&-out breathing?"

When this was said, Ven. Arittha replied to the Blessed One, *"I* develop mindfulness of in-&-out breathing, lord."

"But how do you develop mindfulness of in-&-out breathing, Arittha?"

"Having abandoned sensual desire for past sensual pleasures, lord, having done away with sensual desire for future sensual pleasures, and having thoroughly subdued perceptions of irritation with regard to internal & external events, I breathe in mindfully and breathe out mindfully."[1]

"There is that mindfulness of in-&-out breathing, Arittha. I don't say that there isn't. But as to how mindfulness of in-&-out breathing is brought in detail to its culmination, listen and pay close attention. I will speak."

"As you say, lord," Ven. Arittha responded to the Blessed One.

The Blessed One said, "And how, Arittha, is mindfulness of in-&-out breathing brought in detail to its culmination? There is the case where a monk, having gone to the wilderness, to the shade of a tree, or to an empty building, sits down folding his legs crosswise, holding his body erect, and setting mindfulness to the fore.[2] Always mindful, he breathes in; mindful he breathes out.

"[1] Breathing in long, he discerns, 'I am breathing in long'; or breathing out long, he discerns, 'I am breathing out long.' [2] Or breathing in short, he discerns, 'I am breathing in short'; or breathing out short, he discerns, 'I am breathing out short.' [3] He trains himself, 'I will breathe in sensitive to the entire body.'[3] He trains himself, 'I will breathe out sensitive to the entire body.' [4] He trains himself, 'I will breathe in calming bodily fabrication.'[4] He trains himself, 'I will breathe out calming bodily fabrication.'

"[5] He trains himself, 'I will breathe in sensitive to rapture.' He trains himself, 'I will breathe out sensitive to rapture.' [6] He trains himself, 'I will breathe in sensitive to pleasure.' He trains himself, 'I will breathe out sensitive to pleasure.' [7] He trains himself, 'I will breathe in sensitive to mental fabrication.'[5] He trains himself, 'I will breathe out sensitive to mental fabrication.' [8] He trains himself, 'I will breathe in calming mental fabrication.' He trains himself, 'I will breathe out calming mental fabrication.'

"[9] He trains himself, 'I will breathe in sensitive to the mind.' He trains himself, 'I will breathe out sensitive to the mind.' [10] He trains himself, 'I will breathe in satisfying the mind.' He trains himself, 'I will breathe out satisfying the mind.' [11] He trains himself, 'I will breathe in steadying the mind.' He trains himself, 'I will breathe out steadying the mind.' [12] He trains himself, 'I will breathe in releasing the mind.' He trains himself, 'I will breathe out releasing the mind.'[6]

"[13] He trains himself, 'I will breathe in focusing on inconstancy.' He trains himself, 'I will breathe out focusing on inconstancy.' [14] He trains himself, 'I will breathe in focusing on dispassion.'[7] He trains himself, 'I will breathe out focusing on dispassion.' [15] He trains himself, 'I will breathe in focusing on cessation.' He trains himself, 'I will breathe out focusing on cessation.' [16] He trains himself, 'I will breathe in focusing on relinquishment.' He trains himself, 'I will breathe out focusing on relinquishment.'

"This, Arittha, is how mindfulness of in-&-out breathing is brought in detail to its culmination."

Notes

1. The Commentary reads this statement as indicating that Arittha has attained the third level of Awakening, non-return, but it is also possible to interpret the statement on a more mundane level: Arittha is simply practicing mindfulness in the present moment, having temporarily subdued desire for past and future sensual pleasures, and having temporarily subdued any thought of irritation with regard to the present.

© 2026 Lal A. Pinnaduwage

2. To the fore *(parimukham):* The Abhidhamma takes an etymological approach to this term, defining it as around *(pari-)* the mouth *(mukham).* In the Vinaya, however, it is used in a context (Cv.V.27.4) where it undoubtedly means the front of the chest. There is also the possibility that the term could be used idiomatically as "to the front," which is how I have translated it here.

3. The commentaries insist that "body" here means the breath, but this is unlikely in this context, for the next step — without further explanation — refers to the breath as "bodily fabrication." If the Buddha were using two different terms to refer to the breath in such close proximity, he would have been careful to signal that he was redefining his terms (as he does below, when explaining that the first four steps in breath meditation correspond to the practice of focusing on the body in and of itself as a frame of reference). The step of breathing in and out sensitive to the entire body relates to the many similes in the suttā depicting jhāna as a state of whole-body awareness (see MN 119).

4. "In-&-out breaths are bodily; these are things tied up with the body. That's why in-&-out breaths are bodily fabrications." — MN 44.

5. "Perceptions & feelings are mental; these are things tied up with the mind. That's why perceptions & feelings are mental fabrications." — MN 44.

6. AN 9.34 shows how the mind, step by step, is temporarily released from burdensome mental states of greater and greater refinement as it advances through the stages of jhāna.

7. Lit., "fading."

7. What is Ānāpāna?

Revised April 2, 2017 (#4); September 2, 2019; July 23, 2020; June 6, 2022; October 11, 2022

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

1. The "WebLink: suttacentral: *Ānāpānasati Sutta*, (MN 118)" has the following verse:

"*Ānāpānassati, bhikkhave, bhāvitā bahulīkatā mahapphalā hoti mahānisaṁsā. Ānāpānassati, bhikkhave, bhāvitā bahulīkatā cattāro satipaṭṭhāne paripūreti. Cattāro satipaṭṭhānā bhāvitā bahulīkatā satta bojjhaṅge paripūrenti. Satta bojjhaṅgā bhāvitā bahulīkatā vijjāvimuttiṁ paripūrenti.*"

That means: "*Ānāpānasati*, *Bhikkhus*, when practiced frequently bears many fruits and leads to many benefits. *Ānāpānasati*, *Bhikkhus*, when cultivated and pursued, brings the four *Satipaṭṭhānā* to their completion. The four *Satipaṭṭhānā*, when cultivated and pursued, bring the seven *Bojjhaṅgā* to their completion. The seven *Bojjhaṅgā*, when cultivated and pursued, bring *vijjā* (opposite of *avijjā*) and *vimutti* (or *Nibbāna*) to their completion."

- Now, if *ānāpāna* means "breathing in and breathing out", how can that lead to the completion of the four *satipaṭṭhānās*, *the seven bojjhaṅgas*, removal of *avijjā*, and the attainment of *Nibbāna*? Can anyone seriously think that is possible?
- Instead, *ānāpāna* MEANS cultivating *Satipaṭṭhāna*, *Satta Bojjhaṅga*, etc., by "taking in morals" and "expelling immoral" as we discuss below.

2. *Satipaṭṭhāna Bhāvanā* is a more detailed version of the *Ānāpānasati Bhāvanā*. Thus it is essential to learn the correct version of the *Ānāpānasati*. If one does *Ānāpānasati* correctly, it can be easily turned into *Satipaṭṭhāna Bhāvanā*.

- Section 4 on "Dhammānupassanā" describes how the cultivation of the four types of *Satipaṭṭhāna* leads to the removal of the five hindrances and fulfillment of the seven *Bojjhaṅga* to their completion. See, "WebLink: suttacentral: *Satipaṭṭhāna Sutta* (MN 10)." That confirms the statements in the *Ānāpānasati Sutta* mentioned above.

3. First, let us figure out exactly what the Buddha meant by "*āna*" and "*āpāna*" in "*āna+āpāna+sati*" which rhymes as *ānāpānasati*; of course "*sati*" is mindfulness.

- "Āna" is taking in; In Sinhala, "*ānayānaya*" is "import". "*āpāna*" is discarding; In Sinhala, "*apānayānaya*" is "export". Thus "āna"+"āpāna" or *ānāpāna* is "taking in/discarding" or import/export.
- "Assa" is the same as "āna", and "passa" is the same as "āpāna". In Sri Lanka, parents tell their child to clean his/her room by saying, "*kāmaraya* (room) *assa passa* (or *aspas*) *karāganna*" (කාමරය අස්පස් කරගන්න)
- When cleaning the room, the child needs to get rid of the clutter (*passa*) but also can take in (*assa*) something like a flower vase to make the room look more pleasant, or to take in a chair that can be useful.

4. **During the time of the Buddha itself, auxiliary *suttā* as well as commentaries ("*Atthakatha*") were written to explain the keywords/phrases in the main suttā that were abbreviated for easy transmission; see, "Preservation of Dhamma."**

There are two crucial *suttā*, "WebLink: suttacentral: *Assāsappatta Sutta* (SN 38.5)" and the "WebLink: suttacentral: *Paramassāsappatta Sutta* (SN 38.6)" that describe how one should "take in" *kusala* thoughts and "discard" *akusala* thoughts; that is "āna" + "āpāna" (*ānāpāna*) or "*assa/passa*", for cleaning up (the

© 2026 Lal A. Pinnaduwage

mind). The English translation there is hopeless, but one can get the idea by looking at the Pāli version. You don't need to be an expert on Pāli to see that.

- In the *Mahasaccaka Sutta*, "*assa/passa*" was also used to indicate "in and out breathing" when the Buddha was describing to Saccaka how he engaged in the "breath meditation" per instructions by Āḷāra Kālāma and Uddaka Rāmaputta while he was searching for the truth as Bodhisatta.
- But the following verses of that *sutta* describe how he gave up on that technique and moved onto the correct path.
- So, we must ensure a given phrase is used in the proper context, depending on the situation.
- For example, there are several conventional and deeper meanings to the keywords "*atta*" and "*anatta*," and one needs to be able to figure out which meaning to use for a given case; see, "Attā Hi Attano Nātho," "Anatta – the Opposite of Which Atta?," and links in those posts.

5. When one knows what *kusala/akusala kamma* are, the first thing to do is to prevent from doing *akusala kamma* and to make an effort to do *kusala kamma* by engaging in meritorious actions (*puñña kriya*); see, "Ten Immoral Actions (Dasa Akusala)," and "Punna Kamma – Dāna, Sīla, Bhāvanā."

- Thus when one leads a moral life, one automatically engages in the primary form of *Ānāpānasati*.
- AND, one cannot do a proper formal *Ānāpānasati* meditation and get to even *samādhi*, let alone a *jhāna* unless one leads a moral life. The five hindrances are too strong to be suppressed; see, "Key to Calming the Mind – Five Hindrances."

6. **Formal *Ānāpānasati Bhāvanā*** can be done in a formal sitting or walking meditation session while engaging in the basic version (taking in what is good/discarding what is evil) all the time.

- There is no need to do *Samatha Bhāvanā* separately. If one does a formal *Ānāpānasati* session with the eyes closed in a quiet place, one will automatically get into *samādhi*. **Let good thoughts grow, and discard evil thoughts. Very simple.**
- Another thing to do in a formal meditation session is to **contemplate a particular dhamma concept like *anicca*, *dukkha*, or *anatta*. That means focusing on "āna".**
- When one gets to *samādhi*, the mind goes on "auto-pilot"; you will feel that your mind is taking charge and you need to exert less effort to keep the focus.

7. When one does the basic version while engaged in other activities, one is only mindful of what one is engaged in, i.e., the task at hand. That task presumably does not involve any of the BIG EIGHT we discussed previously; see "The Basics in Meditation." It could be a technical task or a daily chore like washing dishes or driving. **Be mindful of just the task (washing, driving, etc).** Here one will NOT get into samādhi, so there is no danger of injuring oneself; Many people get into accidents while driving because they are not being mindful of driving.

- However, if one does not have a specific task (say, when riding a bus or waiting at the doctor's office), one could be engaged in *Ānāpānasati Bhāvanā*. When our minds are not focused on something (like in the cases mentioned above,) all sorts of ideas bubble up. As we discussed in "The Basics in Meditation." These are due to deeply-ingrained habits or *āsavā* that we have acquired not only in this life but also from previous lives.

8. The more we keep reviving or re-living this habit (i.e., doing *āna/apāna* or *assa/passa*), we strengthen that good habit (*gati*).

- We have come all this way in the cycle of rebirths that are mostly filled with suffering because of our bad habits (*gati*) that have been percolated into a very dense state of deep-seated cravings (*āsavā*). It may take some time to develop this "*āna/pāna*" but you will see results in a few weeks to a few months.

9. In the *ānapānapabba* of the *Satipaṭṭhāna sutta*, it says, "*..so sato vā assa sati, sato vā passa sati. Dīghaṁ vā assasanto dīghaṁ assasāmī ti pajānāti, dīghaṁ vā passasanto dīghaṁ passasāmī ti*

© 2026 Lal A. Pinnaduwage

pajānāti, ……" Here it DOES NOT mean "take long breaths in, expel long breaths out"; instead, it means, "get rid of **long-established (deeply-rooted)** bad habits, and cultivate the **long-established** good habits".

- Similarly, the next sentence ("*..rassaṁ vā assasanto…*") is not about short breaths, but about those good habits that you started to work on recently, and those bad habits that started to creep into your mind recently (if there are any).
- One cannot purify one's mind by breathing in/out, even though it can get one's mind to calm down (*Samatha*). The correct way of doing it is doing both *Samatha* and *Vipassanā* together.

10. When we think a bit more about this, we realize that what needs to be discarded are *micchā diṭṭhi* (wrong views), *micchā saṅkappa* (wrong thoughts or ideas), *micchā vācā* (incorrect, harmful speech), *micchā kammanta* (incorrect/harmful actions), *micchā ājīva* (incorrect/harmful way of living), *micchā vāyāma* (tendency to strive on immoral activities), *micchā sati* (tendency to focus on immoral activities); when one does all that *micchā samādhi* (tendency to get absorbed in immoral ideas/actions) is the result.

- In the same way, what we need to "take in" are *sammā diṭṭhi*, *sammā saṅkappa*, *sammā vācā*, *sammā kammanta*, *sammā ājīva*, *sammā vāyāma*, *sammā sati*, and when one keeps doing that one automatically gets to *sammā samādhi*.
- Put in another way, *Ānāpānasati* is nothing but "taking in" the Noble Eightfold Path and "discarding" the opposite.

11. The longer one "takes in" or "lives" the Noble Eightfold Path and "rejects" the opposite, the easier it becomes to get to samādhi in a formal meditation session. As samādhi grows little by little, one day, one will automatically get into the first *Ariya jhāna*. However, one more thing is needed before getting to the *Ariya jhānā*, an understanding of *anicca*, *dukkha*, and *anatta*. See "Is Ānāpānasati Breath Meditation?"

- Keep practicing "*ānāpāna*" as much as possible throughout the day. With time, you will feel the "cooling down" or '*nivāna*" or "a taste of *Nibbāna*."
- Buddha Dhamma is NOT about following rituals. It is all about cleansing one's mind, which takes effort and concentration. Initially, it could be challenging, but as one gains samādhi bit by bit, one gets motivated. In a few months, one can look back at one's life and see that it has changed for the better.
- Even though one can start with discarding immoral deeds and cultivating or taking in morals, one needs to know the real meanings of "*saŋ*," *anicca*, and *anatta* to do the *Ānāpānasati Bhāvanā* in a deeper sense: (i) One needs to comprehend which "*saŋ*" or defilements to be discarded; see, "Saŋ." (ii) One needs to know the deeper meanings of *Tilakkhaṇa*; see, "Anicca, Dukkha, Anatta."

12.9 Is Ānāpānasati Breath Meditation?

June 2, 2017; revised September 2, 2017; April 25, 2020; August 20, 2022; rewritten September 7, 2024

We discuss the *Saññā Sutta*, which explicitly states that breath meditation is not *Ānāpānasati.*

Introduction

1. If you Google "Ānāpānasati," almost all websites that come up identify it as "Buddhist breath mediation" or "mindfulness of breathing." Nearly all English translations of even the title of the "WebLink: suttacentral: *Ānāpānassati Sutta* (MN 118)" as "Mindfulness of Breathing." Another example is "WebLink: accesstoinsight.org: *Ānāpānasati Sutta*: Mindfulness of Breathing."

- **But several *Tipiṭaka suttās* directly state** that **breath meditation is not the Buddhist *Ānāpānasati Bhāvanā***, as discussed below.
- Breath meditation was practiced by *yogis* even before the Buddha. So, breath meditation predates Buddha's *Ānāpānasati bhāvanā.* Buddha rejected breath and *kasiṇa* meditations because he himself cultivated them and they did not lead to *Nibbāna* or PERMANENT relief from suffering.

Breath Meditation Was Practised Before Buddha Gotama

2. Soon after becoming a hermit and well before attaining the Buddhahood, our *Bodhisatta* (Siddhattha or "Siddhārtha" in Sanskrit) learned breath/*kasiṇa* meditation techniques from two prominent *yogis* of that time, Āḷāra Kālāma and Uddaka Rāmaputta.

- Āḷāra Kālāma taught him how to get to the third *arūpa samāpatti*, *ākiñcaññāyatana* (one must first be proficient in the four *rūpa jhānās* to cultivate *arūpa samāpatti*). But the *Bodhisatta* realized that it only leads to rebirth in the *ākiñcaññāyatana Brahma* realm. See "WebLink: suttacentral: *Bodhirājakumāra Sutta* (MN 85)." After leaving him, the Bodhisatta went to Uddaka Rāmaputta and learned how to advance to the highest *arūpa samāpatti*, *nevasaññānāsaññāyatana* (see @marker 13.25 in the above *sutta*).
- The *Bodhisatta* realized that even the highest *arūpa samāpatti* would not lead to the "end of suffering" and only lead to rebirth in a *Brahma* realm with a finite lifetime.
- After leaving those two teachers, our *Bodhisatta* spent six more years striving to attain Buddhahood. He practiced various techniques used by *yogis* those days and endured hardship, as described in the same *sutta*. See, for example, @marker 25.1 to 30.5.

3. After six years of hardship, he finally realized that such approaches do not lead to *Nibbāna*; see @marker 30.6.

- He realized he needed to make his physical body healthy to cultivate wisdom (*paññā*) to comprehend the "true nature of this world" or "*yathābhūta ñāṇa.*" See "Bhūta and Yathābhūta – What Do They Really Mean."
- He cultivated the same *jhānās* he had attained before, **but this time by eliminating *kāma rāga*, not merely suppressing it**; see @marker 34.37.1.
- Then, he realized the three types of higher knowledge (*tevijjā*): @marker 34.37.5: *pubbenivāsānussati ñāṇa*, *cutūpapāta ñāṇa*, and ***āsavakkhaya ñāṇa*** in that order. Of course, the last one eliminated all *anusaya*/*saṁyojana* by his own efforts, thus making him a *Sammāsambuddha*.
- Upon attaining Buddhahood, he realized it would be difficult to teach his new-found Dhamma to humans; see @marker 43.1. **As we have discussed, such a "worldview" has never been known to humans without being discovered by a *Sammāsambuddha*.** See "WebLink: suttacentral: *Sammāsambuddha Sutta* (SN 56.23)."

Very Few Attain *Magga Phala* via *Ariya Jhāna*

4. I must emphasize that only a tiny fraction of those who have attained *Arahanthood* followed the "path of the *Ariya jhānās/samāpattis*" and cultivated the three types of higher knowledge (*tevijjā*).

- **Even during the time of the Buddha, most attained *Arahanthood* without any *jhāna*.** Some people who had cultivated *anariya jhānās*, after being exposed to Buddha's teachings, attained *magga phala* via those *anariya jhānic* states. In other words, most *Arahants* are "*paññāvimutta Arahants*." See my concluding remarks (1-3) at the end of the post "Kalahavivāda Sutta – Origin of Fights and Disputes."
- That is a different topic, but I wanted to emphasize the above because by describing Buddha's path to Enlightenment, some people may conclude that it is the only way to *Nibbāna*.
- **The main point I wanted to convey is the following. Attaining *jhānās/arūpa samāpattis* was possible before the Buddha Gotama attained Buddhahood.**

Breath Meditation Was Practiced Before the Buddha

5. Therefore, "breath mediation" and *kasiṇa* mediation (where one would focus the mind on a clay ball, fire, or a water bowl) were widely known and practiced before the Buddha. Those techniques were used to suppress *kāma rāga* and enter *anariya jhānās*.

- As described in #2 above, the *Bodhisatta* initially tested all those techniques and realized they could not stop future suffering, i.e., the rebirth process.
- He discovered that the only way is to fully comprehend the mechanism (*Paṭicca Samuppāda*) by which all rebirth processes take place, i.e., by cultivating wisdom (*paññā*). **During the process of understanding *Paṭicca Samuppāda*, the mind gets to the tranquility (*samādhi*) needed to attain any *magga phala*.**

Upacāra Samādhi for *Magga Phala*

6. There is an infinite variety of *samādhi*. To attain a *magga phala*, one must get into the "*upacāra samādhi*" for that *magga phala*. "*Upacāra*" (pronounced "upachāra") means "to stay close to a specific mental state," which in this case is a *magga phala*. For example, to get to the *Sotāpanna* stage, one's mind must get to the "*upacāra samādhi*" for the *Sotāpanna* stage.

- **Getting into a *jhāna* has its own "*upacāra samādhi*," which is different from that of an "*upacāra samādhi*" for a *magga phala*.** Those are two different types of *samādhi*. To attain a *magga phala*, it is unnecessary (and not even common) to cultivate a *jhāna*. See #12 through #16 of "Citta Vīthi – Processing Of Pañcadvāra And Manodvāra Sense Inputs."
- **Now, with that background, let us discuss the focal point of this post, the *Saññā Sutta*.**

Saññā Sutta – "Breath/*Kasiṇa Nimitta*" Does Not Lead to *Nibbāna*

7. Once Ven. Ānanda asked the Buddha whether a *samādhi* can be reached without using the breath (air) or a *kasiṇa* object as the meditation object or "*nimitta*." See "WebLink: suttacentral: *Saññā Sutta* (AN 11.7)."

- Ven. Ānanda asked: "*Siyā nu kho, bhante, bhikkhuno tathārūpo samādhipaṭilābho yathā **neva pathaviyaṁ pathavisaññī assa**, na āpasmiṁ āposaññī assa, **na** tejasmiṁ tejosaññī assa, **na vāyasmiṁ vāyosaññī assa**, **na** ākāsānañcāyatane ākāsānañcāyatanasaññī assa, **na** viññāṇañcāyatane viññāṇañcāyatanasaññī assa, **na** ākiñcaññāyatane ākiñcaññāyatanasaññī assa, **na** nevasaññānāsaññāyatane nevasaññānāsaññāyatanasaññī assa, **na** idhaloke idhalokasaññī*

© 2026 Lal A. Pinnaduwage

assa, ***na*** *paraloke paralokasaññī assa, yampidaṁ diṭṭhaṁ sutaṁ mutaṁ viññātaṁ pattaṁ pariyesitaṁ anuvicaritaṁ manasā, tatrāpi* ***na*** *saññī assa; saññī ca pana assā"ti*?

- The translation there can be improved as follows: "Could it be, *Bhante*, that a *bhikkhu* might gain a *samādhi* like this? They **would not** focus their minds on ***pathavi* (as using a clay ball in *kasiṇa* meditation) by "taking in" the "*pathavi saññā*"** OR *āpo* (as using a water bowl in *kasiṇa* meditation) by "taking in" the "*āpo saññā"* OR *tejo* (as using a fire in *kasiṇa* meditation) by "taking in" the "*tejo saññā"* OR ***vāyo* (as using air in breath meditation) by "taking in" the "*vāyo saññā*"** ..
- **For example, "breath meditation" takes the *saññā* of *air* as the *nimitta: "vāyo saññī assa*."**

"*vāyo saññī assa*"- What Does It Mean?

8. When a mind is focused on a specific object, it "perceives that object" in a certain way. Even though "*saññā*" is commonly translated as "perception," it has a deeper meaning in Buddha Dhamma. Buddha emphasized that all humans who have not comprehended Buddha Dhamma (*puthujjana*) perceive anything in the world incorrectly, i.e., **a *puthujjana* has "*saññā vipallāsa*" or "distorted perception." I call it "distorted *saññā*."**

- Our physical and mental bodies are "programmed/created" (via *Paṭicca Samuppāda*) to provide a **"distorted perception."** We perceive a rock or a diamond as "solid," but even modern science confirms that 99% of "any solid object" is "empty of matter." See "Saññā Vipallāsa – Distorted Perception."
- The Mūlapariyāya *Sutta* (MN 1) describes the **"The Root of All Things" in this world**, which is **"*saññā vipallāsa*" or "distorted *saññā*."** See "Mūlapariyāya Sutta – The Root of All Things."
- The verse "*vāyasmiṁ vāyo saññī assa*" literally means "to take in the (distorted *saññā*) of air" while focusing the mind on the breath. Here, "*assa*" means "take in," and "*vāyasmiṁ*" means "in/of air."
- In the same way, some *yogis* who cultivate *kasiṇa* meditation focus their attention on a hard object (e.g., a clay ball), which is the same as "*pathaviyaṁ pathavi saññī assa*." Some others use a fire as *nimitta* (to get the *tejo saññā*). **Focussing on one's breath is the *kasiṇa* equivalent of taking in the *vāyo saññā.***
- Thus, in the first part of the verse, Ven. Ānanda asks, "Is there a way to get to *samādhi* without focusing on the breath or another *kasiṇa* object?"

Getting Into *Arūpa Samāpatti*

9. The middle part of the verse ("***na*** *ākāsānañcāyatane ākāsānañcāyatanasaññī assa,* ***na*** *viññāṇañcāyatane viññāṇañcāyatanasaññī assa,* ***na*** *ākiñcaññāyatane ākiñcaññāyatanasaññī assa,* ***na*** *nevasaññānāsaññāyatane nevasaññānāsaññāyatanasaññī assa*") similarly is on *arūpa samāpatti.*

- Here, Ven. Ānanda asked: "Could it be, *bhante*, that a *bhikkhu* might gain a *samādhi* like this? They **would not** focus their minds on "infinite space," "infinite *viññāṇa,*" "contracted *saññā*," or "the temporary ceasing of *saññā*"?
- For example, to cultivate *ākāsānañcāyatana arūpa samāpatti*, an *anariya yogi* will focus their mind on "infinite space." That means "taking in the *saññā* of an infinite space."
- Once getting there, an *anariya yogi* focuses the mind on "infinite *viññāṇa*," and the mind will be released from the "infinite space." Now, that *yogi* has no perception (*saññā*) of any space dimension. Then, he can contract that infinite *saññā* to a narrow level, which is the *ākiñcaññāyatana arūpa samāpatti.* Āḷāra Kālāma, the yogi mentioned in #2 above, was able to get there.

10. By proceeding further, an *anariya yogi* can make that "contracted *saññā*" stop arising for a short time. This is the highest "mental state" an *anariya yogi* can reach, which the other *yogi*, Uddaka Rāmaputta,

© 2026 Lal A. Pinnaduwage

attained. **This proves that "*saññā*" about this world is a mirage, and it can be almost stopped from arising even by an *anariya* yogi.**

- However, an *anariya yogi* cannot stop that *saññā* from "coming back" because they had not eliminated *avijjā*, ignorance about the "true nature of this world" or "*yathābhūta ñāṇa*" as mentioned in #3 above.
- Only an "*Ubhatobhāgavimutta Arahant*" can stop the *saññā* from arising (for up to seven days) because they have the "*yathābhūta ñāṇa*." This is the "*nirodha samāpatti,*" where *cittas* stop arising.
- Even though other *Arahants* (*paññāvimutta*) also have the "*yathābhūta ñāṇa*," they cannot get into "*nirodha samāpatti*" since they have not completed all *Ariya jhānās* and *samāpattis*. See "Jhāna – Finer Details."
- **This is also why *saññā* is a critical concept in Buddha Dhamma. All *saññās* associated with this world are illusions or mirages, as we have discussed: "Sotāpanna Stage via Understanding Perception (Saññā)."**

How to Attain *Ariya Samādhi*

11. At the end of the verse in #7, Ven. Ānanda asked whether a *samādhi* can be attained **without taking any *nimitta* associated with this world** (this realm or any other realm: "***na*** *idhaloke idhalokasaññī assa,* ***na*** *paraloke paralokasaññī assa*").

- The answer was yes. **The only *nimitta* one should focus on is the "cooling down/ultimate calmness of *Nibbāna*."**
- @marker 5.1, the Buddha explains that an *Ariya* (Noble Person) takes the "cooling down/ultimate calmness of *Nibbāna*" as the *nimitta*: **"'*etaṁ santaṁ etaṁ paṇītaṁ, yadidaṁ sabbasaṅkhārasamatho sabbūpadhipaṭinissaggo taṇhākkhayo virāgo nirodho nibbānan*'ti."**

Summary

12. Taking any "*lokiya nimitta*" (an object belonging to the world) as a meditation object (*nimitta*) is an *anariya* meditation.

- Also, see "Ariya Jhāna and Anariya Jhāna – Main Differences."
- More details on *Ānāpānasati* with many *Tipiṭaka* references at "Elephant in the Room 3 – Ānāpānasati."
- Few more *suttās* in the *Tipiṭaka* confirm the content in the *Saññā Sutta* (discussed above) that "breath meditation" is not a Buddhist meditation. See "WebLink: suttacentral: *Dutiyasamādhi Sutta* (AN 11.19)," "WebLink: suttacentral: *Tatiyasamādhi Sutta* (AN 11.20)," "WebLink: suttacentral: *Catutthasamādhi Sutta* (AN 11.21)" and "WebLink: suttacentral: *Sāriputta Sutta* (AN 10.7)."

12.10 8. The Basic Formal Ānāpānasati Meditation

Revised June 17, 2022

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and help gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

1. As we discussed in the previous posts of this series, it is important to live a moral life without engaging in the BIG EIGHT in order to achieve the full benefits of meditation. One could start even while making progress on the BIG EIGHT, and these formal sessions will help with those as well.

2. Now let us talk about how to do the correct *Ānāpānasati* meditation as taught by the Buddha; see, "7. What is Ānāpāna?."

- First pick out a quiet time slot that you can allocate without having to worry about other tasks. Initially, 10-15 minutes a day would be fine and you can extend the time to several hours when the benefits of proper meditation become clear and you start feeling the *nirāmisa sukha*.

3. Pick out a room away from external disturbances as much as possible. A room that can be darkened and the door can be closed would be ideal. Sit in a comfortable chair with an armrest, and this becomes important when one starts getting into *samādhi*, because the body could become less rigid and tends to slide off (however, some people tend to "freeze" just like in *samādhi* statues in the beginning).

- Anyway, do not make the chair too comfortable because you may fall asleep. With practice this sleepiness will automatically go away, when the mind starts liking the meditation sessions, i.e., when one of the *pañcanīvaraṇa*, *thina-middha*, is automatically removed. One comes out of *samādhi* energized.

4. Sit in the chair with the hands-on lap and eyes closed. What we will be trying to do is to ward off any thoughts of lust, cravings, etc. (*kāmacchanda*), any thoughts of hate (*vyāpāda*) in particular, and also any stray thoughts such as on kids or other pending tasks. We want to experience the "cooling down" due to the absence of *kāmacchanda* and *vyāpāda*, and also to focus the mind on a Dhamma concept. For those who are starting out, it may be good to do the following first:

- In order to keep the mind from running away, keep saying in your mind, "May all beings be happy and healthy". Or, you could think about some act of generosity that you did recently. But all of a sudden you may drift to a thought of some type of sensual pleasure (involving any of the senses). Deliberately get rid of that thought and focus the mind back on the original task.
- If a hateful thought (towards someone or something) comes to mind, forcefully stop that thought as well. Here you should deliberately think good thoughts about that person. It is important to remember that even the vilest person has friends/family that love that person. Sincerely say, "May X be happy and healthy". Even if you have good reasons to despise that person, it is important to realize that our task is to remove the hateful feelings that WE have. When we do that, in the future we will not generate strong hateful feelings even if someone does something that may appear to be against us.
- Thinking about the serenity of a Buddha statue helps in the case of both *kāmacchanda* and *vyāpāda* (and any stray thought).

5. Once one gets some practice sitting in one place with a focused mind for a little while, one should start meditating or contemplating on Dhamma concepts. It may be a good idea to start with the introductory posts (posts above this post).

- After that, one could read one of the posts from the "Key Dhamma Concepts" on the top menu just before the meditation session and then contemplate those concepts; for example, one could think about examples on "*anicca*": We cannot maintain anything to our satisfaction over the long term. If you are old enough you have many examples on your own. If you are young, you can still maintain your body, hair, teeth, etc., to your liking but when you get to middle age, you will see that it is an impossible task. The

© 2026 Lal A. Pinnaduwage

easiest is to think about your parents/grand parents and see how their bodies have changed, how they are unable to keep their bodies the way they would like.

- For this purpose, I have also added new posts on how one can look at the world through Buddha Dhamma in this section. The posts that I have added after the "Myths about Meditation" are good ones to read before the session and then to meditate on those ideas; for example, "A Simple Way to Enhance Merits (Kusala) and Avoid Demerits (Akusala)." The other three posts below that one may be a bit advanced for some; if so, browse around and find ones that are suitable. Eventually, the key concepts in the "Key Dhamma Concepts" section need to be grasped. I encourage everyone to read the posts in the "Moral Living and Fundamentals" section first.
- You could actually read any post from any area of the site and use that as a "focal point" on the meditation session later on. Not all sections are relevant to everyone. Different people can get to *samādhi* focusing on different topics. **The only posts that is absolutely necessary are the ones on *anicca*, *dukkha*, and *anatta*. But if they are hard to grasp, one should probably start at the "Moral Living and Fundamental" section. It is a matter of getting used to new concepts. In meditation, one will automatically "drift to *samādhi*" when the concepts become clear; the mind becomes awake and clear.**

6. Inevitably, your mind will try to wander off during the session. Stopping lustful and hateful thoughts is the main task of this formal meditation session. **If any distracting thought comes to the mind, DO NOT let it "run wild"; this is what is called "being mindful". Keep a sharp eye on such stray thoughts and put a stop soon as they surface.**

- The other three hindrances *(thina-middha*, uddhacca-kukkucca, and *vicikicchā*) will automatically come down. You will be surprised how refreshed you feel after a "good meditation session".
- Initially, it may be hard, but if you are persistent you should be able to see the results within a week to a month depending on the situation with the BIG EIGHT. Those will also gradually diminish too.
- Once one gets the mind to calm down some, one could start focusing on the good/bad habits that one has, in addition to "taking in" Dhamma concepts.

7. In the *Ānāpānapabba* of the *Satipaṭṭhāna sutta*, it says, "*..so sato va assa sati, sato va passa sati. Dīghaṁ vā assasanto dīghaṁ assasāmī ti pajānāti, dīghaṁ vā passasanto dīghaṁ passasāmī ti pajānāti, ……*" Here it DOES NOT mean "take long breaths in, expel long breaths out"; rather it means, "get rid of old bad habits, and cultivate the old good habits."

- Similarly, the very next sentence ("*..rassaṁ vā assasanto…*") is not about short breaths, but about those good habits that you started to work on recently, and those bad habits that started to creep in to your mind recently (if there is any).
- This is why understanding how habits are formed and become *āsavā* is important; there are several posts on this subject.
- There is no way that one can purify one's mind by breathing in/out, even though it can get one's mind to calm down (*samatha*). The correct way of doing it does both *Samatha* and *Vipassana* together.
- In the above verse, *sati* is a very important term; it is not mere concentration, but contemplation with an understanding of *anicca*, *dukkha*, and *anatta* (actually any form of meditation cannot be done effectively without at least some understanding of *anicca*, *dukkha*, *anatta*).

8. The key to success is to do this as often as possible. You do not need to be in a quiet place either, even though it helps especially initially. As you make progress, try to do it while riding the subway or a bus (but not while driving!), while waiting at the doctor's office, during a lunch break, etc.

9. When one starts on *Ariya Bhāvanā*, sometimes things may look worse before getting better. It is like trying to cool a hot iron by sprinkling water on it when all that smoke comes out and may appear to be

© 2026 Lal A. Pinnaduwage

getting worse. But one needs to be persistent. One needs to keep in mind that uncountable beings have attained "cooling down" by having faith in the Buddha.

- Understanding key Dhamma concepts is key to any type of meditation. Whenever you have time, try to read on different topics. Things will start "falling into place" at some point if it hasn't yet. From that point on, one will start feeling the joy of Dhamma and will be seeking to clarify things with enthusiasm. It is a good addition to have!

12.11 Possible Effects in Meditation – Kundalini Awakening

June 25, 2016; revised July 19, 2016; August 9, 2021

In the post, "Can Buddhist Meditation be Dangerous?" in the Section "Myths or Realities," I discussed some possible effects of meditation, both in conventional and in true Buddhist meditations. Here I will focus on Buddhist meditation and explain the physical and mental changes that one may experience. However, this does not mean everyone will experience these; these symptoms cannot be generalized, and some may not even feel them.

1. It is possible that one may encounter some soothing physical sensations first and then even some discomforts when one starts seriously cleansing one's mind. I did not want to discuss this topic until I had enough background material to explain the origins of such effects.

- Some people may feel such first experiences to be not bad at all and even get attached to them. I believe that what is known in Hinduism as "*kundalini* awakening" manifests this effect. Those are supposed to be encountered in *anariya* meditation techniques, where one stops the cleansing process at this stage. It is the **goal** of most of those non-Buddhist meditators.
- In genuine Buddhist meditation also one may experience certain such effects. However, they will not be painful.
- Before reading this post, it is advisable first to read the introductory post, "Can Buddhist Meditation be Dangerous?," because certain body sensations encountered in the early stages of meditation are discussed in that post.

2. Fully understanding the current post requires some background material on the concept of *gandhabba;* Click to hear pronunciation:

WebLink: Listen to "Gandhabba" pronounciation

The inert physical body is made alive by the *gandhabba* (or "*manomaya kāya*") that comes out of the physical body in the case of "out-of-body experiences"; see, "Manomaya Kāya and Out-of-Body Experience (OBE)."

- There are many posts at the site that explain various aspects of the *gandhabba*; see the sections "Gandhabba (Manomaya Kāya)," "The Grand Unified Theory of Dhamma," and "Udayavaya Ñāṇa."
- While it is not necessary to learn about the *gandhabba* to attain *Nibbāna*, if one needs to understand the mechanisms underlying these "meditation experiences," it is the bridge between mind and the physical body. **In any case, it is good to know about these possible effects (more of which are discussed below), so that if one gets to experience them, one would not be perplexed.**

3. The *gandhabba* has an "energy body," an invisible blueprint of the physical body. And that fine body is the one that controls the heavy physical body according to the commands from the mind, which is also located in the *gandhabba* (at the *hadaya vatthu*).

- The best way to visualize this is to imagine the *gandhabba* is a fine mesh that overlaps the physical body. It can move any part of the physical body, and is able to move any part that it wishes to move. For example, when the *gandhabba* moves its fine arm, the physical arm moves with it.
- This is how we control our physical bodies. Of course, there are more details with the brain acting out as an intermediary; see, "Brain – Interface between Mind and Body."
- For example, most of the energy to move the heavy body parts comes from our food. Gandhabba sends the "control signals".

4. The nervous system of the physical body overlaps the fine nervous system of the *gandhabba* and tries to maintain that overlap all the time. If one sits down cross-legged, for example, the nervous system of the

© 2026 Lal A. Pinnaduwage

physical body may shift from that of the *gandhabba*. Then the physical nervous system will try to adjust for that shift, pulling the attached muscles with it.

- That is why it could become uncomfortable, especially for those not used to sitting cross-legged (when one gets used to it, the physical system will learn to adjust quickly).
- Therefore, this effect does not indicate progress in the meditation program. Significant effects are discussed below.

5. Our thoughts (i.e., the *cittaja kāya*) can influence the fine body (*utuja kāya*) of the *gandhabba*. In fact, the *utuja kāya* arises out of *suddhaṭṭhaka* produced by the *cittaja kāya* and the *kammaja kāya*.

- **Thus the fine body of the *gandhabba* can be affected by two methods:** by the *kammaja kāya* (i.e. by *kamma vipāka*) AND by the *cittaja kāya* or according to how we think.
- **The first effect** can bring about aches and pains in the physical body due to *kamma vipāka* (by shifting the *gandhabba*'s body to out-of-balance in a short time, so we can feel the shift). These are mostly experienced as we get old (e.g., chronic back pains) and are, of course, not due to meditation. Some of these may get better with meditation.

6. **In addition to the shifts caused by *kamma vipāka*, we can change the equilibrium position of the *gandhabba*'s fine nervous system with consistent thoughts over long periods of time.** For example, if we think hateful thoughts a lot, the nervous system of the *gandhabba* may twist in a certain way; if we think mostly greedy thoughts, it may shift differently.

- Thus, as we think defiled thoughts and act on them regularly, it leads to gradual twisting nerve bundles [meridians being repaired for easy access by the *gandhabba*] in the *gandhabba*, and physical muscles also get twisted accordingly. Since it is a gradual process compared to the first effect, we do not normally feel it (until we get old).
- However, when we start cleansing our minds the fine body of the *gandhabba* tries to come back to its equilibrium position. During a good meditation session, this can happen fairly quickly, and that is when one starts feeling such nerve [***meridian*** - any of the pathways along which the body's vital energy flows according to the theory behind acupuncture] (and muscle) movements. We are basically trying to "undo" those twists in nerve bundles that occurred over years and years.
- This is why this effect is much less in young children. Their nerves have not yet being shifted too much.

7. **Thus, the second effect has its origins in our thoughts.** Normally such effects occur above the waist, along the spine, neck, and in the head. This is related to the fact that nerve bundles [meridians] propagate through the spine and also there are cranial nerves in the brain. Thus "*Kundalini* awakening" is an example of this category.

- This effect is experienced by different meditators somewhat differently. But the dominant feature is the "pressure waves" that arise above the waist and are normally located around the spine, neck, throat, and head. These have been attributed to energy centers or "*chakras*" in *Kundalini* awakening; see, "WebLink: wiki: Kundalini."
- That is why they say that the *kundalini* energy is "uncoiled" (or "awakened") during meditation. But this is nothing more than the out-of-balance nervous systems coming back to the equilibrium position. In *anariya* meditations, there is not much further cleansing is possible. To proceed further, one needs to comprehend the *anicca* nature of this world.

8. In Buddhist or *Ariya* meditations, one should start contemplating the *anicca* nature when one starts any body sensations. **Body sensations indicate that the mind is beginning to affect the body and has made progressed in the cleansing process.** Of course, those Hindu yogis who got to this stage had prevented from immoral acts and suppressed such thoughts, and thus had gained a tranquility of mind at least temporarily.

© 2026 Lal A. Pinnaduwage

- But if one does not permanently cleanse one's mind, with the comprehension of the true nature of this world (*anicca*, *dukkha*, *anatta*), such corrections are temporary. They can go right back to the twisted positions. Thus one may experience such effects to varying degrees.

9. When one starts comprehending the *anicca* nature, this "unwinding process" can accelerate (and the body sensations too). This is when one may even start feeling significant discomfort or even mild pain.

- If the body is really "out-of-alignment," the realignment process can lead to different types of sensations; some may be mild, but some could be even a bit painful.

10. Many people experience sweating, which is definitely part of the "cleansing process." Our defiled thoughts lead to the generation of "impurities" in various body sites. The pure *citta* generated in meditation can burn them, and the body will get rid of the waste via sweat. Thus sweating is also possible during a good meditation session (in the early stages of progress; of course, all these go away eventually).

- Another related symptom is becoming thirsty during a good session; the mouth can get dry. It is good to keep a glass of water close by if that is the case.
- By the way, one can move around even while in a *jhāna*. In fact, when one cultivates the *jhāna*, one can open eyes and not be bothered by it. I can confirm that. In fact, those who have *abhiññā* powers are said to be able to do regular work while using *abhiññā* powers.
- For example, a famous story in the *Tipiṭaka* describes how Ven. Cūllapanthaka had created a thousand copies of himself with *abhiññā* powers and how they were all sweeping the temple premises.

11. Here is another experience that I have heard people described according to my teacher *Thero's* recorded *desanās*:

- "Something propagated from the neck area to the top of the head and stayed there during the session. This happened during subsequent sessions too". Such a "propagation" is probably more like a "pressure wave". This is another "*kundalini* type" effect.
- When these "pressure waves" are strong, it may be a bit painful too. But be rest assured that those effects will gradually go away as one continues when the nervous system comes back to equilibrium. However, if such sensations persist outside the meditation session, it may be a good idea to go for a medical examination since it could be due to a medical condition.

12. There is actually a way to reduce these sensations to some extent. This was suggested by my teacher *Thero* in a *desanā* that I listened to. Even if one meditates with the eyes closed (as most people should do in the early stages), the eye balls inside eyelids are in constant motion; they move around a lot.

- One should try to focus the eyes on the nose area. This is done sort of by one's mind, but the eyeballs keep steady, pointing towards nose. In my case, it stopped most of the sensations in the head. Eventually, of course, these sensations go away, once one attains "equilibrium." Then one can proceed even with the eyes open but still focused towards the nose/mouth area.
- Now I do not have any of those "pressure waves" that experienced in the throat area and recently those in the head area also went away. Some of these effects had been there for the past year and a half.
- Getting to the first *Ariya jhāna* means one has reached the *Anāgāmī* stage, where one loses desire for all sense pleasures (i.e, transcend *kāma loka*). See #9 of "Power of the Human Mind – Ariya Jhānā."

13. Our thoughts or our "*cittaja kāya*" are the most important of the four types of "*kāya*" that we have. For a discussion of those four types of bodies, see, "Āhāra (Food) in Udayavaya Ñāṇa," in the Section: Udayavaya Ñāṇa.

- As discussed there, our physical bodies (*karaja kāya*) that we value so much are there only for about 100 years, while our human *bhava* or human existence can last many hundreds of years. The other three types of bodies of *kāya* that we have are *kammaja kāya*, *cittaja kāya*, and *utuja kāya*. All three of

© 2026 Lal A. Pinnaduwage

these prevail through the whole human *bhava* (of course, they undergo constant change); they make a "big transition" when a new *bhava* is grasped at the *cuti-paṭisandhi* moment).

- And it is this *cittaja kāya* (or basically our thought stream) that is the most important. If we use the *cittaja kāya* wisely, we can make progress in our mundane lives as well as in pursuing *Nibbāna*. We will discuss this in detail in the last post on the Udayavaya Ñāṇa in an upcoming post.

14. The key point here is that if one starts feeling these body sensations, one has cleansed the mind to the point of being able to comprehend *anicca, dukkha, anatta* (or any other Dhamma concept) with more ease; see, "Buddha Dhamma – In a Chart," and the post discussed there.

- At this stage (i.e., when feeling thirst, sweating, body sensations, etc.), one is likely to be somewhere around "9. Key to Ānāpānasati – How to Change Habits and Character (Gati)" in the meditation section.
- Of course it is also possible that one could have already comprehended *anicca, dukkha, anatta* and has attained the *Sotāpanna* stage without any such symptoms. Each person needs to decide that for themselves; see, "How Does One Know whether the Sotāpanna Stage is Reached?." The fundamental guide is whether one has removed those "*apāyagāmī gatī*" via cleansing the mind. The physical body may or may not give those clues that we discussed above.
- For attaining *magga phala*, *jhānā* are not necessary. Furthermore, *Ariya jhānā* cannot be attained without attaining at least the *Sotāpanna* stage first; see, "11. Magga Phala and Ariya Jhānā via Cultivation of Saptha Bojjhaṅga."
- **Mental (and associated physical) phenomena are highly personal. Thus above discussed symptoms may or may not be experienced by a particular person.**

© 2026 Lal A. Pinnaduwage

12.12 9. Key to Ānāpānasati – How to Change Habits and Character (Gati)

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section are on possible meditation subjects. They can clarify unresolved questions, and lead to *samādhi*. But one must contemplate on them.

Meditation is all about purifying one's mind. We all have individualized cravings and habits that we have acquired in our past lives that continue during this life unless we act to change or stop them. We need to cultivate good habits and stop bad ones. The only way to do this is to be mindful of our actions and stop bad actions as they start as thoughts in our minds. Most bad thoughts arise due to bad habits; they just "pop up".

- Introduction to Character or Personality (Gati)
- A Broad View of the "Person" Trying to be a "Better Person"
- How Character (Gati) Leads to Bhava and Jāti
- How Habits are Formed and Broken – A Scientific View

12.12.1 Introduction to Character or Personality (Gati)

1. Here is a good place to see why the Buddha rejected both the concept of a "self" AND a "no-self" (or "soul" AND "no-soul"). We first need to realize that the task of purifying the mind is very personal; only you know about your mind and only you can purify it. The perception of a "no-self" is a bad starting point to do this cleansing.

- We can easily see that "a person" changes over time, both physically and mentally (see the next post). Thus it is easy to see that a concept of a "soul" or "self" does not hold water.
- However, each of us is DIFFERENT, and UNIQUE; no two are the same even at a fixed time. Even though each person changes, the change itself is unique to "that person" and CAN BE initiated by that person. What makes one person different from another is his/her character (*gati*).
- For those people who say, "there is no-self" or "there is no real me", I ask: "Then is it OK if someone hits you with a stick or hurt you badly in some way?". Obviously, that is not fine. Just by denying something that is as real as suffering itself, will not make the problem go away. Just being philosophical is not going to make the problem disappear.
- This is why the Buddha rejected both extremes of "self" and "no-self".

2. Actually as one increasingly realizes the fruitlessness of struggling to seek sense pleasures, the feeling of "self" starts to decrease. An *Arahant* is the closest to a "self-less person"; but even an *Arahant* has some unique character qualities: nothing to do with greed, hate, and delusion, but more like *kammically* neutral habits.

- For example, there is this story about a very young *Arahant*. One day a man came to take this *bhikkhu* to his house for a "dāna", which consists of a lunch followed by a gift (usually things that are needed for a *bhikkhu* like a robe, a towel, etc). On the way, they ran into some puddles on the ground and the young *bhikkhu* jumped over one. The man thought, "Oh, this *bhikkhu* is not even disciplined let alone having any *magga phala*; maybe I should not give him the gift". They came across a few more puddles and the *bhikkhu* went around them. So, the man asked, "Why did you jump over only that one?". The *bhikkhu* told him, "If I jumped over anymore puddles, I would probably lose my lunch too". It turned out that the *bhikkhu* was an *Arahant* with *abhiññā* powers and read the man's mind! Also it is said that the *bhikkhu* was born a monkey for many lives in the recent past, and he still had that *sansāric* "monkey habit" of jumping over things.

© 2026 Lal A. Pinnaduwage

3. Habits are formed via repeated use. The Buddha said, *"yā yan taṇhā pono bhavitha....."* or "*bhava* or habits are formed by *taṇhā* for various things, activities. Remember that *taṇhā* means "getting attached to something via greed, hate, of ignorance"; see, "Taṇhā – How we Attach via Greed, Hate, and Ignorance."

4. What we are concerned about is only getting rid of immoral habits and cultivating moral habits. This will make oneself a "better person" long before one even thinks about attaining *Nibbāna*. This can be done with simple process called "*āna-āpāna*" or "taking in good habits" and "discarding bad habits".

- The Buddha said, "*bhāvetabbañca bhāvitaṁ*; *pahātabbaṁ pahīnaṁ me*" [MN 91, MN 92, KN Thag 16.6, KN Snp 3.7] or "keep doing what is good, get rid of those that are not good". The meaning is a bit deeper than that because "*bhāve*" there refers to making "*bhava*". The more one does something, it becomes one's "*bhava*". And the less one willfully stops doing, that "*bhava*" tends to go away. This is what the neurologists are re-discovering today; see, "How Habits are Formed and Broken – A Scientific View."

5. The bad habits need to be stopped each time it surfaces, right there. The Buddha said, "*ette san uppajjamānā uppajjati, pahīyamāna pahīyati*" or "each time a "*saṇ*" (a bad habit) resurfaces, it needs to be recognized and stopped right then." [19.5 *Yaṁ loke piyarūpaṁ sātarūpaṁ,* ***etthesā taṇhā uppajjamānā uppajjati****, ettha nivisamānā nivisati. ...* 20.4 *Yaṁ loke piyarūpaṁ sātarūpaṁ,* ***etthesā taṇhā pahīyamānā pahīyati****, ettha nirujjhamānā nirujjhati.* WebLink: suttacentral: Mindfulness Meditation – *Mahāsatipaṭṭhānasutta* DN 22]

- Therefore, one must do this not only in sitting meditation sessions, but as much as possible, whenever possible.
- This is what the Buddha also meant by "*āsevitāya*, *bhāvitāya*, *bahulīkatāya*," [MN 119, AN 8.1, AN 8.4] or "associate, use, and do as much as possible whenever possible" everything that helps with *Ānāpānasati*. These are described in the post, "Habits, Goals. and Character (Gati)".

6. I cannot emphasize enough the importance of understanding what is truly involved in *ānāpānasati*. The recent findings on the workings of the brain really helps clarify and highlight some key points that the Buddha emphasized. I think it will help anyone understand the process much better. But first we will take a brief look at how these character qualities are inherited.

Next, "A Broad View of the "Person" Trying to be a "Better Person"", …….

12.12.2 A Broad View of the "Person" Trying to be a "Better Person"

Revised November 28, 2018

1. Let us see how and why we act with greed, hate, and ignorance. Stated simply, all we do during a day does not happen by chance.

- **Our actions are based on our "character" (more correctly *gati*)** AND "our way of thinking about this world **based on our views about the world**"; "*gati*" is pronounced as "gati".
- For example, if one does not believe in a rebirth process, or the law of *kamma* (that each action has consequences), then it may be easier to seek enjoyment at the expense of other beings.

2. What our character or world view today is due to a complex combination of many things, but the main factors are: (i) *sansāric* habits (also called *gati* and *āsavas*), (ii) biological parents who provide parts of the physical body (this is also related to *kamma vipāka*), (iii) the environment that one grew up AND the current environment (i.e., physical environment and people one associates with).

- Even though the complexity of a "person" cannot be reduced to simple things, those are major ones. As the Buddha pointed out in the *Sabbāsava sutta* [MN 2] (see, "Habits, Goals. and Character (Gati)"), the main things that CAN BE changed NOW are "physical environment and people one associates with" which is a part of (iii) above. If we are talking about a child, then (iii) applies in its entirety.

© 2026 Lal A. Pinnaduwage

- Once these "external influences" are taken care of, next is to purify the mind by "taking in" good things and "discarding" bad things or "*ānāpāna*"; see, "7. What is Ānāpāna?."

3. When we are conceived in the mother's womb, a "blueprint" of the new life is in the form of a *manomaya kāya* (which is made of undetectably fine matter) descends to the womb and combines with the zygote formed by the combination of an egg from the mother and the sperm from the father.

- This *manomaya kāya* is the same as *gandhabba* or *paṭisandhi viññāṇa*.

4. The *manomaya kāya* comes with three *rūpa kalapas* called the *kāya dasaka* (blueprint for the physical body), *bhāva dasaka* (whether male or female), and *vatthu dasaka* (mind element, which has the "*gati*" in it) that were determined by the *kamma vipāka* that led to the birth; we will discuss these later in the Abhidhamma section.

- Thus the physical body of the new life is now going to be affected by not only the *kāya dasaka*, but also the genetic material in the egg and the sperm (DNA of the parents). As the fetus grows, it will also be affected by the food intake by the mother as well as her mental state, home environment, etc. After the birth until death, the physical body (as well as the mind) will be affected by many other factors including the diet and the environment.
- This is discussed in detail at: "Buddhist Explanations of Conception, Abortion, and Contraception."

5. Thus there is no "unchanging self" either mentally or physically; everything is in constant flux. But one cannot say "there is no-self" either because the character qualities (*gati* and *āsava*) that comes in with the *manomaya kāya* will keep "evolving"; even though they change, there is a continuation of a particular lifestream.

- Each person or animal that born is unique with a complex set of mental and physical parameters that evolve moment-to-moment like a flowing river; see, "What Reincarnates? Concept of a Lifestream".
- We will discuss some of these factors in various sections, but the key point I wanted to get across is the fact that each person has a unique set of character qualities (*gati* and *āsava*) that have evolved over uncountable number of lives in the past. And those are the key to one's destiny. **One has the power to change those.**

6. What makes one person different from another is this set of "*gati* and *āsava*", which can be loosely translated as, "character qualities and deep-seated cravings". Some people are calm and quiet while others are rough and boisterous; some like music while other like to watch things or engage in physical activities; the possibilities are endless and there are innumerable combinations of them. That is why each person is different.

- Hidden in these apparently harmless "habits" and "cravings" are the defilements or the tendencies to engage in certain types of activities that are harmful to oneself or the others.
- The key is to focus on the glaring character flaws first: if one engaged in activities such as fishing or hunting, that means willfully taking the life of other beings for one's pleasure. Does that makes sense within the wider world view of any given being repeatedly born in any of the 31 realms? Within that broader view, we can see that any animal, how small or insignificant, has an attachment to its life; and we could have had that very life in the past.
- Take another example of a transaction between two people. The goal should be to make a decent profit for oneself making sure one covers the cost and make enough profit to "stay in business and provide for the family", but not to make the transaction too burdensome on the other party. As we discussed in the post, "Kamma, Debt, and Meditation", one could get into deep debt to other people and beings by exploiting them in many different ways.

7. The easiest way to deal with this is to look at each action mindfully and decide whether that act is "fair" to everyone involved. Of course one could check to see any of the ten defilements (*dasa akusala*) are committed by that action; see, "Ten Immoral Actions (Dasa Akusala)."

© 2026 Lal A. Pinnaduwage

- As I keep saying, one needs to focus on the more extreme violations first. There is no point in worrying about inadvertently killing some insects while gardening if one is engaged in lying and deceit or killing animals for pleasure. It is good to get an idea of the severity of different acts; see, "How to Evaluate Weights of Different Kamma".

8. **This is why it is important to learn Dhamma as much as possible, while engaging in meditation. The Path becomes clear as one learns the subtleties in key Dhamma concepts.**

- **I am amazed how much I learn each and every day; it is like a picture becoming clearer by the day. You start to see the even smallest detail, and instead of becoming distraught you get a sense of clarity and peacefulness by cleansing the mind. You realize that no one is perfect until the *Arahanthood* and the key is to make progress, no matter where you are. Each step in the right direction makes you feel better.**

Next, "How Habits are Formed and Broken – A Scientific View", …….

12.12.3 How Character (Gati) Leads to Bhava and Jāti

Revised August 9, 2021; February 15, 2023; September 28, 2024

Jāti (births) depend on *gati* (habits/character.) Therefore, it is critical to cultivate "good *gati*."

1. A unique knowledge that the Buddha gained during the Enlightenment was the *āsavakkhaya ñāṇa*. This is the key to stopping the suffering FROM ARISING via getting rid of the deep-seated cravings (*āsava*) that we all have. *Āsavakkhaya ñāṇa* ("*āsava*" + "*khaya*," where "*khaya*" is the opposite of "*saŋ*"; see, "What is "Saŋ"?) is the knowledge on how to remove those cravings (*āsava*).

2. Throughout the site, I keep emphasizing the importance of understanding (not memorizing) the meanings of the key Pāli words like *gati, anusaya, āsava, bhava, jāti, saṁsāra,* and *dukkha*; they are intimately inter-connected in many ways including *Paṭicca Samuppāda*. The way to stop future suffering (*dukkha*) from arising and reaching *Nibbāna* is to break the perpetual cycle that leads to a new *jāti* (birth) at each death.

- Our problems do not go away at death (committing suicide is a bad idea); they merely get started in a new phase with a new body, which could be worse than what we have now; see, "What Reincarnates? – Concept of a Lifestream."
- The connections among *bhava* and *jāti* on one side and *āsava, anusaya,* and *gati* on the other side are intimate, and need to be understood well; see, "Saṁsāric Habits, Character (Gati), and Cravings (Āsava)," before reading the rest of this post.

3. **This understanding is needed even if one is not seriously thinking about *Nibbāna*. The real key to suffering is embedded in these intricate relationships.**

- *Bhava* and *jāti* also happen during this very life; *jāti* could mean the birth of a new desire; see, "Idappaccayatā Paticca Samuppāda" and "Bhava and Jāti – States of Existence and Births Therein."
- It may be confusing for a new comer to this site, but have patience and read the inter-connected posts. I have links everywhere to pertinent posts/material. Once you understand the underlying connections, everything will be clear, like a fog being lifted.
- I have set up links to open them in new windows so that you can go back and forth between posts quickly and try to "fill-in-the-gaps."

4. A perpetual cycle that is ever-present in the sansāric cycle of rebirths is described in the following verse (it is not in the *Tipiṭaka*, and probably in a later Commentary, but makes sense):

"*uppado pavattaṁ, pavatta nimittaṁ*

nimitta paṭisandhi, paṭisandhi gatiṁ" [Need to find source *sutta*.]

© 2026 Lal A. Pinnaduwage

- "*Uppada*" means arising. When *āsava* (cravings) arise due to the triggering of *anusaya* (hidden temptations,) we need to stop that temptation and break the cycle at "*pavattaṁ*" (which means keeping it or going with it).
- If we go along with the temptation ("*pavatta*"), then it becomes a *nimitta* (literally a "sign"). A *nimitta* is a characteristic that is associated with that particular act. For example, for an alcoholic, a picture of an alcohol bottle or a bar (or where one drinks typically), or even seeing a friend with whom one drinks often, can be a *nimitta*; when any of such a "symbol" comes to the mind, it reminds of the drinking act and gets one in the "mood."

5. Most times, the *paṭisandhi* (linking the next rebirth) takes place via a *nimitta*; this is what is meant by "*nimitta paṭisandhi*" above. At the dying moment, what comes to the mind is likely to be something that one often does, which could become the link to the next life.

- A drug addict, if lucky to be born human again, will be attracted to a mother who is a drug addict.
- For a person with a lot of hate, what comes to the mind at the dying moment could be a picture of an arch enemy; then the kammic power shows him a gun or a knife and he will be likely to attack the person with that weapon (in a dream-like state); the next moment he will be in an *apāya* (hell), which is the "matching place."

6. The worst thing is that the old habits continue and even strengthen in this new life; this is why "*paṭisandhi gati*" is meant above. Suppose a drug addict born to an addicted mother is adopted by another family and raised in a drug-free environment. Still, if that child becomes exposed to drugs later in life, he could be tempted to use drugs because of his *sansāric* habit.

- This is the danger in the rebirth process or *saṁsāra*; one keeps going down the slippery slope unless one changes one's habits with effort. Reversing that trend can be done only in human life.
- Sentient beings in most realms do not act willfully but according to their *sansāric* habits. We can see only the animal realm. Animals do things mechanically **(almost like robots, but not entirely only because they have FEELINGS)**. Only the beings in higher realms have genuine free will, which is optimum for humans.
- You can see that many animals have unique characteristics: such characteristics and habits are associated with that particular existence (*bhava*). For example, some birds have been building the same type of nests from beginningless time through countless world cycles; **but they cannot make it any better.** Migrating birds know exactly where to fly. Newborn turtles head to the sea right after the eggs are hatched; see the video:

  WebLink: YOUTUBE: New Born, Baby Sea Turtles Race to the Ocean!

7. However, humans can change their destiny. They have free will and the ability to develop "new ideas." We keep building new things, discovering new things, and making progress.

- We must remember that we can also purify our minds and escape this unending, suffering-laden rebirth process. If we ever get birth in one of the lower realms, we will be stuck there for a long time.
- The way to purify our minds is to get rid of bad habits. Excessive greed (this includes addictions to anything, including food, money, property, alcohol, drugs, etc.) and anger are the first two things one needs to work on.
- This does not mean one has to give away one's wealth; just don't be too attached to them. One has "earned" that wealth from previous good deeds, so one does not need to feel bad about it. But those things last only about 100 years; who knows what we will inherit in the next life.

8. And the key to being permanently free of the *apāyā* is to get rid of those bad character qualities (*gati*) that can give us birth in those four realms.

© 2026 Lal A. Pinnaduwage

- We can avoid the *niraya* (hell) by getting rid of hate; we can stay away from *peta* (hungry ghost) worlds by getting rid of greed; we can make sure not to get a birth in the *asura* realm by not getting "free rides," and making our living honestly ("*a*"+"*sūra*" means "not able" or those who depend on others).
- An animal's birth results from *gati* that have all three roots of greed, hate, and ignorance. The animal realm is called "*thirisan*" in Pāli or Sinhala: "*thiri*" is three and "*saŋ*" is greed, hate, and ignorance. Thus, animal birth is caused by *gati*, which has all three immoral roots.
- In the same way, we can make it possible to be born a *deva* by being generous to others; we can make it possible to become a *Brahma* by cultivating *mettā, karuṇā, muditā, upekkhā*; and we can optimize chances for a human birth by cultivating wisdom as well.

9. But no matter how well we live this life, we do not know what kind of "*kammic* baggage" we carry from previous lives. Thus the only way to avoid the four lower realms (*apāyā*) with CERTAINTY is to attain the *Sotāpanna* stage of *Nibbāna*. And we can do this by comprehending *anicca*, *dukkha*, and *anatta*, the true nature of this world.

- When one truly comprehends *anicca*, *dukkha*, and *anatta,* one's mind automatically rejects actions bound to maintain and cultivate bad *gati*, and encourages actions that will cultivate good *gati*. If this is done to the level of getting rid of the four greedy *citta* with wrong vision and the *citta* with *vicikicchā*, then one becomes PERMANENTLY free of the *apāyā*; see, "Akusala Citta – How a Sotāpanna Avoids Apāyagāmi Citta."

10. Finally, another exciting video from the animal world shows how ants build sophisticated cities. But unlike humans, the ability to do that does not come from ingenious minds; ants have been doing the same for eternity. It is a "characteristic" naturally associated with the "ant *bhava*." Each ant "knows" what to do, like the baby turtles who race to the sea just after being hatched. It is the same with how birds know where to fly in their long migrations.

- The Buddha explained so much to the world, but the world is still unaware of it.

11. More details on the importance of *gati* in the rebirth process are discussed in "Paṭisandhi Citta – How the Next Life is Determined According to Gati."

12.13 Karaṇīya Metta Sutta – Metta Bhāvanā

October 7, 2018; revised September 6, 2019; revised #5 on February 11, 2021

Karaṇīya Metta Sutta is one of the popular *suttā* in Buddhist countries. However, like many *suttā*, it has not been appropriately translated in most current English translations.

1. First of all, the actual name of the *sutta* is WebLink: suttacentral: *Karaṇīyamattha Sutta* (KN Snp 1.8). It comes from "*karaṇīyama*" meaning "essential to do" (කල යුතුම (kalayutuma means "requires") in Sinhala) and "*attha*" meaning "oneself." That means this *sutta* summarizes what one must do (to make progress on the Path). But this is not a significant error since *Metta bhāvanā* is there too.

- Those "requirements" are in the first three verses.
- The actual "*Metta bhāvanā*" part is in verses 4 through 8.
- Verse 9 says that one should do this *bhāvanā* in all four postures. This *bhāvanā* is the "*Brahma Vihāra*" or "living like a *Brahma*" or "living with the mindset of a *Brahma*."
- Verse 10: When one fulfills the "requirements" at the basic level, one will get to the *Sotāpanna* stage. With the cultivation of *Metta bhāvanā*, one will get to be an *Anāgāmi* (not born in a womb again).

	Pāli	English
1	*Karaṇīyamattha kusalena,* *Yantam santaṁ padaṁ* ***abhisamecca**;* *Sakko ujū ca suhujū ca,* *Sūvaco cassa mudu **anatimānī***	What *kusala* should be done by one who is **seeking cooling down (by seeing the unfruitful nature of this world)**: moral, upright and disciplined, with pleasing manners and **humble**.
2	*Santussako ca subharo ca,* *Appakicco ca **sallaukavutti**;* *Santindriyo ca nipako ca,* *Appagabbho **kulesuananugiddho***	Always happy, bearing only good (*gati*), with **few mundane duties and simple life**, with senses calmed and a cooled mind, with few burdens (possessions), and **treating everyone the same** (regardless of race, color, etc.).
3	*Na ca **khuddamsamācare** kiñci,* *Yena viññū pare upavadeyyuṁ;* *Sukhino va khemino hontu,* *Sabbe sattā **bhavantu sukhitattā***	**Not engaging in harmful/lowly actions** (and this thought that one always holds), may all beings **attain *Nibbāna* (and get to the ultimate happiness).**
4	***Ye keci pāṇabhūtatthi**,* *Tasā vā thāvarā vā anavasesā;* *Dīghā vā ye mahantā vā,* *Majjhimā rassakāṇukathūlā*	**Whoever there may be with a breath of life**, trapped by greed for so long in *saŋsāra*, may they be free of fear and greed without exception.
5	*Diṭṭhā vā ye va adiṭṭhā,* *Ye ca dūre vasanti avidūre;* *Bhūtā vā sambhavesī vā,* *Sabbe sattā **bhavantu sukhitattā***	Those who are seen or unseen, those dwelling far or near, those born as well as those seeking birth (*gandhabbā*), may all beings **attain *Nibbāna*.**
6	*Na paroparaṁ nikubbetha,* *Nātimaññetha katthacinam kañci;* *Byārosanā paṭighasaññā,* ***Nāññamaññassa dukkhamiccheyya***	May no one deceive another, treat everyone like close relatives. May they not wish each other harm, and **by seeing the unfruitful nature of this world, may they be free of suffering.**
7	*Mātā yathā niyaṁputtam* *āyusā ekaputtamanurakkhe;* *Evampi sabbabhūtesu,* ***Mānasaṁbhāva ye aparimāṇaṁ***	Just as a mother would protect her only child with her life, may this protection affect **all beings on an equal footing.**

© 2026 Lal A. Pinnaduwage

	Pāli	English
8	*Mettañca sabbalokasmim,* ***Mānasaṁbhāva ye aparimāṇaṁ;*** *Uddhaṁ adho ca tiriyañca,* *Asambādhaṁ averam asapattaṁ*	May all cultivate *mettā* towards **all beings on an equal footing**, those who live above, below, or across. May all be unhindered and without enmity.
9	*Tiṭṭhaṁ caraṁ nisinno vā,* *Sayāno vā yāvatassa* *vighatamiddho;* *Etaṁ satiṁ adhiṭṭheyya,* ***Brahmametaṁ Vihāram** idhamāhu*	Whether standing, walking, sitting or lying down, may all sustain this *mettā* mindset (what the Buddha called ***Brahma Vihāra***).
10	*Diṭṭhiñca anupaggamma,* *Sīlavā **dassanena sampanno;*** *Kāmesu vinaya gedhaṁ,* ***Na hi jātugabbaseyyam** punaretī"ti*	Being **moral based on right vision (a *Sotāpanna*)**, and by removing *kāma rāga* with effort one will **never again be in a womb (*Sakadāgāmi* or higher).**

Note: The pdf file of the *sutta* itself can be downloaded here: "WebLink: PDF File: Karaniya Metta Sutta."

2. Deeper explanations are in some words like "*abhisamecca*" ("*abhi*" + "*saŋ*" + "*avecca*"), and "*dukkhamicceyya*" ("*dukkham*" + "*avecceyya*").

- *Avecca* is the keyword in both cases, and I discussed the deep connection to "*icca*" and thus *Tilakkhaṇa* in the post, "Sotāpatti Aṅga – The Four Qualities of a Sotāpanna" (starting at #9 in the post).
- If anyone needs more explanations of other words, we can discuss it at the discussion forum, but we will look at one more next.

3. Another keyword is "*mānasaṁbhāva*," which comes from "*mānasan*" and "*bhava*," meaning one's mind (ideally) does not contaminate beyond the "*mānasaṁ*" stage.

- When thoughts (*citta*) arise, they get contaminated within a fraction of a second due to one's *gati.* That is discussed in the post, "Amazingly Fast Time Evolution of a Thought (Citta)."
- Therefore, the goal is to improve one's *gati*, so that one's *citta* will not contaminate beyond the "*mānasaṁ*" stage (reached the *Arahant* stage). **One should strive to approach that mindset right now, at least while meditating.**
- As one gets closer to that stage, one will have true *mettā* AUTOMATICALLY for increasingly more and more living beings. At *Arahanthood*, one will have boundless *mettā* to all: "*mānasaṁbhāva ye aparimāṇaṁ*."

4. The first three verses in the *sutta* state how one gets to the *Sotāpanna* stage by getting to the *Ariyakanta sīla* (unbreakable moral conduct). That is when one will have *aveccappasāda* (unbreakable faith in the Buddha, Dhamma, Saṅgha). That is discussed in detail in the post, "Sotāpatti Aṅga – The Four Qualities of a Sotāpanna."

- Then by cultivating *mettā,* one can gradually get rid of *kāma rāga* and get to the *Sakadāgāmi* and *Anāgāmi* stages.
- However, this is an excellent *sutta* to listen to and to recite even before getting to the *Sotāpanna* stage. It is better **to recite Pāli verses with an understanding of the meaning of those verses.** The sound itself is beneficial, especially when pronounced correctly, as done by the *Thero* in the recording below.
- It is also good to play the recording in the background while doing other things or during meditation. In Asian countries, this it is common practice to play this *sutta* in the mornings, while everyone is getting ready to go to school or work.

© 2026 Lal A. Pinnaduwage

5. A recital of the *sutta* by Waharaka *Thero* is below:

WebLink: Karaniya Metta Sutta in mp3

Note: In the recital, the sutta ends around 4:45. The Thero starts reciting the following verse:

"*Nakkhatta-yakkha-bhūtānaṁ*
Pāpaggahā nivāranā
Parittassānubhāvena
Hantu mayhaṁ upaddave"

It is a verse from "*Mahā Jayamaṅgala Gātha*" where merits are offered to other beings. See, p. 42 of the following booklet, which is a useful guide:

12.14 10. Attaining the Sotāpanna Stage via Removing Diṭṭhāsava

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions and gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

July 30, 2015: I have re-written the two posts #10 and #11 (previously titled, "10. Magga Phala and Ariya Jhānā via Cultivation of Satta Bojjhaṅga" and "11. How to Select and "Grow" Meditation Procedures for Magga Phala") that were written some time back with different titles. Over the past two months, I have clarified some subtle issues in my experience and technical details. **Revised August 5, 2017; September 19, 2018 (updated links).**

- First, the order of things: *samādhi, magga phala*, and then *Ariya jhānā* in that order; see, "Possible Outcomes of Meditation – Samādhi, Jhāna, Magga Phala."
- Thus *jhānā* (*Ariya or anariya*) are not necessary to attain the *Sotāpanna* stage; see the posts in the "Sotāpanna Stage of Nibbāna" section for details on this and many other aspects.

1. First, it would be challenging to get to even a state of *samādhi* if one is not keeping up the "conventional" five precepts: abstaining from killing, stealing, sexual misconduct, lying, and using drugs or getting intoxicated. Those things make the mind restless, and hard for the mind to focus attention (the five hindrances "cover the mind"). Just strictly obeying the five precepts may not be effective if one's mind is full of jealousy, extreme greed, hate, etc.; see "The Five Precepts – What the Buddha Meant by Them."

- Just like one cannot see the bottom of a well if it is highly contaminated, the mind (and the body) will not "feel anything" even in a formal meditation session if the mind is "highly contaminated." And there is no point in trying to take out the "small defilements" (such as abstaining from taking a glass of wine) if one is engaged in immoral activities.
- With the "big defilements" removed, one starts seeing a little bit further down the well; similarly, one's mind will become lighter, with less stress, even when not in a formal meditation session. Siting down in a quiet place makes it easier to get to some state of "*samādhi*," or tranquility.
- The Buddha said that "*kusala sīla*" leads to the tranquility of the body and mind, leading to *samādhi*. The "*kusala sīla*" accomplished via gaining *Sammā Diṭṭhi* (to some extent) is all that is needed to attain the *upacāra samādhi* needed for the *Sotāpanna magga/phala*. All three *saṁyojana* removed at the *Sotāpanna* stage (*sakkāya diṭṭhi, vicikicchā, sīlabbata parāmāsa*) are associated with the wrong vision or *diṭṭhi*.

2. Many believe one needs to "get to *samādhi*" using a separate meditation technique such as conventional breath meditation. Even though one could do that, it would be a waste of time. One can get to *samādhi* by listening or reading attentively to CORRECT dhamma.

- There is not even a single reference in the *Tipiṭaka* where the Buddha asked anyone to do a "*Samatha Bhāvanā*" first and then to "*vipassana bhāvanā*." When one comprehends Dhamma, one's mind gets calm, and through that *Samatha* state, one can get to *magga phala*.
- After attaining the *Sotāpanna* stage, one can get to *Ariya jhānā* by focusing on that "state of cooling down" that one has already achieved to some extent, to get to *jhānā*.
- One needs formal meditation techniques to attain **higher** *magga phala*, i.e., above the *Sotāpanna* stage; the reason will become clear shortly. However, it is fine to do formal meditation even to attain the *Sotāpanna* stage. In the following, I will describe what I went through.

3. To get to *samādhi*, contemplating Dhamma concepts will make it easier and faster. Also, one can stay in "meditation" for a longer time. Different names used are insight meditation (*vipassana*), many forms of "*anupassanā*," and cultivating the "*dhamma vicaya*" *sabbojjhaṅga*. Concomitantly, one must do the correct version of "*Ānāpānasati*" at all times.

© 2026 Lal A. Pinnaduwage

- **In principle, working towards the *Sotāpanna* stage does not require formal meditation techniques even though meditation can help**; countless people attained the *Sotāpanna* or even higher stages of *Nibbāna* just by listening to a Dhamma discourse.
- It is quite essential to understand this point. Many people have one or more misconceptions about reaching the *Sotāpanna* stage. (i) Giving up all worldly possessions, (ii) Becoming a *bhikkhu* or living in seclusion, and (iii) One needs many meditation techniques.
- To clarify this issue, let us examine what is involved in attaining the *Sotāpanna* stage.

4. Removal of cravings for worldly pleasures or *āsavas* (*āsavakkhaya*) leads to *Nibbāna*; see, "Āsava, Anusaya (Temptation), and Gati (Gathi)."

- Out of the four *āsavās* that we have, only one goes away at the *Sotāpanna* stage: ***diṭṭhāsava* or the craving for wrong worldviews**. In the *Sabbāsava Sutta* [MN 2], this is referred to as removal by clear vision ("*dassanena pahātabbā*," where *dassanena* is vision and *pahātabba* is removal).
- The other three *āsavas* of *kāmāsava* (craving for sense pleasures), *bhavāsava* (desire to live somewhere in the 31 realms of this world), and *avijjāsava* (ignorance of *anicca*, *dukkha*, and *anatta*) go away at the higher stages of *Nibbāna;* see the above post.

5. The critical point is that one does "*apāyagāmi apuññābhisaṅkhāra*" (or strong immoral deeds that make one eligible to be born in the lower four realms) only when one has wrong worldviews. Contrary to most people's beliefs, one does not need to lose the craving for sense pleasures to attain the *Sotāpanna* stage. *Kāma āsava* is reduced in stages in the *Sotāpanna* and *Sakadāgāmī* stages and is removed only at the *Anāgāmī* stage.

- That is why learning dhamma concepts and getting rid of "*diṭṭhis*" or "wrong views" is key in attaining the *Sotāpanna* stage, as I emphasized in several posts; if you enter "diṭṭhi" in the Search box on the top right, you will see many relevant posts.
- We all have many *diṭṭhis*. These can be removed only by learning the world's true nature, i.e., by learning Dhamma.
- One meaning of *Sotāpanna* ("*sota*" + "*paññā*") is "one who has cultivated wisdom by listening to Dhamma"; in the days of the Buddha, that was how one learned Dhamma, by listening.

6. Even before meeting my teacher *Theros*, I had been thinking about dhamma concepts for 3-4 years and trying to get a consistent picture in my mind. Even at that time, I could focus my mind and quickly get to *samādhi*.

- When I "got stuck" trying to figure out what a particular concept means concerning others, I would look through books and listen to *desanās* (discourses) on the internet. At this stage, I realized that most of the explanations did not make sense and were not consistent with other key concepts.
- For example, I struggled to explain the rebirth stories to many children. If "being born human" is so difficult as explained in many *suttā* (see, "Rebirth – Connection to Suffering in the First Noble Truth"), then how can all those children remember their recent past lives? Furthermore, there were "gaps" from the time they died in their previous life to the time they were born in this life.
- Once I met my teacher *Thero*, I clarified that issue along with numerous others: Birth is different from "human *bhava*"; see, "Bhava and Jāti – States of Existence and Births Therein." Also, when one dies and has energy left in the "human *bhava*," one becomes a *gandhabba* and has to wait until a suitable womb becomes available; see "Mental Body – Gandhabba."
- Thus rebirth in the human realm does not happen instantaneously. One could be in the *gandhabba* state for years before being directed to a suitable womb. And one can be born in the human realm many times before the *kammic* energy for that "human *bhava*" is exhausted.

© 2026 Lal A. Pinnaduwage

7. However, I could get to *samādhi* even before resolving many of these issues. I was making steady progress with the concepts that I could quickly grasp. I would sit at the desk, contemplate, and feel my body lighter and my mind calm. It was much better than just wasting time doing "breath meditation."

- If I sat in a quiet place and meditated (contemplating a Dhamma concept), my mind would "latch on to it," and I could get to an *anariya jhānic* experience. That started a year before I learned the true meanings of "*anicca*, *dukkha*, and *anatta*."
- It started with "tingling sensations inside my brain"; I could feel things happening there. And then I could feel "needle pricks" all over the body, and my body would start "freezing," mostly the upper body. These "symptoms" are not common to all.
- Learning Dhamma is a critical part of "*kusala sīla*," especially for the *Sotāpanna* stage. *Kusala sīla* automatically leads to *samādhi*, as discussed in the "Na Cetanākaranīya Sutta."

8. After I heard the "true meanings of *anicca, dukkha, anatta*," I made progress very quickly. Looking back now, I may have attained the *Sotāpanna* stage while listening to that first *desana*. However, it took me some time to realize and convince myself. One needs to look back at the progress one has made and see that one is now incapable of committing immoral deeds that would make one eligible for rebirth in the *apāyā*.

- I was overjoyed with comprehending the "foundation of Buddha Dhamma." It does not make sense to struggle to seek more worldly pleasures and possessions. That is guaranteed to be a failure in the long run. One spends one's whole life making money to enjoy such "pleasures," and before one realizes it, one has come to old age. I would call or e-mail my friends and tell them they needed to listen to *desanas* by those *Theros*.
- It took me a little while to realize that most of them could not figure out what I was excited about. Now, looking back, I realize that their minds were not ready. They were too busy making "more money." It was a revelation for me, who had been seriously struggling for a few years. But most people who just spent a bit of their time reading critical concepts do not "connect." Reading Dhamma should not be done the same way as reading a newspaper or a novel; one needs to be engaged.
- After getting the true meaning of "*anicca, dukkha, anatta*," I spent the next few months scouring the internet for the *desanas* of those *Theros*. After five months, I traveled to Sri Lanka and brought back more material to listen to. It was so fulfilling and exciting; I was learning at a very rapid pace. At that time I didn't even think about *jhānā*, but I could feel "*jhānic* effects," i.e., my *samādhi* was getting intense, even though I was not trying to cultivate them.
- **September 19, 2018 update:** I have been listening to only those desanas by Waharaka Thero for the past few years. They are available only in the Sinhala language at "සද්ධාම්දේශනා"; also see: "Parinibbāna of Waharaka Thero."

9. Even though I had an inkling about reaching the *Sotāpanna* stage soon after listening to that *desanā*, I developed the *jhānā* some months later. However, **those turned out not to be *Ariya jhānā* though, since they can be attained only by an *Anāgāmi*;** see, "11. Magga Phala and Ariya Jhānā via Cultivation of Satta Bojjhaṅga."

- These and other aspects of *Ariya* and *anariya jhāna* are discussed in the section: "Samādhi, Jhāna (Dhyāna), Magga Phala."
- Once I finished investigating and "filling the gaps," the *jhānā* came almost automatically. The meditation experience I described in #7 became much stronger; I could close my eyes and "feel the change in the head and the body" within minutes (and, nowadays, within seconds).

10. The above is what I mean when I say, "feel the results of meditation." **One can feel it in the body as well as in mind.** Let us first discuss the reasons for the "body effect" and the "mind effect."

- We have a very complex nervous system that the brain uses to control various body parts and communicate with the five physical senses. A "duplicate nervous system" is associated with the

© 2026 Lal A. Pinnaduwage

manomaya kāya, and as we grow up, those two systems get somewhat displaced. The displacement becomes more prominent when we start enhancing all types of bad habits; they go "out of sync."

- When we start learning Dhamma and avoid the most egregious acts, the two nervous systems try to get to the ideal overlap positions, and one could feel that. That becomes noticeable during meditation. Some people may feel aches and pains, sweating, etc. That is why I had said in other posts that things MAY look worse before getting better. In a way, such "body signals" are a good sign; it means the body is starting to respond.

11. Now to the "mind effect." Many people tell me that they cannot keep their minds focused on even their breath for too long. That is a *sansāric* habit; the mind does not like staying in one place. It wants to "know" about everything happening in the vicinity and randomly think about past events or plans.

- The only way to remove this "bad habit" is to start thinking about Dhamma concepts slowly. And that cannot be forced either. Unless and until the mind sees the benefits of learning Dhamma, it can be a "chore" to some people. But once one gets some traction, one starts enjoying the "taste of Dhamma," and it is easy to stay focused.
- The key here is that when one learns Dhamma, "*diṭṭhāsava*" (or craving for wrong worldviews) starts to dissolve, initially slowly, but picks up speed as one starts grasping concepts.
- The two critical components of *pañca nīvaraṇa* (*kāmacchanda* and *vyāpāda*) reduce as *diṭṭhāsava* reduced. That, in turn, lead to the reduction of the other three of the *pañca nīvaraṇa*. This process goes all the way to the *Sotāpanna* stage.

12. Of course, I did not realize until after meeting my teacher *Thero* (online) that what I had been doing all along was a crude version of the *Satta Bojjhaṅga Bhāvanā*. The crucial part of that is *dhamma vicaya* (contemplating Dhamma concepts). [***vicaya*** :[m.] investigation.]

- That is how one cultivates the "*anicca saññā*" which is the key to removing defilements permanently. See "What is the only Akusala Removed by a Sotāpanna?" and "How to Cultivate the Anicca Saññā."
- The formal *Satta Bojjhaṅga bhāvanā* is discussed in the next post, "11. Magga Phala and Ariya Jhānā via Cultivation of Satta Bojjhaṅga."
- It is also important to realize that even an *Arahant* will not lose the sense of taste; one increasingly will lose CRAVINGS for them; see "Kāma Rāga, Rūpa Rāga and Arūpa Rāga."

13. **November 11, 2016:** I get many questions on this topic, i.e., how to verify one is progressing towards the *Sotāpanna* stage. The new section, "Living Dhamma," provides a systematic way to achieve that goal and provides guidelines on checking one's progress.

- **January 23, 2020:** The new "Origin of Life" section attempts to start "at the beginning" and get to more in-depth concepts of *anicca*, *dukkha*, and *anatta*. The deeper I get into the fundamental concepts, I realize there is much more! **However, basic comprehension becomes more natural too.** I may need to go back and revise many of the old posts. So, I would encourage everyone to read the new series with a deeper understanding.

11. Magga Phala via Cultivation of Satta Bojjhaṅga

The top 10 posts in this section describe the fundamentals of Buddhist meditation. The rest of the posts in this section discuss meditation subjects. They clarify unresolved questions, and help gain *samādhi*. The first 11 posts should be followed in that order, at least initially.

Revised August 5, 2017; September 19, 2018; revised April 24, 2020; May 15, 2023

Introduction

1. There are many ways to get to *magga phala*. What I have followed is *Bojjhaṅga Bhāvanā* and *metta Bhāvanā.* As explained in the previous post, I first did a crude version of the *Bojjhaṅga Bhāvanā* for a few years without even realizing that it was effectively a *Bojjhaṅga Bhāvanā*.

- Now I practice *Bojjhaṅga Bhāvanā*/*Ariya Mettā Bhāvanā* in sitting meditation and *ānāpānasati* (and *satipaṭṭhāna*) during other times, i.e., suppressing any thoughts/speech/actions that should be discarded and cultivating the opposite. Nowadays, it has become a habit and the moment something inappropriate comes to my mind, I become aware of it. As I keep saying, cultivating good habits (*gati*) is the key to progress.

Ānāpānasati Bhāvanā Comes First

2. *Ānāpānasati* (and *Satipaṭṭhāna*) helps one to get rid of bad habits/cultivate good habits, and thus change one's *gati* and *āsavā*; see, "9. Key to Ānāpānasati – How to Change Habits and Character (Gati)," and "Is Ānāpānasati Breath Meditation?."

- *Bojjhaṅga Bhāvanā* helps the mind to get to *samādhi* while also cultivating the *Bojjhaṅga dhamma*. *Satta Bojjhaṅga* (Seven Factors of Enlightenment) are listed in the "37 Factors of Enlightenment"; a brief description is given below.
- The other part of my sitting meditation is *Ariya Mettā Bhāvanā*; see "5. Ariya Mettā Bhāvanā (Loving Kindness Meditation)." This routine works well for me.
- Of course, there are many paths to *Nibbāna* (and to the *Sotāpanna* stage), and this is the one I took (almost inadvertently). **Still, it is critical to realize that attaining the *Sotāpanna* stage ONLY REQUIRES removing wrong world views or *diṭṭhi,* i.e., getting rid of *ditthāsava.*** But this may not be an easy step, because one needs to realize the *anicca* nature of this world.

What Are *Bojjhaṅga*?

3. The word *Bojjhaṅga* comes from "*Bodhi*" + "*aṅga.*") Of course, "*Bodhi*" means "*bhava uddha*" or "Enlightenment" and "*aṅga*" means "part."

- Thus, the seven factors in the *Satta Bojjhaṅga* are seven factors (*satta* means seven) conducive to attaining *Nibbāna*.

4. The key here is that during the *Bojjhaṅga Bhāvanā*, one only does "*āna*" or "taking in good things"; see, "7. What is Ānāpāna?." However, "*āpāna*" or "removing the bad" happens automatically via wisdom gained, i.e., via enhanced vision or *sammā diṭṭhi*. One's mind is automatically focused on thinking about a Dhamma concept, and once one gets some traction, the mind will get "latched on to it".

- In the early days, when I started contemplating a Dhamma concept I automatically got to *samādhi* (not *jhāna*), i.e., the mind became concentrated on that and the body and the mind both became lighter. I also experimented with breath meditation) at that time.
- This habit of contemplating dhamma concepts naturally got established as cultivating *dhamma vicaya* in *Satta Bojjhaṅga Bhāvanā* once I met my teacher *Thero*.

© 2026 Lal A. Pinnaduwage

The necessity to Comprehend *Tilakkhaṇa*

5. I was able to make real progress only after learning the true meanings of *anicca*, *dukkha*, and *anatta;* see, "10. Attaining the Sotāpanna Stage via Removing Diṭṭhāsava."

- Waharaka *Thero* has explained how to cultivate the seven *Bojjhaṅga dhamma* systematically. That involves establishing *sati* (moral mindfulness) based on those correct interpretations of *anicca*, *dukkha*, and *anatta.* See "Anicca, Dukkha, Anatta," and the follow-up posts.
- Of course, one must remove the ten types of *micchā diṭṭhi* before comprehending *Tilakkhaṇa*. See, "Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage."

The Seven [*Satta*] *Bojjhaṅga*

6. The seven *Bojjhaṅga Dhamma* are *sati* (mindfulness), *dhamma vicaya* (investigation of *dhamma* concepts; pronounced "dhamma vichaya"), *viriya* (effort), *pīti* (joy), *passaddhi* (tranquility), *samādhi* (one-pointedness), and *upekkhā* (equanimity). I will post it later, but I have discussed most of these terms in other posts.

- It is essential to clarify what *sati* is. Many think *sati* is "concentration" or just "paying attention". It is much more than that. It is "paying attention" WITH a frame of mind based on understanding *anicca*, *dukkha*, and *anatta*: One has contemplated the "big picture" of the Buddha with 31 realms and a rebirth process that has led to much suffering in the long run.
- Even though one may enjoy life now, one knows that it will be of negligible duration compared to the *saŋsāric* (or *saṁsāric*) time scale. This is the theme of this website, and there are many posts that one can read.

Sati Comes First

7. During the whole time of the *Bojjhaṅga Bhāvanā*, *sati* must be there; that frame of mind must be there. *Dhamma vicaya* is a critical evaluation of a given dhamma concept. One can choose a topic or two for a session and then contemplate it. **One could do this not only in a formal way but also just while reading a web post or a book on the subject.** Each individual is different, so one must determine which is more suitable.

- One can compare the concept with one's own life experience, and others that one can see. For example, when contemplating on *anicca*, there are several video clips on various posts giving visuals on the inability of anyone to maintain anything, including one's own body, to one's satisfaction in the long run. Also, one can contemplate the rebirth process and see whether it makes sense, one can contemplate different applications of *Paṭicca Samuppāda*, etc.
- When one comprehends a given concept, that leads to the cultivation of the *pīti* (pronounced "peethi" or "preethi" in Sinhala) *sabbojjhaṅga*. This is part of *nirāmisa sukha* that I have talked about; one starts feeling happiness or a "lightness" making the mind serene. I am sure some of you have experienced this while reading posts. This gives one confidence that one is on the right path, and thus one will be motivated to make more effort, i.e., it cultivates the *viriya sabbojjhaṅga*.

First Phase – Learning and Contemplation

8. Thus *dhamma vicaya, piti*, and *viriya sabbojjhaṅga* are cultivated together (of course *sati* must be there too). At some point, though, the mind and especially the body (head) may get tired. If one is making a lot of progress, one may start to experience some pressures in the head or body (not headaches, but just pressure.) Some feel like "ants crawling in the head"; the brain and the body (including the nervous system) are adjusting and there is nothing terrible about this.

© 2026 Lal A. Pinnaduwage

- When this happens one is making progress; the body feels the effective meditation. Our minds and bodies have been contaminated too, and the nervous systems have been distorted with respect to that in the *manomaya kāya*. Some of the "pressures" one feels are due to the "twisting back" of the nervous system to the proper place. **These effects may be minimal for some people; this is what I experienced.**
- And this burning of defilements leads to a buildup of contaminants in the body that need to be expelled and cleansed, via proper breathing (this is not "*ānāpāna*"). We should not focus on the breath like in the mundane "breath meditation". We are just getting rid of certain "*utuja rūpa*" accumulating in the body due to greed, hate, and ignorance.
- At this point one should stop the contemplation process and start breathing in and out to cleanse the body; sometimes the body automatically gets rid of those things via a long out-breath. This will lead to *passaddhi* (tranquility) of both the body and the mind, and one gets to *samādhi* gradually. One needs to think about the lightness of the body and the mind (*passaddhi*) and the *nirāmisa sukha* (from *samādhi*) results. One also should think about *upekkhā* (equanimity) too.
- When the body and the mind calm down enough and when one feels relaxed, one should go back to cultivating the previous three *sabbojjhaṅga*, i.e., start on the contemplation process of *dhamma vicaya*.

Second Phase – Relaxation

9. Thus one should go back and forth between the two routines with three *sabbojjhaṅga* each. The *sati sabbojjhaṅga* must be there all the time. This is called the two-step cultivation of *Bojjhaṅga dhamma*.

- The Buddha compared this process to the washing of dirty cloth by hand. One needs to apply soap and wring the cloth to release the contaminants. But then, one must soak it in clean water and remove the released dirt. After that, if the cloth is still dirty, one applies soap again, and then again wash it. This process must be repeated until all the dirt is gone and the cloth becomes clean. And one needs to do it with mindfulness: if there is a stubborn stain left in one place, one may need to use a different chemical to get rid of that spot (i.e., use the appropriate *Bhāvanā: asubha Bhāvanā* to get rid of sense cravings, *Mettā Bhāvanā* to get rid of hateful thoughts, *dhamma* concepts to get rid of *micchā diṭṭhi*, etc) and wash in clean water again. Thus one needs to be mindful (*sati*) during the whole process.
- In the same way, one goes back and forth between the two routines with *sati*. The time takes to get to *magga phala* depends on the individual. *Ariya jhānās* can be attained only after getting to the *Anāgāmi* stage; see, "

Continuing With *Ānāpānasati Bhāvanā*

10. The *Bojjhaṅga Bhāvanā* is formal meditation. As we have seen, one must sit comfortably in a quiet place and contemplate.

- However, *Bojjhaṅga Bhāvanā* cannot be done in isolation. One needs to do the *Ānāpānasati Bhāvanā* at all times to get rid of bad habits and cultivate good habits, and live a moral life.
- Once one gains some traction and sees some benefits, one will become motivated.

Alternating Between the Two Phases

11. Initially one should focus on *anicca*, *dukkha*, or *anatta* as the *dhamma vicaya* subject. Then once some understanding is gained, one's mind attains a certain level of cleanliness. After that, like using different chemicals to get rid of coffee or tar stains, one must choose different topics (or even meditation techniques) to broaden the understanding/remove a particular obstacle. Buddha Dhamma is all about cleansing the mind via wisdom and understanding this world's true nature.

© 2026 Lal A. Pinnaduwage

- Also, it helps to do the *Mettā Bhāvanā* as a part of the daily routine. The Buddha stated that If appropriately done (i.e., with an understanding of *anicca*, *dukkha*, *anatta*), the *Mettā Bhāvanā* can lead to the *Anāgāmi* stage; see, "5. Ariya Mettā Bhāvanā (Loving Kindness Meditation)."
- If one has too many cravings, one could use the "*asubha anussati*"; if one tends to procrastinate, one could cultivate the "*maraṇānussati*". We will talk about these in the future.
- But first, it is essential to focus on *anicca*, *dukkha*, and *anatta*. At the same time, it may be a good idea to get some idea of the "big picture", i.e., the rebirth process, the 31 realms, etc., and then some idea about *kamma*, *saṅkhāra*, *Paṭicca samuppāda*, etc. All these are pieces of a puzzle; even though it may look daunting at the beginning when the big pieces are in place, one starts to get a better idea of where small pieces may fit in. *Anicca*, *dukkha*, and *anatta* are the most significant pieces.
- Thus contemplating *anicca*, *dukkha*, and *anatta* is a crucial topic for *dhamma vicaya*. I still do it every day, at least for a short time. For details, see "Vipallāsa (Diṭṭhi, Saññā, Citta) Affect Saṅkhāra."

Attainment of the *Phala* Moment

12. The *Sotāpanna* stage (*magga/phala*) is attained in two consecutive *citta*. However, it is not noticeable at that time. One realizes that with time, mainly by realizing that one's outlook on life has changed. In particular, the tendency to socialize is likely to be reduced, but there may be exceptions; one realizes how important it is to spend the little remaining time in this life on making spiritual progress and enhancing the "cooling down".

- In trying to attain the first *Ariya jhāna*, one could start with the *Satta Bojjhaṅga Bhāvanā* with the frame of mind of the unfruitfulness of anything in this world in the long run (*anicca*, *dukkha*, *anatta*). All mundane thought objects (based on greed and hate) are suspended from the mind. Then one can think about the peacefulness of *Nibbāna* (the partial effect one experiences upon attaining the *Sotāpanna* stage), i.e., the change in one's state of mind.
- I use the phrase, "*etaṁ santaṁ etaṁ paṇītaṁ yadidaṁ sabbasaṅkhārasamatho sabbūpadhipaṭinissaggo taṇhākkhayo virāgo nirodho nibbānan'ti* in the "WebLink: suttacentral: *Mahāmālukya Sutta* (MN 64." I emphasize that I have not yet attained the first *Ariya jhāna* yet, as of August 5, 2017. It is not possible to attain the first Ariya jhāna until one completely removes *kāma rāga*, as I have realized recently; see, "Dasa Saṁyojana – Bonds in Rebirth Process." Whatever *jhāna* that I had must be *anariya jhāna*.
- Here is a recording of the Pāli verse by the Venerable *Thero* (you need to set the volume control on your computer):

  WebLink: Listen to verse on Ethan santhang ethan panithang
- One could say in English, "It is peaceful, it is serene, the expelling of all *saṅkhāra*, breaking of bonds, removing greed and hate; *Nibbāna*", OR "This is peaceful, this is excellent, that is achieved by calming all *saṅkhāra*, breaking all bonds leading to rebirth, *ceasing of all attachments*, *stopping of the saṁsāric journey*, *cessation of all causes*, which is *Nibbāna*".
- What matters in not the actual words, but the understanding one has in one's mind. **It is best to recite the Pāli verse and recall the meaning while chanting.**

Attainment of *Jhāna* Is a Possibility

13. One could attain *anariya jhāna* before or after the *Sotāpanna* stage. However, even the first *Ariya jhāna* is possible by removing *kāma rāga anusaya* at the *Anāgāmi* stage.

- *Jhāna* are mental states corresponding to *rūpāvacara Brahma* realms, which are realms in this world. They can be attained by SUPPRESSING or REMOVING *kāma rāga*, corresponding to *anariya* and *Ariya jhāna*. Either way, one will get to a similar *jhānic* state. However, subtle differences exist due to

© 2026 Lal A. Pinnaduwage

anusaya being present in *anariya jhāna*. See #8, #10, etc. in "Tapussa Sutta (AN 9.41)– Akuppā Cetovimutti."

- Since even to get to the first *Ariya jhāna* by REMOVING *kāma rāga*, one would have to be an *Anāgāmi* to attain the first *Ariya jhāna*. **That is easy to verify for oneself, since one would lose the craving for any sensory pleasures, including sex.**
- These and other aspects of *Ariya* and *anariya jhāna* are discussed in the section: "Samādhi, Jhāna (Dhyāna), Magga Phala."
- It is also important to realize that even an *Arahant* will not lose the sense of taste; one increasingly will lose CRAVINGS for them; see, "Kāma Rāga, Rūpa Rāga and Arūpa Rāga."

14. **November 11, 2016:** I get many questions on this topic, i.e., how to verify one is progressing towards the *Sotāpanna* stage. The new section, "Living Dhamma," provides a systematic way to achieve that goal and provides guidelines on checking one's progress.

- **April 24, 2020:** I recently finished a long discussion at a deeper level in the new "Origin of Life" section. This is a bit more advanced section.
- These are just different ways of trying to understand the Buddha Dhamma. It is a vast subject.

© 2026 Lal A. Pinnaduwage

12.16 12. Key Factors to be Considered when "Meditating" for the Sotapanna Stage

November 13, 2015; revised August 28, 2022

1. **First,** one needs to understand what is meant by the *Sotāpanna* stage of *Nibbāna*. Many people start meditating without an idea of the goal: It is fine to do breath meditation if one only needs to calm down. Others are doing things needed to attain the *Arahant* stage, which will not work either because one needs to understand the concept of *anicca* first, i.e., learning the key concepts comes first (*dassanena pahātabba*).

- If one's goal is to attain the *Sotāpanna* stage, then one should first read the posts in the "Sotāpanna Stage of Nibbāna" section to get an idea of what is meant by a *Sotāpanna* and what is involved in getting there.
- There are many misconceptions about the *Sotāpanna* stage, and those posts could clarify them. I spent a lot of time doing unnecessary things, so I just wanted to make it easier for those who are just starting or doing the wrong things to get there. Of course, one should decide whether what I say is consistent with Buddha Dhamma.

2. I must also point out that many have been "brainwashed" to think that the *Sotāpanna* stage is impossible to achieve now. It is disheartening to see even some "*mahā Theros*" in Sri Lanka have given up striving for even the *Sotāpanna* stage (presumably because they had used the wrong concepts for many years and could not make any progress). But the Buddha clearly stated that his *Buddha Sāsana* will be there for 5000 years, and we are only halfway through. There will be numerous *Arahants* also in the near future.

- Many have attained the *Sotāpanna* stage and beyond within the past few years, and that number is growing. Pure Buddha Dhamma that had been hidden is out and is beginning to spread. Many who have reaped the benefits are trying their best to get the message out. Most of those efforts are in Sri Lanka or the Sinhala language at this early stage.
- Even though it may not be possible for some (those with *dvihetuka* births) to attain the *Sotāpanna* stage in this lifetime, an all-out effort will help at least in their future lives. Those who can make it (with *tihetuka* births) simply have done more in past lives. By the way, if you come across any unknown Pāli words, just enter that word in the Search box, and there will be relevant posts listed.
- In any case, any efforts will have tangible outcomes in this life itself.
- The Buddha clearly stated that there are no language, race, cultural, caste barriers in attaining *magga phala,* or the four stages of *Nibbāna.* The critical thing is that one needs to follow the original, pure Dhamma of the Buddha and comprehend his message.
- The key message of the Buddha is that nothing in this material world (31 realms) can be maintained to our satisfaction in the long run (*anicca* nature.) Thus through uncountable rebirths, we mainly encounter suffering. Some of us may not be experiencing suffering in this life right now, but that does not mean it will be the same in future lives (or even at old age in this life).

3. **Secondly**, having a road map is NECESSARY to reach an unknown destination. Starting to meditate without an idea of what to meditate on, like just getting in the car and driving without a map showing where the destination is.

- Again, the posts in the "Sotāpanna Stage of Nibbāna" section will be useful.
- The "map" to reveal *Nibbāna* is the comprehension of the key concepts like *anicca*. When one reaches the *Sotāpanna* stage, it is like finding the correct map. Then only one can start driving (i.e., *kammaṭṭhāna* or "meditation recitals") to reach the final destination. **Reciting things without understanding is fruitless.**
- Please contemplate this aspect; I cannot emphasize it enough. Finding the map is the hardest and most important part.

© 2026 Lal A. Pinnaduwage

- I have started a new section where a step-by-step process is described to follow; see "Living Dhamma." It can also help one figure out where one is on the Path and clarify many fundamental issues.

4. **Third point** — related to the second point — is that we need to examine what "*bhāvanā*" (meditation) means when striving for the *Sotāpanna* stage. **It is NOT a formal meditation technique (reciting a given *kammaṭṭhāna*) that is mainly needed here.**

- However, the Buddha said that even listening to discourse is *bhāvanā*. One could attain the *Sotāpanna* stage just by listening to a discourse. When listening attentively, one's mind gets focused on it, comes to *samādhi*, and can get to *magga phala* via *upacāra samādhi*.
- What is needed to get to the *Sotāpanna* stage is the contemplation of the key Dhamma concepts, in particular *anicca*, *dukkha*, and *anatta*, but also to try to get an understanding of the Buddha's world view, with 31 realms of existence, beginningless rebirth process, infinite number of planetary systems (*cakkavāḷa*), *Paṭicca Samuppāda*, etc. This is how to "find the correct map" mentioned in #3 above.
- As explained in those posts in the "Sotāpanna Stage of Nibbāna" section, this meditation (*bhāvanā*) involves mainly the contemplation (*citta*) and examination of dhamma concepts (*dhamma vicaya* and *vīmaṁsā*). The four bases of mental power (*chanda, citta, viriya, vīmaṁsā*) are very helpful to be cultivated; see "The Four Bases of Mental Power (Cattāro Iddhipāda)."
- In the above, "*chanda*" is the liking to attain *Nibbāna* cultivated by learning and forming a desire to learn more Dhamma. I can assure you there is no other pleasure like the "pleasure of knowing the truth, the pleasure of discovering true Dhamma."
- Formal meditation techniques are needed mainly after the *Sotāpanna* stage, as described in the sub-section **Key Points from the *Sabbāsava Sutta*** under the post, "The Sotāpanna Stage."

5. **Fourth** is to have a clear idea of the priority items to get done regarding *sīla* (moral behavior). In one of the early meditation posts, I pointed out that one needs to sort out the "big problems" to take care of before tackling smaller problems. If a vessel leaks due to multiple holes, one needs to seal the big leaks first. Spending precious time trying to plug smaller holes when the water is pouring out through the big holes is a waste of time.

- In the following, I will address the fact that many people have misconceptions about the relative weights of *kamma*. Please bear with me and read carefully, because some of these ideas go against established and common wrong views. I have discussed some in "How to Evaluate Weights of Different Kamma."

6. For example, many people are afraid of even accidentally killing a mosquito but do not have any problem making plans to hurt another human or spread rumors about another.

- Then others think taking an occasional alcoholic beverage is immoral but spend hours thinking about other sense pleasures. By the way, it is not the sensory pleasures that is the problem, it is constantly thinking about them; this is a subtle but important point; see, "Assāda, Ādīnava, Nissaraṇa – Introduction."
- Of course, killing any living being should be avoided, and it is best to avoid drinking alcohol (especially if one tends to get drunk; the problem with drinking is that it makes the mind more exposed to the *pañca nīvaraṇa*; one's ability to think is diminished when drunk).
- My point is that hurting another human will have much more potent *kamma vipāka* than killing many mosquito or taking an occasional drink.

7. We can get some ideas on these issues by looking at the *Vinaya* rules for the *bhikkhus*. These are the rules of conduct for the *bhikkhus*. There are 227 rules for fully ordained monks (*bhikkhus*) and 311 for nuns (*bhikkhunis*).

- These rules are called *patimokkha* ("*pati*" is getting bonded and "*mokkha*" or "*moksha*" in Sanskrit is "*Nibbāna*") because they help stay out of trouble and stay on the path to *Nibbāna* for the *bhikkhus*. Remember that in the *Satipaṭṭhāna sutta*, "*mukha*" in "*mukha nimitta*" also means *Nibbāna*.

© 2026 Lal A. Pinnaduwage

These rules are categorized according to their importance (or the severity of consequences for breaking them). The top four belong to the class called "*pārājika*," meaning a *bhikkhu* who breaks any one of the four has been "defeated" and thus needs to leave the monastic order. [***pārājika*** : [adj.] one who has committed the gravest transgression of the rules for bhikkhus.]

1. **Sexual intercourse**: any voluntary sexual interaction between a *bhikkhu* and a living being, except for mouth-to-mouth kissing, which falls under the *Saṅghādisesa* (next level below the *pārājika* level). [***saṅghādisesa*** : [unexplained as regards etym. ; Geiger, P. Gr. § 383, after S. Lévi, = *saṅgh'âtisesa*; but *atisesa* does not occur in Pāli] requiring suspension from the Order; a class of offences which can be decided only by a formal saṅgha-kamma.]
2. **Stealing**: the robbery of anything worth more than 1/24 troy ounce of gold (as determined by local law).
3. Intentionally bringing about the **death of a human being**, even if it is still an embryo — whether by killing the person, arranging for an assassin to kill the person, inciting the person to die, or describing the advantages of death.
4. **Deliberately lying to another person that one has attained a superior state**, such as claiming to be an *arahant* when one knows one is not, or claiming to have attained one of the *jhānā* when one knows one has not.

8. The next level is the *Saṅghādisesa.* The thirteen *Saṅghādisesa* rules require an initial and subsequent meeting of the *saṅgha* (communal meetings). If the monk breaks any rule here, he has to undergo a period of probation or discipline, after which, if he shows himself to be repentant, he may be reinstated by a *saṅgha* of not less than twenty monks.

- Like the *pārājikas*, the *Saṅghādisesa* can only come about through the monk's intention and cannot be accidentally invoked. However, if the *bhikkhu* does not go through this to absolve him/herself, then the consequences will be even harsher. These thirteen rules are not relevant to our discussion here, but you can read them at: WebLink: WIKI: Patimokkha
- Two more layers, *aniyata*, and *Nissaggiya pacittiya*, pertain to *bhikkhus* and are again irrelevant to our discussion. They are even less potent and can be overcome by confessing to another *bhikkhu* and deciding not to repeat.

9. The last set of rules is the "weakest," i.e., with the least consequences compared to all others. They are the 92 "*pacittiya*" rules, which are minor violations and can be overcome by confessing to another *bhikkhu* and deciding not to repeat them. The ones relevant to our discussion are:

- *10. Should any bhikkhu dig soil or have it dug, it must be confessed (to avoid killing small animals/insects).*
- *51. The drinking of alcohol or fermented liquor is to be confessed.*

10. Many people think "life is a life," but that is not so. Here digging soil is not allowed for *bhikkhus* because many lifeforms (insects, worms) are killed in that process. But this act is listed under the last section of the *Vinaya* rules (with the least consequences).

- We know that killing an *Arahant* or one's parents is an "*ānantariya kamma*," a very potent *kamma* that will send one to the *apāyā* in the next birth.
- And as we saw in #7 above, killing or giving the advice to kill even a fetus is a *kamma* that makes a *bhikkhu* lose his/her ordination. Killing small insects (inadvertently) by digging soil is a much less potent *kamma*, as listed in #9 above.
- Human life is precious because only a human can strive and attain *magga phala*, AND it is very difficult to get a "human *bhava*." But even among humans, there is great variation: an *Arahant* or one's parents are ranked way higher. The importance of parents is related to the fact that it is extremely hard for a *gandhabba* to find a suitable womb. I will discuss this in detail later. **[Need to find a reference.]**

© 2026 Lal A. Pinnaduwage

- We also see that drinking alcohol is a minor offense, even for a *bhikkhu*, as listed in #9 above. *Bhikkhus* do not drink alcohol anyway, but this rule came about because of a particular incident at the time of Buddha.

11. It can also be deduced that stealing is a misdeed with harsh consequences since it is included as a "*pārājika*" for the *bhikkhus*.

- We must realize that stealing has many subtle forms, in addition to "taking something that belongs to another without permission." In society, not doing one's part is also a form of stealing. One is benefiting from others' work without contributing to it.
- We also become indebted automatically to our parents, teachers, friends, etc. Even though they may not expect a "payback," we must "respond in kind" whenever an opportunity arises.
- More can be found in the post, "Kamma, Debt, and Meditation."

12. Finally, I would like to point out that it is difficult to quantify the weight of a given *kamma* generically. For example, "killing an animal" is a very generic statement, and such an act has a broad range of *kamma vipāka*.

- When you slap a mosquito that bit you while reading a book almost without realizing it, it has very little *kammic* power. On the other hand, when one aims a gun at a deer and fires to kill it, that will have much more *kammic* power.
- One way to easily figure out the difference between those two acts is to think in terms of "*javana* power" of a *citta*. This goes together with the "intention" and "how bad one wants to get it done." In the above example, you can almost visualize the difference in the mindsets of killing a mosquito versus deer. For more details, see "Javana of a Citta – The Root of Mental Power" and "Details of Kamma – Intention, Who Is Affected, Kamma Patha."
- Hitting a person to cause minor pain is done with less *javana* in the *citta*. But hitting a person with an iron rod intending to kill has much more *javana* power, as you can imagine.

13. These are things one needs to contemplate to truly understand the Buddha Dhamma; that is the real *vipassana* or insight meditation. Getting to the *Sotāpanna* stage requires learning about such basic things on one's own by thinking about real life.

- Buddha Dhamma is not a "set of rules and rituals" to blindly follow. That is exactly why many people have not been able to make any progress and have even given up.
- When one starts thinking critically and attentively, one develops the four types of (*cattāro*) *iddhipāda* discussed in #4 above. Once one gets traction by understanding a few basic things, Dhamma will be the guiding force to generate *chanda* (desire) to investigate more and to find more. It is boring and fruitless to blindly follow precepts and rituals that will not get one anywhere.

14. **November 11, 2016:** I get many questions on this topic, i.e., how to verify one is progressing towards the *Sotāpanna* stage. The new section, "Living Dhamma," provides a systematic way to achieve that goal and guidelines for checking one's progress.

12.17 13. Kammaṭṭhāna (Recitations) for the Sotāpanna Stage

December 5, 2015

1. There are two ways to look at the effectiveness of recitations. First, one could gain some benefit when LISTENING TO recitations (such as recorded chanting of *sutta*), even without understanding what is said in the *suttā*. However, that benefit will increase if one understood the content.

- The effectiveness of recitations in MEDITATION SESSIONS is somewhat similar. There are many people who have been practicing various types of recitations (*kammaṭṭhāna*) for 10, 20, 30, or more years without significant results (i.e., *magga phala*), even though they are likely to feel some calming effect.
- Reciting phrases (in any language) can be quite beneficial if the meanings of those phrases are understood in either of the above cases. Recitation in Pāli can be a bit more effective, since Pāli words tend to condense a lot of meaning. If one starts off with at least some understanding, recitation on a regular basis will help understand the concept at a deeper level.
- For example, the concept of *anicca* is understood gradually — with a glimpse of it grasped on the way to the *Sotāpanna* stage, getting a firm foothold at the *Sotāpanna* stage, strengthening at the *Sakadāgāmī* and *Anāgāmī* stages — and is fully comprehended at the *Arahant* stage.
- A systematic procedure to get to *sammā samādhi* to be able to comprehend *anicca, dukkha, anatta*, is described in the "Living Dhamma" section. It can also help one figure out where one in the Path, and to clarify many fundamental issues. It is not possible to comprehend *Tilakkhaṇa* until one's mind is purified to some extent. **Then one's mind can easily grasp concepts rather than just memorizing them.**

2. A mundane example is learning the multiplication table. Some get it easier than others. But with practice anyone can master it. All one needs is to spend some time reciting and memorizing the table, even though only memorization may not be helpful in the final objective, i.e., solving a bit more complex problems.

- We know that this "learning process" can be speeded up by using what one learned in solving some problems. Rather than just memorizing the multiplication table, if one applied it to solve some multiplication problems, the learning time can be drastically reduced and also it is easier to keep in the memory for longer time.
- This is what the Buddha meant by "*bhāvanāya bahulīkatāya*….." *Bhāvanā* (or meditation) [DN 33, DN 34, MN 62, MN 119, SN 42.8, SN 46.57, SN 46.76, SN 54.5, AN 6.13, AN 8.1.] is what one uses frequently: one needs to be thinking about it and examine it in many different situations as much as possible. Then the concept starts to "sink in". Formal recitations can be part of this process. [***bahulīkata***: [pp. of bahulīkaroti] took up seriously; increased. (adj.), practiced frequently.]
- Reciting a phrase repeatedly while contemplating on it (*kammaṭṭhāna*) is an excellent way to retain and comprehend a given concept, **once the concept is at least vaguely understood.**

3. Another important benefit of a good recitation session is in subsiding the five hindrances (*pañcanīvaraṇa*) that makes the mind agitated and not receptive; see, "Key to Calming the Mind – The Five Hindrances." When one is focusing on Dhamma — even by just reciting verses — those greedy, hateful, and irrelevant thoughts are at least temporarily subsided and the mind will not be lethargic or agitated.

- In this respect, just listening to *Pāli suttā* could be beneficial too. In many Buddhist countries, many people start off the day with chanting of *suttā* (*pirith*) in the background. When I was little, I used to wake up to the chanting of *pirith* on the radio (my mother used to do turn it on the first thing in the morning).
- If the *suttā* are recited the right way, just listening to them can make the mind calm. I have posted audio files of several *suttā* by my teacher *Thero* including a 75 minute session in the post: "Sutta Chanting (with Pāli Text)."

© 2026 Lal A. Pinnaduwage

4. Yet another critical benefit is to make the conditions conducive to attract previous "good *kamma*," and make the mind "tune into" receiving such merits. Each of us has done innumerable good and bad *kamma* in our previous lives, and they are waiting for "right conditions" to bring their results (*vipāka*).

- For example, there may be a good TV (or radio) program being broadcast. But if the television (or the radio) is not "tuned in" to the right station, one would not be able to watch (or listen to) the program.
- "Making the conditions right" can bring about both good and bad *kamma vipāka* too. If one associates with bad friends, that is making conditions for bad *kamma vipāka* to bring fruits. On the other hand associating with good friends and listening/reading Dhamma can make one's life better. This is discussed in detail in the posts, "Anantara and Samanantara Paccaya" and "Transfer of Merits (Pattidana) – How Does it Happen?."
- I have mentioned in many posts that the effectiveness of absorbing material at this website can be much improved by reading them at a quiet time. In the same way, a meditation session can be made more effective by calming the mind by doing some well-planned recitations. That itself can be a meditation session. What I do is, in the middle of recitations contemplate about relevant Dhamma concepts or my own daily experiences, i.e., do insight meditation in the middle of the recitation itself.

5. One should tailor the recitation session to match one's own personality and needs. For example, if one has a temper, one should spend more time doing *metta bhāvanā*; if one has excessive greed (for sense pleasures) one could spend more time doing *asubha bhāvanā* (unfruitful nature of things), which is basically to contemplate on the fact that ANY object that is providing sense pleasure is going to decay and destruct at the end.

6. I have thought a lot about how to present a "*kammaṭṭhāna* program". But it is difficult to decide what *kammaṭṭhāna* to discuss because each individual is different, and has own preferences and needs. I may still do that in pieces in the future, and I have discussed basic features of some in other posts.

- Here, I think it is better to just provide an audio of recitation session that I go through each day. This is just to give an example of how it can be done, and I know that it helps me in calming my mind and making it more receptive and alert.
- This is somewhat modified compared to what I actually do, because I do some parts in Sinhala which most of you will not understand, and I have also tailored this for those who are seeking the *Sotāpanna* stage of *Nibbāna*.

7. It is best to do these recitations in a quiet room, sitting comfortably — but not too comfortably — so that one would not fall asleep initially. Once one gets used to it, one will never fall asleep. Also, it may be better to actually say the words initially to avoid the mind to wander around; one could just recite in the mind later on.

October 13, 2016: I have removed the audio file temporarily until I make a better one. After I started the "Living Dhamma" section, I realized a way to present material in a better way.

But I leave the pdf of the text file:

WebLink: PDF File: Kammattana Example

Notes:

1. I am assuming that anyone who is interested in these *kammaṭṭhāna* (i.e., those who have the desire to strive for the *Sotāpanna* stage) have already read the relevant key posts at Sotāpanna Stage of Nibbāna. Now, let us discuss different sections of the WebLink: PDF File: Kammattana Example.

- Also, the Search button on the top right is very useful for finding relevant posts for any given keyword or a phrase that is not clear.

© 2026 Lal A. Pinnaduwage

2. In reciting precepts, instead of the "*Pānātipātā Veramani Sikkāhāpadam Samādiyāmi*", which says "I promise not take another life of a living being", it is more truthful to say, "I promise not to take another life with any liking for it" (*Pānātipātā pativirato hoti)*, unless one is dedicating a day to strictly observe the precepts.

- For example, if one needs to apply a medication to a wound, that will kill many microscopic living beings; yet, one has to do that in order to heal the wound; **thus in day-to-day life, we may have to take actions like that we would not like to; this is what is meant by "*paṭivirato hoti*", i.e., one would not do it unless necessary.** But if one is observing precepts, one could avoid applying the medication on that day. [***paṭivirato*** : Abstaining from.]
- Same for the other four precepts.

3. Note the break in between "*itipi so bhagava*…". Many people recite it as "*itipiso bhagava*…", which has a very different and inappropriate meaning.

- I really need to discuss the meanings of these three phrases, and hope to get it done in the "Buddhist Chanting" section in the future.

4. The phrase, "*Natti me sanaran annan Buddho me saranan varan"* means, "I have no other refuge than that of the Buddha".

- *"etena sacca vajjena sotti me hotu sabbada"* means something to the effect of "may the truth in my refuge in Buddha, Dhamma, Saṅgha lead to my well being and success in my efforts".
- *"etena sacca vajjena sotti te hotu sabbada"* means something to the effect of "may this truth lead to the well being and success in others' efforts".

5. The next phrase (in Sinhala, I am unable to come up with a suitable English or Pāli phrase) means, "I will be truthful to myself, see things as they are, be pure in mind, and endeavor to generate only pure thoughts (*prabhasvara* or *pabhassara citta*). I plan to write separate posts discussing some of these *kammaṭṭhāna*. Even a single phrase is so condensed that one could write many posts on each.

- For example, "*avanka*" comes from "*vanka*" or "bent" or "not straightforward". If someone is not truthful, then that is "*vanka*"; "*avanka*" is the opposite of "*vanka*."

6. The next three phrases are also very important. I recite it every day. The phrase, "*Kayena vaca cittena pamadena maya katan, accayam khama me Bhante bhuripanna Tathagata",* means: "If I have done any wrong inadvertently (or due to ignorance) by thoughts, speech, or mind to the Buddha, may I be forgiven for that".

- And then the same phrase directed to Dhamma and Saṅgha. For example, I always worry about inadvertently explaining some concept in a way which may not be quite right. Also, when dealing with people, we don't know whether we inadvertently hurt their feelings or do something that they see as inappropriate (and it is possible that such a person may be a Noble person).

7. The next set of phrases are for cultivating *anicca saññā* and related other factors. The phrase, "*Aniccanupassi viharati, nicca saññā pajahati"* means "I will live my life cultivating the *anicca saññā* and reject that things in this world can be kept to my satisfaction (i.e., reject the *nicca saññā*)". Similar meaning can be deduced for the following three phrases.

- In the phrase, *"Nibbidanupassi viharati, abhinandana pajahati", nibbida* means "stay away from valuing sense pleasures" and *viharati* means "live accordingly". A*bhinandana* means "valuing sense pleasures", and *pajahati* means "avoid".
- *"Nirodhanupassi viharati, samudayan pajahati",* means stop the wheeling process and reject generating more "*saŋ*" ("*saŋ*" + "*udaya*" combines to give "*samudaya*"); see, "What is 'San'?."
- *"Patinissagganupassi viharati, sambhavan pajahati"* means "I will endeavor to break all bonds to this world, and stop making new *bhava*."

© 2026 Lal A. Pinnaduwage

- The last three recitals in this section with *"Anissitoca viharati, na ca kinci loke upadiyati"* confirm one's conviction that "it is unfruitful to stay in this world of 31 realms, there is nothing in this world that worth craving for (*upādāna*)".

8. The set of three phrases that come next also help cultivate *anicca saññā*, and one could review or do insight meditation on *anicca, dukkha, anatta* right after that.

9. The next section is on *metta bhāvanā*. I normally recite this in Sinhala, but these English phrases give almost the same meaning. This is also discussed in the post, "5. Ariya Metta Bhāvanā (Loving Kindness Meditation)."

- The relevance to different types of *akusala citta* is discussed in the post, "Akusala Citta – How a Sotāpanna Avoids Apayagami Citta." The 12 types of *akusala citta* are discussed in, "Akusala Citta and Akusala Vipāka Citta."

10. The next phrase is the standard phrase to use when cultivating *jhāna*: see, "11. Magga Phala and Ariya Jhānā via Cultivation of Saptha Bojjanga." Even though it is supposed to be fully effective only after attaining the *Sotāpanna* stage, it can be used by anyone who has been exposed to the true meanings of *anicca, dukkha, anatta,* and is pursuing the *Sotāpanna* stage.

- One could get into at least some kind of *samādhi* by this time, and do some insight meditation here. Actually, at any of the above *kammaṭṭhāna* sections, one could do insight meditation related to that section. I normally do this and my sessions sometimes last for much longer times.

11. In the subsequent sections, we start giving merits to all living beings. The phrase, "*Idam me nati nan hotu Sukhita hontu natayo", means* "May all my relatives (which does include all living beings in the through *saṁsāra*) attain peace and happiness due to these merits".

- The next phrase, "*Idam vo nati nan hotu Sukhita hontu natayo",* can have multiple meanings. If one is doing a group session, it could mean "relatives of others in the group". If one is by oneself, it could mean "distant relatives", who may even be in worlds far away from the Earth.
- Thus when one recites both phrases, it does include all living beings.

12. The next section gives merits to *devas* (which include *brahmā* as well), *bhūta*, and *preta*, and then to all beings (*sabbe satta*). It is another way of giving merits as in #11.

- Then the next phrase in English is straightforward. I specifically included this so that anyone can use this with full understanding. If one had (even inadvertently) done a bad deed to someone that day, one could be thinking about that person and ask for forgiveness. This is a very effective way to calm the mind and reduce tensions, and I hope to write a post on this. If done sincerely, one should be able to see the effects in real life. You may notice that the tensions with that person automatically reduced.
- What happens is that those strong *javana citta* that you generate can produce *cittaja rūpa* that can affect that person even over long distances. It is again related to what we discussed in #4 of the main section (above the current "Notes" section).

13. Then we end the session with the phrase "*Idaṁ me puññaṁ āsavakkhaya vahaṁ hotu, sabba dukkha nirujjati"* that is recited three times. It means, "May the merits that I have acquired help remove my *āsava* (cravings), and lead to the end of all suffering".

- It is to be noted here that "*āsavakkhaya vahaṁ hotu"* is really, "*āsavakkhaya* ***ahaṁ hotu****"* or "may (these merits) be ***hetu*** for cleansing of **my** *āsava*." It just rhymes as, "*āsavakkhaya vahaṁ hotu".*

14. Of course the above is an example of what one could do. One could use all the *kammaṭṭhāna* (and add more), or use only the ones that one likes. I don't use them all in a given session, but do use some of them all the time. I just start the session with the first few and select phrases as I proceed. Sometimes, I get into insight meditation (contemplating relevant ideas, connecting with other concepts, etc.,) following a given phrase and just do that for the whole session.

15. **November 11, 2016:** I get many questions on this topic, i.e., how to verify one is making progress towards the *Sotāpanna* stage. The new section, "Living Dhamma," provides a systematic way to achieve that goal, in addition to providing guidelines on how to check one's progress.

© 2026 Lal A. Pinnaduwage

12.18 New Approach to Meditation

This section has been moved to, "Living Dhamma." Please check there for the follow-up posts.

© 2026 Lal A. Pinnaduwage

12.19 Anussati and Anupassanā – Being Mindful and Removing Defilements

April 16, 2018; revised August 10, 2022; February 5, 2026

Anussati and *Anupassanā*

1. *Anussati* and *anupassanā* are two Pāli words with related but different meanings. It helps to understand the difference because many people today incorrectly use various types of *anussati* as *kammaṭṭhāna* (meditation subjects). [***anussati*** : [f.] recollection; memory; mindfulness. ***anupassanā*** : [f.] 1. consideration; 2. realisation.]

- If one understands *Ānāpāna* and *Satipaṭṭhāna*, they are other ways of saying the same thing. They are all different angles of looking at the goal (*Nibbāna*) and how to get there, i.e., how to cultivate the Path.
- It is ALWAYS good to remember that *Nibbāna* is attained via getting rid of greed, hate, and ignorance (*lobha*, *dosa*, and *moha*) **from one's mind**. The only thing to remember is that without comprehending *Tilakkhaṇa*, that process cannot be completed. Everything else is just more details on how to get there.
- "*Anu*" can have two different meanings. One is "according to" or "via this process." The other is "food" for bad *viññāṇa*, which are essential "*keles*" or "*kilesa*" or "defilements." But here, the first meaning is mainly relevant.

  [***kilesa*** :'defilements', are mind-defiling, unwholesome qualities. Vis. M. XXII, 49, 65: **There are 10 defilements**, thus called because they are themselves defiled, and because they defile the mental factors associated with them. They are: (1) greed (*lobha*), (2) hate (*dosa*), (3) delusion (*moha*), (4) conceit (*māna*), (5) speculative views (*diṭṭhi*), (6) skeptical doubt (*vicikicchā*), (7) mental torpor (*thīna*), (8) restlessness (*uddhacca*); (9) shamelessness (*ahirika*), (10) lack of moral dread (fearlessness) or unconscientiousness (*anottappa*). For 1-3, s. *mūla*; 4, s. *māna*; 5, s. *diṭṭhi*; 6-8, s. *nīvaraṇa*; 9 and 10, s. *ahirika - anottappa*.]

  [***upakkilesa*** : 'impurities', corruptions, imperfections (a frequent rendering by 'defilements' is better reserved for *kilesa*, q. v.). A list of **16 moral 'impurities of the mind'** (***cittassa upakkilesa***) is mentioned and explained in M. 7 & 8 (WHEEI. 61/62): 1. covetousness and unrighteous greed (*abhijjhā-visamalobha*), 2. ill will (*byāpāda*), 3. anger (*kodha*), 4. hostility (*upanāha*), 5. denigration (*makkha*), 6. domineering (*palāsa*), 7. envy (*issā*), 8. stinginess (*macchariya*), 9. hypocrisy (*māyā*), 10. fraud (*sāṭheyya*), 11. obstinacy (*thambha*), 12. presumption (*sārambha*), 13. conceit (*māna*), 14. arrogance (*atimāna*), 15. vanity (*mada*), 16. negligence (*pamāda*).]
- Now we can see the origins of those two words (*pada nirutti*).

Buddhānussati, *Mettānussati*, *Asubhānussati*, *Maranānussati*

2. **First, let us discuss *anussati***, which comes from "*anu*" + "*sati*." Of course, *sati* is a mindset (with the *Tilakkhaṇa* in the background); therefore, ***anussati*** means **the mindset focused on attaining *Nibbāna***. Then one can live with that mindset, i.e., ***anussaraṇa***.

- There are several types of *anussati*, but four are lumped together as **"*caturārakkhā*" or "Four Protections"** that one should try to keep with oneself all the time, which will help one to stay out of trouble.
- This is expressed in the following verse (I have not found the source in the *Tipiṭaka*):

"*Buddhānussati metta ca, asubhaṁ maraṇānussati; iti ima* ***caturārākkhā****, Bhikkhu bhaveyya sīlava*"

Translated: "*Buddhānussati, mettānussati, asubhānussati, maraṇānussati*; these are the **Four Protections** for a *Bhikkhu* cultivating *sīla* (moral behavior)."

- These are four things that one should ALWAYS remember to protect one's mind from getting defiled.

© 2026 Lal A. Pinnaduwage

3. We already know that "*Buddha*" comes from "*bhava*" + "*uddha*," or uprooting *bhava*, i.e, stopping the rebirth process to stop future suffering. So, *Buddhānussati* means keeping that key message in mind.

- *Asubha* means "unfruitful" and even "harmful." Getting attached to sensory pleasures is harmful in the long run, just as a fish biting a tasty worm on a hook will suffer. So, *asubhānussati* means always to be mindful of the bad consequences of material things that are appealing at first sight.
- *Mettānussati* is to keep in mind always that all living beings are in the same boat, suffering in the long run, and thus to have compassionate thoughts about all of them. Of course, that can be implemented at various levels depending on one's progress (from mundane *mettā* to *Ariya mettā*).
- Especially when one becomes aware of the true meanings of *Tilakkhaṇa*, one realizes not only the fruitlessness of seeking happiness in this world, but one becomes AFRAID of possible future suffering. When that realization comes, one's efforts will be automatically accelerated.

4. Therefore, these four types of *anussati* are the four types of "mindfulness" that one should always keep in mind. Not only when meditating but even more importantly, when interacting with society.

- These Four Protections, with practice, will help enormously in maintaining *Satipaṭṭhāna* or *Ānāpāna* while interacting with others.
- For example, suppose someone says something nasty. Instead of getting mad and retaliating, one should immediately recall that one's goal is "*bhava uddha*," which requires seeing the *asubha* nature and cultivating *mettā*. That one may not have much time left to get this done (*maranānussati*).

5. As is the case in many cases, those Four Protections have mundane meanings too. These could also be helpful. The following are the mundane meanings.

- *Buddhānussati* is to contemplate the nine supreme qualities of the Buddha. This is, of course, a good thing to do.
- *Asubhānussati* is contemplating the "foulness for the body." That is a misinterpretation. One could do *asubha bhāvana* to contemplate the real nature of the body. A given male or female body can be enticing when the body is young, but it will degrade with time.
- *Mettānussati* is to keep in mind/to recite, "May all beings be happy and healthy." Again, not a bad thing to do.
- *Maranānussati* as reciting "*jīvitaṁ aniyataṁ, maraṇa niyataṁ*" or "this life is impermanent, death is a certainty." While the statement is true, recitation alone cannot do much to remove defilements and purify the mind.

Aniccānupassanā, Dukkhānupassanā, Anattānupassanā, Asubhānupassanā

6. **Now, let us discuss *anupassanā*.** In contrast to *anusssati*, *anupassanā* is more relevant to the final result, i.e., 'seeing Dhamma' with wisdom.

- '*Passa*' here means to 'see with wisdom' and is related to "*passato*.' See "'Jānato Passato' and Ājāniya – Critical Words to Remember."
- While there are four types of *anupassanā*, three are associated directly with *Tilakkhaṇa*: *aniccānupassanā*, *dukkhānupassanā*, and *anattānupassanā*, and the fourth is *asubhānupassanā*. [See; WebLink: suttacentral: Paṭisambhidāmagga Paññāvagga 3.9. Vipassanākathā for *aniccānupassanā*, *dukkhānupassanā*, *anattānupassanā* and WebLink: suttacentral: Itivuttaka 85 Asubhānupassīsutta for *asubhānupassanā*]
- Normal humans take this world to be of *nicca, sukha, atta,* and *subha* nature. The key to *Nibbāna* is to realize the true nature: *anicca, dukkha, anatta*, and *asubha*.

© 2026 Lal A. Pinnaduwage

7. Thus, *aniccānupassanā* means 'seeing with wisdom' the *anicca* nature.

- Similarly, *dukkhānupassanā* and *anattānupassanā* mean 'seeing with wisdom' the *dukkha* and *anatta* nature.
- We have not discussed *asubhānupassanā* up to this point. This becomes more important for a *Sotāpanna* to reach the *Sakadāgāmi/Anāgāmi* stages by contemplating the harmful consequences of the sensory pleasures that appear so enticing.

8. Therefore, for one trying to get to the *Sotāpanna* stage, the first three *anupassanā* are more important. However, *asubhānupassanā* cannot hurt (and may even be beneficial) because it helps calm the mind.

- We need to remember that the *tāpa* (or "burning" or "excitement of the mind") comes from *kāmacchanda* and *vyāpāda*: greed and hate. Both arise due to excess greed or "blindness due to excess desire for sense pleasures"; see, "The Cooling Down Process (Nibbāna) – How Root Causes are Removed" and "Kāma Rāga, Rūpa Rāga and Arūpa Rāga."
- For anyone interested in meditation, such basics must be understood: "Living Dhamma – Fundamentals." I can see from the discussion forum that many people worry too much about "deep concepts" without a proper understanding of fundamentals.

Understanding *Dhamma*: A Step-by-Step Process

9. We also need to keep in mind that one cannot just start doing formal meditations on these *anupassanā*. It is a step-by-step process. One needs to understand *Tilakkhaṇa* (*anicca*, *dukkha*, *anatta*): "Anicca, Dukkha, Anatta."

- Even before that, one needs to eliminate the ten types of *micchā diṭṭhi* by cultivating the mundane eightfold path: "Buddha Dhamma – In a Chart."

The reason for that was discussed in the recent post, "Buddha Dhamma for an Inquiring Mind – Part I." **If one has either of the following two views, then it is NOT possible to comprehend *Tilakkhaṇa*:**

- The next life is going to be forever, in heaven or hell.
- This life is all one has. When one dies, it is over. No rebirth anywhere.

10. There are many reasons why those two views will block the path to *Nibbāna*. The following are a few key reasons:

- Neither of the above views can accommodate the laws of *kamma*: That one's actions WILL have consequences, which are much more complex than just leading to hell or heaven (and then getting stuck there forever).
- It is impossible to have a consistent picture (world view) without eilminating wrong views, such as the idea that there is no rebirth process or that the *gandhabba* concept is wrong; see, "Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage."
- If one holds the above views, one cannot comprehend the *dukkha* nature. The fact that most future suffering is in the *apāyā*s and that one needs to stay away from *dasa akusala* done with powerful and immoral *javana citta* that "power-up" such births in the *apāyā*.

Conclusions

11. I know that I keep repeating some things. But many people skip essentials because they desire to get there quickly. I admire their enthusiasm, but I do not want people to have false hopes. On the other hand, "just learning concepts" is not enough either, so one MUST put all this into practice, i.e., stay away from *dasa akusala* (and keep in mind that *micchā diṭṭhi* is the worst of them; see the post mentioned in #10 above).

© 2026 Lal A. Pinnaduwage

- The bottom line is, if one can truly see the *anicca* nature, one will have the *anicca saññā* and will avoid *dasa akusala* with a high degree of fear of the *apāyā*: "*dukkhaṁ bhayattena*."
- Thus one will automatically have *Buddhānussati*, the desire to reach *Nibbāna*.
- Furthermore, it will sink into the mind that those enticing things in the world are, in fact, of *asubha* nature (*asubhānussati*). One will also realize that all living beings are in the same boat and thus will have *mettānussati*.

12. Finally, one will also have *maraṇānussati* established in one's mind: that one needs to make haste and cultivate the path before death comes, the timing of which is unknown.

- If one reads the WebLink: dhammatalks.net: Maraṇasati Sutta (AN 6.19), it is clear that the Buddha advised *bhikkhus* to be keenly aware that death can come at any time and thus to CULTIVATE THE PATH without delay and that *maraṇānussati* was not a specific *kammaṭṭhāna*. [***kammaṭṭhāna*** : lit. 'working-ground' (i.e. for meditation), is the term in the Com. for 'subjects of meditation'; *s.bhāvanā*.]
- Another English translation of the *sutta* is: "WebLink: suttacentral: Mindfulness of Death."

12.20 Myths about Meditation

Early post; revised September 11, 2018; December 17, 2019; March 10, 2021

Nibbāna Is Not Possible With Rituals

1. Once I attended a meditation retreat. Everyone was sitting down on the floor with crossed legs, but after a while, many people "could not endure the pain" and were stretching their legs out or were fidgeting. It was apparent (to me) that many people could not think about anything else but their pain due to the uncomfortable posture. That went on for two days. Other than those who were long-time meditators and were comfortable with the lotus position, I do not believe the others enjoyed the retreat that much.

- Such nonsensical "rituals" are part of the set of wrong views that one needs to remove before attaining the *Sotāpanna* stage. This particular practice is a "*sīlabbata parāmāsa*" or "engaging in rituals."
- Such practices do not make sense. Sitting in the lotus position is not a requirement for meditation. Meditation is contemplation. That can be done in any posture, sitting, standing, walking, or lying down.

We Need to Know What to Meditate On!

2. It is helpful to think about the goal of meditation. The ultimate goal is to remove greed, hate, and ignorance from our minds and attain *Nibbāna*. One needs to understand the fundamental concepts of Buddha Dhamma first.

- But even for those who are just interested in achieving some "cooling down" from everyday stresses, it is the same fundamental idea at work. We need to keep greedy, hateful, and ignorant thoughts from arising in our minds. The more we do that, the more relaxed our minds will become.
- Many people automatically associate "breath meditation" with "Buddhist meditation" and spend years on it, and end up discouraged; see a person account, "WebLink: PDF-file: Meditation-Experience-of-Paññobhāsa-Bhikkhu."
- The correct *Ānāpānasati Bhāvanā* is NOT breath meditation; see the posts at, "Bhāvanā (Meditation)."
- Purification of the mind is the way to achieve temporary relief to the mind. In the long run, it helps attain even the *Arahantship*. There is no one else monitoring one's progress. It is one's mind that is keeping tabs on one's progress.
- When one does a "formal meditation," one should sit in a comfortable position. It could be the lotus position for those who have practiced it. One could be in the lotus position for several hours when one gets good at it. It is just sitting in a chair for most people, one that is not too comfortable that one may fall asleep!

Bad Idea to Remove ALL Thoughts

3. Getting rid of evil thoughts can be and should be done ALL THE TIME. The Buddha said, "*bhāvanāya bahulīkatāya.*" That means "meditate as much as possible, whenever possible." And it is done in all possible postures: sitting, standing, walking, and lying down. [***bahulīkata*** :[pp. of bahulīkaroti] took up seriously; increased. (adj.), practised frequently.]

- Ven. Ānanda is the only known person to attain *Arahanthood* while not in any of those four postures. He was making an all-out effort to become an *Arahant* before the first *Dhamma Sangāyanā* (Buddhist Council.) Only *Arahants* were able to attend. But since Ven. Ānanda was the only one who had memorized the whole of the Sutta Piṭaka; he needed to attend the *Sangāyanā*. The night before the *Sangāyanā*, he had been exhausted by the effort. But he was still thinking about a Dhamma concept while getting into the bed. He sat down on the bed and raised his legs to lie down. Before his head touched the pillow, that particular point came clear to him, and the "*Arahant phala citta*" was realized.

© 2026 Lal A. Pinnaduwage

- Another story from the *Tipiṭaka* relevant to #1 above is about a minister of King of Kosala, named Santati. He attained *Arahanthood* while listening to a single verse by the Buddha: "WebLink: tipitaka.net: Dhammapada Verse 142."

Removing ALL Thoughts Lead to Births in the *Asaññā* Realm

4. I have seen many meditation programs that describe *Nibbāna* as removing perception or *saññā* from the mind.

- Many people wrongly advise that one needs to remove ALL THOUGHTS from one's mind to attain *Nibbāna*. One time a *Deva* expressed the same idea to the Buddha: "Isn't *Nibbāna* attained via removing all thoughts?". The Buddha replied, "No. *Nibbāna* is realized by removing greedy, hateful, and ignorant thoughts." That account is in the "WebLink: suttacentral: *Manonīvaraṇa Sutta* (SN 1.24)."
- Some others say that when a thought comes to the mind (about a loved one, a place, or anything material), to say "that does not exist" and forget it. Just because the Buddha said everything changes rapidly, he did not mean phenomena did not exist. Things do not exist for eternity either, because they are continually changing. That is the same argument that we discussed in "What Reincarnates? – Concept of a Life-stream": the Buddha rejected both "self" and "no-self." *Paṭicca Samuppāda* explains all phenomena. They arise due to causes and would not occur if such reasons are absent.
- If one cultivates *asaññā* meditation (by removing all thought that come to the mind), may be born in the realm of *asaññā Brahmā.* In that realm, no thoughts arise in mind. One would stay there for a very long time, only to come back to the human plane and start the rebirth process all over.
- **All the above meditation techniques are dangerous.** As one develops them, one may become forgetful; *saññā* or perception is a critical mental factor associated with recognizing external objects. If one starts losing memory, that will be a sign that one is on the wrong path.

Nibbāna is the Removal of Greed, Anger, and Ignorance

5. An *Arahant* has not removed the capacity to generate thoughts OR perceptions. **An *Arahant* has removed greed, hate, and ignorance (about the Four Noble Truths).** Thoughts arise in him/her with *saññā*, i.e., he/she can identify people or things. They can experience the whole world just like any other human: they can see, hear, taste, smell, touch, or think about any place.

- The only difference is that an *Arahant* will not generate any greedy, hateful, or ignorant thoughts about anything.
- The concept of *Nibbāna* is straightforward: "*ragakkhayo Nibbanaṁ, dosakkhayo Nibbanaṁ, mohakkhayo Nibbanaṁ*". [Extinction of greed (or desire), hatred (or aversion, anger), ignorance (or delusion) gives rise to *Nibbāna*.]

Nibbāna Is Approached With the Removal of Greedy, Angry, and Unwise Thoughts

6. And one CAN experience the "cooling down" as one makes progress on removing greed, hate, and ignorance, even before the *Sotāpanna* stage. Instead of becoming forgetful, one's mind will become more sharp and alert. One will be able to remember things BETTER, not less. One will become happier, not gloomy or depressed. **It is hard for ordinary people to fathom how much stress is associated with a mind contaminated with greed, hate, and ignorance.**

- The constant stress in an average human mind arises due to greed, anger, and ignorance. That is why people seek sense pleasure, basically to get some relief. But the problem is that any such relief is temporary. Furthermore, many people do immoral things to get such pleasures. So it can make things much worse. Not only does one not get permanent relief, but one will have to pay for the bad kamma that were accumulated by such immoral acts (lying, stealing, sexual misconduct, etc.).

© 2026 Lal A. Pinnaduwage

- That is why one can feel the relief right away when one starts living a "clean, simple life." That should be the "base" for beginning meditation. It is impossible to make any progress, no matter how much time one allocated to "meditation", if one is engaged in immoral behavior. One needs to start reducing the BIG EIGHT.
- What the Buddha prescribed was simple yet profound. As one clears the mind of the five hindrances (*pañcanīvaraṇa*) via living a clean life AND start doing the proper *Ānāpānasati Bhāvanā*, the progress will accelerate with time because one's mind start being able to see more clearly. One will be able to quickly grasp the real meaning of *anicca*, *dukkha*, *anatta*.

Do All Things "Appear, Destruct in a Moment, and Re-Appear"?

7. Another series of "*desanā*" that I listened to described how an advanced meditator could actually "see" the "formation/breakup" of the material world. That person says that one could see the "impermanence" described in the "The Grand Unified Theory of Dhamma" post. He explained how he got so afraid when the "world disappeared" momentarily before re-formation!

- A *citta* never arises as a single unit. It appears in a *citta vīthi* (series of *cittā*) which generally have 17 *citta* if the *citta vīthi* occur due to an external sense input coming through one of the five physical sense inputs (eyes, ears, nose, tongue, and body). And that there are many billions of thought moments per second. **However, only a Buddha can actually "see" such a fast time scale.**
- The Buddha described to Ven. Sāriputta such minute details in summary form, and it took Ven. Sāriputta, and his immediate followers, hundreds of years to finalize a detailed description of mental/physical phenomena based on such information provided by the Buddha. They were able to complete the *Abhidhamma Piṭaka* only by the third *Dhamma Sangāyanā*.
- Even in many textbooks on *Abhidhamma*, sometimes it is stated that **".. *rūpa* is very short-lived – it endures only for 17 conscious moments.** What arises is almost instantly gone". That is wrong! That is the lifetime of a "*hadaya rūpa*." A *hadaya rūpa* is generated in the *hadaya vatthu* by a sense event through one of the five physical senses. The lifetime of a *hadaya rūpa* is the time taken to experience that external sense event, i.e., 17 thought moments. (During that short time, the mind grasps an impression of the external *rūpa*); see, "Does any Object (Rūpa) Last only 17 Thought Moments?."

Fake Teachings Are Not Restricted to *Mahāyāna*

8. The problems with Mahāyāna teachings have become apparent due to the advances made in science and technology. See, "Key Problems with Mahāyāna Teachings" and "Saddharma Pundarika Sutra (Lotus Sutra) – A Focused Analysis."

- However, some of the "fake teachings" that I mention in this post originated in *Theravāda* countries, particularly in Sri Lanka. That is why it is critically important to learn pure *Dhamma* before or, at least, during meditation.
- How can one follow the path of the Buddha without knowing the actual path? "*Bhāvanāya pahātabbā*" (or removal of defilements via meditation) comes AFTER "*dassanena pahātabbā*" (or eradication of defilements due to wrong views via understanding the true Dhamma.) That is also why *Sammā Diṭṭhi* is first and *Sammā Samādhi* is last in the Noble Eightfold Path.
- I highly encourage everyone to read as many posts as possible to learn about Dhamma. Regardless of one's familiarity with Buddha Dhamma, one should read those posts in the "Moral Living and Fundamentals" section at least once because they provide the foundation. I know from experience the following. It is hard to comprehend the related advanced material if one does not get the basics right.

"Feeling Better" Does Not Necessarily Indicate That One Is on the Correct Path

© 2026 Lal A. Pinnaduwage

9. In "weeding out" the wrong approaches, a key point to understand is that there are many ways to "feel better." A drug user can instantly get into a "relaxed state of mind" by taking a drug. We don't do that because (i) we know it is a temporary solution, AND (ii) it has terrible consequences.

- Getting "addicted to" *anariya* (non-Buddhist) meditations like breath or *kasiṇa* meditation is only somewhat better. Many get addicted to them because they do not seem to have any adverse consequences in this life. Even though that may be true, they do have harmful implications for the long term because one is wasting one's precious time in this human life on something that does not help in avoiding rebirth in the *apāyā*.
- Just because one starts feeling better using a particular technique does not mean it is THE solution. That is why one needs to look at the UNDERLYING BASIS of that approach. I have come across several groups where they are convinced of their "technique" because they "feel better" with what they do. As we just discussed, a "good experience" does not rule out a "better experience" with the correct approach.
- **The only way to make a sound judgement of "any theory" or "approach" is to critically examine it and see whether it can explain the realities that we see around us.** Can it explain why people are born different? Similarly, why some live relatively better than others, why do only some people get horrible diseases, why do animals experience pain but still cannot do anything about it (i.e., why they have limited minds)? Only pure Buddha Dhamma can explain all these and more.

Formal and Informal Meditations

10. Finally, once one looks at the evidence and decides on the Path, meditation can be "formal" or "informal." To engage in formal meditation, one allocates a time and place, and it could be any of the following:

- Conventional sitting or walking meditation session. But this is not the only formal way to meditate.
- Listening to a Dhamma discourse delivered by an *Ariya* (one who has grasped *anicca, dukkha, anatta*) is an excellent formal meditation session.
- Reading (and contemplating) on a Dhamma concept, say *anicca*, is also formal meditation. If one reads/listens when the mind is calm, one will grasp more.

11. Informal meditation is possible at any time, anywhere.

- Merely thinking about a Dhamma concept or trying to clarify a Dhamma concept is meditation. That can happen at any time. While lying in bed trying to fall asleep, waiting at the doctor's office, riding a bus or subway, etc. Instead of daydreaming or generating greedy, hateful, or useless thoughts, one could spend that time contemplating Dhamma.

Suppression or Removal of Five Hindrances Lead to *Samādhi*

12. In all these cases, one can experience a calming effect due to the five hindrances' suppression. That can lead to even deeper *Samādhi* if one's mind becomes focused on the Dhamma concept. One could develop a habit of doing informal meditations. **But avoid doing that while driving or even when concentrating on a task at work! That WILL have terrible consequences. One needs to use wisdom (being mindful of consequences) while cultivating understanding.**

- Five hindrances discussed at "Key to Calming the Mind – The Five Hindrances."

Next, "Is Suffering the Same as the First Noble Truth on Suffering?", ……..

12.21 A Simple Way to Enhance Merits (Kusala) and Avoid Demerits (Akusala)

Revised February 28, 2019; revised May 17, 2019; August 22, 2022

1. This is an important post that should be read carefully. Grasping the basic concept here can prevent many *akusala kamma* (unmeritorious deeds) and boost the power of a *kusala/puñña kamma* (meritorious deeds). In addition, it shows the consistency and universality of Buddha Dhamma.

2. The potency of a *kamma* (good or bad) depends on two key factors. First we need to clarify some basic ideas.

- Any action or speech originates as a "thought". As described in the Abhidhamma section, a *citta* is of duration much less than a BILLIONTH of a second. Such fast thoughts do not even register in our minds. Once in a while a burst of cittā on a given object gets latched on and stays long enough to register in our minds. Then we consciously think about it and make a decision.
- For example, when I walked to the kitchen to make tea this afternoon, it started as what seemed to be thought of as "having a tea." In reality, that "thought" itself was due to billions of *citta* going through my mind; the initial "vague idea of having a tea" very quickly got built up by numerous follow-up *cittā* until I had to get up and walk to the kitchen.

3. Most such "initial thoughts" just do not cascade into strong enough thoughts to make us physically move or even speak out. If the "impulse of the thought" (or "*javana*") is not strong enough, we just disregard it.

- If you think about it, you will realize that thousands, millions of stray thoughts pass our minds each day. When we ride a bus just staring out of the window, we see zillion things go by and each thing seen is a thought. We do not remember most of it afterward.
- On the other hand, powerful sense inputs prompt us to instantaneous action or speech. Sometimes, we just stay on that stream of thoughts: some people laugh out loud just thinking about a happy event. Other times, if thoughts of a hated person come to mind, one's face gets dark, and muscles get tightened.
- A mother hearing her child cry out is lifted out of her seat instantaneously: She hears the cry in a series of "*citta vīthi*" of "thought streams" coming through the ear door. Subsequently, millions of "mind-door" *citta vīthi* run within a fraction of a second, identifying that it is a crying sound and it is coming from her child. Subsequently, millions more *citta vīthi* start running, trying to analyze what could be the problem, and then more *citta vīthi* will prompt her to get out of the seat and move towards the source of that sound. All this happens within a fraction of a second, without her being consciously aware.

4. Not all thoughts on the same subject have the same *kammic* power.

- If some insects get killed while someone is walking on the ground or while cleaning the house, that will have no *kammic* consequences; because the intention associated with those actions was not to kill any living being.
- As we will see below, several key things contribute to the *kammic* power: the intention, what kind of knowledge is behind that intention, and whether one does the act enthusiastically are all key factors.

5. Now let us take an example to see how these different factors contribute to the strength of a *kamma*. Suppose a person who does not know that stealing is a bad thing to do and that it will have bad consequences steals something from a shop. Since **he does it with the wrong vision (ten types of *micchā diṭṭhi*), he does not feel remorse for it**. Thus the *kammic* strength is very high; see "Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage."

- But if he does it on the urging or prompting of another, then it will have less strong *kammic* consequences since he did not think about doing it on his own, and thus the "*javana*" or the "impulse power" of the *citta* is less strong.
- Now, if he comes up with the idea of stealing by himself AND enjoys doing it, that is the worst.

© 2026 Lal A. Pinnaduwage

6. So, now we can see different levels of *kammic* strengths associated with the SAME ACT of stealing:

- 01 If done with wrong vision, with pleasure, and without prompting, it will have the highest strength (of course, this will be the highest BAD strength).
- 02 If done with wrong vision, with pleasure, and with prompting, it will have the next lower strength.
- 05 If done with the wrong vision, with a neutral feeling, and without prompting, it will have the next lower strength.
- 06 If done with the wrong vision, with a neutral feeling, and with prompting, it will have the next lower strength.
- 01 *Somanassasahagataṁ diṭṭhigatasampayuttaṁ asaṅkhārikaṁ ekaṁ.*
- 02 *Somanassasahagataṁ diṭṭhigatasampayuttaṁ sasaṅkhārikaṁ ekaṁ.*
- 05 *Upekkhāsahagataṁ diṭṭhigatasampayuttaṁ asaṅkhārikaṁ ekaṁ.*
- 06 *Upekkhāsahagataṁ diṭṭhigatasampayuttaṁ sasaṅkhārikaṁ ekaṁ.*

Now in the next four cases, the same act was **done by a person who did know that it was a bad act** and it will have bad consequences and would do it with at least some hesitation, and thus the "*javana*" or the "impulse of the thought" would be less, and consequently, the *kammic* power will be less. So, now we have the last four cases:

- 03 If done WITHOUT wrong vision, with pleasure, and without prompting, it will have the highest (GOOD) strength.
- 04 If done WITHOUT wrong vision, with pleasure, and with prompting, it will have the next highest strength.
- 07 If done WITHOUT wrong vision, with a neutral feeling, and without prompting, it will have the next highest strength.
- 08 If done WITHOUT wrong vision, with a neutral feeling, and with prompting, it will have the least strength.
- 03 *Somanassasahagataṁ diṭṭhigatavippayuttaṁ asaṅkhārikaṁ ekaṁ.*
- 04 *Somanassasahagataṁ diṭṭhigatavippayuttaṁ sasaṅkhārikaṁ ekaṁ.*
- 07 *Upekkhāsahagataṁ diṭṭhigatavippayuttaṁ asaṅkhārikaṁ ekaṁ.*
- 08 *Upekkhāsahagataṁ diṭṭhigatavippayuttaṁ sasaṅkhārikaṁ ekaṁ.*

7. Thus, it is clear that just having an understanding of Dhamma (that it is unfruitful to gain anything at the expense of other beings) will automatically make the *kammic* power less potent; but this "knowledge" is not the "book knowledge"; it is not effective if one has read about it, but the mind has not grasped it. Wisdom and "book knowledge" are two different things.

- If you think about it deeply, it should become clear that **it is the comprehension of *anicca*, *dukkha*, and *anatta* that leads to true knowledge (*paññā*)** and **helps get rid of *avijjā* (ignorance)**. It involves understanding the true nature of this world and that one's actions are bound to have consequences.
- It works in the other way too. Good actions will lead to good results.

8. Thus, the same reasoning is true for meritorious acts (*puñña/kusala kamma*). There are eight levels, depending on whether one does a meritorious act with/without knowledge, with joy/with a neutral feeling, and without/with prompting, just like in the case of the greed-based *akusala citta*. Let us take the case of someone donating to build a shelter for homeless people.

© 2026 Lal A. Pinnaduwage

- This *kusala kamma* (meritorious deed) done with knowledge, joy, and without prompting has the highest merit.
- And THE SAME *puñña kamma* done WITHOUT knowledge, with a neutral feeling, and with prompting has the LEAST effectiveness.
- Thus the same deed done without comprehension of *Tilakkhaṇa* is a *puñña kamma.* The same deed done with comprehension of *Tilakkhaṇa* is a *kusala kamma.*
- The intermediate six are just analogous to the ones for the greed-based *akusala kamma*.

9. Let us examine how these categories play out in the real world for the above mentioned meritorious act of building a shelter for the homeless:

- If someone understands the value of giving, does it out of the kindness felt for those homeless people, does it without wishing for anything in return, and will be doing it with knowledge. And thus, it will be done without prompting and with natural joy in the heart, realizing that one is making a difference in many people's lives. This is the highest merit.
- If a person did the same deed, but initially it took some prompting from others or even him/herself, it was not spontaneous and thus will have somewhat less "*javana*" in the thought process.
- Those two scenarios without joy would have even less "*javana*" in the thought process. Here one may write a check and may not think much about it afterward. But in the above two cases, the person may stay engaged with the act of building the shelter and gains joyful feeling every time he/she thinks about it.
- Now, those four cases can be repeated for a person who does not understand the true impact of that action. The *kammic* power will be reduced accordingly. Thus a person who does not have an understanding of *kammic* consequences, the true nature of this world (i.e., that we all may go through such hard times or worse in other lives, etc.), just writes a check out of necessity, may be even to get some votes (i.e., prompting by oneself after seeing the benefits for one's political career) will have the least benefits.
- Thus understanding Dhamma (true nature of the world) leads to spontaneous meritorious actions done with a joyful heart; this leads to *saddhā* (true faith) , *citta pasāda* (joy), and *adhimokkha* (resolve) to get the maximum impact of the impulse *kammic* power (*javana*). *Adhimokkha* (resolve) is a key factor in the *kusala-mūla paṭicca samuppāda*, see, "Kusala-Mūla Paṭicca Samuppāda."

Notes:

1. This post clarifies the types of different *citta* given in *Abhidhamma*. See "Akusala Citta and Akusala Vipāka Citta" and #4 of "Conditions for the Four Stages of Nibbāna."
2. There are two *akusala kamma* rooted in hate and two rooted in ignorance. The ways to sort those are different. I will write another post on them.
3. The above description is a simpler version of a post that I did recently: "Javana of a Citta – The Root of Mental Power." It may be a good idea to read that too.

12.22 Possible Outcomes of Meditation – Samādhi, Jhāna, Magga Phala

Revised May 30, 2018; February 10, 2020

Introduction

1. As we discuss in the "Bhāvanā (Meditation)" section, meditation is of two types.

- One is done at all times, being "morally mindful." Then the other type is the formal meditation where one contemplates on a given "procedure" while sitting down or walking.
- In Buddhist meditation, the first is more important than the second.

2. Then there are three possible outcomes of meditation: *Samādhi*, *jhāna*, and *magga phala*.

- One gets to *samādhi* by focusing the mind on one thing. Frequently a mind jumps incessantly from one thing to another. A sound pulls the mind one way, a sight another way, smell, etc., and the mind itself likes to jump around.
- When one is thinking about a greedy or angry thought, the "scatteredness" of the mind is intensified.
- Regardless of the cause, this makes the mind tired.

What is *Samādhi*?

3. *Samādhi* ("*sama*"+"*adhi*" where "*sama*" means "equilibrium" and "*adhi*" means "dominance") means turning the mind towards an equilibrium state away from distractions (especially greedy, angry, or foolish thoughts.)

- The opposite of the Pāli word "*sama*" is "*visama*." When either the body or the mind gets "away from equilibrium," that is "*visama*" and we become uncomfortable. [***sama*** :[adj.] even; equal; level; similar. (m.), calmness; tranquillity. ***visama*** : [adj.] uneven; unequal; disharmonious.]
- A good analogy is the following. We become restless if our environment becomes too hot. Then we try to find a way to cool ourselves. We get very uncomfortable if we are in a "too cold" environment also. Then we try to be warm by turning on a heater or wrapping ourselves with blankets.
- However, if the room temperature is moderate and away from both those extremes, then we feel comfortable. We feel contended.
- A similar effect takes place when the mind stops going to the extremes. A greedy or angry mind is in a "*visama*" state and is away from *samādhi*.
- However, if the focus is a *dhamma* concept, then the mind moves toward "equilibrium."

Getting to *Samādhi*

4. Unless one has experienced *Samādhi*, or especially *jhāna*, one may not even realize that one's mind is always under stress. Of course, when a deadline approaches and the mind goes to overdrive, we notice that. One can truly appreciate this only after experiencing the tranquility of a focused mind. The mind gets "sensitized" as one gets to *Samādhi*.

- Most people do not realize how "inherently stressed" our minds are. We get used to things and do not feel even hardships. Only when we get to a "better state," we feel the difference, and then it is hard to go back to the "lower state".
- For example, one who has lived a life of poverty has gotten used to it. However, if one is able to upgrade the lifestyle to a higher level, then one can FEEL the difference and now it will be very tough to go back. One becomes "sensitized". We will encounter this word "sensitized" in many cases when we discuss the *Satipaṭṭhāna sutta*.

© 2026 Lal A. Pinnaduwage

5. There are three kinds of *Samādhi* when categorized according to morality, i.e., what the focus is on. There is *micchā Samādhi* and two types of *Sammā Samādhi*, one mundane (for living a better life) and one supermundane (focusing on *Nibbāna*).

- A suicide bomber who is assembling a bomb must focus on his task. Otherwise, he will blow himself up. He gets into a *micchā samādhi.*
- Most people meditate to get some "peace of mind", to get some relief from the pressures of hectic life by focusing on the breath. That is a form of *samādhi*. When one focuses on a neutral object, like breath, one gets to such a "neutral kind of *samādhi*".
- The best kind of *samādhi* is attained when one focuses on a *dhamma* concept, which takes the mind off *pañcanīvaraṇa*. See, "Key to Calming the Mind – The Five Hindrances."
- There is a post on different types of *samādhi*: "What is Samādhi? – Three Kinds of Mindfulness."

Jhāna Is a Deeper Level of *Samādhi*

6. *Jhāna* is a deeper level of *samādhi*, where the mind really gets absorbed in the object (*ārammaṇa*). Then the tranquility is optimized, and there are eight levels of *jhānā*. The first four are the ones experienced by beings in the 16 realms of the *rūpa loka*, and the last four in the 4 realms of the *arūpa loka*.

- *Jhānā* CANNOT be attained via *micchā samādhi.*
- The *jhānā* attained via *Sammā Samādhi* are two types, corresponding to *Ariya jhānā* and *anariya jhānā*; see, "Power of the Human Mind – Anariya or Mundane Jhānā" and "Power of the Human Mind – Ariya Jhānā."
- Even though one can get to *anariya jhānā* by just focusing on the breath, it does require one to live a moral life. One who is not at least following the conventional five precepts will not be able to cultivate them; see,"Jhānic Experience in Detail – Sāmaññaphala Sutta (DN 2)."
- Of course, the uniqueness of Buddhist meditation is the supermundane *Sammā Samādhi*, leading to *Ariya jhānā*, and the four stages of *Nibbāna*.
- **However, one could be distracted from attaining a *magga phala* if one starts enjoying *anariya jhānā.*** Therefore, it is best NOT to attain *anariya jhānā.* However, some people can easily get to *anariya jhānā* if they had cultivated *jhānā* in recent previous lives.

Permanent Removal of Suffering Attained Only With *Magga Phala*

7. Thus the highest levels of "peace of mind" are at the four stages of *Nibbāna* or *magga phala*: *Sotāpanna, Sakadāgāmī, Anāgāmī*, and *Arahant*. However, it is not necessary to PRACTICE *Ariya jhānā* to attain *magga phala.*

- For example, one could attain the *Sotāpanna* stage without practicing *jhānā*. What is needed for achieving the *Sotāpanna* stage is *upacāra/anuloma samādhi*; see, "Citta Vīthi – Processing of Sense Inputs."
- Furthermore, unless one has practiced it before, a *Sotāpanna* cannot automatically get into a *jhāna*. However, it will be easy for a *Sotāpanna* to attain *jhānā* with practice.
- We need to remember that *jhānā* are mental states of higher-lying *Brahma* realms. They still belong to the 31 realms of "this world." One needs to lose cravings for *jhanic* pleasures to attain the *Arahanthood.*

Jhāna Not Necessary to Attain *Magga Phala*

8. What is required to attain *magga phala* is *samādhi*. *Jhānā* are NOT necessary to achieve *magga phala*.

© 2026 Lal A. Pinnaduwage

- We know that there are *jāti Sotāpannas* born in the human realm. But if a *jhāna* were REQUIRED to attain the *Sotāpanna* stage, then that person WOULD NOT be born in the human realm, but in a *Brahma*-realm corresponding that *jhāna*. Waharaka Thero emphasizes that in the following *desanā*:

  WebLink: PureDhamma: Listen to Are Jhāna Required for Magga Phala

- Furthermore, just by listening to correct Buddha Dhamma and/or attaining *jhāna* does not make one become a *Sotāpanna*. The *Thero* points out that Devadatta ended up in an *apāya*, even though he had not only cultivated *jhāna* but had supernormal powers (*iddhi*) too. Devadatta listened to many discourses from the Buddha but was not able to attain the *Sotāpanna* stage of *Nibbāna.*

Getting to *Ariya jhānā* – Only After *Anāgāmi* Stage

9. One gets to *anariya jhāna* by SUPPRESSING *kāma rāga* and *paṭigha*. One gets to *Ariya jhāna* by REMOVING *kāma rāga* and *paṭigha.* See, "Power of the Human Mind – Ariya Jhānā." **But before one can use this technique to attain *Ariya jhānā*, one needs to attain the *Anāgāmi* stage.**

- One sits down in a quiet place and first contemplates on *anicca*, *dukkha*, and *anatta nature*. One then keeps repeating the following (or the English translation; what matters is one has to have the understanding.) "*Etaṁ santaṁ etaṁ paṇītaṁ, yadidaṁ sabbasaṅkhārasamatho sabbūpadhipaṭinissaggo taṇhākkhayo virāgo nirodho nibbānan'ti.*" That means, "It is the only peace, the only happiness: prevent *saṅkhāra* from arising (via) eliminating *taṇhā* and excess greed and thus stopping the arising of defilements, which is *Nibbāna.*" ['*etaṁ santaṁ etaṁ paṇītaṁ yadidaṁ sabbasaṅkhārasamatho sabbūpadhipaṭinissaggo taṇhākkhayo virāgo nirodho nibbānan'ti*, which means, "It is peaceful (*santaṁ*), it is supreme (*paṇītaṁ*), which is the calming of *saṅkhāra* and breaking of bond (*upadhi*) via eliminating *taṇhā* and excess greed (*rāga*), and thus stopping the arising (*nirodho*) of defilements (*saṅkhāra*, *upadhi*, *taṇhā*, and *rāga*), which is *Nibbāna*." AN 9.36 *Jhāna Sutta.*
  upadhi : 'substratum of existence' or bond. In the Com. there are enumerated 4 kinds : the 5 groups (*khandha*), sensuous desire (*kāma*), mental defilements (*kilesa*), *kamma*.]

- The reciting of a certain phrase (meaningfully, with understanding) is called a "*kammaṭṭhāna.*" A given meditation technique is also called a *kammaṭṭhāna.*

- Two important points. (1). One can either say it out quietly or say it in one's mind, (2) This is not chanting; just saying the words will be just a waste of time. One needs to comprehend, to some extent, what is meant by *anicca*, *dukkha*, *anatta*, i.e., some idea of what *Nibbāna* (or "cooling down" is).

- If one has experienced any kind of "cooling down," it is best to recall that while saying the above phrase. For example, if one does not flare up like one used to, or if one has less attachment to things, that is the best to recall.

- Unlike the *Sotāpanna* stage, it is relatively easy to confirm the attainment of *Ariya jhāna.* One must have REMOVED *kāma rāga* (craving for sensual pleasures, including the urge for sex) even to attain the first *Ariya jhāna.*

Summary

10. Thus reaching *magga phala* and *Ariya jhānā* REQUIRE the understanding of *anicca, dukkha, anatta*, the Three Characteristics of existence. Without the "correct vision" or *Sammā Diṭṭhi* at some level, the mind does not see the unfruitful nature of sense pleasures or the "superiority" of *nirāmisa sukha*.

Next, "Are you not getting expected results from meditation?", ……..

12.23 What is Samādhi? – Three Kinds of Mindfulness

Revised May 16, 2019; revised February 13, 2021; December 10, 2022; January 30, 2023

What Is *Samādhi*?

1. *Samādhi* ("*sama*" + "*adhi*" where "*sama*" means "same" and "*adhi*" means "dominance") means the object becomes the priority. Then the mind becomes focused on it. As we discussed in many posts, when the mind becomes focused on one object (*ārammaṇa*), the *ekaggatā cetasika* takes over and makes the mind latch "onto it."

- That is how one gets to both *samādhi* and *anariya jhāna* using breath meditation, just by focusing the mind on the breath. The goal here is to calm the mind by keeping it away from greedy and angry thoughts. As long as one keeps the mind focused on the breath, it cannot "run around and latch on to greedy/angry thoughts."
- But that does not help eliminate the "deeply-ingrained defilements" or *anusaya*. That is why the "peace of mind" attained in a breath-meditation retreat goes away a few days after returning to regular activities.
- One gets to *samādhi* on whatever activity one gets absorbed in. Someone absorbed in an exciting book is in a *samādhi* too.

Many Kinds of *Samādhi*

2. Being mindful also depends on the situation. The mindfulness needed while driving a car differs from the mindfulness required to design something (or read a book). And the mindfulness required to attain a *jhāna* is different from those two.

- There can be numerous kinds of *samādhi*. There can be *micchā samādhi* too. For example, when setting up a bomb, one focuses on that and gets into a *micchā samādhi* (otherwise, the bomb may blow up.)

Here we distinguish three types of *samādhi* or mindfulness:

- Momentary mindfulness (*khaṇika samādhi*) [***khaṇika*** : [*nt.*] momentary; temporary; changeable.]
- Access mindfulness (*upacāra*, pronounced "*upachāra*," *samādhi*) where one stays longer in that state. [***upacāra*** : [*m.*] neighbourhood; preparative or preliminary action.]
- Absorption mindfulness (*appaṇā samādhi*) [***appaṇā*** : [*f.*] fixing of thought on an object; attainment of a trance.]

Let us discuss each type separately.

Momentary Mindfulness or *Khaṇika Samādhi*

3. We should always have **momentary mindfulness or *khaṇika samādhi***. Here we frequently change the focus from one object to another based on the need.

- We can use momentary mindfulness during the day when we are active. When we talk to someone, we should be mindful of what we say. The more one practices, the more one can control one's speech by being mindful. It is the same with any physical activity too. When we are about to cross the street, we should be aware of the traffic, etc.
- Many people take this the wrong way, and use it as formal meditation. It is kind of silly to do the wrong "walking meditation" by saying "lifting the foot," "putting it down," etc., like a robot. That is what happens when Buddha's teachings get distorted.

© 2026 Lal A. Pinnaduwage

- For example, when driving, we need to pay attention to the road and apply brakes if the car in front gets too close. We must keep an eye on the traffic and be prepared to take quick action. Focusing the mind on the job at hand here translates to shifting the focus to different tasks optimally to drive the car safely.

Access Concentration or *Upacāra Samādhi*

4. **Maintaining concentration (*upacāra samādhi*)** is more focused. While reading an exciting book, one gets absorbed in it. One cannot be thinking about other things while reading.

- On the supermundane (*lokuttara*) side, when listening to a Dhamma discourse or reading about a Dhamma concept, one can get into access concentration or *upacāra samādhi*. Reading a web post on a Dhamma concept can calm one down if done at a quiet time. Reading with understanding and a focused mind makes it possible to get into a somewhat deeper *samādhi*.
- All following activities involve access concentration. A programmer writing computer code or a surgeon doing surgery, an architect designing a building, a scientist thinking about a new theory, etc. These are all mundane *Samādhi*. But one can still feel being in a trance if one gets absorbed in any task.

Appaṇā Samādhi or Absorption in Concentration

5. ***Appaṇā Samādhi* or absorption in concentrations** can lead to a *jhānic* state with practice. Here one needs to find a quiet place,close one's eyes and concentrate on just one neutral object.

- In *Ariya* meditations, the focus is something related to *Nibbāna*. It could be a Dhamma concept or *Nibbāna* itself. But one must have attained a *magga phala* to get into such a *samādhi*.
- *Ariya Mettā Bhāvanā* is another.
- Both help a mind to "comprehend Dhamma" and cleanse it.
- In *anariya* meditations, this object is usually either a *kasiṇa* object, the breath, or the stomach's falling/rising. **That only prevents a mind from accumulating more "gunk/defilements" but does not help cleanse existing gunk!**

Some Examples

6. Now, let us look at some general features of the three types.

- For someone with practice, it is possible to get into *appaṇā samādhi* (*jhāna*) very quickly. Thus the difference between the three types of *samādhi* is not in the time scale. Instead, it is on the goal or the situation at hand.
- Workplace or home accidents happen when one loses momentary mindfulness. If one loses attention/focus, one can pull the wrong switch, cut oneself while chopping vegetables, or even trip while walking.
- One can read something for hours and not get anything in, if the mind wanders off. One can meditate for hours and not get into *samādhi* if the mind wanders off.

Sammā Samādhi and Five Hindrances

7. In all these three types, achieving mindfulness comes naturally if the five hindrances do not cover the mind; see, "Key to Calming the Mind – The Five Hindrances."

- It is challenging to calm the mind if one has greedy or angry/hateful thoughts (*kāmacchanda* and *vyāpāda*.)
- Even a simple task can become aggravating and frustrating under the following conditions. One's mind is lethargic (*thina-middha*), one is agitated by being high-minded or low-minded (*uddhacca-kukkucca*),

© 2026 Lal A. Pinnaduwage

or one does not have a clear idea of the task (*vicikicchā*). [Note: *thina-middha* and *uddhacca-kukkucca* are one whole, each word consisting of two *cetasikā*. A *Sotāpanna* may still have more or all of the four *cetasikā*.]

8. Thus, it helps to live a moral life, i.e., avoid the ten immoral actions as much as possible. See "Dhamma Concepts."

- If one is planning a "formal meditation session," it pays off to make preparations ahead of time to set up a conducive mindset.
- Especially for the *upacāra* and *appaṇā samādhi*, one could get other tasks out of the way beforehand. Then meditation does not have to be interrupted in the middle. Simple things like going to the bathroom and ensuring one does not have a full stomach before sitting down to meditate can make a difference.
- Preliminary procedures, such as reciting precepts or offering flowers or incense to the Buddha before a formal meditation session, are also a part of "getting the mind ready." That helps to attain "*citta pasāda*" or a "joyful mind."

Sammā Samādhi and *Sammā Sati*

9. *Samādhi* is the endpoint of being mindful (*sati*).

- *Samādhi* is a synonym for the *cetasika* (mental factor) of *ekaggatā*, i.e., having a focus. One can cultivate it by being mindful the correct way, i.e., via mundane *sammā sati*.
- *Lokottara sammā sati* requires comprehension of the Four Noble Truths/*Paṭicca Samuppāda*/*Tilakkhaṇa*. See "Sīla, Samādhi, Paññā to Paññā, Sīla, Samādhi."

Different Types of *Samādhi*

10. It is also possible to get into *micchā samādhi*, the opposite of *sammā samādhi*. A master thief plotting a grand robbery can get focused and be absorbed in that immoral activity. The same is true for a serial killer planning a killing.

- Thus, there are three kinds of *samādhi* when categorized according to morality. One is *micchā samādhi*. The other two are *sammā samādhi*: one mundane (for living a better life) and one supermundane (focusing on *Nibbāna*).

11. One could get into *upacāra samādhi* by reading this post and paying attention to the material. One may need to read related posts or other articles to absorb the key concepts. When the minds get "absorbed in the issue," it is in a state of *samādhi*. Of course, that is possible only if the material is interesting to oneself.

- If correctly done, one will have a lower heartbeat, and a calmer and more peaceful mind at the end of the reading session. People have attained even *magga phala* by attentively listening to Dhamma discourses.

© 2026 Lal A. Pinnaduwage

12.24 Getting to Samādhi via Formal Mediation Sessions

March 25, 2016; revised December 1, 2017

1. It does make sense to do formal meditation even at the very beginning when one decides to follow the Path of the Buddha, but AFTER one has at least read about the correct interpretation of "Anicca, Dukkha, Anatta." In the following I will discuss the importance of a daily (or few days a week) formal meditation session.

- When one starts seeing the dangers of staying "in this world" (*anicca* nature), one needs to reassure the mind that there is an alternative, i.e., *Nibbāna* or *Niveema.* Thus, simultaneously with contemplating *anicca* nature, one needs to encourage the mind to taste the *nirāmisa sukha* that results from it by cultivating *samādhi*. A formal meditation session provides that.
- The Buddha gave a simile to explain this effect. In the old days, when people took to the oceans to look for new lands, they took caged birds with them. When they were lost and wanted to find whether they were close to land, they released a bird and shooed it away frightening it. The bird would fly around looking for safety (i.e., land) but will be forced to come back to the ship if no land is found; but if it can see land, it will not come back to the ship. When the mind starts seeing the dangers of *āmisa sukha* or "worldly pleasures", we need to encourage it to enjoy the *nirāmisa sukha,* i.e., that there is a better alternative.

2. Even before one gets to *jhāna*, one can experience "cooling down" when one engages in regular formal meditation. Looking back to my early days, I remember getting to some sort of *samādhi* while sitting at the desk and contemplating on a Dhamma concept. The body became light and breathing became slow due to the calmness of the mind.

- It is hard to feel "*samatha*" or "*samādhi*" if one is not sitting down or lying down.
- Furthermore, it gives one confidence that one is making progress if one can see the "improvement" in being able to stay in "*samādhi*" for longer times with practice. To emphasize, this *samādhi* does not need be a *jhāna*. It is just being able to stay in one place with a focused mind and with palpable lightness in the body and the mind.

3. Many people who do breath meditation say that it is a *samatha bhāvanā* to calm the mind BEFORE doing *vidassana* (insight) meditation. But that is a waste of time. One can get to *samatha* by doing *vidassana (vipassana)* or insight meditation.

- As I have discussed in other posts, one should find a quiet place and sit comfortably. One could start the session with *Tiratana vandana* to calm the mind; see, "Buddhist Chanting." One could make the room dark and light a candle and/or incense to "set the background". Those activities help some people to get into the proper mindset.
- Then one could just start contemplating on a Dhamma concept. One could either listen to part of a *desanā* or read part of an essay and then start contemplating on that. This is insight meditation.
- Some people who do breath meditation have difficulty in maintaining their focus on the breath; other random thoughts start creeping in. However, if one starts seeing the value of Dhamma and becomes truly interested in learning Dhamma, it will become easier to concentrate on a Dhamma concept. Thus one initially should pick a topic of interest to oneself.

4. With time, it becomes easier to get to *samādhi* by gradually purifying the mind. But it is important to figure out which areas to focus on in order to gain maximum benefits.

- First, it is important to realize that there are two main categories of "bad deeds" that can have negative consequences; see, "Lobha, Dosa, Moha versus Raga, Patigha, Avijjā" for details.

© 2026 Lal A. Pinnaduwage

- Those done with *lobha* (excess greed), *dosa* (hate), and *moha* (covered mind) can lead to birth in the *apāyā* (four lowest realms). Permanent reduction of *lobha, dosa, moha* to *rāga, paṭigha, avijjā* happens when one attains the *Sotāpanna* stage.
- Those done with *rāga* (craving for sense pleasures), *paṭigha* (friction), and *avijjā* (ignorance) can only lead to rebirth in the higher realms in the *kāma loka* (human and *deva* realms), and in *rupi* and *arupi brahma loka*. Thus one can concentrate on those after getting to the *Sotāpanna* stage, but one can start thinking about them too in order to help comprehend the *anicca* nature as discussed further below.

5. Therefore, our main goal should be to avoid those actions that can lead to rebirth in the *apāyā*, i.e., avoid those actions done with *lobha, dosa, moha.*

- In simplest terms, this means getting rid of *micchā diṭṭhi* and comprehending *anicca* nature. One of the strongest kind of *micchā diṭṭhi* prevalent today is materialism: One believes that at death one ceases to exist, i.e., one believes that the mind is a byproduct of the body (brain), and thus when the body dies, that is the end of story. This is also called *vibhava taṇhā*.
- It is a good idea to review the relevant posts on *micchā diṭṭhi* to make sure one understands them. The ten types of *micchā diṭṭhi* are discussed in "Three Kinds of Diṭṭhi, Eightfold Paths, and Samādhi." There are also many posts on "anicca, dukkha, anatta."
- Starting on the Eightfold Path for a *Sotāpanna Anugāmi* begins with getting rid of *micchā diṭṭhi*, comprehending *anicca*, and thereby comprehending first stage of *sammā diṭṭhi*; see, "Buddha Dhamma – In a Chart" and the post in there.

6. By sorting out priorities (the order of things to be done), we can save a lot of time in getting to the *Sotāpanna* stage.

- One has the potential to be born in the *apāyā* if one has remnants of *gati* suitable for those four realms; there are many posts on *gati, bhava*, and *jāti* at the site to read and contemplate on.
- It is imperative to be mindful and avoid actions compatible with "*apāya gati*." In the meditation sessions, one could think back to the previous few days and see whether there were any such instances and make a determination to not to repeat such acts. Once it becomes a habit, one can even catch oneself doing it and stop right then.
- For example, if someone does something bad to you, and if you start thinking about "how to get back" in retaliation, that is done with hate and need to be stopped. However, it is OK if one "gets mad" momentarily at such an unprovoked, harsh act by someone. It is only at the *Anāgāmī* stage that one will automatically stop "getting mad". Even then there may be some annoyance at that person. Only an *Arahant* has perfect *upekkhā* and will not be bothered to the slightest by ANY provocation.
- Another example is extreme greed (*lobha*) where one tends to do "whatever it takes" to get what one wants, and also wishing that others should not get those things. Enjoying sense pleasures (*kāma rāga*) that are acquired through legitimate means is not a hindrance to attain the *Sotāpanna* stage. Thus engaging in sex with a spouse is done with *kāma rāga*, but that with another's spouse or a child, for example, is done with *lobha*.
- A successful meditation program goes hand in hand with a moral lifestyle. They feed on each other.

7. It is also very important to be aware of the *dasa kusala, dasa akusala,* and also *puñña kiriya*; see, "Kilesa – Relationship To Akusala, Kusala, And Puñña Kamma Kamma," "Ten Immoral Actions (Dasa Akusala)" and "Puñña Kamma – Dāna, Sīla, Bhāvanā."

- *Puñña kiriya* help one attain the right mindset for meditation. Also, *puñña kiriya* increasingly become stronger *kusala kiriya* as one's understanding of *anicca, dukkha, anatta* grows.
- A *Sotāpanna* has COMPLETELY removed only *micchā diṭṭhi* from the *dasa akusala.* Only an *Arahant* is completely free from *dasa akusala*; see, "What is the only Akusala Removed by a Sotāpanna?."

© 2026 Lal A. Pinnaduwage

- Of course, the tendency to do *dasa akusala* start decreasing from the time one starts on the mundane eightfold path, even before the Noble Eightfold Path; see, "Buddha Dhamma – In a Chart."
- In terms of Abhidhamma, the *apāyagāmī* strength of all *dasa akusala* will be removed at the *Sotāpanna* stage due to the removal of the 4 *diṭṭhi sampayutta lobha citta* and the *vicikicchā sampayutta moha citta*; see, "Akusala Citta – How a Sotāpanna Avoids Apāyagāmi Citta." Thus if a *Sotāpanna* commits any of the remaining 9 *akusala kamma* their strength would be much reduced, because one has removed *gati* suitable to be born in the *apāyā,* mainly by getting rid of *micchā diṭṭhi.*

8. Many people worry about sense pleasures way too early. It is not necessary to forcefully suppress normal sense desires before the *Sotāpanna* stage, even though it may happen to some extent automatically. *Kāma rāga* (and *paṭigha*) are removed via the *Sakadāgāmī* and *Anāgāmī* stages.

- If a vessel is leaking due to multiple holes, one needs to fix the bigger holes first. Trying to plug small holes which are leaking slowly, while water is draining rapidly through gaping big holes, is a waste of time.

9. On the other hand, contemplating on the bad consequences of sense pleasures can lead to a better understanding of *anicca* (unfruitfulness of worldly things) and the First Noble Truth. In addition to the suffering due to obvious causes such as an ailment or a headache, we are not even aware of most of the suffering that we endure.

- In fact, in a twisted way, we perceive most of our sufferings as enjoyments. It is a "made-up" enjoyment and is called "*assāda*" **(*āsvāda* in Sinhala)**.
- This is also a good "meditation topic", and could help one to get to *samādhi*. However, this should be done when one can come to a stage where one starts to comprehend such concepts. Each person is different, so one should keep trying different options.

10. For example, we enjoy eating, especially if the food is tasty. But why do we have to eat? This seems like a foolish question, but there are beings (*brahmā*) who do not need to eat anything. They are sustained by their *kammic* power (previous good *kamma*). *Devas* have to consume *amurtha* to sustain themselves, but that is a very fine food and there is no residue (i.e., they do not defecate or even sweat). [***Devas*** are blessed with *amrita* (Sanskrit - *amṛta*; Pāli - *amata*) or the nectar of immortality. ***amata*** : *(nt.)* ambrosia; the deathless state.]

- On the other hand, we have to work hard to make money to buy food, spend time and energy to cook, and then "enjoy a meal" that lasts may be half an hour.
- But all that suffering (working to make money, going to grocery store, cooking, etc) is masked by "made-up mind pleasures" or *assāda*: We look forward to that meal and forget about all that suffering!
- On the way back from work we may start getting hungry, but that will be masked because we will be thinking only about the meal that is waiting for us.
- Is this any different from a cow who pulls a heavy cart, but forgets about all that suffering because it is focusing on a bundle of hay dangling in front of it?

11. Let us consider another type of hidden suffering that is associated with cleaning ourselves. In the morning, we brush our teeth, take a shower, shave, apply all kinds of fragrances and go to work very happily. We don't even notice the hidden suffering associated with all that work!

- One could experience another facet of that suffering if one can skip a day or two of doing those things. It will be very uncomfortable even for ourselves let alone for the others.

12. In fact, most of the things that we do in a given day are done to just maintain our bodies, our houses, our environment in a presentable condition. Yet, we do not see the suffering associated with all those activities. That is another way to comprehend *anicca* nature.

© 2026 Lal A. Pinnaduwage

- One may think that thinking about such things could make one depressed. That is certainly possible if one did not know about the *anicca* nature, and also that by following the 37 Factors of Enlightenment one can be released from that suffering.
- The comprehension of the true (*anicca*) nature of this world, and the hidden sufferings associated with it gives one "*anuloma khanti*." This is the joy that comes from grasping the true nature of this world.
- Then by realizing that there is a way to REMOVE future suffering (by following the 37 Factors of Enlightenment), provides one with "*sammatta niyāma*."
- Thus as one makes progress, it is a good idea to think about specific cases where one has gained a "peace of mind". That itself can lead to *samādhi*. One needs to realize BOTH the dangers of the rebirths process (*anicca* nature) AND the benefits of following the Path (*Niveema* or cooling down).
- When one starts experiencing BOTH *anuloma khanti* and *sammatta niyāma,* one becomes a *Sotāpanna Anugāmi,* which inevitably leads to the *Sotāpanna* stage; see, "Sotāpanna Anugāmi and a Sotāpanna." [See "Anuloma Khanti and Sammattaniyāma – Pre-requisites for a Sotāpanna."]

13. Finally, I want to emphasize the importance of trying to extend the duration of the formal meditation session gradually.

- At some point one will start feeling body sensations. And then the mind will "switch over" to a different state. When that first happened to me a few years ago, I was startled. At that point one could let the mind "take over", i.e., stop contemplating and let the *samādhi* "grow" and possibly lead to *jhānā* (it is easier for those who have the *sansāric* habit; but *jhānā* are not necessary for *magga phala*). Now one has attained a higher level of *samādhi*. One could of course continue with insight meditation.
- This is when one starts feeling enhanced *nirāmisa sukha*. It is not really a "pleasurable feeling" in the sense of what you experience in eating a nice meal, listening to a favorite song, etc. It is rather a calmness of an unburdened mind. Until one experiences it, one is not aware of the real stress that our minds are normally under. One comes out of the meditation session refreshed and alert.
- I would say it is possible that one could start experiencing some kind of benefit when the session is naturally lengthened to half an hour or may be an hour. I am just basing this on my own experience. If people are willing to share their experiences, I can update this post in the future (or even present someone's experience in a separate post). That could help motivate others.

12.25 Are you not getting expected results from meditation?

Revised December 1, 2017; January 27, 2023

Some people try to attain *Nibbānic* bliss by trying to "give up all attachment to this world" in their minds during meditation. However, until one's mind truly realizes the dangers of this world (the rebirth process), the mind cannot give up those attachments.

- One has to attain at least the *Sotāpanna* stage by "seeing the true nature of this world" before one's mindset becomes amenable to "giving up". This is the hardest part to understand.
- Even before that, one needs to get rid of the ten types of *micchā diṭṭhi* as discussed below.

1. During the time of the Buddha there was a *bhikkhu* named Poṭṭhila, who was well-versed with deep Dhamma concepts and was a well known teacher; he had developed *abhiññā* powers as well, but had not attained even the *Sotāpanna* stage. His *desanās* (discourses) were deep and only those at the *Anāgāmī* stage (at least the *Sotāpanna* stage) could follow them and get to *Arahanthood*. One day he went to see the Buddha, paid respects, and told the Buddha that he had been a Dhamma teacher during the times of several earlier Buddhas too, and helped many to attain *Nibbāna* (*Arahantship*). [**Bhikkhu Potila** - see, **Poṭṭhilatthera Vatthu - Dhammapda verse 282**]

- The Buddha asked him whether he had attained any *magga phala*, and Bhikkhu Poṭṭhila admitted that he had not. The Buddha just commented: "*Thucca* Poṭṭhila" and turned his attention to other matters; *tuccha* (pronounced "thuchcha") in Pāli and Sinhala means despicable or "lowly".

2. So, *bhikkhu* Poṭṭhila, who had expected praise from the Buddha for helping others, realized that he needed to work on his own salvation before helping others. He strived by himself and could not make any progress; he was trying very hard to "give up all attachments", following the instructions he gave others. But no matter how hard he tried, he could not succeed.

- When he sought help from other *bhikkhus*, they were reluctant to become his teacher because everyone knew he was very knowledgeable in Dhamma. Eventually, he went to this very young *Arahant* (well-known for his teaching abilities) and sought help. The young *Arahant* agreed to help, only if *bhikkhu* Poṭṭhila agreed to carry out everything as instructed, and Poṭṭhila agreed.
- The young *Arahant* decided to use an unusual *kammaṭṭhāna* (instructions). He took Poṭṭhila to a large area covered by mud, and asked him to wade into the mud and keep going until he told him to stop. Poṭṭhila started wading in the mud and kept going until he was told to stop when the mud was all the way up to his chin; he could barely able to move because the mud was heavy.

3. The *Arahant* told him, "if someone is stuck in the mud like that any knowledge about cleaning oneself by taking a bath is not going to help. One needs to get out of the mud first".

- Then he asked Poṭṭhila to come back. Poṭṭhila had difficulty moving since he was up to his chin in thick and heavy mud. While dragging himself out of the mud with great difficulty, Poṭṭhila realized what the young *Arahant* was talking about. It is not possible to get out of mud until one realizes that one is stuck there, and getting out of mud requires sheer willpower. Similarly, he had not realized that he was stuck at a much lower moral level; he needed to cleanse his mind first.
- The "giving up" part comes with a mind that has removed the wrong visions (*micchā diṭṭhi*) and excessive greed for sensual pleasures. These cannot be removed **just by** reading or listening to them.
- The account of bhikkhu Poṭṭhila at "WebLink: tipitaka.net: Dhammapada Verse 282" and "WebLink: ancient-buddhist-texts.net: Potthila the Empty-Head."

4. Of course one can remove some of it by reading, listening, **and contemplating** the validity of the Buddha's reasons, especially on *micchā diṭṭhi.* One has to realize that *kamma* (or one's actions) are likely to have their results either in this life or the next, and thus the rebirth process must be valid. The remaining types of *micchā diṭṭhi* are also related to *kamma* and rebirth. The ten types of *micchā diṭṭhi* are discussed in "Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage".

© 2026 Lal A. Pinnaduwage

- The second level of removal of *micchā diṭṭhi* comes via comprehending *anicca*, *dukkha*, and *anatta*; ; see, "Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage".

5. The simile can be made even better by looking at what happens to ants stuck in honey. Here unlike mud, the sensory pleasures are appealing and there is no incentive to get out. Those ants stuck in the honey, would not even try to get out because they are too busy enjoying it. **Even when they are barely stuck, and can move out of honey, they would not because they like the taste of honey.** Like that, any living being, whether a human or even the lowly worm, likes to indulge in sensory pleasures, and thus gets stuck.

- **And even when one realizes that one needs to get out of "the honey pot" it is hard, at least initially.**
- For that, one needs to see the perils of staying in this rebirth process, where birth in the lower four realms will lead to unimaginable suffering. Even if one can strive to be born in higher realms, that will not last long. **This is "*anicca*": no matter how hard we try to find refuge in the 31 realms, it is impossible to do so in the long run.**

6. With much effort, Poṭṭhila slowly made his way up to the waist level, and started feeling the lightness of being free of mud. He could now move faster too. He felt relief when he was out of the mud and was asked to go and take a shower. Now, cleaning up with soap could be done; but while stuck in the mud, there was no use for soap and water. Just like that, the profound Dhamma he had memorized was useless to him while he was still stuck in the mud.

- Eventually, when one comes out of the mud, that is like the *Sotāpanna* level. One is still covered with mud, i.e., one still likes to enjoy sensory pleasure. But now one knows one needs to shower, use soap and shampoo, and remove all that mud.

7. What Poṭṭhila was doing was to give discourses on profound Dhamma that could help an *Anāgāmī* attain *Arahanthood*. Most of those who benefited from *bhikkhu* Poṭṭhila's discourses were, ironically, *Anāgāmīs*. Poṭṭhtila was just reciting the Dhamma without real comprehension but those who benefited could comprehend the true meanings. After that *kammaṭṭhāna*, Poṭṭhila was able to attain the *Sotāpanna* stage and soon became an *Arahant*.

(By the way, one cannot attain the *Sotāpanna* stage by taking instructions from an *Anariya*, i.e., one who had not attained at least the *Sotāpanna* stage. But once one attains the *Sotāpanna* stage, one can learn by himself or from anyone else and get to the higher stages. This is why it was only *Sotāpannas* or above (mostly *Anāgāmīs*) who could benefit from *bhikkhu* Poṭṭhila's discourses).

- I believe this actual incident involving *bhikkhu* Poṭṭhila highlights a very important point. No matter how much one reads on deep concepts of Dhamma, it is hard to get the idea to sink in unless one's mind is purified to a certain extent. It is critical first to break through the heavy fog of being covered by many wrong concepts and strong attachments. When one breaks through that initial "wall of resistance," it is easier to comprehend more profound concepts; see "Lobha, Dosa, Moha versus Raga, Patigha, Avijjā."

8. One needs to make progress systematically. Just like it is impossible to learn high school math without learning basic addition/subtraction, one MUST understand the basic concepts first. Suppose one is engaged in killing, stealing, sexual misbehavior, lying, gossiping, getting "drunk" with alcohol, drugs, power, beauty, money, etc. In that case, it is impossible to calm the mind to a basic level. **And this is the hard part.** One is stuck in the mud (more like honey, because it feels good to be stuck there).

- And while stuck in the mud (or honey), no matter how much meditation one does, it is not possible to get LONG TERM relief. One may be able to go to a meditation retreat and be away from all those "honey-filled" attractions and enjoy some sense of calmness; but that goes away soon after coming back to "real life" with all those temptations.
- One needs to slowly work through the mud (or honey, because that is how it initially seems). This is the HARDEST part. No matter how much one READS, that will not make much difference until one sets up the stage for the mind to see reality.

© 2026 Lal A. Pinnaduwage

- By the way, this is also why those who meditate on "there is no self" (there is no 'me') cannot make any progress either. One needs to comprehend the "pointlessness in striving to accumulate material things for oneself" first. If one could tell a full blown lie, hurt someone else, sexually misbehave, etc., then isn't that done to gain something for "me"?

9. **Here is a rough step-by-step I would recommend (this is of course not for everyone; just for those who know they are stuck in honey):**

A. If one is hurting others for sensory pleasure, that should be stopped first. It is double jeopardy; one is "getting stuck" due to excessive greed and suffering the consequences of harming others. One is getting attached to "pleasurable things" and accumulating bad *kamma* by hurting others.

- For example, if one is killing animals for fun (sport), stealing valuables from others, having sexual relationships with other married people or young children, planning to hurt someone (even for retaliation), or spreading rumors about someone to get some pleasure out of it, getting drunk and verbally/physically abusing others, all those would be included here.
- **Such immoral activities are the worst, and are called "*pāpa kamma*". Both *lobha* and *dosa* (*dvesha*) are involved here and one's mind is said to cover with ignorance (*moha*);** see, "Lobha, Dosa, Moha versus Raga, Patigha, Avijjā."
- Thus someone in this stage is deeply in mud up to the chin.

B. One notch lower is being capable of doing things (of course not always) with EXTREME greed, even if it does not hurt others directly; here, one is only up to the waist to shoulder level in mud. These are usually the things one does to seek "perceived happiness" by going to extremes.

- When one cannot get "high enough" with alcohol, one tends to try drugs, because one has been "de-sensitized". We all know of many movie stars etc., who get into this trend and end up committing suicide because nothing at the end can bring more pleasure to a highly "de-sensitized" mind.
- Another indication of extreme behavior is living beyond one's means. This is, of course, relative. If one lives in a small (but comfortable) house and wants to move into a bigger house **by stretching one's resources**, that is a sign of extreme greed. If one is already living in a mansion that one has inherited or earned, and there is no financial burden, then there is nothing wrong with that since that will not burden the mind. However, in general, the fancier the item is, whether a house, car, or anything else, it usually takes more time and effort to "maintain." Inevitably, that leads to a higher stress level.
- Such extreme greed could also lead to actions of hate, when someone else gets in the way. Then one may do "*pāpa kamma*" here as well; actions of hate may get one into more trouble.

It is not possible to discuss all possibilities, but one should be able to figure out many such cases. No one else can decide these for anyone. Only each person knows about one's status of mind. However, any sensible person can make judgements for oneself, but not for others.

C. If one is at stage A or B above, one should read those posts in the "Moral Living and Fundamentals" section. It could be helpful to read those as one progresses and see that one understands more things than previously. This is hard to explain but it is true. A clear mind sees things much more quickly.

- Those in stages A or B should read posts #1 through #3 below.

D. Once one gets to the B stage, one should start reading the "Key Dhamma Concepts" posts and learn and comprehend *anicca*, *dukkha*, and *anatta*.

This is the real key step to getting started on the next stage. Once one gets some traction, there is nothing to hold back someone from attaining the *Sotāpanna* stage. It had been hard for hundreds of years only because the correct concepts were hidden. Once one gets some traction, one can start doing any of the *bhāvanā*.

© 2026 Lal A. Pinnaduwage

- As Carl Sagan said, "..think about all those emperors and kings who committed unmentionable atrocities to have a sense of superiority and power for maybe 50 years. They are all gone"; see, "The Pale Blue Dot……." Even though Dr. Sagan did not know, that is another way to state what *anicca* is.
- All those emperors and kings will be stuck in the animal or lower realms for billions of years. On the other hand, a peasant who lived within his/her means and led a moral life could live in a *deva/brahma* realm for billions of years.
- The main point here is that there is no point in trying to seek sense pleasures or accumulate wealth for 80-100 years maximum because, in the end, we will not be able to KEEP ANYTHING to our satisfaction. We may have a billion dollars, but if our bodies are worn out, will we be able to get ANY sensory pleasure? Will we be able to keep any part of our bodies to our satisfaction? Many try to "beat the aging process" by using temporary fixes such as botox, but any such effect will also be temporary.
- It is impossible to grasp the meaning of *anicca*, *dukkha*, and *anatta*, if one is stuck in mud or honey.

E. When one comes out of the mud and starts walking (with mud on the body), that is like the *Sotāpanna* stage. Now one does not need anyone's help, even though that can help expedite the process; one can figure things out by oneself.

- Many know many *suttā* by heart or Abhidhamma concepts, but nowhere near the *Sotāpanna* stage.
- We must understand that Buddha Dhamma is not about JUST LEARNING concepts (even though learning plays a big part); it is all about using what is learned to purify the mind. As the mind becomes clear, one will start seeing reality better. In the Buddha's days, illiterate people could learn Dhamma just by listening, and even attained Arahanthood.

E. The final stage is to realize that even birth in such *deva*/*Brahma* worlds will be temporary. At some point in the future, they will commit some bad deed and end up in the four lower realms for a long time; that is just the nature of this world, where sense pleasures can lure anyone to commit bad actions. But there is no point in talking about that stage, until one gets above the A and B stages and becomes a *Sotāpanna*.

F. The series of posts that I am writing on the *Satipaṭṭhāna Sutta* goes through this process too, from stage A. Therefore, it may be a good idea to read those posts from the beginning. The first introductory posts are full of Pāli words but go through them briefly even if you do not fully understand. They WILL become clear later, if not now.

- When one starts following the Path, one is bound to break the trend occasionally. A child learning to walk will fall many times. Many people get discouraged when they do an immoral act occasionally; but to realize that one made a mistake, and that it bothers one's mind, means one HAS MADE PROGRESS. That is why one needs to have the perseverance to get back up with renewed determination. Just like a child WILL learn to walk, one WILL get better with time.

G. Of course I do not know the level of each person coming to the website. Only each person knows where he/she is relative to the above steps.

- If one genuinely can purify one's mind and comprehend *anicca*, *dukkha*, and *anatta*, that is all it takes to attain the *Sotāpanna* stage.
- There is material ranging from the basic to very advanced levels and even more will be posted in the future. This is for completeness, and to ensure that any scholar or interested person can gauge the depth of Buddha's true teachings.
- Some people start comprehending Dhamma and start enjoying finding further details; no other type of "pleasure activity" can match the "enjoyment of Dhamma". Buddha Dhamma is the ultimate "book of nature".
- Furthermore, reading widely on different topics will help build *saddhā* (faith), which is NOT blind faith but faith built on understanding. When one sees how little modern science knows compared to the Buddha, it helps build faith. **And *paññā* (wisdom) and *saddhā* grow together.**

12.26 How to Attain Samādhi via "Vipassanā Pubbaṅgama Samatha" Bhavana

Revised June 23, 2023; January 10, 2024

Sammā Samādhi (state mind to permanently remove "*saṇ*") requires comprehending the Noble Truths/*Paṭicca Samuppāda*/*Tilakkhaṇa*. That is possible only with *vipassanā* or "insight meditation." However, *Samatha* (calming the mind) plays a critical role too.

Anariya Bhāvanā Is Only *Samatha Bhāvanā*

1. *Anariya bhāvanā* methods (which include breath or repeated recitation of a passage, such as "May all beings be happy and healthy") can suppress "sensual thoughts" (based on "*kāma rāga*") and lead to **mundane *samādhi***.

- But the effects are temporary, as anyone who participated in meditation retreats knows; it feels really good at the retreat, but after returning and getting into the hectic everyday life, that feeling of calmness fades away with time.
- Why is that? The reason is that our minds have deeply embedded "hidden defilements." The above methods help them keep suppressed, so it feels like one has gotten rid of them.
- Consider a glass of muddy water. If we let it sit for a while without disturbing it, the mud will settle to the bottom of the glass, and the water on the top eventually becomes relatively clean. Yet, if stirred with a straw, the mud will come back up, and dirty water can be seen.
- The mud at the bottom of a glass of water can be compared to "hidden defilements" in our minds. If the mind is not exposed to "attractive sensory stimulants," the "mud" will settle down, and the mind seems clear and peaceful.

"Previously Unheard Teachings" of a Buddha

2. At the time of the Buddha there were *yogis* who had pushed such *anariya Samatha Bhāvanā* techniques to advanced levels and attained *anariya jhānās*.

- But the Buddha realized that such *jhānās* don't have the "staying power." They can be "broken" when a *yogi* is exposed to "attractive sensory inputs." Such "tempting sensory stimulation" trigger "hidden defilements" in a mind, as explained above with the analogy of a glass of muddy water.
- The Buddha showed those "hidden defilements" can be described in many ways. We will mainly focus on seven types of *anusaya* and ten types of *saṁyojana*. See "Kilesa – Relationship to Akusala, Kusala, and Puñña Kamma."

Two-Step Process – *Jānato Passato*

3. As explained in #5 of the above post, the removal of *anusaya* or *saṁyojana* ("mud in a glass of muddy water") requires comprehending "Paṭicca Samuppāda, Tilakkhana, Four Noble Truths."

- That comprehension happens in a two-step process, which the Buddha called "*jānato passato*": (i) First, one must be exposed to the above concepts from a Noble Person (*Ariya.*) That is the "*jānato*" step. (ii) Second, one must engage in *vipassanā* or "insight meditation" to fully comprehend those concepts (*passato.*)

Samatha and *Vipassanā* Both Needed

4. A calm, non-agitated mind is needed in both those steps of *jānato* and *passato*. That is why *Samatha* also plays a significant role.

- A calm mind is needed to get an idea of a concept being explained, i.e, in the *jānato* step.

© 2026 Lal A. Pinnaduwage

- For that idea to "sink in" to the mind one needs to repeatedly think about those concepts and to see whether they make sense; that is the "*passato*" step and obviously a calm mind is needed there too.

5. The "WebLink: suttacentral: *Yuganaddha Sutta* (AN 4.170)" explains different ways of removing *anusaya* (*saṁyojana*) and reaching *Nibbana* (*Arahanthood.*)

i. *Samatha pubbaṅgama vipassanā* (*Samatha* preceding *vipassanā*)

ii. *Vipassanā pubbaṅgama samatha* (*vipassanā* preceding *Samatha*)

iii. *Samatha vipassanā yuganaddha* (both together)

iv. *Dhammuddhaccaviggahitaṁ mānasaṁ* (this is a special case of someone getting stuck at a higher level, but will eventually overcome difficulties)

Samatha preceding *Vipassanā*

6. This first category above is likely to play a significant role early in one's practice. To calm the mind, one needs to keep the mind away from attractive sensory inputs.

- If the mind is constantly distracted by an attractive sensory input, it moves away from "*samatha.*" That attachment is ***taṇhā***.
- If a mind is vulnerable to *kāma rāga* (for those with strong *kāma rāga anusaya* or *kāma upādāna*), it could be hard to get to "*samatha.*"
- The popular method used by non-Buddhists for "sensory control" is "breath meditation." If you keep the mind on the breath, it cannot be attached to any other sensory input. However, that will not help with *vipassanā* at all.

7. Therefore, one must use "sense control" (i.e., not indulge in sensory pleasures all the time) and willfully decrease it first. In other words, one can get to "*samatha*" by keeping the mind away from attractive sensory inputs.

- That will help calm the mind and help cultivate *paññā* (insight/wisdom) to some extent. This is the "*Sīla, Samādhi, Paññā*" sequence: *sīla* (moral conduct), *samādhi* (Concentration), and *paññā* (wisdom.)
- Once *paññā* is cultivated sufficiently the mind will automatically switch to "*Paññā, Sīla, Samādhi*" sequence. **This is where one gets to *Ariya* "*Sammā Samādhi.*"** Here, the cultivated *paññā* (with the comprehension of "distorted *saññā*") can make a big difference in cultivating *Samatha*; see #8 below.
- This is explained in "Sīla, Samādhi, Paññā to Paññā, Sīla, Samādhi."

Removal of Hidden Defilements Requires *Vipassanā Bhāvanā*

8. The "*Samatha Bhāvanā"* in (ii) and (iii) of #5 above is not an *anariya Samatha Bhāvanā* like "breath meditation." Of course, such an *anariya* version could be useful in the early stages, especially while on the mundane eightfold path (the "*Sīla, Samādhi, Paññā*" sequence in #7 above.)

- In the latter stages, the best way to calm a mind is to understand the concept of "distorted *saññā*"; see "Sotāpanna Stage via Understanding Perception (Saññā)." **Once one understood the this concept, one's cravings will diminish and it will be easier to get to *Samatha*.**
- Of course, that requires some insight too. Thus, especially for those on the Noble Path, (ii) and (iii) of #5 are likely to benefit most people.

9. Thus, *vipassanā* becomes increasingly more important as one makes progress (especially after comprehending the concept of "distorted *saññā.*") It will not be necessary to a separate "*samatha bhāvanā.*"

© 2026 Lal A. Pinnaduwage

- At that point, t**he best is to keep the mind focused on a Dhamma concept, i.e., *vipassanā*.** That way also, the mind can not attach to other sensory inputs and you will get both done (*samatha* and *vipassanā*.)

Progress Will Strengthen Motivation

10. As you progress, your mind will gain calmness, a permanent relief. It will gradually become easier to "get to *samādhi*."

- The Buddha compared the relief gained by this *Bhāvanā* as follows: paying off an enormous loan that had been a burden to the mind, being released from jail, recovering from a significant disease, gaining freedom from slavery, and reaching safety after crossing a dangerous desert. If someone has all those five experiences simultaneously, the Buddha said, that is the kind of relief one gets by removing the five hindrances.
- This is the *nirāmisa sukha* gained when approaching *Nibbāna*; see the post, "How to Taste Nibbāna." *Nibbāna* is "cooling down"; any sensory pleasure cannot match it and is permanent. One can experience it in varying degrees as one cultivates this *Ariya* meditation.

13.1 Abhidhamma – Introduction

Revised January 9, 2019; August 4, 2019; September 8, 2019; July 19, 2022 (#9 added); July 25, 2022 (#10-11 added); February 23, 2023; October 5, 2024; October 29, 2024 (Ref. 4 added)

1. "*Abhi*" means "higher" or "deeper." Thus *Abhidhamma* is a more in-depth, fundamental description of Buddha Dhamma.

- The result is the same as the material in the *suttā*. Still, *Abhidhamma* provides a "bottom-up" description of existence, starting with 82 "most basic units" within the four ultimate entities of *citta, cetasika, rūpa*, and *Nibbāna*. Finalizing that task was a monumental task, and it took almost 500 years to complete it at the third Buddhist Council.
- The 81 "basic units" that make up this world are one **pure *citta***, 52 *cetasika*, and 28 types of *rūpa*. Depending on the combinations of *cetasika* that arise with *citta*, 89 (or 121) types of **contaminated *citta*** (or *viññāṇa*) can occur. That will become clear as we discuss it further.
- *Abhidhamma Piṭaka* is entirely consistent with the other two *Piṭaka* of the *Tipiṭaka*.

2. In the *suttā*, the Buddha explained the Dhamma concepts using everyday language. **Most people can attain *Nibbāna* without knowing anything about *Abhidhamma*.**

- However, one could study Abhidhamma and see WHY Buddha Dhamma is not a religion but is the ultimate explanation of nature, the Grand Unified Theory. That can lead to a "faith-based understanding" of Buddha Dhamma. It has a thousand-fold more explanatory power than modern science. And for those who like to "get to the bottom of understanding something," Abhidhamma will bring joy to the heart.

Let us take the example of making a cake:

- All one needs to know are the ingredients, how to mix them, and the proper procedures to bake them. That is analogous to *suttā*.
- *Abhidhamma*'s approach is comparable to starting at the atomic level of the ingredients. Then one can describe how those fundamental entities combine to make flour, oil, eggs, etc. Furthermore, one would know the choice of those ingredients and WHY the cake needs to bake at a specific temperature.
- It is mind-boggling what *Abhidhamma* can accomplish.
- **However, instead of being a boring "recipe book," learning *Abhidhamma* can be a delightful experience if one starts with understanding the basics. Furthermore, one can get a much deeper understanding of the Dhamma concepts.**

3. *Abhidhamma* provides a complete, consistent description of existence (encompassing the 31 realms). With this description, there can be no unexplained phenomena at any level. A logician like the late Dr. Kurt Gödel could have a great time with it; see "Gödel's Incompleteness Theorem."

- The scope of *Abhidhamma* is somewhat comparable to what the scientists are trying to do with a Grand Unified Theory to describe the behavior of inert matter. Einstein devoted the latter part of his life to developing one and failed; scientists are still far from achieving it. And even if accomplished, it can only describe the behavior of inert matter, not of living beings.

4. *Abhidhamma* is the Grand Unified Theory of the Buddha. I introduced it in the post "The Grand Unified Theory of Dhamma." In this *Abhidhamma* section, I will try to provide further details. My goal is to describe it in an easy-to-grasp, straightforward manner.

- When I taught physics to undergraduate students, I told them not to memorize anything but to grasp the essence of the material. Many students (and adults) try to memorize descriptions of a concept but have no idea how to apply that concept. I used to give them all the complex equations and any other hard-to-memorize material in the tests; they needed to apply those equations correctly in solving problems.

© 2026 Lal A. Pinnaduwage

- My approach is the same here. For example, in the "Tables and Summaries" post, different types of *cittā* (loosely speaking, "thoughts") are listed. There is no need to memorize them. One should understand a given Dhamma concept starting from the basics: for example, which *cittā* are immoral and can lead one to rebirth in the *apāyā* and WHY.

5. For example, a key concept in Buddha Dhamma is *saññā* (translated to English as "perception"). But it is much more complicated than "knowing and identifying an object"; see "Saññā – What It Really Means."

- One of my first goals in the Abhidhamma section is to describe *saññā* and the critical role played by the brain. For that, we first need to understand the connection between the brain and the mind (they are NOT the same). See "Brain – Interface between Mind and Body."
- Abhidhamma can make one addicted to it, as I have become addicted. When one starts to grasp how this complex world works, understanding even a bit more can bring joy to the heart.

6. However, I must say that even if one can understand the whole of the *Abhidhamma* theory, one MAY NOT understand the Buddha's message. **One must understand the true meanings of *anicca*, *dukkha*, and *anatta*.**

- I had so many unresolved questions on parts of *Abhidhamma* until I listened to the first *desanā* from one of my teachers on July 30, 2013, on *anicca*, *dukkha*, and *anatta*. It was like lifting a fog, and by the end of that *desanā,* I knew I would be able to 'fill in the blanks" to improve my understanding.
- *Abhidhamma* can solidify and "fill in the blanks" of Buddha Dhamma from the *suttā*, which can be exhilarating.

Background of the Development of *Abhidhamma* Theory

7. Following is a brief background on how the *Abhidhamma Piṭaka* of the *Tipiṭaka* was developed over roughly 250 years by the lineage of *bhikkhus*, starting with Ven. Sāriputta. Of course, Ven. Sāriputta was one of the two chief disciples of the Buddha: While Ven. Mahā Moggallāna excelled in supernatural powers, Ven. Sāriputta excelled in Dhamma. He was only second to the Buddha in Dhamma knowledge.

- The minute details on the structure of a *citta vīthi* (a series of *citta*) of 17 thought moments, with each *citta* lasting sub-billionth of a second, can be seen only by a Buddha. The Buddha described the framework of the Abhidhamma to Ven. Sāriputta. Then Ven. Sāriputta and his group of *bhikkhus* (and their subsequent lineage) completed the monumental task of compiling the Abhidhamma theory, starting with the fundamental entities.
- As I mentioned earlier, that is a million times more complicated than putting together a Grand Unified Theory of inert matter (as scientists are attempting to do today). A living being has an inert body but a complex mind that makes that inert body "alive." Most of Buddha's teachings (including *Abhidhamma*) are focused on the mind and mental phenomena.

8. At the First Buddhist Council, just three months after the *Parinibbāna* of the Buddha, only a theoretical framework was recited. More was added at the second Council, and the task was completed only at the third Council. This completed *Tipiṭaka* was written down in 29 BCE at the Fourth Buddhist Council; see "Preservation of the Buddha Dhamma."

- A false statement in many books is the following statement. *Abhidhamma* was "invented" by *bhikkhus* after the *Parinibbāna* of the Buddha.
- Those who make such statements have not either studied *Abhidhamma* or have not been able to understand the in-depth analyses of *Abhidhamma.* The minute details of the very fast *citta vīthi* are discernible only to the mind of a Buddha.
- It is essential to realize that hundreds of *Arahants* at the Fourth Council wrote the whole *Tipiṭaka*, including the complete *Abhidhamma Piṭaka.*

© 2026 Lal A. Pinnaduwage

9. The description of the events leading to the First Buddhist Council, just three months after the *Parinibbāna* of the Buddha, is described in the "WebLink: suttacentral: 21. *Pañcasatikakkhandhaka*" section of the "*Cūḷavagga*" of the "*Theravāda Vinaya Piṭaka*."

- At the end of that section is a small section titled "*Tassuddānaṁ*." That summarizes the events of the First Council.
- The following verse is in there: "***Upāliṁ vinayaṁ pucchi, suttantānandapaṇḍitaṁ; Piṭakaṁ tīṇi saṅgītiṁ, akaṁsu jinasāvakā***."
- That says: "Venerable Upāli recited the Vinaya (***Upāliṁ vinayaṁ pucchi***,) Ven. Ānanda recited the Suttas (***suttantānandapaṇḍitaṁ*** or ***sutta ānanda paṇḍitaṁ***), and all of the 500 *Arahants* present recited ALL THREE ***Piṭaka*** (***Piṭakaṁ tīṇi saṅgītiṁ, akaṁsu jinasāvakā.***) [***tīṇi*** : see *tayo*. ***tayo*** : [nom. plu. of *ti*] **three** (persons).]
- Thus, there is clear evidence that all three *Piṭaka* of the *Tipiṭaka* were recited at the First Council.
- However, only a basic framework of Abhidhamma was available at that First Council. Further refinements/expansions were added to the *Abhidhamma Piṭaka* at the Second and Third Councils. The finalized version was written down at the Fourth Council.

10. In the "Introduction" to his book (Ref. 1), Bhikkhu Bodhi has a subsection on "The Origins of *Abhidhamma*" (see pp. 9-11 of Ref. 1.) There, he has provided a brief background which I will summarize.

- The Buddha explained *Abhidhamma* in detail to an assembly of Devas in the *Tāvatiṁsa Deva* realm over three months. Each day, the Buddha would descend to Earth for his almsround, meet Venerable Sāriputta, and give him a summary of that day's discourse.
- Having learned *Abhidhamma* from the Buddha, Ven. Sāriputta taught it to his 500 student-*bhikkhus*. However, they had to expand that summary to the form we have in seven books today. That task was completed only by the Third Council, as mentioned in #9 above.
- The "WebLink: suttacentral: *Lomasakaṅgiyabhaddekaratta Sutta* (MN 134)" confirms that the Buddha spent in the *Tāvatiṁsa Deva* realm: "*Ekamidaṁ, bhikkhu, samayaṁ bhagavā devesu tāvatiṁsesu viharati pāricchattakamūle paṇḍukambalasilāyaṁ*." OR "One time, the Buddha was staying among the *Devas* of *Tāvatiṁsa* realm."

11. There is also a verse close to the beginning of the "WebLink: suttacentral: *Dhutaṅgapañha* (Mil 6.4.2)" section of "*Milindapañha*" of the *Tipiṭaka* directly saying that. It is in Ven. Nagasena's answer to a question by King Milinda about the vast numbers of humans and *Devas* who attained *magga phala* while listening to the Buddha.

- "*..Nagare rājagahe paññāsasahassāni tīṇi ca satasahassāni ariyasāvakā bhagavato upāsakaupāsikāyo, puna tattheva dhanapālahatthināgadamane navuti pāṇakoṭiyo, pārāyanasamāgame pāsāṇakacetiye cuddasa pāṇakoṭiyo, puna indasālaguhāyaṁ asīti devatākoṭiyo, puna bārāṇasiyaṁ isipatane migadāye paṭhame dhammadesane aṭṭhārasa brahmakoṭiyo aparimāṇā ca devatāyo, puna* ***tāvatiṁsabhavane paṇḍukambalasilāyaṁ abhidhammadesanāya*** *asīti devatākoṭiyo,.*"
- The "WebLink: suttacentral: English translation (Mil 6.4.2)" there is as follows: "..In the city of Rājagaha, three hundred and fifty thousand devout laymen and devout laywomen, disciples of the Blessed One, were walking in the Paths. And there again at the taming of *Dhanapāla* the great elephant nine hundred million living beings, and again at the meeting at the *Pāsāṇika Cetiya* on the occasion of the *Pārāyana* discourse one hundred and forty million living beings, and again at the *Indasāla* cave eight hundred millions of gods, and again at Benares in the deer park Isipatana at the first preaching of the Dhamma one hundred and eighty million Brahmā gods and innumerable others, and again **in the heaven of the Thirty-Three at the preaching of the *Abhidhamma* on the *Paṇḍu Kambala* Rock** eight hundred millions of the gods,."
- Much merits to the reader TripleGemStudent for providing me with this reference.

© 2026 Lal A. Pinnaduwage

Weakening of *Buddha Sāsana*

12. The absence of *Arahants* (in significant numbers) started around the second century CE and coincided with the rise of *Mahāyāna* and the "contamination" of Theravada, which culminated in the *Visuddhimagga* of Buddhaghosa; see "Historical Timeline of Edward Conze."

- As we discuss more topics, it will become clear that only *Arahants* with superior mental power can accomplish the complex task of completing the *Abhidhamma Piṭaka.* It was compiled without an easy way of recording, let alone having access to computers.
- I have given a breakdown of the *Abhidhamma Piṭaka* in the post, "Preservation of Dhamma."

13. **August 12, 2015:** I have brought the subsections on "Mind and Consciousness" and "Gandhabba (Manomaya Kāya)" from "Dhamma Concepts" to the "Abhidhamma" section since it is imperative to understand those basic concepts first. Reading those subsections (and "Citta and Cetasika") is a good idea before reading further in the *Abhidhamma* section.

- It is not necessary to understand the material in all those essays. But the more of those basic concepts one understands, the easier it becomes to grasp the content in subsequent articles.
- Also, we all keep increasing our understanding as we learn Dhamma. I learn new things daily and update the posts as much as possible. The more one learns, the more one can "see the inconsistencies" in other versions of "Buddhism," and possibly in my essays; some of these posts date back to 2014. Please don't hesitate to point out any inconsistencies on this website. I would be grateful. There is a "Comments" tab under each post.

14. I have written a series of posts in a new subsection introducing fundamental concepts in Abhidhamma at "Essential Abhidhamma – The Basics."

The background and an overview are at "Abhidhamma Piṭaka – Deeper Analyses of Concepts."

13.2.1 Amazingly Fast Time Evolution of a Thought (Citta)

August 23, 2018; revised (#18 added) September 12, 2018; January 6, 2019; May 16, 2020; September 22, 2021; February 1, 2024; July 5, 2024

Introduction

1. Even though only one word in the English language ("thought") describes "a unit of cognition" or "a thought," the Buddha explained that such a "thought" arises as a *citta* and goes through nine stages of "contamination" to become *viññāṇakkhandha*. What we experience is this *viññāṇakkhandha* of the "aggregate of *viññāṇa*." See, "The Five Aggregates (Pañcakkhandha)."

- However, even a contaminated *citta* is still called a *citta* for convenience, even in the *suttā*. So, one needs to determine the meaning depending on the context. One needs to have an idea of those nine stages.
- Some of these terms in the nine stages are used interchangeably as "a thought" in many Buddhist textbooks and internet sites (e.g., *citta*, *mano*, *viññāṇa*.) That is NOT correct.

2. I will make this post simple because everyone must understand how a *citta* (incorrectly translated as "thought") is "contaminated" within a split second. By the time we become aware of a "thought," millions or billions of *cittās* may have arisen.

- It is impossible to stop a *citta*'s contamination within such a short time. I have even seen some well-known, and respected Dhamma teachers say that **one can willfully** keep a "*pabhassara citta*" (uncontaminated *citta*) from being contaminated.
- I hope this post will clarify that such a thing is impossible. **One's *cittā* are contaminated depending on one's *gati* and the sensory input (*ārammaṇa*) in question.** The key to preventing *cittā* from getting contaminated is changing one's *gati* over time.
- That is done by following the Noble Path, and specifically by practicing the correct *Ānāpāna* and *Satipaṭṭhāna Bhāvanā*, **not by the "fake breath meditation."** That will become clear by the end of the post.

Nine Stages of a Thought (*Citta*)

3. Those nine stages of contamination during the lifetime of the fundamental unit of cognition (within a billionth of a second) are ***citta, mano, mānasan, hadayan, pandaran, mano manāyatanam, mana indriyam* (or *manindriyam*), *viññāṇa, viññānakkhandha.*** [*Yaṁ cittaṁ mano mānasaṁ hadayaṁ paṇḍaraṁ mano manāyatanaṁ manindriyaṁ viññāṇaṁ viññāṇakkhandho*...] A *Tipiṭaka* reference is given in the post, "Pabhassara Citta, Radiant Mind, and Bhavaṅga."

© 2026 Lal A. Pinnaduwage

- Amazingly, these nine steps occur within a split second, and the Buddha said there are billions of *citta* arising within the blink of an eye. Each *citta* has three stages: *uppāda*, *ṭhiti*, and *bhaṅga* (rising, stability, and dissolution). Those nine steps occur before the *bhaṅga* or the termination stage.
- It may be hard to believe, but we can prove this true with the following example.

4. Suppose three people A, B, C, are sitting in a small coffee shop. They are all facing the door, and person X walks in. Suppose that person X is a close friend of A, the worst enemy of B, and that C does not know X. We will also assume that all are males.

- So, let us see what happens within a split second. A recognizes X as his friend, and a smile comes to his face. B recognizes X as his enemy, and his face gets darkened.
- On the other hand, C's mind does not register anything about X, and X is just another person to him. He immediately goes back to whatever he was doing.
- Such fast "recognition" is possible because of the "*saññā*" (a mental factor or a *cetasika*) that arises with every *citta* (loosely translated as a thought.) See "Saññа Gives Rise to Most of the Vedanā We Experience."

5. **That is an example of a "*cakkhu viññāṇa*," a "seeing event."** It is over within a split second, just like taking a photo with a camera takes only a split second, where the image is instantaneously captured on the screen.

- However, something very complicated happens in the human mind when a "seeing event" occurs.
- It is critically important to go slow and analyze what happens to see how complicated this process is (for a human mind) to capture that "seeing event." It is far more complex than just recording "a picture" in a camera.

6. Within that split second, A recognizes X as his good friend and pleasant emotions arise in his mind, making him happy. B recognizes X as his worst enemy, and destructive emotions arise in his mind, making him angry. On the other hand, C identifies X as a man or a woman, and no feelings occur.

- We usually don't think twice about these observations. However, if one carefully analyzes what happens, one can easily see that this process is amazingly complex.
- How does the SAME "seeing event" (seeing X) lead to all these very different changes in the minds of three people? (and the emotions even show up on their faces!)
- No one but a Buddha can see the evolution of a *citta* because billions of *cittās* can arise in the blink of an eye.
- The Buddha has analyzed this process in minute detail. We will discuss only the critical basic features here.

Nothing Faster in the World Than the Arising of a *Citta*

7. Buddha said it is hard to find any phenomenon in this world that changes faster than the mind: "WebLink: suttacentral: Aṅguttara Nikāya (1.48)."

The short *sutta* says: "*Nāhaṁ, bhikkhave, aññaṁ ekadhammampi samanupassāmi yaṁ evaṁ lahuparivattaṁ yathayidaṁ cittaṁ. Yāvañcidaṁ, bhikkhave, upamāpi na sukarā yāva lahuparivattaṁ cittan*"ti."

Translated: "I consider, *bhikkhus*, that no phenomenon comes and goes so quickly as *citta*. It is not easy to find an analogy (a simile) to show how quickly *citta* can change."

Three Features of a Seeing Event (Cakkhu Viññāṇa)

© 2026 Lal A. Pinnaduwage

8. **The "seeing event" has three essential features:**

- One gets into an emotional state (pleasant, unpleasant, or neutral, called *sukha, dukha*, and *upekkhā* in Pāli), which is ***vedanā***.
- One recognizes the object, and that is called ***saññā.***
- Based on *vedanā and saññā*, one also generates other mental factors (*cetasika*,) such as anger and joy. Those are none other than ***saṅkhāra.***
- Of course, this holds for all six types of *vipāka viññāṇa.*

9. ***Viññāṇa* is the overall sense experience encompassing all those three:** *vedanā, saññā, saṅkhāra.*

- **But *viññāṇa* can be more than the sum of those three.** See "Viññāṇa – What It Really Means."
- We can safely say that *viññāṇa* (or, more correctly, *viññāṇakkhandha*) is the overall sensory experience, INCLUDING one's expectations based on that sensory experience. That is why one's facial expressions may change, too, according to such expectations.

10. We can see that those three people, A, B, and C, will have three different "states of mind" upon that seeing event (*ārammaṇa*).

- **That "mindset" with a set of *vedanā*, *saññā*, and *saṅkhāra* is called a *viññāṇa*.**
- *Viññāṇa* is the overall sensory experience that includes all those. And that takes place within a split second.
- There are six types of *vipāka viññāṇa* corresponding to the six sense faculties. See, "Viññāṇa – What It Really Means."

Importance of Character/Habits (*Gati*)

11. Several key important basic features come out from this simple example.

- **There is no single entity called "*viññāṇa*."** When we hear something a "*sota viññāṇa*" arises, when we taste something a *jivhā viññāṇa* occurs, etc. Altogether, six types of *vipāka viññāṇa* are associated with the six sense faculties we have. Those are *cakkhu* (see), *sota* (hear), *ghāṇa* (smell), *jivhā* (taste), *kāya* (touch), and *mano* (mind).
- **Any of those will lead to the following outcomes:** *Sukha, dukha*, or *upekkhā* ***vedanā*** arise. One recognizes what type of picture, sound, etc., and that is (***saññā***.) Then other types of *cetasika* occur (called ***saṅkhāra***) depending on the *ārammaṇa* (sound heard, etc.) AND the "nature" of the person (**character/habits or *gati***).
- *Gati* is sometimes written as *gathi as* is pronounced in conventional English. However, there is a "*Tipiṭaka* English convent" adopted in the 1800s to keep the words short; see, ""Tipiṭaka English" Convention Adopted by Early European Scholars – Part 1."
- Each person has a unique (but changing) set of good and bad *gati.* I will not discuss this here, but there are many posts on the website on *gati.*

Dependence on the "Thought Object" (*Ārammaṇa*)

12. Let us take a different scenario. Let us assume that X is B's girlfriend — who is not on good terms with A — and that C is a young male who has never seen X.

- Now, we see that the moods of A and B will reverse. A will be instantaneously unhappy to see X, and B will be happy to see X.
- The situation for C could be different. If X appears attractive to him, C may instantaneously form a lustful state of mind.

© 2026 Lal A. Pinnaduwage

13. Thus, we see that the type of *cakkhu viññāṇa* depends primarily on two things: the person experiencing it and the sense object in question (called a *ārammaṇa* in Pāli).

- In the above two cases, A and B experienced different types of vipāka *viññāṇa* (seeing something "good" or "bad.") But their experiences reversed when the sense object changed (situation in #4 versus that in #12.)
- In the case of C seeing an attractive woman, even though he had no prior contact with her, lustful *viññāṇa* arose in C, due to his "lustful" *gati*.
- If C were an *Arahant*, C would only generate a *upekkhā viññāṇa* when seeing the X. An *Arahant* has removed all *gati*; one must learn about *gati* to understand this point.

14. **Now, we see that for a given person, there is no permanent set of good or bad *viññāṇa*.** What kind of *viññāṇa* arises depends on the *gati* of the person (at that time) and the sensory object.

- We usually call someone a "good person" based on their overall character, i.e., if that person displays more "good character" than "bad character" over time. But only an *Arahant* can be called a "definitely a moral person," acting 100% morally all the time.
- Even though this is a complex subject, the basic features are those mentioned above. One needs to analyze different situations in one's mind to get these ideas firmly grasped. That is actual *vipassanā* meditation!
- To progress on the path, one needs to understand how the mind works. The Buddha said that the world had never known his Dhamma, and it has the mind at the forefront. Furthermore, the mind is the most complex entity in the world.

Simple Explanation of the Nine Steps

15. The first stage, *citta*, is just awareness that comes with the "uncontaminated" *vedanā* and *saññā* and five other universal mental factors (*cetasika*): *phassa, cetanā, manasikara, ekaggatā, and jivitindriya*. One is just aware that one is alive and is experiencing something.

- At the "*mano*" stage, the mind has "measured" what the object is (මැනීම [*mænīma* or Measurement] in Sinhala,) whether it is a tree, a human, or a bird.
- In the following "*mānasaṁ*" stage, the mind can distinguish among different species, such as whether it is just a woman or one's mother or a parrot or a hummingbird. That is the "pure and complete awareness": one sees the external world as it is. An *Arahant*'s mind will not be contaminated beyond this stage.

16. At the next "*hadayaṁ*" (හදෑ වීම [*hāda vīma* or Trouble shooting] in Sinhala) phase, the mind gets attached to the object (or repulsed by it) based on one's prior experiences and *gati*.

- This attachment gets stronger in the following several stages, and by the time it reaches the *viññāṇa* stage, it can be fully "corrupted."
- Finally, that *viññāṇa* gets incorporated into the aggregate of *viññāṇa* or the *viññāṇakkhandha*. With each thought, the *viññāṇakkhandha* grows.

17. One crucial observation is that C's mind stopped at the "*mānasaṁ*" stage in the first example above. (That is only partially correct, but we don't need to get to details here). However, in the second example, it got contaminated.

- Of course, an *Arahant*'s mind will never get contaminated beyond the "*mānasaṁ*" stage for ANY sense object.
- Specifically, no *lobha*, *dosa*, or *moha* will arise in an *Arahant*, regardless of the sensory input.

18. Hopefully, the above basic description will clarify how a *citta* gets contaminated automatically according to one's personality (*gati*) and the sense object.

© 2026 Lal A. Pinnaduwage

- The critical point is that we do not control those initial *citta* that arises automatically at the first exposure to the sense object.
- **However, when we become aware of this initial response, we can control our subsequent *cittā* by being mindful.** That is the key to *Ānāpāna* and *Satipaṭṭhāna* meditations and is a different topic. For details, see "Bhāvanā (Meditation)" and "Living Dhamma" and "Paṭicca Samuppāda" sections.

19. Finally, another critical point is that the six types of *viññāṇa* that we just discussed are all *vipāka viññāṇa*. These arise due to past *kamma*, i.e., as *kamma vipāka*. However, even this *vipāka viññāṇa* is contaminated at a low level; see "Purāṇa and Nava Kamma – Sequence of Kamma Generation."

- Then there are *kamma viññāṇa* that we create ourselves; see "Kamma Viññāṇa – Link Between Mind and Matter."
- When the Buddha said that we need to stop defiled *kamma viññāṇa* from arising, he was referring to the *kamma viññāṇa*. We have control over *kamma viññāṇa*. But we do not have control over *vipāka viññāṇa*, which is due to past *kamma*.
- Details on *kamma viññāṇa* in the post "Do I Have "A Mind" That Is Fixed and "Mine"?". At a given moment one's state of mind depends on one's *gati* (character and habits) AND the external sense object.

20. This discussion continues in "The Amazing Mind – Critical Role of Nāmagotta (Memories)" which provides further details.

13.2.2 The Amazing Mind – Critical Role of Nāmagotta (Memories)

September 6, 2018; revised September 7, 2018; October 7, 2019; March 10, 2020; June 6, 2021; June 10, 2021; September 16, 2021 (revised #1); September 22, 2021 (revised #1); December 13, 2022

Nāmagotta (Part of *Pañcakkhandha*) Are Memories

1. Here, we will discuss the critical importance of *nāmagotta* (our memory records). This discussion will help us understand the post, "Anatta in Anattalakkhaṇa Sutta – Part 1."

- It is important to note that "*nāmagotta*" contains records of all our past events. **As we know, each aggregate (*khandha*) includes all past events.** For example, *rūpakkhandha* includes the *rūpa* we are experiencing now and all past *rūpa* we have experienced. See, "Rūpa, Vedanā, Saññā, Saṅkhāra, Viññāṇa – Mostly Misunderstood." That holds for the other four aggregates too. **Thus, *nāmagotta* consists of the "past components of *pañcakkhandha*."**
- Let us take person X. If someone shows X an apple, he will say, "that is an apple, and I know how it smells and tastes." Suppose X loses all memory right after that. Now, will X be able to identify that as an apple? Of course not.
- That is another amazing thing about the mind. It can search one's previous experiences with a given object (in this case, an apple) and remember what an apple looks like, tastes like, etc., i.e., all the distinctive properties of an apple. And it can do that in a billionth of a second!
- We discussed this in detail: "Amazingly Fast Time Evolution of a Thought (Citta)."

Important Aside: A mind is constantly interacting with *pañcakkhandha* and also constantly adding to the *pañcakkhandha*.

- *Pañcakkhandha* becomes *panca upādāna khandha* (*pañcupādānakkhandha*) when the mind attaches to an *ārammaṇa* based on *gati* (character/habits). That initial "attachment" happens within a billionth of a second.

© 2026 Lal A. Pinnaduwage

- But if we are mindful, we can stop that "attachment" when it leads to unwise actions. That will slowly change our *gati*. That will lead to better responses to various types of *ārammaṇa* over time. That is the basis of true *Ānāpānasati*/*Satipaṭṭhāna*.
- Of course, practicing *Ānāpānasati*/*Satipaṭṭhāna* becomes easier with a proper understanding of the *anatta* nature. Then the mind will see the unfruitfulness of immoral deeds seeking temporary pleasures.)

Without Memories, There Would Be Only a Zombie (or a Robot)

2. **Think carefully about the following.** If X loses all memories, he will not know what to do with a plate of food put in front of him; he will not identify that as a pizza, a sandwich, etc.

- X will not know how to go home if he is at work when memory loss happens. X would not even know what "home" means and that he is supposed to go home at a particular time.
- If he gets the urge to go to the bathroom, X will not know where the bathroom is.
- You can think about the zillions of things we take for granted every day that X will not be able to do. X will not be able to function at all!

3. That is why a baby of a few months does not recognize anything and has no control over "bathroom functions."

- A baby's brain is not developed and thus cannot make contact with the *mano loka*, where memories are; see, "Nāmagotta, Bhava, Kamma Bīja, and Mano Loka (Mind Plane)" and "Recent Evidence for Unbroken Memory Records (HSAM)."
- Thus a baby is TOTALLY dependent on parents until about a year old until the brain develops to some extent.
- The *manasikāra cetasika* helps re-creates memories based on the "*rūpa*" received from the brain.

Perception or Identification (*Saññā*) Requires Memories

4. Now, suppose that person X, who has lost all his memories, takes a bite of the apple. Of course, he will taste the sweetness, but he will not be able to IDENTIFY that as an "apple taste."

- Furthermore, X may not even generate a liking or the desire to take another bite unless he is hungry.
- **That also proves that the CRAVING for the taste of apple was not in the apple.** Cravings are associated with one's ***āsava***. **And those *āsava* cannot manifest unless one's memories are intact and hidden *anusaya* can be triggered.**

5. With his memories lost, X's *vedanā* and *saññā* will be pretty close to "uncontaminated" *pabhassara citta*. He will experience a taste (without identifying it as the taste of an apple). But he will not generate any *sobhana* or *asobhana cetasika* based on any attractive or repulsive sensory input.

- But of course, he has not attained the *Arahant* stage. His *āsava* will be with him, just as a newborn baby will have all its *āsava* with it.
- If X lost his memory due to brain damage, his *āsava* would not resurface until the next birth if the brain was permanently damaged.
- Details at "Āsava, Anusaya, and Gati (Gathi)." Many examples are discussed in, "Patient H.M. – Different Roles of Brain in Memory."

The Account of Patient H.M.

6. Patient H.M.'s story is in the book "Patient H.M. : A Story of Memory, Madness, and Family Secrets" by Luke Dittrich.

© 2026 Lal A. Pinnaduwage

- Here we must remember that our memories are in the *nāma loka* and can be recalled only by the *mana indriya* in the brain. See, "Namagotta, Bhava, Kamma Bīja, and Mano Loka (Mind Plane)," "Memory, Brain, Mind, Nama Loka, Kamma Bhava, Kamma Vipāka," "Gandhabba Sensing the World – With and Without a Physical Body," and "Brain – Interface between Mind and Body." One needs to spend some time clarifying this key concept.
- The surgeons had inadvertently removed part of the brain of "patient H.M." that contained the *mana indirya* (surgeons were trying to stop regular seizures that the patient was experiencing by removing tiny parts of his brain).
- With more studies in the future, we may identify the *mana indirya* in the brain.

Brain is Required to Capture the External Sensory Object

7. That is why a newborn baby (within a year or so from birth) has a minimal perception capability. The brain has not developed to process all the information that comes through the sense faculties.

- Therefore, a newborn baby's brain cannot transfer anything useful to the *hadaya vatthu* to identify objects or match each with the set of *āsava/anusaya* and generate cravings or dislikes for that sensory input.
- A baby's hidden *āsava* will not show up until its brain develops. According to the Buddha, the brain function attains its total capacity around seven years of age: One can even attain *Arahanthood* if one is over seven.
- The role of the brain is discussed in "Brain and the Gandhabba" and "Brain – Interface between Mind and Body." Those who want to investigate this issue can find a lot of information there. I have tried to present a consistent picture using Buddha Dhamma and recent scientific findings.

The Difference Between an Arahant and Patient H.M.

8. We can get a good idea of how *Arahant's* mind works by considering a person X discussed in #1 through #5 above (or patient H.M. IN #6) who has lost all his memories. The only difference is that in X or H.M., all *anusaya* are intact, but they cannot be "triggered."

- For an *Arahant*, all *gati* and *āsava/anusaya* have gone away via cultivating *paññā*.
- But an *Arahant* will have all his memories intact. If he has developed *abhiññā* powers, he will be able to recall memories not only from this life but many lives in the past.

Habits/Cravings (and Thus *Gati* and *Āsava*/*Anusaya*) Change With Time

9. Most cravings are associated with our past habits and desires. Each person has a unique set, AND that set of habits/cravings will change over time.

- All *gati* and *āsava/anusaya* arise or — are with oneself — because of the inability to get rid of evils due to ignorance of the fundamental nature of this world: *anicca, dukkha, anatta, asubha*, etc.
- When one is on the Path, one will gradually get rid of "bad *gati*" and cultivate "good *gati*." Then, at some point, one can comprehend *the anicca* nature. Then one's *paññā* will grow leading to the PERMANENT removal of *anusaya* in four stages of *Nibbāna*.
- One should read up on those Pāli terms if one does not understand them. **Translating those terms to English does not make sense because no single English word will convey the same meaning as a Pāli word.**
- That is NOT memorization. One should comprehend what is MEANT by a Pāli word, not memorize it.

10. Suppose X is a young male. When X — if he has lost ALL his memories — sees an attractive woman, he will see her as an attractive person. But he will not generate any lust for her, no matter how beautiful she

© 2026 Lal A. Pinnaduwage

is. It is just "seeing" for him. Note here that he would have lost all memories regarding his past sexual activities (in fact, this is why a baby does not generate sexual thoughts.)

- The "picture" that comes to mind, cannot match it with X's previous experiences with women. **His *kāma rāga anusaya* is still there but not awakened. The same is true for a baby.**
- Similarly, X will not generate any angry thoughts when seeing "an enemy"; he does not recollect past encounters with the person.
- In the same way, X may touch a red-hot iron because he has no idea that it can burn.
- That is also why babies touch or even try to eat anything and everything. They have no prior experience that some of those could be harmful. In the same way, until that baby grows up and has had sexual experiences, *kāma rāga anusaya* will stay dormant.
- To emphasize, in the case of X, he had NOT his hidden defilements (*anusaya*.) If he gets his memories back, his lust toward attractive women or anger toward an old enemy will trigger. We can make it even simpler: If you lose ALL your memories of your father, would you be able to recognize him when you see him? If you cannot recognize him, would you generate affectionate thoughts when you see him? Of course not.
- There are several real-life medical situations where people lost memories for different reasons: "Patient H.M. – Different Roles of Brain in Memory."

"Live in Just the Present Moment"?

11. These days, there are many "philosopher-types" (like Ekhart Tolle or even some Buddhist teachers) who say "forget the past and live in the moment."

- That is utter nonsense.
- One CANNOT forget the past AND live in the present. The Buddha said **to live in the present moment mindfully**, ensuring not to make bad decisions.
- The Buddha had a perfect memory. He could remember things as far back as he wished. Often he would give accounts of what had happened in past lives and teach people how to learn lessons from the past.

An Example from the *Tipiṭaka*

12. Finally, at the beginning of the "WebLink: suttacentral: Mahāmālukya Sutta (MN 64)," the Buddha points out the fact that *sakkāya diṭṭhi* cannot arise in a new-born baby. That is because of what we discussed above. There is no way to trigger the hidden *anusaya* in that baby's mind.

- To quote the above translation: "**For a young tender infant lying prone does not even have the notion 'identity,' so how could identity view (*sakkāya diṭṭhi*) arise in him?** "
- The Pāli verse is: "*Daharassa hi, mālukyaputta, kumārassa mandassa uttānaseyyakassa sakkāyotipi na hoti, kuto panassa uppajjissati sakkāyadiṭṭhi?* ."
- **Deeper explanation:** That baby's *anusaya* (hidden defilements), and thus *sakkāya diṭṭhi,* remains intact in the *manomaya kāya* (*gandhabba*.) However, until the baby's brain is developed enough to process external sensory inputs, it cannot generate the *saññā* corresponding to sensory inputs; see "Brain – Interface between Mind and Body." One's *gati* from previous lives start to materialize after about seven years of age when the brain is fully functional.

13.2.3 Citta and Cetasika – How Viññāṇa (Consciousness) Arises

Revised February 17, 2020

© 2026 Lal A. Pinnaduwage

Necessary Background

1. It is a good idea to read the posts, "Amazingly Fast Time Evolution of a Thought (Citta)" and "Viññāna – What It Really Means" first.

- It may be a good idea to read at least the introductory post on the *manomaya kāya* before reading this post: "Gandhabba (Manomaya Kāya) - Introduction."
- When one learns *Abhidhamma*, one can see why the Buddha rejected both "self" and "no-self" concepts. A "living being" is a momentarily changing entity. It is not possible to say "it does not exist," because it does exist. It is just that it continuously evolves ON ITS OWN PATH determined by "*gati*" at each stage. There is a "dynamic self," which has its own identity or personality or "*gati*" (which also evolve.)

Citta and *Cetasika* Arise Together

2. The name *citta* came from "*chitra*," the name for a painting in Pāli or *Sinhala*. A pure *citta* has only seven mental factors (*cetasika*). *Cetasika* provide "colors for the picture," so to speak.

- But the seven *cetasika* that are in every *citta* (universal *cetasika* or "*sabba citta sadharana cetasika*") may be considered "colorless." A pure *citta* is like a blank sheet of paper on which these "snapshots" painted.
- There are a set of 14 "bad *cetasika*" and a set of 25 "good *cetasika*." For a rough visual, we may think of the "bad *cetasika*" as dark colors (black, brown, etc.), and the "good *cetasika*" as pleasant colors such as green or yellow. Then there are six other "occasionals" (i.e., appear only in some *cittā*) that are also "colorless," and those can arise with either good or bad *cetasika*; see, "Cetasika (Mental Factors)."
- *Cetasika* arise with a *citta*, decay with a *citta*, and take the same thought object (*ārammaṇa*) as the *citta*. But a given *citta* has either good OR bad *cetasika*; they do not mix.
- And a citta is of very short duration; it lasts much less than a billionth of a second; see "What is a Thought?" in the "Mind and Consciousness" section.

Sensory Experience Comes in "Snapshots"

3. A living being experiences the "world out there" in a series of very fast "snapshots"; it grasps the "world" in a snapshot called a *citta* (pronounced "chiththa") that lasts much less than a billionth of a second. As soon as the mind sees that "snapshot", it is gone. But the mind gives us an illusory sense of a permanent "world." **It does that by making that "snapshot" meaningful. That requires incorporating our memories as well as our hopes for the future.** Let us see how this process as described in *Abhidhamma*.

- The mind does this with the help of a *cetasika* (pronounced "chethasika") in that *citta* called *manasikara*. We will discuss this later, but I am just trying to get across the basic idea.
- Pāli words are spelled differently compared to "Standard English" spelling. See, ""Tipiṭaka English" Convention Adopted by Early European Scholars – Part 1" and ""Tipiṭaka English" Convention Adopted by Early European Scholars – Part 2."

4. **Therefore, we can visualize each "moment of awareness" of the outside world by the mind like a snapshot.** As soon as it comes, it is gone.

Then how does our mind see the outside world as "permanent?" Also, how does it decide a given situation as 'good' or 'bad?' Often, two people look at the same thing and perceive it differently (one may perceive it as as "good" and the other as "bad.")

- Two of the universal *cetasika* (*manasikāra* and *cetanā*,) are responsible for such variations.

© 2026 Lal A. Pinnaduwage

- As we discussed in other posts, a record of the "snapshot" that decays is permanently recorded in the mental plane, and these records are called *nāma gotta*; see, "Difference Between Dhamma and Saṅkhāra (Saṅkhata)."
- In the same way, our hopes and visions for the future are also in the mental plane. Of course, the past *nāma gotta* are permanent while the imprints for the future keep changing. The *manasikāra cetasika* brings in memories from the past and hopes for the future into the current *citta*, thus a "permanent like" view of the world is composed of the *cetanā cetasika*, which is responsible for "putting together a *citta*."
- Furthermore, in one person, "good" *cetasika* may arise due to a sensory input, but if the "*gati*" of the other person is opposite, a set of "bad" *cetasika* may arise in the other person. The *cetanā cetasika* combines them to form a "good" or a "bad" awareness.

How Do We See?

5. It is basically the same kind of process happens when we see, hear, taste, smell, touch, or think. Let us explain the concept of vision.

- The basic sequence of events in capturing any "input" via the five physical senses was described in "Gandhabba (Manomaya Kāya) - Introduction."
- If we keep looking at a picture on the wall, nothing changes because it is a static picture.
- Now let us think about what happens when we look at a water fountain. The water fountain looks like a sort of a solid object. But in reality, there are trillions of water particles rising and falling each second. We do not "see" individual water particles but just the appearance of a "sort of solid object with a certain shape."
- In a "thought" (*citta*), the *manasikāra* and *cetanā cetasika* help the mind put together a "composite" of what is happening to give a more or less "solid appearance."
- Same thing happens in seeing a continuous "ring of fire" when one swirls a light in a circular motion. At a given moment, the light is at a fixed position, but if we move the light fast enough, only see a "composite picture" in the shape of a continuous ring of light.

The Movie Analogy

6. Another example is a motion picture. When making a movie, many many static pictures are taken and then play them back at fast enough speed. If the playback speed is too slow, we can see individual pictures, but above a certain "projection rate," it looks like real motion. Here is a video that illustrates this well:

WebLink: YOUTUBE: Animation basics: The optical illusion of motion

Our Sensory Experience Is Very Similar to the "Movie Analogy"

7. When we see the outside world, what happens is very similar to the above. At the end of the video it is stated that the "movie" we see is an illusion. **As the Buddha explained, that holds for real life as well.** In real life when we see someone coming towards us, what we actually see is a series of "static pictures" or *citta* projected at a very fast rate in our minds. That gives us the illusion of a "movie like experience."

- In the above video, it is suggested that all the information from the "previous static frames" were put together by the brain. However, that is true only to a certain extent.
- The brain does put together the individual frames. But it is the mind that incorporates past memories and IDENTIFIES who is in the picture.
- We not only "see" the video, but we also RECOGNIZE what is seen. We identify a given actor, we can even remember previous movies with that actor, we KNOW all about the scenes in the background, etc.

© 2026 Lal A. Pinnaduwage

It is not possible for the brain to have access to all those memories. This is a point that needs a lot of thought.

- What happens according to *Abhidhamma* is the following. The brain periodically sends packets of acquired data put together by the cortex in the brain to the *hadaya vatthu*, which is basically the seat of the mind. *Citta vīthi* arise in accepting that information from the brain, and it is the mind that does all the compiling (with the help of the *manasikāra* and *cetanā cetasika*) and that is how we EXPERIENCE it.
- I will go into more details later, but those are the key points.

8. We need to keep in mind that all animals have this capability too. A dog basically sees its environment just like we do and instantly recognizes the objects in the picture. Even an ant does too, even though its "world" is much more limited.

- Think about how a tiny ant can process all that information that allows it to move in a reasonable fast pace in hunting for food. It knows its territory, certain smells, and also remembers how to get back to its nest. All that information is NOT in that tiny body of an ant. More things to think about!

Brain Is Very Fast Computer

9. In the above video, it is shown that the slowest projection rate where the brain seems to process data is about 20 frames per second; this correspond to a data packet of about 50 millisecond duration. This is consistent with a recent findings from MIT that says the *minimum* time needed is about 20 milliseconds: WebLink: Detecting Meaning in Rapid Pictures-Potter-2014.

- This is consistent with the *Abhidhammic* picture of the brain capturing segments of visual data and transmitting that information to the *hadaya vatthu*, which is the "mind door." That takes place via the *cakkhu pasāda* that is located on the *manomaya kāya* close to the *hadaya vatthu*.
- *Abhidhamma*, of course, does not mention how long the brain captures visual data for a "seeing event" before sending it to the *hadaya vatthu*. But it does say that this information is now converted by the brain to a format suitable for transmission to the *hadaya vatthu*, and is sent there via a "ray system" (*kiraṇa*.) I assume that this encoded information is sent at the speed of light. Thus, the information gets to the *hadaya vatthu* almost instantaneously. Note that the *hadaya vatthu* is located on the *manomaya kāya*, but is close to the heart

But The Mind Is Faster

10. Of course we not only see things, but we also hear, smell, taste, touch, and think other thoughts all at the SAME TIME, it seems.

- The mind processes the information sent by the brain in a billionth of a second, much faster than the brain can process. So, the mind is mostly idle, "waiting for data from the brain."
- Therefore, the "sensing rate" is limited by the relatively slow processing speed of the brain. According to current scientific studies mentioned above, brain processing happens at the millisecond time scale, a thousand-times slower than the mind. However, it is still more than fast enough for us to experience simultaneity in all sensory inputs.

Science Helping to "Fill-in-the-Blanks"

11. The scientific studies on the "minimum duration of a detectable event" are still at early stages (see #9 above.) We may be able to put together a more precise sequence of events in the future. Yet we have enough data to put together a qualitative picture of what happens.

- This is an excellent example of how science can help us "fill in the blanks" of the overall picture that the Buddha provided. Of course, such a scientific background was not there 2500 years ago.

© 2026 Lal A. Pinnaduwage

- Once the Buddha was in a *Simpāsa* forest near *Kosambi*, and he took a few leaves into his hand and told the *bhikkhus*, "what I have taught you compared to what I know is like these few leaves compared to the leaves in this forest. But what I have taught you is more than enough for you to attain *Nibbāna*."
- Thus modern science can provide us with details about the "big picture" of the Buddha, and we should be grateful to all those scientists for that knowledge. However, we should use that knowledge wisely and should not get carried away in spending too much time on such details.

Next, "What is a Thought?", ……

13.2.4 State of Mind in the Absence of Citta Vithi – Bhavanga

September 23, 2018; revised January 18, 2021; Re-written November 22, 2021; revised August 31, 2022 (several esp. #14)

"*Bhavaṅga* state of mind" is different from "*bhavaṅga citta*" that arises in a *citta vīthi*.

Bhavaṅga State of a Mind

1. At the *cuti-paṭisandhi* moment of grasping a new *bhava*, a new *hadaya vatthu* (seat of the mind) arises due to *kammic* energy. Since a human *bhava* is grasped with a "good *nimitta*" associated with a "good *gati*," the *bhavaṅga* state associated with that *hadaya vatthu* will reflect that *gati*.

- **That natural, "born-with" *bhavaṅga* state will be there until grasping the next *bhava*.** For example, even if one becomes unconscious, the mind will be in the ***bhavaṅga* state.** A ***bhavaṅga* state** does not have "conscious thoughts" or *cittā* (plural of *citta*.)
- That "natural *bhavaṅga*" (unlike any "temporary *bhava*" that we will discuss below) cannot be "felt." For example, while unconscious we don't "feel" anything, but the *hadaya vatthu* (seat of the mind) is in the ***bhavaṅga* state.**
- It is easier for some to grasp concepts than others. One factor for that is that one's *bhavaṅga* is "better" than another. In other words, one with a *tihetuka* birth will have a better natural *bhavaṅga* state than one with a *dvihetuka* birth.
- I had written a post about *bhavaṅga* sometime back (which describes it from another angle), which you may want to read now to "seal in" your understanding: "Bhava and Bhavaṅga – Simply Explained!."

2. When a mind is not occupied with any specific *ārammaṇa* (i.e., when it is not focused on a sensory input), it is in the natural *bhavaṅga* state.

- **As we discussed above, that "natural state of mind" or "the *bhavaṅga*" is good in a human. Animals mostly live in fear and uncertainty.**
- However, one does not feel it as good or bad. If you see someone just staring into space (and if that person is not in deep thought), that mind is in the *bhavaṅga* state. If you talk to him, he would be startled into "wakefulness". If you ask him what he was thinking about, he cannot answer because his mind was not on a particular *ārammaṇa*. It was in the *bhavaṅga* state.
- The *bhavaṅga* state can be compared to a started car in neutral gear. It is a dormant state. The mind becomes active when it comes out of the *bhavaṅga* state.
- Thinking happens only with an active mind with *cittā*, and *cittā* can arise ONLY in *citta vīthi*. See, "Citta Vīthi – Processing of Sense Inputs."

Switching from *Bhavaṅga* to Active *Citta Vīthi* – an Analogy

4. I have read the following nice analogy, but have forgotten where it was. In this analogy, a man is sitting in the middle of an enclosed small hut with six windows. He is sitting at a desk in the middle of the hut but can easily look up and see any of the six windows.

© 2026 Lal A. Pinnaduwage

- The mental body (*gandhabba*) trapped inside the physical human body is like the man sitting at the table in the hut. Note that a *gandhabba* is essentially *hadaya vatthu* and *five pasāda rūpa*. But those are the critical components where the mental activity occurs, i.e., *citta* arises.
- When the mind is focused on the *bhavaṅga* state, that is comparable to the man absorbed in reading a book sitting at that table. He is not aware of what is happening outside the hut at all.
- In the same way, the *gandhabba* in the *bhavaṅga* state has no awareness of what is happening outside the human body. It is focused on the *bhavaṅga* (the *nimitta* grasped at the beginning of this *bhava*).

5. The man in the hut could be distracted from the book if a disturbance happens at one of the windows. For example, suppose someone outside comes to a window and knocks on it. Then the man would look up from the book at the window where the disturbance was.

- This is like a sense signal from one of five physical sense doors coming to one of the five *pasāda rūpa* around the *hadaya vatthu*. The *hadaya vatthu* — surrounded by the five *pasāda rūpa* — is like the man sitting in the hut with windows.
- The only difference is that signals for the *mana indriya* come directly to the *hadaya vatthu*, instead of through a sixth *pasāda rūpa*. Those signals (*namagotta* and *dhammā*) come through the *mana indriya* in the brain directly to *hadaya vatthu*.

Coming Out of the *Bhavaṅga* State

6. When the seat of the mind (*hadaya vatthu*) gets a signal from one of the six sense doors, it comes out of the *bhavaṅga* state and starts investigating the sensory input. If the sensory input is significant, it will act on it by generating *javana citta* in a *citta vīthi*.

- As we mentioned in the link in #2 above, a series of *cittā* arises in *citta vīthi*. A *citta vīthi* is based on an *ārammaṇa* coming through one of the five physical senses always will have 17 *cittā*. A *citta vīthi* can also arise directly in mind (*manodvāra*) and *manodvāra citta vīthi* have 10 or more *cittā* (maximum 12).
- When an *ārammaṇa* comes to the mind, the mind "comes out of the *bhavaṅga* state". **That takes 3 *cittā* labeled as "*atīta bhavaṅga* (AB)" "*bhavaṅga calana* (BC), and "*bhavaṅga uccheda* (BU)."**
- In simple terms, that means it takes three thought-moments (*cittā*) for the mind to "get out of the *bhavaṅga* state" and start paying attention to the *ārammaṇa*. That activity takes place in *citta vīthi*. Let us look at the basic structure of a *citta vīthi*.

Components of a *Citta Vīthi*

7. When a signal comes to one of the five *pasāda rūpa*, the *hadaya vatthu*'s attention to the *bhavaṅga* state will be disturbed. **Then three *cittā* will rise to break away from the *bhavaṅga* state.**

- Those three *citta* are called *atīta bhavaṅga* (*atīta* means "old" or "past" in Pāli or Sinhala), *bhavaṅga calana* (*calana* — pronounced "chalana" — means move or vibrate), and *bhavaṅga uccheda* (*uccheda* means to "cut-off").
- Just like it would take the man in the hut a few moments to become aware of the disturbance at the window and to look up, it will take those three *cittās* to pass before the *hadaya vatthu* "breaks away" from the *bhavaṅga* state. Then it will investigate what the disturbance is.

8. Now, *hadaya vatthu*, with the next *citta* will look to see which of the five *pasāda rūpa* is disturbed. That *citta* is called the "*pañcadvārāvajjana citta*," where *pañca dvāra* means "five doors" referring to the five physical senses.

© 2026 Lal A. Pinnaduwage

- If it turns out that the signal is coming through the *ghāna pasāda rūpa* (i.e., a smell), then the mind will turn to that door. Then a *ghānadvāra citta* arises. That will be the fifth *citta* in the *citta vīthi.*
- Now the mind will "accept" that signal; this is called a "*sampaṭicchana citta*."
- Then it will fully realize that signal with the next *citta*: "*santīraṇa citta*."
- Up to this point, there have been three *bhavaṅga citta*, a *pañcadvārāvajjana citta*, a *ghānadvāra citta* (or any one of the five *pañcadvāra citta*), a *sampaṭicchana citta*, and a *santīraṇa citta*; seven *cittās* in all. **All these are *vipāka citta*.**

9. The eighth *citta* in the *citta vīthi* is called a "*votthapana citta*." This is a very important *citta*, where one's mind decides to take action based on the sensory input it receives.

- How to respond to a given sense input (*ārammaṇa*) is automatically decided by the mind, based on one's *gati* (pronounced "gathi") and the particular sensory input.
- We have discussed *gati* before: see, for example, "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavas)," "How Are Gati and Kilesa Incorporated into Thoughts?," "Cetasika – Connection to Gati," and "Āsava, Anusaya, and Gati (Gati)."
- Depending on the sensory input and one's *gati*, the mind may decide to ignore the sensory input or take action if it gets attracted to it.
- Possible actions will include one or more of the following: Thinking along the same lines to oneself/talking out about it (with *vacī saṅkhāra*), and possibly taking bodily actions (with *kāya saṅkhāra*).

10. Such actions are implemented with seven *javana citta*; see, "Javana of a Citta – The Root of Mental Power." This is where *mano/vacī/kāya saṅkhāra* arises. Therefore, the seven *javana citta*, after the *votthapana citta* are ***kamma*-generating *citta***.

- All *kammic* energies are generated in the seven *javana cittā*. This is where *vacī saṅkhāra* and *kāya saṅkhāra* are generated. Then physical actions and speech are implemented by the brain, as needed.
- After seven *javana cittā*, the *citta vīthi* ends with two *tadārammaṇa* (T) or ***bhavaṅga citta* (B)**, as we discuss next. Note that B here represents a *citta*, not the ***bhavaṅga* state**. However, it has the same "qualities as the *bhavaṅga* state."

A Pañcadvāra *Citta Vīthi*

11. Now we can represent a *pañcadvāra citta vīthi* as follows:

[*bhavaṅga* state] **"AB BC BU PD CV Sam San V J J J J J J J T T"** [temporary *bhavaṅga* state] **OR**

[*bhavaṅga* state] **"AB BC BU PD CV Sam San V J J J J J J J BB"** [*bhavaṅga* state]

- The difference depends on the strength of the sensory input that triggered the *citta vīthi.* Let us discuss that now.

Two *Tadārammaṇa* or Two *Bhavaṅga Citta*?

12. If the sense input was particularly strong (like a death in the family), that is a special case. Then those last two *cittās* will be *tadārammaṇa* (T), as shown in #11 above. Here *tadārammaṇa* indicates a "strong sensory input." Such a strong sensory input is registered in the mind temporarily and "that state of mind" can linger for some time. That time duration can range from a few minutes to several days.

- Such a very strong *citta vīthi* is called an ***atimahāntārammaṇa* (very strong) *citta vīthi*.** The sensory event "sinks into the mind" and the **mind stays in that state for a while** before settling back to the natural *bhavaṅga* state. This is the situation depicted in the first *citta vīthi* of #11.

© 2026 Lal A. Pinnaduwage

- For example, if one gets frightened by a chasing dog, that agitated and frightened state may last for many minutes. If a parent or a child dies, the resulting sadness may last several days.
- However, eventually, the mind will return to the natural *bhavaṅga* state.

13. If the impact of the sensory input is not that strong, but enough for one to think about it, say something, or take action, then the seven *javana* will still flow. However, it will NOT register in the mind as a *tadārammaṇa* (which means "a strong thought object"). It is strong because it still generates *javana citta.*

- In that case, the last two *citta* will fall back to the "natural *bhavaṅga* mindset", B, so now the *citta vīthi* is: "AB BC BU PD CV Sam San V J J J J J J B B". This is the situation depicted in the second *citta vīthi* of #11.
- Such a *citta vīthi* is called a ***mahāntārammaṇa* (strong) *citta vīthi***.

14. If the sense input is not strong enough to generate interest in the mind, no *javana citta* will be generated.

- In that case, *citta* will fall back to the natural *bhavaṅga* state right after the *votthapana citta*: "AB BC BU PD CV Sam San V **B B B B B B B B B**".
- Such *citta vīthi* are called ***parittārammaṇa* (weak)** or ***atiparittārammṇa* (very weak) *citta vīthi.*** *Parittārammaṇa citta vīthi* are involved in dreaming. *Atiparittārammṇa citta vīthi* are involved in breathing. We don't even notice such *citta vīthi* of the last and weakest type.
- For more details, see; "Javana of a Citta – The Root of Mental Power."

Strong Sensory Input Leaves the Mind in a Temporary *Bhavaṅga* State

15. This is the situation we discussed in #12 above. Let us discuss some examples.

- For example, many people get into a "state of sorrow" after hearing about the sudden death of a parent, spouse, etc. Even when they are not thinking about that person, they may be just sitting somewhere with very clear features of sadness on their faces.
- Sometimes people get very scared and it shows on their faces, but they cannot even think. They are too scared to think or to speak: "frozen in fear".
- The same thing happens when one gets very angry: They may not say anything but we can see the anger in their faces. They themselves may not know what to do.

16. So, there are many such cases where we just get into a certain state of mind, which can be called "**a temporary existence or *bhava***": the above three examples correspond to "sad *bhava*", "scared *bhava*", and "angry *bhava*" respectively.

- Such a "temporary *bhava*" or "temporary state of mind" can last many minutes or even days. **These may be denoted by B_T, compared to one's natural *bhavaṅga* state, which we can denote by B.** After some time, the B_T state will slowly fade away to fall back to the natural B state.
- Active *citta vīthi* run during such a temporary B_T state would be influenced by that B_T state. **For example, if one becomes temporarily angry, his following actions could be influenced by that anger.**
- The natural *bhavaṅga* state (B) is the mindset grasped at the *cuti-paṭisandhi* moment; see #1 above.

Connection of "Temporary *Bhava*" to *Gati*

17. We can see right away that "angry *bhava*" comes easily to those who are easy to get angry. Such people can be "triggered" easily. Just saying some wrong words can make them angry.

- The same is true for other types of "temporary *bhava*". Some can be easily frightened. Some can be easily tempted with sense pleasures.

© 2026 Lal A. Pinnaduwage

- The tendency to easily get into such "temporary *bhava* (B_T)" will be reduced when one progresses on the Path.
- When one finally gets to the *Arahant* stage, one will not get into any "temporary *bhava*"; one has lost all such *gati*. One will have "an unshakable calm state of mind".
- Thus, for an *Arahant*, only the natural *bhavaṅga* state (B) will be there until death. **Of course, any *anusaya* that was there initially will be gone.**

13.2.5 Bhava and Bhavanga – Simply Explained!

January 19, 2018; revised February 5, 2018; January 19, 2021; September 10, 2022; revised March 27, 2026

1. There is much confusion about the two key Pāli words: *bhava* and *bhavaṅga*. By clarifying what they mean, it would be much easier to comprehend many concepts in Buddha Dhamma, for example, how laws of *kamma* are enforced by nature via *Paṭicca Samuppāda*.

- Even in current Theravāda texts, there is confusion about the difference between *bhava* and *jāti*. If you have not read the post, "Bhava and Jāti – States of Existence and Births Therein," I recommend reading that first.
- Please do not be discouraged by the Pāli terms. Some have no suitable English terms, and it is better to learn their meanings and use the Pāli terms. Read through first, even if you don't get the whole meaning. It will become clear. I will make it simple in this post.
- I will make one or two more posts on this subject, including references from the *Tipiṭaka*.

2. *Bhava* means "the potential for existence" in either **one of the 31 realms of possible existence** (we can see just the human and animal realms) or **some specific state of mind within the current life**.

- **The first category** includes human *bhava*, animal *bhava*, *Tusita deva bhava*, *peta bhava*, *Ābhassarā Brahma bhava*, etc., i.e., existence in one of the 31 possible realms. As we will see below, many such "potential *bhava*" exist for each living being. A new *bhava* will be grasped at the end of the current *bhava* based on the relative energies of various *bhava* (*kamma bīja*) cultivated in one's past.
- Even in this lifetime, we "live under different existences" shaped by significant life events. **This is the second category**. For example, a normally "good person" may become violent for a short time upon seeing his wife in bed with another man, or one will live in a "state of sorrow" for many days upon the death of a loved one.
- Both are "*bhava*," states of existence.

3. *Bhavaṅga* ("*bhava*" + "*aṅga*," where *bhava* means 'existence' and *aṅga* means 'part') means an aspect that is inseparable from any existence.

- When not disturbed by a strong external sense input (via the five physical senses or the mana indriya), a human mind is in its natural bhavaṅga state received at the beginning of this human bhava. Each person's bhavaṅga state is different (based on the sense object taken in at the paṭisandhi moment) and feels "neutral" to each person. For example, when one is in deep sleep or "just staring out into space," one's mind will likely be in **one's natural *bhavaṅga* state, which we can denote by B**.
- On the other hand, when one's mind is deeply affected by some event like in the examples we mentioned above, then the mind goes into a "temporary *bhavaṅga* state" corresponding to that event ("state of rage" when angry or "state of sadness" upon the death of a loved one). **We can denote this by B_T.**

4. This "state of mind" (B or B_T) could be interrupted by a *citta vīthi* triggered by an external sensory input coming through one of the five physical senses or the *mana indriya*.

© 2026 Lal A. Pinnaduwage

- For example, when another loved one comes to pay respects to the dead loved one (who is in a "sad B_T"), one's mind may become happy for a few minutes upon seeing that person. Then they may recall a past event about the dead person, and both may get sad again. That "sad temporary *bhavaṅga state*" (B_T) may persist for several days. And then the mind will gradually fall back to the natural *bhavaṅga* state, B.
- That temporary state of mind may last only minutes or hours for less strong life events.
- For example, if one sees an old friend on the street, one's mind may become happy, and one talks excitedly. After the friend departs, that "happy" B_T state may linger for a while. But then it would be suppressed when another thought process starts based on a different *ārammaṇa*.

5. Therefore, within a given day, one's mind could enter several B_T states. But unless a B_T state is triggered by a significant life event, such as losing a loved one, the mind would revert to the natural B state when one wakes up the following day.

- For the reasons discussed above, the natural *bhavaṅga* state, B, could be called the "*uppatti bhavaṅga*," and those temporary *bhavaṅga* states, B_T, could be called "*pavutti bhavaṅga*."
- However, such labels are not used in the *suttā* or *Abhidhamma*. I mention that to strengthen the connection.

6. Please reread the above discussion. That should help one get the basic ideas about what *bhava* and *bhavaṅga* are. **It is important to note that *bhavaṅga* is a state of mind, not *citta vīthi* (thoughts).**

- Another way to describe a *bhavaṅga* state is to say that while the mind is in that state, one has corresponding *gati* (*gathi*). This is also an important aspect.
- For example, when one enters a B_T state of anger, one, of course, has predominantly "angry *gati*" during that time. Furthermore, one who has generally cultivated "angry *gati*" will likely quickly enter a B_T state.
- By the way, the Sinhala word for bhava is just "*Bava*" (බව). For example, when one sees an eye-catching thing and generates a "*lobha bhava*" at that moment: ලෝභ බව ඇවැසි ලෝභයක් වනවා

7. Another important aspect is that when one is in an "angry B_T state**," it is easier to generate more angry thoughts. This is due to the "Anantatra and Samanantara Paccaya": That "state of mind" is receptive to more angry thoughts. This is why it is important to try to shift the mind away from an angry state and focus on something entirely different.**

- **It is good to contemplate the** above basic ideas with examples from one's life. For example, when one is angry at someone, it is easier to recall such bad past experiences and suppress any past good experiences coming to mind.

8. When one has a calm state of mind while reading/listening to Dhamma, it is easier to generate compassionate thoughts about others. Therefore, it is important to "set the background" when starting an important task.

- This is why people go to a temple, offer flowers, etc., and recite *gāthā* before sitting down to listen to a *desanā* by a *bhikkhu*. The state of mind is critical. One cannot comprehend the deep *Dhamma* if the mind is angry or even in an excited state (for example, thinking about a sick child at home.)
- This is why it is a good idea to at least recite the qualities of the Triple Gem (Buddha, *Dhamma, Saṅgha*) before starting a formal meditation session; see "Buddhist Chanting."

9. Another important application of the "Annantara and Samanantara Paccaya" relevant to this case is that while in human *bhava*, only *kamma vipāka* are "compatible" with the human *bhava* and human *gati* (and thus human body) can bring in *vipāka*.

© 2026 Lal A. Pinnaduwage

- Even if one has *kamma bīja* suitable to bring harsh *vipāka* experienced in the *apāyā*, they will not be able to bring *vipāka* as long as one is with a human body. Similarly, any highly pleasurable *vipāka* has to wait until one is born in a *deva bhava* with a fine body suitable to experience such good *vipāka*.
- An animal always lives with fear for its life; that is part of *bhavaṅga*. Similarly, a *tihetuka* human has a natural, pleasant demeanor; an *ahetuka* human (disabled, etc.) has a weakened mindset. A *dvihetuka* is in between.

10. Yet another is the state of mind at the dying moment, when the grasping of new *bhava* is getting close (if *bhava* energy is to run out at death, i.e., if there are no more *jāti* left in the current *bhava*).

- Here the *kammic* power will start bringing various thoughts to mind via the *mana indriya* compatible with the strongest *kamma bīja*. For example, one who is about to grasp a new life in hell (*niraya*) may start recalling some fear-generating events (even from previous lives), and one's mind could be bent to a "fearful temporary *bhavaṅga* state (B_T)." Then more and more such fearful events will start to come to mind.
- This is why some dying people's fear can be seen in their eyes, even if their bodies have become non-responsive.
- Some people start yelling in fear when they see an especially unpleasant *bhava* coming their way. Flashes of the existence awaiting will come to their minds, such as burning in hell, being cut by sharp weapons, or just seeing others engulfed in flames.
- On the good side, some people will remain calm with a pleasant look on their faces, even if their bodies are becoming unresponsive Some smile when they see the scenery of the happy environment they are going to.
- This basic knowledge can explain many phenomena like that.

11. For those familiar with *Abhidhamma*, *bhavaṅga citta* are called "*dvāramutta citta*" or *citta* that arise without needing a sense door. Let me clarify this in simple terms.

- When we hear something, that sound comes through our ears, and many *citta vīthi* will be generated at the *manodvāra* (mind-door) after that initial *sotadvāra citta vīthi*. A seeing event may be started by a picture seen with the eyes, etc.
- This is a swift process. For example, we receive sensory input from the ears and eyes when watching a movie. But *citta vīthi* flow so fast that the mind will fall to a *bhavaṅga* state (B or B_T) even between the rapidly incoming *citta vīthi*.
- Therefore, what we see, hear, taste, smell, or touch with our body is all due to *citta vīthi*. Even our thoughts generated by the mind (coming through the *mana indriya*), are due to *citta vīthi*.

12. In contrast, a *bhavaṅga* state (B or B_T) DOES NOT come through any of the five physical senses (eyes, ears, nose, tongue, body) or the *mana indriya* in the brain. That is why it is called "*dvāramutta citta*" or "*citta* that arises without the need for a sense door."

- Therefore, *bhavaṅga* is a "stationary state of mind" that falls back to when there are no running *citta vīthi*.
- Note that the *mana indriya* — where concepts and memories come to the mind — is unknown to scientists; see, "Brain – Interface between Mind and Body."
- *Bhavaṅga* (B or B_T) is a state of mind with a corresponding *gati*. There are no associated *citta vīthi*. But of course, some *bhavaṅga citta* can appear in a *citta vīthi*; see "Citta Vīthi – Processing of Sense Inputs."

13. It is also important to note that the series of *cittā* do not flow continuously. It is the kammic energy that runs without interruption throughout *saṁsāra*.

© 2026 Lal A. Pinnaduwage

- For example, when one is born in the *asañña* realm, no *citta* is generated for 500 *mahā kappa*. Remember that a *mahā kappa* is our solar system's age, which lasts about 15 billion years!
- During that whole time, the body of that being in the *asañña* realm is kept alive by the *kammic* energy for that *bhava*, and the *bhavaṅga* is active during that time. As we emphasized above, *bhavaṅga* is a state of mind.

14. Please keep in mind that it is unnecessary to learn the material in #11 and #12 above if one can grasp the basic idea of what is meant by *bhava* and *bhavaṅga*. That is enough to grasp important concepts at a bit of a deeper level.

- Also see "State of Mind in the Absence of Citta Vīthi – Bhavaṅga."

13.2.6 Citta Vīthi – Processing of Sense Inputs

Revised April 26, 2018; revised May 30, 2018; October 17, 2019; February 24, 2020; January 18, 2021; August 9, 2021; October 27, 2021; May 27, 2022; July 9, 2022; August 31, 2022; rewritten January 28, 2023 (esp. #15); revised April 25, 2024 (#13 to end)

Introduction

1. Thoughts (*citta*) do not arise as individual *citta*; see, "Essential Abhidhamma – The Basics." They appear in the mind due to sensory inputs via the six senses. Those are *cakkhu*, *sota*, *ghāṇa*, *jivhā*, and *kāya indriya*, corresponding respectively to the eye, ear, nose, tongue, and body, and *mana indriya* (located in the brain; see, "Brain – Interface between Mind and Body").

- Sensory input through any of the five physical senses received and analyzed by the mind in a "*citta vīthi*" (series of *cittā*) with 17 *cittā*. Those are *pañcadvāra citta vīthi*. *Pañcadvāra* ("*pañca*" + "dvāra" where "pañca" is five and "dvāra" is a door) means five (physical) doors. See the post, "What is Mind? How do we Experience the Outside World?."
- *Vīthi* is pronounced, "veethi." It means "road" since, like a road, the flow is continuous. And *citta* pronounced "chiththā."
- That is because the convention for spelling Pāli words differs from "standard English." See ""Tipitaka English" Convention Adopted by Early European Scholars – Part 1" and ""Tipitaka English" Convention Adopted by Early European Scholars – Part 2."
- While *pañcadvāra citta vīthi* always have 17 *cittā*, *manodvāra citta vīthi* typically have 10-12 *cittā* in them.

Pañcadvāra Citta Vīthi

The sequence of *cittā* in a *pañcadvāra citta vīthi* is as follows:

# in the Series	Citta Type	Symbol
1	*Atīta Bhavaṅga* (Past *Bhavaṅga*)	AB
2	*Bhavaṅga Calana* (Vibrating *Bhavaṅga*)	BC
3	*Bhavaṅga Upaccheda* (Arrest *Bhavaṅga*)	BU
4	*Pañcadvārāvajjana* (Sense-door adverting consciousness)	PD
5	*Cakkhu Viññāṇa* (eye-door perceiving consciousness) - for example	CV
6	*Sampaṭicchana* (Receiving consciousness)	Sam

© 2026 Lal A. Pinnaduwage

7	*Santīraṇa* (Investigating consciousness)	San
8	*Votthapana* (Determining consciousness)	V
9-15	*Javana*	J
16, 17	*Tadārammaṇa* (Registering consciousness)	T

2. When the mind is not dealing with a *pañcadvāra citta vīthi* or a *manodvāra citta vīthi,* it is in a "dormant state" called the *bhavaṅga. Bhavaṅga* ("*bhava*" + "*aṅga*" where "*aṅga*" means "part of") thus represents the particular "*bhava*" of the living being, in this case, a "*human bhava*." The conventional English term is "life continuum," but we will use *bhavaṅga*.

- For a discussion on *bhavaṅga,* see "State of Mind in the Absence of Citta Vīthi – Bhavaṅga" and "Bhava and Bhavaṅga – Simply Explained!"
- The *bhavaṅga* state is conventionally represented by the following series **as if they are a series of *bhavaṅga citta***:

..B B B B B B B B ……

However, ***bhavaṅga citta*** can arise only within a *citta vīthi.*

- When the mind is in the ***bhavaṅga* state**, we do not "feel" anything. Like an eye cannot see itself, the mind in the *bhavaṅga* state cannot "see itself." That is the "dormant state" in-between sense inputs. When one is in deep sleep or unconscious, the mind is entirely in the *bhavaṅga* state.
- The mind is generally in the *bhavaṅga* state. It comes off the *bhavaṅga* state when an object of interest comes through one of the five physical senses (*cakkhu, sota, ghāna, jivhā*, or *kāya indriya.*) A "*dhammā*" coming to the "*mana indriya*" can do that too.
- As we will see later, the mind is in the *bhavaṅga* (B) state most of the time, even if the mind feels very active. Even while watching a movie, the mind is mainly in the *bhavaṅga* state (in between various types of *manodvāra* and *pañcadvāra citta vīthi.*) Yet, our brains are stressed to the limit since they need to analyze the movie's sights and sounds at a rapid pace. See "Vision Is a Series of "Snapshots" – Movie Analogy."

3. We can represent the *pañcadvāra citta vīthi* in the above Table as follows:

B B B B B "AB BC BU PD CV Sam San V J J J J J J T T" B_T B_T B_T B_T…..

Note that this is the strongest *citta vīthi. There* are many variations WITHIN this *citta vīthi; some* do not have T or even J *citta*. Different types of *pañcadvāra citta vīthi* are discussed in detail in "A Comprehensive Manual of Abhidhamma" by Bhikkhu Bodhi (2000).

- In the above case, the *bhavaṅga* temporarily changes to B_T due to the strong sensory input. See "State of Mind in the Absence of Citta Vīthi – Bhavaṅga."
- In the above example, we took a "*cakkhu viññāṇa*" event, i.e., what happens when a picture comes to the mind via the "*eye indriya*" and the mind investigates that picture.
- First, the "mind comes off the *bhavaṅga* state, and that takes three thought moments: AB (*atīta bhavaṅga*), BC (*bhavaṅga calana*), and BU (*bhavaṅga upaccheda*). Here "*atīta*" (or "*atheetha*") means "past," "*calana*" (pronounced "*chalana*") means "move" or "vibrate," and "*upaccheda*" (or "*upachcheda*") means "stop" or "break away."
- Then the mind looks at the "five physical senses or *pañcadvāra* (PD)" and determines through which of the five sense inputs it is coming, and then picks the relevant door, which in the present case, we assumed to be *cakkhu viññāṇa* (CV).

© 2026 Lal A. Pinnaduwage

- Then it investigates what that "picture" is with the *sampaṭicchana citta* and decides what type (like, dislike, etc.) with the *santīraṇa citta.* Based on those, the *votthapana* (V) *citta* determines what actions to take.

4. According to *citta niyāma* (or Law of *Cittā*), a *pañcadvāra citta vīthi* always has 17 *cittā*. For an object of "high interest," *atimahantārammaṇa citta vīthi* arise with *javana cittā*. For example, in the case of a visual object, that visible object must be of high interest, and the light conditions for seeing it are good.

- In such cases of "high interest," all-important seven *javana citta* arise based on that determination made with the *votthapana citta* (V). Potent *kammas* are done with *javana citta*: "Javana of a Citta – The Root of Mental Power."

5. In the last two *Tadārammaṇa* (T) *cittā*, the mind takes in the "flavor" or the "essence" of the sense object. Then it falls back to the *bhavaṅga* state at the termination of the *pañcadvāra citta vīthi.* Only the very strong (*atimahāntārammaṇa*) *citta vīthi* have them, and such strong impressions are "retained in one's memory" for some time (i.e., one will not forget immediately.)

- Until one loses that "temporary memory," it becomes one's "temporary *bhavaṅga*." For example, when one hears about the death of a parent, one will become sad, and that "sad state of mind" will be there for days.
- For a discussion on that, see "State of Mind in the Absence of Citta Vīthi – Bhavaṅga" and "Bhava and Bhavaṅga – Simply Explained!"
- Of course, ALL happenings get recorded as *nāmagotta*. Even unimportant events get recorded. The ability to recall events depends on one's capabilities. Sometimes, such limited capabilities become possible due to "*puñña iddhi*" for even average humans. See "Recent Evidence for Unbroken Memory Records (HSAM)."

The Simile of Tasting a Mango

6. A *pañcadvāra citta vīthi* is the procedure by which the mind experiences an external object (sight, sound, taste, etc.). The following analogy is In some commentaries to the *Tipiṭaka.*

- Suppose a weary traveler is asleep at the foot of a mango tree. This state of being asleep is analogous to the *bhavaṅga* state. Now a ripe mango drops to the ground near the traveler. This event resembles a visible object of great intensity coming to the "eye door."
- The mango falling awakens the traveler and causes him to raise his head. This event is similar to the appearance of the visible object at the eye door, causing the *bhavaṅga* to vibrate twice and become arrested; now, he is not asleep anymore.
- The traveler opens his eyes and looks around to inquire about the disturbance. That is similar to the *pañcadvārāvajjana* (PD) *citta* adverting the mind towards the sense object.

7. The traveler sees the fallen mango. That is analogous to the eye-consciousness of seeing the object (CV). Now the man picks up the mango, which is similar to the *sampaṭicchana* (Sam) *citta* receiving the *cakkhu viññāṇa*. **By the way, *Sampaṭicchana* comes from "*saŋ*" + "*paṭicca*"; you can contemplate on this to get the basic idea; see, "What is "Saŋ"? Meaning of Sansāra (or Saṁsāra)?".**

- Then the man inspects the mango to see whether it is suitable for eating. That is similar to the *santīraṇa citta* ("*saŋ*" + "*tīraṇa*" or "*theerana*," where "*theerana*" means "decide on whether the sense object is good or bad") investigating the sense object.
- Then the man decides that the mango is good and edible. That is similar to the *votthapana* ("*vottha*" + "*pana*" meaning "deciding on what to do" or in Sinhala, "පණ දෙනවා" or "energize"). *votthapana* is pronounced, "voththapana." If it were a rotten mango, one would throw it away.
- If one understands Sinhala, it is easier to understand Pāli. As I have mentioned, the Sinhala language is close to Pāli and not Sanskrit.

© 2026 Lal A. Pinnaduwage

8. The man bites the mango seven times, eating and enjoying the taste. That is similar to seven *javana cittā* enjoying the taste of the sense object. These are the "actions corresponding to the decision made with the *votthapana citta*"; if the mango tastes bad, the mind will generate appropriate *javana citta* to throw the mango. We will discuss such complex processes later.

- Then the man gathers the remnants of the fruit and the juice sticking to his teeth with his tongue and swallows twice. That is similar to the two *tadārammaṇa* (T) *cittā* following the *javana cittā.*
- Task completed, the man falls back to sleep. That is similar to the resumption of the *bhavaṅga* state.

Three *Manodvāra Citta Vīthi* will follow Each *Pañcadvāra Citta Vīthi*

9. **According to the *Tipiṭaka*, three *manodvāra citta vīthi* will follow each *pañcadvāra citta vīthi*.** The *javana cittā* in those three *citta vīthi* become increasingly intense, and it is the *javana cittā* of the last *manodvāra citta vīthi* that instructs the brain to get the body to act (and initiate speech). [Read WebLink: PDF Download: Process Of Consciousness And Matter – Bhaddanta Dr. Rewata Dhamma in **Chapter III – Mind-Door Cognitive Process (*Manodvāra Vīthi*)** under the topic **Consequent Mind-Door Process (*Tadanuvattika-manodvāra Vīthi*)**.]

- We will discuss this in detail in future posts. But it takes three more *manodvāra citta vīthi* to complete the sequence of a thought process initiated by a *pañcadvāra citta vīthi.* When one gets "absorbed" (for example, keeps looking at an attractive picture), one may be generating numerous such "one plus three processes," with the mind falling back to the *bhavaṅga* state repeatedly in between.
- It will be easier to visualize this process by understanding what happens when we look at an object, for example, in scientific terms; see "Citta and Cetasika – How Viññāṇa (Consciousness) Arises" (especially starting with #4 of that post).

Now let us look at a typical *manodvāra citta vīthi.*

Manodvāra Citta Vīthi

# in the Series	Citta Type	Symbol
1	*Bhavaṅga Calana* (Vibrating *Bhavaṅga*)	BC
2	*Bhavaṅga Upaccheda* (Arrest *Bhavaṅga*)	BU
3	*Manodvārāvajjana* (Mind-door adverting consciousness)	MD
4-10	*Javana*	J
11, 12	*Tadārammaṇa* (Registering consciousness)	T

10. We can represent the *manodvāra citta vīthi* in the above Table as follows:

B B B B B "BC BU MD J J J J J J T T" B B B B B…..

- Here it takes only two thought moments to be released from the "*bhavaṅga* state": BC (*bhavaṅga calana*) and BU (*bhavaṅga upaccheda*).
- The mind already knows the *ārammaṇa* (thought object).
- The *manodvāra citta* (MD) is the same as the *votthapana citta,* where the decision is made.
- Then seven *javana cittā* arise, and then the *citta vīthi* ends with the two *Tadārammaṇa* (T) *cittā.*
- Like in the case of a *pañcadvāra citta vīthi, we also* considered an object with high intensity as an example. We will discuss the variations when handling signals of lower intensities as the need arises. However, this discussion is sufficient to understand how the two types of *citta vīthi* function in cognitive processes.

© 2026 Lal A. Pinnaduwage

11. Now, we can write the complete sequence of *citta* for a sensory event initiated by a *pañcadvāra citta vīthi as:*

B B B B B "AB BC BU PD CV Sam San V J J J J J J J T T MD J J J J J J J T T MD J J J J J J J T T MD J J J J J J J T T " B B B B B…..

- As mentioned above, three *manodvāra citta vīthi* will run following the initial *pañcadvāra citta vīthi.* The object is recognized only after the four *citta vīthi.* But that happens within a billionth of a second. [Read WebLink: PDF Download: Process Of Consciousness And Matter – Bhaddanta Dr. Rewata Dhamma in **Chapter III – Mind-Door Cognitive Process (*Manodvāra Vīthi*)** under the topic **Consequent Mind-Door Process (*Tadanuvattika-manodvāra Vīthi*)**.]

12. Conversely, *manodvāra citta vīthi* can arise by themselves.

- Furthermore, even though the length of a *manodvāra citta vīthi usually is* 12 *cittā* for ordinary people, a single *manodvāra citta vīthi* can have many *javana cittā* while in a *jhāna*.
- **In a *jhāna***, such long *manodvāra citta vīthi* are interrupted by *pañcadvāra citta vīthi* arising in between. That is why one could hear external sounds while in a *jhāna*.

Citta Vīthi Generating *Jhāna Cittās*

B B B "BC BU MD P U A G Jh" B B B

B B B "BC BU MD U A G Jh" B B B

13. The first above is the *jhāna citta vīthi* for an average person. The second is for one with "higher wisdom."

- See above for explanations on B, BC, BU, MD, P, U, A, and G.
- Then, it goes through a *Jhāna* (Jh) *citta*. The number of *jhāna cittās* "Jh" *cittās* in a *citta vīthi* will increase with practice; see below.
- **Here, *Gotrabu* (G, change of lineage) means the lineage has changed from "*kāma loka*" to "*rūpa loka*."** That is why they are *jhāna cittās.*
- Attainment of *anariya jhāna* is a "***puññābhisaṅkhāra***" or an "***āneñjābhisaṅkhāra***" depending on whether it is a ***rūpāvacara*** *or* ***arūpāvacara jhāna***. Either of them results via *Akusala-Mūla Paṭicca Samuppāda*, which starts with "*avijjā paccayā saṅkhāra.*"
- Therefore, while this attainment will lead to a birth in a *Brahma* realm, those *yogis* will ALWAYS return to the human realm; after that, future rebirths in the *apāyās* are still possible. See "Rebirths Take Place According to Abhisaṅkhāra."

14. In most cases, a *yogi* may not notice that a *jhāna citta vīthi* has gone through the mind. At the end of the "*jhāna citta vīthi*," the mind falls back to the "regular *citta vīthi*" of *kāma loka* (discussed in #2 through #12 above.)

- A *yogi* may not even notice the flow of a *jhāna citta vīthi* initially.
- At the end of a *jhāna citta vīthi,* the mind falls back to the "regular *citta vīthi*" of *kāma loka.*
- With continued practice, the number of *jhāna cittās* can increase. For example, the following *jhāna citta vīthi* has many *jhāna cittās.*

B B B "BC BU MD P U A G Jh Jh Jh Jh Jh Jh Jh Jh" B B B

- That is when a *yogi* can start cultivating *jhāna samāpatti.*

Jhāna Cittās Arise Continuously In a *Jhāna Samāpatti*

© 2026 Lal A. Pinnaduwage

15. While **in a *jhāna samāpatti*,** *javana citta* can keep arising for long times, as long as one had determined at the start:

B B B B B "BC BU MD Jh Jh Jh Jh Jh Jh Jh Jh Jh Jh Jh ……..

- Thus, one becomes unaware of what happens in the outside world during that time. There is no way to get back to the *bhavaṅga* state or for a *pañcadvāra citta vīthi* or another *manodvāra citta vīthi* to arise. Before getting into the *samāpatti*, one decides how long to stay in the *samāpatti*.
- People who can get into *jhāna samāpatti* can display the real power of *javana citta.*
- **A crude analogy**: Suppose one is trying to light an oil lamp (oil-soaked wick) with the light of a matchstick. If one is not holding the lighted matchstick steady and the light moves in and out of the vicinity of the wick, it will not light. But if one can hold the light steady, it will light up quickly. Here, the mind is "locked on" that *javana citta*!
- The following is another analogy for those who are familiar with lasers. One can drill holes in a metal plate using a laser beam. But the metal spot will not heat up and evaporate unless the laser beam is held steady at that spot. Being in a *jhāna samāpatti* is like keeping a laser beam steady on one spot for a long time.
- A yogi is said to be "able to get into a *jhāna*" only if that yogi can get into *jhāna samāpatti.*

Citta Vīthi for Attainment of *Magga Phala*

B B B "BC BU MD P U A G Pa Fr Fr" B B B

B B B "BC BU MD U A G Pa Fr Fr Fr" B B B

16. The first is the *magga phala citta vīthi* for an average person; the second is for one with "higher wisdom."

- B, BC, BU, and MD are, as discussed above.
- Then it goes through the *Parikamma* (P), *Upacāra* (U), *Anuloma* (A), *Gotrabu* (G), Path (*magga*) (Pa), and Fruit (*phala*) (Fr).
- **As you can see, there is no connection to *jhāna*.** In particular, the *magga phala citta vīthi* does not go through a *jhāna citta*. Also, the *Gotrabu* (change of lineage) *citta* for *magga phala* is COMPLETELY DIFFERENT than that of a *jhāna citta vīthi.*
- The change **of lineage here is to become an *Ariya* or a Noble Person**.
- The change to an *Ariya* happens even before the *Sotāpanna phala* moment, at the *Gotrabu* (G) moment. *Gotra* means "lineage," and *Gotrabu* is the change of lineage. **Thus, one would become a *Sotāpanna Anugāmi* with the *Gotrabu citta*.**

13.2.7 Javana of a Citta – The Root of Mental Power

Revised July 15, 2020; July 22, 2022; July 30, 2022

Javana Cittā Are Associated with *Abhisaṅkhāra*

1. The power of the human mind has been discussed in several posts starting with "Power of the Human Mind – Introduction." There are different kinds of *cittā*; the powerful ones are *javana cittā* ("*javana*" means an arrow in flight; it can be highly potent).

- Such *javana cittā* are responsible for *abhisaṅkhāra*, those *saṅkhāra* that are potent and will lead to (good or bad) consequences. *Puññābhisaṅkhāra* is the meritorious *abhisaṅkhāra* that will lead to good results, and *apuññābhisaṅkhāra* is the immoral *abhisaṅkhāra* that leads to adverse outcomes.

© 2026 Lal A. Pinnaduwage

- *Javana cittā* arise in *pañcadvāra cittā vīthi* and *manodvāra cittā vīthi* when the object (*ārammaṇa*) is evident and robust; see, "Citta Vīthi – Processing of Sense Inputs."

Vipāka Cittā Do Not Have *Javana* Power

2. Out of the 54 types of *cittā* in the *kāma loka* (the 11 lower realms including the human realm), 29 are *javana cittā*: 12 *akusala cittā*, eight *mahā kusala cittā*, eight *mahā kiriya cittā*, and the functional smile-producing *cittā* (the latter nine *cittā* only *for an Arahant*).

- A *kusala citta* generates power for rebirth in the human or above realm, and helps progress towards *Nibbāna* or "cooling down."
- When one does an *akusala cittā*, one generates power to form *kammic* energy for rebirth in the *apāyā* (lowest four realms).
- Thus for average human beings, there are only 20 *cittā* out of 54 that are *javana cittā*: 12 for doing evil deeds and 8 for good deeds (here deeds means thought, speech, or bodily action).
- Thus, *vipāka cittā* do not have *javana cittā*. Therefore, in detecting any sensory input (seeing, hearing, etc.), *javana cittā* is absent. They are *prittārammaṇa* (slight) and *atiparittārammaṇa* (very slight) *citta vīthi*. However, based on these *vipāka citta vīthi*, we MAY instantly initiate potent *atimahattārammaṇa* (very high) and *mahattārammaṇa* (great) *citta vīthi* that will have *javana cittā* in them.
- Therefore, if we start making plans (buy that picture, re-listen to that song, etc.) based on those visuals, sounds, etc., then subsequent *citta vīthi* will have *javana cittā* in them, leading to *abhisaṅkhāra* (GENERATE *kammic* power).

Javana Power Depends on the Type of *Citta*

3. Not all ***akusala javana*** *cittā* have the same power. Also see "How to Evaluate Weights of Different Kamma" and "12. Key Factors to be Considered when "Meditating" for the Sotāpanna Stage."

- Out of the eight greed-rooted *cittā*, those four done with pleasure (*somanassa-sahagata*) are more robust than the done with neutral feeling.
- Next, those associated with *micchā diṭṭhi* (or *diṭṭhi-sahagata*) are more powerful than the four generated without wrong vision (or *diṭṭhi-vippayutta*).
- The power of greed-rooted *cittā* depends on whether they arose spontaneously (sometimes erroneously labelled as *asaṅkhārika*) or occurred intending to receive something in return, i.e., *sasaṅkhārika*.
- The two hate-rooted *akusala cittā* always arise with displeasure and are associated with aversion (dislike.) One that is spontaneous (unprompted) is stronger than the prompted.
- The two ignorance-rooted *akusala cittā* always arise with neutral feelings. The one based on *vicikicchā* is stronger than that based on *uddhacca*.

Javana Strength of *Akusala Citta*

4. The above list gives the order of strength of the *akusala cittā* and appears in that order in "Conditions for the Four Stages of Nibbāna."

- Thus the first *lobha citta* that is "connected with the wrong view, accompanied by pleasure" or in Pāli, "*somanassa-sahagata, diṭṭhi-sampayutta citta*" is the strongest *akusala javana citta*.
- The last of the 12 *akusala citta* is "one accompanied by equanimity and associated with high-mindedness" or, in Pāli, "*upekkha-sahagata uddhacca-sampayutta citta*."

Javana Strength of *Kusala Citta*

© 2026 Lal A. Pinnaduwage

5. The power of the human mind can work both ways, for the good or the bad. Now let us see how the eight *mahā kusala* (wholesome) *cittā* rank according to the *javana* power.

- Here again, four done with a joyous heart (*somanassa-sahagata*) take precedence over those done with neutral feeling.
- Next, those done with knowledge, called "*ñāṇa-sampayutta*," have higher power compared to those done without knowledge (*ñāṇa-vippayutta*). Here, knowledge could be at two levels: (i) understanding how the laws of *kamma* work and (ii) understanding *anicca*, *dukkha*, and *anatta* in addition to (i).
- Finally, they are sorted by whether the response is spontaneous (higher-merits) or prompted/induced by an expectation of a profit (*sasaṅkhārika*).

6. Thus, the most potent *kusala citta* is "one accompanied by joy, associated with knowledge" or in Pāli, "*somanassa-sahagata, ñāṇa-sampayutta citta*".

Here one does a good deed with a complete understanding of its benefits and thus with a joyous heart. The action is spontaneous and joyful BECAUSE one is fully aware of its ethical consequences. Since it is automatic, the knowledge must be in one's mind.

- The weakest *kusala citta* is "one accompanied by the neutral mind, dissociated with knowledge, and for one's advantage" or in Pāli, "*upekkha-sahagata, ñāṇa-vippayutta, sasaṅkhārika citta*." Here one may do a good deed without knowledge and on the prompting of others or after some deliberation. Such acts will bring benefits, but since they have less *javana* power, the benefits are less.

Some Examples of "*Javana* Power"

7. Let us take some examples for clarification.

- Some people are so deep on the wrong path that they enjoy committing evil deeds. Or, they get into a mindset where such deeds become enjoyable. We have heard of a person killed by multiple stabbings with the body gruesomely mutilated. Such an act is the worst of the worst.
- It should be easy to imagine why the *javana* for *citta* associated with such "passionate" killings are very intense. The killer is absorbed in that act and is generating potent mental power to carry out the physical act; by the way, any physical activity originates in *citta*. Thoughts lead to actions. See, "Neuroscience says there is no Free Will? – That is a Misinterpretation".
- That is also why a *kamma* becomes a "*kamma patha*" or a "strong *kamma*" for bodily action. See "Details of Kamma – Intention, Who Is Affected, Kamma Patha." One needs a strong *javana* to carry out that task. If one is aware of the consequences of such acts (i.e., do not have *micchā diṭṭhi* or wrong vision), then even if one started stabbing, one may likely that one may catch oneself and stop.

8. Conversely, even the smallest act of kindness can bring many benefits if done with complete understanding and a joyous heart. Here the "mental power" or the *javana* comes through knowledge. We see these kinds of "small acts of kindness" all the time, and we can even share in those merits when our hearts become joyful too.

- Writing a check for a lot of money is easy for a wealthy person. If done to get publicity or due to "outside pressure," it would not bring many benefits. If a poor person shares what they can with another in a worse situation with joy, that will bring much more benefit.

Saṁvega – Indication of *Javana* Strength

9. High *javana* power manifests as "*sanvega*" (*saŋ* + *vega*, where "*vega*" means fast) or one's emotions. See, "What is "Saŋ"? – Meaning of Saṁsāra" for the meaning of "*saŋ*"). Therefore, "*saṁvega*" depicts a potent emotional condition. If it is for the "good," one will be doing *puññābhi saṅkhāra* (meritorious acts), and an evil deed done with "*saṁvega*" will be a potent *apuññābhi saṅkhāra* (immoral actions).

© 2026 Lal A. Pinnaduwage

- In the literature, "*sanvega*" is commonly written as "*saṁvega*"; as with many other such words, replacing "*saŋ*" with "*saṁ*" leads to distortion of the meaning of the word. Other such misspelled words are *saṁsāra, samvedana*, *saṁyoga*, and *saṁvara*; see, "What is "Saŋ"? – Meaning of Saṁsāra."
- However, some words like "*sammā*" ("*saŋ*" + "*mā*") are correct because that is phonetically correct.
- In the Sinhala language, "*saṁvega*" is commonly used to describe emotionally intense situations, mostly sad situations. However, we can see that it can apply to any emotional situation.

Emotions Felt Close to the Heart, Not in the Brain

10. The mind and the heart are in close contact. Even that person who derived pleasure by stabbing someone many times will have a heavy heart until death, no matter how bad a person they are. It is in human nature. Of course, when we do a meritorious act, too, we feel joy in our hearts.

- We "feel" close to the heart because citta arises in the "*hadaya vatthu*" close to the physical heart. The *hadaya vatthu* is in the *manomaya kāya*, like an "energy field" spread through the physical body. See "Manomaya Kāya (Gandhabba) and the Physical Body" and "Ghost in the Machine – Synonym for the Manomaya Kāya?."

Javana Strength Depends on the Level of Desire (Good or Bad)

11. The *javana* power in our thoughts significantly affects "how engaged we are." The potency of a good or an immoral *citta* depends on the strength of the desire to get it done. Three out of four bases of mental power, *chanda, citta, viriya,* originate due to this; see "The Four Bases of Mental Power (Cattāro Iddhipāda)."

- And the fourth factor of *vīmaṁsā* (reasoning/investigation) is vital because that is how one gains the all-important *ñāṇa* (wisdom); see #5,#6 above. When one truly comprehends *anicca*, *dukkha*, and *anatta*, that leads to the cultivation/growth of the *paññā cetasika*, reducing ignorance (*avijjā*).

It Is Good to "Re-live" Past Good Experiences

12. **Another thing that comes out of this analysis is that it is good to contemplate the past good deeds and "re-live" that experience to gain *citta pasāda* or a joyful mind.**

- Similarly, it is NOT good to do that for past evil deeds. It is better to forget them and get a new start. If something like that comes to the mind, focus the mind on a good deed.
- That is part of "*Ānāpāna*." We need to keep and cultivate "good things" and "discard" bad things; see, "7. What is Ānāpāna?."
- Our thoughts are what ultimately matter, and they arise due to our character (*gati*); the more we do "*Ānāpāna*" correctly, the more our "*gati*" will change for the better.

13. Finally, These *javana citta* have the power to produce *suddhaṭṭhaka*, the fundamental building blocks of *rūpa;* see "The Origin of Matter – Suddhaṭṭhaka."

Next, "Cuti-Paṭisandhi – An Abhidhamma Description", ……

13.2.8 Cetasika – Connection to Gati

Revised March 26, 2022; August 26, 2022; December 12, 2023 (#9)

Cetasika that arise in citta influence a person's moral and immoral character (*gati*).

Seven Universal *Cetasika*

© 2026 Lal A. Pinnaduwage

1. In the introductory posts in *Abhidhamma* we saw that there are **seven universal *cetasika* (mental factors)** that arise with every *citta* (loosely translated as a thought, but not correct); *citta* is pronounced "chiththā" and *cetasika* pronounced "chethasikā."

- The seven universal *cetasika* are essential in forming any *citta*, whether immoral (*akusala*) *citta*, moral (*kusala*) *citta*, or a *citta* that does not have any *kammic* potential.
- Some other *cetasika* provide "character" to *cittā*. Whether a given *citta* is good or bad depends on whether a "good" or "bad" set of *cetasika* arises with it; see, "Citta and Cetasika – How Viññāṇa (Consciousness) Arises." They are listed in "Cetasika (Mental Factors)," and you may want to print them out for reference when reading this post. There is no need to memorize them. With time, one may even know them by heart.
- Out of the 54 types of *cittā* in the *kāma loka*, there are 12 *akusala citta* and 8 *kusala citta*. The other 34 are *vipāka citta* and *kiriya* citta which do not generate *kammic* power.

Six *Cetasika* That May Appear in *Kusala* or *Akusala Citta*

2. Then, there are six *cetasika* called **particulars (also called occasional)** or *pakiṇṇaka* that **MAY** appear in any *citta*. Therefore they do not determine the PURPOSE of the *citta*, but they HELP with any type of purpose that was intended.

- For example, *viriya cetasika* could be in a *kusala citta* and it can also be in an *akusala citta*. In either case, the *viriya cetasika* will HELP intensify the effort with that *citta*.

Cetasika That Appear Only in *Kusala* or *Akusala Citta*

3. Out of a total of 52 *cetasika*, the other 39 (= 52-7-6) *cetasika* determine whether a given *citta* will be an *akusala citta* or a *kusala citta*.

- 14 *cetasika* (called *asobhana* or immoral or bad *cetasika*) could be present in an *akusala citta*. Out of those, 4 ALWAYS are present in any *akusala citta*; those 4 are *asobhana universals*.
- The other 25 *cetasika* (called *sobhana* or moral or good *cetasika*) can be present only in *kusala citta*, and 19 of those are ALWAYS in any given *kusala citta*; those 19 are *sobhana universals*.
- Therefore, 11 *cetasika* (7 universal plus four universal immoral) arise with every *akusala citta*. There may be other immoral and particular *cetasika* as well.
- There are 26 *cetasika* (7 universal plus 19 universal morals) that arise with every *kusala citta*. Six more moral *cetasika* may arise in some *kusala citta*.

Saṁsāric Habits ("*Gati*") and *Cetasika*

4. Therefore, *sobhana and asobhana cetasika* determine the *kammic* nature of a *citta*. If we want to eliminate all *akusala citta*, we need to remove the 14 *asobhana cetasika* from our minds (they come up automatically with our *gati* and *āsavā*).

- **In other words, our *saṁsāric* habits ("*gati*") and cravings ("*āsavā*") are embedded in the 14 *asobhana* (and 25 *sobhana*) *cetasika*,** such as *lobha* and *dosa*. For example, one may have dominant "*lobha gati*" (excess greed) or "*dosa gati*" (strong hate). But typically, we have a mixture of many different inter-mixed *gati*.
- In the same way, cultivating good "*gati*" and "*cravings*" (basically for moral deeds) leads to "good *cetasika*."

Saṁsāric Habits ("*Gati*") and *Asobhana Cetasika* in *Akusala Citta*

© 2026 Lal A. Pinnaduwage

5. As we follow the Noble Eightfold Path, the 14 *asobhana cetasika* are reduced in strength and eventually removed. When reaching the *Sotāpanna* stage, the two *asobhana cetasika* of *diṭṭhi* and *vicikicchā* are REMOVED, and all others reduced to some extent. In particular, *lobha* is reduced to *rāga* level, and *dosa* is reduced to *paṭigha*. That is why a *Sotāpanna* will never be born in the *apāyā*.

- *Raga* has 3 components: *kāma rāga*, *rūpa rāga*, and *arūpa rāga*, corresponding to attachment to the *kāma loka, rūpa loka*, and *arūpa loka* respectively. At the *Sakadāgāmī* stage, *kāma rāga* and *paṭigha* are REDUCED to the level that one will never be born at or below the human realm.
- At the *Anāgāmī* stage, both *kāma rāga* and *paṭigha* are REMOVED. Thus all bonds to *kāma loka* are broken, and one will never be born again in *kāma loka*.
- All *asobhana cetasika* are removed at the *Arahant* stage.

6. We can easily see why **four immoral universal *cetasika*** arise with every *akusala citta*. These four are: *moha* (delusion or moral blindness), *ahirika* (shamelessness of wrong), *anottappa* (fearlessness of immoral), and *uddhacca* (restlessness).

- We do not realize, but when we get greedy or hateful enough, we can become morally blind. One loses any sense of decency just for a short time, but that is enough to commit an immoral act.
- Then we lose the fear of doing wrong and the shame of doing wrong because our minds are covered (it takes only a fraction of a second to generate a *citta* and sometimes even to act on it if the *javana* is strong enough). That inevitably leads to a restless mind (*uddhacca*) too.

Saṁsāric Habits ("*Gati*") and *Sobhana Cetasika* in *Kusala Citta*

7. Now, let us discuss the seven pairs in the universal moral *cetasika list*, starting with the pair of *kāyapassaddhi* (tranquility of the mental body, which leads to the tranquility of the physical body itself); *cittapassaddhi* (tranquility of consciousness). These seven pairs are states of mind and body corresponding to some "cooling down." When doing a *kusala kamma*, the body and mind relax and "cool down." That is the first glimpse of *Nibbāna* as one is already on the mundane eightfold path.

- That is why the Buddha said that the state of mind does affect the state of the body. When one starts on the *lokuttara* eightfold path, these *cetasikas* all get more robust, one starts feeling the "*nirāmisa sukha*," and thus one becomes motivated to follow the Path.
- But it is important to emphasize (as I have stated many times), that things COULD get worse before getting better. **When one deprives the mind of things it has gotten used to, it does not like that.** Until it sees the benefits of staying on the Path, it may try to pull one firmly in the "wrong direction." One needs to be persistent, and this is where one needs to cultivate the *cattāro iddhipāda* (*chanda*, *citta*, *viriya*, and *vīmaṁsā*).

8. It is important to realize that the 19 universal moral *cetasika* can arise in ANYONE regardless of one's religion or any other "label." All of them will arise when doing a good deed (or speech or thought). They can occur when one is on the mundane eightfold Path (nothing to do with a religion *per se*); see "Buddha Dhamma – In a Chart." [***per se*** : [adverb] by or in itself or themselves; intrinsically.]

- Also, note that *hiri* (shame of immoral deeds) and *ottappa* (fear of the consequences of evil deeds) are the two that are opposed to the immoral ones of *ahiri* and *anottappa*. That means one can sort out right from wrong (moral from corrupt) in that instance.
- Then there is *saddhā* (faith) and *sati* (mindfulness), which grow even more after embarking on the Path. Here, *saddhā* is not the faith in Buddha, Dhamma, or Saṅgha, but the faith that such a moral act will bring about good outcomes.
- And *sati* is NOT *Sammā Sati*, but just the mindfulness of being involved in a moral act. However, once one gets on the *lokuttara* eightfold Path, it can become ***Sammā Sati.***

© 2026 Lal A. Pinnaduwage

- The other two familiar ones are *alobha* and *adosa cetasika*; they are opposite to the immoral ones of *lobha* and *dosa*. *Alobha* is not a mere absence of *lobha* but also embodies generosity. *Adosa* is not the mere absence of *dosa* but embodies compassion.
- Then there is *tatramajjhattatā* (neutrality of mind; "*majjhatta*" means "in the middle"). That is not *upekkhā*, one of the *Satta Bojjhaṅga*; see "37 Factors of Enlightenment."
- Thus far, we have discussed the 19 universal moral *cetasika* in #7 and #8. Now let us discuss the six moral *cetasika* that arise only with some *kusala citta*.

Six *Sobhana Cetasika* Require Understanding of *Tilakkhaṇa*

9. It is easier to list the six moral *cetasika* that do not necessarily arise with each *kusala citta*. These are the ones that NEED TO BE CULTIVATED with the comprehension of *anicca*, *dukkha*, and *anatta*.

- They are ***Sammā Vācā*** (speech that is conducive to eliminating "*saŋ*"), ***Sammā Kammanta*** (actions that are conducive to eliminating "*saŋ*"), ***Sammā Ājīva*** (a lifestyle that is conducive to eliminating "*saŋ*"), *karuṇā* ("*Ariya*" compassion), *muditā* ("*Ariya*" appreciative joy), and *paññā* (wisdom) which is the same as ***Sammā Diṭṭhi***.
- Of course, mundane versions of those are developed to some extent when someone lives one's life morally, but they will NEVER grow to higher stages until one understands *anicca*, *dukkha*, and *anatta*, at least to some extent. In particular, ***paññā*** (wisdom) starts emerging ONLY when one starts grasping *anicca*, *dukkha*, and *anatta*; that happens at an early stage of *lokuttara* (not mundane) ***Sammā Diṭṭhi***.
- That is why *sammā vācā* is not just "good speech" or *sammā kammanta* is not just "good deeds." *Sammā* ("*saŋ*" + "*ma*") means "to remove '*saŋ*'," i.e., done with an understanding of *anicca, dukkha, anatta*; see, "Why is Correct Interpretation of Anicca, Dukkha, Anatta so Important?."

Amoha Is Not *Paññā*

10. However, *amoha* does not mean wisdom (*paññā*)! *Amoha* is not a *cetasika* but is a root cause. ***Paññā* is in all *kusala citta* in the sense that the immoral *cetasika* of *moha* is not present at that moment, i.e., the mind is not "covered."**

- Some people interpret *amoha* to be *paññā*; not so. *Paññā* (wisdom) or *lokuttara Sammā Diṭṭhi* needs to be cultivated via comprehending *anicca*, *dukkha*, and *anatta*, and starts when one is on the *Sotāpanna magga*; see, "Buddha Dhamma – In a Chart" and "What is Unique in Buddha Dhamma."
- The more *paññā* one has, the more likely one will generate *amoha* thoughts more frequently!
- No matter how intelligent one is, one cannot start cultivating *paññā* until one hears the correct interpretations of *anicca*, *dukkha*, and *anatta*.

Directing *Pakiṇṇaka Cetasika* Toward Noble Path

11. Now, let us briefly revisit the six **particulars (also called occasionals)** or *pakiṇṇaka* we mentioned in #2 above. They are *vitakka* (focused application), *vicāra* (sustained application), *adhimokkha* (dominate), *viriya* (effort), *pīti* (joy), *chanda* (desire).

- As we can readily see, these six can be in *kusala* or *akusala citta* and make them stronger.
- That is why it is said that "*Dhammo have rakkhati dhammacāriṁ*" [WebLink: suttacentral: *Dhammika* (KN Thag 4.1)] or "dhamma will guide one in the direction of dhamma that one follows", applies to both moral AND immoral paths.
- *Vitakka* (focused application of thoughts), when cultivated in the *lokuttara* Path, can become ***Sammā Saṅkappa***. Similarly, *viriya (effort) can become* ***Sammā Vāyāma***.

© 2026 Lal A. Pinnaduwage

Good and Bad Gati Associated with Sobhana and Asobhana Cetasika

12. Therefore, *Abhidhamma* helps us understand the connection between *cetasika* and *gati* and how "bad *gati*" are removed at each stage of *Nibbāna* (see #5 above). We can also see from the above discussion how 8 of the *cetasika* (related to "good *gati*") turn into components of the Noble Eightfold Path when one starts on the *Sotāpanna magga*. We discussed only seven above (**highlighted in bold red**). The eighth one is the universal *cetasika*, *ekaggatā* (one-pointedness) which can become ***Sammā Samādhi***.

- However, depending on one's behavior and understanding, all these eight could be developed in the direction of the immoral (*micchā* eightfold path), mundane moral (*lokiya* eightfold path), or the *lokuttara* Noble Eightfold Path; see "Three Kinds of Diṭṭhi, Eightfold Paths, and Samādhi."
- Looking from different perspectives, there could be many types of *samādhi*. For a discussion on three other types of *samādhi*, see "What is Samādhi? – Three Kinds of Mindfulness."

13. This world is very complex. And the Buddha has analyzed it in many different ways. But they are all self-consistent. If one can get some traction, there is no other pleasure better than finding out about this world, the pleasure of Dhamma.

- "*Sabbaratiṁ dhammaratiṁ jināti*" [Dhammapada verse 354 KN Dhp 334-359] means "from all tastes in the world, the taste of Dhamma wins." Here "*rati*" means "taste." Thus, the "taste of Dhamma" optimizes for an *Anāgāmī*.
- However, at *Arahanthood*, one loses all interest in worldly things, including Dhamma. The Buddha said, "A boat is needed only to cross a river; one should not carry it after crossing it. Just like that, even my Dhamma needs to be used only to find the true nature of this world, and then it should be discarded too".

13.3 Mind and Consciousness

What is Mind? How do we Experience the Outside World?

What is a Thought?

What is in a Thought? Why Gati are so Important

What is Consciousness?

1. Thoughts (Citta), Consciousness (Viññāṇa), and Mind (Hadaya Vatthu) – Introduction

2. Viññāṇa (Consciousness) can be of Many Different Types and Forms

3. Viññāṇa, Thoughts, and the Subconscious

13.3.1 What is Mind? How do we Experience the Outside World?

Revised January 17, 2019; March 20, 2023

1. Everything we experience comes through six "doors" or "*āyatana*" we have to the outside worlds: eye, ear, nose, tongue, body, and mind. Through those six doors we can see pictures, hear sounds, smell odors, taste food, feel things physically by touch, and be aware of concepts (say, mundane things like remembering past events or making plans about future events, or thinking about a black hole in the middle of the universe or a mathematical concept).

- The six sense faculties (and the corresponding six external "*āyatana*" which are *rūpa, sadda, gandha, rasa, pottabba, dhamma* or visuals, sounds, smells, tastes, touches, and concepts) are what the Buddha called "*sabba*," or "everything." These are 12 *āyatana* (six internal and six external).

2. All those sense experiences are done with *citta* or thoughts. But this is probably not a good translation. We usually associate a "thought" with an idea or one visual event, etc., a moment of "experience." But *citta* is very fast and no one can experience a single *citta* that lasts a billionth of a second or less; see, "Citta and Cetasika – How Viññāṇa (Consciousness) Arises."

- **Don't be fooled by the title of that post.** It has a simple description of how the "mind" puts together all six sense inputs to give the illusion that we see, hear, smell, taste, touch, and think all at the same time (at least start reading at #3 there).
- It is a good idea also to read the posts, "Amazingly Fast Time Evolution of a Thought (Citta)" and "Viññāṇa – What It Really Means" first.

3. When we look at an object, the "eye" generates visual consciousness (*cakkhu viññāṇa*): Comprehending what is seen is accomplished via a series of very fast thought processes. There are billions of thoughts per second, so each citta or thought moment is billionth of a second. Let us see how the mind "sees" an object in a series of very fast "snapshots" alternating between the "eye" and the "mind":

- The "eye" captures a snapshot of the object and the brain transfers that captured information to mind: that process takes 17 thought moments or *cittā* (let us abbreviate it as TM); this series of TM is called a **"sense input *citta vīthi*" (or *pañcadvāra citta vīthi*)**. Next, the mind analyzes that "imprint" with three *citta vīthi* that involve only the mind. These latter **"mind-only *citta vīthi" (manodvāra citta vīthi)*** are shorter, around ten TM, and try to discern the object. It may first try to discern the color of the object for example.
- Then the "eye" takes another snapshot and transfers that "imprint" to the mind, which in turn receives it in a *pañcadvāra citta vīthi* containing 17 TM, analyzes that in 3 more *manodvāra citta vīthi* containing about 10 TM, and makes better sense of the color. This "back and forth" process continues until the object is determined.

© 2026 Lal A. Pinnaduwage

- This process is slowed down only due to the time needed for the brain to put together the information captured by one of the five sense faculties (*pañcadvāra*), for example, the eyes. This time is about ten milliseconds; see, "What is a Thought?." Thus there can only be about 100 (600 if they are processed in parallel) or so "sense events" per second; since science shows that the brain has different regions for processing different sense inputs, the latter number (600) is probably right.

4. Since these *citta vīthi* run very fast, once the brain sends an "information packet" to the mind it is processed very quickly, within a billionth of a second. Thus the process is slowed down only by the brain. **Still, everything about the object is grasped in a small fraction of a second.**

- Many of you may think, "this looks like some far off theory made up by someone." The Buddha said he experienced everything that he taught. Phenomena in this fast time scale are discernible only to a Buddha.
- Once the Buddha explained the critical aspects to Ven. Sāriputta, it was Ven. Sāriputta and his group of *Bhikkhus* developed the Abhidhamma, where all these details were worked out. It took generations of *bhikkhus* to develop the Abhidhamma to the final form that was recited at the Third *Sangāyanā* (Buddhist Council) and was written down in the *Tipiṭaka* in 29 BCE (we know that there were many *Arahants* before 100-200 CE; see the timeline in "Incorrect Theravāda Interpretations – Historical Timeline"). For us, the truth of these minute details becomes apparent as all observable phenomena are EXPLAINED using all three forms of Dhamma in the *Tipiṭaka*: *Sutta, Vinaya*, and *Abhidhamma*).

5. As all this information comes in, the mind recognizes the object: ***saññā* or perception**. Based on that recognition **feelings (*vedanā*)** are generated (for example when we see a friend we generate a happy feeling; if it is someone we don't like, it is a unhappy feeling, etc).

- Once everything about the object is grasped, then if it is an "interesting object", the mind may start its own "wheeling around" process: the "*pati +iccha sama+uppada*" or *Paṭicca Samuppāda* process leading to the **accumulation of *saṅkhāra*:** see, "Paṭicca Samuppāda – Introduction," "Nibbāna – Is it Difficult to Understand," "Saṅkhāra, Kamma, Kamma Bīja, Kamma Vipāka," and other related posts. All these tie up together, but one needs to be a bit patient since there are many inter-coupled concepts.

6. Thus experiencing a visual object in the above example generates all kinds of mental phenomena: *vedanā, saññā, saṅkhāra*, and during this whole process we have the *viññāṇa* or *citta* flowing. *Viññāṇa* is the momentary consciousness, a *citta*. In the above example, it alternates between visual consciousness (*cakkhu viññāṇa*) and the mind consciousness *(mano viññāṇa*).

- The baseline state of a mind, i.e., when it is not looking at an external object or thinking about it, is called "*bhavaṅga*." Here we do not "feel" anything, for example when we are in a deep sleep. The mind falls back to the *bhavaṅga* state even in between *pañcadvāra citta vīthi.*

7. The same process happens with any of the five physical senses (the "back and forth switching" between the sense faculty and the mind). **When someone is just remembering a past event or planning something, those are exclusively mind processes (only *manodvāra citta vīthi* take place).**

Now let us look at some details on how the mind processes all the "signals" from the real world where multiple "signals" come in.

- When we watch a movie, the projector projects about 30-50 static pictures per second on the screen; a movie is a series of static pictures. When the projection rate is above 30 frames a second or so, our eyes see a continuous movie, not individual frames. **Thus even though cittā run at billions per second, we do not "experience" them individually, not even close.**
- This fast rate of *citta vīthis* (which, as we saw above run at about 100 *citta vīthis* per second) also makes it possible to perceive all six inputs from the outside world "simultaneously"; at least we experience them as "simultaneous." For example, we can be watching a movie and enjoying some popcorn; so we see and hear the movie, and taste popcorn and feel the popcorn cup, and also may be thinking about something related to the scene on the screen; all at the "same time."

© 2026 Lal A. Pinnaduwage

- *Citta vīthi* just alternate among the six sense inputs; it is possible only because there are hundreds of *citta vīthi* per second. Since it happens so fast, we experience them all as "simultaneous", just like the static pictures projected at a fast rate on a movie screen are perceived as a continuous "movie."
- Not only that, but the mind can ignore a multitude of "signals" that are of no interest to one's habits ("*gati*") or cravings ("*āsavā*"). And those depend on the individual. Two friends could be walking on the street, and one (woman) stops abruptly and starts looking at a dress in a shop window. The other (man) looks at it, shrugs, and wants to move on; he would not have even noticed it.

8. As we saw, information to the mind comes via the brain. All five physical sense inputs (vision, hearing, smell, taste, touch) come through the brain. Thinking about concepts involves the brain too (those involve only the *manodvāra citta vīthi*), and that happens much faster compared to the processes associated with the five physical senses; we will discuss that later.

- When someone gets old, the brain starts functioning less efficiently; see, "Manomaya Kāya and Out-of-Body Experience (OBE)." Or, the brain may get damaged due to a *kamma vipāka*; for example, getting Alzheimer's disease is a *kamma vipāka*.
- As the body gets old, various other body parts also start functioning less efficiently and are also vulnerable for many *kamma vipāka* to come to fruition. *Kamma vipāka* are not deterministic; they come to bear fruit only when conditions become suitable (see, "Saṅkhāra, Kamma, Kamma Bīja, Kamma Vipāka"). Thus meditation and regular exercise help keep both the body and the mind (through an efficiently working brain) in good condition.

9. In any case, the mind goes to the "baseline or dormant state" called "*bhavaṅga*" even in between these *citta vīthi*. When the mind is fairly inactive, say when someone is dozing off, the mind is mostly in the *bhavaṅga* state. When someone is unconscious or in deep sleep, the mind is in the *bhavaṅga* state for the whole duration. When seeing a dream, the mind is active.

- Even when *citta vīthis* run at a fast rate of about 600 per second (say, while watching a movie or playing a competitive sport), the mind drops to the *bhavaṅga* state while the brain is processing those "10 millisecond information packets", as discussed above.
- The above discussion is all about receiving information from the outside world and then getting attached to "things" ("*taṇhā*"), generating *mano saṅkhāra*, etc.

10. Based on that process, we may decide to take further action too, either verbally or bodily, thus generating *vacī saṅkhāra* and *kaya saṅkhāra*: We may speak or do some physical activity. All those are done with the mind, and each action is done with a thought process or *citta vīthi*.

- This is why the Buddha said, "*mano pubbaṅgamā dhammā*, ,,,," [Dhammapada verse 1 and 2 KN Dhp 1-20] i.e., "mind precedes everything that we do…." **We cannot even lift a finger without generating a *citta vīthi*, i.e., without the initiation by the mind.** The physical body, with the brain acting as a "sophisticated control center", helps the mind to achieve whatever physical activity it wishes; see, "Neuroscience says there is no Free Will? – That is a Misinterpretation!."

Further reading: "A Comprehensive Manual of Abhidhamma," by Bhikkhu Bodhi (2010). This book has summarized *citta* and *cetasika* very well. But discussions on *Paṭicca Samuppāda* or *anicca*, *dukkha*, and *anatta* are not correct.

Next, "What is Consciousness?", …….

13.3.2 What is Consciousness?

Revised July 16, 2020

1. Philosophers through the ages have struggled to figure out how consciousness arises in a human being. For "materialists" everything that makes a human being originates in the body, and they have been trying to explain consciousness in terms of something that comes out from the workings of the brain.

© 2026 Lal A. Pinnaduwage

- For the "dualist" consciousness is totally distinct from the material body, and falls into the realm of theistic religion (related to a "soul").
- According to the Buddha, consciousness, together with the body, are two of the five "aggregates" that a human being consists of. **And Consciousness does not arise from the body, but arises with the body at the conception.**

2. First of all, let us define consciousness.

- The Buddha said that being conscious is "being aware," but with feelings and perceptions, and the ability to "recall the past."
- There are several definitions of consciousness in modern science, but the general consensus among the scientists and philosophers is that the state of being conscious is a condition of being aware of one's surroundings as well as one's own existence (or self-awareness).
- Therefore, we could say that science and Buddhism are attributing similar meaning to the word "consciousness".
- However, the Buddha's definition of consciousness takes into account the critical roles played by the *vedanā* (feelings), *saññā* (perceptions), and the *manasikāra cetasika* among 52 other mental factors (*cetasika*), which combine to produce the *viññāṇa* which can be roughly translated as consciousness.

3. As to the origins of consciousness, we have three "theories":

- Contemporary science is totally matter-based: the universe started with the "big-bang" which created all existing matter, and all living beings "evolved" from this inert matter, and thus consciousness also evolved by some (yet unknown) manner.
- The theistic religions believe, of course, that humans were created with built-in consciousness by an Almighty-God, and animals were also created (same consciousness).
- The Buddha's is different from both above: It states that living beings (humans and animals) with built-in consciousness are different from inert matter, but they were not created. Rather, there is no traceable beginning to sentient life; life always existed, and it will exist forever (until *Nibbāna* is attained). Everything has a cause, so does life.

4. Consciousness is more than registration of a visual event, or an auditory event, for example. It has associated a variety of mental factors such as *saññā* (perception) and *vedanā* (feelings).

- A camera captures an image of a cat, but it is not aware of the presence of the cat. On the other hand, a dog sees a cat and becomes aware of its presence. It not only sees the cat, but knows exactly where it is and can try to catch it.
- Have you ever thought about how we can not only see things, but know exactly where they are? Without this ability, we can not even walk without bumping into things. How do we know that the person in front of us is only a few feet away? Consciousness is associated with a sentient being with a MIND. Science cannot yet explain this capability.

5. There is also the issue of the phenomenal quality of the conscious experience: qualia, subjective feelings, the redness of red, the warmness of warmth, etc. How do these arise in a being made up of inert atoms? There are basically two approaches to solve this problem in modern philosophy and science: [***Qualia*** is a quality or property as perceived or experienced by a person.]

- One is that it arises as an emergent property in the neuronal activities in the brain. The other is the proposal of duality by Rene Descartes in the 17th century that persists to the present; see, for example, David Chalmers, "The Character of Consciousness", (2010).
- A subset of these scientists believe that consciousness is associated with the microtubules in a cell (for example, see "The Emerging Physics of Consciousness" Ed. by Jack A. Tuszynski (2006) and John Smythies, "Brain and Consciousness: The Ghost in the Machines", Journal of Scientific Exploration, vol.

© 2026 Lal A. Pinnaduwage

23, No. 1, pp. 37-50, (2009)). Despite much research, the question of how qualia and subjective feelings arise from dead matter remains a mystery.

- Just because a cell responds that does not necessarily mean it has consciousness; the cell can expand and contract (chemical reactions) in response to environmental stimuli. In a way, something similar happens when a plant turns towards sunlight; of course, plant life is not sentient. Thus, just because an entity responses to outside influence does not necessarily mean the entity is "mentally aware" of the outside influence, i.e., that it is conscious.

6. Therefore, all these scientists and philosophers are a long way off of solving the issue of the four mental aggregates of feelings, perceptions, volitional formations (*saṅkhāra*), and consciousness that make up the mental aspects of a human being. They are mainly focusing on consciousness and perception at this early stage, and even then are totally disregarding the intrinsic mental nature. It will be interesting to see what progress they can make by just taking a totally materialistic approach.

7. There is evidence, though, that some leading scientists are beginning to suspect that a complete "world view" cannot be achieved without taking into account the mental aspects. This trend started with the invention of quantum mechanics at the beginning of the 20th century, and is gaining traction slowly. Some interesting ideas are discussed in a number of books including "Wholeness and the Implicate Order" (by David Bohm, 1980), "Quantum Enigma" (by Bruce Rosenblum and Fred Kuttner, 2006), "Biocentrism" (by Robert Lanza, 2009).

- However, attempts to explain the mind as a manifestation of quantum phenomena will also fail, because it is the mind that precedes matter; see, "The Double Slit Experiment – Correlation between Mind and Matter?."

8. Consciousness (*viññāṇa*) discussed in this section does NOT take account the fact that consciousness of any living being (other than an *Arahant*) is contaminated by defilements. This means our awareness is not pure; it is like looking through a foggy window. This is discussed in the "Viññāṇa (Defiled Consciousness)" and "Expanding Consciousness by Purifying the Mind."

Next, "1. Thoughts (Citta), Consciousness (Viññāṇa), and Mind (Hadaya Vatthu) – Introduction", ……

13.3.3 What is a Thought?

Revised January 24, 2019; September 2, 2023; December 26, 2023

Basic *Abhidhamma*

1. *Abhidhamma* has many confusing terms, like *citta* and *mano*, which have been interpreted differently in different books. I have written a few posts in the "Mind and Consciousness" section to clarify these concepts. Those who like to "dig deeper" need to read those posts. I highly recommend reading those, and especially, "3. Viññāṇa, Thoughts, and the Subconscious."

- In Buddha Dhamma, a thought or a *citta* is the briefest moment of awareness experienced by a sentient being. *Citta* is pronounced "chiththa." There can be well over a billion *cittā* (plural of *citta*) in the blink of an eye.
- Let us keep in mind that a single *citta* takes much smaller than a billionth of a second. What we experience is the cumulative effect of millions of *cittā*.

Each *Citta* Has At least Seven *Cetasika*

2. A pure *citta* only has seven *cetasika* (*phassa*, *vedanā*, *saññā*, *cetanā*, *ekaggatā*, *jīvitindriya*, and *manasikāra*) in it; see, "Cetasika (Mental Factors)." Thus, it is the purest form of a "thought", but it is too brief for anyone to experience.

© 2026 Lal A. Pinnaduwage

- The first thing to note is that one will never be able to experience a single thought if we mean by a thought to be a *citta*, even though we say, "I just had a thought". **The briefest awareness that we actually experience** is probably a fraction of a second; Scientists say it is about ten milliseconds. But that ten millisecond time is spent mainly by the brain in processing the sensory input; once that is done, a series of *citta* with 17 *cittā* flow in a very brief time (less than a billionth of a second), and that is what is registered in the mind. We will discuss this later in detail.
- This series of *citta* with 17 *cittā* is called a *citta vīthi* (pronounced "chiththa veethi"); see below.

3. Even a single *citta* has three phases, just like any *saṅkhata*: *uppāda* (rising), *ṭhiti* (fully formed but still changes), and *bhaṅga* (dissolution/destruction). Thus, a *citta* arises and fades away very fast.

- **Only a Buddha can see such details as I pointed out in the Introduction.** Even people with the highest *abhiññā* powers (attained via *jhānā*) cannot even come close to seeing such details.
- *Abhidhamma* is a special section of Buddha Dhamma that needs to be taken "as is," i.e., we must believe what the Buddha said. We cannot hope to verify these details by our own experience (for example there are a certain number of *citta* in a *citta vīthi* as discussed below). Yet, *Abhidhamma* is very valuable in clarifying any issue in detail.

4. A pure *citta* with seven *cetasika* does not last. Even though it starts as such a pure *citta*, within the duration of the citta itself (less than a billionth of a second), it gets contaminated by either a set of bad *cetasika* like *lobha* (greed), *issa* (envy) or a set of good cetasika like *saddhā* (faith) and *sati* (mindfulness).

- Before it starts decaying, it goes through NINE STAGES to become *viññāṇakkhandho* (this is NOT the aggregate as in the common usage of *viññāṇakkhandha*; rather, here the mind has coupled the information in the previous stages of this *citta* with past *viññāṇa* and future *viññāṇa* that are in the mind and has made a "composite").
- **However, the convention is to call this whole process still a *citta*.**
- All this happens in less than a billionth of a second! This process keeps repeating in the *citta* to follow and the process is cumulative, i.e., as more and more *citta* flow by, the awareness *of the event* gets stronger, and we actually begin to feel it.
- It may be a good idea to read about *citta vīthi* before proceeding: "Citta Vīthi – Processing of Sense Inputs."

We Never Experience a Single *Citta*

5. **Thus, we experience the cumulative effect of numerous *citta vithis***. That is why the Buddha talked about *kandhas* (which means "heaps" in Pāli or Sinhala) as in "heaps" of feelings (*vedanākkhandha*), perceptions (*saññākkhandha)*, volitions (*saṅkhārakkhandha)*, and consciousness (*viññāṇakkhandha)*; those are the "heaps" that we actually experience in a "thought".

- If *cittā* fly by that fast and capture six kinds of possible "inputs" (through the five physical senses and the mind itself), how do we "experience" seeing, hearing, etc "at the same time" but still sort them out?

Mind Is the Fastest Entity in the World

6. This is because the mind is the most powerful entity in this world. All five physical senses just provide traces of inputs ("memory imprints"), and billions of them arise and perish each second. The mind keeps a record of all past events and MAKES A COMPOSITE SENSE EXPERIENCE moment-by-moment.

- For example, when we hear someone say, "I bought some apples," that was processed by several *citta vīthi*. When the brain processes the word "apples," it has processed the previous words and passed that information to the *hadaya vatthu* (seat of the mind.) The mind can comprehend the meanings of those words and compare them with memories.

© 2026 Lal A. Pinnaduwage

- We speak (and can understand) about 150 words/minute. The minimum "packet of information" **that the brain (not the mind) can process** is estimated to be about a hundredth of a second (10 milliseconds) by scientists. This comes about 1-2 letters in such a "packet".
- When it has captured the whole word "apple" (with several "packets," each of which processed by a series of *citta vīthi*), the mind automatically matches that with all the memories and instantly produces an awareness or a mental picture of an apple; **memories, as well as hopes for future, are recalled by the *manasikāra cetasika* and the *citta* is "put together" by the *cetanā cetasika*.**

7. The mind can do this because it can process billions of *citta vīthi* per second!

- But there is a "bottleneck" in the brain, which slows down the whole process. The brain takes a relatively long time to process a "packet" of information.
- **Therefore, the mind falls back to the *bhavaṅga* state in between comprehending information packets.** For example, right after receiving the letter "a," it falls to the *bhavaṅga* state and waits until the next packet with "p" comes.

Mind Can Process Multiple Sensory Inputs in Parallel

8. Furthermore, the mind can process multiple inputs (received via the five senses) that are coming in mixed up.

- For example, after hearing the letter "a" that comes through the ears, the mind may get a "packet" with information about the smell of the apple. But the mind is capable of "sorting out" these different inputs.
- It can also carry out its own mental processes (thinking and coming to conclusions about what is perceived through the five senses by comparing it with memories) at such a fast speed, that it appears to be done in "real-time".
- There is nothing faster than the mind in this world; see, "Amazingly Fast Time Evolution of a Thought (Citta)." Also, see the previous post, "Citta and Cetasika – How Viññāṇa (Consciousness) Arises."

9. Now the mind "knows" what that person was referring to, and has a mental image of an apple with its smell also registered.

- If someone hears the word "lemon," one could even feel the sour taste of lemon; the mind recalls that "sour taste" from memories of previous experiences of tasting lemon.
- Even if we see just the outline of a familiar person at a distance, the mind "fills in the blanks" and flashes an image of that person in your mind so you know who it is.

Processing of *Citta Vīthi*

10. One sensory "event" does not happen in one *citta.* A sensory event from one of the five physical senses is captured by a single *citta* (say, *cakkhudvāra citta* for a seeing event), but that information is processed by a string of *cittā* with 17 *cittā* in it; this "string of *cittā*" is called a *citta vīthi* (pronounced "chiththa veethi"). A *citta vīthi* for "seeing" is referred to as a *citta vīthi* at the "eye door" or the eye, one for "hearing" occurs at the "ear door" or the ear, etc.

- When one *chakkhudvāra citta vīthi* provides sensory input, that information is then processed by three *citta vīthis* that involve only the mind; this *citta vīthi* "at the mind-door" has 12 *cittā.*
- Thus, there are two types of *citta vīthi* involved in processing a sensory input: a long one with 17 *cittā* to CAPTURE an input from one of the five physical senses (*pañcadvāra*) AND three *manodvāra citta vīthi* (at the mind-door) with 12 *cittā.* [Read WebLink: PDF Download: Process Of Consciousness And Matter – Bhaddanta Dr. Rewata Dhamma in **Chapter III – Mind-Door Cognitive Process (*Manodvāra Vīthi*)** under the topic **Consequent Mind-Door Process (*Tadanuvattika-manodvāra Vīthi*)**.]

© 2026 Lal A. Pinnaduwage

- Both types are thus involved in cognition (awareness) processes; we will discuss other processes by the mind later.
- Only one *citta vīthi* runs at a given time; they do not overlap.

Example of a "Seeing Event"

11. Thus it is mind-boggling if we try to imagine the frantic pace at which the mind works. It may be a good idea to look at an analogy to simplify things a bit.

- A series of static pictures generates a movie. When a movie is projected on a screen, static pictures are projected at a rate of about 30 frames a second, and we see the movie as a continuous progression of events; if the projection rate is low, we can see it frame by frame or as "packets of information" separately. When we watch a movie, we do not perceive those static pictures or "packets of information," but we perceive a continuous progression without gaps.
- This was described in #4 of the previous post, "Citta and Cetasika – How Viññāṇa (Consciousness) Arises."
- Processing of a visual input is discussed in detail in "Vision Is a Series of "Snapshots" – Movie Analogy."

12. In the same way, when we perceive that our mind is hearing a word, but in reality that word is the result of many *citta vīthi* originating at the ear door; and the scene that appears simultaneous is the composite of many *citta vīthi* coming through the eye door and none of it happens "at the same time".

- Just like the movie projected at 30-50 frames a second, *citta vīthi* are generated at many frames a second. (I had previously mentioned billions of *cittā* per second, which is incorrect; the flow of *citta vīthi* is subsided by the processing time of about 10 milliseconds needed by the brain to process each sensory input). Thus we feel that we are watching, hearing, tasting, smelling, touching, and thinking simultaneously.
- **To repeat for emphasis:** Our minds process probably less than 100 *citta vīthi* per second. However, each *citta vīthi* has 17 *cittā* (for five physical sensory inputs) or 12 *cittā* (for mind inputs) and each of those *citta vīthi* takes less than a billionth of a second. Even though it takes the brain about ten milliseconds to process a sense input, the mind grasps that information in less than a billionth of a second.
- While the brain processes sensory input, the mind returns to the *bhavaṅga* state.

13. Just like a movie reel, there is actually a tape (not a physical one) that is recorded in the "mind plane"; this is the origin of the "*nāma gotta*" discussed in, "Difference Between Dhamma and Saṅkhāra." That tape is there forever, and allows one with *abhiññā* powers to look back to any time in the past; see, "Recent Evidence for Unbroken Memory Records (HSAM)."

- Therefore, to verify rebirth or to look at memories from past lives, all one needs to do is develop *abhiññā* powers! And some people, including my teacher *Thero*, can do this today.

A Citta Evolves into *Viññāṇa*

14. A *citta* evolves into *viññāṇa,* and that is actually what we experience; see, "Amazingly Fast Time Evolution of a Thought (Citta)" and "Viññāṇa – Consciousness Together With Future Expectations."

- There is only one *citta* at a time. But there is a memory, as we just discussed. And that memory is normally hidden because the defilements cover up the mind; when one develops *abhiññā* powers, what one is really doing is cleaning up the mind so everything becomes clear.
- One who develops *abhiññā* powers through *anariya jhānā* lets the gunk settle at the bottom and see just the upper layers; but one who has developed *abhiññā* powers through *Ariya jhānā* is doing that by "cleaning up" the gunk so a much more penetration to deeper past is possible; see, "Solution to a Wandering Mind – Abandon Everything?."

© 2026 Lal A. Pinnaduwage

15. Thus, sensory experiences are VERY BRIEF (the duration of a *citta vīthi*). **The mind that puts everything together and presents us with a "movie-like" experience.**

- The mind (specifically the *viññāṇa khandha* or the aggregate of consciousness) puts everything together and presents it as a smooth movie-like experience.
- Here, *diṭṭha*, *suta*, *muta*, and *viññāta* mean "seeing, hearing, enjoying (with smell, taste, and touch), and consciousness respectively; "*mattan*" means "a *mātra*" in Sinhala or "a trace" in English. Thus "seeing" is just a trace of a visual event lasting only a billionth of a second. Then, it passes away, and a new one comes in. It is like taking a series of pictures with a camera. The mind makes everything appear solid, permanent, and stable.

16. If all this appears too technical, do not worry about it. It took me a long time to figure this out. I got the final details recently by combining information from scientific studies. The Buddha could not use today's technical terms, but what he said in summary form is entirely compatible with science. But science is still way behind in terms of the bigger picture.

Next, "What is in a Thought? Why Gati are so Important?", ……

13.3.4 What is in a Thought? Why Gati are so Important?

Revised March 1, 2020; March 20, 2023

Many confusing terms in *Abhidhamma* like *citta* and *mano*, have been interpreted differently in different books. To clarify these concepts, I am writing a few posts in the "Dhamma Concepts" section under "Mind and Consciousness" starting with: "Thoughts (Citta), Consciousness (Viññāṇa), and Mind (Hadaya Vatthu) – Introduction."

1. In the previous post, we saw that a thought (*citta*; pronounced "chittha") lasts much less than a billionth of a second. The more surprising part is that each citta has structure! Each *citta* "contains" multiple *cetasika* (mental factors.) It is more accurate to say that each *citta* rises with several *cetasika*, and they all perish together within a billionth of a second.

- Of course, a *citta* does not arise by itself . It is in a *citta vīthi* involved in "sensing the outside world." That can occur via one of the six senses. Such a *citta vīthi* has either 17 *cittā* (for those sensing events involving the five physical senses) or about ten *cittā* in *citta vīthi* involving only the mind. In between those, the mind is in the "*bhavaṅga*" state.
- There is a "*bhavaṅga*" state associated with each "*bhava*." Upon transitioning to a new *bhava*, a new "*bhavaṅga* state" will be associated with that new *bhava*. That is because the "seat of the mind" (*hadaya vatthu*) is unique to each *bhava*.
- However, we do not "feel" all the "*bhavaṅga* state." For details, see "State of Mind in the Absence of Citta Vīthi – Bhavaṅga."

2. The *cetasika* (mental factors) provide different qualities to each *citta*. A *citta* is moral (*kusala*), immoral *(akusala*), or neutral (*kiriya*), depending on what type of *cetasika* rises with it.

A complete description of 52 *cetasika* is given in "Cetasika (mental factors)". A summary:

- There are seven universal *cetasika* that rise with ANY *citta*.
- Six others CAN appear in any *citta*, i.e., only some may be in a given *citta*.
- There are 14 *asobhana cetasika* (non-beautiful mental factors) that appear only in *akusala citta*.
- There are 25 *sobhana cetasikā* (beautiful mental factors.) Nineteen *sobhana cetasikā* appear in every *kusala citta*; thus, those 19 are called beautiful universals.

© 2026 Lal A. Pinnaduwage

3. Let us first discuss the seven universal *cetasika*. These arise with ANY *citta*. A *citta* with just these is called a "*pabhassara citta*" because it is the "purest form" of a *citta*. It becomes a "*viññāṇa citta*" as it develops in time within a billionth of a second! See, "Citta, Mano, Viññāṇa – Nine Stages of Mind Contamination."

- **What we experience are "*viññāṇa citta*," as *viññāṇa khanda (aggregate of viññāṇa or a "heap of viññāṇa").***

The seven universal *cetasika* that arise with any *citta* are:

- *Phassa* (contact), *vedanā* (feeling), *saññā* (perception), *cetana* (intention), *ekaggata* (one-pointedness), *jivitindriya* (life faculty), and *manasikara* (memory).

4. The *phassa* (contact) *cetasika* is what makes contact with the "object of the *citta*" whether it is sense input from one of the five physical senses or a concept that makes contact with the mind.

- Thus, the *phassa cetasika* makes it possible for the mind to make contact with the world.
- *Saññā* (perception) identifies the object by working with *manasikāra* (memory), and *vedanā* (feeling) arises.
- Depending on the object, one will generate good, bad, or neutral feelings, and also different types of *cetasika* (greed, shame, compassion, etc) can arise; *cetanā* (intention) puts it all together and "prepares" the *citta*. Based on the types of *cetasika* in the *citta*, it could be a good or bad thought. This is why *cetanā* can be good or bad, and the Buddha said: "*cetanā* is *kamma*."
- *Ekaggatā* is the ability to keep the mind on one object. *Jīvitindriya* maintains life in the current life (keeps the body alive) until death. And *manasikāra* is the all-important memory. *Manasikāra* has ALL memories (or *nāma gotta*) from the beginning-less time; see, "Difference between Dhamma and Saṅkhāra" for a discussion on *nāmagotta*.
- This is why the present *citta* is the precursor to the next *citta*, and that next *citta* is NOT entirely different from the previous *citta*. "Cause and effect" is at work from *citta* to *citta*, maintaining the "personality" or "*gati*" of the given lifestream. Thus, the Buddha rejected the notion of a "no-self" or a "self".
- Yet it is essential to realize that "*gati*" can change even in a *citta*, for example, one attains the *Arahanthood* with a single *citta* (of course with billions of *citta vīthi* making gradual progress towards it).

5. So, we can see the basic working of a *citta* with these seven universals; they carry out the most fundamental and vital functions of recognizing the object, matching it with old memories and figuring out what it is, and also *sukha*, *dukha,* or neutral feeling arise because of that recognition.

- Yet all that does not happen in a single *citta*. When an "input" comes through one of the six senses, it is captured by a *citta vīthi* containing 17 *citta* for a physical sense input and about ten *citta* for a mind input as we discussed in the previous post. Then that "captured event" is discerned and analyzed by three follow-ups "*manodvāra citta vīthi*," i.e., by the mind.
- Even then, we only experience the "net result" of millions of such *citta vīthi*; see "What is a Thought?" But due to the extreme rapidity of these processes, we feel like we are using all six in real time. We are not. The mind is always analyzing a set of events that have already gone by. This is discussed in the Bāhiya Sutta (Ud 1.10), "*diṭṭhe diṭṭamattaṁ bhavissati* ……". What we experience NOW is what has already transpired.

6. But invariably, other *cetasika* (other than the seven universal) arise as the *citta* develops in time, and the *citta* becomes *kusala citta, akusala citta* or a *kiriya* (neutral) *citta* depending on the *cetasika* that arise with the *citta*.

- *Sobhana cetasika* arise with *kusala citta* and *asobhana cetasika* arise with an *akusala citta.*

© 2026 Lal A. Pinnaduwage

- These *cetasika* types do not mix, i.e., no *sobhana cetasika* arise with an a*kusala citta* etc.

7. Now the question arises: If *cittā* arise and fall and go by so rapidly, how do we willfully stop *akusala citta* from arising? Especially when exposed to a tempting external object like an eye-catching figure.

And the answer lies in a straightforward concept that I have discussed in many posts:

- This is where one's character qualities (*gati*) and *āsava* come into play. **One automatically responds with the "set of values" one has.**
- By changing habits, one can change their character (*gati*)and eventually change one's deep-rooted cravings (*āsavā*). Even though the answer is simple, it takes a long time to get rid of bad habits and cultivate good habits, at least initially.
- Then with time, as that *gati* loses its power, one will be less and less tempted when subjected to the same sensory input. For example, this could be the sight of an attractive figure or an enemy.

8. The key to reducing such bad *gati* is to forcefully suppress that bad-thought as soon as you become aware of it. Even though an evil thought arises automatically, one becomes aware of it after a few seconds.

- As soon as you become aware of an evil thought, you should think about the dire consequences [*ādīnava*] and forcefully stop that thought stream. Just start thinking about something good or doing something that needs your full attention.
- When you keep doing this for a while, that tendency will slowly reduce, i.e., that bad *gati* will lose its power.
- For example, if one needs to quit smoking, as soon as one starts lighting a cigarette one should think about the harmful consequences of smoking and throw it away. Keep some mints handy and pop one in your mouth. Finding a "replacement activity" always helps to break a bad habit.
- If it is hateful thought, one could stop that and start thinking about something good. Recalling something pleasant, say a picture of the Buddha, can help. Always have a "replacement" ready.
- One needs to keep doing this faithfully to make the old habit weak.

9. When one gets rid of bad habits and cultivates good habits, the neural connections in one's brain get rewired. The brain changes gradually and that is how the thoughts change. This is an easy answer to using modern science.

- But there is a deeper analysis. Not only does the physical brain change but also our *manomaya kāya* is transformed. Eventually, that is what controls the brain; see a couple of posts on *manomaya kāya* and also, "Neuroscience says there is no Free Will? – That is a Misinterpretation!" for details.
- As I have discussed in other posts, this idea of gradually changing one's habits holds the KEY to making progress on the Path or even achieving mundane goals. See, for example, "9. Key to Ānāpānasati – How to Change Habits and Character (Gati)."

10. Therefore, initially one responds with one's current set of values or *gati*. But after a few moments, one CAN think about the consequences and correct the initial automatic reaction.

- This is further explained in terms of the instant reaction coming from the limbic system in the brain and the "reasoned out" corrective action coming from the neo-cortex or "the thinking brain"; see, "Truine Brain – How the Mind Rewires the Brain via Meditation/Habits."
- And that is how we slowly change our *gati*, by willfully correcting the initial "auto-response". This is what makes us different from animals. Animals do not have this ability, at least not to our level.
- **The more you "catch" such "inappropriate auto-responses" and stop them, the more effectively you can get rid of bad habits, cultivate good habits and change your *gati* (character) in the right direction. This is "*ānāpāna sati*", i.e., one keeps good thoughts and gets rid of bad thoughts willfully; see, "What is Ānāpāna?" in the Meditation section.**

© 2026 Lal A. Pinnaduwage

11. As mentioned above, *cetasikā* present in a given *citta* determines the quality and/or the function of the *citta*.

- An immoral (*akusala*) *citta* has one or more immoral roots; *avijjā* (delusion *cetasika*) is in any immoral *citta*.
- A moral (*kusala*) citta will always have non-greed and non-hate *cetasika*. Wisdom (*paññā*) *cetasika* rises only in *citta* with all three roots (*tihetuka citta*).
- We have encountered many of the *cetasika* in the posts on various topics: the five hindrances are included in the 14 *asobhana cetasika*.
- The four bases of mental power (*cattāro iddhipāda*) are four of the *sobhana cetasika,* i.e., *chanda, citta, viriya, vīmaṁsā*. Here *citta* means "thinking about the goal" and thus is *sammā saṅkappa* when fully cultivated. *Vīmaṁsā* is another name for *paññā* and becomes *sammā diṭṭhi* when fully cultivated; see "37 Factors of Enlightenment."
- Some of the factors in the Noble Eightfold Path are directly in the set of *sobhana cetasika*, for example, *sammā vācā, sammā kammanta*, and *sammā ājīva*. Other *cetasika* like *sati* and *paññā*, when cultivated become *sammā sati* and *sammā diṭṭhi*.
- Similarly, *ekaggatā* in the universal *cetasika* set becomes *sammā samādhi*, and *viriya* and *vitakka* in the set of particulars become *sammā vāyāma* and *sammā saṅkappa* when cultivated.

12. As we noted, we can control a bad series of thoughts like planning a robbery or even making a quick plan to steal an item from a store. There is enough time to think about the consequences of such bad actions and deliberately stop such thoughts. **But one needs to be in a reasonably stable "state-of-mind" to be able to do that. When the mind is agitated, the mind cannot see "right from wrong". The five hindrances cover the mind.**

- Sometimes people commit horrendous crimes in the spur-of-the-moment. One can get into a rage and shoot someone with a gun that is close by. How do we stop such quick reactions? By being mindful of controlling that bad *gati,* which is the tendency to get mad at the slightest provocation. See #10 above.
- When one keeps reducing one's "bad *gati*," those really dangerous *gati* — which could lead to rebirth in the *apāyā* — will be permanently eliminated when one becomes a *Sotāpanna*. With that achieved, that mindset persists even in future lives. As we saw, a *paṭisandhi citta* in the new life arises based on the *cuti citta* of the past life, so it has all the "*gati*" from a past life. Changing to a "*gati*" of a *Sotāpanna* is a change in the lineage (*gotrabhu*.) One becomes an *Ariya* or a Noble person forever.

13.3.5 1. Thoughts (Citta), Consciousness (Viññāṇa), and Mind (Hadaya Vatthu) – Introduction

Pre-2016 post; rewritten May 12,2025

It is important to get a good understanding of the key Pāli words regarding the mind.

Introduction

1. It will be beneficial to read this post even if one is not interested in learning *Abhidhamma*.

- After writing a few posts in the *Abhidhamma* section, I realized it is a good idea to write introductory posts on the English meanings of some Pāli keywords related to the mind. **In the end, words do not matter, and grasping the concepts involved matters.** But conveying the concept correctly REQUIRES the use of the right words.

© 2026 Lal A. Pinnaduwage

- This is a bit of a problem because there are no words in English that truly convey the meaning of some Pāli keywords when talking about the mind (like *mano* and *viññāṇa*).
- More details will be given in the *Abhidhamma* section, but the posts in this section provide just the basics.

Pāli Words Related to the Mind

2. A *Citta* (pronounced "chiththa"; **see Ref. 1**) is widely translated as a "thought," *viññāṇa* as "consciousness," and *mano* as "mind." Those are all incorrect.

- A "conscious thought" would have many *cittās*; *viññāṇa* is much more than "mere consciousness"; *mano* is an "evolved state of *citta*." *Cittās* arise in *hadaya vatthu* ("seat of the mind)." Let us first discuss the reason for using this term for the mind.
- *Hadaya vatthu* is where *citta* (thoughts) arise; thus, it is appropriate to call it the mind or, even more appropriately, "seat of the mind". ***Hadaya vatthu* is the "link" between the "*mano loka*" (mind plane) and the "material plane," whether it is in *kāma loka*, *rūpa loka*, or *arūpa loka* (i.e., anywhere in the 31 realms).** Mind or the *hadaya vatthu* is a very fine *rūpa* (matter); in technical terms, *hadaya vatthu* is formed at *paṭisandhi* as a *vatthu dasaka*.
- This *hadaya vatthu* is the only trace of matter associated with a living being in the *arūpa loka*. It is much smaller than an atom; only a form of "*suddhaṭṭhaka*" (sometimes written as "*suddhāshtaka*") in the form of a "*dasaka*."
- For example, suppose a *cuti-paṭisandhi* transition occurs from a cat to a human. In that case, the "cat *hadaya vatthu*" dies and a "human *hadaya vatthu*" is formed, and the very next *citta* arises in the "human *hadaya vatthu*" or the "human mind" in the "human *gandhabba*"; see, "Cuti-Paṭisandhi Transition – Abhidhamma Description." With that in mind, let us discuss the ultimate "primary elements."

Four Paramattha Dhamma

3. In the absolute sense (*paramattha*), there are four entities: *citta*, *cetasika* (pronounced "chethasika"; **see Ref. 1**), *rūpa* (pronounced "rūpa"), and *Nibbāna*. [***paramattha*** : [m.] the highest ideal; truth (*sacca*) in the ultimate sense.]

- The last one, *Nibbāna*, does not belong to "this world" of 31 realms. Therefore, *citta*, *cetasika*, and *rūpa* represent anything and everything in this world.
- There are 89 (or 121) types of *citta*, 52 kinds of *cetasika*, and 28 kinds of *rūpa*. See "Rūpa (Material Form) – Table."
- These are all listed in the "Tables and Summaries" section.

Citta and *Cetasika*

4. *Citta* and *cetasika* are "*nāma*" and all tangible things are made of "*rūpa*".

- A *citta* ("thought") does not arise by itself but occurs with several *cetasika* (mental factors). There are seven *cetasika* that arise with ANY *citta*, and normally, there are other *cetasika* that arise in addition to those seven. This is discussed in "Cetasika (Mental Factors)."
- There are "good" and "bad" *cetasika*. The familiar ones are *lobha*, *dosa*, *moha*, *alobha*, *adosa*, and *amoha*, but many others exist. These determine whether a given *citta* is a "good" (*kusala*) *citta* or a "bad" (*akusala*) *citta*. There are only good or bad *cetasika* in a given *citta*; they do not mix.

5. Even though a *citta* arises and perishes within less than a billionth of a second, it gets contaminated during its lifetime. Starting as a "pure *citta*" ("*pabhassara citta*"; "*prabhasvara citta*" in *Sanskrit*) with the seven

© 2026 Lal A. Pinnaduwage

universal *cetasika*, it gradually degrades by incorporating many other *cetasika* into a *"contaminated citta"* or *viññāṇa*. Without going into details, the nine steps are:

- ***citta, mano, mānasan, hadayaṁ, pandaran, mana indriyan, mano manāyataṁ, viññāṇa, viññāṇakkhandha.*** But this happens during the life of the *citta* itself (in a billionth of a second) according to the "*gati*" we have. See "Citta, Mano, Viññāṇa – Nine Stages of Mind Contamination."
- **This is why we cannot control our initial thoughts, but as they turn to speech and bodily actions, we may have time to control them.**
- But we still use the term "*citta*" to denote the outcome; to differentiate the one that the sequences started, we call it a "pure *citta*" or a "*pabhassara citta*."
- What we end up with is basically what we call *viññāṇakhandha,* and all this happens within a billionth of a second. This "contamination process" cannot be controlled at that early stage; it happens automatically based on one's "*gati*" (pronounced "gathi"). **The only thing we can do is to change our "*gati*."**

6. **We can use the following analogy:** If we start with a glass of pure water, that can be compared to a pure *citta* with just the seven universal *cetasika.* Adding some sugar (*mano*) and salt *(mānasan)* makes it contaminated, but we cannot see the contamination. Now, if we add a bit of brown sugar, we can see the water turning brown; this is like the *hadayaṁ* stage. Then, we add bits of dirt, and the water gets further contaminated, but it is still mostly water. A contaminated *citta* is at the *viññāṇa* stage; it is a *citta* that is defiled.

- The *citta* of an *Arahant* does not contaminate beyond the *mānasan* stage (While in the "*Arahant phala samāpatti*" enjoying *Nibbānic* bliss, an *Arahant* has the *pabhassara citta* or the pure *citta).* All others get to the *viññāṇa* stage, but of course, the "level of contamination" is much lower even by the time one gets to the *Sotāpanna* stage because one has gotten rid of any "*gati*" associated with the *apāyā*.
- As we can see, it is impossible to control such a fast process by sheer willpower; it is a matter of "cleansing the mind" progressively of the contaminants of greed, hate, and ignorance.
- Now we can see why "*mano*" cannot be the mind. "*Mano*" is just a bit "contaminated" *citta*. It gets progressively contaminated, and by the time it comes to the "*viññāṇa*" step, it has captured all relevant *cetasika* for that *ārammaṇa* or the "thought object."
- **At the last step, a very profound thing happens.** The *manasikāra cetasika* brings into play all relevant past *viññāṇa* (which are fixed as "*nāma gotta*") as well as one's "hopes and dreams" for the future that are relevant to the "event in question." For example, if the thought occurs due to seeing a nice house, one may compare that house with houses like that one has seen before, AND one's "dream house" that one hopes to build one day. Therefore, in the "final version," a *citta* is a very complex entity that reflects the "nature of the object seen" and one's likes/dislikes for it.
- This last stage of the *citta* or *viññāṇa* is the "composite awareness" for that particular event, which also has one's likings, dislikings, etc. for that particular event; see, "Citta, Mano, Viññāṇa – Nine Stages of Mind Contamination."

7. And we do not, and cannot, just perceive a single or even a few *viññāṇakkhandha*; rather, what we "feel" as a "thought" is the sum of many such ***viññāṇakkhandho,*** and we still call that a "*citta*" or a "thought"; see, "What is a Thought?" and "Citta and Cetasika – How Viññāṇa (Consciousness) Arises."

- We also alternatively call such sense experiences "*citta*," "thoughts," "consciousness," and "*viññāṇa*."
- Thus, it is critical to understand that what we mean by *viññāṇa*, in general, is the total of many *cittās*; in *Paṭicca Samuppāda*, at the "*avijjā paccayā saṅkhāra*," *viññāṇa* means this total of many *cittās* or, even more accurately, the total of many of *viññāṇakkhandha*.

8. Now, I would like to point out a few important conventions:

- It is important to remember that thought can have many meanings, even in English: WebLink: wikipedia.org: Thought

© 2026 Lal A. Pinnaduwage

- **Normally, "*citta*" is used to denote a thought, and "*viññāṇa*" is used to denote the "awareness" associated with a thought.** But that is not correct, as we discussed above.
- And as you can imagine, such an "average of thoughts" may have many types of cognitions and underlying "awarenesses," and we will talk about the different types of *viññāṇa* in the next post, "2. Viññāṇa (Consciousness) can be of Many Different Types and Forms".

References

1. In the 1800s, the Pāli Text Society adopted a specific writing convention to write Pāli words using the English alphabet. See "Pāli Words – Writing and Pronunciation."

2. Further details on *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* in "Rūpa – What It Really Means," "Vedanā (Feelings) Arise in Two Ways," "Saññā – What It Really Means," "Saṅkhāra – What It Really Means," and "Viññāṇa – What It Really Means,."

13.3.6 2. Viññāṇa (Consciousness) can be of Many Different Types and Forms

Revised August 4, 2021; July 1, 2022

1. *Viññāṇa* is unique to sentient beings. Plants are alive but have no *viññāṇa*; they respond to the environments but are not capable of "thinking." Sentient beings are aware that they are alive and just that basic awareness of "being alive" is not really a *viññāṇa.*

- This purest level of *viññāṇa* (the awareness of being alive) is called the "*citta*" (pronounced "chiththa") stage.
- A *citta* arises with 7 concomitant "mental factors" (*cetasika*, pronounced "chetasika"), and this is described in "Citta and Cetasika – How Viññāṇa (Consciousness) Arises." To emphasize, a pure *citta* arises with universal *cetasika*; a *citta* always has those 7 *cetasikā.*

However, a *citta* gets "contaminated" by other *cetasika* as soon as it arises. Within the lifetime of a *citta* (which is less than a billionth of a second), it progressively gets contaminated by "good" or "bad" *cetasika*, and this happens in nine stages! See the previous post: "Thoughts (Citta), Consciousness (Viññāṇa), and Mind (Hadaya Vatthu) – Introduction."

2. As discussed in "Citta and Cetasika – How Viññāṇa (Consciousness) Arises," additional *cetasikā* provide "color" to a *citta*: if a set of "good *cetasika*" arise with the citta it becomes a "good thought" or a "good *viññāṇa*"; if it is a set of "bad *cetasika*," then the thought or the viññāṇa is bad (those *cetasika* do not mix). Also, there are neutral thoughts or neutral *viññāṇa* that are neither good nor bad.

- *Viññāṇa* can be experienced in many different ways; since it is hard to come up with different names for each case, they are all bundled together as *viññāṇa*. Words like *citta, viññāṇa, mano,* as well as *cakkhu viññāṇa, sota viññāṇa*, etc., and *vipāka viññāṇa* are used in different contexts, and that can be confusing to many regardless of whether their native language is English, Chinese, or even Sinhala, which is the closest language to Pāli. But each term has its own "subtle identity," and as we discuss more, those subtle differences will become clear.

3. Viññāṇa is often translated as "consciousness," but *viññāṇa* can be used in many different contexts like "subconscious" or "layers of consciousness."

- The same problem is encountered by those who speak the *Sinhala* language because there the word "*sitha*" (සිත) is used on many occasions to represent the Pāli words *citta, mano*, and *viññāṇa*. Similarly, in Sinhala, "*yati sitha*" (යටිසිත) is used to denote the subconscious.
- This "subconscious" in English (as introduced by Sigmund Freud) is not a separate citta (there can be only one citta at a time). But, each *citta* can have "layers of consciousness"; the *manasikāra cetasika* plays a big role here.

© 2026 Lal A. Pinnaduwage

- For example, at a given time, we may have several "subconscious" *viññāṇa* (expectations): **we may have plans to buy a certain car, getting ready to go on a trip next week, in the process of building a house, etc.; all these are in the subconscious and each *citta*.** If we see a car on the road that looks like the car we are interested in, the *viññāṇa* alerts us to it, and we take a good look at it.
- As the Buddha advised *bhikkhus*, what really matters is to convey the meaning. Just like in the case of *Paṭicca Samuppāda* or *taṇhā*, it is best to use the *Pāli* words and comprehend their meanings; those key words convey deep meanings that may take several words or even sentences in any other language to get the idea across.

Types of *Viññāṇa* associated with *Kamma* and the Sense Doors

Viññāṇa is complex and can be presented in different types and forms. We will start by looking at "two categories" of *viññāṇa*.

4. First, we can categorize them according to *kamma* (or *saṅkhāra*) associated with the *viññāṇa*: ***Kamma viññāṇa* and *vipāka viññāṇa*.**

Let us describe in plain English what these terms mean.

- We can put *viññāṇa* into two categories: Those *viññāṇa* that arise while doing a *kamma* (*saṅkhāra*) is a *kamma viññāṇa*. For example, when one steals something, one has an awareness of that; that is the "*viññāṇa* that one is stealing."
- Then some arise as *kamma vipāka*, and thus we do not have much control over them; they just happen to us and are called *avyākata viññāṇa* or *vipāka viññāṇa*. I like the term *vipāka viññāṇa* than *avyākata viññāṇa* because then it is easy to differentiate those two kinds. For example, when one is walking on the road and sees something valuable on the roadside; that is a *cakkhu viññāṇa* (seeing something) and also a *vipāka viññāṇa* (due to a *kamma vipāka*).

5. When traveling by car and looking out of a window, we see many different things. But most of it we do not pay any attention to, even though we are "aware" that we see things. Those are *vipāka viññāṇa*, they are "presented to us," but most of them may not interest us.

- Then all of a sudden, we see something that "piques our interest," say, a nice house by the roadside. Then we focus on that and may keep looking at it until it moves out of our range. That is a *vipāka viññāṇa* that triggered a "*gati*" in us; it was of interest. And it could put us in a position to acquire more kamma by initiating a *kamma viññāṇa*. An easy way to remember is that "*kamma viññāṇa*" are those arising via "*saṅkhāra paccayā viññāṇa*" in *Paṭicca Samuppāda*; see #6 below.
- For example, if we really got interested in that house, we may start thinking about how nice would it be if we could build and live in a house like that. Now we are making *saṅkhāra* (i.e., generating *kamma*) based on that "seeing event." Thus such thoughts (or *viññāṇa*) that followed the initial *vipāka viññāṇa* of "seeing the house" are *kamma viññāṇa*.
- Our life experiences belong to basically one of those two categories.

6. *Vipāka viññāṇa* arise with sensory input; only these can be truly called "consciousness." We can differentiate them into six categories, this time based on the sense door: thus we have *cakkhu viññāṇa* (vision consciousness), and *sota* (sound), *ghāṇa* (smell), *jivhā* (taste), *kāya* (touch), and *mano* (mind) *viññāṇa* (consciousnesses).

- In the previous example, the both types of *viññāṇa* were all initiated by *cakkhu* viññāṇa, a "seeing event or consciousness." At the *kamma viññāṇa* stage, they turned to an "expectation" (more that consciousness) because those thoughts about acquiring a house originated in our minds.
- Thus if you contemplate a bit on this, you can see that we can put ALL our experiences into one of those two "divisions," i.e., we can analyze them to be in the *vipāka viññāṇa* or *kamma viññāṇa* categories.

7. Let us discuss something fundamental to *Paṭicca Samuppāda*.

© 2026 Lal A. Pinnaduwage

- The *Paṭicca Samuppāda* cycle starts with "*avijjā paccayā saṅkhāra*", and "*saṅkhāra paccayā viññāṇa*". **This *viññāṇa* is NOT a *vipāka viññāṇa*, but only a *kamma viññāṇa*.**
- When we see something, hear something, etc., those are things that HAPPEN to us. Thus there is no *avijjā* (or ignorance) initiating that consciousness. There is no *kusala-mūla* or *Akusala-Mūla Paṭicca Samuppāda* cycle associated with such a consciousness (*vipāka viññāṇa*).
- However, if we now decide to act on it (say, take another look at it because we like it), then we may be initiating a *saṅkhāra* (*kamma*) event: now this new event initiates *an Idappaccayatā Paṭicca Samuppāda* cycle with "*avijjā paccayā saṅkhāra*," which leads to, "*saṅkhāra paccayā viññāṇa*," i.e., this *viññāṇa* was initiated by a *saṅkhāra*; thus it is a *kamma viññāṇa*.

8. Usually, what happens in our lives is that we are bombarded with sensory inputs via all six senses. We tend to turn our attention to many because we are afraid that "we may miss out on something." This is the root cause of the lack of "peace" in our minds because we are constantly moving our attention among the six senses, going back and forth. If we have too many "likings," our mind will be pulled in all different directions trying to follow all those sense inputs.

- We can reduce this effect by avoiding busy environments (i.e., going to a secluded place). **But, we still cannot "turn off the sixth sense input," i.e., the mind, unless we purify our minds.** This is the key to meditation. It is not possible to have "peace of mind" if the mind is burdened with greed, hate, and ignorance (wrong vision or *micchā diṭṭhi*).

9. Thus, an *Arahant* can have a peaceful mind even when in the busiest place. A *Sotāpanna* can do that to a certain extent too.

- Even before any of the "*magga phala*" is attained, one can easily get to *samādhi* and then to *jhānā* by gradually getting rid of the defilements associated with "wrong vision" just by learning Dhamma (mainly *anicca, dukkha, anatta*).
- Then we can reduce the number of different types of *kamma viññāṇa* going through the mind ("Sounds like my neighbor's car leaving, I wonder whether she is going to the mall?", "I wonder what (my enemy) is up to today?", "I wish I could have a body like that!", "How come I don't have a nice house like that?"; these are all types of *kamma viññāṇa* that we burden our minds with unnecessarily.
- And it is important to realize that it is not easy to turn those off; they WILL BE turned off automatically when we purify our minds first by learning Dhamma ("What is the use of thinking about unnecessary things? There are better things to think about that provide lasting happiness").

Next, "3. Viññāṇa, Thoughts, and the Subconscious", …….

13.3.7 3. Viññāṇa, Thoughts, and the Subconscious

Revised February 25, 2020

Cetasikā (Mental Factors) Determine the Nature of a *Citta* (Thought)

1. A thought (*citta*) arises based on a specific thought object (*ārammaṇa*), say thinking about buying a car or going for a walk. There is only one *citta* at a time, but each lasts less than a billionth of a second. The word *citta* is pronounced "chiththa." See, ""Tipiṭaka English" Convention Adopted by Early European Scholars – Part 1."

- *Cittā* (plural of *citta*) flow at a very fast rate. We do not experience individual citta, but the overall effect of billions of *cittā* that arise in a second.
- Each *citta* has many *cetasika* (mental factors) in it, including the all-important *saññā, phassa, manasikāra cetasika*.
- Then there are "good" and "bad" *cetasika* in a *citta* that describes the "quality" of the *citta*.

© 2026 Lal A. Pinnaduwage

- When someone is angry, most *cittā* **at that time** will have anger/hate (*paṭigha* and/or *dosa cetasika.*) When the same person is feeding a hungry person his/her *cittā* **at that time** will have the benevolence and/or loving-kindness *cetasikā.*
- The good and bad *cetasikā* do not mix, i.e., one either has a good thought or a bad thought. For discussion on *cetasika*, see, "Cetasika (Mental Factors)."

What Is *Viññāṇa*? – Role of *Cetasikā*

2. Even though we simply think about a "thought," a thought is really a complex entity, that goes through nine stages within a billionth of a second. It ends as *viññāṇa or viññāṇakkhandha.* See, "Citta, Mano, Viññāṇa – Nine Stages of Mind Contamination." *Viññāṇa* represents the overall experience of "thought" and is largely described by the *cetasikā* in those *cittā.*

- Of course, no one experience a *viññāṇa* due to a single *citta*; rather what one experiences is the average of millions or billions of *cittā.* A bunch or a heap is called *khandha* in Pāli or Sinhala. Thus what we experience is a *viññāṇakkhandha* or the overall effect of a bunch or a heap of *cittā.*
- *Viññāṇa* is complex and multifaceted. But they are primarily of two types: *vipāka viññāṇa* and *kamma viññāṇa* See, "Viññāṇa – What It Really Means."
- We can look at those two types in a simple way as follows.

3. The *manasikāra* and *saññā cetasika* are in each and every *citta*, and they can incorporate all past memories, habits (*gati*) and cravings (*āsavā*) to a given citta. It is the *cetanā cetasika* that "puts it all together." Only the mind of a Buddha can "see" such amazing details. It all happens within a billionth of a second!

- Our *gati* and *āsavā* (plural of *āsava*) may not be displayed in each *citta.* Rather, they lie dormant, waiting for a "trigger" to come up. For example, greedy thoughts arise only when a "pleasing thought object" is in play, as in seeing a tasty dish or an attractive person.
- Therefore, the way we think (*viññāṇa*) depend on our *gati* (habits/character,) *āsavā* (cravings,) AND the particular "thought object" or *ārammaṇa.*
- Of course, we can get rid of certain *gati*/*āsava* and cultivate new ones.
- The main goal of *Ānāpāna* and *Satipaṭṭhāna* meditations is to remove bad *gati*/*āsava* and to cultivate good *gati.* See, "Is Ānāpānasati Breath Meditation?" and "9. Key to Ānāpānasati – How to Change Habits and Character (Gati)."

Vipāka Viññāṇa and *Kamma Viññāṇa*

4. The mind is directed to a new thought object (or *ārammaṇa*) with a *vipāka viññāṇa* that may come through **any of the six sensory inputs**. For example, we may be walking down the street, but an attractive item in a shop window may catch our attention.

- Now, if we like that item, we may start thinking about buying it. That is a *kamma viññāṇa.* Now we have generated a new *viññāṇa* with a desire to buy that item. A *kamma viññāṇa* has an expectation. We may not buy it at that time. But if we go home and again start thinking about it (generating *vacī saṅkhāra*,) then we build up that *viññāṇa* via "*saṅkhāra paccayā viññāṇa"* step in *Paticca Samuppāda.* Therefore, a *kamma viññāṇa* **arises only in the mind.**
- Without getting deep into the issue, we can just say that a *kamma viññāṇa* is an expectation. Once formed, a *kamma viññāṇa* will stay with us at least for a while. It will grow only if we keep thinking, speaking or doing things (with *vacī* and *kāya saṅkhāra*) related to that expectation.

Kamma Viññāṇa Come Back as *Vipāka Viññāṇa*

© 2026 Lal A. Pinnaduwage

5. When we build such an expectation, the memory of that can come back as a *vipāka viññāṇa* at a later time.

- For example, the memory of that item in the shop window in #3 above may come back to the mind via one of the six senses later on. For example, we may hear about it on the radio, we may hear someone else talking about it, etc. It may even "pop into the mind" too.
- That item in the shop window is a "thought object" or a *ārammaṇa*.
- Then if we keep thinking, speaking, doing things related to that *ārammaṇa,* that associated *viññāṇa* will grow.

What is Subconscious?

6. Such *vipāka viññāṇa* are waiting in the background to bring their fruits. There may be many types hiding beneath the surface. **This is what Sigmund Freud called the "sub-conscious".**

- When I am paying for my groceries, my thoughts stay focused on that transaction. But there can be many types of *viññāṇa* lurking "in the background". I may be building a house, studying for an exam, planning a trip, planning a birthday party for my child, etc. and all those "*viññāṇa*" are working in the background even though I am not thinking about any of them at the time I am paying for my groceries.
- However, any of those, and even some things that I had not been thinking about for a long time, can be there in the "subconscious". But there is no separate "subconscious" as such.
- All these different types of *viññāṇa* cannot be there in a single thought (*citta*), and there is only one *citta* at a time; see, "What is a Thought?". Then how is it possible for many types of *viññāṇa* to be lurking in the background? That is what we discussed in #2, #3 above. Based on the particular *ārammaṇa,* the *cetanā cetasika* "transforms" a pure *citta* to the "contaminated" *viññāṇa* stage in several steps.

7. The more one does something repeatedly, there starts a *kamma viññāṇa* for that particular event or behavior. For example, when one starts smoking, a *viññāṇa* starts building, and the more one smokes, the stronger the *viññāṇa* gets. This is called "feeding the *viññāṇa*" by doing it again and again. In other words, habits are formed via repeatedly feeding the *viññāṇa* for that habit.

- When a certain *viññāṇa* is pleasing to the mind, that *viññāṇa* tries to get fed frequently. When someone has the habit of smoking the *viññāṇa* for that tries to deviate his/her attention to smoking at every possible opportunity. For example, if a smoker sees an advertisement for smoking, that "triggers" the liking or the *viññāṇa* for smoking that was in the subconscious.

8. But it works the same way for a *viññāṇa* that got established with a dislike also. For example, if someone did something really awful to you in the past, the hearing of his/her name will bring back that *viññāṇa*.

- This is why we get "attached" (*taṇhā*) to things we like as well for things we dislike and is the meaning of *taṇhā* (get bonded via greed or hate); see, "Taṇhā – How We Attach Via Greed, Hate, and Ignorance."

Viññāṇa Are Not Permanent

9. Not all *viññāṇa* keep accumulating in the background. Those weaker ones, especially if don't get fed, diminish and disappear.

- For example, suppose I had planned an overseas trip and had been making preparations for it. The more preparations I make and the more thoughts I have of the trip, those are "food for that *viññāṇa*", and it grows. If I see a new article with that country's name, I would immediately read the article. But suppose, a major war breaks out in that country before my trip; then I would cancel that trip right away. I will no longer be planning for the trip and my mind will "not be interested" in it anymore. Since that *viññāṇa* for "visiting that country" is not going to get fed anymore, it will be gone in a short time.

© 2026 Lal A. Pinnaduwage

- We don't even need to actually physically do the activity to "feed the *viññāṇa*" or make a habit stronger. There are studies that show that one could improve the game of basketball, for example, by just visualize practicing, and getting the ball mentally. These are called "*mano sañcetanā*". Focusing attention on a given task can be very powerful.
- One's associations strongly influence which of those different types of *viññāṇa* will grow by "getting fed" frequently. If one starts associating with people who drink regularly, one's *viññāṇa* for "getting drunk" will grow as one keeps feeding that *viññāṇa* by drinking frequently.

Summary

12. A built-up *viññāṇa* can form a habit (*gati*.) As the habit or the *gati* gets stronger, it can be carried over to the next life, possibly in two ways.

- If a human dies and has time left in the "human *bhava*" then when he/she is reborn as a human most of the previous *gati* will be there.
- A really strong habit could lead to a "*paṭisandhi viññāṇa*" at the dying moment and can lead to a corresponding "*bhava*" based on that particular *gati*. For example, an extremely greedy person, may acquire a "*peta bhava*" at the dying moment and be born as a "*peta*" or a hungry ghost.

13. Thus *viññāṇa* is very complex. It is not just "awareness." *Viññāṇa* also has one's "hopes and dreams" as well as "likes, dislikes, and habits". It also includes the "subconscious." It is a complex combination of the 52 *cetasikā*.

- Of course, not all *cetasikā* are involved in a given *citta* or in our thoughts. *Sobhana* (good) *cetasikā* do not arise with *asobhana* (bad) *cetasikā* in a given *citta*.
- See, "Cetasika (Mental Factors)" for a discussion on *cetasikā*.

Gandhabba (Manomaya Kāya) – Introduction

Does any Object (Rūpa) Last only 17 Thought Moments? Moved to Paṭicca Samuppāda → Understanding the Terms in Paṭicca Samuppāda

Hidden World of the Gandhabba: Netherworld (Paraloka)

Ghost in the Machine – Synonym for the Manomaya Kāya?

Manomaya Kāya (Gandhabba) and the Physical Body

Brain – Interface between Mind and Body

Manomaya Kāya and Out-of-Body Experience (OBE)

Cuti-Patisandhi – An Abhidhamma Description

These posts complement some of the posts in the "Udayavaya Ñāṇa" section, which is important for the *Sotāpanna* stage of *Nibbāna*. All these are pieces of a complex puzzle, but they are all inter-consistent. So, don't worry if you do not understand it all; with time it will all make sense and will lead to unbreakable faith in Buddha Dhamma even through future lives. Faith comes via true understanding.

13.4.1 Gandhabba (Manomaya Kāya) – Introduction

Revised April 22, 2016; revised February 16, 2021

Gandhabba Is the Essential "Seed" for the Physical Human Body

1. A human-being is born at the *cuti-paṭisandhi* moment first with just the "mental body." That is the *manomaya kāya* or a *gandhabba*. Once that *gandhabba* "descends" to a womb, the physical body starts growing.

- In most realms, beings are born fully formed (*opapātika* births). But in the human and animal realms, first, the blueprint of that life-form arises at the *cuti-paṭisandhi* moment .
- Once born a *gandhabba*, It can make many new physical bodies in a given *bhava*. For example, a "human *bhava*" may last many hundreds of years. But a human body lives only about 80 years. Therefore a "human *gandhabba*" can make many "human bodies" during existence as a human; see, "Bhava and Jāti – States of Existence and Births Therein."
- This is why there are resemblances of both mental and physical characteristics between the two lives in rebirth stories.

An Example

2. Let us take the example of a being born many times as a cow making a transition to a human *bhava* at the end of the "cow *bhava*" (an infrequent event).

- The transition from a cow to a human occurs in the last *citta vīthi* of the "cow life". See, "Cuti-Paṭisandhi – An Abhidhamma Description." At the end of that *citta vīthi*, a human *gandhabba* comes out of the cow's dead body. That *gandhabba* has a subtle body that cannot be seen, but it is a "blueprint" of the human body. But the "gross physical features" will be partially determined by the parents of the new life.
- This *gandhabba* now awaits a suitable womb to be available. Of course, the *gandhabba* cannot decide on a womb. Instead, when a right womb becomes available (i.e., matching the "*gati*" of the *gandhabba*), it will be pulled into the womb by the kammic energy.

© 2026 Lal A. Pinnaduwage

- When a sperm fertilizes an egg in a womb, a single cell called zygote results. But there is no life there until the *gandhabba* enters the womb and is incorporated with that zygote. Now the zygote becomes an embryo, then a fetus, and once out of the womb grows to a full-size human according to that blueprint in the *gandhabba*.
- More details can be found at, see, "Buddhist Explanations of Conception, Abortion, and Contraception."

3. At the cow-human transition in the last *citta vīthi* of the cow life, some significant changes occur in that lifestream. The concept of a lifestream, which is really a very basic introduction, is discussed in "What Reincarnates? -Concept of a Lifestream."

- Of course, the most significant change is that now the lifeform has a mind that is at the human level, not at the animal level; the baseline "consciousness level" has shifted. This is expressed in several ways in the *manomaya kāya* of the *gandhabba*.
- At the *cuti-paṭisandhi* transition, the *kammic* energy creates three very fine *rūpa* called *vatthu dasaka*, *kāya dasaka*, and *bhāva dasaka*. **We will discuss these in detail later, but they basically correspond, respectively, to the mind-door (or the mind), the blueprint for the human body, and dominant features including male or female character** (it is not just the sex type, since *rūpi Brahmā* also have *bhāva dasaka*, but are gender-neutral).
- As the physical body grows, first inside the womb and then outside the womb, the subtle body of the *manomaya kāya* expands with it when the physical body grows from the single cell. Thus overlapping the physical body that we see, there is a subtle body (*manomaya kāya*) of the *gandhabba. Gandhabba* means the same as the *manomaya kāya*.
- Therefore, the *gandhabba* is really like a "driver" driving or navigating the physical body; see, "Ghost in the Machine – Synonym for the Manomaya Kāya?."

How Does the *Gandhabba* See and Hear Outside the Physical Body?

4. The subtle body of the *gandhabba* or the *manomaya kāya* has all key "sensing units" of *hadaya vatthu* (mind-door) surrounded by the five *pasāda rūpa* (*cakkhu, sota, jivhā, gandha,* and *kāya.*) A *gandhabba* is in the form of a very subtle matter at the *suddhaṭṭhaka* level. It is an invisible "energy body." A physical body would be inert without a *gandhabba* inside.

- **The *gandhabba,* when outside the physical body, can experience the world without eyes, ears, etc.** See #6 of, "Out-of-Body Experience (OBE) and Manomaya Kāya."
- The *gandhabba* sometimes comes out of the physical body in traumatic situations like during heart operations. Then it can see doctors operating on its own physical body! Such "out-of-body experiences" (OBE) have been reported; see, "Manomaya Kāya and Out-of-Body Experience (OBE)."
- The main thing to remember is that *hadaya vatthu* is the mind-door. It is surrounded by the five *pasāda rūpa* (*cakkhu, sota, jivhā, gandha,* and *kāya.*) The *pasāda rūpa* correspond to the five physical senses of the eye and ear, tongue, nose, and touch.

Gandhabba Inside the Physical Body

5. The physical body is really a "shell" controlled by the mind (*hadaya vatthu*).

- When a *gandhabba* is inside a physical body, "seeing" and "hearing" happens with the help of the physical eye and the physical ear. It is like being inside a military tank. One needs to use the sensors mounted on the tank to see and hear what is going on outside.
- For details, see, "Out-of-Body Experience (OBE) and Manomaya Kāya."

6. The world is experienced through the physical body, and this interaction is slow compared to the fast pace of the *citta*. The sensory data are collected by the five physical senses of eye, ear, nose, tongue, and

© 2026 Lal A. Pinnaduwage

body. They are then transmitted to the brain via the central nervous system, which takes millisecond scale time.

- At the brain, data for a specific time interval (possibly around 10 milliseconds; see, "Citta and Cetasika – How Viññāṇa (Consciousness) Arises") are processed and then converted to a format suitable for transmission to the five *pasāda rūpa* and the *hadaya vatthu*, via a fast "ray system" (called "*kiraṇa*" in Pāli or Sinhala).
- Individual "packets of information" from each of the five senses are then transmitted to the corresponding *pasāda rūpa* located on the *manomaya kāya*, which overlaps the physical body; information from the *mana indriya* are sent to the *hadaya vatthu.*

Detailed Explanation

7. For example, let us consider a "packet of data" sent from the physical eye to the brain. This information is processed by the brain, converted to a "ray system," and is transmitted to the *cakkhu pasāda*. Now the *cakkhu pasāda* vibrates and hits the *hadaya vatthu* that is located close to it. (The five *pasāda rūpa* surrounds by the *hadaya vatthu*.) That causes the *hadaya vatthu* to vibrate 17 times, much like a gong hit by an iron rod vibrating for a certain fixed number of times.

- The 17 vibrations of the *hadaya vatthu* correspond to the 17 *citta* in a *citta vīthi*. Such a *citta vīthi* is called a *pañcadvārāvajjana citta vīthi* because it is initiated by one of the five physical senses or *pañcadvāra* ("*pañca*" or five + "*dvāra*" or "door").
- Imagine a blade clamped at one edge and is hit by an object on the other edge; it vibrates for a certain FIXED number of times per second; that number is called the frequency of vibration and is fixed for a given material. And one can see the blade vibrating. Pretty much the same thing happens when the ***hadaya vatthu*** vibrates when hit by one of the *pasāda rūpa*, and this "vibration" is called a ***hadaya rūpa***, which thus has a lifetime of 17 *citta* or thought moments. Therefore, the *hadaya rūpa* is not a physical *rūpa* but basically is a mode of vibration.
- The misconception that any *rūpa* has a lifetime of 17 thought moments arose because of not understanding that it is the *hadaya rūpa* with 17 thought moments.
- In other words, this information packet is received and processed by the *hadaya vatthu* within those 17 *cittā*. The information is fully received by the fourth *citta* (vibration,) and then the rest of the *citta* in that *citta vīthi* deal with this information. This "information processing" by the *hadaya vatthu* will not be completed until three more *citta vīthi* run by the *hadaya vatthu* itself. Such *citta vīthi* initiated by the mind itself is called a *manodvāra citta vīthi,* where *manodvāra* means the "mind-door".
- Information packets from the *mana indriya* are sent directly to the *hadaya vatthu.*

8. Thus, we can see a **huge difference** in time between the physical body acquiring senses data (time of the order of 10 milliseconds) and the mind processing that information within a billionth of a second using one *pañcadvāra citta vīthi* and three *manodvāra citta vīthi.*

- Even if the five senses keep sending data continuously, the mind is "just sitting there" most of the time. Let us examine this in a bit detail: Suppose the brain keeps sending data from the eye non-stop; since each "packet" takes, say 10 milliseconds, then in a second, there will be 100 "data packets" of vision coming in. If the brain is going at full speed, it can send at most 500 (=100×5) "data packets" from all 5 physical senses in a second. The mind will then be spending less than a millionth of a second in processing all that data since it takes less than a billionth of a second to process one "data packet" (from the previous bullet).
- During those gaps, the *hadaya vatthu* also interacts (both ways) with the *mana indriya*. **It also gives instructions to the *mana indriya* on how to control the physical body in response to the sensory inputs.**

© 2026 Lal A. Pinnaduwage

- Thus most of the time, the mind is just sitting there, which is called the "*bhavaṅga*" state of mind. In this state, the mind is actually taking the object that came to the mind at the *paṭisandhi* (rebirth) moment in that last *citta vīthi* of the last life. *Bhavaṅga* ("*bhava*" + "*anga*" or associated) denotes that this state of the mind is characteristic of this new life, in the present case as a human. Just like the eye cannot see itself, **the mind cannot see this "*bhavaṅga*."** It is the current state of mind itself.

The *Bhavaṅga*

9. In the example that we started with, the "cow mind" has now switched over to a "human mind." It has the object taken at the *paṭisandhi* moment. But we do not become aware of what is in the *bhavaṅga*.

- You may remember that there are times when one just stares blankly "out into space," and if someone asked, "what were you thinking about?" we would be hard-pressed to recall anything that we were thinking about. Here the mind was mostly in the *bhavaṅga* state; we are aware that we were alive but did not have "actual thoughts" going through the mind.
- In reality, even when we think we are fully engaged, the mind is mostly in the *bhavaṅga* state. As we discussed in a previous bullet, it takes very little time for the mind to process data. Even if all five physical senses keep sending data about the outside world non-stop, the mind takes less than a millionth of a second to process data coming in within a second!

The Mind Decides on Actions

10. However, the sixth sense or the mind (*hadaya vatthu*) itself is also initiating *citta vīthi* either to process information from the five physical senses or "think about those senses inputs." **Furthermore, it also start *citta vīthi* to get the physical body to speak and do any work.** That information is relayed to the *mana indriya,* which works with the brain to carry out those instructions.

- For example, if the mind gets interested in a sound, it can direct the body to walk towards that sound source. To do this, it sends instructions to the *mana indriya* in the brain via the same "ray system" instantaneously. The *mana indriya* then decodes that information — and working with other parts of the brain — sends instructions to the muscles in the legs (via the nervous system) to move. Those bodily movements take time because the mechanical motions are comparatively slow.
- Speech is done in the same way. The mind sends the information to the brain, and the brain gets the vocal cords to move to produce the sounds. Here is a short video showing how the muscle movements give rise to sounds:

  WebLink: YOUTUBE: Inside the Voice

Brain Is Just a Fancy Computer That Follows Instructions by the Mind

11. Thus, we can see that the brain is just a very fancy computer, carrying out the mind's instructions.

- Now the questions arise, "Why is nature going through all this trouble to give us a physical body that is cumbersome and slow?". The main answer is that this is to impart *kamma vipāka*.
- For example, a *deva* has a subtle body that is not subject to aches and diseases as for humans; that was acquired by a good *kamma vipāka*. On the other hand, there are some *petas* (hungry ghosts) who suffer from hunger. They have large bodies but tiny mouths.
- In the human realm, our individual bodies are "pre-designed" by *kamma vipāka* to impart varying degrees of suffering. That is why some people are relatively healthy, while others have health problems. There are, of course, ways to reduce or even get rid of such problems. One could make suitable conditions (eating well, exercise, etc.) for a healthy body.
- We do not realize the constant stresses that we are subjected to (both physical and mental) because we are used to them. By living a moral life, we can begin to experience the *nirāmisa sukha* achieved by

© 2026 Lal A. Pinnaduwage

"liberating the mind from burdensome thoughts." When one gets to *jhāna*, this is further enhanced, and at higher *jhāna*, one sees quite significant relief from "dissociating from the body." Then one makes a big jump in attaining the *Sotāpanna* stage.

It is possible that I may not have clearly explained some concepts. If you send me a comment referring to the corresponding item number, I can clarify it. Also, when you read other posts in this section, things will become more apparent. This basic description is critical if one is really serious about learning *Abhidhamma*.

Next, "Ghost in the Machine – Synonym for the Manomaya Kāya?", ……..

13.4.2 Hidden World of the Gandhabba: Netherworld (ParaLoka)

February 18, 2016; updated April 5, 2016; July 14, 2021

[Title changed (see the red highlights) from **Hidden World of the Gandhabba: Netherworld (Para Loka)** to **Hidden World of the Gandhabba: Netherworld (ParaLoka)**]

Gandhabba Is Human

1. I have discussed the fact that when a living being gets a "human *bhava*" it does not necessarily mean that it is born with a human body during all that time; see, "Bhava and Jāti – States of Existence and Births Therein."

- For example, when a human dies and still has *kammic* energy left for the human *bhava*, then it is very unlikely that it will be conceived as a human baby right away. At death, a "human *gandhabba*" with a fine body leaves the dead body and has to wait in that state until a suitable womb becomes available. There are a large (uncountable?) number of such human *gandhabbā* waiting for a suitable womb.
- This is one reason that a mother and father are so revered. No matter how bad they may be in some cases, just the fact that they made it possible for a *gandhabba* to have a human body, makes them invaluable.

Gandhabba Is a Human (or Animal) Without a Physical Body

2. Beings are born as humans because they crave the sensory pleasures associated with the human body. The most valued are the tastes and the bodily pleasures. A *gandhabba* has an "energy body" that we cannot see weighing much less than 0.01 g; see, "Manomaya Kāya (Gandhabba) and the Physical Body." A *gandhabba* born at the *cuti-paṭisandhi* moment is much smaller than an atom in modern science. Some could inhale aroma (*gandha*) and get a bit denser; thus the name "*gandhabba*" ("*gandha*" + "*abba*").

- A *gandhabba* is unable to taste solid food or experience physical touch. But they can see and hear very well. Thus their life is miserable since they can see normal humans engaging in "pleasurable activities". That is what they crave too, but they are unable to experience them.
- When a zygote is created in a womb as a result of intercourse (see, "Buddhist Explanations of Conception, Abortion, and Contraception"), there are a huge number of *gandhabbā* waiting to "get hold of that zygote". But of course, they don't have a choice; only the *gandhabba* matching the "*gati*" of the father — and especially the mother — is pulled into the womb.

3. Therefore, even though a human "*bhava*" may last thousands of years, the actual time that one is "born with a human body" (human *jāti*) could be a fraction of that time. This is another reason why a "human birth" is so precious that it should not be wasted.

- Among the 31 realms, it is only in the human and animal realms that physical bodies can manifest from time to time within a *bhava*. Within animal *bhava*, some animals are born via eggs, while others are "womb-born." There are an uncountable number of "animal *gandhabbā*" waiting for a suitable womb at any given time.

© 2026 Lal A. Pinnaduwage

Gandhabbas Live in *Paraloka*

4. Both the human and animal *gandhabbā* can be said to live in "*paraloka*" ("*paralowa*" in Sinhala); see "Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage." . It is a world that a normal human cannot see, even though they can see us. Of course there is no English word for it, but "netherworld" or "the hidden world" seems to convey the idea.

- *Paraloka* is not a distinct realm in the 31 realms. Just like human and animal realms co-exist, the *paraloka* co-exists with the human and animal realms, but we normally cannot see those beings in the *para loka* (unless one develops *abhiññā* powers). One can imagine there is another world with human and animal *gandhabbā*.

  WebLink: Listen to Pronunciation "paralowa" or පරලොව is the Sinhala word, for the Pāli word "paraloka"

- Those with "human (or animal) *bhava*" spend their time either in "this world that we can see" or in the "*paraloka*" or the "hidden world" (netherworld).

- Many people are not even aware of the existence of "*para loka*," because (like the concept of the *gandhabba*), it is not discussed in the *Visuddhimagga*. It is unfortunate that current *Theravāda* relies on *Visuddhimagga* (written by an *Anariya*) rather than the *Tipiṭaka*.

Tirokuṭṭa – "Able to Go Through Walls"

5. The "Tirokuṭṭa Sutta (kp 7)" in the *Khuddakapāṭha* describes a "*tirokuṭṭa*" who hangs around the home that he/she departed from. An English translation there: "Outside the Walls."

- The meaning of the word "*tirokuṭṭa*" becomes apparent in the "Dutiyasamaṇabrāhmaṇa Sutta (51.17)." The phrase, "***tirokuṭṭaṁ tiropākāraṁ tiropabbataṁ*** *asajjamānā agamaṁsu, seyyathāpi ākāse*" appears in the beginning of that *sutta*. That means, "going unimpeded **through a wall, a rampart, or a mountain** as if through space."

- Therefore, "*tirokuṭṭa*" is a being who can travel unimpeded through the walls. Those with *iddhi* (supernormal) powers can do that as detailed in the *Dutiyasamaṇabrāhmaṇa Sutta* (51.17.)

- However, the *Tirokuṭṭa Sutta* (kp 7) is specifically about persons who died and have come back to "hang around" their formal homes. These could be *gandhabbās* or *petās* (*pretās* in Sinhala.)

- However, *gandhabbās* are not *petās* (*pretās* in Sinhala). *Petās* (*pretās* in Sinhala) do not make "dense bodies" as human and animal *gandhabbas* do.

Petās (*Pretās* in Sinhala) Are Different from *Gandhabbās*

6. The idea behind giving a special offerings ("*dāna*") to the *bhikkhus* after the death of a person is mainly for the benefit of the *gandhabbā* (and also *petās* (*pretās* in Sinhala). This is a common practice in Buddhist countries. Normally it is done after seven days and after three months etc., of death, and I will discuss the reasons for those specific dates in a future post.

- Not all beings can receive merits. Especially those in the *niraya* (hell) are unable to do so because they don't have the right mindset to receive merits (absence of *samanantara paccayā*). See "Anantara and Samanantara Paccayā."

- Those who can benefit most are the *gandhabbas* and *petās* (*pretās* in Sinhala).

- Also, note that *gandhabba* are totally distinct from *petās* (*pretās* in Sinhala) or hell beings in the *niraya*. Only *gandhabbas* live in "*paraloka*" waiting for suitable wombs. *Petās* (*pretās* in Sinhala) and hell beings have instantaneous (*opapātika*) births, just like *devas* and *Brahmā*.

© 2026 Lal A. Pinnaduwage

7. It has been described how the Buddha saw human beings wander from life-to-life when he first comprehended the *cutūpapāda ñāṇa* during the night of his Enlightenment; "*cutūpapāda*" comes from "*cuti*" for death and "*upapāda*" for birth.

- Thus *cutūpapāda ñāṇa* is the knowledge about the rebirth process. But this particular description was restricted to births and deaths associated with a single human *bhava*.
- *Cuti* is pronounced "chuthi", and "*cutūpapāda ñāṇa*" is pronounced "chuthupapāda gnāna".
- WebLink: Listen to Pronunciation: "cuti and cutūpapāda ñāṇa"

8. That description by the Buddha was not about the general wandering among the 31 realms, but is on how a being in a human *bhava* wanders from human birth to human birth with *gandhabba* states in between (i.e., going back and forth between "this world that we can see" and the "other world that we cannot see" or the *para loka*).

- The description is as follows: If one is situated in the upper level of a building at a four-way junction, he can see the street below. He can see many people wandering in the street (*gandhabbā* wandering around). Sometimes, one goes into a house and stays there for a long time. This is compared to a *gandhabba* entering a womb and making himself a physical body; that house is the analogy of a physical body.
- Then at the death of that physical body, the *gandhabba* comes out and starts wandering again (a person walking on the street); he may be wandering the streets for a long time before entering "another house", i.e., to get a chance to go into a matching womb.
- Sometimes, he may enter a house and may come right out. This can be compared to an unsuccessful pregnancy. A *gandhabba* taking hold of a zygote, but for some reason cannot stay there and has to come out, mostly because it turns out to be a mismatch of "*gati*" of the potential mother.
- Thus it describes a human being going back and forth between "this world" and the "other world" or the "netherworld" ("*para loka*"). Once the *kammic* energy of the human *bhava* is exhausted, a new "*bhava*" is grasped.
- If the new *bhava* is not human or animal, then one would be born instantaneously in another realm (*brahma, deva*, *asura, peta* (*preta* in Sinhala), or *niraya*). There are no *gandhabbā* associated with those realms.
- Thus we can see that *bhava* and *jāti* mean the same in all the other realms. In those realms, *bhava* automatically leads to *jāti*. For example, one with *deva bhava* is always a *deva*.

Rebirths With Human Bodies

9. When one studies the accounts of people (of mostly children) describing their rebirth stories, there are always "gaps" between births; see, the references (books) cited in "Evidence of Rebirth." For example, see, "Children Who Remember Previous Lives: A Question of Reincarnation", by Ian Stevenson (2000).

- During those "gaps" in between successive human births, they had been in the *gandhabba* state, i.e., they were in *para loka*.
- When one dies in an accident especially at a younger age, it is more likely that their *kammic* energy for the human *bhava* had not been exhausted. Thus they are more likely to be in the *gandhabba* state, waiting for a suitable womb.
- This is why in most rebirth stories the previous life tends to have been terminated by an unexpected incident (killed by someone, a natural disaster, etc).
- This "memory from the past life" fades away as children grow, and that is why it is mostly children who provide these accounts. As they grow old, these memories disappear gradually.

© 2026 Lal A. Pinnaduwage

10. A *gandhabba* changes with time (just like everything else). In fact, it is even possible that if a *gandhabba* properly receives merits from a giving (*dāna*) mentioned in #5 above, he/she can gain a *deva* or *Brahma bhava* and be born instantly in such a realm.

- On the other hand, another human *gandhabba*, who had been engaged in behavior appropriate for an animal (say, a dog) in the previous human life, could cultivate those "dog *saṅkhāra*" as a *gandhabba* and slowly transform into a "dog *gandhabba*" while in *paraloka*.
- When we think about these possibilities we realize how complex life is, and why we need to be mindful of the consequences of our actions. Not only that, we need to avoid doing things mechanically and understand the reasons behind even meritorious actions like alms-giving (*dāna*). I have seen many alms givings that are conducted in a "party-like" atmosphere. One needs to do it with the proper mindset with the *gandhabba(s)* in mind.

Other Related Issues

11. Another interesting bit of deduction is how the concept of a soul or "*āthma*" came to be established by the ancient Hindu *yogis*. Even to attain higher *anariya jhānā* (above the fourth *jhāna*) that enables one to acquire the ability to see previous lives, one has to have that "*gati*" of cultivating *jhānā* through recent human lives. Therefore, such a *yogi* with powerful *abhiññā* powers can be expected to have had many recent human lives.

- Thus it is possible that such *yogis* would have been born human hundreds of times (with *gandhabba* states in between). When they looked at their previous lives, they could see that every time they died a *gandhabba* came out, and sooner or later took hold of another human body. Thus it is this *gandhabba* that they thought was the indestructible "*āthma*" or "soul". They could look back hundreds of lives and always see that they were born as human again and again.
- Thus, in the Hindu scripture *Bhagavad Gita,* getting hold of a new body is compared to discarding an old suit and wearing a new suit. As far as those *yogis* could see, it was the same *gandhabba* that came back in a different physical appearance! Thus for them it appeared that there was an unchanging entity coming back in a different form; this is why it is called "reincarnation".

12. Our world is much more complex than we can ever imagine. The Buddha said that only a Buddha can truly comprehend the complexity of this world: There are four "unthinkable" or "*acinteyya*" subjects for us; see, "WebLink: suttacentral: *Acinteyya Sutta* (AN 4.77)". English translation there: "WebLink: suttacentral: Unconjecturable (AN 4.77 by Ven. Thanissaro)".

- Even though we do not need to comprehend everything (and we cannot), it is beneficial to learn these concepts at least to some extent.
- If one can comprehend *anicca*, these in-depth analyses are not needed. But especially these days, humans do not have the ability to grasp *anicca* right away. So, learning Dhamma and appreciating the unmatched knowledge of the Buddha gives one the confidence to persevere in one's efforts.

13.4.3 Ghost in the Machine – Synonym for the Manomaya Kāya?

Revised July 14, 2019

1. The "mind-body problem" has been a central problem of philosophy since Descartes formulated it over 350 years ago. René Descartes proposed that while the physical body is subjected to the physical laws, there is a soul associated with a human body which is normally called the "mind" and it is non-material; for him, having a mind amounted to having an immaterial soul, outside the physical space, whose essence consisted in thinking. This is the so-called "Cartesian dualism".

- Here mind and body are on equal footing, each in its own domain.

© 2026 Lal A. Pinnaduwage

2. Philosophers no longer take this "dualism" view seriously. Instead current philosophers have adopted a "material monism" that claim that our world is fundamentally material; this is materialism or physicalism. The only question they are debating on is how the "mental" arises from "material", i.e., how thoughts arise in a material brain.

- We must note that the Buddha's worldview is totally different from both the above. It is "mental monism", i.e., that our world is fundamentally mental. This is why he said his Dhamma is "*pubbe anunussetu dhammesu*" or a Dhamma (or a theory on nature) that was not known to the world.
- This world view of the Buddha has been hidden for many centuries.
- This is of course a paradigm shift and a shocking one too at the first glance. But I hope to convince you with evidence gathered from various fields of study and illustrate the consistency across diverse disciplines.
- It must be mentioned that this monism is not the "mental monism" (or "idealism") that a few philosophers have proposed. They say that material things are mere imagination. On the contrary, the physical world is very real, it is just that it cannot provide any lasting happiness because of its transient nature.

3. In 1949 Gilbert Ryle introduced the phrase "ghost in the machine" to ridicule the concept of Cartesian dualism in his book, "The Concept of Mind". It is said that with that book, he put the final nail in the coffin of Cartesian dualism. Of course, the "ghost" is the soul or the mind and the machine is the body, in "ghost in the machine".

- In Buddha Dhamma, it is not a called a "ghost" but a "*gandhabba*"; see, "Mental Body – Gandhabba."
- And unlike in Decartes' ghost, *gandhabba* has a trace of matter. Furthermore, even the basic building block of a physical body (cell) has origins in the mind. Therefore, mind and matter are inter-related and inter-dependent; see, "Origin of Life – There is No Traceable Origin."

4. I think the ghost in machine analog is actually a good one to describe a human or an animal. The body actually plays a secondary role, and the mind is the controlling entity. **But the "ghost" or the *manomaya kāya* is NOT all mental**; it has a fine form of matter even though it would not be detectable by current scientific instruments.

I must emphasize that this concept is NOT a version of dualism. Mind and body are interdependent: "*viññāṇa paccayā nāmarūpa*" and "*nāmarūpa paccayā viññāṇa*"; a *manomaya kāya* has both *nāmarūpa* and mind.

- This *manomaya kāya* is made by the last *citta vīthi* of the previous existence (*bhava*), which is called *cuti* (pronounced "chuthi") citta; see, "What is a Thought?" in the *Abhidhamma* section. Thus this fine material form was PRODUCED by the mind. This is why it is said, "*mano pubbangamā dhammā*.....", i.e., "the mind precedes EVERYTHING…".
- You probably have seen pictures of a "misty ghostly figure" rising out of a physical body in literature on "astral projection" or "out-of-body experience". That is a good visual, but of course only people with *abhiññā* powers can see them.
- Many people have, though, experienced this out-of-body experience usually under stressful conditions. Most common is the case when a patient undergoes an operation and is unconscious, but recalls later how he/she was able to see the operation from above. This seems to happen more often to women than to men; see, "Manomaya Kāya and Out-of-Body Experience (OBE)."

5. When one has cultivated *abhiññā* powers, one can bring out the *gandhabba* or the *manomaya kāya* out of the physical body. Then the body is lifeless, until the *gandhabba* comes back into the body. The "ghost" or the *manomaya kāya* can now see and hear without the aid of a physical ear or eye. Thus it can "focus" on events happening far away, and can see and hear what is going on at that place.

© 2026 Lal A. Pinnaduwage

- All this may sound very esoteric but there is a lot out there that is not "captured" by our five physical senses; see, "The 4 percent Universe : Dark Matter, Dark Energy, and the Race to Discover the Rest of Reality" by Richard Panek (2011).
- Our eyes can see only an infinitesimally small part of the electromagnetic spectrum from 390 nm – 700 nm. The human audible range is commonly given as 20 to 20,000 Hz, though there is considerable variation between individuals. Modern scientific instruments can expand these, for example, to see in the infrared frequencies with infrared cameras, etc.
- The "ghost" does not need light to see, or a sound wave to travel in air to hear.

6. The *manomaya kāya* has all six senses in the sense that all five *pasāda rūpa* corresponding to the five physical senses and also the *hadaya vatthu* that is the "seat of consciousness". **The *hadaya vatthu*, where *citta* (thoughts) are originated, lines up with the physical heart, not the brain. Thus we can say that mind is located close to the heart, and is not in the brain; brain is like a computer that helps run the physical body; see, "Neuroscience Says there is no Free Will – That is a Misinterpretation!."**

- The five *pasāda rūpa* in the *manomaya kāya* are also located close to the *hadaya vatthu*. Signals between the five physical sense faculties (eye, ear, etc) — called five *indriya* — and the five *pasāda rūpa,* and also between the (frontal cortex of the) brain and the *hadaya vatthu,* occur via a "ray system", probably electromagnetic, and are thus very fast.
- However, the "eye" is not just the "eye ball" but includes associated processing units in the brain, which is the visual cortex. It is the visual cortex that sends the signal to the "*cakkhu pasāda*" located close to the *hadaya vatthu.* When the *cakkhu pasāda* receives a signal from the visual cortex ("eye *indriya*"), it hits the *hadaya vatthu* which in turn vibrates 17 times corresponding to a "*citta vīthi.*"
- The same process occurs for the other four physical senses. The "motor cortex" sends/receives signals from all body parts using the central nervous system, and sends "ray signals" to the "*kāya pasāda.*" I will discuss this in detail later.
- The five *pasāda rūpa* are located around the *hadaya vatthu* much like the five small balls (clappers) are situated around the "main clapper" in temple bells in Sri Lanka (I am not sure whether this true in other countries). Such a bell symbolizes the five *pasāda rūpa* around the *hadaya vatthu*.
- When the "ghost" is inside the physical body, it cannot see or hear without the aid of the physical senses of eyes and ears. Similarly, the mind cannot "think" without the aid of the brain.
- This is why the efficiency of all six senses degrade with time: Because the physical body degrades. As we get old, all six physical sense faculties of eyes, ears, nose, tongue, body (outer skin), and the brain degrade, and lose their effectiveness.

7. Thus in the visualization as a "ghost," the *manomaya kāya* has all six senses. But it cannot use the *kāya pasāda* outside the physical body since not enough "matter' is in the *gandhabba* to "feel" the touching sensation. Similarly, the *manomaya kāya* ("ghost") cannot taste or smell when it is outside the physical body.

- Thus the *gandhabba* can only see and hear when outside the physical body. And it can do those without any limitations imposed by physical eye or physical ear, i.e. it can see and hear things far away.

8. When a human dies, if there is still *kammic* energy left for the "human *bhava*", i.e., the potential to be born as a human, then there is no *paṭisandhi citta* at death. A *paṭisandhi* ("pati" + "sandhi" = bind to a new life) happens when a transition to a "new *bhava*", for example to a "*deva bhava*" or an "animal *bhava*", happens. If the '*bhava*" remains the same and the next birth is also human, the *manomaya kāya* ("ghost" in this new terminology) or the *gandhabba* just comes out and waits until a suitable womb becomes available. The old physical body is now lifeless and just decays.

9. If the *kammic* energy for the "human *bhava*" is exhausted at death, then in the last *citta vīthi* the transition to a new "bhava" takes place. Then a new *manomaya kāya* for the new existence (*bhava*) is

© 2026 Lal A. Pinnaduwage

formed within that final *citta vīthi*, and at the end of that *citta vīthi*, the new *manomaya kāya* corresponding to the new life comes out of the dead body. If it is deva, then a new *deva* is instantly born in the *deva loka*. If it is an animal, say a dog, then a *manomaya kāya* (or *gandhabba*) that resembles the form of a dog comes out of the dead body and will wait until a suitable "dog womb" becomes available.

- As mentioned in other posts, births in 29 realms happen instantaneously, i.e, a fully formed figure is born at the very instant of death in the previous life. An intermediate "*gandhabba* state" with a *manomaya kāya* (a "ghost" in the current analogy) that needs to wait for a suitable womb is involved only for birth in human and animal realms.

10. There is another interesting facet: The *kammic* energy automatically prepares the "blueprint of the body" to deliver the *kamma vipāka* (consequences of previous actions). Thus the physical body has "built-in" defects and flaws that may become evident at birth or at different stages of life: for example a cancer may develop at latter stages of life. This is the reason why some people are born handicapped; some have healthy bodies, beautiful bodies, ugly bodies, and a healthy person may die suddenly too; the varieties are endless.

- Furthermore, the nervous system is also setup to induce various effects as kamma vipāka. The incessant "urge to do something" works at different levels for different people. This actually reveals a deeper meaning of the First Noble Truth of Suffering; if you are ready for a deeper analysis, see, "Anicca – The Incessant Distress ("Pīlana")".

11. Therefore, the concept of a "ghost in the machine" may be useful to describe the *gandhabba* state or the separation of the *manomaya kāya* from the physical body in the cases of out-of-body experience (OBE), or with *abhiññā* powers. However, it must be kept in mind that in this case, the "ghost" does not depict an unchanging soul and also it is not totally "mental"; it has very fine material (*rūpa*) associated with it, that is invisible to the naked eye, but is visible to someone with *abhiññā* powers.

- Contrary to the idea of a soul, the *manomaya kāya* will keep changing even during an given existence and will make a huge transition at a new existence, for example when an animal is reborn a human or vice versa.

12. The main usefulness of this "ghost in the machine" concept is to accurately describe the physical body for what it really is: a temporary "residence" for the *gandhabba*. The "residence" decays with time and finally dies and then the *gandhabba* needs to find a new "residence". The *gandhabba* derives its uniqueness or the "personality" via *sansāric* habits (*gati* and *āsavas*), and the *gandhabba* has the power to change those habits; see, "Habits, Goals, and Character (Gati)."

- Further information can be found on several posts on the *manomaya kāya* and *gati* (or *gathi*). You can do a keyword search using the "Search" button on the top right.

13. Here is a recent article by the philosopher Colin McGinn on the current theories on the "mind body problem" (click to open the pdf):

WebLink: PDF file: All machine and no ghost - McGinn-2012

- Also see, Thomas Nagel's book: "Mind & Cosmos: Why the Materialist Neo-Darwinian Conception of Nature is Almost Certainly False" (2012).
- Obviously, both of them have had no exposure to Buddha Dhamma. But I am very much impressed that they have came to the conclusion that mind MUST play a central role.

14. A *gandhabba* with a fine body cannot be "seen" with our eyes, because they are "more energy that matter". It is possible that the entities detected by "ghost detectors" are such *gandhabbas*.

- There are "ghost detector" apps made by many software companies that can detect "ghosts"; if you Google, "ghost detector" you can explore more on that. Even though right now this is done mostly for fun, it will be shown to be correct concept in the future. These detectors detect "packets of energy" that we cannot see with our eyes.

© 2026 Lal A. Pinnaduwage

- Whether these ghost detectors actually can detect *gandhabbas* or not I am not sure. But the concept matches what is described in the *Tipiṭaka*.

July 14, 2019: I recently started a new subsection, "Origin of Life" to point out that not only the mental body (*gandhabba*), but also the physical body (which is a vast collection of cells), have their origins in the mind.

13.4.4 Manomaya Kāya (Gandhabba) and the Physical Body

Revised April 20, 2016; July 31, 2017; September 6, 2019; March 14, 2021; July 16, 2022; October 31, 2022 (#15)

Introduction

1. *Manomaya kāya* means a "mental body." We should not perceive the "mental body" in the same way as our physical body. The mental body is mostly energy than matter. It is called a "body" more in the sense of a "collection," as in a "body of water" or a "body of evidence."

- The Pāli term for a physical body is *āhāraja kāya* or *karaja kāya.*
- The mental body or "*manomaya kāya*" is also called *gandhabba* kāya or simply *gandhabba*. The *manomaya kāya* is made of three parts called *utuja, kammaja, cittaja.*

2. Therefore, we have four types of bodies (*kāya*): *āhāraja*, *utuja*, *kammaja*, and *cittaja*. The *āhāraja kāya* is the physical body. The other three are parts of our "mental body," the *gandhabba*.

- It is easy to visualize a "person" consisting of two overlapping bodies: the physical body that we see and the gandhabba with an "energy body" (it is not a body in the sense we are used to but more like a "misty ghost"). **The fine body of the *gandhabba* "overlaps" the physical body (solid or coarse versus that fine gandhabba body.)**
- The *gandhabba* makes the physical body "alive." Without it, the physical body is like a piece of wood and is inert. If you touch a dead body, you will feel the difference compared to touching a live person.
- A dead body is comparable to a metal wire without a current flowing through it. When a current flows through the wire, it becomes "energized."
- In the *Tirokuṭṭa Sutta* (Kp 7) in the Khuddaka Nikāya, *gandhabba* is called a "*tirokuṭṭa.*"

3. The physical body (*karaja kāya*) that we see is built from the food we eat (*āhāraja kāya*). Starting with a single cell (zygote) in the womb, it grows by taking food from the mother.

- The *gandhabba* consists of the other three *kāya*: *kammaja, cittaja, utuja.*
- Under stressful conditions (or with *abhiññā* powers), the misty *gandhabba* can come out of the physical body, and the physical body is no longer under the control of the *gandhabba.* But it is not dead because the *jīvitindriya* that maintains life is still there.
- Only at death do both the *gandhabba* and the *jīvitindriya* leave, and the body becomes inert like a log.

Kammaja Kāya is Primary

4. Let us follow the time sequence of how a *gandhabba* evolves to acquire a physical body (in human and animal realms only.) That happens via several steps per *Tipiṭaka*: "*jāti sañjāti okkanti abhinibbatti khandhānaṁ pātubhāvo āyatanānaṁ paṭilābho*." See, "WebLink: suttacentral: *Vibhaṅga Sutta* (SN 12.2)."

The basis of all the other three *kāya* is the *kammaja kāya*; it arises from the *kamma* seed responsible for that particular *bhava* or existence at the *cuti-paṭisandhi* moment.

© 2026 Lal A. Pinnaduwage

- A *kammaja kāya* has three components called "*dasaka*" or "ten units." Those ten units are eight *suddhaṭṭhaka* and modes of rotation and spin. The three components are *vatthu dasaka* (*hadaya vatthu* or the seat of mind), *kāya dasaka* (blueprint of the final human body), and *bhāva dasaka*. The latter is loosely translated as man/woman nature, but it encompasses many other features related to one's *gati* or *bhava*).
- More details at "The Origin of Matter – Suddhaṭṭhaka" and "Gandhabba – Only in Human and Animal Realms."
- The formation of the *kammaja kāya* is called the "*jāti*" moment of birth.

5. Immediately following its birth, *kammaja kāya* gives rise to a thought stream (*cittaja kāya*).

- Both *kammaja* and *cittaja kāya* start producing fine *rūpa* and immediately give rise to a very light physical form called the *utuja kāya.* At this stage, *cakkhu, sota, ghāṇa, and jivhā dasaka* are also present. That is called the "*sanjāti*" moment of birth.
- This subtle body with three *kāya* (*kammaja, cittaja, utuja*) is a *gandhabba*. Since all three types of *kāya* have their origin in mind, the *gandhabba* is a "mind-made body" or a *manomaya kāya*. But soon, it will acquire a faint physical body by inhaling aroma (*gandha* + *abba*), thus the name *gandhabba. Therefore* a *gandhabba* would have all four "bodies" (*kammaja, cittaja, utuja, karaja*).
- The five sets of *dasaka* (*kāya, cakkhu, sota, ghāṇa, and jivhā*) arrange around the *hadaya vatthu* (*vatthu dasaka*) in the subtle or "misty" body of the *gandhabba.* This *gandhabba* may exist in that state for a long time, waiting for a suitable womb.
- That manomaya kāya or the *gandhabba* will now have to wait for a suitable womb to enter. That could take months or years.

Gandhabba Descending to a Womb

6. When a suitable womb becomes available, this fine *gandhabba* enters the uterus. At that time, it collapses to a size smaller than a single cell and merges with the single cell (zygote) formed by the union of mother and father. This moment of entering a womb is called the "*okkanti* moment" of birth.

- The physical body (*karaja kāya*) results from that single cell (zygote). It grows first by extracting food from the mother's womb and then consuming regular food once born as a baby.
- The physical body grows according to the "blueprint" in the subtle body of the *gandhabba.* The subtle body of the *gandhabba* expands with it so that it overlaps the physical body. For example, there is a nervous system in the *gandhabba* that overlays the physical nervous system.
- The initial growth stage of the fetus inside the womb is the "*abhinibbatti* stage" of birth.

7. Then, the fetus inside the womb starts developing and forms the physical senses and the brain over many weeks. The eyes, ears, nose, tongue, and nervous system grow during this time. Furthermore, the brain develops too. It will have processing units to analyze signals from those five physical senses.

- In Buddha Dhamma, the *cakkhu indriya* is NOT just eyes but also includes the brain's associated processing centers. Similarly, for the other four *indriya*: *sota, ghāṇa, jivhā, and kāya.*
- Signals generated in these five *indriya* get to the five *pasāda rūpa* located around the *hadaya vatthu* (seat of the mind) as described in "Gandhabba (Manomaya Kāya)- Introduction."
- The "*khandhānan pātilābho*" stage of birth is complete with the formation of all six sense faculties.
- When that baby is born (i.e., comes out of the womb), that physical body can use all six *āyatana* (eyes, ears, nose, tongue, body, and mind) to fully interact with the external world. The final stage of the birth process is "*āyatanan pātilābho*."
- A better description of *āyatana* at "Contact Between Āyatana Leads to Vipāka Viññāṇa."

© 2026 Lal A. Pinnaduwage

8. Ven. Sāriputta discussed that sequence of events when he analyzed the *Dhammacakka Pavattana Sutta* in detail to the bhikkhus in the WebLink: suttacentral: *Sacca Vibhanga Sutta* (Majjhima Nikaya 141): "*Katamā cāvuso, jāti? Yā tesaṁ tesaṁ sattānaṁ tamhi tamhi sattanikāye jāti sañjāti okkanti abhinibbatti khandhānaṁ pātubhāvo āyatanānaṁ paṭilābho, ayaṁ vuccatāvuso: 'jāti.'*"

- Those who do not believe in the *gandhabba* state (i.e., a *gandhabba*) need to contemplate that point. The *gandhabba* state is there only in human and animal realms.
- At death, if that human *bhava* has more *kammic* energy left, the *gandhabba* comes out of the dead physical body and waits for a new womb.
- If *kammic* energy for the human *bhava* is exhausted, then a *cuti-paṭisandhi* transition occurs, and the above discussed time sequence is repeated. A brand new *gandhabba* in a new *bhava* emerges from the dead body. For a technical analysis of this process, see, "Cuti-Paṭisandhi – An Abhidhamma Description."

The *Manomaya Kāya*

9. We can get an idea of the fineness of the *manomaya kāya* from the following comparison. The average human weighs about 70 kg (70,000g) and has a body volume of about 70 L; the Density of a typical fog (that we can barely see) is approximately 0.1 g per cubic meter. Thus the weight "of the fog of volume equivalent of a human body" is about 0.01g.

- Thus a "human body made of fog" weighs only a tiny fraction of the average human weight.
- For another comparison, the weight of a mustard seed is about 0.002g.
- A *gandhabba* would have a "misty body" like a human figure made of fog, but will be MUCH SMALLER weight; it is immeasurably small. Sexual intercourse between a man and woman creates a zygote (a human cell) in the womb. Then a *gandhabba* descends to the uterus and takes hold of the zygote; see, "Buddhist Explanations of Conception, Abortion, and Contraception."
- My late Noble teacher, Waharaka Thero, has seen how a *gandhabba* enters a womb. When getting closer to the mother, *gandhabba* rotates rapidly and loses all its body other than the *hadaya vatthu, jīvitindriya*, and *bhāva dasaka.* So it becomes much smaller than an atom in modern science (at the *suddhaṭṭhaka* level). That tiny body (which would not be seen even by the most powerful microscope) is pulled into the womb through the mother's body and gets attached to the zygote in the womb. I heard him describe this in a *desana*.
- So, a human body starts with two cells from the mother and father (which make the zygote) and an even smaller *gandhabba*. Thus virtually all the weight of a human comes from nutrients. First from the mother's body, and once comes out of the womb by eating food.

10. We can easily see the role of the *manomaya kāya* with the actions by its three components:

- *Kammaja kāya* is the most important. It is the blueprint for that existence (*bhava*). It has the blueprint of the physical body too.
- *Cittaja kāya* is what we EXPERIENCE moment-to-moment. We see, hear, smell, taste, touch, and think about concepts with thoughts: *cakkhu, sota, gandha, rasa, phoṭṭhabba*, and *mano viññāṇa*.
- Those thoughts NORMALLY depend on our habits (*gati*), *āsava* (cravings), and *kamma vipāka*, all in the *kammaja kāya*; see, "What is Mind? How Do We Experience the Outside World?."
- If thoughts arise ONLY DUE TO our past *kamma* and the habits and cravings acquired through them, then *kamma* would be deterministic. And we will be like robots (which is the case for many beings, like animals). **LUCKILY, we can THINK on our own (unlike animals) and change our destinies.**

11. That last sentence summarizes the message of the Buddha. Please do not lose this opportunity to get out of this *saṁsāric* suffering when we have this precious human life, which will last only about 100 years.

© 2026 Lal A. Pinnaduwage

- Even if we are reborn humans, what guarantees will we have to listen or read about Buddha Dhamma?

12. If anything is "transferred" from one existence (*bhava*) to another, those would be the "*gati*" and "*āsavā*" of that lifestream. But they also keep evolving. If we do not act mindfully, we let our minds "go with the flow." Then our actions will be determined by our *saṁsāric* habits. That would only further strengthen such habits. That is why it is essential to identify bad habits, eliminate them, and cultivate good ones.

- That is the process of mind purification called Bhāvanā (Meditation) detailed in *Satipaṭṭhāna* (see "Mahā Satipaṭṭhāna Sutta"), *Ānāpāna sati* ("6. Ānāpānasati Bhāvanā (Introduction)"). I have also written about the *Sabbāsava sutta*: "Habits and Goals," and a bit more in-depth analysis in "Key Points in the *Sabbāsava Sutta*" at the end of the post, "The Sotāpanna Stage."
- Also, see the post, "The Importance of Purifying the Mind."

Living Beings in Other Realms Have Different "Bodies" and Different *Manomaya Kāya*

13. The above description is valid for humans and animals. In *Brahma* realms, there are only *manomaya kāya* and no physical body. There are physical bodies in the deva realms, but those are much less dense than human bodies.

- In other realms, different mechanisms (mainly *opapātika* births) operate; see, "Gandhabba – Only in Human and Animal Realms."

14. In the post, "What Reincarnates? – Concept of a Lifestream," we mainly talked about the *cittaja kāya*, the stream of thoughts, and the physical body. We saw that, If an animal dies and is reborn a human:

- The physical body in the animal realm is very different from that in the human realm.
- The *cittaja kāya*, or the stream of thoughts associated with animal existence (*bhava*), is also very different from the *cittaja kāya* of human existence (*bhava*). That is what is meant by "*bhava paccayā jāti*" in the *Paṭicca Samuppāda*: the birth is according to the *bhava* that latched on at the moment of death, i.e., "*upādāna paccayā bhavo*"; see, "Akusala-Mūla Paṭicca Samuppāda."

15. Thus, it is clear that both the physical body and *manomaya kāya* make "quantum jumps" (large instantaneous change) when switching from one existence (say an animal) to another (say a human).

- The *kammaja kāya* has all the *kammic* potentialities (*kamma* seeds) acquired up to any given time; see "Saṅkhāra, Kamma, Kamma Bīja, Kamma Vipāka," and "Saṁsāric Habits, Character (Gati), and Cravings (Āsavas)." But one of those seeds (which embeds matching *gati*) becomes operative for the "new *bhava"* and becomes the "*bhavaṅga*" for that life. The remaining *kamma* seeds will retain their *gati*; each *kamma* seed embeds the *gati* at the moment of its creation. One of those will rise to the next *bhava* or existence; that would be the one best matching the mindset at that *paṭisandhi* moment. Thus, different "*gati*" are in different *kamma* seeds. That is why an *Arahant*'s mind would not grasp any *kamma* seed with any *gati*.
- That is why "no-self" was not approved or rejected by the Buddha: the new life is not the same as the old life. But it is not entirely different either because those *gati* and *āsavā* propagate (but they all keep changing too). And similarly, the Buddha neither approved nor rejected the idea of a "self."
- A living being is a "life-stream" that changes moment-to-moment based on cause and effect: *Paṭicca Samuppāda*. Even though there is no "unchanging entity" such as a "soul," the life-stream has its characteristics (*gati* and *āsavā*), which also keep evolving.

More on the *Manomaya kāya* at: "Manomaya Kāya and Out-of-Body Experience (OBE)."

Next, "Ghost in the Machine – Synonym for the Manomaya Kāya?", ……..

13.4.5 Out-of-Body Experience (OBE) and Manomaya Kāya

Re-written October 24, 2019; revised January 30, 2020; February 16, 2021 (#6 added); July 16, 2022

Two Types of Bodies – Physical Body and *Manomaya Kāya*

1. We humans have two "bodies." *Manomaya kāya* is the "mental body" (with a trace of matter) born at the beginning of human existence or human *bhava*. That *manomaya kāya* is pulled into a womb when a "matching womb" becomes available, which is the start of a "physical body." Within a human *bhava*, there can be many "human births (*jāti*)" with different "physical bodies." See, "Bhava and Jāti – States of Existence and Births Therein."

- More details on the two types of "bodies" at "Manomaya Kāya (gandhabba) and the Physical Body."

2. One could visualize the *manomaya kāya* or the "mental body" as an "energy field" (it has some fine *rūpa*, too) overlapping the solid physical body. All vital functions happen in the mental body. Thoughts generate in the seat of the mind (*hadaya vatthu*). There are five *pasāda rūpa* (*cakkhu, sota, ghāna, jivhā, kāya*) around the hadaya vatthu responsible for detecting sights, sounds, smell, taste, and touch.

- That *manomaya kāya* can leave the solid physical body under some conditions. Those who have cultivated supernormal powers (*iddhi*) can willfully come out of the physical body. During heart operations, *manomaya kāya* of some patients come out, as discussed below. In both cases, *manomaya kāya* can see and hear without the aid of physical eyes and ears.
- That is hard to visualize for us. But as you read more posts on the *manomaya kāya*, you will see that it makes perfect sense.
- We experience the world with the "mental body" or the *monomaya kāya* (also called a *gandhabba*.) This is explained in, "Ghost 1990 Movie – Good Depiction of Gandhabba Concept."

When Inside the Physical Body *Manomaya Kāya* Depends on the Physical Body

3. When the *manomaya kāya* is attached to the physical body, the *hadaya vatthu* needs the physical body's help to see, hear, smell, taste, feel the touch, and recall memories. One can think of the *manomaya kāya* as being "trapped inside" the physical body. Physical eyes need to capture images of external objects; ears need to capture sounds; the nose helps smell; the tongue helps taste, and the body's nervous system feels the touch.

- The brain analyzes all those "signals" and transmits them to the five *pasāda rūpa* located in the manomaya kāya around the *hadaya vatthu*.
- The brain is part of the physical body and is the interface between the physical and mental body (*manomaya kāya*).

4. The seat of the mind (*hadaya vatthu*) and the five "internal senses" (*pasāda rūpa*) are born with the *manomaya kāya* at the time of human *bhava* (*paṭisandhi*). All these are very fine *rūpa* that our eyes cannot see. Thus one can visualize the *manomaya kāya* as an "energy field" that overlaps the physical body and provides vitality to the inert physical body.

- The Buddha compared the situation of a *manomaya kāya* separating from the physical body to a sword pulled out of its sheath or a snake shedding its skin. Once the *manomaya kāya* leaves, the body is like an inert log. And that is precisely what happens when one dies. The vitality is gone the instant the *manomaya kāya* comes out.

Manomaya Kāya of a Human (or an Animal) is "*Gandhabba*"

© 2026 Lal A. Pinnaduwage

5. When a person dies, if he/she has more *kammic* energy left in the human "*bhava*," then the *manomaya kāya* leaves of the dead body. Then it will wait until another suitable womb becomes available. The *manomaya kāya* is still in the human *bhava*, but we cannot see it. It is in "*paraloka*" or the "netherworld."

- While waiting in the *paraloka*, they could inhale aroma (*gandha*) from plants and food and get denser. Thus the name "*gandhabba*" ("*gandha*" + "*abba*" where "*abba*" means "taking in").
- That is why the *manomaya kāya* of a human (or an animal) is called "*gandhabba*." For more details, see "Clarification of "Mental Body" and "Physical Body" – Different Types of "Kāya."
- This *gandhabba* may stay in that form for even years until pulled into a suitable womb with matching "*gati.*"

How Does the *Gandhabba* See and Hear Outside the Physical Body?

6. When outside a physical body, *gandhabba* sees and hears differently. Seeing does not involve light, and hearing does not require air.

- Perhaps the best way to think about this is how *Brahma* sees. As we have discussed, *Brahma* does not have physical eyes and ears. A *Brahma* is just like a *gandhabba.*
- **Furthermore, *Brahma* realms are well above the Earth, and there is insufficient air for sound to travel.** *Brahmā* can hear without sound waves traveling through the air. In the same way, they can see without light. Those mechanisms are not perceivable to us.
- That is why they can see and hear over very long distances. This is meant by "*Dibba cakkhu*/*Dibba sota*" or "divine eye/divine ear."
- Therefore, *gandhabbā* can see and hear over long distances. That does not require light/air or (physical) eyes/ears.

7. Therefore, a *gandhabba* can see and hear more flexibly. The capabilities of the physical eye and physical ear are much limited.

- A *gandhabba* cannot smell, taste, or touch because its body is too subtle (it is more like an energy field.) Thus, it cannot make physical contact.
- When the *manomaya kāya* is separated from the physical body, it can see and hear without eyes and ears. "Seeing" does not need light (one could look at things far away), and "hearing" does not need air as a medium for the sound to propagate (one could hear sounds from far away). Both mechanisms involve "*Kirana*" (or "rays" in English, similar to electromagnetic radiation).
- Furthermore, the *gandhabba* can "travel" very fast; it is not physical travel. For example, the *suttā* talk about the Buddha or *Arahants* with *iddhi* powers traveling to *deva loka* in a time comparable to the time taken to "stretch a bent arm."

Gandhabba Inside the Physical Body

8. When the *manomaya kāya* (*gandhabba*) merges with the physical body, "seeing" and "hearing" happens with the help of the physical eye and the physical ear. It is like being inside a military tank. One needs to use the sensors mounted on the tank to see and hear what is going on outside.

- Now, "seeing" happens with the help of the physical eye. The physical eye is like a camera that takes a picture. The brain processes that image and sends it to the *cakkhu pasāda rūpa* in the *manomaya kāya*. Same with the ear. Thus, eyes and ears can be considered sensors mounted on that military tank.
- Therefore, seeing and hearing also degrade with old age, as the physical eyes and physical ears age.
- The brain is like the computer in that tank that processes the information coming in through the sensors.

© 2026 Lal A. Pinnaduwage

- Therefore, if there is damage to any of these three "physical instruments" (brain, eyes, ears), the ability to think, see, or hear can be degraded or lost. See "Our Mental Body – Gandhabba" and "Brain – Interface between Mind and Body."

9. However, actual "seeing" and "hearing" still happen at the two *pasāda rūpa* (internal eye and internal ear) associated with the *manomaya kāya*.

- For example, have you ever wondered how to judge the distances as we move around, avoiding bumping into things and each other? The physical eye cannot "judge distances"; see, "The Sense of Being Stared At" by Rupert Sheldrake (2003, p.12). Our eyes can see many things simultaneously and judge the relative distances of all things. This ability is in the *pasāda rūpa* and not in the eyes or the brain.

Out-of-Body Experiences (OBE)

10. The *hadaya vatthu* of the *manomaya kāya* (*gandhabba*) overlaps the physical heart when the two bodies are together. However, in some situations, the *manomaya kāya* can separate from the physical body. That leads to "out-of-body experience (OBE)."

- In his book, "Travels," the famous author of Jurassic Park, Michael Crichton (1988, p. 307,) mentions his ability to "shift my awareness out of my body and move it around the bedroom." He says, "..I didn't think anything about it… I assumed that anybody could do it.. ."
- Recently, a woman described how she thought that "everybody could do it": ABCNEWS: Woman Has 'Out of Body' Experiences Whenever She Wants
- A series of books, including "Journeys of the Body," has been written by Robert A. Monroe based on his experiences.

Near-Death Experiences (NDE)

11. Only a few people can experience OBE at will. Typically, OBE happens under stressful conditions, most commonly during heart operations. These have a unique name of near-death experiences (NDE.) The following video provides a good summary:

WebLink: youtube: Near Death Experiences & Evidence of the Afterlife

- Of course, there are many books on NDE. "Consciousness Beyond Life" by Pim van Lommel (2010) gives detailed accounts of NDE case studies experienced by people undergoing heart operations.
- A recent book, "Dying to be me: My Journey from Cancer, to Near Death, to True Healing," by Anita Moorjani (2012), describes the NDE experience in detail.

Our Thoughts Do Not Arise in the Brain, and We Do Not See With Our Eyes

12. The mind-door is the *hadaya vatthu* in the *gandhabba* or the *manomaya kāya*. Thoughts arise in the *hadaya vatthu* in the *gandhabba*, even when the *gandhabba* is INSIDE a physical human body. See, "Gandhabba Sensing the World – With and Without a Physical Body."

- "Seeing" happens in the *cakkhu pasāda rūpa* in the *gandhabba*. When outside a human body, that *cakkhu pasāda* can see by itself.
- When inside a human body, that *cakkhu pasāda* is shielded by the body. In that case, the visual signal must come through the eyes, processed by the brain, and that signal is transmitted to the *cakkhu pasāda rūpa*.
- Sometimes, people are born with the *cakkhu pasāda rūpa*, but the optic nerve (or the physical eye itself) may be damaged. They cannot see because the brain is not getting a signal from the eyes. But if the

© 2026 Lal A. Pinnaduwage

gandhabba can come out of the body, it can see by itself without needing the help of the brain. The following video clearly illustrates this situation.

WebLink: youbetube: Near Death Experience - Blind woman 'sees' while out of body

- However, in other cases, one may be born blind because one may not have the *cakkhu pasāda rūpa*. In that case, even if the *gandhabba* comes out of the body, it would not be able to see.
- All five sensory faculties are in the *gandhabba*, or the *manomaya kāya*. The brain first processes those signals, and then those signals arrive at the corresponding *pasāda rūpa*. Each *pasāda rūpa* transfers the signal to the *hadaya vatthu* and it is the *hadaya vatthu* that really "sees," "hears," etc.

More information at, "Mental Body – Gandhabba" and "Gandhabba (Manomaya Kāya)."

A new series of posts discusses life in great detail, "Origin of Life."

13.4.6 Cuti-Paṭisandhi – An Abhidhamma Description

Revised May 26, 2021; re-written September 7, 2022; re-written December 2, 2022

Paṭisandhi does not take place in a womb. It happens simultaneously with the time of the end of the previous existence (*cuti*; pronounced "chuthi.")

Paṭisandhi Does Not Happen in a Womb

1. Many people believe that *paṭisandhi,* or the linking to a new life, happens in a womb (in human and animal realms). But that is not correct. ***Paṭisandhi citta*** is experienced in the next very *citta* after the *cuti citta* of the old life in the last *citta vīthi* of the dying person. **The *paṭisandhi* (creation of a new *hadaya vatthu*)** is an action by *kammic* energy at the end of the last *citta vīthi*; it is not a *citta* as explained below.

- The new life-form (a *manomaya kāya* with a new *hadaya vatthu*) emerges from the dead body right after the last *citta vīthi*. Here we will discuss the case where the new life is either human or animal and thus, that *manomaya kāya* is a *gandhabba*; see "Manomaya Kāya (Gandhabba) and the Physical Body" and "Ghost in the Machine – Synonym for the Manomaya Kāya?."
- A human baby is born after several steps following the *paṭisandhi* moment. That includes the step of the *gandhabba* getting into a womb at the "*okkanti* step" long after *paṭisandhi.* See #8 of "Antarābhava and Gandhabba."

2. *Paṭisandhi* ("*paṭi*" is to "bind," and "*sandhi*" is a "joint" in Pāli or Sinhala.) Thus, *paṭisandhi* means joining a new life at the end of the old. That happens a thought-moment after the last *citta* of the current existence (*bhava*.)

- Let us consider an example. If the subsequent life of a human is that of an animal, then an animal *gandhabba* comes out of that human body at the end of that last *citta vīthi*. Of course, the *gandhabba* has an invisible (subtle) body, which can be seen only by a person with *abhiññā* powers.
- On the other hand, if a human *bhava* ends and a *Deva* (or *Brahma*) *bhava* start, a fully-formed *Deva* (or *Brahma*) will appear in a *Deva* (or *Brahma*) realm at the end of the last *citta vīthi* of the human *bhava*. There is no separate "*gandhabba* state" in *Deva* (or *Brahma*) realms.
- The following analysis is technical and suitable only for those familiar with *citta vīthi* processes in *Abhidhamma*. **However, the conclusions are informative, so it is beneficial for all to go through them.** *Citta vīthi* is discussed in "Citta Vīthi – Processing of Sense Inputs."

Paṭisandhi Takes Place After the Last *Citta Vīthi* of the Current *Bhava*

3. The last *citta vīthi* of the old life with 17 *citta* run in the standard way (see #4 of "Citta Vīthi – Processing of Sense Inputs."):

© 2026 Lal A. Pinnaduwage

atīta bhavaṅga (AB), *bhavaṅga calana* (BC), *bhavaṅga upaccheda* (BU), *pañcadvārāvajjana* (PD), *cakkhu viññāṇa* (CV), *sampaṭiccana* (Sam), *santīraṇa* (San), *votthapana* (V), J J J J J **J (*Cuti*) J (*Paṭisandhi*), T, T.**

- That last *citta vīthi* arises due to a previous *kamma vipāka* which brings an *ārammaṇa* (thought object) associated with that *kamma vipāka* through one of the five sense doors: Normally, it is a visual or a sound associated with the new existence (*bhava*).
- Then at the *votthapana citta*, the mind decides to act on that *ārammaṇa* based on the person's *gati*. **The person has no control over it, which happens in a split second.**
- After the fifth *javana citta*, there are two more *javana citta* are left. **The sixth is the *cuti citta,* and the seventh and last *javana* is the *paṭisandhi citta*.** Following the seven *javana* the last two ***Tadārammaṇa* (T)** (or "registration") *cittā* run **and the last last *citta vīthi* ends and the old *hadaya vatthu* dies.**
- Let us consider that process in detail.

Vipāka Brings in *Ārammaṇa* Triggering the Last *Citta Vīthi*

4. When close to end of an existence, a *vipāka* brings in an *ārammaṇa* based on the strongest *kamma* from the past. If that person still has "*gati*" to commit such a *kamma*, his mind will embrace that *ārammaṇa* and re-enact that same *kamma*. **That is "*kamma sambhava*."**

- That "*vipāko kamma sambhavo*" process is initiated at the *votthapana citta*. The *votthapana citta* decides how to proceed with the *ārammaṇa* from the *kamma vipāka.*
- Attachment to that particular *ārammaṇa* happens because that person still had that particular "*gati*" with which he committed that particular *kamma* in the past. See "Vipāka Vedanā and "Samphassa jā Vedanā" in a Sensory Event."
- The attachment gets stronger with each *javana citta* and by the time the person has the "*cuti citta*" in the sixth *javana*, he has fully embraced that *gati*. **Thus, in the next *javana citta* (*paṭisandhi citta*) the mind grasps that new *gati*.** See the sequence of *javana citta* in #3 above.

5. For example, if that *ārammaṇa* re-constructs an old *kamma* (say, killing an enemy) that person will go through the same sequence (that led to the killing in the past) again in his mind. If his *gati* have not improved, his mind will automatically go through the same steps, "killing the person" as if in a dream. That mindset (*gati*) corresponds to a hell-being, **and thus he will be instantaneously born in a hell (*niraya*.)**

- If Aṅgulimāla had not met the Buddha (and did not become a Noble Person) he would have been born in a *niraya*. See, "Account of Aṅgulimāla – Many Insights to Buddha Dhamma."
- Thus "*vipāko kamma sambhavo*" starts with the first *javana citta*. Each subsequent *javana* strengthens via *āsevana paccayā* from the previous *javana*. Thus, after five *javana-citta, kammic*-energy is optimized. See "Āsevana and Aññamañña Paccayā."

Paṭisandhi Citta Is Not *Paṭisandhi*

6. As we saw above, *cuti citta* and *paṭisandhi citta* are two *javana citta* in the last *citta vīthi* of the current *bhava*. The *paṭisandhi citta* gets one to the mindset of the new *bhava,* and the mind firmly gets into that "*gati.*" Then in the last two "registration *citta*" (*Tadārammaṇa*) that *gati* is firmly registered in the mind.

- **With the death of the old *hadaya vatthu*, *kammic* energy creates a new *hadaya vatthu* matching that registered "*gati*."**
- In the example of #5 above, it is a *gati* suitable for a "*niraya* being."
- Thus, transition to the new *bhava* takes place at the end of the last *citta vīthi* with the creation of the new *hadaya vatthu* by *kammic* energy. That is the *paṭisandhi.*

© 2026 Lal A. Pinnaduwage

- Thus, *paṭisandhi citta* is different from *paṭisandhi.*

Operation of the Rebirth Cycle

7. Old *kamma* bring *vipāka* with various *ārammaṇa*. Mind gets attached to such *ārammaṇa* and engage in more *kamma*. That is why the rebirth cycle never ends, UNTIL one fully grasps that process and takes steps to stop attaching to such *ārammaṇa*.

"*kammā vipāka vatthanti, vipāko kamma sambhavo*

Tasmā punabbhavo hoti, evan loko pavattatī"

[**Vism 602, 20–21**: *kammā vipākā vattanti vipāko kammasambhavo, kammā punabbhavo hoti: evaṁ loko pavattatīti.*]

- **"*Kamma* lead to *vipāka*; (ignorant people) attach to *ārammaṇa* arising due to *vipāka* and do more *kamma* (which in turn will bring more *vipāka.*) Thus the cycle of rebirth repeats, and that is how the world continues (for those people)."**

8. The last *citta vīthi* brings the *kammic vipāka* to energize the next *bhava*: "*kamma vipāka vaḍḍhanti.*" At the *votthapana citta*, i.e., a decision is made on whether to accept that *ārammaṇa.*

- **If the decision is made to grasp the *ārammaṇa* brought in by that *vipāka citta*, then *javana citta* will arise to power the new life:** That is "*vipāko kamma sambhavo.*"

Last *Citta Vīthi* and *Paṭisandhi*

9. The last *citta vīthi* of the old life arises in the old *hadaya vatthu* and it will run its course of 17 *cittā* — including the last two *Tadārammaṇa* or "registration" (T) *cittā* — after the seven *javana cittā.*

- *Cuti* or death is not a *citta*; it is the death of the *hadaya vatthu* of the old life. ***Cuti* (or the death of the old *hadaya vatthu*) happens immediately following the last *citta vīthi*,** and the *cuti citta* is in the last *citta vīthi. Paṭisandhi citta* grasps the *gati* of the new *bhava.*
- At the very end of that last *citta vīthi* (after the last two *Tadārammaṇa cittā*,) ***kammic* energy creates the *manomaya kāya* for the new existence (*bhava*) based on the "*gati*" registered in the last two *Tadārammaṇa cittā.***
- Thus, *paṭisandhi,* or the arising of the new *hadaya vatthu,* happens just after that last *citta vīthi.*

New *Hadaya Vatthu* Arises at the end of the Last *Citta Vīthi*

10. When this last *citta vīthi* ends, the old *hadaya vatthu* is dead, too; it had exhausted all its *kammic* power. The next *citta vīthi* starts with a new *hadaya vatthu* of the new life powered by a new *kamma bīja.* The new *hadaya vatthu* is formed by the new *kamma* seed grasped at the 7th *javana* (the *paṭisandhi citta*), and the first *citta vīthi* for the new life starts immediately.

- If a human *bhava* ends and the next *bhava* is an animal, then that animal *gandhabba* comes out of that body at the end of that last *citta vīthi.*
- On the other hand, if a human *bhava* ends and *Deva bhava* starts, a fully-formed *Deva* will appear in a *Deva* realm at the end of the last *citta vīthi* of the human *bhava.*
- Let us consider a specific example.

Human to Animal *Bhava*

11. If a human dies and the next life is an animal, that animal *gandhabba* came out of the dead human body. **It has the blueprint for the new physical body of that animal.**

© 2026 Lal A. Pinnaduwage

- That animal *gandhabba* now has to wait for a suitable womb. It is not that *gandhabba* decides which womb is good; instead, when a womb that matches the *gati* of the *gandhabba* becomes available, *gandhabba* will be pulled into it (*okkanti*) by the *kammic* energy. That is true for humans and animals.
- A single cell called zygote results when a sperm fertilizes an egg in a womb. But there is no life there until the *gandhabba* enters the womb and is incorporated with that zygote. Now the zygote becomes an embryo, then a fetus, and once out of the womb, grows into a full-size human or an animal according to that blueprint.
- Science has been unable to explain how all the complex body parts of a human or animal develop, starting from a single cell. This is how it happens. **The blueprint for all the complex body parts is in the *gandhabba*, not in that single cell**; see "Buddhist Explanations of Conception, Abortion, and Contraception."

Stopping of Grasping a New *Bhava*

12. In the last *citta vīthi*, a *Paṭicca Samuppāda* cycle operates with an *ārammaṇa* coming in via one of the six sensory faculties. Thus a PS cycle starts at the "*phassa paccayā vedanā"* step. See #12 of "Difference Between Taṇhā and Upādāna" and #7 of "Contact Between Āyatana Leads to Vipāka Viññāṇa."

- For example, at the death of Ven. Aṅgulimāla, *kammic* energy would have brought in an *ārammaṇa* that re-creates the killing of another human. If Aṅgulimāla still were a killer, his mind would have grasped that *nimitta*, which would have led to rebirth in *niraya* (hell.) However, since he became an *Arahant*, his mind would not grasp it. Ven. Aṅgulimāla did not grasp ANY *ārammaṇa* and thus was not reborn anywhere.
- Thus, unless "*phassa paccayā vedanā"* becomes *"samphassa paccayā samphassa-jā-vedanā,"* PS will not proceed to the *"taṇhā paccayā upādāna"* step to grasp the new *bhava.* See "Dukkha Samudaya Starts With Samphassa-Jā-Vedanā."
- The above example illustrates the stopping of the *Uppatti Paṭicca Samuppāda* at the "*phassa paccayā vedanā"* step in "Akusala-Mūla Upapatti Paṭicca Samuppāda."

13.5 Role of the Brain in Human Consciousness

Brain – Interface between Mind and Body

Body Types in Different Realms – Importance of Manomaya Kāya (located at The Grand Unified Theory of Dhamma)

13.5.1 Brain – Interface between Mind and Body

April 22, 2016; revised September 22, 2019; #17 added March 31, 2021; March 6, 2023; July 8, 2024; March 29, 2026

The brain is Not the Mind

1. Contrary to what scientists believe, our minds are not in the brain (this is another prediction from Buddha Dhamma that will be proven correct in the future). Furthermore, more scientists are realizing that fact, as illustrated in the following video:

- The "mind door" where *citta* (or thoughts) arise is at the *hadaya vatthu*, which is not in our physical bodies. It is in the *manomaya kāya* of the *gandhabba;* see "Gandhabba (Manomaya Kāya) – Introduction."
- The *gandhabba* has a subtle body; it is not a "body" in the sense we usually think about a "body." It is more like an energy field that overlaps the physical body; see "Ghost in the Machine – Synonym for the Manomaya Kāya?."
- The *hadaya vatthu* overlaps the heart in the physical body. When we hear traumatic news, we feel a burning sensation close to the heart, not in the head. We don't say, "Oh, my head felt burning when I heard the news." It is the heart area that feels it. (The head may start hurting later if one keeps thinking about the loss).
- On the other hand, when we overuse our five physical senses or think hard about a complex problem, our heads hurt. That's because the brain has to do a lot of processing in those situations. While watching a movie, our brains work overtime to convert sensory inputs from the eyes (*cakkhu indriya*) and the ears (*sota indriya*). When we think about a complex problem, the brain's *mana indriya* must work hard; see below.

Two Overlapping "Bodies" – Physical Body and *Gandhabba* (Mental Body)

2. A physical body is a temporary shelter or a "shell" for the *gandhabba*'s subtle body. The *gandhabba* receives sensory inputs from the outside world through the physical body. See "Body Types in Different Realms – Importance of Manomaya Kāya."

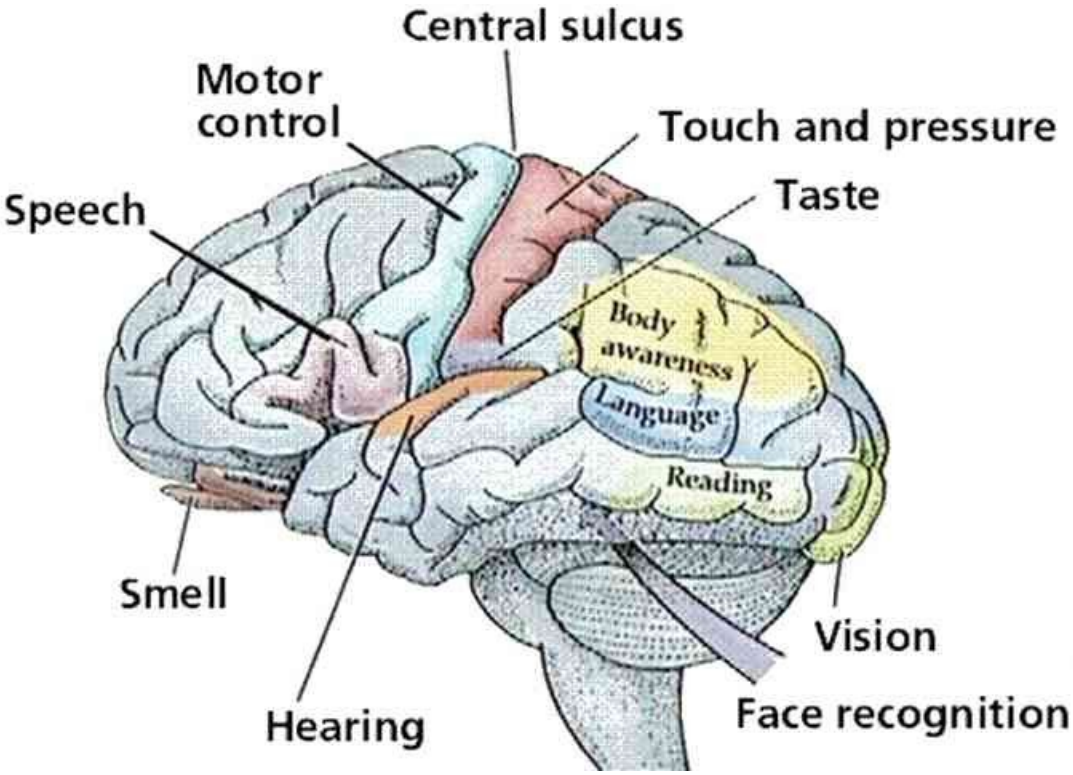
- Since a given physical body has a lifetime of around 100 years, we have to "build a new physical body" when the current one decays and finally dies. (That is if we have extra *kammic* energy for the human *bhava*); see, "Bhava and Jāti – States of Existence and Births Therein."

3. Before entering the mother's womb, the *gandhabba* has an invisible "body," more like an "energy packet." Thus, it cannot experience taste or touch, even though some can "digest odors" and become denser.

- A *gandhabba* waiting for a womb is usually about the size of a fully-grown human, but it has very little "matter" that is not visible to us. At the moment of "*okkanti*" or entering the mother's womb, he/she will enter through the mother's body and collapse to the size of the zygote when taking possession of it; see, "Buddhist Explanations of Conception, Abortion, and Contraception."

© 2026 Lal A. Pinnaduwage

- Thus a *gandhabba*, when outside waiting for a suitable womb, is just like a ghost shown in the movies. Of course, humans cannot see it even with technological advances. It is much smaller in mass than the first cell formed by the union of the mother and father, the zygote.
- The physical body starts with a single cell (zygote) and grows using nutrition from the mother. After the baby is born, it consumes food to grow to adult size.
- Thus, it is helpful to have this visual: a very fine *gandhabba*, trapped inside a physical body weighing over a hundred pounds controls it.



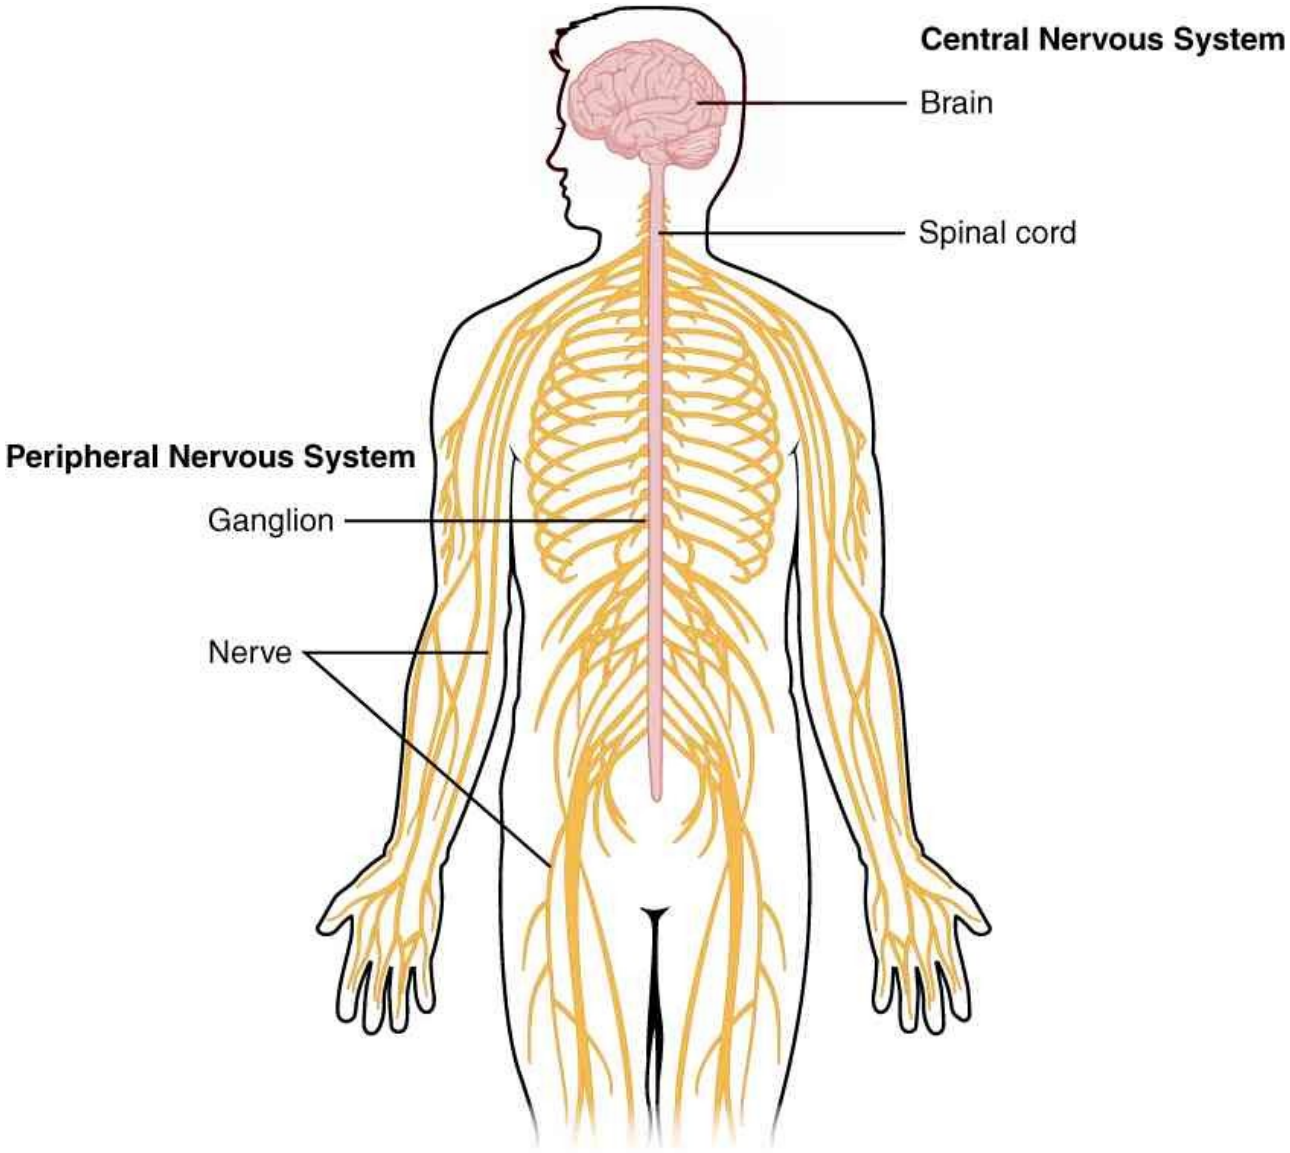
Brain – Interface Between the Physical Body and *Gandhabba*

4. Once inside a physical body, a *gandhabba* **has to** use the physical body to interact with the outside world. It is like being trapped in a solid shell. Initially, its mind will be in the *bhavaṅga* state (see, "Citta Vīthi – Processing of Sense Inputs") and not conscious of the outside world, except for body sensations.

- In humans, the brain first processes signals from the "physical senses" (eyes, ears, etc.). The brain transmits that information to the five *pasāda rūpa* in the *gandhabba*. Those *pasāda rūpa* then pass that information to the *hadaya vatthu* (seat of the mind) in the *gandhabba;* see, "Gandhabba (Manomaya Kāya) – Introduction."
- That is how our minds receive information from the external world.
- Now the question arises: "How are the sense inputs coming through the eyes, ears, tongue, nose, and body transmitted to the *pasāda rūpa* (situated close to the *hadaya vatthu*)?." Note that the *hadaya vatthu* overlaps (and not inside) the physical heart.

5. The brain acts as the intermediary between those physical sense inputs and the five *pasāda rūpa*. It processes incoming information and converts it to a form that can be understood by the mind (*hadaya vatthu*).

- First, sensory inputs from the eyes, ears, tongue, nose, and body travel to specific brain regions. That has been well-researched by scientists over the past hundred years. The following figure shows the specific areas of the brain that analyze the data from the five senses.



Brain and five Senses

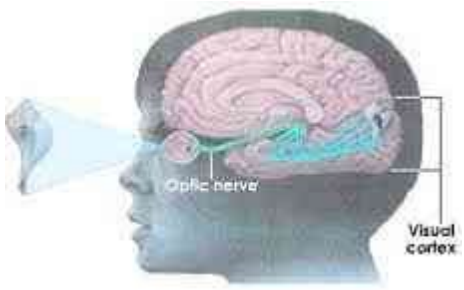
© 2026 Lal A. Pinnaduwage

- Science cannot explain how the brain comprehends the signals after processing them. For example, in vision, no "picture" is formed in the back of the head; see "On Intelligence" by Jeff Hawkins (2005) for a helpful discussion.

6. The signals for vision, sounds, smells, and taste come into the body through specific body parts. In contrast, the touch sensations can come from anywhere in the body and are transmitted to the brain via an intricate system of nerves:

Nervous System

- These nerve signals go to the brain for processing (see the "touch and pressure" processing area figure in #5 above).



Gandhabba (Mental Body) Overlaps the Physical Body

7. It is essential to note that the misty *gandhabba* has a similar "nervous system" that overlaps the physical nervous system shown above. Yes. Gandhabba is more like an "energy field." (This is irrelevant to the present discussion, but the physical body imparts *kamma vipāka* via body aches, diseases, and injuries.)

- The physical nervous system has to align with the nervous system of the *gandhabba*. That alignment could change (due to *kamma vipāka*), which can throw our nervous system out of alignment, disrupting proper bodily function and leading to aches and pains. See, #6 of "11. Magga Phala and Ariya Jhānā via Cultivation of Saptha Bojjhaṅga."

© 2026 Lal A. Pinnaduwage

8. The signals from the other four senses go to specific brain areas (indicated in the figure in #5 above) via specialized neural pathways. For example, the optical nerve carries the visual signal to the brain:

Eye Indriya

- Once the brain processes those sensory inputs from the five physical senses, they are "transmitted" to the corresponding five *pasāda rūpa* in the *gandhabba* (*manomaya kāya*.) See below.

Mana Indriya in the Brain

9. So far, we have identified five of *gandhabba*'s "windows to the outside world" from his/her "shell" or the physical body: eyes, ears, nose, tongue, and the body.

- What about the "*dhammā*" that are the finest *rūpa* (*mano rūpa*) that interact with the physical body? That is how we think about "random things" out of the blue. For example, we may be washing dishes in the kitchen when thoughts about a friend or relative come to mind.
- Thoughts about a friend — who may be a thousand miles away — come through the *mana indriya* in the head (inside the brain). Of course, science is not aware of that.
- We discussed this in a previous post: "What are Dhammā? – A Deeper Analysis."

10. How are the signals processed in the brain due to incoming vision, sound, smell, taste, touch, and dhamma passed to the five *pasāda rūpa* and the *hadaya vatthu?*

- **The *manomaya kāya* has a blueprint of the physical body.** The physical body grows according to that blueprint. **As the physical body grows, *manomaya kāya* (also called a "*kiraṇa kāya*" because it is a subtle body, essentially the *gandhabba*) also "expands."** The brain in the physical body overlaps "the brain" in the *manomaya kāya* and transfers the processed information on sensory inputs to "the brain" in the *manomaya kāya*. The *hadaya vatthu* thus receives that information via the *manomaya kāya.*
- **It would be the reverse process when the *hadaya vatthu* sends commands to the brain, for example, to move body parts.**
- Further details in "Gandhabba (Manomaya Kāya) – Introduction."

The Origin of *Citta Vīthi*

11. When information comes to one of the five *pasāda rūpa,* it passes on that signal to the *hadaya vatthu* by impinging (hitting) the *hadaya vatthu*. That results in the *hadaya vatthu* vibrating 17 times, just like a clamped blade, when hit by an object, vibrates a certain number of times; see, "Gandhabba (Manomaya Kāya) – Introduction" and "Citta Vīthi – Processing of Sense Inputs."

- That is the origin of a *citta vīthi* of 17 *citta*. Each *citta* in a *citta vīthi* corresponds to a single vibration of *hadaya vatthu*. This 17 thought-moment time is the lifetime of a *hadaya rūpa* (vibrational energy) of the *hadaya vatthu*.
- It is a common mistake to take this to mean that **any *rūpa*** has a lifetime of 17 thought moments. That is a terrible mistake; see, "Does any Object (Rūpa) Last only 17 Thought Moments?."

© 2026 Lal A. Pinnaduwage

- Describing these details in one or even several posts is impossible . One may need to review other posts to clarify certain concepts. The "Search" button on the top right is an excellent resource for this task.

12. Any of the five *pasāda rūpā* has to strike the *hadaya vatthu* to pass on its signal. However, the *mana indriya* can exchange information directly with the *hadaya vatthu*.

- When the *mana indriya* interacts with the *hadaya vatthu,* that also results in a *citta vīthi*; such *manodvāra citta vīthi* do not have a fixed length.
- Still, only one of the six sensory signals can contact the *hadaya vatthu* at a given time. But since the process is swift, billions of *citta vīthi* can run through the *hadaya vatthu* "in the blink of an eye."

Two Inter-Dependent "Bodies"

13. Therefore, this process involves interaction between two overlapping systems: the physical body and the corresponding subtle "energy body" of the *gandhabba.*

- When the *gandhabba* escapes from the body under stressful situations, it can float above the physical body. Then the physical body becomes inert until the *gandhabba* returns to it; see, "Manomaya Kāya and Out-of-Body Experience (OBE)."

14. Thus, the brain plays a significant role in shaping our future. Similarly, the five physical senses play vital roles too.

- If one of the five physical senses is damaged, we lose the corresponding "window to the external world." We will not be able to see If both eyes are damaged. If the sensors inside the ears are damaged, we cannot hear, etc.
- But the most critical is, of course, the brain. If the brain is damaged, sensory signals cannot be processed, and we cannot interact with the external world. Thus, being brain-dead is virtually equivalent to being dead.
- However, if one's brain is damaged in an accident, it will not affect the *gandhabba* within. It is just that the *gandhabba* will not be able to communicate with the external world. And if damage to the brain results in the death of the physical body, the *gandhabba* will just come out of the dead body and wait for a suitable womb.

Next Existence Determined by *Gati* and *Kamma Vipāka*

15. It does not matter whether one gets killed due to an accident or dies due to an illness or old age. The *gandhabba*'s future is determined by his/her *gati* (or *gathi*), past *kamma* (*kamma bīja*), etc.

- If the physical body dies in an accident, the *gandhabba* will immediately come out of the dead body. Then it will wait for a suitable womb if there is still more *kammic* energy left for the human *bhava* (in an accident, that is likely).
- But if one gets to old age and dies or dies due to illness — and if one has exhausted *kammic* energy for the human *bhava* — then the *cuti-paṭisandhi* will occur. If one is to become a *deva*, a *deva* will appear instantaneously in the corresponding *deva* world. If one is to become an animal, an animal *gandhabba* will emerge from the dead body and wait for a suitable womb to become available.

16. It is also clear why we must take good care of the body, our sense faculties, and our brains. *Gandhabba*'s (our) ability to make decisions depends on all those faculties working in optimum conditions.

- We have a short lifetime of around 100 years to get rid of our defiled (immoral) *gati*. We also need to cultivate good (moral) *gati*, comprehend the true nature of this world (*anicca, dukkha, anatta*), and be free from future suffering.

© 2026 Lal A. Pinnaduwage

- We need to strive to attain the *Sotāpanna* stage of *Nibbāna* and be free from the four lowest realms (*apāyā*). At least, we must make progress towards that goal so that in a future life, we will have a *tihetuka* birth that makes it easier to attain *Nibbāna*.
- We need to eat, exercise, and care for our bodies to perform optimally to accomplish those things. We also need to avoid drugs and alcohol and associate with those who have similar goals (and avoid those with bad habits).

17. Some scientists and philosophers are beginning to understand that memories are not stored in the brain. See "WebLink: getpocket.com: The Empty Brain."

Thanks to reader Diogo Roberto R. Freitas for alerting me to the above article.

13.6 Abhidhamma via Science

July 15, 2016; revised February 16, 2021

1. In this section, I have two goals:

- Introduce Abhidhamma in a scientific way that can be understood not only by people with scientific backgrounds but anyone with an interest. It will complement the other section on Abhidhamma, which necessarily involves a lot of Pāli terminologies.
- To demonstrate that the current hypothesis by scientists that consciousness originates in the brain is not correct.

2. I will also make predictions in this section on what the scientists are likely to confirm in the future.

- We all are impressed by the scientific advances made during the past 100 years or so making our lives easier and more productive. I am actually a cheerleader for scientific and technological advances.
- Physics had been my passion since high school days, and that changed when I started learning Buddha Dhamma several years ago. I still love and work on topics of interest in physics (and science in general). Fortunately, I am finding that those two interests are not mutually exclusive, and there is significant overlap. In fact, this section is the result of my two overlapping interests.

3. Despite the advances in science and technology, there is much about the human mind that science does not understand, and has not even begun to understand. **Western science is based on the five physical senses, leaving out the most important one, the mind.**

- At the present time, in 2016, scientists have the wrong view that consciousness originates in the brain.
- All scientific theories relating to the mind are based on this wrong hypothesis. However, Buddha Dhamma says not only that the mind is a sense of its own, but it is the most powerful of all six senses.

4. I will first discuss some interesting phenomena that scientists have discovered recently and are currently grappling with many diverse areas of science. Then I will discuss the layout of the brain of humans and animals, and how that information can lead to satisfactory explanations of those phenomena by taking into account the Buddha's view of the mind as described in Abhidhamma.

- Instead of using Pāli words to describe Abhidhamma (which can be boring to those who are new to Abhidhamma), my hope is to explain Abhidhamma concepts in the context of such already observed phenomena.
- Posts on *Abhidhamma* at, "Abhidhamma."

Topics in this Section (I have moved a couple of posts from the Dhamma and Science section to here because they discuss possible future discoveries/present misinterpretations in science):

○ Neuroscience says there is no Free Will? – That is a Misinterpretation!

○ The Double Slit Experiment – Correlation between Mind and Matter?

○ Vision (Cakkhu Viññāṇa) is Not Just Seeing

Here is another post from the Abhidhamma section that has a deeper analysis on the brain-mind connection:

○ Brain – Interface between Mind and Body

13.6.1 Vision (Cakkhu Viññāṇa) is Not Just Seeing

July 15, 2016; revised October 19, 2020; rewritten January 13, 2023

© 2026 Lal A. Pinnaduwage

Cakkhu viññāṇa is not just "seeing a picture" of an object; it includes gauging the distance of the object from us. Furthermore, it simultaneously generates recognition (perception), feelings, and other mental factors.

Introduction

1. You may have experienced or seen the following happen to someone else. You are crossing a street and see a speeding car approaching. You instinctively run to the safety of the pavement.

- You see the car coming, gauge its speed and distance, and realize it is too fast. Thoughts of danger and fear arise, and you quickly jump out of its way. All that happens in a split second.
- As you can see, several things happened in that short time. In particular, you recognize it is a car and its distance from you. Since you perceive it is coming too fast, fear arises, and you jump.
- Scientists have only begun to investigate the arising of recognition and feelings associated with an event. But they have made recent progress in resolving the issue of "gauging the distance in a visual event."

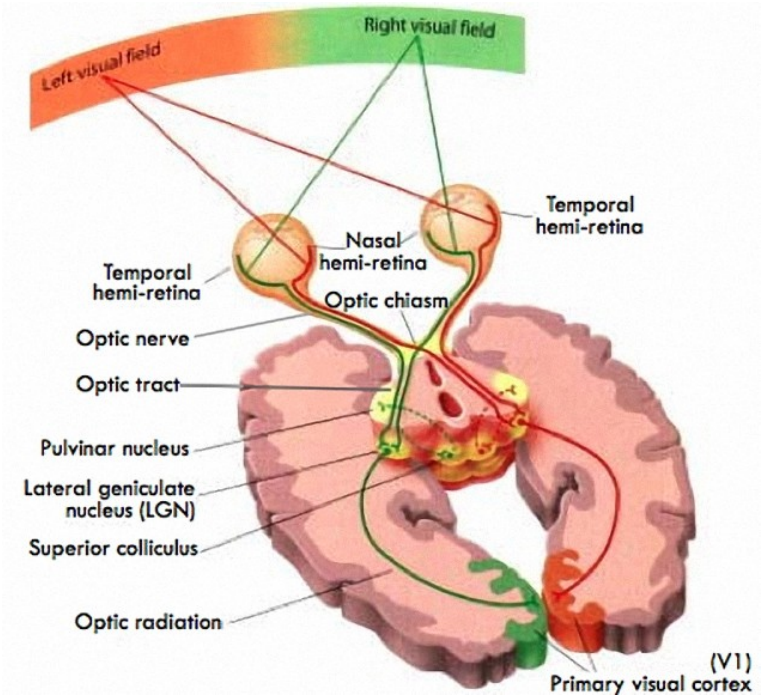
2. In 1988, Dee Fletcher almost died due to carbon monoxide poisoning. Her husband found her unconscious just in time to save her life. However, when she recovered, she had lost "sight" in the ordinary sense of the word.

- She could not see or recognize someone standing right in front. She lost the ability to read a book.
- But soon she realized that she had some peculiar abilities. She could grab a pencil from the hand of a person who held it in front of her, even though she could not actually "see" the pencil or the person.
- Her vision is good enough for picking something up, but not good enough for seeing it!

Dee Fletcher's Case Provided Many Clues on Vision

3. Since then researchers have done numerous experiments on her, which have led to some astonishing findings about how vision works.

- For example, they tested her with a mailbox with a narrow slot for inserting letters. Even though she could not see the mailbox — let alone the slit or the envelope — she could insert the letter in the slot without effort. Even when they tilted the slit, she did not have a problem at all! It was as if a phantom inside her was doing that task for her.



4. Another ability of Dee was walking around the house without bumping into furniture or walls. Since that ability could be due to her familiarity with the house, they took her to an unfamiliar trail. She had no problem walking there without tripping over rocks or bumping into trees.

- This disorder is known as visual agnosia.
- It turns out that there are two relatively independent visual systems in the brain: One is for conscious perception (visual cortex), which was severely damaged in Dee. The other was for unconscious control of action (superior colliculus), which is largely preserved.

Two Ways of Visual Processing

5. The following figure shows the optical nerve splitting and connecting to those two areas in the brain.

© 2026 Lal A. Pinnaduwage

You can download the figure here.

6. The presence of two visual processing streams in the brain has been known only since 1982. Even though the role of the visual cortex in the brain (in producing a picture "in mind") had been known before that, the role of a second processing area in the brain (superior colliculus) that helps with figuring out the "depth of vision" or how far a given object was proposed in 1982 by Leslie Ungerleider and Mort Mishkin.

- Of course, their model helped explain the symptoms experienced by Dee Fletcher. She had parts of her visual cortex damaged by carbon monoxide poisoning, while her superior colliculus was left intact. Her eyes sent the signals to the visual cortex, but the damaged visual cortex could not process that signal.
- You do not need to know the details of the visual cortex, superior colliculus, or any other technical term to get the idea I plan to convey. I do not know the finer details about them either.

How Vision Happens – Still a Mystery for Science

7. Of course, scientists are only aware that those two areas in the brain **contribute** to those two functions. They do not know exactly how the visual cortex gleans information about the object (i.e., its visual characteristics.) Also, it is not known how the superior colliculus figures out the object's dimensions and how far it is (to grab an item correctly, both types of information are needed).

- We need to realize that "no light" is going to the visual cortex and there is no screen at the back of the head that displays the object in question. The optical nerve only transmits a chemical (and electrical) signal. **The visual cortex somehow generates a "picture" for our minds to see**.
- Even more mysterious is how the **superior colliculus figures out the depth of vision** from that chemical signal coming through the optical nerve.
- We will come back to these issues in upcoming posts, but first, let us continue with our discussion on what the scientists know at this time and how they found them.

Further Details of Dee Fletcher's Case

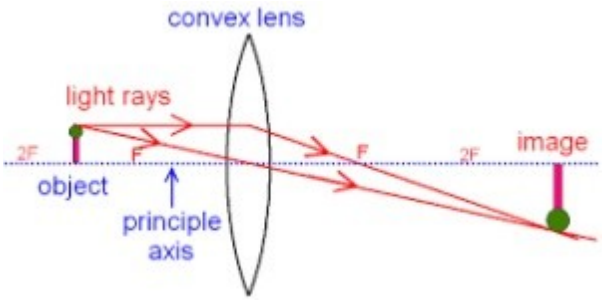
8. Many research papers describe experiments involving Dee Fletcher, and the two principal researchers have written a book on this research: "Sight Unseen – An Exploration of Conscious and Unconscious Vision" by M. A. Goodale and A. D. Milner (2004).

© 2026 Lal A. Pinnaduwage

- The above book is a bit expensive. Chapter 4 of V. S. Ramachandran's popular book, "Phantoms in the Brain" (1998) provides a less technical description. That book also describes some other interesting findings about the brain. In future posts, I hope to discuss some of those observations (particularly his and others' work on "phantom limbs").
- There is also a Wikipedia article on the WebLink: WIKI: Two-streams hypothesis on vision.

9. The book by Goodale and Milner also describes a visual problem that is the opposite of that of Ms. Fletcher. This syndrome is called "optic ataxia." Those with it can "see" and recognize objects very well, but they have difficulty in actions involving them.

- Those who suffer from optic ataxia can see the mailbox and slit described in #2 above. However, they have much difficulty putting a letter through the slit.
- It turns out that these people have their superior colliculus damaged, but their visual cortex works fine.



How Does the Mind Figure out the Distances to Objects Around Us?

10. Have you thought about how we can move around without bumping into each other and other objects like trees on the ground and cars on the road? The presence of the two processing streams can BEGIN TO explain how the brain figures out not only "what is in front of us (a human, tree, or a car)" but also "how far is it at and how big it is."

- As mentioned above, part of the signal going through the optical nerve to the visual cortex deals with the first task, and the other part going to the superior colliculus deals with the "how far and how big" issue.

11. Even though scientists have figured out that those two areas in the brain (visual cortex and the superior colliculus) somehow extract the two kinds of information, **they have no idea how those areas extract that information from the chemical signal coming through the optical nerve.**

- Scientists know that the lens in an eye projects an image of the object to the back of the eye (retina); see the figure above. It is pretty much the same as an image you can see with a lens:

This is pretty much how a camera captures an image:

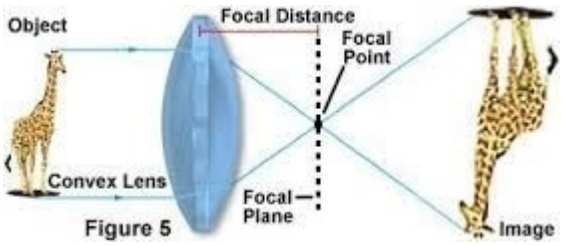


Figure 5

How Can a Chemical Signal Provide the Perception of Sight (and Light)?

12. Of course, the film in an old camera undergoes chemical changes when the image falls on it. Then that film is chemically processed to reveal the picture.

© 2026 Lal A. Pinnaduwage

- In the same way, when the image of an object falls on the retina of an eye, the cells on the retina generate a chemical (and electrical) signal. The optical nerve transmits this signal to the visual cortex and the superior colliculus in the brain. There is no "picture" transmitted to the brain.
- So, how does the visual cortex generate a visual of the object starting with the chemical signal from the eye?
- Even more puzzling is how the superior colliculus figures out the distance to the object (and the object's dimensions), solely based on that same signal.

13. Even within the visual cortex, there are 30 different areas specialized to carry out different tasks. They all help provide a "comprehensive picture" of the object.

- For example, the area called V4 deals with the object's color but does not care about the direction of motion.
- On the other hand, area MT (also called V5) responds to targets in the visual field based on their direction of motion, but does not care about the object's color. Specialized sub-areas in the visual cortex carry out multiple tasks.

The brain is Not a Computer – It Can Change

14. Brain is indeed a very sophisticated machine! However, as we will find out in upcoming posts, it is not a typical machine like a computer. **It can change on its own!**

- While a computer cannot get rid of parts that go bad, the brain can replace or repair bad parts and even make new parts. This is puzzling neuroscientists right now. **They have confirmed that these things happen (I will discuss examples in future posts) but have no idea HOW the brain does that.** (However, when a whole section is damaged, like in the case of the visual cortex or superior colliculus, such rejuvenation is not possible).
- The key to this puzzle is the following. Our "mental body," or the *gandhabba,* controls the physical body. The *gandhabba,* or the *manomaya kāya,* has three components: *kammaja kāya, cittaja kāya*, and *utuja kāya*. The *cittaja kāya* plays the dominant role in CHANGING brain functions. In other words, it is OUR THOUGHTS that can change the brain!
- Note that "*cittaja kāya*" means not a separate "body" but part of the *manomaya kāya* associated with our physical body.
- Ultimately, one attains *Nibbāna* by gradually transforming one's brain. In other words, getting rid of greed, hate, and ignorance can change one's brain! However, even a Buddha can only show the way, and one has to make an effort.
- The four types of bodies that we have and the *gandhabba* are discussed in the section "Gandhabba (Manomaya Kāya)." The critical functions of the *cittaja kāya* are also discussed in the post, "Udayavaya Ñāṇa – Importance of the Cittaja Kāya."

Buddha Dhamma and Science – a Symbiotic Relationship

15. We live in a truly opportune time to comprehend the value of Buddha Dhamma. Modern science provides clues that can be used with Buddha Dhamma to clarify many issues and vice versa. See, "Buddha Dhamma – A Scientific Approach" and "Quantum Mechanics and Dhamma."

- In this series of posts, I hope to suggest some such avenues for scientists to explore, based on Buddha Dhamma, which can also explain many of these "new findings."
- As I have mentioned, attaining *Nibbāna* does not require such details. However, for most people, future confirmation of such "predictions" hopefully will help build confidence in Buddha Dhamma and to appreciate its value.

© 2026 Lal A. Pinnaduwage

- Of course, the real value of Buddha Dhamma is not in exposing such mundane things, but in showing the path to liberation from suffering (*Nibbāna*). But it is good to have faith in Buddha Dhamma to feel confident that one is not wasting one's precious time in learning Buddha Dhamma.

13.6.2 The Double Slit Experiment – Correlation between Mind and Matter?

Revised March 13, 2018; November 15, 2019; November 25, 2022; March 2, 2026

There is no mystery in the "double slit experiment." The idea of a 'solid particle' dissolves at the quantum level. This is the key idea behind the mind-generated *kammic* energy giving rise to the 'material world.'

Introduction

1. The failure of the materialistic approach in explaining consciousness is becoming ever more apparent; see Ref. 1 and Ref. 2 below.

- The materialistic approach, of course, is to explain mental phenomena to arise in the brain, which is composed of inert matter.

2. Many scientists/philosophers are hoping that quantum mechanics can come to the rescue (Ref. 3, and Ref. 4).

- They say that even though deterministic Newtonian mechanics cannot explain consciousness, quantum mechanics can (because quantum mechanics does not have such an apparent deterministic nature.)

Quantum Mechanics to the Rescue?

3. Quantum mechanics (QM) is different from other branches of physics where one can get an intuitive idea of what is taking place.

- What we currently do with QM can be called a "black box" approach. When we apply the correct equations, we get the right results. Einstein did not like this at all. Yet, to his frustration, none of his predictions of QM's inadequacy materialized, AND the predictions of QM have been correct to an amazing degree of accuracy.

4. Those experiments, the results of which can only be explained by QM, **appear to be** non-deterministic.

- This has compelled some scientists to investigate whether there is a connection between QM and the mind, which IS non-deterministic. Two experiments, in particular, have been at the forefront of these discussions. The "double-slit experiment" and the "Schrödinger's cat experiment."

5. This essay challenges the two central assumptions of this postulated relationship between QM and the mind.

i. Even if QM and the mind are non-deterministic in their own rights, there is no particular reason to believe there is an apparent connection between them.

ii. There is nothing really "non-deterministic" about QM, other than the indeterminacy depicted by the Heisenberg uncertainty principle. That is just the accuracy of a given measurement.

Quantum Mechanics Is Not Intrinsically Psychophysical

6. Let us look into (i) first. Henry Stapp is a leading physicist who argues that quantum theory will ultimately explain consciousness. In his book, "Mindful Universe" he says (p.2), "… quantum theory itself is intrinsically psychophysical as designed by its founders, and as used in actual scientific practice, it is ultimately a theory about the structure of our experience that is erected upon a radical mathematical generalization of the laws of classical physics."

© 2026 Lal A. Pinnaduwage

- My primary point is that quantum theory is NOT psychophysical; there is no way to accommodate "subjectivity" in QM. Where is the "mind connection" in the theory of QM?
- Others work on theories that try to explain consciousness as arising from quantum effects in the brain; see, for example, "Conversations on Consciousness", by Susan Blackmore (2006). No one has clarified how these theories connect "psyche" and "physical" in "psychophysical."

The "Observer Effect" in QM

7. Let us review one experiment that has become the main demonstration for the "observer effect" in QM, the "double-slit experiment." Here is a short video by Dr Quantum to illustrate the "paradox" of the double slit experiment:

WebLink: YOUTUBE: Dr Quantum Double Slit Experiment

8. The two main points of this experiment are:

a. The particles behave like waves when both slits are open, and

b. This "wave nature" goes away when the particle's path is "observed" or monitored.

- The following video explains the current scientific understanding.

Bohmian theory of Quantum Mechanics

9. There is a version of QM called the Bohmian theory or the Pilot Wave theory developed by the late David Bohm. It uses Schrodinger's equation to track the propagation of a "pilot wave." That theory is explicitly nonlocal, i.e., quantum entanglement is builtin.

- With this theory, each wave equation solution describes a DETERMINISTIC path for the particle, and the statistical average agrees with the experiments and the results of the standard QM calculations.
- The actual trajectories have been harder to measure not because of a "mind effect" but because observation can disturb the particle trajectory itself. Recent experiments have been conducted to "weakly" measure a system without appreciably disturbing the trajectories. Those experimental results are consistent with the predictions of the Bohmian theory (Ref. 5).

Thus the role played by Bohmian mechanics in these "QM experiments" is just like the role statistical mechanics played in thermodynamics.

- Here is a very short video showing INDIVIDUAL trajectories for a double-slit experiment calculated using the Bohmian theory. There is nothing "mysterious." **Each particle has a definite trajectory. There is no "observer effect."**

  WebLink: YOUTUBE: Bohmian Trajectories in the Double-Slit Experiment

- When an attempt is made to observe an individual particle's path, the system's coherence, or pilot wave, is disturbed, and the interference pattern disappears. Thus, there is no "observer effect," in the sense of bringing "subjectivity" in.

"Schrödinger's Cat" Thought Experiment

10. Another famous experiment that is the subject of much discussion is Schrödinger's cat thought experiment. This experiment suggested by Schrödinger back in 1935, involves a cat in a closed chamber.

- A radioactive sample in the chamber, if it undergoes decay within a given period, triggers the release of a hammer that breaks a vial of a toxic gas, killing the cat. If a conscious observation is required to collapse the wave function, the cat's fate is unknown until the box is opened. Unfortunately, both the

© 2026 Lal A. Pinnaduwage

consciousness-based and consciousness-free interpretations of quantum measurement are indistinguishable for the observer outside the box.

- In 2006, an actual experiment was conducted to simulate this experiment. It was reported that "… measurement alone, rather than conscious observation of measurement, is sufficient"; see Ref. 6.

No Real "Observer Effect"

11. Thus there is no "observer effect" in the double-slit experiments or the Schrödinger cat experiment.

- In the double-slit experiment, an "observer" could disturb the system's coherence if the disturbance is strong enough. It does not matter whether the "observer" is human or a mechanical device (in most cases it is non-human); one ALWAYS gets the same result. This is in contrast to real subjective situations. For example, millions of people make complex subjective decisions in the stock market.
- So, where does the "objectivity" or "intention" – in the sense of the mind affecting the experimental result – come from? "Intent to monitor" is not a significant subjective decision; just a simple "yes" or "no."

12. Therefore, it is clear that there was no evidence for "subjectivity" in those experiments even before Bohmian mechanics or Schrödinger's cat experiment. Those two pieces of evidence make that point undeniable. There is no evidence that the mind affects the outcomes of those experiments.

The Mind Creates Matter, Not the Other Way Around

13. The Buddha stated that the mind is at the forefront: "Manopubbangamā Dhammā.." A deeper analysis of *Abhidhamma* is available at "The Origin of Matter – Suddhaṭṭhaka."

- This is the key idea behind the mind-generated *kammic* energy giving rise to the 'material world.' Also, see "Origin of Life."
- Even though the mind affects matter and even CREATES matter, science has not advanced enough yet to confirm that.

14. There has to be a paradigm change in science to explain consciousness. **Any theory based on matter and that treats mental phenomena as a byproduct will not succeed.** The mind is the more fundamental entity and takes precedence over matter.

- Some philosophers are beginning to sense this reality. Even though he does not appear to know anything about the Buddha Dhamma, philosopher Thomas Nagel says the following. "The great advances in the physical and biological sciences were made possible by excluding the mind from the physical world… ..But at some point it will be necessary to make a new start on a more comprehensive understanding that includes the mind." (Ref. 1, p.8). Then on p. 15, "…The possibility opens up of a persuasive conception of the natural order very different from materialism – one that makes mind central, rather than a side effect of physical law."

Consciousness and Quantum Mechanics

March 13, 2018: I have started a new section "Quantum Mechanics and Dhamma," in which a new interpretation of quantum mechanics is presented, discussing why a connection between quantum theory and consciousness **will not be** possible.

13.6.3 Neuroscience says there is no Free Will? – That is a Misinterpretation!

Revised April 22, 2016; revised November 15, 2019; September 6, 2020 (update at the end of the post)

Libet's Experiment

1. In 1983, Benjamin Libet conducted an experiment **apparently showing** that our brain makes decisions before we become aware of it. When a person moves a finger, the brain activity appears to start before the person actually makes that decision.

- There have been numerous follow-up experiments since then. All those experiments seemed to confirm this observation, even though the time delays vary.
- Scientists and philosophers are quite puzzled and some are very worried that we are just zombies run by a program in our brain.

2. Here is a video clip that illustrates the basic experiment:

WebLink: VIMEO: Neuroscience and Free Will

Here is a recent youtube video on the same subject:

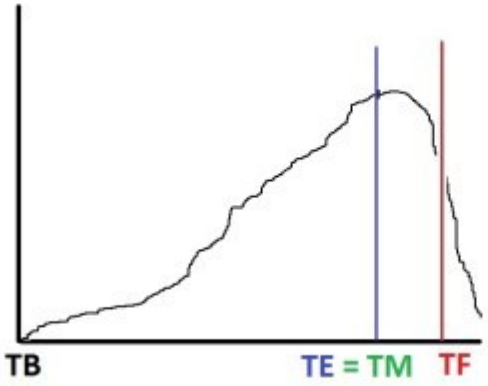
WebLink: Youtube: Do humans truly have Free Will?

Does Libet's Experiment Prove There is No Free-Will?

3. Since Libet published his results, scientists and philosophers have been debating whether these experiments show that man has no free will:

WebLink: WIKI: Neuroscience of free will

- Also, see the recent post, "Mind Is Not in the Brain" and follow-up posts at "Buddha Dhamma – A Scientific Approach"



Refined Follow-Up Experiments

4. The second recent experiment is a bit more refined. Let us summarize that experiment:

- The person randomly decides (no pre-planning) to press a button at some time. Let us take this time to be TM (M for the mind) making the decision.
- He presses the button at TF, which is recorded electronically (F for using the finger to press the button).
- At the same time that he decides to press the button, he is watching the clock and makes a mental note of the "time" and after hitting the button, records that time too: TE (E for using the eye to see the time on the clock. It is important to note that TE is the time that the MIND says it saw the clock).
- Finally, his brain activity is recorded by the sensors attached to his head. Let us take the recorded start of brain activity to be TB.

© 2026 Lal A. Pinnaduwage

Here is a summary from the researchers (you can click on the figure to expand and then hit the back button on the browser to get back):

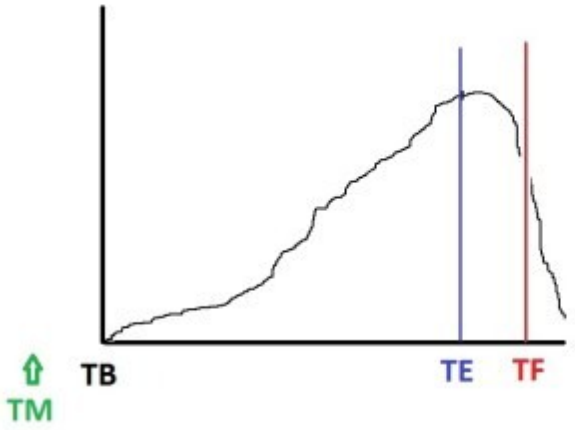
So, the researchers conclude that since brain activity started at TB before, either (i) him pressing the button (at time TF) , or (ii) him recording the "clock" **at the time TE when he made the decision,** the brain activity started before he made the decision.

- The problem is that **they ASSUME that the time, TE, that one gets off the clock is the same as the time, TM, that the mind makes the decision to press the button.**

Explanation From Buddha Dhamma

5. In Buddha Dhamma, the mind is the precursor to every action that we do with the body. The mind's decisions are implemented by the brain. The brain is just a very sophisticated computer.

- Buddha's explanation of the mind is very thorough. The basic ideas at "Moral Living and Fundamentals" and "Essential Abhidhamma – The Basics."
- More detailed analyses on how the mind and the brain work together at "Buddha Dhamma – A Scientific Approach," "The Grand Unified Theory of Dhamma" and "Mental Body – Gandhabba,"
- Deeper aspects discussed in the "Abhidhamma" section.
- Some of the basic aspects are discussed below.



Brain Is The "Control Center"

6. The brain is the control center for the mechanical body to carry out both these tasks ASSIGNED BY THE MIND. The brain gets the finger to push the button and the physical eye to look at the watch.

- **Now the mind is in the *manomaya kāya* and is lined up with the heart of the physical body. The mind and the brain are connected by a signal system that is analogous to how television or radio signals are transmitted (very fast, possibly electromagnetic). The brain communicates with the five senses via the nervous system, and those communications are slower.**
- **Thus the brain gets the message from the mind to "press the button" and to "watch the clock." Thus TB is ALWAYS later than TM.**
- Modern science has shown that, "It normally takes 0.4 – 0.6 seconds for the nervous system to activate available muscle motor units to contract,……." (see, at the very end of the article: WebLink: WIKI: Motor control). The finger movement involves muscles in the arm, and the eye movement involves muscles in the head and the eye).

© 2026 Lal A. Pinnaduwage

- Both actions of "watch the clock" and "press the button" are initiated by the brain (with the help of the central nervous system) per mind's instructions. The eye function circuitry can be logically thought to be a bit faster than the mechanical finger moving. Thus "watching clock" gets done first with the eye, and a little time later the finger has pushed the button. So, here is the time sequence per Buddha Dhamma (you can click on the figure to expand and then hit the back button on the browser to get back):

6. The mind initiates all movements of the body. Here, it is the mind that starts off the brain activity, i.e., TB is later than TM. The brain activity starts AFTER the mind decides to take action because the brain needs to get the signal from the mind. The seat of the mind (*hadaya vatthu*) lies close to the physical heart, far away from the brain.

- Now the brain needs to carry out those two functions of pressing the button and look at the clock. The vision circuitry is faster. The mechanical movement of the fingers is slower (it involves moving muscles), and thus pushing the button happens a bit later.

Back to Libet's Experiment

7. **Now, let us go back to the first experiment.** The only difference here is that the person is not recording the time. He just presses the left or right button. So, there are just two events recorded now instead of three events. All we have to do is to remove TE from the above two graphs.

- It is simpler: His mind decides to push the button. The mind directs the brain to push either the left or right finger, and it takes some time for the brain to mobilize the muscles to move the finger. The time sequence is the same as in the same figure. The mind decides (TM), the brain starts working on it (TB), and the sensors attached to his head record that brain activity (wiggly line). Finally, the finger pushes the button (TF).
- As in the other experiment, **the mistake is to assume that finger pushing happens SIMULTANEOUS with the mind's decision**. But the mind only gets the brain (the computer) to initiate the complex sequence of events to work the muscles in the arm and hand to move the finger, and that is the lag time.

An Analogy

8. The body is like a mechanical instrument, say, a sophisticated tank that is used to fire at the distant object. The operator is like the mind. He aims the gun barrel using sophisticated computer-controlled circuitry and then fires the gun. He can drive the tank where ever he wants. But things do not, **and cannot**, happen simultaneously with the operator's decision. The gun needs to be moved into position before it is fired.

© 2026 Lal A. Pinnaduwage

- The mind is controlling the body just like that. The finger (and the eye) in the above case(s) are just two instruments helping with the two tasks of pressing the button (and reading the clock), and the brain is the "control center" that oversees both those activities on the command of the mind.
- The connection between the body and the mind is explained in the post, "Brain – Interface between Mind and Body" and other posts on the *gandhabba*.

Thoughts Arise in Hadaya Vatthu, Not In The Brain

9. The "seat of the mind" (*hadaya vatthu*) is in the *manomaya kāya* (also called *gandhabba*). Thoughts arise there, not in the brain. The brain is a very sophisticated computer and controls the physical body per instructions given by the mind. At death, the *manomaya kāya* with the mind leaves the body and both the body and the brain become lifeless. See, "Ghost in the Machine – Synonym for the Manomaya Kāya?," "Manomaya Kāya (Gandhabba) and the Physical Body," and "Manomaya Kāya and Out-of-Body (OBE) Experience."

- Therefore, we are not robots controlled by a program running in our brain. The brain is just a sophisticated mechanical instrument that helps the mind with coordinating the tasks (like the computer in the tank in the above example that is helping the tank operator). But there are certain functions like breathing that the brain carries out without input from the mind. We will discuss those in an upcoming post soon.
- Any person has the POTENTIAL to do things in a scale that is unimaginable to us. We just do not realize the power of our minds; see, "Power of the Human Mind – Introduction," and the follow-up posts.

September 6, 2020 update:

There have been a few recent experiments that reduce the delay between TE and TF in #4 above. The following is the most recent paper on the subject: "WebLink: sciencedirect.com: Sanford-Libet's Intention Reports are Invalid-2020"

- To quote from the abstract of the above paper: "..We argue that Libet's intention reports are invalid and explore the phenomenology of intention in the Libet's experiment."

Why Do People Enjoy Immoral Deeds? – Diṭṭhi Is Key

Key to Sotāpanna Stage – Diṭṭhi and Vicikicchā

The Origin of Matter – Suddhaṭṭhaka

What are Dhamma? – A Deeper Analysis

Pabhassara Citta, Radiant Mind, and Bhavaṅga

13.7.1 Why Do People Enjoy Immoral Deeds? – Diṭṭhi Is Key

1. Most of us feel uncomfortable when we do something immoral or unethical. For example, I remember how my heart rate went up when I stole a cookie or a candy when I was little. We all know how the heart rate goes up and the whole body gets tense when we get angry. Those are definitely not enjoyable moments.

- Therefore, immoral deeds normally make one uncomfortable and even feel like one is "on fire" in extreme cases. This is called "*tāpa*" ("burning")in Pāli or Sinhala. In the *Satipaṭṭhāna sutta*, "*atāpi sampajāno*" means having a mindset to avoid such deeds; see, "Satipaṭṭhāna Sutta – Structure."
- When one stay away from bad deeds, the heart "cools down"; this is *Nibbāna* or "*nivana*" or "*niveema*" ("cooling down").

2. When a thought comes to our mind (mostly triggered by seeing, hearing something related), the decision to act on it may come automatically based our "*gathi*." If an "enemy" comes into our view when we are walking down the road, thoughts of anger may arise immediately leading to a "fire" in the heart, depending on how "bad" we perceive that person to be. Here the *cetasika* "*dosa*" dominates our thoughts. Such thoughts that come automatically to one's mind are due to one "*gati*" and are the strongest; sometimes they are labelled as "*asankharika" citta*.

- Other times, one may hesitate to do an immoral act, but after deliberation or due to encouragement by others may go ahead and do it; such thoughts are called "*sasankharika*" *citta*.
- When I was thinking about stealing cookies as a child, if I did it with a prompting by a sibling, or I myself did it after not been able to overcome the greed, that would have been a "*sasankharika citta*."
- In another example, the stronger version of "*lobha*" may be in our minds when we compete for something valuable. Here the desire is not only to acquire it, but we also do not want others to have it. Here the "fire" in the heart is more noticeable compared to the above case of desiring a cookie, which comes under "*rāga*" category.
- So, there are many shades of strength for both good and bad thoughts.
- Even if we do some of these "bad deeds" once in a while, we feel that it is wrong to do them. The stronger the bad deed, the stronger that we "feel" them.

3. However, some people seem to enjoy doing bad deeds. We have heard about people who got tens or hundreds or stab wounds when they died in knife attacks. The person who did the stabbing seem to have been enjoying it; killing of a person does not need that many stabbings. This is a rare event that we all agree is disgusting; we are horrified by the mere thought of it.

- But there are milder versions that seem "normal" to more of us.
- Some people get enjoyment watching other people suffer, say when engaged in a fight. We have seen pictures of people kicking the opponent while the opponent was down on the ground, even unconscious. This is of more common occurrence in torturing animals. Many people enjoy watching "cock fights".
- In the even more common occurrence of fishing, most people do not "see" the suffering of a fish as it is writhing in agony hanging by the hook, or convulsing while fighting for "water to breath". These are not

© 2026 Lal A. Pinnaduwage

immoral people, but their perception about animals has been cultivated to the point that they do not see animals as living beings.

4. *Diṭṭhi* or "wrong vision" play a key role in generating feelings and desires. If we have been taught that killing animals is not an immoral thing to do, then we do not feel uncomfortable doing such an act. People enjoy fishing or hunting because they do not perceive killing fish or deer as an immoral thing to do.

- Instead of getting a "fire" in the heart, they feel a joy while fishing or hunting.
- And this is not restricted to any particular religion. I know many "Buddhists" who enjoy fishing and hunting. On the other hand, most "Buddhists" consider drinking to be immoral, even though "drinking" *per se* is not one of the *dasa akusala* (of course excessive drinking can induce one to do immoral things). It just depends on what "*diṭṭhis*" one has. [***per se*** : [adverb] with respect to its inherent nature.]
- In parts of India, some people believe that washing in a particular river will help "wash away" bad merits. But then the fish in that river should be completely devoid of any bad merits, since they live their whole lives in water. Even such "apparently harmless" wrong visions still cover the mind, and prevent the mind from seeing the reality.
- The problem is that most such *diṭṭhis* propagate from generation to generation without people actually examining the sense of such beliefs.

5. *Diṭṭhi* is one of the key immoral *cetasika* (mental factors), and the opposite *sammā diṭṭhi* or *paññā* (wisdom) is of course a "moral *cetasika*."

- A key point about *cetasika* is that moral and immoral *cetasika* DO NOT arise together in a *citta*. A thought is either moral OR immoral. A moral thought has one or more of "moral *cetasika*" such as *alobha, adosa*, compassion, etc. and an immoral thought has one or more of immoral *cetasika* such as *lobha, dosa*, shamelessness, fearlessness of wrong, etc.

6. The *cetasika* "*pīti*" (pronounced "peethi" or "preethi") which means "joy" is one that can be associated with either a *kusala* or *akusala* thought. The same thing is true for the cetasikas *vīmaṁsā* (liking) and *viriya* (effort). **These three *cetasika* are included in the six types of *cetasika* called "particulars" that can be in either type of thought, *kusala* or *akusala*;** see, "Cetasika (Mental Factors)."

- Thus if one does not believe that killing fish or other animals is immoral and can lead to bad results in future lives, then a person with that *diṭṭhi* can enjoy fishing/hunting (*pīti*), can form a liking for it (*chanda*), and enthusiastically make preparations for fishing/hunting trips (*viriya*).
- On the other hand, someone with *sammā diṭṭhi* will definitely feel at least uncomfortable in doing such an act, will not like it, and will not strive to do such acts. He/she will gain joy by doing things with thoughts that have only moral *cetasika*, and also may have *chanda* and *viriya* associated with such activities.

7. Thus there are many types of "*micchā diṭṭhi*" that tend to make people comfortable with immoral acts.

- It must be noted that the word "*diṭṭhi*" is used in Buddha Dhamma to specifically denote *micchā diṭṭhi* or "wrong vision". The opposite is *sammā diṭṭhi* or *paññā* (wisdom).
- Some people do not have a problem with killing other human beings if those are presumed to be "non-believers". They have been taught all their lives that it is "good thing to do" and will pave the way to heaven.
- It is amazing how one's mind can be made to accept certain activities as "acceptable" by conditioning over time, especially if started at young age. This is also called "brain washing". This is why *diṭṭhis* are very difficult to break. Yet, with a determined mindset, one can break *diṭṭhis*.
- The key is to critically evaluate both sides of the particular issue at hand. Does it make sense to say one can go to heaven by killing people? Other than someone's promise, is there any truth to that statement? Is there a doctrine that EXPLAINS HOW "killing unbelievers can pave the way to heaven?".

© 2026 Lal A. Pinnaduwage

- The key problem is that human mind likes to "take the easy way". It is easier to try to justify one's vision or position rather than trying to spend time looking deeper into the issue to make an informed decision. But one needs to think about the consequences that can last for unimaginably long times.

8. Some people just enjoy killing other people; serial killers are a good example. Such people have extreme version of the *moha cetasika*; they are totally and completely morally blind.

- While most of us cannot even fathom, "how can such a person go to sleep at night?" after killing another person for fun, they actually sleep well with a content (but perverse) mind.
- People like Pol Pot and Hitler planned systematic killing of millions of people for many years. In their "*diṭṭhi*" that was the right thing to do, and many others started believing in that "*diṭṭhi*" too.

9. This is why getting rid of "*diṭṭhi*" and embracing *sammā diṭṭhi* is the first step in the mundane Eightfold Path first and then in *lokuttara* Eightfold Path; see, "What is Unique in Buddha Dhamma?."

- Having wrong kinds of vision (*diṭṭhi*) can be very dangerous, since one may not even realize that one is doing immoral things because of that *diṭṭhi*. Such *diṭṭhis* can only be removed via learning Dhamma. One becomes a *Sotāpanna* just by eliminating such wrong visions and perceptions. The three *saŋyojana* (or *saṁyojana*) that are removed at the *Sotāpanna* stage (*sathkāya diṭṭhi, vicikicchā, sīlabbata parāmāsa*) all arise due to *micchā diṭṭhi*.

10. **When we analyze at the *akusala citta* we can see why.** All immoral acts are done with just 12 types of *akusala citta:* eight based on *lobha* (greed), two based on *paṭigha* (dislike), and two based on *moha* (ignorance).

- All "*apāyagāmī*" deeds (those acts responsible for rebirth in the four lowest realms or *apāyā*) are done with the first four *lobha citta* and the *vicikicchā citta*; see, "Akusala Citta and Akusala Vipāka Citta."
- Those first four *akusala citta* are "*diṭṭhi sampayutta*" or "done with wrong views". The cetasika *vicikicchā* also arises due to not knowing the true nature of the world, i.e., *anicca, dukkha, anatta.* Thus all five *akusala citta* that are removed at the *Sotāpanna* stage arise due to *micchā diṭṭhi,* wrong visions about the world.

11. **If one believes one is not doing an immoral act while doing that immoral act**, then he/she is likely to do it with *pīti*, *chanda*, and *viriya*., i.e., with joy, liking, and makes effort joyfully to get it done.

- Of course ignorance of law is not an excuse, as stated in the latin phrase, *Ignorantia juris non excusat.* It holds true for the natural laws stated in Buddha Dhamma as well.
- Even worse, according to Buddha Dhamma, immoral acts done with joy are the worst. That is why out of those first four *lobha citta*, those two done with joy are the absolutely worst: the "***somanassa sahagata diṭṭhi sampayutta*** *citta*" and the "***somanassa sahagata diṭṭhi sampayutta*** *sasankharika citta*."
- In English, these mean, "**act done with joy and wrong vision** due to *gati*" and "**act done with joy and wrong vision** prompted by other factors". The first is the worst since it comes automatically; the second *citta* arises after some deliberation, and thus has less potency, or *javana*.

12. Therefore, now we can see why some people do immoral acts with joy and make them even worse; **they simply have wrong world views or *diṭṭhi*.** This is why learning Dhamma is so important.

- As the Buddha said, "My Dhamma has never been known to the world before". So, none of us will know **precisely** what is moral or immoral, without hearing or reading about them.
- However, as humans we have the innate sense of knowing roughly what is moral/immoral. These come from our previous lives. **But depending on the environment that we grew up, we may have acquired certain "wrong visions" or "*micchā diṭṭhi*" or "*diṭṭhi*."**
- This is why teaching children to be moral and making sure they associate with only "good friends" is critical. Those habits learned at young age can last a lifetime unless changed via a determined effort.

© 2026 Lal A. Pinnaduwage

- And since one person's *diṭṭhi* is different from another's, it is absolutely critical to spend time and verify which *diṭṭhis* are the wrong to be adhered to in the long term. Many people do not believe in rebirth, but according to Buddha that is a *micchā diṭṭhi* that can lead to the adverse outcomes in the future. One needs to examine the evidence and decide for oneself. In addition to looking at , "Evidence for Rebirth," one should also examine, "Complexity of Life and the Way to Seek "Good Rebirths".

13. Finally, the reverse is true too: Those *moral* acts that are done with joy and knowledge (wisdom) or "correct views" (*sammā diṭṭhi*) will lead to *vipāka* or outcomes with highest merits.

- Getting rid of wrong views is acquiring correct views or cultivating *sammā diṭṭhi*. The more one becomes knowledgeable in what is moral and what is not, one easily BECOMES joyful while doing moral deeds; joy and wisdom feed on each other. Of course, *chanda* and *viriya* will grow simultaneously too.
- Thus the "***somanassa sahagata ñāṇa sampayutta*** *citta*" or the "**thought with joy and wisdom** that comes out automatically" is the strongest *moral citta* (or *sobhana citta*). The next highest is the "***somanassa sahagata ñāṇa sampayutta*** *sasankharika citta*" or the "**thought with joy and wisdom** prompted by other factors".
- Here, wisdom starts at the mundane *sammā diṭṭhi* level, increases as one one embarks on the *Sotāpanna magga*, then *Sotāpanna phala*, and so on until becoming "fully enlightened" at the *Arahant* stage; see, "Buddha Dhamma – In a Chart."
- The power or *javana* of a *kusala citta* is enhanced with enhanced wisdom. Thus the power of a *citta* of an *Arahant* is much stronger compared to that of a *Sotāpanna*, and that of a *Sotāpanna* is much stronger compared to a normal person.
- Of course the *javana* of a *citta* with strong ignorance (*moha*) is strong too, and thus makes the deed even more potent and will bring about unbearably bad outcomes (*vipāka*).

14. Even though many people perceive Abhidhamma to be complex, if started with good basics, Abhidhamma helps clarify many complex issues very clearly. Learning about types of *citta* and how different *cetasika* play roles in one's habits ("*gati*") will help clarify many issues.

Next, "Javana of a Citta – The Root of Mental Power", ……

13.7.2 Key to Sotāpanna Stage – Diṭṭhi and Vicikiccā

1. The attainment of the *Sotāpanna* stage accomplishes the first and foremost goal of a *Bhauddhayā*: to remove the possibility of rebirth in the lowest four realms, where suffering is unbearable.

- Even though I have analyzed different ways one can comprehend the "requirements" to be fulfilled to attain the *Sotāpanna* stage (they are all equivalent), one way to easily remember those requirements is to realize that a *Sotāpanna* has REMOVED two key immoral *cetasika*: *diṭṭhi* and *vicikicchā*.
- See, "Cetasika (Mental Factors)" and "Diṭṭhi (Wrong Views), Sammā Diṭṭhi (Good/Correct Views)" for introductions to the types of ***cetasika*** **or "mental factors" that highlight one's "*gathi*" in one's thoughts.**

2. *Cetasika* are inter-related. A good example is *dosa* (strong hate), which arises as a result of *lobha* (strong greed); actually *lobha* TURNS to *dosa*, **they do not arise together**. When someone kills another human, that is due to *dosa*; at the moment of the killing, only *dosa* was in that person's mind. But that *dosa* likely arose due to *lobha*, strong attachment to something at an earlier time.

- And *lobha* is strong when *diṭṭhi* is strong. In the above example, one would not have formed such strong *lobha* if one did not have *diṭṭhi*, and instead would have cultivated the moral *cetasika*, *sammā diṭṭhi,* to some extent (i.e., if one knew the consequences of such a strong attachment that can lead to hate and then killing). **Thus when *diṭṭhi* is removed, *lobha* gets to weaker strength of *rāga* (attachment to sense pleasures).**

© 2026 Lal A. Pinnaduwage

- **Removal of *diṭṭhi* also leads to the reduction of *dosa* (strong hate) to *paṭigha* (tendency to get angry or irritable).**
- *Vicikicchā* is related to *moha*; **when *vicikicchā* is removed, *moha* (morally blind) is reduced to *avijjā* (ignorance of *anicca, dukkha, anatta*) level.** As discussed in another post, *vicikicchā* is the tendency to do unfruitful and harmful things because of a "covered mind", i.e., not knowing the true nature.
- Those two points are stated in another way by saying that the four "*diṭṭhi sahagatha lobha citta*" and the "*vicikicchā citta*" are removed at the *Sotāpanna* stage (thus 5 of the 12 akusala citta are removed at the *Sotāpanna* stage). This was discussed in the post, "Why Do People Enjoy Immoral Deeds? – Diṭṭhi Is Key."

3. In other posts I have discussed how one's "*gathi*" are intimately linked to the kinds of *cetasika* that dominate in one's mind. The "*apāyagāmī gathi*" or those habits or tendencies of a person that makes the person eligible to born in the *apāyā* (the lowest four realms) are mainly in several key immoral *cetasika*: *lobha, dosa, diṭṭhi, moha*, and *vicikicchā*.

- At the *Sotāpanna* stage, the *cetasaika* of *diṭṭhi* and *vicikicchā* are REMOVED; then *lobha* is reduced to *rāga* (which can be separated out as *kāma rāga, rūpa rāga, arūpa rāga*); *dosa* is reduced to *paṭigha*, and *moha* reduced to *avijjā*.
- At the *Sakadāgāmī* stage, from those remaining above, *kāma rāga* and *paṭigha* are REDUCED.
- Those two, *kāma rāga* and *paṭigha*, are REMOVED at the *Anāgāmī* stage.
- It is only at the *Arahant* stage that the remaining strength of those key immoral *cetasika* of *lobha* and *moha* (i.e., *rūpa rāga, arūpa rāga, avijjā*) together with all other immoral *cetasika* are removed.

4. As one sheds these immoral *cetasika* and thus "immoral *gathi*," one automatically cultivates "moral *gathi*" with moral *cetasika*. We saw above that when *diṭṭhi* diminishes, *sammā diṭṭhi* (which is the same as the *paññā* or wisdom *cetasika*) grows.

- In the same way, as *vicikicchā* is reduced, *saddhā* (faith) *cetasika* grows. This is why a *Sotāpanna* has "unbreakable" faith (*saddhā*) in Buddha, Dhamma, and Saṅgha; *vicikicchā* has been removed. However, that *saddhā* comes through not via blind faith, but via understanding.
- Still, paying homage to Buddha, Dhamma, Saṅgha, via *Tiratana vanadana* or listening to *pirith* helps build *saddhā*.; see, "Buddhist Chanting – Introduction." This is why it is said that one needs to cultivate *saddhā* and *paññā* together.
- Another thing to remember is that while *alobha* (non-greed) and *adosa* (non-hate) are moral *cetasika* opposing *lobha* and *dosa*, *amoha* is NOT actually a *cetasika*. Unlike *alobha* and *adosa*, *amoha* is not cultivated; *amoha* is merely the absence of *moha*.
- Instead, what is cultivated is *paññā* (wisdom) or the *sammā diṭṭhi cetasika*. And that requires understanding of *anicca, dukkha, anatta*. This is why *paññā* (wisdom) has nothing to do with "book knowledge", but is all about comprehending the "true nature of this world of 31 realms". I will have another post on this important point.

5. Another illuminating way to analyze is to look at the removal of the *āsavas* at each stage. The four types of *āsavas* are: *ditthasava* (*āsava* for *diṭṭhi*), *kamasava* (*āsava* for sense pleasures, almost the same as *kāma rāga*), *bhavasava* (*āsava* for *bhava* or existence, which is almost the same as *rūpa rāga* plus *arūpa rāga*), and *avijjasava* (*āsava* for ignorance). Of course "*āsavakkhaya*" or removal of all *āsavas* is *Nibbāna*.

- As we can see (by comparing with #3 above), *ditthasava* is removed at the *Sotāpanna* stage; *kamasava* is reduced at the *Sakadāgāmī* stage and removed at the *Anāgāmī* stage; *bhavasava* and *avijjasava* removed at the *Arahant* stage.

© 2026 Lal A. Pinnaduwage

- Thus we can also see that it is the **combination of *ditthasava* and *kamasava*** that give rise to strong greed (*lobha*) and strong hate (*dosa*). When one loses *ditthasava* by comprehending the true nature of this world, *lobha* and *dosa* are reduced to *kāma rāga* and *paṭigha* (which constitute *kamasava*).
- While such different analyses will be helpful for someone who has been studying them, all these different terms could be confusing to those who are new to these terms. But one will get used to these terms with time, and it is important to understand what they mean (not just to memorize) in the long term. With usage, they WILL become familiar.
- In the days of the Buddha, Buddha Dhamma was called "*vibhangavādī*" or "doctrine that systematically analyzes by parts". Just like medical students learn about the human body by dissecting dead bodies, it is informative to look at the mind by analyzing it in different ways. And all types of analyses are inter-consistent.

6. A *Sotāpanna*, by comprehending *anicca, dukkha, anatta* to a certain extent, REMOVES *diṭṭhi* (i.e., achieves *diṭṭhivisuddhi*) and cultivates *sammā diṭṭhi* to a certain level. And when that happens, the strength of the *moha cetasika* is reduced to just *avijjā* level, and also the *vicikicchā cetasika* is REMOVED. Simultaneously, *lobha* is REDUCED to *rāga*, which then are removed in stages at higher stages of *Nibbāna* as stated in #3 above.

- The above paragraph briefly summarizes what happens at the *Sotāpanna* stage. It may seem simple, but it requires lot of effort to discipline the mind to get to that stage, mostly via learning and contemplating Dhamma.
- One has reduced the strength of attachment to "worldly things" to the extent that one will NOT do certain immoral actions no matter how much wealth or sense pleasure is at stake. One WILL NOT act with *vicikicchā*: there is no hesitation in trying to decide, one KNOWS such an act will lead to the birth in the *apāyā*. It is not something one has to think about at that moment; it comes out AUTOMATICALLY, because of such "*apāyagāmī gathi*" have been PERMANENTLY removed.
- Thus by getting to know some properties of key *cetasika* we can get an idea of how our minds work, and get an idea why different people respond to the same external influences in different ways. **It is because their "*gathi*" or dominant *cetasika* are different.**

7. Now let us take some examples. *Diṭṭhi* is at the forefront because one's "views" determines what one has gotten used to or one is comfortable with.

- If we take the *diṭṭhi* (or view) that says if one bathes in a certain river one could wash away one's sins. This does not appear to be a strong *diṭṭhi*, but it is dangerous one: then one can do all sorts of immoral deeds all day along and then take a bath to "wash away" all those sins and thus get rid of any *kamma vipāka*. Yet, this *diṭṭhi* is something that has been carried from generation to generation in parts of India.
- Many people say, "I don't do immoral things and even help out others, therefore, bad things will not happen to me". That is a *diṭṭhi* too, because that person does not realize that he/she most certainly has done innumerable bad things in previous lives. That *diṭṭhi* therefore arises due to not believing in rebirth. **The "cause and effect" is a valid argument, but that argument holds only within the broader world view, that this is not the only life we have had.**

8. There are several key *diṭṭhis* that are common in Buddhist countries.

- Many "Buddhists" believe that taking and obeying the eight precepts on Full Moon days is enough to attain *Nibbāna*. There are old ladies in Sri Lanka who do not miss a single Full Moon day and dutifully take those precepts. But their minds are filled with ignorance and some of them mostly get together and gossip all day.
- While taking those precepts and mindfully disciplining oneself and meditating for a whole day is an excellent way to practice, just nominally taking precepts is not going to do anything to cleanse one's mind.

© 2026 Lal A. Pinnaduwage

- Then there is the perception that taking even a glass of wine (or some mild alcoholic beverage) is highly immoral. While it is best to avoid taking any kind of alcohol, drinking a glass of wine or beer is not a "*akusala kamma*." Of course if one gets addicted or intoxicated, then one could be led to do *akusala kamma*. Actually, when one gains wisdom via learning Dhamma, **the tendency to crave for alcohol or anything else** gradually diminishes.
- Rituals are prevalent in most Buddhist countries. People may do all sorts of immoral deeds (gossiping, slandering, using harsh words, fishing, hunting, are a few examples) during the day and at the end of the day, they light a lamp for the Buddha, say a few verses ("*gatha*"), and believe that is all they need to do.
- All these come under one of the three *sanyojana*, "*silabbata paramasa*" (diṭṭhi that says following rituals or set guidelines can lead to *Nibbāna*), is removed at the *Sotāpanna* stage.
- But it must be emphasized that most of such procedures CAN BE very effective in calming the mind and building *saddhā* (both of which then help cultivate wisdom by being able to comprehend Dhamma), if done properly while making an effort to cleanse one's mind; see, "Buddhist Chanting – Introduction."

9. We can also see that *vicikicchā* (tendency to do inappropriate/immoral/dangerous deeds) also arises because one is not aware of how *kamma/kamma vipāka* operate and has not comprehended *anicca, dukkha, anatta*.

- It is easy for outside influences to change the mind of someone with strong *vicikicchā* to do bad things. Since children in general are unaware of what is right and what is wrong, it is easy to manipulate their minds. This is why making sure children grow up in environments that are conducive to moral behavior is very important.
- Even adults, who are not aware of the consequences of immoral behavior have high levels of *vicikicchā*. They tend to only look at the immediate gratifications of an act rather than to have a long-term perspective.
- Learning Dhamma is the only guaranteed way to remove *vicikicchā*.

10. Some people tend to think that it is better not to even contemplate on bad consequences of bad actions, or to learn WHY bad actions are bound to lead to bad outcomes. The thinking is "as long as I don't think about such depressing things, I will feel fine".

- Just like not knowing that a certain action is unlawful is not a valid argument in a court of law, ignorance of the Nature's laws is not a valid excuse. Sometimes one can get away when a law is broken by telling more lies and changing the decision of a jury. **But in the Nature's court, it is one's mind that makes the decisions and one cannot fool one's own mind.**
- This is why *diṭṭhis* can be broken only by cleansing one's mind. One cleanses one's mind by first learning about *kamma* and *kamma vipāka* first and THEN reading about *anicca, dukkha, anatta*, and THEN comprehending the true meanings of those words, i.e., by comprehending the true nature of this world; see, "Buddha Dhamma – In a Chart" and "How to Cultivate the Anicca Saññā."
- One's own mind needs to realize futility of doing immoral deeds, **not just because they are bound to bring thousand-fold bad outcomes**, but also because there is "no point", "no real benefit" of doing bad things to fulfil one's sense desires or to "own valuable things"; such sense pleasures or valuable things do not last in the long term. But the consequences can linger on for long times.

11. As I pointed out in "Why do People Enjoy Immoral Deeds? – Diṭṭhi is Key," we all have *diṭṭhis* that have been cultivated in us by the environment that we grew up in, whether it is cultural, social, or religious. And Buddhists are no exception. We all need to critically evaluate such *diṭṭhis* and sort out which ones are bad for oneself. Buddha has clearly stated which *diṭṭhis* are bad: "Three Kinds of Diṭṭhi, Eightfold Paths, and Samādhi."

13.7.3 The Origin of Matter – Suddhaṭṭhaka

November 27, 2015; Revised December 17, 2017; May 17, 2019; August 21, 2019; February 24, 2020; December 24, 2020; re-written August 31, 2022; October 29, 2022 (#8 added); March 7, 2023 (#7 – #9 revised); September 3, 2023

Introduction

1. *Suddhaṭṭhaka* is not even mentioned in many *Theravāda* Texts. It is discussed in "WebLink: PDF-file: Bhikkhu Bodhi-Comprehensive Manual of Abhidhamma," by Bhikkhu Bodhi (2000); see pp. 246, 253-254. However, it does not have the more profound explanation given in this post. Waharaka *Thero* explained that in his discourse mentioned in #10 below. That explanation cannot be found anywhere else in that form, even in the *Tipiṭaka*. Of course, it is fully consistent with the *Tipiṭaka*. It is possible to "make connections" and clarify such issues if it is consistent with the *Tipiṭaka*. I frequently use new information from modern science to clarify some concepts. That is discussed in "Interpretation of the Tipiṭaka – Gandhabba Example."

- Please don't read it, unless you have thought about the basic concepts of "*saŋ*," *gati* (pronounced "*gathi*" as in "theme"), *āsava*, *Paticca Samuppāda*, etc. It may not make much sense, and thus it could discourage people from proceeding any further, thinking, "This stuff does not make sense."
- On the other hand, for those who understand those concepts, this could help them gain more insight.
- The picture will become increasingly apparent as I publish more posts on this issue. Buddha Dhamma's value will also become apparent, which is the best way to cultivate *saddhā* (faith based on understanding)
- This topic is discussed in detail in the "Nāma & Rūpa to Nāmarūpa" subsection of the "Living Dhamma" section.

Origin of Matter – Scientific Theory

2. If we accept that all matter has been created somehow, what is the origin of matter?

- Scientists have no clear explanation for this (November 2015). They say they can calculate the universe's evolution from a fraction of a second after the Big Bang, but physics cannot explain what happened before it.
- Of course, the "Big Bang Theory" has not yet been fully confirmed, even though most scientists believe it.
- Still, some scientists do not believe everything "popped up" suddenly in the Big Bang. See, for example, "Endless Universe – Beyond the Big Bang" by P. J. Steinhardt and N. Turok (2007).
- By the way, English astronomer Fred Hoyle coined the term "Big Bang" to ridicule the concept. See "WebLink: en.wikipedia.org: Fred Hoyle – Rejection of the Big Bang."

Buddha Dhamma – Universe Evolves

3. The Buddha discouraged people from investigating the universe in detail. However, he has taught that uncountable "planetary systems" like our Solar system exist in the universe. That model will have living beings in existence somewhere in the 31 realms. This has been discussed in detail in a few *suttā*, especially the *Aggañña Sutta* (DN 27). I have written an introductory post: "Buddhism and Evolution – Aggañña Sutta (DN 27)".The following are some key points.

(i) The universe has no traceable beginning, just like life.

(ii) The universe has "clusters or groups" of stars. Our Solar system is one of 10,000 "star systems" (cakkavāla or planetary systems; chakrawāta in Sinhala). There is an infinite number of such cakkavāla in the universe.

© 2026 Lal A. Pinnaduwage

(iii) When a star near our Sun blows up in a few billion years, that blast will destroy 10,000 other star systems in the neighborhood. In modern science, such a "star explosion" has a particular name, a supernova.

(iv) Such a cluster of 10,000 world-systems blows up from time to time in the universe. Again, scientists observe such supernovae every year.

(v) Science does not know yet that those destroyed star systems re-form over billions of years.

4. Whatever the model that science eventually clarifies WILL BE consistent with Buddha Dhamma.

- Thus, the universe did not start with a "Big Bang," as many scientists believe right now. Remember that only 100 or so years ago, scientists thought the universe was in a steady state. Scientific theories change to "fit the existing data."
- Just 400 years ago, "science" believed in the geocentric model of the universe. The Earth was in the middle of the universe, and the stars were embedded in a celestial sphere around it far above. See "WebLink: wikipedia.org: Geocentric model."
- But pure Buddha Dhamma has not changed since Buddha Gotama taught it 2500 years ago; see, "Historical Background."
- We will slowly go through the *Aggañña sutta* because that needs enough background material. I expect this topic will take us several years and many essays to complete.

Suddhaṭṭhaka – The Smallest Unit of Matter

5. Here, we will discuss only the origin of the smallest unit of matter, called a "*suddhaṭṭhaka."* (sometimes written as *suddhāshtaka*).

- This unit of matter is a billion times smaller than "an atom" in modern science. One time, not long ago, science believed that an atom was the smallest unit of matter. But they are composites of many "elementary particles." Even many of those "elementary particles" are shown to have more structure! There is no end to how smaller a "basic unit of matter" can get, i.e., there is no clear distinction between matter and energy.
- For example, a "Higgs boson" is just a packet of energy. The light was in the energy category; see "Photons Are Particles Not Waves."
- Matter and energy are essentially the same, related by the famous equation, E (energy) = m (mass) x c^2, where c is the light speed. Thus any small unit of matter is indistinguishable from a "packet of energy." For example, the light comes in "packets" called photons. Thus photon belongs to matter in this sense.
- Thus, in science, the distinction between "matter" and "energy" is blurred at this fundamental level.

6. **However, the Buddha made a clear "demarcation boundary" between matter (*rūpa*) and *kammic* energy that "bears things" (*dhammā*.)** *Dhammā* (or *kamma bīja*/*kamma bhava*) arise via *Paṭicca Samuppāda* ("*avijjā paccayā saṅkhāra"* leading to "*upādāna paccayā bhavo*.) See "What are Rūpa? – Dhammā are Rūpa too!"

A *suddhaṭṭhaka* is a "packet of energy" and the basic unit of matter. It is much smaller in energy compared to a light photon. A single light photon would be made of a large number of *suddhaṭṭhaka.*

- **A *suddhaṭṭhaka,* being a *saṅkhata*, is created by the mind.** The Buddha said, "Manopubbangamā Dhammā..", i.e., "everything has a mind as the precursor…".
- However, almost all of the matter around us was created by this "mental process" long ago. That is the story in the *Aggañña Sutta*: "Buddhism and Evolution – Aggañña Sutta (DN 27)." At present, *suddhaṭṭhaka are* being created by us (via *javana citta*), but in very minute quantities.
- Anyone with higher *abhiññā* powers can create significant matter, like a flower or larger entities. Matter (at the level of *suddhaṭṭhaka)* is created by *javana citta.* And someone with *abhiññā* powers can

© 2026 Lal A. Pinnaduwage

maintain a *citta vīthi* with *javana citta* flowing continuously to generate "significant amounts of matter." See the end of the post, "Citta Vīthi – Processing of Sense Inputs."

What is a *Suddhaṭṭhaka*? Roles of *Avijjā* and Taṇhā

7. *Suddhaṭṭhaka* ("*suddha*" for "pure" or fundamental" + "*aṭṭha*" or "eight") means a unit of matter consisting of eight fundamental entities (usually translated as the "pure octad," for example, in Bhikkhu Bodhi's book per #1 above).

- Four of these belong to the "*bhūta*" stage of *pathavi*, *āpo*, *tejo*, and *vāyo* arising due to *avijjā*. These are the fundamental units of matter, and they cannot be detected by themselves. It may be hard to believe for many at this stage, but those arise due to our "gati" that I have discussed in several posts; see the introductory post: "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavā)." By the way, the removal of "*āsava*" and "*gati*" leads to *Nibbāna*: "The Way to Nibbāna – Removal of Āsavā." One needs to understand these concepts to grasp the material in this post.
- The mind first creates the four *bhūta* with four basic "*gati*" of humans: "*thada gatiya*" or "තද ගතිය" (in Sinhala) means the "coarseness," corresponding to *pathavi*; a defiled mind is "hard" and "coarse" and correspond to "*pathavi*" nature.
- The word *āpo* comes from the tendency to "attach or get attracted to worldly things" ("*bandena gatiya*" or "බැඳෙන ගතිය" in Sinhala means the "bind together," which leads to liquidity in science). *Tejo* comes from "fiery or energetic" ("*thējas gati*" or "තෙජස් ගතිය" in Sinhala), and *vāyo* refers to "motion/vacillation" ("*salena gatiya*" or "සලෙන ගතිය" in Sinhala). They are all created in *javana citta* that arise in mind in minute quantities that cannot be detected. However, *yogis* with *abhiññā* powers can generate large amounts of matter like a flower.

8. There is a deeper explanation: According to the above explanations, *āpo, pathavi, and tejo* can be attributed to *lobha, dosa*, and *moha*. Vacillation in *vāyo* represents uncertainty — representing mundane *alobha, adosa, amoha.* Mundane *amoha* is the ignorance of the Four Noble Truths. See "Six Root Causes – Loka Samudaya (Arising of Suffering) and Loka Nirodhaya (Nibbāna)."

- Thus, we can say that *vāyo* is the "better element" compared to *āpo, pathavi*, and *tejo*. The latter three can be attributed to the "*kāma loka,*" and *vāyo* can be taken to represent transcending the *kāma loka*. *Jhānā* represent the mental states in *Brahma* realms that lie above *kāma loka*.
- Thus, we can connect to *anariya yogis* getting into *anariya jhāna* with breath meditation (by temporarily overcoming *lobha, dosa*, and *moha*, i.e., without removing *anusaya*.)

9. **The mind creates four types of gati (*pathavi*, *āpo*, *tejo*, and *vāyo*) due to *avijjā* or ignorance**. We like to have possession of things made out of these units because we do not comprehend the "unfruitful nature" of such impermanent things.

- **The craving for material things leads to four more *gati* due to *taṇhā*.** Due to our tendency to think highly ("*varnanā karanava"* in Sinhala), another *gati* of "*vaṇṇa*" is created as different manifestations of the four primary *bhūta* of *pathavi*, *āpo*, *tejo*, and *vāyo*. Similarly, three more units of *gandha, rasa*, and *ojā* are created due to *taṇhā. Those* correspond to our desire to be in touch with them and be "fooled" (gandha), keep them close (*rassa*), and re-generate them (*ojā*). [***rasa*** : *[m.]* taste; juice; flavour; quick-silver. ***oja*** : *[m.; nt.]* nutritive essence; juice. || ***ojā*** [f.], nutritive essence; juice. ***rassa*** : *[adj.]* short; dwarfish; stunted.]
- It will take too much space to explain these in detail, but I hope you get the basic idea. Further information at "Bhūta and Yathābhūta – What Do They Really Mean." See #5 there, clarifying the transition from "*gati*" to "*bhūta*" to "*mahā bhūta*" stages.

Suddhaṭṭhaka – Eight Components Do Not Arise Individually

© 2026 Lal A. Pinnaduwage

10. Therefore, four basic units of *pathavi*, *āpo*, *tejo*, and *vāyo*, arise due to *avijjā*, and the other four of *vaṇṇa*, *gandha*, *rasa*, and *oja* arise due to *taṇhā*.

- These eight components never arise in isolation and thus are called "*avinibbhoga rūpa.*" They always rise together and all eight are there in any *suddhaṭṭhaka.* Each component's relative "amounts" can vary; thus, some entities may be dominated by one of the eight. For example, *paṭhavī* is dominant in a stone and *āpo* is dominant in water. Even then, all eight are present to some extent. [***avinibbhoga*** : *[adj.]* indistinct; that cannot be separated.]
- This very fundamental level is called the "*bhūta*" stage. *Bhūta* is another name for "ghosts" because of their elusive nature. They can never be detected and only be "seen" by a Buddha. The Buddha explained this to *Mahā Brahma*, who thought he knew everything about the world: "WebLink: suttacentral: *Brahmanimantanika Sutta* (Majjhima Nikāya 49)." I have discussed that part of the *sutta* in #12 of "Anidassana Viññāṇa – What It Really Means."
- And a *suddhaṭṭhaka* can never be divided; thus they are called "*avinibbhoga rūpa kalāpa*."
- Those who understand the Sinhala language can listen to the following discourse by Waharaka *Thero*: "සුද්ධාෂ්ඨක-කර්මශක්තිය සහ භව ශක්තිය"

  WebLink: Listen to the audio of CD063-16 වන සංයුක්තනිකාය - සුද්ධාෂ්ඨක-කර්ම ශක්තිය සහ භව ශක්තිය

Critical Role of *Gati*

11. Thus, "*gati*" leads to "*bhūta*," the first phase of *rūpa* that can be seen (only by Buddha). That is the *suddhaṭṭhaka* stage. That is where mental energy is converted to matter at the fundamental stage. Just keep that in mind as we proceed.

- It may be hard to believe for many at this stage, but those arise due to our "*gati*" that I have discussed in many posts. See the introductory post: "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavas)." By the way, the removal of "*āsava*" and "*gati*" lead to *Nibbāna*: "The Way to Nibbāna – Removal of Āsavā." One needs to understand these concepts to grasp the material in this post.
- More details in "Gati (Habits/Character) Determine Births – Saṁsappanīya Sutta" and "Gati, Bhava, and Jāti."

Stages of Matter – *Bhūta*, *Mahā Bhūta*, *Dhātu*

12. When enormous numbers of *suddhaṭṭhaka fuse*, they get to a more condensed state of "*mahā bhūta.*" The subtle bodies of *Brahmā* and some *gandhabbā* are made of *mahā bhūta.* This level of "solidification" can be compared (in energy) to electromagnetic radiation at the long-wavelength range; thus, we cannot "see" those entities with our eyes.

- Only when vast amounts of *mahā bhūta* fuse and become even more condensed can we see them. In this highly condensed state, the matter is called "*dhātu.*" Bodies of *devas* are made of finer *dhātu*. That is why we cannot see *devas*, but *Brahmā* can see them.
- Thus our bodies are made of denser *dhātu*, which we can see. That is why solid objects are called "*pathavi dhātu*." *Suddhaṭṭhaka* in such solid objects predominantly has *pathavi.* In liquids, things are bound together and flow together because they mostly have *āpo dhātu*. Not only fire but also those objects that have an "energetic appearance," have more *tejo*. And not only the wind but also things prone to move have more *vāyo*.
- For details: "Bhūta and Yathābhūta – What Do They Really Mean."

Other Implications

© 2026 Lal A. Pinnaduwage

13. Therefore, we can see that *pathavi*, *āpo*, *tejo*, and *vāyo* have much deeper meanings than the earth, water, fire, and wind. Why did the ancient Greeks also use the same terms? Hinduism also uses terms like *karma* (the Sanskrit word for *kamma*), *Nirvana* (the Sanskrit word for *Nibbāna*), etc. The teachings of the previous Buddha, Buddha Kassapa, got distorted with time to become *Vedic* teachings. I need to write about that but see #8 of "Arogyā Paramā Lābhā.."

- There were three Buddhas in this *mahā kappa* (i.e., during the existence of our Solar system) before the Buddha Gotama; that is how those terms came into usage before Buddha Gotama. The previous Buddhas' concepts were transmitted down through successive generations, but the true meanings got lost.
- Human history is much longer than tens of thousands of years, as believed by many today. Whole continents can submerge, wiping out entire populations. That is not considered seriously yet, but there is some evidence: see WebLink: wiki: Submerged continent.
- That is a topic to be discussed later when more evidence becomes available. It will be proven that one region that has not changed since the formation of the Earth is Asia encompassing Sri Lanka, India, and China. **Archeologists should focus more on that region rather than on Africa.** See "Ancient teeth found in China challenge modern human migration theory."

Three Buddhas Before Buddha Gotama in the Present Eon

14. As I mentioned above, there were three Buddhas before Buddha's Gotama. That is how key terms like *pathavi, āpo, tejo, vāyo*, *kamma*, and *Nibbāna* (*nirvāna*) have been used even before the Buddha Gotama. They had been transmitted through generations, but their true meanings had been lost.

- Losing the true meanings in the *Tipiṭaka* happened at least a few times, even during this Buddha *Sāsana,* within the past 2500 years. The best example is the misinterpretation of *saŋ*, *saṁsāra*, *anicca,* and *anatta* during just the past hundreds of years; see, "What is "Saŋ"? Meaning of Sansāra (or Saṁsāra)" and "Anicca, Dukkha, Anatta – Wrong Interpretations."
- **But the Buddha Gotama has said that his *Buddha Sāsana* will last for 5000 years. We are only halfway through. That is why it is making a comeback now. And this time, it will have staying power due to the presence of the internet. That is one reason we should all be forever grateful to modern science, much more than all other technological wonders it has brought.**

15. Buddha Dhamma is profound, but once one gets some traction, it can be an exhilarating experience to "dig deeper."

- **August 2019:** Series of posts on "Origin of Life."
- **July 31, 2020:** New series "Buddha Dhamma – A Scientific Approach."
- **February 16, 2023:** New Series "Buddhism – In Charts."

13.7.4 What are Dhamma? – A Deeper Analysis

April 15, 2016; revised November 5, 2017; February 9, 2018; December 27, 2022

1. This is an advanced topic (yet, hopefully, made easy even for those who are not into Abhidhamma). Please don't hesitate to comment if something is not clear. A simpler version is at: "What are rūpa? – Dhamma are rūpa too!."

- In contrast to touching, smelling, and tasting, we do not directly "touch" the external world (matter) with our eyes, ears, or mind.
- While we experience the "outside world" as it is (or objectively) with our five physical senses, what we interact with our minds are our own "perceptions, feelings, plans, and hopes" for that external world.

© 2026 Lal A. Pinnaduwage

- We will get into more details on those two aspects in the future, but in this post, we will look at what "*dhammā*" are in relation to the mind. That will help us address those other two issues in the future.
- It is to be noted that ***dhammā*** are rūpa below the *suddhaṭṭhaka* stage. On the other hand, ***dhamma***, as in Buddha Dhamma or Abhidhamma refers to Buddha's teachings.
- As I mentioned in the "Abhidhamma – Introduction," I very much want to make Abhidhamma easy to grasp for anyone. I also want to highlight that the Buddha Dhamma is well ahead of science (quantum mechanics) in understanding our material world; science has not even begun to explore the mind.

2. Existence in this world of 31 realms is maintained via our attachments to "things" in this world. These "things" are *rūpa*.

- When a mind makes contact with an external *rūpa*, it may generate a brief sense enjoyments called *assāda*; see, "Assāda, Ādīnava, Nissarana." Since we perceive these sense contacts to be long-lasting and enjoyable (and ignore the sufferings that we go through to acquire them), we willingly desire such sensory pleasures.
- **However, any *rūpa* that arises is subjected to unexpected change (*vipariṇāma*) and eventual decay and destruction, which is the basis of *anicca* nature.**

3. Another factor that we have not discussed much in detail is that *rūpa* has different levels of texture or solidity.

- *Rūpa* that we experience in the human realms (and those realms below us) are the densest form called *dhātu*. The *deva* realms above us have finer *dhātu* that we cannot see. In the *rūpa lokas*, *rupi Brahmā* have even finer *rūpa* called *mahā bhūta*. And in the *arūpa loka*, there are just traces of *bhūta* (just the *hadaya vatthu*) made of the smallest unit of matter called *suddhaṭṭhaka,* and of course much finer *gati* (or *gathi*).
- You may want to review the concepts discussed in the following posts: "What Are Rūpa? (Relation to Nibbāna)," "The Origin of Matter – Suddhaṭṭhaka."

4. It is conventional knowledge is that we experience the external world with our five physical senses: We see with our eyes, hear with the ears, smell with the nose, taste with the tongue, and touch things with our physical bodies.

- Is that all one experience? Imagine being in a dark chamber isolated from the rest of the world. A good example is a punishment by the military called solitary confinement, especially in the old days. One is kept in an isolated dark cell for many hours.
- Does such a person experience the outside world? Of course. He/she can think about all sorts of things: recall past events, think about the future, recall any place that he has been to, etc.
- We do this any given day, not only by recalling past experiences, but also by imagining desired future events.

5. Sense contacts other than the five physical senses are due to the sixth sense: the mind. One is unaware of the external world only when one is unconscious.

- So, what are the *rūpa* that we experience with our minds? These are *dhamma*! As stated in the phrase, "*manañca paṭicca dhamme ca uppajjati manoviññāṇaṁ*," contacts of *dhamma* with the *mana indriya* leads to *mano viññāṇa*.

6. The arising of *viññāṇa* due to different types of sensory inputs is described in *abhidhamma* (and also in "WebLink: suttacentral: *Cha Chakka Sutta* (MN 148)") as:

"*cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññāṇaṁ*,"

"*sotañca paṭicca sadde ca uppajjati sotaviññāṇaṁ*,"

© 2026 Lal A. Pinnaduwage

"*ghānañca paṭicca gandhe ca uppajjati ghānaviññāṇaṁ*,"

"*jivhañca paṭicca rase ca uppajjati jivhāviññāṇaṁ*,"

"*kāyañca paṭicca phoṭṭhabbe ca uppajjati kāyaviññāṇaṁ*," and

"*manañca paṭicca dhamme ca uppajjati manoviññāṇaṁ*"

- Thus it is clear that *mano viññāṇa* arise when *dhammā* makes contact with the *mana indriya*, just like *cakkhu viññāṇa* arises when *(vaṇṇa) rūpa* or light makes contact with the *cakkhu indriya* (eyes) or *sota viññāṇa* arise when *sadda rūpa* (sound waves) make contact with the *sota indriya* (ears).
- *Kāya viññāṇa* result from contacts that are the most coarse (*phoṭṭhabba* or touch due to *dhātu*), and *mano viññāṇa* results from contacts that are extremely fine, dhamma.

7. Thus, we can categorize our six types of contacts with the external world according to the "coarseness" of the contacts.

- The body contacts (touch), taste, and smell are the coarse contacts; they involve direct touching (*pottabba*), and those involve solid particulates (taste and smell).
- Vision involves light particles (photons) interacting with the physical eye. The light was not even considered a particle until Einstein, Compton and others proved that in the early 1920s.
- In the language of physics, sound involves phonons having even less energy than light photons, i.e., they are "even softer".

8. We can also see that the **sensor elements in the body** also get less and less coarse in that order. It must be noted that the sensing elements in the ear are not the ear we see, but a very sensitive area deep inside the ear.

- According to Buddha Dhamma (confirmed by science), two things respond to each other and last longer when in heavy usage, if they have similar densities. For example, if a steel rod rubs against a wooden rod, the wooden rod will soon wear out. But two steel rods (or two wooden rods) can be rubbed against each for long.
- Thus going from touch, smell, taste, sight, and hearing, both the external influences — touch, tasty things, smells, light (photons), sound (phonons) — and the sense elements (body, tongue, nose, eyes, ears) become finer in that order.

9. The finest sensing element is the "*mana indriya*" inside the brain. It is likely to be one of the following: the thalamus, amygdala, or hippocampus. I have not had enough time to investigate the functions of these sensitive elements of the brain, but according to Buddha Dhamma, the "*mana indriya*" is inside the brain and is analogous to the eyes or the ears; more details will become clear as we discuss below.

- What come down in the legend as the "third eye" is this "*mana indriya*." It is supposed to be located behind the forehead.
- The *rūpa* that come into contact with the *mana indriya* are finer than a *suddhaṭṭhaka*, and are still in the "*gati*" stage, but they are on the way to becoming *suddhaṭṭhaka*. They are not coarse enough to be "seeing" even with *abhiññā* powers, and do not make contact with the other five coarse senses. Thus they are, "*anidassanaappaṭighaṁ dhammāyatanapariyāpannaṁ*." See, the last verse of "WebLink: suttacentral: 2.2.2. Mātikā" in *Dhammasaṅgaṇī* of the *Tipiṭaka*.
- Here, "*anidassana*" means "cannot be seen" and "*appaṭigha*" means "cannot be touched or sensed with even the finest instrument". And, "*dhammāyatana pariyāpanna rūpaṁ*" means "belongs to *dhammāyatana*".

10. In the post, "The Origin of Matter – Suddhaṭṭhaka," we discussed how the smallest material element, **a *suddhaṭṭhaka*, is created by the mind with origins in four basic "*gati*" of humans that arise due to *avijjā***: "*thada gati*" (in Sinhala) means the "coarseness", corresponding to *pathavi*; "*bandena gati*" means

© 2026 Lal A. Pinnaduwage

the "bind together" which leads to liquidity corresponding to *āpo*; "*thejas gati*" means the "fiery or energetic", corresponding to *tejo*; and, "*salena gati*" means the "motion", corresponding to *vāyo*.

- **Craving for these material things leads to four more *gati* due to *taṇhā***: Due to our tendency to think highly ("*varnanā karanava"* in Sinhala), another *gati* of "*vaṇṇa*" is created as different manifestations of the *satara mahā bhūta*. Similarly, three more units, *gandha, rasa*, and *oja*, are created due to *taṇhā* corresponding to our desire to be in touch with them, keep them close (*rassa*), and regenerate them. [***rassa***: [adj.] short; dwarfish; stunted]

11. Before these eight inseparable units solidify into what we call matter, there is the precursor stage of *gati*: cultivation of *gati* leads to *bhūta,* which are in the *suddhaṭṭhaka* stage. Further solidification of *bhūta* leads to *mahā bhūta.* The fine *rūpa* of *Brahmā* is composed of *mahā bhūta.*

- The *gati* stage of *rūpa* — the origins of *rūpa* — are also called "*mano rūpa*": these are really what we visualize in our minds. We can visualize scenes from the past, and those are *mano rūpa*. In the process of making *gati,* we constantly think about associated material things; those are *mano rūpa*.

12. *Mahā bhūta*, upon further condensation, become *dhātu*. The bodies of *devas* are made of finer *dhātu*, and our bodies — as well as all material things we see — are composed of denser *dhātu*.

- Therefore, the origin of all matter is *gati*! But our *gati* (of normal humans) do not lead to the formation of significant amounts of even *suddhaṭṭhaka*. So, we still have a long way to go before explaining how these solid objects in our world were formed as described in the *Aggañña Sutta*.

13. Just like the eye receives visual information or the ear the sounds, the "*mana indriya*" receives "*dhammā*." And *dhammā* are much finer than light or sound *rūpa*. All five physical senses deal with signals transmitted via solidified particles made out of *suddhaṭṭhaka,* but *dhammā* are just energy, below what we call "matter". Even most physicists do not consider light as matter or "particles"; I will write a post on why light photons are indeed particles according to quantum mechanics.

- As we discussed in the post, "The Origin of Matter – Suddhaṭṭhaka," even a single light particle (photon) is made of a very large number of *suddhaṭṭhaka.*
- As we discussed there, a *suddhaṭṭhaka* is made by the mind. *Dhammā* can be considered the early stages of a *suddhaṭṭhaka*. They are *kammic* energy packets made by the mind in *javana citta* and arise due to our *gati*. This is the link between mind and matter!

14. Therefore, all six senses allow our minds to interact with the material world. We interact with the material world and the mental world or the *mano* plane.

- Different types of *rūpa* (*vaṇṇa, gandha, rasa, ojā, phoṭṭhabba*) in our physical world (*rūpa loka*) are built with *suddhaṭṭhaka*. *Dhammā* or *kamma bīja* (in the *mano loka*) are basically "energy packets" not yet solidified to the state of a *suddhaṭṭhaka.*
- The *pañcakkhandha* of a living being has "components" from both worlds. The *rūpakkhandha* are our mental impression of the material world (as mental records); see, "Pañcakkhandha or Five Aggregates – A Misinterpreted Concept." The other four *khandha* (*vedanā, saññā, saṅkhāra, viññāṇa*) are our mental impressions of the mind world.
- Every living being is associated with its *pañcakkhandha*., because one makes one's mental impressions. The Buddha said that one could not define a living being with less than five *khandhā*.
- To repeat: **One's *pañcakkhandha* is not one's body as is commonly described.** It is not even physical. It is all mental: "Pañcupādānakkhandha – It is All Mental."

15. The creation of *suddhaṭṭhaka* by the mind in *javana citta*, starts by enhancing one's *gati*. As we will discuss in a future post on the "*Āsevana Paccaya*," the more one does activities related to a given *gati*, the *gati* grows. [**Āsevana-paccayā**: repetition, is one of the 24 conditional relations paccayā.]

© 2026 Lal A. Pinnaduwage

- The growing of a *gati* is the accumulation of a *kamma bīja* (seed), and that is deposited in the *kamma bhava* in the mind plane. These are *dhammā* that is in "*manañca paṭicca dhamme ca uppajjati manoviññāṇaṁ*."
- And they (*dhammā* or *kamma bīja*) can return to one's mind when the mind is in a receptive to such a *gati*. Thus it is a self-feeding feedback loop.
- This is a Crucial point to contemplate on. This is why a drunkard gets the urge to drink, or a gambler to visit a casino. People who don't have such *gati*, do not get such urges because they do not have the corresponding *dhammā*, repeatedly coming back to impinge on the *mana indriya*.
- By the way, as discussed in the "Living Dhamma" section, any such "bad *gati*" can be reduced and eventually eliminated by a two-step method: (i) forcefully stop activities — and conscious thoughts about them — that contribute to that *gati* when one becomes aware DURING such an act OR a conscious thought, (ii) keep learning Buddha Dhamma to comprehend how that process can actually work (as discussed starting with fundamentals of Buddha Dhamma in the "Living Dhamma" section); one key aspect here to contemplate on the bad consequences of such actions/thoughts.

16. To emphasize, *dhammā* arise due to *kamma* that we commit. The more *kamma* we do, the corresponding *dhammā* will grow, and become *gati*.

- *Dhammā* means "to bear"; one bears what one likes and what one engages in.
- When one cultivates "dog *gati*," that is what one bears, and that is what comes back to one's mind at the *cuti-paṭisandhi* moment and can lead to the next *bhava* and thus birth (*jāti*) as a dog.

17. However, creating a *suddhaṭṭhaka* requires trillions of *citta vīthi* running consecutively. Thus it does not happen significantly in a normal human being. It requires not only *jhānā*, but being able to get into *samāpatti*. Those with *abhiññā* powers can get into *samāpatti* very quickly.

- When in *jhānā*, *cittā* can still switch back to five physical senses in between. When one is in a *jhāna*, one can hear external sounds, for example.
- However, when one is in a *samāpatti*, the *jhānic cittā* can flow unceasingly for long periods. Thus, *pañcadvāra citta vīthi* cannot run in between, thus, one is totally unaware of the external environment when in *samāpatti*.

18. Furthermore, when in *samāpatti, jhānic citta* flow unceasingly and make each new *javana citta* stronger than the predecessor with the "*Āsevana Paccayā*." We will discuss this in detail in the future.

- This is how those with *abhiññā* powers (i.e., who can easily get into *samāpatti* and have practiced it well) can even make physical objects: One can start off with a picture of a flower in one's mind and then by creating more and more *suddhaṭṭhaka* with each new *javana citta*, create an actual flower in a very short time!

19. Finally, *dhamma* in the *nāma loka* are the same as those *viññāṇa* established in the *kamma bhava*. This is a subtle point; see, "Viññāṇa Aggregate."

- *Dhamma* or *viññāṇa* are called *anidassana, appaṭigha rūpa* (*rūpa* that cannot be seen or made contact with) and they are just energies lying below the *suddhaṭṭhaka* stage; see, "Anidassana Viññāṇa – What It Really Means."
- *Kamma bhava* is the same as the *nāma loka*; *Dhamma* in the *nāma loka* are the same as *viññāṇa* that are established in the *kamma bhava*.; see, "Our Two Worlds: Material and Immaterial."

13.7.4.1 24 conditional relations Paccaya

From Dhamma Wiki

© 2026 Lal A. Pinnaduwage

Paccaya: 'condition', is something on which something else, the so-called 'conditioned thing', is dependent, and without which the latter cannot be. Many are the ways in which one thing, or one occurrence, may be the condition for some other thing, or occurrence. In the Paṭṭhāna, the last book of the Abhidhamma Piṭaka comprising 6 large vols. in the Siamese edition, these 24 modes of conditionality are enumerated and explained, and then applied to all conceivable mental and physical phenomena and occurrences, and thus their conditioned nature is demonstrated.

The first two volumes of the Paṭṭhāna have been translated into English by the Venerable U Nārada mūla paṭṭhāna Sayadaw of Burma, under the title Conditional Relations Published by the Pāli Text Society, London 1969, 1981.

The 24 modes of conditionality are:

1. Root condition: *hetu paccayā*
2. Object: *ārammana*
3. Predominance: *adhipati*
4. Proximity: *anantara*
5. Contiguity: *samanantara*
6. Co-**nascence**: *sahajāta*
7. Mutuality: *aññamañña*
8. Support: *nissaya*
9. Decisive Support: *upanissaya*
10. Pre-nascene: *purejāta*
11. Post-nascene: *pacchājāta*
12. Repitition: *āsevana*
13. Kamma: *kamma*
14. Kamma-result: *vipāka*
15. Nutriment: *āhāra*
16. Ability: *indriya*
17. Jhāna: *jhānā*
18. path: *magga*
19. Associaton: *sampayutta*
20. Dissociation: *vippayutta*
21. Presence: *atthi*
22. Absence: *natthi*
23. Disappearance: *vigata*
24. Non-disappearance: *avigata*

1: Root-condition *hetu-paccayā* is that condition that resembles the root of a tree. Just as a tree rests on its root, and remains alive only as long as its root is not destroyed, similarly all kammically advantageous and disadvantageous mental states are entirely dependent on the simultaneity and presence of their respective roots, i.e, of greed *lobha*, hate *dosa* confusion *moha* or greedlessness *alobha* hatelessness *adosa* unconfusedness *amoha* For the definition of these 6 roots, see: *mūla*.

© 2026 Lal A. Pinnaduwage

The roots are a condition by way of root for the mental phenomena associated with a root, and for the material phenomena produced thereby e.g. for bodily expression; Patth.

2: Object-condition *ārammaṇa-paccayā* is called something which, as object, forms the condition for consciousness and mental phenomena. Thus, the physical object of sight consisting in colour and light 'light-wave', is the necessary condition and the sine qua non for the arising of visual-consciousness *cakkhu-viññāṇa* etc.; sound 'sound wave' for ear-consciousness *sotā-viññāṇa* etc.; further, any object arising in the mind is the condition for mind-consciousness *mano-viññāṇa* The mental-object may be anything whatever, material or mental, past, present or future, real or imaginary.

3: Predominance-condition *(adhipati-paccaya)* is the term for 4 things, on the preponderance and predominance of which are dependent the mental phenomena associated with them, namely: concentrated intention *(chanda)*, energy *(viriya)*, consciousness *(citta)* and investigation *(vīmamsā)*. In one and the same state of consciousness, however, only one of these 4 phenomena can be predominant at a time. "Whenever such phenomena as consciousness and mental concomitants are arising by giving preponderance to one of these 4 things, then this phenomenon is for the other phenomena a condition by way of predominance" (Patth.). Cf. *iddhi-pāda*.

4-5: Proximity and contiguity or immediacy-condition *anantara* and *samanantara-paccayā* - both being identical - refer to any state of consciousness and mental phenomena associated with them, which are the conditions for the immediately following stage in the process of consciousness. For example, in the visual process, visual-consciousness is for the immediately following mindelement - performing the function of receiving the visible object - a condition by way of contiguity; and so is this mind-element for the next following mind-consciousness element, performing the function of investigating the object, etc. Cf. *viññāṇa-kicca*.

6: Co-nascence condjtion sahajāta-paccayā i.e. condition by way of simultaneous arising, is a phenomenon that for another one forms, a condition in such a way that, simultaneously with its arising, also the other thing must arise. Thus, for instance, in one and the same moment each of the 4 mental groups feeling, perception, mental constructions and consciousness is for the 3 other groups a condition by way of co-nascence or co-arising; or again each of the 4 physical elements solid, liquid, heat, motion is such a condition for the other 3 elements. Only at the moment of conception in the mother's womb does materiality physical base of mind serve for the 4 mental groups as a condition by way of conascence.

7: Condition by way of mutuality aññāmañña-paccayā All the just mentioned associated and co-nascent mental phenomena, as well as the 4 physical elements, are, of course, at the same time also conditioned by way of mutuality,;just like three sticks propped up one by another.; The 4 mental groups are one for another a condition by way of mutuality. So also are the 4 elements, and also mentality and materiality at the moment of conception.

8: Support-condition nissaya-paccayā This condition refers either to a pre-nascent see: 10 or co-nascent see: 6 phenomenon which is aiding other phenomena in the manner of a foundation or base, just as the trees have the earth as their foundation, or as the oil-painting rests on the canvas. In this way, the 5 sense-organs and the physical base of the mind are for the corresponding 6 kinds of consciousness a prenascent, i.e. previously arisen, condition by way of support. Further all co-nascent see: 6 phenomena are mutually see: 7 conditioned by each other by way of support.

9: Decisive-support or inducement condition upanissaya-paccayā is threefold, namely a by way of object ārammanūpanissaya-paccayā b by way of proximity anantarūpanissaya c natural decisive support pakatupanissaya These conditions act as strong inducement or cogent reason.

a. Anything past, present or future, material or mental, real or imaginary, may, as object of our thinking, become a decisive support, or strong inducement, to moral, immoral or kammically neutral states of mind. Evil things, by wrong thinking about them, become an inducement to immoral life; by right thinking, an

© 2026 Lal A. Pinnaduwage

inducement to moral life. But good things may be an inducement not only to similarly good things, but also to bad things, such as self-conceit, vanity, envy, etc.

b. is identical with proximity condition No. 4.

c. Faith, virtue, etc., produced in one's own mind, or the influence of climate, food, etc., on one's body and mind, may act as natural and decisive support-conditions. Faith may be a direct and natural inducement to charity, virtue to mental training, etc.; greed to theft, hate to murder; unsuitable food and climate to ill-health; friends to spiritual progress or deterioration.

10: Pre-nascence-condition purejāta-paccayā refers to something previously arisen, which forms a base for something arising later on. For example, the 5 physical sense-organs and the physical base of mind, having already arisen at the time of birth, form the condition for the consciousness arising later, and for the mental phenomena associated therewith.

11: Post-nascence-condition pacchā-jāta-paccayā refers to consciousness and the phenomena therewith associated, because they are - just as is the feeling of hunger- a necessary condition for the preservation of this already arisen body.

12: Repetition-condition āsevana-paccayā refers to the kammical consciousness, in which each time the preceding impulse moments javana-citta are for all the succeeding ones a condition by way of repetition and frequency, just as in learning by heart, through constant repetition, the later recitation becomes gradually easier and easier.

13: Kamma-condition kamma-paccayā The pre-natal kamma i.e kamma-intentions, kamma-cetanā in a previous birth is the generating condition cause of the 5 sense-organs, the fivefold sense-consciousness, and the other kamma-produced mental and material phenomena in a later birth. - Kammical intention is also a condition by way of kamma for the co-nascent mental phenomena associated therewith, but these phenomena are in no way kamma-results.

14: Kamma-result-condition *vipāka-paccayā* The kamma-resultant 5 kinds of sense-consciousness are a condition by way of kamma-result for the co-nascent mental and material phenomena.

15: Nutriment-condition *āhāra-paccayā* For the 4 nutriments, see: *āhāra*.

16: Ability-condition *indriya-paccayā* This condition applies to 20 abilities (*indriya*), leaving out No. 7 and 8 from the 22 abilities. Of these 20 abilities, the 5 physical sense-organs 1 - 5, in their capacity as abilities, form a condition only for unmaterial phenomena visual-consciousness etc.; physical vitality 6 and all the remaining abilities, for the co-nascent mental and material phenomena.

17: Jhāna-condition jhāna-paccayā is a name for the 7 so-called jhāna-factors, as these form a condition to the co-nascent mental and material phenomena, to wit:

- (1) thought-conception *(vitakka)*,
- (2) discursive thinking *(vicāra)*,
- (3) interest *(pīti)*,
- (4) joy *(sukha)*,
- (5) sadness *(domanassa)*,
- (6) indifference *(upekkhā)*,
- (7) concentration *(samādhi)*. (For definition s. Pāli terms)

1, 2, 3, 4, 7 are found in 4 classes of greedy consciousness see: Tab. I. 22-25; 1, 2, 5, 7 in hateful consciousness ib. 30, 31; 1, 2, 6, 7 in the classes of confused consciousness ib. 32, 33.

This condition does not only apply to jhāna alone, but also to the general intensifying ‘absorbing’ impact of these 7 factors.

© 2026 Lal A. Pinnaduwage

18 path-condition magga-paccayā refers to the 12 path-factors, as these are for the kammically advantageous and disadvantageous mental phenomena associated with them, a way of escape from this or that mental constitution, namely: 1 knowledge paññā = sammādiṭṭhi right understanding, 2 right or wrong thought-conception vitakka 3 right speech sammā-vācā 4 right bodily action sammā-kammanta, 5 right livelihood sammā-ājīva 6 right or wrong energy viriya 7 right or wrong awareness or mindfulness sati 8 right or wrong concentration samādhi 9 wrong views *micchādiṭṭhi* 10 wrong speech *micchā-vācā* 11 wrong bodily action micchā-kammanta 12 wrong livelihood *micchā-ājīva* Cf. magga

19: Association-condition *sampayutta-paccayā* refers to the co-nascent see: 6 and mutually see: 7 conditioned 4 mental groups *khandha* as they aid each other by their being associated, by having a common physical base, a common object, and by their arising and disappearing simultaneously; Patth. Com..

20: Dissociation-condition vippayutta-paccayā refers to such phenomena as aid other phenomena by not baving the same physical base eye, etc. and objects. Thus material phenomena are for mental phenomena, and conversely, a condition by way of dissociation, whether co-nascent or not.

21: Presence-condition atthi-paccayā refers to a phenomenon - being pre-nascent or co-nascent - which through its presence is a condition for other phenomena. This condition applies to the conditions Nos. 6, 7, 8, 10, 11.

22: Absence-condition natthi-paccayā refers to consciousness, etc., which has just passed, and which thus forms the necessary condition for the immediately following stage of consciousness by giving it an opportunity to arise. Cf. No. 4.

23: Disappearance-condition vigata-paccayā is identical with No. 22.

24: Non-disappearance-condition avigata-paccayā is identical with No. 21.

These 24 conditions should be known thoroughly for a detailed understanding of that famous formula of the dependent origination (*paticcasamuppāda*).

Mahā Thera Nyanatiloka. *Manual of Buddhist Terms and Doctrines*, Buddhist Publication Society, first edition 1952.

See The Significance of Dependent Origination, by Nyanatiloka (WHEEL 140).

13.7.5 Pabhassara Citta, Radiant Mind, and Bhavanga

April 13, 2017; revised January 19, 2018; August 20, 2018; January 7, 2019; February 14, 2021; July 28, 2023

It is a good idea first to read the posts, "Amazingly Fast Time Evolution of a Thought (Citta)" and "Viññāṇa – What It Really Means."

A "Thought" Is the Result of Billions of *Citta*

1. Billions of *citta* flow in a second, and what we experience is the cumulative effect of billions of *citta*, which we call a "thought." Let us start at the base state of a *citta* (loosely translated as a thought, but it is not). Every *citta* has seven universal *cetasika* (mental factors). Universal *cetasika* are discussed in, "What is in a Thought? Why Gati are so Important?."

- Those seven universal *cetasika* are: *Phassa* (contact), *saññā* (perception), *vedanā* (feeling), *cetanā* (intention), *ekaggatā* (one-pointedness), *jivitindriya* (life faculty), and *manasikāra* (memory). This is the "baseline" state of a *citta*, which lasts only a billionth of a second.

© 2026 Lal A. Pinnaduwage

- And during that brief time, many other *cetasika* (good or bad) can be incorporated into a *citta*. **But let us consider the more straightforward case where no other *cetasika* are included.**
- Even such a simple *citta* is still contaminated or defiled at the end of that brief time. This contamination is manifested in *vedanā* and *saññā cetasika*.

Each *Citta* Goes Through Nine Stages!

2. **Each INDIVIDUAL *citta* — during its existence for a billionth of a second — undergoes change in nine stages!** Such a fast process cannot be seen by any human other than a Buddha; see "Citta, Mano, Viññāṇa – Nine Stages of Mind Contamination."

- At the end of the nine stages, it has evolved and has become affected by the whole of the *viññāṇakkhandha* (including past *viññāṇa*).
- The contamination of a *citta* is manifested in *saññā* and *vedanā;* **a contaminated *citta* is called *viññāṇa*.**
- *Vedanā* at the base level is "discerning that an event took place" ("*veema*" + "*danaveema*" or "වීම දැනවීම" in Sinhala). Actual "feelings" about the event will be incorporated as the *citta* evolves in nine stages, as discussed below.

Even the First *Citta* Is Contaminated

3. The other critical universal *cetasika* that evolves in nine stages is *saññā*. Even though it has become standard to write is as "*saññā*," that is not how it is pronounced "sangngā":

WebLink: Listen: Play the word "saññā"

- Some do indicate the correct pronunciation by writing as *saññā*. Even though it does not really matter how one writes it ("sanna" or *saññā* or "sangnga"), it is critically important to understand what is meant by it; see, "What is Saññā (Perception)?."
- *Saññā* provides one's perception about a given event that led to the arising of the *citta*. For example, if we see an object, the identification of that object proceeds via those nine stages (and *vedanā* evolves accordingly).
- So, let us briefly go through the nine stages of the evolution of a *citta* using *saññā* as the basis.

Contamination of a *Citta* Is Due to *Anusaya*

4. Each *citta* gets contaminated in those nine stages due to *anusaya* that comes to the surface as *āsava* (or *āsaya*), which are also related to one's *gati*. There are many posts on the site with details on those entities.

- Those nine stages of contamination during the lifetime of the *citta* itself (in a billionth of a second) are ***citta, mano, mānasaṁ, hadayaṁ, paṇḍaraṁ, mano manāyatanaṁ, mana indriyaṁ* (or *manindriyaṁ*), *viññāṇaṁ, viññāṇakkhandho.*** [*Yaṁ cittaṁ mano mānasaṁ hadayaṁ paṇḍaraṁ mano manāyatanaṁ manindriyaṁ viññāṇaṁ viññāṇakkhandho*...]
- This rapid contamination of a *citta* is explained in the "WebLink: suttacentral: Paṭiccasamuppāda Vibhaṅga," in Section 2.5.1. Akusalacitta : "*Tattha katamaṁ saṅkhāra paccayā viññāṇaṁ? Yaṁ cittaṁ mano mānasaṁ hadayaṁ paṇḍaraṁ mano manāyatanaṁ manindriyaṁ viññāṇaṁ viññāṇakkhandho tajjāmanoviññāṇadhātu—idaṁ vuccati "saṅkhārapaccayā viññāṇaṁ*".
- Those nine stages are also listed in the original commentary, section 1.3.5.3. Tatiyacatukkaniddesa in WebLink: suttacentral: 1.3. Ānāpānassatikathā of Patisambhidamaggapakarana (or Part I, p. 360 of Buddha Jayanati Tipiṭaka): "..*yaṁ cittaṁ mano mānasaṁ hadayaṁ pandaraṁ manomanāyatanaṁ manindriyaṁ vinnanaṁ vinnakkhandho*..." [*Yaṁ cittaṁ mano mānasaṁ hadayaṁ paṇḍaraṁ*

© 2026 Lal A. Pinnaduwage

mano manāyatanaṁ manindriyaṁ viññāṇaṁ viññāṇakkhandho...] I trust only three commentaries and all three are in the *Tipiṭaka*: *Patisambhidamagga*, *Petakopadesa*, and *Nettippakarana.*

- All other commentaries were written much later and are not reliable; see, "Buddhaghosa and Visuddhimagga – Historical Background."
- What we experience is *viññāṇakkhandha*. Even after going through the nine stages it is still called a *citta* for convenience; see, "Citta, Mano, Viññāṇa – Nine Stages of Mind Contamination" and "Amazingly Fast Time Evolution of a Thought (Citta)."

Simple Example Explaining the Nine Stages of a *Citta*

5. Let us consider the example of seeing one's mother. At the initial *citta* stage, the only perception is that a person is there. In the next step of "*mano*" (which stands for "calibrating with respect to other persons; "*maneema*" in Sinhala), it is realized that the person is a woman.

- In the third stage of "*mānasaṁ*," "*saŋ*" comes into the picture and extra information (which is personal) is incorporated; see, "What is "Saŋ"? Meaning of Sansāra (or Saṁsāra)." Now, one identifies the person as one's mother.
- By the way, we cannot live in this world without at least reaching the "*mānasaṁ*" stage of a *citta*. Otherwise, we will not be able to distinguish a given person in a crowd.
- Actual contamination of the *citta* starts at the next stage of "*hadayaṁ*," which means identifying whether that person is "close to one's heart" and then getting attracted or repulsed. In our example, one recognizes the person as "one's mother" and of course corresponding *vedanā* of an attachment arises as well.

An *Arahant*'s Citta Does Not Contaminate Beyond the '*Mānasan*' Stage

6. An *Arahant*'s *citta* does not evolve beyond the '*mānasaṁ*' stage. So, the Buddha could identify different people, but he did not form any attachment/dislike based on that identification.

- This is what is stated in the *Karaniyamatta Sutta*: "*..mānasaṁ bhāvaye aparimāṇaṁ*..." One needs to cultivate "*mānasaṁ*" as much as possible ("*aparimāna*" or "*appramāna*" or without limit), but not let the *citta* contaminate beyond that.
- That can be done only via reducing and finally removing one's bad *gati*, *āsava*, and *anusaya,* as we discuss below.

Getting Attached at the '*Hadayaṁ*' Stage

7. The next step after "*hadayaṁ*" is "*paṇḍaraṁ*," which means to "add more power," i.e., one's mind will look back at past events (yes, within a billionth of a second), recall how loving she was, and "attach more". It is done automatically by the *manasikāra cetasika*.

- So, the *citta* becomes increasingly contaminated as it advances to the *viññāṇa* stage. Thus *viññāṇa* is a *citta* that is very contaminated due to one's *anusaya, āsava,* and *gati*.
- Finally, it becomes part of the *viññāṇakkhandha*, which includes 11 types of *viññāṇa*: past (*atīta*), future (*anāgata*), present (*paccuppanna*), internal (*ajjhatta*), external (*bahiddha*), coarse (*oḷārika*), fine (*sukhuma*), dislikes (*hīna*), likes (*paṇīta*), near (*santika*), and far (*dūra*). [*yaṁ kiñci viññāṇaṁ atītānāgatapaccuppannaṁ ajjhattaṁ vā bahiddhā vā oḷārikaṁ vā sukhumaṁ vā hīnaṁ vā paṇītaṁ vā yaṁ dūre santike vā, ayaṁ vuccati viññāṇakkhandho* (WebLink: suttacentral: *Khandha Sutta* SN 22.48, WebLink: suttacentral: *Puṇṇama Sutta* SN 22.82)]
- A *viññāṇakkhandha* has incorporated not only one's *anusaya*, *āsava*, and *gati*, but also one's memories and future hopes, etc.

© 2026 Lal A. Pinnaduwage

8. Now we can address the issue of a "*pabhassara citta*." First, what is meant by "*pabhassara*"?

- The word comes from three sounds at the root: "*pa*" means again and again, "*bha*" is related to "*bhava*"; and "*sara*" or "*chara*" means "to engage/participate" ("සැරිසරීම" in Sinhala.) Thus a "***pabhasara*** *citta*" with only one "s" in the word (NOT *pabha**ss**ara*) is a contaminated *citta* that will lead to the *saṁsāric* journey or the rebirth process.
- The opposite of "***pabha sara***" is "*pabha assara*," where "*assara*" means "not take part in". It rhymes with "***pabhassara***."
- Thus, someone who has cleansed the mind to generate **"*pabhassara citta*" is not liable to be reborn among the 31 realms**, i.e., an *Arahant* generates "***pabhassara*** *citta.*"
- This is why I say that Pāli is a phonetic language. Meanings come based on sounds. I have given many examples throughout the website.

Pabhassara Citta Is There Only at the Beginning of Nine Stages

9. Therefore, a "***pabhassara citta***" is that base state, or the **pure state** of a *citta*, BEFORE it goes through the nine stages of contamination. It has only the seven universal *cetasika*.

- Each *citta* of a given person starts as a *pabhassara citta* but gets contaminated to varying degrees depending on one's remaining *saṁyojana*/*anusaya* and *gati* at that time.
- Even an *Arahant*'s *citta* is not a *pabhassara citta;* it will contaminate to the level of "*mānasaṁ*," as we discussed above. However, *Arahant phala citta*, which lasts for only one *citta*, is a *pabhassara citta.*
- When an *Arahant* is in *Arahant phala samāpatti,* he/she knows that one is alive but is unaware of outside events. This is called *animitta, appanihita*, *suññata samādhi*. That is different from the *nirodha samāpatti*, where the flow of *citta* stops.
- In Buddha Dhamma, defilements are associated with "dark", and pure states are associated with "bright" or "radiant". So, we could call a *pabhassara citta* a "radiant *citta*," and a mind that generates AND maintains citta at that state a "radiant mind".
- The only time such radiant or pure *citta* flow occurs, is when an *Arahant* is in *Arahant phala samāpatti*, with the *Arahant phala citta* flowing continuously.

Pabhassara Sutta (AN 1.51)

10. This process of contamination of a *citta* is what stated in the "WebLink: suttacentral: *Pabhassara Sutta* (AN 1.51)": "*Pabhassaramidaṁ, bhikkhave, cittaṁ. Tañca kho āgantukehi upakkilesehi upakkiliṭṭhaṁ. Taṁ assutavā puthujjano yathābhūtaṁ nappajānāti. Tasmā 'assutavato puthujjanassa cittabhāvanā natthī'ti vadāmī ti.*"

- First, "*Pabhassaramidaṁ"* is "*Pabhassara idaṁ*." As I keep saying, words are sometimes combined or even a bit changed to rhyme in *suttā*. So, the first sentence says, "Bhikkus, *citta* (the first stage) is *pabhassara* or does not contribute to the rebirth process".
- The following sentence says how it is defiled: "*āgantuka*" (which is also a Sinhala word, "ආගන්තුක") means "introduced." What is introduced is "*upakilesa*" or defilements (that are in one's *gati, anusaya, āsava*). That leads to "*upakilitta*" or contamination. Again. "*kilitī*" in Pāli and Sinhala means "dirty". [***upakkiliṭṭha*** : [adj.] soiled; impure; stained. ***kiliṭṭha*** : [pp. of *kilissati*] become soiled or stained; was impured.]
- The following sentence says, "Those *puthujjano* who do not understand this, cannot comprehend the reality (*yathābhūta*)". *Puthujjana* means an average human who has not been exposed to Buddha Dhamma; i.e., one who does not comprehend *Tilakkhaṇa*. Thus the last sentence says, "therefore, I do not recommend *citta Bhāvanā* to those who do not comprehend *Tilakkhaṇa*."

Anidassana Viññāṇa Is Not a *Pabhassara Citta*

11. Another famous quote from the WebLink: suttacentral: *Kevaṭṭa Sutta* (DN 11) in the *Dīgha Nikāya*, says, "*Viññāṇaṁ anidassanaṁ anantaṁ sabbato pabhaṁ*..." This could be written as "*Viññāṇaṁ anidassanaṁ, anantaṁ, sabbato pabhaṁ*.." to break into three components.

- Here, "*anidassana*" means "cannot be seen". *Viññāṇa* is more than a *nāma dhammā* and has "*kammic* energy". But it is below the "visible *rūpa*"; see, "Kamma Viññāṇa – Link Between Mind and Matter."
- And, "*ananta*" is infinite; *viññāṇa dhātu* is infinite.
- "*sabbato*" means "in every way/for all".
- As we discussed above in #8, "*pabha*" means "repeated *bhava*" (*pabhaṁ* comes from that).
- Therefore, the above verse means, "*viññāṇa* is unseen, infinite, and leads to the rebirth process for all."
- To emphasize: ***viññāṇa* is a defiled *citta*. We all experience *viññāṇa*, not pure *citta*. Even more accurately, we experience *viññāṇakkhandha* (*viññāṇa* aggregate). However, we loosely call "a thought" a *citta*.**
- One stops the rebirth process by removing one's bad *gati, āsava*, and *anusaya* and not letting *citta* contaminate beyond the "*mānasaṁ*" stage.

More details at this post: "Anidassana Viññāṇa – What It Really Means."

Bhavaṅga Citta Is Not a *Pabhassara Citta*

12. Some commentaries say that *bhavaṅga citta* are *pabhassara citta*. **That is absolutely incorrect.** All living beings have *bhavaṅga citta* that depend on one's *bhava*; see "Bhava and Bhavaṅga – Simply Explained! ."

- *Bhavaṅga* comes from "*bhava*" + "*anga*," where "*anga*" is a "part". So, *bhavaṅga* means "associated with a given *bhava*." *Bhavaṅga* is obviously different for different *bhava*.
- An animal also gets into the *bhavaṅga* state. **Does that mean an animal has a "radiant mind" when it is in the *bhavaṅga* state?**
- Furthermore, sometimes "*anidassana viññāṇa*" is also incorrectly explained as the base level of *viññāṇa*. Per #11 above, it is clear that *anidassana viññāṇa* just explains that *viññāṇa* cannot be "seen."

13. In fact, it is not correct to say *bhavaṅga citta*. *Bhavaṅga* is a "state of mind"; no *citta vīthi* runs during *bhavaṅga*.

- For example, a living being in the *asaññā* realm does not experience any thoughts. There are absolutely no *citta vīthi* running during the whole time there. However, the body is maintained by *bhavaṅga* that corresponds to that *bhava*.

No *Pabhassara Citta* Below *Arahant* Stage

14. So, the point here is that as long as one has bad *gati* (or *anusaya*, *āsava*, etc., which are all interrelated and can be just called *avijjā*), one's thoughts **will be contaminated as they arise.**

- Therefore, we cannot control our thoughts as they arise: **a *citta* is contaminated to the *viññāṇa* stage in a billionth of a second, which is unimaginably fast.** This is why the Buddha said a *citta* is the fastest entity in the world (we loosely call "a thought" a *citta*, even though it is really *viññāṇakkhandha* that we experience).

© 2026 Lal A. Pinnaduwage

- All we can do is to REDUCE *avijjā* (and thus all those related entities of *gati*, *āsava*, *anusaya*) by learning *Dhamma* and then practicing *Ānāpāna* (not breath meditation) and *Satipaṭṭhāna* meditation.
- As one proceeds in the Path, one's had *gati* (and *āsava* and *anusaya*) will start decreasing, and one's *citta* will tend to be more "cleaner and brighter."
- Once one gets to a certain level, one can start contemplating those key concepts like *anicca*, *dukkha*, and *anatta*, i.e., *vipassanā* meditation, and attain *magga phala*.

Contamination of a *Citta* Depends on the *Ārammaṇa* and *Gati*

15. Not all *citta* get contaminated at the same level. A *citta* arises when one of our six sense faculties makes a sensory contact, and the level of contamination of the *citta* depends critically on what that sensory input is.

- Let us take some examples. When we taste delicious food or see an attractive object, greedy thoughts may arise. But we know that we all don't have the same cravings for a given item. Some foods that some people crave can be repulsive to others. In another example, a given person may be liked by some but disliked by others (think about a famous politician).
- Furthermore, we don't generate defiled thoughts in many cases. Billions of *citta* flow through our minds as we look at scenery passing by while riding in a car; they are mostly neutral but still are contaminated to a certain level.
- But the level of contamination will be stronger when one sees an eye-catching object.
- Details at, "Ārammaṇa Plays a Critical Role in a Sensory Event."

A Newborn Baby Does Not Have a *Pabhassara Citta*

16. I have seen some people say that the *cittā* that arise in a baby are *pabhassara citta*. *Anusaya* ALWAYS remains with a lifestream regardless of whether it is a baby, animal, or *Brahma* until that lifestream attains the *Arahant* stage.

- A baby's brain has not developed so it cannot experience the world as we do, and it also cannot express itself. But a baby's *citta* are also contaminated due to *anusaya* being there.
- Only when one attains *magga phala* that a part of one's *anusaya* (and *āsava* and *saṁyojana*) is removed permanently; see, "Conditions for the Four Stages of Nibbāna."

How to Attain a *Pabhassara Citta*

17. As one starts at the *Sotāpanna* stage of *Nibbāna*, and advances through *Sakadāgāmī* and *Anāgāmī* stages to the *Arahant* stage, one's *avijjā* (and thus bad *gati*, *anusaya*, *āsava*, etc.) decrease permanently.

- Thus a *Sotāpanna*'s thoughts will not be defiled beyond a certain level of contamination. Indeed, a *Sotāpanna* will not generate strong *akusala citta* capable of leading to rebirth in the *apāyā*.
- By the time one gets to the *Anāgāmī* stage, one has removed all *kāmāsava* (*kāmā āsava*), and thus will not be tempted by any sensual object in the *kāmā loka*. Therefore, he/she will not be reborn anywhere in the *kāmā loka* (four *apāyā*, human realm, and the six *deva* realms).
- When one gets to the *Arahant* stage, one has removed all *avijjā* (and all bad *gati*, *anusaya*, *āsava*, etc.): One has attained *Nibbāna*, and thus one will not be reborn anywhere in the 31 realms at death.
- All of the above have been discussed in detail in many posts on the site. One can use the site map "Pure Dhamma – Sitemap" or use the "Search" box on the top right to look for posts for given keyword(s).

14.1 Historical Background – Introduction

One of the earliest posts: Revised May 27, 2017

1. Today, we have three main "schools" of "Buddhism" that include the Theravāda Buddhism in Sri Lanka, Burma, Thailand, and few other South Asian countries, Mahāyāna Buddhism in the form Zen in Japan, China, and several other Asian countries, and Vajryāna Buddhism in Tibet.

- All these are being practiced in other countries in varying degrees. How the original teachings of the Buddha got branched out over 2500 years is discussed in, "Historical Timeline of Edward Conze."

2. The vast literature in Theravāda Buddhism, which is contained in the Tipiṭaka (three baskets of Sutta, Vinaya, and Abhidhamma) are mostly self-consistent.

- Considering the vastness of the material in these documents, the consistency is amazing, and gives one confidence that any "contamination" would be small indeed.

3. However, even the *Theravāda* literature has been contaminated with incorrect interpretations of the *Tipiṭaka*.

- The root causes of misinterpretations of key terms are discussed at several posts below in this section, but specifically two major historical events can be pointed out: "Buddhaghosa's Visuddhimagga – A Focused Analysis" and "Misinterpretation of Anicca and Anatta by Early European Scholars."
- These inconsistencies were first pointed out by my teacher *Thero* who recently passed away, and my goal with this website is to point out those errors and illustrate that those correct interpretations provide a fully-consistent picture: "Parinibbāna of Waharaka Thero."

4. It is hard for me to fathom how a normal human being, regardless of how intelligent he is, could teach the doctrine in such different ways over forty five years, yet be so consistent in multiple ways (the discourses range from simple one-to-one question answer sessions with individuals to lengthy discourses delivered to audiences of thousands of people, not to mention the complex Abhidhamma material).

- Even with the help of a computer, it is hard for me to keep track of the intricacy of Abhidhamma. The complex workings of the mind has been analyzed in multiple ways, and they are all consistent within the Abhidhamma and also with the Suttā.

5. Teachings of the Buddha, as given in the Theravāda Tipiṭaka, are confirmed and solidified with each new scientific discovery (in contrast, the mythical aspects introduced in various forms of Mahāyāna Buddhism are facing problems in light of scientific progress).

Buddha Dhamma is like a diamond covered in the dirt of ignorance. The more we find about the world through scientific methods (thus removing more dirt from the diamond), the more of the diamond's luster become apparent. Not too far into the future, Buddha Dhamma will shine brightly and will greatly help the humanity all over the world.

6. It is ironic in a way how the "materialistic science" is helping to clarify and confirm the teachings of the "mind-based" Buddha Dhamma. Yet the humanity is still only enamored with the truly amazing materialistic advances based on scientific discoveries, and is for most part unaware of its primitive stage compared to ultimate knowledge contained in Buddha Dhamma.

- The real breakthrough may come when science will be forced to embrace the mind as yet another fundamental property of nature.
- The discovery of quantum mechanics has clearly laid the foundation for this next breakthrough. It has been more than hundred years since the advent of quantum mechanics, but it is only within the past two to three decades that real progress has been made in this direction. I discuss these developments in detail in the "Dhamma and Science" section.

14.2 Counterfeit Buddhism – Current Mainstream Buddhism

June 30, 2023; Revised July 4, 2023 (#4); February 25, 2024 (#6)

Counterfeit Buddhism (mainstream Buddhism today) appears like Buddha's teachings but has deviated much from the original teachings. The Buddha foresaw that, as we discuss.

Counterfeit Gold – Buddha's Analogy

1. The Buddha stated that his teachings tend to "go underground" quickly because there is a tendency to replace more profound concepts with simple/mundane interpretations that most people can easily understand. Unfortunately, as discussed below, that prediction came true only 500 years after the Buddha.

- The tendency to deviate from the profound teachings became clear even during the life of the Buddha. During the first 20 years, the Buddha did not declare any *Vinaya* (disciplinary) rules for the *bhikkhus*. Even after the Buddha started enacting *Vinaya* rules (they grew to 227 for the *bhikkhus* and 311 for *bhikkhunis* before the *Parinibbāna* of the Buddha), many started behaving inappropriately and also misinterpreting Buddha's teachings.
- Thus, after the initial "surge" of *Arahants*, the progress slowed even during the latter years of the Buddha.
- One time, Ven. Mahākassapa asked the Buddha why fewer *Arahants* were produced even with established *Vinaya* rules.

2. That question and Buddha's answer are in the "WebLink: suttacentral: *Saddhammappatirūpaka Sutta* (SN 16.13)." Here, "*saddhamma*" ("*sath*" + "*dhamma*") means the "good/true teachings," and "*patirūpa*" means "imitation" (something that looks like the original but is not.)

- Ven. Mahākassapa asked the Buddha, "There used to be fewer training rules but more *Arahants* (*bhikkhū aññāya*). But now there are more training rules and fewer *Arahants*. Why is that?"

The Buddha explained as follows (only the meaning): "Those who could easily grasp my teachings attained *Arahanthood* in the early days. It is more difficult for those remaining to comprehend this profound Dhamma. Even with more *Vinaya* rules (*sikkhāpadāni*,) it is difficult for them to tame their minds and grasp the deep teachings."

Then the Buddha predicted that it would get worse: "The true teaching will go underground when a counterfeit of the true teaching appears. It's like genuine gold going underground when counterfeit gold appears because most cannot distinguish between pure gold and counterfeit gold. **Only a few will be able to make the distinction between my Dhamma and the counterfeit Dhamma.**"

Buddha Did Not Provide a Time Limit

3. There is a widespread belief that Buddha Gotama's Buddha *Sāsana* will last 5000 years. However, I have not seen it in the *Tipiṭaka*. It could be in a later Commentary, but I have not seen such a commentary either.

- In the above, the Buddha stated that his teachings would go "underground" gradually as "fake teachings (that look like the true teachings)" take hold.
- That happened around 2000 years ago (or roughly 500 years after the *Parinibbāna* of the Buddha, with the emergence of "*Mahāyāna* Buddhism" in India.
- Thus, the Buddha foresaw the upcoming decline, but he stated that as long as there are at least *Sotāpannas* among the humans, his teachings will survive "in the underground" where those who can understand and appreciate its value.

© 2026 Lal A. Pinnaduwage

The Emergence of *Mahāyāna* With Counterfeit Dhamma

4. Around 100 BCE, some in India started translating Pāli *suttās* into Sanskrit. Some of those Sanskrit translations have survived in other countries, even though no literature related to Buddhism remained in India after about 1000 AD. The following is one of the *suttās* translated into Sanskrit: "WebLink: suttacentral: The Questions of Nālaka." There seems to be only a handful of such *suttās* translated into Sanskrit that have survived, and they are at the Sutta Central: see "WebLink: suttacentral: Sanskrit Canonical Discourses."

- Starting around 100 BCE, a group of *Mahāyāna* philosophers started compiling Sanskrit ***sutrās***; **these were not even translations of the Pāli *suttas* but were "new interpretations" of Buddha's teachings**. They asserted that old interpretations had become obsolete and needed to be "upgraded" with new concepts.
- The only consolation is that it is easy to distinguish the *Mahāyāna* versions because they are ***sutrās*** (Sanskrit term for ***suttās***). If you see a ***sutrā***, that is one compiled by a philosopher like Nagarjuna. Of course, the exception is the handful of surviving direct translations; but those can be identified as translations. Furthermore, they clearly show the direct translation of ***anicca, dukkha*, and *anatta*** with the Sanskrit words ***anitya, duḥkha, and anātma***. I will discuss that in the next post.
- All original ***suttās*** remain intact in the Pāli *Tipiṭaka*. Yet, most current translations of those Pāli ***suttās*** are incorrect because *Theravada* adopted SOME of the *Mahāyāna* distortions (including the replacement of ***anicca*, *dukkha*, and *anatta*** with the Sanskrit words ***anitya*, *duḥkha*, *anātma***) during the peak of *Mahāyāna* Buddhism in India.

5. In the analogy provided above, when counterfeit gold appears, it becomes widely used because it is cheaper, and most people cannot distinguish the difference.

- In the same way, when the deeper meanings of Buddha's fundamental concepts are replaced by easy-to-understand (but incorrect), superficial, and mundane explanations, most people latch on to such incorrect explanations. That is why *Theravādins* readily adopted some of the "proposed improvements" put forth by *Mahāyāna* philosophers.
- For example, *anicca* and *anatta* are complex Pāli words that CANNOT be translated into any language as single words. Yet, they were first translated to Sanskrit as *anitya* (pronounced "*anithya*") and *anātma* (pronounced "*anāthma*") only 500 years after the passing away of the Buddha.
- **Just like now, most people quickly adopted those simpler explanations. They were praised as "new interpretations for the obsolete teachings,"** as the historian Edward Conze pointed out; see "Historical Timeline of Edward Conze."

The Buddha Predicted the Timeline

6. The Buddha also foresaw the timeline of the "emergence of counterfeit Dhamma." In the "WebLink: suttacentral: *Gotamī Sutta* (AN 8.51)," **he stated that his teachings, in their "full glory," would last only 500 years**. That matches the emergence of *Mahāyāna* roughly 500 years after the *Parinibbāna* of the Buddha.

- The Buddha made that prediction after the establishment of the *bhikkhuni* order. The Buddha first declined to establish the *bhikkhuni* order. After establishing the *bhikkhuni* order, the Buddha told Ven. Ānanda that instead of lasting for 1000 years after his passing away, it would last only 500 years.
- As the Buddha predicted, the "peak period" lasted only about 500 years after the *Parinibbāna* of the Buddha to roughly 100 AD. The emergence of *Mahāyāna* Buddhism started gradually around 100 BC and peaked around 400-500 AD; see the "Mahāyāna Buddhism" section in the Wikipedia article "WebLink: wikipedia.org: History of Buddhism."

© 2026 Lal A. Pinnaduwage

- However, the Buddha also emphasized that his teachings (among humans) will not disappear as long as there are at least *Sotāpannas* among humans who can keep passing down the teachings to the next generation.
- That is in the "*Mahāparinibbāna Sutta* (DN 16)" toward the end: "*Yasmiṁ kho, subhadda, dhammavinaye ariyo aṭṭhaṅgiko maggo na upalabbhati, samaṇopi tattha na upalabbhati. Dutiyopi tattha samaṇo na upalabbhati. Tatiyopi tattha samaṇo na upalabbhati. Catutthopi tattha samaṇo na upalabbhati. Yasmiñca kho, subhadda, dhammavinaye ariyo aṭṭhaṅgiko maggo upalabbhati, samaṇopi tattha upalabbhati, dutiyopi tattha samaṇo upalabbhati, tatiyopi tattha samaṇo upalabbhati, catutthopi tattha samaṇo upalabbhati. Variant: ca → idheva (mr)Imasmiṁ kho, subhadda, dhammavinaye ariyo aṭṭhaṅgiko maggo upalabbhati, idheva, subhadda, samaṇo, idha dutiyo samaṇo, idha tatiyo samaṇo, idha catuttho samaṇo, suññā parappavādā samaṇebhi aññehi. –**Ime ca, subhadda, bhikkhū sammā vihareyyuṁ, asuñño loko arahantehi assāti**.*"

  That means: "Subhadda, in whatever teaching and training the noble eightfold path is not found, there is no true Sotāpanna, no Sakadagami, no Anagami, and no Arahant found. In whatever teaching and training the noble eightfold path is found, there is a true Sotāpanna, a Sakadagami, an Anagami, and an Arahant found. The noble eightfold path is found in this teaching (Buddha Dhamma) and training (Vinaya).

  – As long as bhikkhus maintain the Ariya lineage, this world will have Arahants."

Historical Timeline by Edward Conze

7. The historical timeline is also discussed in detail by Edward Conze in his book, "A Short History of Buddhism" (1980; last edition 2008). According to Conze, the history of Buddhism can be conveniently divided into four periods:

1. The old Buddhism largely coincided with what later came to be known as *Theravāda*.
2. Rise of *Mahāyāna*,
3. Rise of the *Tantra* (*Vajrayāna*) and *Ch'an* (*Zen*),
4. No further divisions.

8. During the heyday of *Mahāyāna*, it became highly influential for about 500 years. As Edward Conze put it, "**The creation of this literature is one of the most significant outbursts of creative energy known to human history, and it was sustained for about four to five centuries."**

- I highly recommend reading the post "Historical Timeline of Edward Conze," where I discussed Conze's book.
- Even though no trace of Buddhism was left in India by the time Europeans took control in the 1800s, the damage had been done, and the consequences have lasted to the present time.

Mahāyāna Influence Led to the Distortion of *Theravāda* Buddhism

9. I have discussed the fact that even the mainstream *Theravāda* Buddhist texts today — which are the closest to the teachings of the Buddha compared to *Mahāyāna*, *Vajrayana*, Tibetan, and other versions — interpret many of the fundamental teachings of the Buddha incorrectly. See "Incorrect Theravada Interpretations – Historical Timeline."

- When the Europeans discovered Buddhism in the 1800s, they found that contaminated version. With the newly discovered printing press, that version got firmly established worldwide. Details in "Misinterpretation of Anicca and Anatta by Early European Scholars."
- However, the Pāli *Tipiṭaka* has been faithfully preserved by a generation of a small number of *bhikkhus*. As discussed in the post "Preservation of the Dhamma," they kept re-writing the whole *Tipiṭaka* on ola

© 2026 Lal A. Pinnaduwage

leaves every 100-200 years (lifetime of manuscripts made of ola leaves.) **That also served the unintended benefit of taking into account the changes in the Sinhalese alphabet over 2000 years.**

- How could Buddha's teachings get distorted so quickly? The Buddha addressed that in his first discourse: **The worldview he discovered during the night of his Enlightenment was radically different from any known worldview.**

The inability of Many to Comprehend the True Teachings

10. **The Buddha explained the root problem of the inability of most people to comprehend the profound — and unimaginably different — worldview he realized during the night he attained the Buddhahood.**

- *Dhammacakkappavattana Sutta* was the first *sutta* delivered by the Buddha just after attaining Enlightenment.
- The following verse appears in the "WebLink: suttacentral: Dhammacakkappavattana Sutta (SN 56.11)" twelve times: "..***pubbe ananussutesu dhammesu***." It means "**this Dhamma that I just discovered has not been known to the world previously**."
- It is a teaching that goes against all mundane views/perceptions about our world. Because of that, there is a high probability that many deep concepts would be easily replaced (and accepted) by people who cannot grasp those more profound meanings. **This is the root cause for the vulnerability of Buddha's teachings to be "easily distorted." People tend to drift toward "simple and mundane concepts."** The obvious example is the currently deeply-embedded view that *Ānāpānasati* is "breath meditation."

11. The Buddha has repeatedly emphasized the need to pay serious attention to comprehending his Dhamma.

- As we know, Ven. Ānanda had an excellent memory (he had memorized the whole *Sutta Piṭaka* and recited it at the First Buddhist Council.)
- Yet, when he told the Buddha that it was easy for him to understand *Paṭicca Samuppāda*, the Buddha admonished him not to take it lightly: "WebLink: suttacentral: *Mahānidāna Sutta* (DN 15)."

12. **The difference between Buddha's worldview and any other worldview ever proposed by a human can be stated simply as follows:** "Humans perceive that happiness is in the material world; they are delighted when able to acquire "valuable worldly entities," whether in desirable partners or expensive things like gold, cars, houses, etc. **However, the Buddha's new found worldview says pursuing those worldly things will — without any doubt — lead to suffering. That suffering manifests not only in future lives but also in this life. The relief from suffering can be experienced in this life itself by comprehending Buddha's true teachings.**"

- One truly comprehends the "*anicca* nature" upon seeing the truth of that last part. **Then one would realize how silly it is to translate "*anicca*" as "impermanence."**
- Thus, "*Nibbānic* Bliss" can be experienced in this life! The way to get there is to become a *Sotāpanna* and diligently practice *Satipaṭṭhāna*/*Ānāpānasati* (practically the same; *Satipaṭṭhāna* is a longer systematic version.) . I will write more in the coming months.
- Understanding "Paṭicca Samuppāda During a Lifetime" is critically important; also see "Paṭicca Samuppāda in Plain English."

Unimaginable Harm Inflicted by *Mahāyāna* Buddhism

© 2026 Lal A. Pinnaduwage

13. The Buddha had prohibited even translating the *Tipiṭaka* to Sanskrit; see #13 of "Misinterpretation of Anicca and Anatta by Early European Scholars." However, *Theravāda bhikkhus* started learning Sanskrit during the peak of *Mahāyāna* in India.

- During that time, *Mahāyāna* (based on Sanskrit ***sutrās***) became so influential even in Sri Lanka that the *bhikkhus* at the *Theravāda* Center of *Mahāvihāra* in Anuradhapura had to take some controversial steps to stay relevant. One time, the *Mahāvihāra* was burnt to the ground by a King under the influence of the *Abhayagiri Vihāra*, which adopted *Mahāyāna* teachings; it was rebuilt later.
- Those details are discussed in the Introduction to "WebLink: PDF Download: The Path of Purification" by *Bhikkhu* Ñāṇamoli (BPS Pariyatti, 1999.) The pdf version of the complete book is available in the link provided; **the Introduction section extends from p. 36 to p. 111** and is a MUST READ for those who like to "dig in." I have separated the Introduction to a separate pdf that you can view/download: "WebLink: PDF Download: The-Path-of-Purification-Introduction."
- In the following, I present a few extractions from that Introduction section by *Bhikkhu* Ñāṇamoli.

A Few Highlights from the Introduction section by *Bhikkhu* Ñāṇamoli

14. **Starting at the bottom of p. 36 through the top of p. 38:** "Before dealing with those facts, however, and in order that they may appear oriented, it is worthwhile first to digress a little by noting how Pāli literature falls naturally into three main historical periods.

The early or classical period, which may be called the First Period, begins with the Tipiṭaka itself in the 6th century BCE and ends with the Milindapañhā about five centuries later. These works, composed in India, were brought to Sri Lanka, where they were maintained in Pāli but written in Sinhalese. By the first century CE, Sanskrit (independent of the rise of Mahāyāna) or a vernacular had probably displaced Pāli as the medium of study in all Buddhist "schools" on the Indian mainland. Literary activity in Sri Lanka declined and, it seems, fell into virtual abeyance between CE 150 and 350, as will appear below.

The first Pāli renascence was underway in Sri Lanka and South India by about 400 CE and was made viable by Bhadantācariya Buddhaghosa. This can be called the Middle Period. Many of its principal figures were Indian. It developed in several centers in the South Indian mainland and spread to Burma, and it can be said to have lasted till about the 12th century. Meanwhile, the renewed literary activity again declined in Sri Lanka till it was eclipsed by the disastrous invasion of **Magha** in the 11th century. [In 1214 **Magha** of the Kalingas invaded Sri Lanka with the help of thousands of such mercenaries, and he took control of the whole island. See "WebLink: britannica.com: The fall of Polonnaruwa."]

The second renascence, or the Third Period as it may be termed, begins in the following century with Sri Lanka's recovery, coinciding more or less with major political changes in Burma. In Sri Lanka, it lasted for several centuries, and in Burma for much longer, though India lost all forms of Buddhism about that time or soon after." (**My comment:** Unfortunately, Buddhaghosa only made the situation worse. He misinterpreted *Ānāpānasati* as "breath meditation" in his Pāli compilation, *Visuddhimagga*"; see "Buddhaghosa's Visuddhimagga – A Focused Analysis.")

On p. 46: "**In the first century CE, Sanskrit Buddhism ("*Hīnayāna*," and perhaps by then *Mahāyāna*) was growing rapidly and spreading abroad. The Abhayagiri Monastery would naturally have been busy studying and advocating some of these weighty developments while the Great Monastery had nothing new to offer:** (**Comment:** highlighting mine; note that *Bhikkhu* Ñāṇamoli specifically called the altered *Hīnayāna* "**Sanskrit Buddhism**") the rival was thus able, at some risk, to appear go-ahead and up-to-date while the old institution perhaps began to fall behind for want of new material, new inspiration, and international connections, because its studies being restricted to the orthodox presentation in the Sinhalese language, it had already done what it could in developing Tipiṭaka learning (on the mainland Theravāda was doubtless deeper in the same predicament). Anyway, we find that from the first century onwards, its constructive scholarship dries up, and instead, with the reign of King Bhātika Abhaya (BCE 20–CE 9), public wrangles begin to break out between the two monasteries. This scene indeed drags

© 2026 Lal A. Pinnaduwage

on, gradually worsening through the next three centuries, almost bare as they are of illuminating information. King Vasabha's reign (CE 66–110) seems to be the last mentioned in the Commentaries as we have them now, from which it may be assumed that soon afterward, they were closed (or no longer kept up), nothing further being added. Perhaps the Great Monastery, now living only on its past, was itself getting infected with heresies. But without speculating on the immediate reasons that induced it to let its chain of teachers lapse and to cease adding to its body of Sinhalese learning, it is enough to note that the situation went on deteriorating, further complicated by intrigues, till in Mahāsena's reign (CE 277–304) things came to a head.

- **The excerpts end here.**

15. Note that *Abhayagiri* (which readily adopted *Mahāyāna* concepts) had been a rival to the *Theravada* Center of *Mahāvihāra* (**Great Monastery** in the above quote) for a long time.

- Reading the whole Introduction section (pp. 36-111) is necessary to get a good idea.
- Also, note that the periods mentioned in Conze's book (and also in other sources like Wikipedia) can vary. The first written historical record was in the Sinhalese *Mahāvamsa*, compiled around 450 CE. **Thus, there are many "unverified historical accounts" up to at least 400 CE.**

True Teachings Must Be Pursued by Those Interested

16. After spending several years on internet forums trying to explain the glaring contradictions with current "mainstream Buddhism," I recently realized that such "engagements" are stressful, a hindrance to my progress, and also can be harmful to those who are on the "other side" (believing their interpretations are correct.) I will focus on posting on this website and not get involved in any "debates." Buddha Dhamma cannot be understood by engaging debates; it is fruitless to engage in debates. My only regret is not realizing it sooner.

- It is up to each person to decide which version is correct. My responsibility is to present my understanding to the best of my ability.
- How can someone decide which version is correct? As the Buddha pointed out, anyone should be able to figure that out by checking for consistency within the three *Piṭakas*: *Sutta*, *Vinaya*, and *Abhidhamma.*
- Only the Pāli *Tipiṭaka* remains faithful to Buddha's teachings because it has remained in Pāli, unaltered for 2000 years. Most current translations have grievous errors, and many of my posts point them out. I even started a new section, "Elephants in the Room," to point out the apparent logical contradictions that even an intelligent child can see. Also see "Buddha Dhamma: Non-Perceivability and Self-Consistency."
- The sequel to the current post: "Anicca, Dukkha, Anatta – Distortion Timeline."

14.3 Methods of Delivery of Dhamma by the Buddha

December 12, 2015

1. Buddha Dhamma is undoubtedly the most complex "theory" in the world. It is truly amazing that such a deep philosophical doctrine has survived over 2500 years.

- However, we can be confident that the pure Dhamma still survives, because the three baskets of *sutta, vinaya,* and *abhidhamma* were written down in 29 BCE when there were still numerous *Arahants* were present.
- After about 100 - 200 CE, people started translating the *Tipiṭaka* into *Sanskrit* and also the *Mahāyāna* sect started writing their own *suttā* in *Sanskrit*; see, "Historical Timeline of Edward Conze."

2. Another important point to remember is that there is no single discourse in which the Buddha has drawn together all the elements of his teaching and assigned them to their appropriate place within some comprehensive system; see, "Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa."

- Therefore, the same material was delivered in a variety of different ways over the 45-year "ministry" of the Buddha. If some mistakes were made in the transmission of one of the *suttā* or discourses, that would become apparent when compared with the numerous other discourses or the *Abhidhamma*.

3. The Buddha tailored his discourses to his audience at hand. Thus his teachings that have been transmitted encompass a broad spectrum, ranging from one-to-one conversations with people who had particular questions in mind to long discourses to audiences consisting of groups with wide-ranging mental capabilities.

- If the Buddha realized that it was not fruitful to explain a deep concept to an individual, he remained silent. One example cited is Buddha's silence when a certain wanderer named Vacchagotta asked him whether there was an *Atman* or *āthma* (permanent soul) or not. Even though Buddha had clearly explained in *Paṭicca Samuppāda* that the concept of a lifestream with changing "*gathi*," in this case, he remained in silence when Vacchagotta asked him the question twice. Vacchagotta then left.
- After Vacchagotta left, Buddha's personal attendant, Ven. Ānanda, asked him why Buddha did not explain the concept that it is not correct to say "there is no soul" or "there is a soul" to Vacchagotta. The Buddha told Ānanda that he did not think Vacchagotta was mentally capable at that time to understand the concept, and that he did not want to confuse him. See the post, "What Reincarnates? – Concept of a Lifestream" for the correct explanation.
- It turned out that Vacchagotta later became a disciple and even attained *Nibbāna* through his efforts.

4. Other times, he would enunciate invariable principles that stand at the heart of the teaching: for example, *Abhidhamma* is a complete description of the working of the mind. The Buddha delivered this *Abhidhamma* material in summary form to his chief disciple, Ven. Sāriputta, and it was Ven. Sāriputta and his followers who expanded that summary to the form that we have today in the *Tipiṭaka*; see, "Abhdhamma – Introduction."

- But in most cases, instead of trying to provide the most thorough and intellectually deep answers, he tried to find the best way to steer people to the truth according to their mental capabilities. Some recent books have misrepresented such isolated one-to-one correspondence as indications that some fundamental issues have not been addressed by the Buddha. They are probably unaware that such questions have been answered in other *suttā*. I will point such instances as they come up in other posts.

Next, "Misconceptions on the Topics the Buddha "Refused to Answer"", …..

14.4 Misconceptions on the Topics the Buddha "Refused to Answer"

Revised January 25, 2019; March 26, 2021; re-written October 9, 2022

The "Unanswered Questions"

1. Some say that the Buddha refused to answer a set of questions; see "WebLink: en.wikipedia.org: The unanswered questions." According to that article and others, the four questions that the Buddha did not answer are:

1. Is the world eternal?
2. Is the world finite?
3. Is the "self" identical to the body?
4. Does *Tathāgata* (Buddha/*Arahant*) exist after death?

- Buddha did provide answers to those questions. But the answers depend on what one understands by the words "*loko*" (the world) and "*jīvaṁ*" (life.)

Buddha's Method of Answering Questions

2. Buddha's main concern at any given instance was to provide an answer that the audience at hand was able to comprehend.

- If the correct answer had befuddled the audience, he remained silent on that question. There are some *suttā* with such accounts.

3. A good example is when a monk named Māluṅkyaputta came to the Buddha and asked several questions regarding the universe and stated that he would leave the order if the Buddha refused to answer them; see "WebLink: suttacentral: The Shorter Discourse to Māluṅkyaputta (MN 63)."

The Buddha told Māluṅkyaputta, "Suppose Māluṅkyaputta, a man is wounded by a poisoned arrow, and the friends and relatives bring him to a surgeon. Suppose the man should then say: 'I will not let this arrow be taken out until I know who shot me; whether he is a Ksatriya or a Brahmana or a Vaisya or a Sudra (i.e., which caste); what his name and family may be; whether he is tall, short, or of medium stature; whether his complexion is black, brown, or golden; from which village, town, or city he comes. I will not let this arrow be taken out until I know the kind of bow shot me; the kind of bowstring used; the type of arrow; what sort of feather was used on the arrow, and with what kind of material the arrow was". Māluṅkyaputta, that man would die without knowing any of these things. Even so, Māluṅkyaputta, if anyone says: 'I will not follow the holy life under the Blessed One until he answers these questions such as whether the universe is eternal or not," he would die with these questions unanswered by the Blessed One."

4. However, other *suttā* provided the answers, or they are inherent in the doctrine itself.

- For example, the answer to the fourth question should be evident to anyone who has understood the primary goal of an authentic Buddhist: "to stop the rebirth process"; see "Four Noble Truths – Suffering and Its Elimination."

5. The Buddha seems to have followed four ways of treating questions:

i. Should answer some directly,

ii. others should be answered by way of analyzing them,

iii. counter-questions should answer some others, and

iv. put aside some since they serve no purpose.

- This is stated in the "WebLink: suttacentral: *Pañhabyākaraṇa Sutta* (AN 4:42)."

© 2026 Lal A. Pinnaduwage

- As mentioned in the above section, depending on the audience, he chose the method that he deemed appropriate.

Answers According to Mundane Meanings

6. Nowadays, the words "*loko*" and "*jīvaṁ*" are taken as "the world out there/cosmos" and "self," as Wikipedia article of #1 indicates. Here, the short answers are: Yes; No; It is not correct to say there is a "self" or "no-self"; No.

The answers to the first two questions are in several *suttā*, but mainly in the *Aggañña Sutta* (DN 27). An introduction to that *sutta* is in "Buddhism and Evolution – Aggañña Sutta (DN 27)."

- As you can see in that post, the Buddha's version sharply contrasts the current scientific understanding. For example, Earth was exclusively populated by humans who had subtle, invisible bodies in the beginning. This is the reverse of the currently adopted "theory of evolution" in science.
- However, as pointed out in that post, Buddha's version had survived previous scientific theories. I have no doubts that further scientific discoveries will confirm Buddha's version; also see "Dhamma and Science – Introduction."

7. Think about the fact that starting with the Greek philosophers at the time of the Buddha (a coincidence), Western science took over 2500 years to reach the current level of understanding of the universe.

- Even two hundred years ago, the scientific understanding was limited to the Solar system and nothing beyond that. Now we know that there are billions of galaxies, each with billions of stars (most of which have planetary systems like our Solar system) and that all this started with the big bang.
- This slow transition took the genius and courage of people like Galileo, who sometimes sacrificed their lives to bring out the truth.
- But the Buddha knew all about the universe and how the mind worked 2500 years ago!

8. Buddha has explained that both theories of a "self" and "no-self" are wrong. That is discussed in detail in many *suttā;* see, for example, "What Reincarnates? – Concept of a Lifestream" and "Anattā – A Systematic Analysis."

The Buddha's following answer illustrates the urgency with which he asked the followers to "follow the path" diligently instead of wasting valuable time on metaphysical questions.

9. Buddha's perspectives on many issues ranging from the working of the mind to those on the universe, are apparent in his teachings on *Abhidhamma* (and also in some main *suttā*, such as the *Aggañña sutta*). Fundamental aspects of the universe (infinite in space and time) are inherent in the doctrine.

- For example, his teachings are based on cause and effect (principle of causality). There can be no effects without prior causes. This is the opposite of the "Creator model," which requires a Creator of the world. The causality principle NECESSARILY requires that there can be no beginning!
- Those principles are embedded in the teachings, but the Buddha avoided giving answers to specific questions, especially from individuals, because it would have confused those people.

Answers According to "Buddhist Meanings"

10. In most cases, by "*loko*" (and also "*sabba*" or "all,") the Buddha meant "one's world" and NOT the conventional meaning that scientists use for the "world out there" with innumerable stars and planets.

- One's world is the five aggregates. That is all each "person" has ever experienced. But there is no "person" that "travels the rebirth process." Each existence arises depending on causes and conditions (*Paṭicca Samuppāda*.)

© 2026 Lal A. Pinnaduwage

- The Buddha has given clear answers based on the above in "WebLink: suttacentral: *Sassatadiṭṭhi Sutta* (SN 24.9)" and "WebLink: suttacentral: *Asassatadiṭṭhi Sutta* (SN 24.10)." **The Buddha describes the five aggregates (*rūpa, vedanā, saññā, saṅkhārā, viññāṇa*) as the "*loka*."**
- The first position ("*loka*" is eternal) is *sassata diṭṭhi* and the second position is *uccheda diṭṭhi.*
- **Note:** The translator (of the English versions in the links) incorrectly translated "*loko*" as "cosmos," the mundane meaning we discussed earlier. Also, he has truncated the five aggregates in the second *sutta* and the following *suttas*. The complete versions are there in the *Buddha Jayanthi Tipiṭaka* Edition.

11. The following two *suttas* address the issue of whether "*loka*" is infinite or not: "WebLink: suttacentral: *Antavā Sutta* (SN 24.11)" and "WebLink: suttacentral: *Anantavā Sutta* (SN 24.12)."

- The two *suttas* following that "WebLink: suttacentral: *Taṁjīvaṁtaṁsarīraṁ Sutta* (SN 24.13)" and "WebLink: suttacentral: *Aññaṁjīvaṁaññaṁsarīraṁ Sutta* (SN 24.14)" state that it is not correct to say either life (*jīva*) is the same as the body (*sarīra*) or not.
- Here, those with *uccheda diṭṭhi* believe that life (*jīva*) is associated with the physical body (*sarīra*) in this life. When the body dies, that is the end of *jīva.*
- Those with *sassata diṭṭhi* refer to *jīva* as a "lifestream that continues without end" because it has a permanent entity (*ātman*) associated with it.

12. There are four more *suttas*, "WebLink: suttacentral: *Hotitathāgato Sutta* (SN 24.15)" through "WebLink: suttacentral: *Nevahotinanahotitathāgato Sutta* (SN 24.18)" stating that it is not correct to take those positions on the "status of a Buddha/*Arahant*" after *Parinibbāna.* That is because we cannot express anything about *Nibbāna* in the terminology of "this world."

- *Mahayanists* believe that *Buddha/Arahants* still exist in this world of 31 realms. That is the wrong view of the first *sutta* in the four *suttas*.
- The other three wrong views arise because of not understanding the following fact. Once attaining *Parinibbāna,* the "status" of Buddha/*Arahants* cannot be expressed with the vocabulary of "this world of 31 realms." We can only say that Buddha/*Arahants* will not be reborn in this world.

14.5 Misinterpretations of Buddha Dhamma

Revised October 5, 2016; rewritten February 27, 2023

Misinterpretation of Buddha Dhamma (Buddhism) started with the emergence of *Mahāyāna* in India and was accelerated by the commentaries of Buddhaghosa.

1. After Emperor Asoka's reign [WebLink: en.wikipedia.org: c. 304 – 232 BCE], no further steps were taken to hold back the inevitable *Brahminic* influence on Buddhism in India. Buddhism went through a gradual decline in India (despite or even because of the resurgent philosophical activity led by Nagarjuna, Asanga, Vasubhanudhu, and others around the beginning of the first millennium) and virtually disappeared from India during the first millennium.

2. The *Mahāyāna* version of Buddhism started with the works of Nagarjuna [WebLink: britannica.com: 2nd century C.E. or WebLink: en.wikipedia.org: ca. 150–250 C.E.], who, in all likelihood, had the best intentions for promoting Buddhism (even though he was naive enough to assume that Buddha Dhamma can be refined for the "new ages").

- These refinements became significant when WebLink: D. T. Suzuki's books were written in the early 1900s, and the original teachings were severely distorted. This is why I am so obsessive about ensuring my essays are compatible with Buddha's original teachings.

3. All these distortions in both *Mahāyāna* and Theravada versions have their origins in various philosophers (such as Nagarjuna and Buddhaghosa) trying to interpret Buddha Dhamma in terms of mundane concepts.

- However, as pointed out in many posts on this website (see #8 below), it is easy to point out the inconsistencies with such mundane interpretations by Nagarjuana, Buddhaghosa, and others, especially with the evidence gained by the scientific advances made during the past few hundred years.
- And such scientific evidence and those that are yet to be discovered will only confirm the pure Dhamma that stays intact in the *Tipiṭaka* to the day, as also pointed out in that post.

4. The *Tipiṭaka* (Pāli Canon) has the correct teachings of the Buddha. However, it is in a condensed form fit for listening, retention, recitation, memorization, and repetition – the five major elements in oral transmission.

- Commentaries were composed to explain condensed versions, especially in some deep *suttas*. Even though many of the original commentaries ("*Sinhala Atthakata*") have been lost, three commentaries compiled by *Arahants* at the time of the Buddha are still there with the *Tipiṭaka*: *Paṭisambhidāmagga*, *Petakopadesa*, and *Nettippakarana*. See "Preservation of the Buddha Dhamma."
- This is a critical point. For example, the Buddha orally delivered the main *Suttas* over many hours; the *Dhamma Cakka Pavattana Sutta* was delivered to the five ascetics over several days. For easy transmission, these discourses were SUMMARIZED in *Magadhi* (and that particular format of "lining up" was termed Pāli); see "Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa."
- Each line, sometimes even a word in a *Sutta,* needs a further explanation; see "Satipaṭṭhāna Sutta – Structure" and follow-up posts. Such "explanatory texts" or "commentaries" were initially written in *Sinhala* and were called "*Sinhala Atthakata*."

5. Commentaries in *Sinhala* accumulated for centuries, and in the fourth or fifth century CE, these commentaries were translated to Pāli **(and edited with his ideas incorporated)** by Buddhaghosa. **Subsequently, most of the original *Sinhala* commentaries were lost, and today we only have the edited summaries of Buddhaghosa, where he incorporated his *Vedic* concepts.**

- Among the "tainted" commentaries to the *Tipiṭaka*, those on the *Abhidhamma* are dominated by the three commentaries of Buddhaghosa: (i) the Atthasālinī, "The Expositor," the commentary to the *Dhammasaṅgaṇī*, (ii) the *Sammohavinodani*, "The Dispeller of Delusion," the commentary to the *Vibhaṅga*, and (iii) the *Pañcappakaranatthakatha*, the combined commentary to the other five treatises in the *Abhidhamma*.

© 2026 Lal A. Pinnaduwage

- But it must be remembered that Buddhaghosa wrote those commentaries with his ideas as a former Hindu Brahmin.
- **The original *Tipiṭaka* remains unaltered, including those three original commentaries mentioned in #4 above.**

6. Besides writing those commentaries on the *Tipiṭaka* while he was in Sri Lanka, Buddhghosa also wrote the *Visuddhimagga* (The Path of Purification) around 430 CE, wrongly considered an essential treatise on *Theravada* doctrine.

- I have pointed out many problems with Buddhaghosa's writings – including *Visuddhimagga* — at this site. See "Buddhaghosa and Visuddhimagga – Historical Background" and "Buddhaghosa's Visuddhimagga – A Focused Analysis."
- The most common problems include misinterpretation of *Ānāpānasati Bhāvanā* as "breath meditation"; see, "7. What is Ānāpāna?" and "Mahā Satipaṭṭhāna Sutta."
- He also incorporated *anariya* versions of *kasiṇa* meditations. In *Ariya* (or true Buddhist) meditations, the object of meditation is *Nibbāna,* not a mundane object like a *kasiṇa* object.

7. This is a critical issue since most current *Theravada* institutions teach mainly the works of Buddhaghosa since those works are supposed to be reliable summaries of the teachings in the *Tipiṭaka*. Therefore, it is good to have the works of Buddhaghosa reviewed extensively.

- I will point out the most critical misrepresentations on this website. The Dhamma that I present here is, in my opinion, the correct interpretation of the *Tipiṭaka*. I hope you will come to that conclusion after carefully examining the material.
- More details can be found in "Incorrect Theravada Interpretations – Historical Timeline" and other posts in the "Historical Background" section.

8. Another critical point is that the Buddha advised not translating the *Tipiṭaka* word-by-word into any other language. See #5 of "Preservation of the Buddha Dhamma."

- Of course, this tradition was broken with the emergence of the *Mahāyāna* version of Buddhism just 500 years after the Buddha. *Vedic* teachings highly influenced *Mahāyāna* Buddhism and both those highly influenced Buddhaghosa. That is how incorrect translations of *anicca* as "impermanence" and *anatta* as "no-self" got incorporated into *Theravada* Buddhism. See "Misinterpretation of Anicca and Anatta by Early European Scholars."
- The problems with such incorrect translations can be easily seen because they lead to inconsistencies with the *Tipiṭaka.* The following section discusses these critical issues: "Elephants in the Room."
- However, the teachings of the Buddha are entirely self-consistent. Those original teachings are in the *Tipiṭaka* and remain unaltered, including those three original commentaries mentioned in #4 above. See "Buddha Dhamma: Non-Perceivability and Self-Consistency."

© 2026 Lal A. Pinnaduwage

14.6 Preservation of the Buddha Dhamma

Revised October 28, 2017; November 11, 2017; January 9, 2019; re-written January 26, 2020; (revised June 19, 2021;) re-written June 25, 2021; revised August 29, 2022; November 19, 2022; revised October 5, 2024

Tipiṭaka – The Pāli Canon

1. After the passing away of the Buddha, his teachings were handed down verbally from one generation to the next over three to four hundred years. Preservation in the written form took place 2000 years ago.

- *Tipiṭaka* was composed in a form suitable for easy verbal transmission, often in SUMMARY form. See, "Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa." That is why it survived almost entirely in content over this long period.
- It was written down in Matale, Sri Lanka, at the turn of the first century, 2000 years ago. See "Welcome to Aluvihāra Rock Cave Temple" for information about where the *Tipiṭaka* writing occurred.
- The other early written Buddhist documents are from Gandhāra in modern northwestern Pakistan; see "The Buddhist Literature of Ancient Gandhāra" by Richard Salomon (2018.) However, those do not provide a complete version of the *Tipiṭaka*; see p. 83 of the book.
- All other documents in Chinese, Tibetan, etc., date later and are derived from the Pāli *Tipiṭaka*.

Initial Oral Transmission

2. The Buddha's discourses were said to have been delivered in the *Māgadhi* language.The written form was called Pāli. But Pāli does not have its script, so it was written down with Sinhala script.

- **That provides a strightforward way of sorting out the Mahāyāna literature, written in Sanskrit and never written in Pāli. Mahāyānic philosophers wrote all the Sanskrit *suttā* in Sanskrit.**
- Around the turn of the first millennium, translations of the *Tipiṭaka* to Chinese and Tibetan also took place. The original manuscripts in Pāli can be expected to contain most of the Buddha's original discourses.

3. Today, it is hard to fathom (especially for Westerners) that such accuracy would be possible in verbally transmitted material.

- However, we need to understand the background traditions and the monks' determination over thousands of years that helped preserve most of the original teachings.
- Even today, some people have memorized large sections of the *Tipiṭaka*, especially in Myanmar (formerly Burma). In Myanmar, there are special examinations to test memorization. See "WebLink: myanmarnet.net: Tipitakadhara Sayadaws of Myanmar (Burma) in Five Decades." Also, see "WebLink: dhammadharo: Memorizing the Tipitaka."
- During oral transmission, groups of *bhikkhus* memorized (overlapping) sections of the *Tipiṭaka*. Then during a *Sangāyanā* (Buddhist Council), they all got together and compared each other's versions to ensure compatibility.

It Took Three Councils to Finalize the *Tipiṭaka*

4. A major reason for the assembly of the First Buddhist Council within three months of the Buddha's *Parinibbāna* — around 480 BCE — was to organize the vast material.

- Within the next two hundred years, two more Councils were held to recite and verify the teachings and to finalize the *Tipiṭaka* in three broad categories ("*ti*" + "*piṭaka*" or "three baskets"). The second was held about a century after the first one.

© 2026 Lal A. Pinnaduwage

- The third was held in 250 BCE at Pataliputra under the patronage of King Asoka. At this Council, the "three baskets" were completed with the finalization of the *Abhidhamma Piṭaka*; see #15 below.
- This completed *Tipiṭaka* was written down in 29 BCE at the Fourth Buddhist Council in Matale, Sri Lanka. This was the last Council attended ONLY by Arahants. Thus, we can be assured of its authenticity. Since Pāli does not have its script, it was written in the Sinhala language.

The authenticity of the *Tipiṭaka*

5. Another critical point is hidden in the history of the *Tipiṭaka*. Even up to the 20th century, the whole *Tipiṭaka* was written on specially prepared ola (palm) leaves. They typically deteriorate over 100 years or so and need to be rewritten. Even though that was a very labor-intensive process (about 60 large volumes in the modern printed version of the *Tipiṭaka*), it served another essential purpose.

- Sinhala language (both spoken and written) changed over the past 2000 years. **The need to re-write it every 100 or so years made sure that they took account of the changes in the Sinhala script.** Of course, the Pāli language has not changed.
- The following video gives an idea about the preparation process and the tools used to write:

  WebLink: youtube: Ola Leaf manuscripts

- European Civil Servants saved existing Pāli manuscripts of the *Tipiṭaka* in the 1800s. See "Misinterpretation of Anicca and Anatta by Early European Scholars." The original documents on Palm leaves are still kept at the British Museum:

  WebLink: youtube: Sinhalese Palm Leaf Manuscripts Digitisation | The University of Manchester John Rylands Library

Most *Suttā* Are Condensed Versions of the Discourses

6. **A critical point here is that, in many cases, a *sutta* is a CONDENSED version of a discourse.** For example, the *Dhamma Cakka Pavattana sutta* was delivered to the five ascetics overnight. Imagine how many written pages would be if written verbatim! Yet, it is summarized in a few pages. The same is true for all the deeper *suttā*. Otherwise, transmitting all those thousands of *suttā* would have been impossible.

- The Buddha delivered most of his discourses in the *Māghadhi* (*māghadhi* = "*maga*" + "*adhi*" or Noble path) language. *Tipiṭaka* was written in Pāli with Sinhala script. Pāli is a version of *Māghadhi* suitable for writing down oral discourses in a summary form suitable for transmission.

- Each Pāli word is packed with a lot of information, and thus commentaries (called "*Attha Kathā*") were written to expound on the meaning of critical Pāli words and to explain the key phrases in the *suttā*.

Importance of the Commentaries

7. **Pāli *suttā* are not supposed to be translated word-by-word.** see, "Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa." The *Tipiṭaka* was meant to be used with the commentaries. Commentaries compiled by *Arahants* at the time of the Buddha are still there with the *Tipiṭaka*: *Paṭisambhidāmagga*, *Petakopadesa*, and *Nettippakarana*. Venerable Mahinda started compiling Sinhala Commentaries 200 years later.

- Sadly those Sinhala commentaries were burned during the Anuradhapura era; see, "Incorrect Theravāda Interpretations – Historical Timeline."
- Fortunately, three original commentaries prepared by the formost disciples of the Buddha (Ven. Sāriputta, Ven. Kaccayana, etc.) during the Buddha's time were included in the *Tipiṭaka* (in the *Khuddhaka Nikāya*) and thus survived. The current revival of pure Dhamma by the Waharaka *Thero* in

© 2026 Lal A. Pinnaduwage

Sri Lanka was partially due to his perusal of these three documents (*Paṭisambhidāmagga*, *Petakopadesa*, and *Nettippakarana*).

8. With the loss of most of the commentaries and the non-prominence of the surviving three commentaries mentioned above, people started translating the *Tipiṭaka* word by word, a practice that continues to date: "Elephant in the Room" – Direct Translation of the Tipiṭaka." The problem was compounded by the increasing usage of the Sanskrit language beginning around the first century CE.

- For example, "*anicca*" was first translated to Sanskrit as "*anitya*," and then the same Sanskrit word "*anitya*" was adopted as the Sinhala translation for *anicca*. Similarly, "*anatta*" was translated to Sanskrit as "*anāthma*" and again adopted as the Sinhala word for "*anatta*." **This has prevented millions of people from attaining *Nibbāna* all these years;** see "Anicca, Dukkha, Anatta – Wrong Interpretations."
- Another good example is the translation of *Paṭicca Samuppāda* to Sanskrit as *Pratītyasamutpāda*; see, "Paṭicca Samuppāda – "Pati+ichcha" + "Sama+uppāda"" and the Wikipedia article, "Pratītyasamutpāda."
- It is NOT POSSIBLE to translate some critical Pāli words to Sanskrit, English, or any other language without losing their true meaning. **In many cases, I prefer to keep the original words (e.g., *anicca*, *anatta*, *taṇhā*) and explain their meanings.**

Buddha Prohibited Translation of the *Tipiṭaka* to Sanskrit

9. The Buddha foresaw this and warned not to TRANSLATE the *Tipiṭaka* to Sanskrit. There were two *Brahmins* by the names of Yameḷa and Kekuṭa who were experts on the *Vedic* Texts; they became *bhikkhus* and asked the Buddha whether they should translate the Pāli *suttā* to Sanskrit.

- The Buddha admonished them that Sanskrit was a language with musical overtones developed by the high-minded *Brahmins*. Thus, it was impossible to convey the true meanings of *Māghadhi* (Pāli) words in Sanskrit; see WebLink: tipitaka.fandom.com/wiki: Chulavagga 5.33. He admonished them not to translate his teachings to Sanskrit.
- In the Sutta Central English translation, the Pāli word for *Sanskrit* (*chandasa*) is mistranslated as "metrical"; see "WebLink: suttacentral: 15. Minor matters (Khuddaka)," The relevant Pāli text starts as, "*Tena kho pana samayena yameḷakekuṭā nāma…*".

10. **One grave problem today is that many people try to translate a given *sutta* word by word to other languages. Thus the Dhamma *Cakka Pavattana sutta* that we mentioned above is translated into a few pages.**

- For a comprehensive translation of that *sutta*: "Dhammacakkappavattana Sutta."
- **That is why most of the existing translations are inadequate at best and erroneous in most cases; see,** "Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa."

Buddhaghosa's Commentaries

11. Finally, just before the burning of the Sinhala commentaries, Buddhaghosa translated **and edited** those commentaries back to Pāli in his *Visuddhimagga* and other books.

- Even though he made many errors (like including *kasiṇa* meditation and substituting the *ānāpānasati bhāvanā* with "breath meditation"), he had used the words *anicca* and *anatta* in the Pāli version of the *Visuddhimagga;* see, "Buddhaghosa and Visuddhimagga – Historical Background" and"Buddhaghosa's Visuddhimagga – A Focused Analysis."
- Thus the incorrect translations of the words "*anicca*" (as "impermanence") and "*anatta*" (as "no-self") may have happened more recently; see, "Misinterpretation of Anicca and Anatta by Early European Scholars."

© 2026 Lal A. Pinnaduwage

- Now, let us systematically review the timeline of the *Tipiṭaka.*

Timeline – First Buddhist Council

12. That first Buddhist council was held three months after the *Parinibbāna* at Rājagaha, the capital of Māgadha.

- Shortly after the Buddha passed away, Ven. Mahakassapa, the *de facto* head of the Saṅgha, selected five hundred monks, all Arahants, to meet and compile an authoritative version of the teachings.

13. The *Cullavagga*, one of the books of the Pāli *Vinaya Piṭaka*, gives an account of how the authorized texts were compiled at the First Buddhist Council:

- Disciplinary matters were compiled based on Venerable Upāli's recitation of *Vinaya* in the *Vinaya Piṭaka*.
- Venerable Ānanda then recited "the Dhamma" or the *Sutta Piṭaka*, i.e., the discourses. Based on this recitation the *Sutta Piṭaka*, the Compilation of Discourses, was compiled (Venerable Ānanda was supposed to have an amazing memory and had memorized all the *Suttā* preached by the Buddha).
- All the *Arahants* present at the Council recited the *Abhidhamma*. Although they recited parts of it at these earlier Buddhist Councils, it was not until the Third Council that it became finalized to its present form as the third and final *Piṭaka* of the Canon.

Finalization of *Tipiṭaka* at the Third Council

14. The Moggaliputta-Tissa *Thero* compiled the proceedings of the Third Council in the Kathavatthu, which became part of the *Tipiṭaka* (Three Baskets). During the Third Council, Arahants compiled the final version of the *Tipiṭaka* (as available today). It finalized the *Abhidhamma Piṭaka* and added several books on the *Khuddhaka Nikāya*, and the *Kathavatthu*.

The composition of the *Tipiṭaka* is as follows:

1. The Vinaya Piṭaka is composed of five books: Major Offenses (*Prajika Pāli)*, Minor Offenses (*Pacittiya Pāli*), Greater Section (*Mahavagga Pāli*), Smaller Section (*Culavagga Pāli*), and Epitome of the Vinaya (*Parivara Pāli*).

2. The *Sutta Piṭaka* consists of five *Nikāyas*: *Digha Nikāya* (Collection of Long Discourses), *Majjhima Nikāya* (Collection of Middle-Length Courses), *Saṁyutta Nikāya* (Collection of Kindred Sayings), *Aṅguttara Nikāya* (Collection of Discourses arranged by a number), and *Khuddaka Nikāya* (Smaller Collection).

3. The *Abhidhamma Piṭaka* consists of the following categories: *Dhamma Saṅghani* (Classification of Dharmas), *Vibhanga* (The Book of Divisions), *Kathavatthu* (Points of Controversy), *Puggala Paññatti* (Description of Individuals), *Dhātukatha* (Discussion regarding Elements), *Yamaka* (The Book of the Pairs), and *Paṭṭhāna* (The Book of Relations). Venerable Moggaliputta Tissa COMPILED *Kathavatthu* at the Third Buddhist Council.

- That collection is the *Tipiṭaka* (Three Baskets) or the Pāli Canon that exists today.

Abhidhamma Piṭaka Finalized at the Third Council

15. The work on the *Abhidhamma Piṭaka,* started during the time of the Buddha by Ven. Sāriputta was not finalized until the Third Council. **The Buddha only taught the basic framework to Ven. Sāriputta.** It was completed over roughly 250 years by the lineage of *bhikkhus*, starting with Ven. Sāriputta. Of course, Ven. Sāriputta was one of the two chief disciples of the Buddha: While Ven. Moggallāna excelled in supernatural powers, Ven. Sāriputta excelled in Dhamma. He was only second to the Buddha in Dhamma knowledge.

© 2026 Lal A. Pinnaduwage

- The minute details on the structure of a *citta vīthi* (a series of *citta*) of 17 thought moments, with each *citta* lasting sub-billionth of a second, can be seen only by a Buddha. The Buddha described only the underlying principles to Ven. Sāriputta. Then Ven. Sāriputta and his group of *bhikkhus* (and their subsequent lineage) completed the monumental task of categorizing the Abhidhamma, starting with the fundamental entities.
- Bhikkhu Bodhi describes the origins of *Abhidhamma* in his book, "Comprehensive_Manual_of_Abhidhamma," (2000); see pp. 9-11.
- As I mentioned, compiling *Abhidhamma Piṭaka* (after the Buddha described it in summary form to Ven. Sāriputta) was not a trivial task. That is why it took 250 years to finalize that work. Anyone with even a little knowledge of *Abhidhamma* would realize that it must be the work of a Buddha. See the "Abhidhamma" section at puredhamma.net.
- **The *Abhidhamma Piṭaka* is fully consistent with the *Sutta Piṭaka*.** I would be happy to discuss any perceived inconsistencies.
- **However, it is not necessary to learn *Abhidhamma* to attain *magga phala*.** It is an additional tool for those who like to get into details. It is truly a joyful experience to "see" how phenomena can be explained at a deeper level.

Writing Down the *Tipiṭaka* at the Fourth Council

16. This enlarged Canon, completed at the Third Council, was committed to writing in Sri Lanka in the first century BCE (29 BCE) at the Aluvihara Monastery at the Fourth Buddhist Council. The material in Pāli was written down in the Sinhala language (Pāli does not have its script).

Bhikkhus wrote on palm leaves with styluses, a pointed steel dagger-like instrument, which scratched the letters into the soft leaves. Ink made from berries was rubbed over the whole page and gently removed so that only the indentations retained the color. It is said that *Tipiṭaka* was also written down on gold leaves. These could be entombed inside *stupās*; see, the Wikipedia article "Stupa"

Translation of the *Tipiṭaka* to Other Languages

17. It is to be noted that Theravāda Buddhism was brought to Burma and Thailand from Sri Lanka in the first century CE. Over the next two centuries, it diffused into adjoining countries of Laos and Cambodia and survived in its purity in those countries to the present day. (In Cambodia, the Khmer Rouge regime in the 1970s massacred most monks, and the Buddha Dhamma is virtually extinct).

- However, the Chinese and Tibetan versions of the *Tipiṭaka* seem to have come from India. The Tibetan version seems to have undergone many revisions/additions and, in some cases, is far removed from the original teachings.
- While the *Saṅgha* (with the aid of most of the kings) in Sri Lanka took pride and honor in keeping the teachings intact, Buddhism underwent many changes in India, China, Japan, and Tibet. It then finally disappeared altogether from India around 1200 CE.

14.7 "Tipiṭaka English" Convention Adopted by Early European Scholars – Part 1

February 8, 2020; added #13 (pronunciation guide) on July 23, 2020; August 25, 2022; October 14, 2022; May 22, 2023; April 10, 2024

Writing Pāli words with the Latin script uses a convention adopted by the British Government in 1866. Unlike in English, the letters have a "one symbol – one sound" character. I call it "Tipiṭaka English" to differentiate it from writing in "Standard English."

Background

1. Just three months after the Buddha's *Parinibbāna* (passing away), the First Buddhist Council (*Dhamma Saṅgāyanā*) occurred. The leading disciples of the Buddha realized the importance of organizing the teachings of the Buddha, which had accumulated over 45 years. Organizing the material into "three baskets" (*Tipiṭaka*) was completed only at the Third Council held 200 years after the *Parinibbāna* of the Buddha.

- The material in the *Tipiṭaka* was transmitted verbally from one generation to the next over roughly the first four hundred years. It was only at the Fourth Council that the *Tipiṭaka* was written down.
- The *Tipiṭaka* (or the Pāli Canon) was written down in Matale, Sri Lanka, at the turn of the first century, 2000 years ago. Pāli is a spoken language and does not have a script. The *Tipiṭaka* was written in the Sinhala script.
- See details in "Preservation of the Buddha Dhamma."

Writing Pāli Words in English – Different Convention

2. There are two specific issues in writing Pāli words in any language. Note that this does not include translation into **English**. It is about **transliterating** Pāli texts with the Latin (Roman) script. The Latin script is used here to **transliterate (not translate)** the Pāli text. This enables people who are familiar with the Latin script (like English speakers) **to read and pronounce Pāli words**.

- Pāli is a phonetic language, meaning words must provide original sounds. Many words have their meanings explicit in the way they sound. See "Why is it Necessary to Learn Key Pāli Words?"
- However, in "Standard English," the same letter combinations may yield different sounds. For example, "**th**" is pronounced differently in "**th**em" than in "**th**ief." Therefore, writing in "Standard English" will lead to problems writing Pāli words.
- The second issue is that Pāli words written in "Standard English" become very long. I see many Sri Lankans writing "*anicca*" as "*anichcha*" (අනිච්චin Sinhala) because that is how it is pronounced.
- We must adhere to the convention adopted by the Early Europeans (in the late 1800s) to have a standard pronunciation and to avoid words getting too long. First, let us discuss these two issues in some detail..
- Let us first address the "sound" issue.

English "th" Sound Depends on the Word

3. We know that "**th**" represents a different sound in the word "**th**em" than in "**th**ief."

- A **phoneme** is the smallest contrastive segment in a language. In other words, they are the smallest building blocks that make the difference between two words. The term ***digraph*** describes a combination of two letters representing only a single phoneme.

© 2026 Lal A. Pinnaduwage

- In words like them, father, and writhe, the ***digraph*** is **th (voiced),** and the **phoneme** is /th/. This is the "ද" sound in Sinhala, as shown below.
- On the other hand, in words like thief, Catholic, and both, the ***digraph*** is **th (voiceless)** and the **phoneme** is /th/. This is the "ත" sound in Sinhala.
- Don't worry about the above technical terms. **The point here is that one MUST be aware of the correct "Standard English" when pronouncing those English words.**
- That was one reason to adopt a new "*Tipiṭaka* English" convention. Now, let us discuss the second reason.

Pāli Words can become very long in "Standard English"

4. Now, let us see why the "Standard English" convention leads to long words written with the English (Latin) alphabet. Let us take a simple Pāli word, "***citta***." In the original *Tipiṭaka*, it was written as "චිත්ත" in Sinhala.

The "ch" sound in English is seen, for example, in "china" and "chain." It takes two English letters to produce the **"च"** sound. In the same way, the "ත" sound requires two letters, "th," in English as in "Theme" or "both."

- Therefore, in "Standard English," "චිත්ත" would be reproduced as "**chiththa**." As you can see, it would take eight letters instead of five in "citta."
- With more complex Pāli words, the corresponding "Standard English" reproduction would be cumbersome. **That seems to be the second reason for using a different "*Tipiṭaka* English" convention; see below.**

Evolution of "Tipiṭaka English"

5. When the early Europeans started writing the Pāli *Tipiṭaka* using the English alphabet (a Latin alphabet), they ran into the above two problems. They realized the necessity to represent the original sounds in an "unambiguous and efficient" way. To address the above issues, they adopted a new convention in the 1800s.

- We will call the convention they adopted "*Tipiṭaka* English."
- **That "*Tipiṭaka* English" convention is DIFFERENT from "Standard English."**

6. I came across an old book by James D'Alwis, published in **1870** (Ref. 1), that describes the historical process of cataloging the Pāli literature found in Sri Lanka (called Ceylon at that time.) The book is available on Amazon.

- The seed for the project was a request by a government agent in 1868 to the "Chief Translator to Government" to assist with a project in India to collect and compile Sanskrit literature.
- In 1869, the Chief Translator to the Government replied that nearly all Sanskrit manuscripts in Ceylon were "importations from India." He suggested initiating a similar effort to collect and compile the Pāli and Sinhalese manuscripts in Ceylon would be worthwhile.
- That proposal was approved in early 1870. James D'Alwis, who had done some work on Pāli/Sinhalese literature and Buddhism, was selected to collect and compile such manuscripts mainly from Buddhist temples ("*pansalas*.)"
- Mr. D'Alwis was a civil servant of the British Government at that time. At that time, there was a concerted effort by the English civil servants to recover and preserve all ancient literature that they came across in Asian countries. See "Background on the Current Revival of Buddhism (Buddha Dhamma)."
- Dr. Malalasekera's account confirms the above background in **Ref. 2**, pp. xv-xvii.

The Original Convention for "*Tipiṭaka* English"

© 2026 Lal A. Pinnaduwage

7. The goal was to collect all Pāli manuscripts and write them with the English (Latin) alphabet. The early work by Mr. D'Alwis followed (as quoted from p. xxviii of the book) "the system sanctioned by Government in the Minute, which is published in the Appendix."

- A full page in the Appendix contains the complete alphabet of the Sinhala language (and the corresponding English script adopted.) Download here: WebLink: PureDhamma Picture: Complete Orthography – Sinhala to English
- That page (on p. 234 of the book) has the Sinhala alphabet and the Latin letters adopted to represent those sounds (**adopted on August 28, 1866.)** That was the first version of the "*Tipiṭaka* English" convention. As we will see below, one more change was adopted based on a recommendation by D'Alwis.
- It may be difficult to read that page. The following is an enlarged section containing the consonants.

Consonants.

Gutterals ...	ක k	ඛ kh	ග g	ඝ gh	ඞ ṅ
Palatals ...	ච ch	ඡ chh	ජ j	ඣ jh	ඤ ñ

Sibilants ...	ස s	ශ s′	ෂ sh	හ h	

Download here: WebLink: jpg download: Pāli Words – Sinhala to English Script – Consonants

Consonants

Gutterals	කk	ඛkh	ගg	ඝgh	ඞṅ
Palatals	චch	ඡchh	ජj	ඣjh	ඤñ
Linguals	ටṭ	ඨṭh	ඩḍ	ඪḍh	ණṇ
Dentals	නt	ථth	දd	ධdh	නn
Labials	පp	ඵph	බb	භbh	මm
Semi vowels	යy	රr	ලl	ළḷ	වv
Sibilants	සs	ශs'	ෂsh	හh	

- Now, let us discuss some of the adopted conventions in "*Tipiṭaka* English."

Only "t" Represents the "න" Sound

8. The letter "න" in Sinhala **represents the sound "th" in theme or north. But the "*Tipiṭaka* convention" is to use "t."**

- Therefore, "theme" in "ordinary English" becomes "teme" in "*Tipiṭaka* English."
- The word "gati" is pronounced as "gathi," where **the sound "th" as in theme.** But the "*Tipiṭaka* English" convention is to write as "gati."
- The word "***Tipiṭaka*"** also starts with the "න" sound. In "Standard English," it would be "***Thipiṭaka.***"

© 2026 Lal A. Pinnaduwage

Anatta in "Standard English" would be "anaththa."

- Therefore, words become significantly shorter with the "*Tipiṭaka* English" convention. With more complex words with the "ch" and "th" sounds, the corresponding English words can become very long.

Only "d" Represents the "ද" Sound

9. Another is the "ද" sound, pronounced like "this." In "***Tipiṭaka* English," the letter "d" represents the "th" sound in "this" or "that."**

- For example, the Pāli word "දස" in "Tipiṭaka English" is "dasa." which needs to be pronounced like the "th" sound in "the" or "that."
- Of course, the word "dasa" appears in "dasa akusala" for "ten immoral deeds."
- More examples are sadda, *hadaya*, and *Deva.*

The "ච" Sound In the Above Table is With "ch"

10. It is interesting to see that the above Table (in #7) has the "ච" sound represented with "ch" as in "Standard English." **Thus the decision to use "c" to represent the "ච" sound was made later.**

- The text in D'Alwis's book represented that "mixed convention." On p. 136, for example, the name "Kacchchāna" appears. In modern texts, it is "Kaccāna."
- The word "vivicchati" (විවිච්ඡති in Sinhala) appears on p. 73 as "vivichchhati," where "ch" represents the "ච" sound and "chh" represented the "ඡ" sound. We can see why they decided to make that change too!
- By the time "The Dhammasangani" by Edward Müller came out in **1885** (Ref. 3), they had adopted the current convention to use "c" to represent the "ච" sound.

Current Convention – Only "c" Represents the "ච" Sound

11. For example, the letter "ච" frequently appears in Pāli verses, and it has the "ch" sound (as in chai tea). In "ordinary English," the Pāli word *anicca* (අනිච්ච) would be "anichcha." You can see why that would lead to very long words in English. I used to do that too, and I still see some Sri Lankans writing words that way.

- Therefore, in almost all cases, **a single English letter "c" represents the "ch" sound in "Tipiṭaka English."**
- Note that "chai tea" would be "cai tea" in "*Tipiṭaka* English"!

"*Tipiṭaka* English" Conventions Hold Everywhere

12. The "ත" sound is ALWAYS represented by "t," and the following are some examples we use often.

- Atta, Anatta, gati, sota, tanhā, tejo, Tilakkhaṇa, Tisarana, āyatana

The "ද" sound is ALWAYS represented by "d" as in the following:

- Hadaya, sadda, dosa, Deva, desanā, diṭṭhi, dukkha, dugati, pasāda

Finally, the "ච" sound is ALWAYS represented by "c" as in the following:

- Anicca, citta, cakkhu, cuti, paccayā, sacca, rūpāvacara, cetasika, cetanā

The above words are pronounced in the audio below:

14.8 "Tipiṭaka English" Convention Adopted by Early European Scholars – Part 2

February 15, 2020; revised on July 23, 2020 added #12 (pronunciation guide); August 25, 2022

Introduction

1. In the previous post, we discussed the reasons for adopting a "*Tipiṭaka* English" convention to write Pāli words by European scholars in the 1800s. It is necessary to read that post first: "'Tipiṭaka English' Convention Adopted by Early European Scholars – Part 1."

- As we discussed, those early European scholars realized the importance of the need to preserve the "Pāli sounds" as much as possible. Of course, the other requirement was to keep the corresponding English version short.
- In that post, we discussed the adoption of "**t**," "**d**," and "**c**" to represent the "ත," "ද," and the "ච" sounds in Pāli.
- Here we will continue that discussion. The "**ṭ**" (with a "dot" underneath the "t") represents the "ට" sound in Pāli.
- Then there are **aspirated** sounds "**th**", "**dh**", "**ch**", and "**ṭh**" respectively for the "**t**," "**d**," "**c**," and "**ṭ**" sounds. Some of those "aspirated words" represent "emphasized versions" of the "unaspirated words." I will explain it below.

We Need to Be Familiar With the "*Tipiṭaka* English" Convention

2. As I mentioned in the previous post, the above convention went into effect before **1900**. Thus all Pāli documents compiled by the Pāli Text Society are consistent with this convention.

- The **Pāli texts (with the English alphabet)** available on the Sutta Central website are directly from the Pāli Text Society. **Those texts are accurate.** For example, here is the "WebLink: suttacentral: *Dhammacakkappavattana Sutta* (SN 56.11)" that was the first discourse delivered by the Buddha.
- It is an excellent idea to examine that *sutta* (and try pronunciations of those Pāli words) with the guidelines provided in my two posts on the "*Tipiṭaka* English" Convention.
- Many of my posts at the puredhamma.net website are not entirely consistent with the "*Tipiṭaka* English" Convention, but I will try to make them compatible gradually. I have been trying to "upgrade" several weekly posts in recent months.
- Of course, as I have repeatedly pointed out, many **English translations** of Pāli words at the Sutta Central site are **not correct.** Examples include *anicca*, *anatta*, *Ānāpāna Bhāvanā,* and *viññāṇa*. See, for example, "Misinterpretation of Anicca and Anatta by Early European Scholars."
- Now let us continue introducing the "*Tipiṭaka* English" convention.

Only "ṭ" Represents the "ට" Sound

2. The "ට" sound in Pāli is the "ta" sound in English, as in "**T**om." The "ට" sound in Pāli is ALWAYS represented by "**ṭ.**" **Note the "dot" underneath the "t."**

- Some examples are *Paṭicca, paṭigha, paṭiloma, paṭisandhi, paṭipadā.*
- In the previous post, we saw that the "ත" sound is ALWAYS represented by "**t**" (without the "dot" underneath the t.)
- The word ***T**ipiṭaka* is an excellent example of both sounds, the "**t**" and the "**ṭ**." I hope you can catch the difference in the audio in #4 below.

© 2026 Lal A. Pinnaduwage

Aspirated Versions

3. Now, let us consider the "aspirated versions" of those four sounds we have discussed. We must remember that we are dealing with "*Tipiṭaka* English" and NOT "Standard English."

- **The aspirated version accompanies a forceful expulsion of air.** If you hold a thin piece of paper in front of the mouth, it should move when you make an "aspirated sound."
- The following video explains that for English words. But it is the same idea.

  WebLink: youtube: Aspirated sounds

Putting Emphasis on "ට" Sound to Make the "ඨ" Sound

4. The "**ṭ**" ("ට") sound, when aspirated with "**ṭh,**" becomes the "ඨ" sound. It is not that common to have the "**ṭh**" by itself. An example is ***ṭh**apetvā*, meaning "placement."

- In most cases, the "**ṭ**" sound is in a word just before the "**ṭh**" sound as in *aṭṭha* (අට්ඨfor number 8.)
- Here are more examples of the "**ṭ**" ("ට") AND "**ṭh**" ("ඨ") sounds coming together: *diṭṭhi* (දිට්ඨි for view), *sandiṭṭhika* (සන්දිට්ඨික for "seeing '*saŋ*'"), *aṭṭha* as in *aṭṭha purisapuggalā* and *aṭṭhaṅgika, kammaṭṭhāna, satipaṭṭhāna.*
- In #2, we mentioned some example words with the "**ṭ**" sound: *Paṭicca, paṭigha, paṭiloma, paṭisandhi, paṭipadā.*
- Compare all those with the following words with just the "**t**" ("ත") sound: a**tt**a (අත්තfor the truth), sa**tt**a (සත්තfor living being; note that *Bodhisatta* is a living being who is striving to attain the *Buddhahood*.)
- Here is the pronunciation of the unaspirated *paṭicca, paṭigha, paṭiloma, paṭisandhi, paṭipadā* AND aspirated ***ṭh**apetvā*. Both aspirated and unaspirated in *aṭṭha, diṭṭhi, sandiṭṭhika, aṭṭhaṅgika, kammaṭṭhāna, and satipaṭṭhāna*. Also, ***T**ipiṭaka.*

  WebLink: mp3 file: Pāli words Tipiṭaka English Post 2-1

Putting Emphasis on "ත" Sound to Make "ථ" Sound

5. The sound "**th**" is the "aspirated version" of "**t**" as in *Samat**h**a* (සමථ in Sinhala) in *Samat**h**a Bhāvanā*. The word ra**th**a (රථfor "vehicle") is another.

- Here are more words with both the "**t**" and the "**th**" sounds: **t**a**th**āga**t**a (නථාගත), na**tth**i, a**tth**i, ya**th**ābhūta, hadaya va**tth**u.

6. There are a few words with both aspirated and unaspirated versions. For example, when the "*a**tt**a*" (අත්ත) refers to the meaning "truth," it is (the "true-ness") emphasized with the word "*a**tth**a*" (අත්ථ).

- There are a few words like that where the **meaning is emphasized with the aspirated version.** We will discuss that with examples from the *Tipiṭaka* later on. Two more such words addressed in #8 below.
- Many other words do not have such an "emphasized" and "non-emphasized" versions. Here are some examples with ONLY the "**th**" sound: *vi**th**i, It**th**i, Samat**h**a, **Th**ero*, For example, **there are no words as** vi**t**i, It**t**i, Sama**t**a, or **T**ero.
- Here is the pronunciation of *Samat**h**a, ra**th**a, **th**ā**t**a, na**tth**i, a**tth**i, ya**th**ābhūta, hadaya va**tth**u, vī**th**i, It**th**i, Samat**h**a, **Th**ero*.

  WebLink: mp3 file: Pāli words Tipiṭaka English Post 2-2

Putting Emphasis on "ද" Sound to Make the "ධ" Sound

© 2026 Lal A. Pinnaduwage

7. The sound "**dh**" is the "aspirated version" of "**d**" as in ***Dh**amma* (ධම්ම). More examples of words with the "**dh**" sound: ***Dh**amma, ad**h**amma, **dh**ātu, gan**dh**a, gan**dh**abba, mid**dh**a, niro**dh**a, sad**dh**ā,* ***and**h**a, san**dh**i, sā**dh**u, paṭisan**dh**i, samā**dh**i.***

- Both the unaspirated and the aspirated sounds are in words, ***Dh**ammapada* (ධම්මපද in Sinhala) and *Bu**dd**ha* (බුදු), i.e., both the **dh** and **d** sounds appear. More examples: *passa**dd**hi, i**dd**hi, mi**dd**ha.*
- Here is the pronunciation of ***Dh**amma, ad**h**amma, **dh**ātu, gan**dh**a, gan**dh**abba, mid**dh**a, niro**dh**a, sad**dh**ā,* ***and**h**a, san**dh**i, sā**dh**u, paṭisan**dh**i, samā**dh**i, **Dh**ammapada, Bu**dd**ha, passa**dd**hi, i**dd**hi, mi**dd**ha.*

  WebLink: mp3 file: Pāli words Tipiṭaka English Post 2-3

Putting Emphasis on "ච" Sound to Make the "ඡ" Sound

8. The sound "**ch**" ("ඡ") is the "aspirated version" of "**c**" ("ච") as in ***ch**anda* (ඡන්ද) meaning "desire." The unaspirated is in ***c**alana* (චලන), meaning "movement."

- Most Pāli words with the "**ch**" sound also have the "**c**" sound coming first. Some examples are, *i**cch**a, vicii**cch**ā, appi**cch**a* (*appa i**cch**a*), *ma**cch**ariya, mi**cch**ā, mi**cch**ācāra, mi**cch**āvācā, pari**cch**eda, ga**cch**ati, u**cch**eda.*
- Two more critical Pāli words have the aspirated version emphasizing the meaning of the unaspirated version, just like in the case of atta/attha discussed above in #6.
- Those two are *i**cc**a/i**cch**a* (ඉච්ච/ඉච්ඡ) and *ani**cc**a/ani**cch**a* (අනිච්ච/අනිච්ඡ). The two aspirated words emphasize the meanings of unaspirated words. We will discuss that in the next post.
- Here is the pronunciation of ***ch**anda, **c**alana, i**cch**a, vicii**cch**ā, appi**cch**a, ma**cch**ariya, mi**cch**ā, mi**cch**ācāra, mi**cch**āvācā, pari**cch**eda, ga**cch**ati, u**cch**eda, i**cc**a, i**cch**a, ani**cc**a, ani**cch**a.*

  WebLink: mp3 file: Pāli words Tipiṭaka English Post 2-4

Connection to Key Concepts in Buddha Dhamma

9. Over the past year, I have realized that many misconceptions could be easily avoided by looking at a few Pāli words and their inherent meanings.

- For example, the Pāli word *atta* has two different meanings. Furthermore, the word *attha* emphasizes just one of those two meanings.
- Similarly, the meanings of the words *icca* and *anicca* become emphasized in *iccha* and *aniccha*.
- See "Icca, Nicca, Anicca – Important Connections."

Many of Posts at Puredhamma.net May Not be Up To the "*Tipiṭaka* English" Convention

10. I gradually became aware of this issue over the past several months. During that time, I have progressively followed the above rules. I will try to stick to this convention in future posts and gradually revise old posts to be compatible. That will take some time.

- All Pāli literature on the Sutta Central website is compatible with the "*Tipiṭaka* English" convention.
- Once you select a *sutta*, you can access translations to several languages using the "hamburger icon" on the top left.
- Of course, all translations there have errors, especially with keywords like *anicca*, *anatta*, *Ānāpāna Bhāvanā,* and *viññāṇa*.

© 2026 Lal A. Pinnaduwage

Singular to Plural in Pāli

11. The following issue is somewhat unrelated, and many people could be aware of it. But I would mention it here since it is essential to know.

- Many Pāli nouns ending in "short *a* (/ə/)" converted to plural by replacing that "short *a*" with a "long *a*" or *ā*.
- For example, *Deva, Brahma, sutta, citta, apāya, gandhabba, jhāna* are singular and the corresponding plural are *Devā, Brahmā, suttā, cittā, apāyā, gandhabbā, jhānā*.
- Finally, Pāli Glossary pages with pronunciation are available at "Tables and Summaries."

Pāli Alphabet with Illustrations & subtitles

12. The following video could be very useful in learning the Pāli alphabet (in English.) Moreover, it provides excellent instructions on pronunciation.

14.9 Historical Timeline of Edward Conze

Revised September 8, 2021; June 25, 2023

Edward Conze was a Mahāyāna scholar and translated the Mahāyāna Prajnapāramitā or *Perfection of Wisdom* sutras from original Sanskrit to English. See, WebLink: WIKI: Edward Conze

(Note that Sanskrit sutrā (sutra is the Sanskrit word for *sutta*) were composed by Mahāyāna philosophers like Nagarjuna (who were just philosophers) and are NOT original Pāli *suttā* delivered by the Buddha).

Conze was impressed with the Mahāyāna *sutrā*, and in the book, "On Indian Mahāyāna Buddhism" (1968), he analyzed the works of the Mahāyāna/Zen scholar D. T. Suzuki. Even though his bias towards Mahāyāna *sutrā* are clear, I selected his timeline, which clearly shows how Mahāyāna scholars wrote their own *suttā* and tried later to attribute those to the Buddha.

This historical timeline is discussed in detail by Edward Conze in his book, "A Short History of Buddhism" (1980). According to Conze, the history of Buddhism can be conveniently divided into four periods:

1. The old Buddhism largely coincided with what later came to be known as Theravāda
2. Rise of Mahāyāna,
3. Rise of the Tantra (Vajrayāna) and Ch'an (Zen),
4. No further divisions.

The first period is roughly 500 years; the second and third periods roughly cover the first thousand years of the current era (CE); the last thousand years can be considered as the fourth period. During this whole period, the Theravāda Dhamma was kept mostly intact. In the following description, the differences between the original teachings and the Mahāyāna ideology are also evident.

In the following I will present this story verbatim as told by Conze (starting at p. 45 of his book):

"……About 100 BCE (roughly 400 years after the Buddha's Parinibbāna) a number of Buddhists in India felt that the existing statements of the doctrine had become stale and useless. In the conviction that Dhamma required ever new re-formulations so as to meet the needs of new ages, new populations and new social circumstances, they set out to produce new literature which ultimately came to be known as Mahāyāna Buddhism. The creation of this literature is one of the most significant outbursts of creative energy known to human history and it was sustained for about four to five centuries. Repetition alone, they believed, cannot sustain a living religion. Unless counterbalanced by constant innovation, it will become fossilized and lose its life-giving qualities, they believed.

So far the Mahayanistic attitude seems quite logical. What is more difficult to understand is that they insisted in presenting the new writings, manifestly composed centuries after the Buddha's Parinibbāna, as the very words of the Buddha himself. They followed the Mahasanghikas in minimizing the importance of the historical Gautama Buddha, whom they replaced by the Buddha who is the embodiment of Dhamma (dharmakaya). In the "Lotus of the Good Law", we are told that the Buddha, far from having reached his enlightenment at Bodhgaya, abides for eons and eons, from eternity to eternity, and that He preaches the Law at all times in countless places and innumerable disguises.

……..Not content with this, the Mahayanists tried to link their own writings with the historical Buddha by a number of mythological fictions. They asserted that they had been preached by the Buddha in the course of his life on Earth, that parallel to the (First Buddhist) Council at Rajagaha, which codified the *Suttā* of the Theravāda, the Mahāyāna *suttā* had been codified by an assembly of Bodhisattvas on the mythical mountain of Vimalasvabhava; that the texts had been miraculously preserved for five centuries and stored away in the subterranean palaces of the Nagas, or with the king of the Gandharvas, or the king of the Gods. Then, as Nagarjuna puts it, "five hundred years after the Buddha's Nirvana, when the Good Law, after having

© 2026 Lal A. Pinnaduwage

gradually declined, was in great danger", these treasures from the past were unearthed, revealed and made known, so as to revivify the doctrine.

What then were the main doctrinal innovations of the Mahāyāna? They can be summarized under five headings:

1. As concerns the goal there is a shift from the Arhat-ideal to the Bodhisattva-ideal;
2. A new way of salvation is worked out, in which compassion ranks equal with wisdom, and which is marked by the gradual advance through six "perfections" (*pāramitā*);
3. Faith is given a new range by being provided with a new pantheon of deities, or rather of persons more than divine;
4. "Skill in means" (*upayakausalya*), an entirely new virtue, becomes essential to the saint, and is placed even above wisdom, the highest virtue so far;
5. A coherent ontological doctrine is worked out, dealing with such items as "Emptiness", "Suchness", etc".

We will now consider them one by one.

1. The goal of Arhantship is now relegated to second place. The Mahayanists strive to be a "Bodhisattva". A Bodhisattva is distinguished by three features: (a) In his essential being he is actuated by the desire to win the full enlightenment of a Buddha, (b) He is dominated by two forces, in equal proportion, i.e., by compassion and wisdom. From compassion, he selflessly postpones his entrance into the bliss of Nirvana to help suffering creatures,…….. (c) Although intent on ultimate purity, a Bodhisattva remains in touch with ordinary people by having the same passions they have. His passions, however, do not either affect or pollute his mind.

2. A Bodhisattva's compassion is called "great" because it is boundless and makes no distinctions….. This enlightenment does not automatically entail the desire to assist others. Among the enlightened, they distinguish three types, two of them "selfish", one "unselfish". The "selfish" types are Arahants and Pratyekabuddhas, who are said to represent the idea of the Hinayana, of the "inferior vehicle". The "unselfish" ones are the Buddhas, and the pursuit of the unselfish quest for enlightenment on the part of a Bodhisattva is called the "Buddha-vehicle", of the "Great Vehicle" (*mahā-yana*).

A Bodhisattva must be a patient man. He wants to become a Buddha, but his distance from the transcendental perfection of a supreme Buddha, who both knows and is everything, will obviously be infinite. In one life it could not possibly be traversed. Countless lives would be needed, and a Bodhisattva must be prepared to wait for eons and eons before reaching his goal. Yet, he is separated from Buddhahood only by one single obstacle, i.e., his belief in a personal self. To get rid of himself is the Bodhisattva's supreme task. By two kinds of measures he tries to remove himself – actively by self-sacrifice and selfless service, cognitively by insight into the objective non-existence of a self. The first is due to compassion, the second to wisdom.

The unity of compassion and wisdom is acted out by the six "perfections", or "*pāramitā*", the six "methods by which we go to the Beyond". A person turns into a Bodhisattva when he first resolves to win full enlightenment for the benefit of all beings. The six are: the perfections of giving, morality, patience, vigor, meditation, and wisdom".

This ends the quotation from Edward Conze's book. (I have not added or edited anything other than to skip some text to make it concise).

Criticism of Conze's Analysis

I agree with Conze's analysis except for the statement in the very first paragraph: "The creation of this literature is one of the most significant outbursts of creative energy known to human history and it was sustained for about four to five centuries." This literature, even though voluminous, only made a simple theory

© 2026 Lal A. Pinnaduwage

much more seemingly confusing, and contradictory. See "Key Problems with Mahāyāna Teachings," "Saddharma Pundarika Sutra (Lotus Sutra) – A Focused Analysis," and "Misinterpretation of Anicca and Anatta by Early European Scholars."

- **The only fortunate thing about it is that *Mahayana sutras* are written entirely in Sanskrit and thus are easily distinguished from the original *suttās* in the Pāli *Tipiṭaka*.**
- In addition to the "improvements" that were added in India, further material associated with national customs was added when Mahāyāna Buddhism spread to China, Japan, and Tibet (and came to be known by different names such as Zen, Vajrayāna, etc.). See "Background on the Current Revival of Buddha Dhamma."

So, the premise of the Mahāyāna re-formulation of the Buddha Dhamma was to "refine and improve" the Dhamma of the Buddha. This is in sharp contradiction with one of the most fundamental concepts in Dhamma that only a Buddha can discover these laws of nature and BY DEFINITION, it is impossible to improve upon them. They themselves admit that a Buddha appears in the world after a long time, and thus their attempt to change Buddha Dhamma is one of the fundamental contradictions in Mahāyāna.

- We need to understand the essential difference between Buddha Dhamma and any other human accomplishment: All other human accomplishments involve the cumulative effort of many, whether it is science, philosophy, engineering, etc.; see, "Dhamma and Science – Introduction." **In contrast, Buddha Dhamma was the product of a single human who transcended the "human-ness" and became a Buddha.**

Furthermore, all those mundane human efforts are made within the system, using the knowledge acquired by the experience within the system; see, "Gödel's Incompleteness Theorem." A Buddha transcends the human realm and discovers the "whole existence" of the 31 realms; see, "The Grand Unified Theory of Dhamma." The Mahāyānists took a "watered-down" version of the Buddha's worldview, (which is not accessible to normal human beings but only to a Buddha,) and then added their own theories.

- This is why there are so many apparent contradictions in various versions of "Buddhism" today. Adding more "pluff", which is wrong anyway by definition, only distorts the correct picture.
- I attempt to provide a self-consistent picture of the genuine teachings in the *Tipiṭaka* throughout this website. See "Buddha Dhamma: Non-Perceivability and Self-Consistency."

© 2026 Lal A. Pinnaduwage

14.10 Why is it Critical to Find the Pure Buddha Dhamma?

Pre-2016 post; revised July 18, 2022

1. In 2014, I participated in an online discussion group on "Buddhism" for a few days. A couple of things that struck me were:

- There are a lot of people out there who see that there is something valuable in Buddha Dhamma. But there is a lot of confusion because so many conflicting ideas are brought up and discussed without a conclusion.
- Each person seems to have their version their own "theory" of what Buddha Dhamma is. In many forums, instead of having an honest discussion about what ideas are right and what is wrong, many people use the forums for "entertainment." It is their "coffee break" to sit around and show off their "knowledge" and "wisdom." **(I must say that I regularly participated in a couple of other discussion groups in 2014 where people seemed to be genuinely interested in having an open exchange of ideas; due to lack of time, I don't participate in such discussions any more).**

2. It is a good idea to first decide what the goal of such a forum is. I think the goal should be to find and confirm the core ideas that the Buddha taught 2500 years ago. Let us eliminate all these different labels, Mahāyāna, Theravāda, etc. Since it does not appear to happen any time soon, I have decided to just present what I have found. I call it Buddha Dhamma. And that is what it was called until the term "Buddhism" came into vogue in the 19th century.

3. I have two key points to make:

- We can remove many bad ideas that crept into Dhamma by looking at the historical "evolution" of "Buddhism"; The main problem with the "evolution" of Dhamma is that it is not a germ idea that needs to be nurtured and refined: **Buddha Dhamma is the set of ultimate natural laws that a Buddha DISCOVERS.** Now, one can be skeptical about that, which is perfectly fine. Confidence in that belief comes from critically examining the evidence, which may come later. But let us make that assumption because that is a key idea in Buddha Dhamma: It is a rare event that a human being can discover the ultimate laws of nature; see "Power of the Human Mind – introduction," and the follow-up posts.
- Modern science can be another useful tool in finding the truth or fallacy of some concepts involved; the "theories" of science are continually being tested and verified by thousand of independent scientists, so even though they are not infallible, they are better than many speculations by individuals. And there is a key difference between finding nature's laws via the scientific method and how a Buddha finds them; see "Dhamma and Science – Introduction."

I will use both these tools in presenting my case.

4. The goal (and the motivation) in finding true Dhamma (or any kind of true salvation for those who believe in any other religion or belief system) is different compared to a philosophical debate. One could "win an argument" in a philosophical debate, especially if "winning" means persuading more people in the audience. One could thus "win a debate," but deep inside, one knows the argument has flaws. It is like winning a court case and freeing a criminal. The criminal (and may be even the lawyer) knows that he/she committed the crime. Even though the consequences will not be paid in prison, they will be paid according to the Dhamma or nature's laws.

5. If we can recover those correct laws that the Buddha taught, we can gain the benefits of knowing them and following them. It is not about winning an argument. It is ALL about finding the truth for oneself. If what Buddha said is true, then this world is much more complex than most people think, and there is much more suffering if one does not use the remaining time in this life wisely.

6. Then there is this naive argument: "All religions work for the good of mankind. Do not criticize any religion or sect within Buddhism." But some of those people also say, "Our sect of Buddhism is the best version because we are so compassionate that we will not attain Enlightenment until EVERYONE is ready". As we

© 2026 Lal A. Pinnaduwage

will see below, this oath is against one of the five precepts in Buddha Dhamma, promising not to lie. I will not talk about other religions, but I will point out the flaws in many existing versions of "Buddhism" today because **that is the compassionate thing to do.**

7. If one is truly compassionate, one should try to find the true Dhamma (because there is only one set of natural laws) and SHARE it with anyone interested. Dhamma is not something that anyone can GIVE to anyone else. Even the Buddha could only teach those who would listen to him. Some people even question the compassion of the Buddha when they hear this story from the Tipiṭaka:

- A butcher named Cundasukara lived right next door to the Jetavanaramaya, where the Buddha resided for a long time. Some may wonder why the Buddha did not try to "save" Cundasukara by teaching him the right path. *Bhikkhus* could hear the screams of the pigs being slaughtered and asked the Buddha why he would not try to teach Dhamma to Cundasukara. The Buddha told them that Cundasukara would accrue much more bad kamma if he tried to do that. Killing pigs leads to much bad kamma, but unimaginable bad kamma could be accumulated by having hateful thoughts towards a Buddha: see, "How to Evaluate Weights of Different Kamma." One could accumulate more bad kamma by hurting the feelings of a human being than by killing an animal, and hateful thoughts towards a Buddha can be infinitely worse than hurting a normal human being. Therefore, sometimes true compassion can be hidden.
- In my way of thinking, I would not be acting compassionately if I did not point out these flaws in both Mahāyāna and Theravāda because I have experienced the benefits of the true and pure Dhamma.
- My goal is not to try to "convert" anyone to anything. The Buddha did not try to convert anybody. It is up to each person to make their own decisions because one is responsible for one's future, and no one else is. Most of us are lucky to live in societies where we can make our own decisions.
- As I keep emphasizing, Buddha Dhamma describes the ultimate laws of nature. Anyone with any religious background, or an atheist, can follow Dhamma and should be able to see that it does describe the laws of nature. However, it is critical to find the true Dhamma. The only way to do that is to check for consistency at ALL TIMES and to weed out the bad versions.

8. In the following few posts we will examine the problems in many different versions of Mahāyāna and Theravāda. If you see any flaws in my arguments, please send me a comment. **It is possible that I could make a mistake, and if so I will correct them.** I hope all those who read these posts will keep an open mind because we all should have the same goal: finding the pure Dhamma that will benefit us all.

Problems with Mahāyāna and Theravāda are discussed in the section "Historical Background."

© 2026 Lal A. Pinnaduwage

14.11 Key Problems with Mahāyāna Teachings

Revised September 2, 2019; June 11, 2021; re-written September 28, 2022

Main Contradictions

1. The following are just three major contradictions of "*Mahāyāna Buddhism*" with the teachings of the Buddha.

i. *Mahāyānists* say that each person needs to attain *Buddhahood*. By "*Buddhahood*," they mean a "*Sammā Sambuddha"* like Buddha Gotama. They say even *Arahants* like Ven. Sāriputta needs to attain the Buddhahood!

ii. "*Bodhisatta* vow" is even worse. Not only each person needs to become a *Sammā Sambuddha,* but they need to wait until "everyone" is ready to become a *Sammā Sambuddha.* They have no idea how hard it is to become a *Sammā Sambuddha.*

iii. Those who initiated the *Mahāyāna* version (a mere 500 years after the *Parinibbāna* of the Buddha Gotama) declared that the teachings had become "outdated" and needed to be "updated."

iv. Any sentient being can attain the state of a *Sammā Sambuddha* (all have the "Buddha nature.")

- I discussed (i) and (ii) above in the post "Saddharma Pundarika Sutra (Lotus Sutra) – A Focused Analysis."
- This post will discuss (iii) and (iv) below. But let me first emphasize the problems with (i) and (ii) above.

Summary of the First Two Contradictions

2. The main problem with (i) and (ii) above is a conflict with a fundamental tenet of Buddha Dhamma. A Buddha comes to this world after a very long time and DISCOVERS the laws of nature; *Mahāyānists* agree that it takes eons (billions of years) to fulfill the "*pāramitās*" and to become a Buddha.

- Then they turn around and say that EVERYONE (meaning all sentient beings) must SIMULTANEOUSLY attain the *Sammā Sambuddha* status. Given that there are an uncountable number of sentient beings, that is utterly foolish.
- Furthermore, the Buddha has clearly described the uniqueness of a *Sammā Sambuddha* ("WebLink: suttacentral: *Ekapuggalavagga* (AN 1.170-187)") and the difference between a *Sammā Sambuddha* and an *Arahant*: "WebLink: suttacentral: *Sammāsambuddha Sutta* (SN 22.58)."
- Thus, the "gap" between a *Sammā Sambuddha* and an *Arahant* is enormous. Similarly, a huge difference exists between an *Arahant* and an average human (*puthujjanika*.) [*puthujjanika* : [adj.] [fr. *puthujjana*] common, ordinary J. I,360 (of iddhi).]

3. The first thing one is supposed to do in becoming a *Mahāyāna* Buddhist is to take the "*Bodhisattva* vow." They say each being should endeavor to become a Buddha, i.e., each person should be a *Bodhisattva*.

- Those who initiated this idea a long time ago probably did not know that there is an infinite number of sentient beings in this world. Each human body has a vast number of microscopic beings. See, "There are as many creatures on your body as there are people on Earth!"
- There are 1000 trillion just ants on this Earth: "WebLink: gotreequotes.com: How Many Ants Are There in the World?." Or do they not count other living beings?
- In this eon (basically the lifetime of the Solar system of about 4.5 billion years), there have been four Buddhas. One more Buddha is to appear. That is truly an exception. Before this eon, 30 eons (trillion years!) did not have a single Buddha appearing. So, how long would one wait to become a Buddha, i.e., remain a *Bodhisattva*? **And will all beings (or even the human population today) be able to become Buddhas in the same eon, let alone at the same time?** Utterly foolish!

© 2026 Lal A. Pinnaduwage

Teachings of a *Sammā Sambuddha* Can Be Outdated?

4. Getting to the issue (iii), *Mahāyānist* forefathers stated Buddha Dhamma needed to be "refined" for the changing times. See "Background on the Current Revival of Buddha Dhamma." **How can the ultimate laws of nature discovered by a Buddha be "refined" or "revised"? I hope someone can answer this fundamental question.**

- Within 500 years of the passing away of the Buddha, the Indian *Mahāyānists* started not only refining but incorporating concepts that were alien to Buddha Dhamma.
- If it needed refining after 500 years, how come they have not kept up with the updating process? **One would think they would be doing a significant revision these days with so many changes in science and technology.**
- What has happened is the opposite: Science and technology are consistent with the original Dhamma. People will gradually realize that those alien concepts in Mahāyāna do not make sense.

Treating Buddha's Teachings as Philosophy

5. Those who started this revision did not understand the central idea of *Nibbāna*. They never mention concepts like *anicca, dukkha, or anatta*. So, they defined those in their terms and then got into a slippery slope in explaining those terms by inventing more concepts. It snowballed, and in the words of Edward Conze, who translated many *Mahāyāna* texts to English:

- "……About 100 BCE (roughly 400 years after the Buddha's Parinibbāna), many Buddhists in India felt that the existing statements of the doctrine had become stale and useless. They were convinced that Dhamma required new reformulations to meet the needs of new ages, new populations, and new social circumstances. So they set out to produce new literature, which ultimately became known as Mahāyāna Buddhism. The creation of this literature was one of the most significant outbursts of creative energy known to human history and sustained for about four to five centuries. Repetition alone, they believed, cannot sustain a living religion. Unless counterbalanced by constant innovation, it will become fossilized and lose its life-giving qualities, they believed".
- (See "Historical Timeline of Edward Conze").
- For someone who is not familiar with the Buddha's original teachings, those philosophical arguments may look impressive, as they did for Edward Conze. We will examine those concepts in detail in upcoming posts. I have discussed the concept of "emptiness"; see the link below.

Forefathers of *Mahāyāna* Were Philosophers, Not *Ariyas*

6. None of the *Mahāyānist* "philosophers" such as Nagarjuna, Vasubandhu, and Asanga are documented as *Arahant* or even a *Sotāpanna.* They were like the philosophers of today with their "theories about the world." They also had an aversion to the concept of an *Arahant*.

- The *Mahāyāna sutras* originated with Nagarjuna, who lived 150-250 CE in India. Thus, the Buddha's original teachings went underground somewhere before 200 CE, within about 700 years of the Buddha's *Parinibbāna* (passing away).
- **Thus those Indian intellectuals like Nagarjuna were just like the philosophers from the time of Socrates. They make all kinds of speculations consistent with the "knowledge" about the "world" at any given time.**
- The Buddha did warn of this outcome: He said: "there will be other versions that look like Dhamma and feel like Dhamma. Just like when there are imitations of gold coming to the market, the real gold goes underground" (WebLink: suttacentral: *Saddhamma Patirupaka Sutta* (SN 16.13). That has been the case for over 1800 years.

© 2026 Lal A. Pinnaduwage

- But the truth comes out eventually. That time could well be now. The correct interpretations of *anicca*, *dukkha*, and *anatta* have been hidden for hundreds of years.

The "Updates" Violate the Core Teachings of the Buddha

7. So, what are these revisions that the *Mahāyāna* forefathers made?

Edward Conze has listed five doctrinal "innovations" of the *Mahāyānists*; see "Historical Timeline of Edward Conze." They are:

- As concerns the goal, there is a shift from the "*Arahant-ideal"* to the "*Bodhisattva*-ideal."
- A new way of salvation was worked out: compassion ranked equal with wisdom.
- Faith is given a new range by being provided with a new pantheon of deities.
- "Skill in means" (*upāyakausalya*), an entirely new virtue, becomes essential to the practitioner. That is placed even above wisdom, the highest virtue in Buddha Dhamma.
- A coherent ontological doctrine was worked out, dealing with such items as "Emptiness," "Suchness," etc.." But it is philosophy; see, "What is Sunyāta (Emptiness)?."

8. We will discuss the critical contradictions of these revisions with the Buddha's original teachings (see i-v below) and go into detail later.

i. The basic idea of Buddha Dhamma is that each human being has a unique mind. But greed, hate, and ignorance defile a mind. Because of that, each person commits immoral acts and subsequently "pays for those actions," suffering is the net result of the cycle of rebirths. One gets out of this cycle of rebirth by purifying one's mind; one who has accomplished this task is an *Arahant*. No person can purify another person's mind. *Nibbāna* is not an abstract concept. See the subsection "Nibbāna."

ii. One attains *Nibbāna* when one purifies the mind of ALL defilements. That is when one has ultimate wisdom or *paññā*. There is no way to equate compassion with *paññā*. One can be compassionate to the maximum, but that does not mean one has gotten rid of ignorance. Those beings in the *Brahma* world do not generate any hateful thoughts; they have perfected the four *Brahmavihara: mettā, karunā, muditā, and upekkhā*. They don't have a trace of hateful thoughts. Yet, they have ignorance (of the Four Noble Truths) and will one day be reborn in the four lower realms. Therefore, this is also a significant contradiction. See, "Sotāpanna Stage of Nibbāna."

iii. Buddha said life in the human realm is better than any other (except for those reserved for the *Anāgāmis.*) That is because the easiest to attain *Nibbāna* is from the human realm. Some beings in higher realms can be helpful to us, and we should share our merits with them. However, a human is not supposed to worship any other being. One must only have faith in the Buddha, Dhamma, and Saṅgha. No other living being can help with our goal of attaining *Nibbāna*.

iv. "Skill in Means," or whatever other term anyone comes up with, runs into the same problem as compassion above in (ii). Such ideas run against the core teachings of the Buddha. Even if one gets rid of greed and hate but still has ignorance, one will get back the greed and hate DUE TO ignorance. One attains *Nibbāna* by cultivating wisdom.

v. Mahāyāna's descriptions of all these philosophical concepts like emptiness or *sunyāta* are just a lot of empty words. They have simpler explanations consistent with original teachings; see the links below. The *Mahāyānists* had to re-invent alternate descriptions for these terms. The original meanings conflicted with their "revisions" discussed in i-iv.

Now, to address the issue (iv) in #1 above.

Buddha Versus *Sammā Sambuddha*

© 2026 Lal A. Pinnaduwage

9. Buddha means "to stop *bhava"* (*bhava* + *uddha.*) Only a *Sammā Sambuddha* can figure out how to stop grasping various types of *bhava* (*kammic* energies) that we have accumulated, thus stopping future suffering.

- In principle, it is possible to call an *Arahant* a Buddha since an *Arahant* has stopped grasping a new *bhava*. However, no *Arahant* could have gotten to the "*bhava uddha"* status without learning/comprehending the teachings of a *Sammā Sambuddha.*
- But it has become customary to reserve the term "Buddha" as a shortened version of "*Sammā Sambuddha.*"
- The term "Buddha nature" is discussed without the above understanding. See "WebLink: en.wikipedia.org: Buddha-nature."

Summary

10. Those who follow the Mahāyāna version do that for several reasons. (i) They are born into *Mahāyāna* tradition (just like I was born to Theravada.) (ii) They have had no exposure to other versions of Buddhism. The problems with *Mahāyāna* versions are not due to their making. But it is time to start changing those features that contradict Buddha's original teachings.

- Teachings of a *Sammā Sambuddha* like Buddha Gotama cannot be "updated." Buddha Dhamma is "timeless" (*akāliko.*) Of course, the teachings of a *Sammā Sambuddha* only last a relatively short time (in the *Saṁsaric* scale.) Those "timeless truths" about nature are re-discovered by the next Buddha. All *Sammā Sambuddhas* re-discover and teach the same *Paṭicca Samuppāda*.
- There needs to be an open discussion about weeding out the inconsistent material from all sects and recovering the pure Buddha Dhamma for all to benefit.

14.12 Saddharma Pundarika Sutra (Lotus Sutra) – A Focused Analysis

Revised August 13, 2019; July 26, 2020; December 3, 20121 (#3); August 24, 2022; September 27, 2022

Saddharma Pundarika Sutra (*Lotus Sutra*) is a famous *Mahāyāna sutra.* It is full of contradictions with the genuine teachings of the Buddha.

Difference Between a *Sutra* and *Sutta*

1. This ***sutrā***, written by several Indian philosophers over hundreds of years, led to the gradual formation of Mahāyāna Buddhism over that period. Note that I am NOT referring to it as a ***sutta***. *Suttā* are the original teachings of the Buddha delivered in the *Māghadhi* language. They were subsequently written down in Pāli and are available in the *Tipiṭaka*.

- In contrast, all Mahāyāna *sutrās* were written after the *Parinibbāna* (passing away) of the Buddha. Furthermore, they all are in Sanskrit without exception.
- Thus at least we have a clear way of distinguishing the original discourses by the Buddha (***suttā***) and the Mahāyāna ***sutrās*** written by laypeople hundreds of years after the Buddha.
- Even in the Theravāda tradition, the question often arises regarding the interpretation of key concepts. As mentioned in the *Tipiṭaka*, this problem was there, even DURING the time of the Buddha.

How to Verify the Authencity of Buddha Dhamma

2. Once, Mahā Prajapathi Gotami *bhikkhuni*, Prince Siddhartha's stepmother, approached the Buddha and pointed out that some *bhikkhus* were teaching incorrect interpretations of the Dhamma. She feared things would get out of hand after the *Parinibbāna* of the Buddha. "How can the future generations figure out the correct version of Dhamma?" she asked the Buddha.

- The Buddha agreed that it is inevitable that wrong interpretations will always be there but said there is a way to identify the correct version. He always said to look for consistency with the Four Noble Truths, as explained in the *suttā*. The Buddhist principle of Cause and effect is defined in the *Paṭicca Samuppāda*. How to live a moral life by getting rid of *lobha*/*rāga* (greed), *dosa* (anger/hate), and *moha*/*avijjā* (ignorance of the Four Noble Truths) is laid out in the *Vinaya.*
- These teachings lead to *rāgakkhaya*, *dosakkhaya*, and *mohakkhaya* (getting rid of *rāga*, *dosa*, and *moha*).
- If a version of Dhamma does not lead to *rāgakkhaya* (reduction of greed), *dosakkhaya* (reduction of hate), and *mohakkhaya* (reduction of ignorance), then that version should be discarded. Internal consistency must be there too.

Three Ways to Attain *Nibbāna*

3. A bit of background material before we discuss this *sutrā*. According to the Buddha, there are **three ways** to attain *Nibbāna*:

- A **Sammā Sambuddha** (like Buddha Gotama) discovers the Noble Eightfold Path and achieves Nibbāna through his efforts, AND he can teach the doctrine to others.
- A second way to attain *Nibbāna* is to learn Dhamma from a *Sammā Sambuddha* or a true disciple of his. That is how **an *Arahant*** reaches *Nibbāna*. An *Arahant* is also a ***Sāvaka* Buddha.** Note that a "*Sāvaka* Buddha" is different from a "Buddha *Sāvaka"* (or "*Ariya Sāvaka"*) which identifies any Noble Person above the *Sotāpanna Anugāmi* stage.
- Then there are ***pacceka Buddhas*** who discover the Path by themselves but are not capable of explaining it to other people.

© 2026 Lal A. Pinnaduwage

- The three types are in the "WebLink: suttacentral: *Nidhikanda Sutta* (KN Kp 8)" in the following verse: "*Paṭisambhidā vimokkhā ca, yā ca* ***sāvakapāramī****;* ***Paccekabodhi buddhabhūmi****, sabbametena labbhati.*"

Only One Vehicle to *Nibbāna* (the "Great Vehicle" or Mahāyāna)?

4. Now, let us discuss how this *sutrā* paved the way for the *Bodhisattva* concept in Mahāyāna.

This *sutrā* starts with the Buddha saying that even though he had taught previously there were three paths to *Nibbāna*, he now admits that there is only one. When Ven. Ānanda asked why, he said he did not think people were "ready" for this higher doctrine. Instead of three vehicles (or paths) that one can take, there is only one. It is the great vehicle or the Mahāyāna ("*mahā*" is great, and "*yāna*" is a vehicle). And this is the path he took by striving for eons as a *Bodhisattva* to become a Buddha.

- Continuing with this *sutrā*, now he (the Buddha) was advising everyone to become a *Bodhisattva* and to attain Buddhahood!
- They have no idea how difficult it is to attain *Buddhahood*.
- Then he assures all those *Arahants* present there, including Ven. Sāriputta that they will become Buddhas. That is a complete lack of understanding of the concept of an *Arahant*. An *Arahant* will not be reborn; thus, there is no way for an *Arahant* to become a Buddha.
- Furthermore, the Buddha has clearly described the difference between a *Sammā Sambuddha* and an *Arahant*: "WebLink: suttacentral: *Sammāsambuddha Sutta* (SN 22.58)." The uniqueness of a *Sammā Sambuddha* is described in a series of short *suttas*: "WebLink: suttacentral: *Ekapuggalavagga* (AN 1.170-187)."

Now let us go through a few more "obvious inconsistencies" in the *sutrā*.

The *Sutrā* Opens With a Lie (*Musāvāda*)

5. Astonishingly, the *sutrā* opens with, "Thus have I heard…", a big *musāvāda* (an untruth) Ven. Ānanda is providing the details of the *sutrā*.

First, a brief background is in order. Venerable Ānanda, who knew all the *suttā* by heart, recited them at the First Buddhist Council. Thus any given *sutta* in the *Tipiṭaka* starts with clarification, "Thus have I heard…" to indicate that this was what Venerable Ānanda had heard himself. In trying to give the impression that this *sutrā* was also one delivered by the Buddha, the authors of the *Lotus sutrā* attempted to deceive the readers.

- Historians generally accept that the *Lotus sutrā* was written much later after the passing away (*Parinibbāna*) of the Buddha Gotama. That is true of all other *sutrās* written in Sanskrit.
- The oldest parts of the text (Chapters 1–9 and 17) were probably written between 100 BCE and 100 CE, and most of the text was complete by 200 CE. See, for example, WebLink: WIKI: Lotus Sutrā. Thus it was written by several authors over 100 years or more. A translation was made from Sanskrit to Chinese in 255 CE, the earliest historical documentation of its existence.

Reads Like a Fairytale

6. The middle of the *sutrā* is devoted to describing the "universal accessibility" of the Buddhahood to anyone. Here it reads like a fairytale with astounding stories of accomplishments. For example, the daughter of the dragon king Sagara astonishes the assembly by performing various supernormal acts and says she can attain the Buddhahood "in an instant."

- However, those *sutrā* also stress the importance of faith and devotion to get to Enlightenment. There is less emphasis on the need for wisdom. That is blind faith!

© 2026 Lal A. Pinnaduwage

The *Bodhisatta* Vow

7. A critical problem is the *Bodhisatta* vow that a Mahāyāna Buddhist agrees in advance to take (see, WebLink: WIKI: Bodhisattva vow). The promise is to wait until "everyone is ready to attain the Buddhahood." It is not clear how or who can determine WHEN everyone is ready.

- Current scientific facts point to the existence of an innumerable number of living beings; see, "There are as many creatures on your body as there are people on Earth!." Therefore, it is a critical question how all these beings can attain Buddhahood simultaneously.
- Furthermore, it seems contradictory that Buddha Gotama and other previous Buddhas did not wait for anyone else.

Is a Buddha Eternal?

8. The story gets even more fascinating in Chapter 16 (presumably as a different writer of the *sutrā* comes up with another idea). That is when Buddha Gotama reveals that he is an eternal being. He had attained the Buddhahood an incalculably distant time in the past. Even though he sometimes seems to pass away to *nirvāna* (Sanskrit word for *Nibbāna*), he periodically makes appearances in the world.

- This declaration makes the Buddha more like a Creator God who has always been there! And there is no discussion on the issue of whether there was a beginning to this world.
- It seems to me that the philosophers who wrote Mahāyāna *sutrās* had no idea of the concept of *Nibbāna*! By the very definition, the whole idea of attaining *Nibbāna* is to dissociate from this suffering-filled material world: There are several posts on this website ranging from "Three Kinds of Happiness – What is Nirāmisa Sukha?" to "What are Rūpa? – Relation to Nibbāna" on the concept of *Nibbāna*.
- Then there is the issue of other Buddhas being present at that assembly too. And they all seem to be "at the same level." Thus the question arises as to who was the first Buddha and why those other Buddhas "did not wait until everyone else was ready for the Buddhahood."

Absence of Key Doctrinal Concepts

9. Most of the sections of the *sutrā* hyperbolize the value of the single, great vehicle (Mahāyāna) to attain *Nibbāna*. That is in contrast to the three vehicles of *Sammā Sambuddha*, *Pacceka Buddha*, and *Arahant*; see #3 above. **There is no discussion on the actual distinguishing doctrinal concepts of the single vehicle other than just saying that it has the advantage of "easy accessibility of the Buddhahood."** What makes this "single-vehicle" approach different from the original "three-vehicle" approach in terms of details in Dhamma? For example, does it have a new way of describing the Noble Eightfold Path, *Paṭicca Samuppāda*, or the Four Noble Truths?

- The *sutrā*, like many other Sanskrit *sutrās*, only mentions those critical foundational concepts of Buddha Dhamma in passing. There is no discussion on them, let alone pointing out any difference from the original doctrine. **I am amazed that no one even refers to this glaringly obvious point. What sets the "single-vehicle" approach apart from the original "three-vehicle" approach other than the name change?**
- But the real problem is that in changing some key concepts. For example, getting rid of the *Arahant* concept and making the Buddha effectively a Creator God. This *sutrā* paved the way to distort the Buddha Dhamma for generations.
- In terms of the necessary conditions set forth by the Buddha, does this *sutrā* clarify how to reduce greed, hate, and ignorance? Can anyone point to such aspects? Besides grandiose descriptions, there is nothing substantial in terms of doctrine, let alone a revised doctrine. All it does is gravely distort foundational concepts like *Nibbāna*, *Buddhahood*, and *Arahanthood* with the concept of a "single-vehicle."

© 2026 Lal A. Pinnaduwage

Numerous Untruths, Inconsistencies, and Exaggerations

10. There are so many untruths, inconsistencies, and exaggerations in this *sutrā* that I only have space in this essay to point out the gross problems that are vividly displayed. That is why the post is a "focused analysis."

- Here is an English translation of the *sutrā* available online, so that anyone can peruse through and see the apparent difference between this *sutrā* and any Pāli *sutta* that is in the *Tipiṭaka*: WebLink: PURIFYMIND: Lotus Sutra
- One could compare this *sutrā* with the actual Pāli *suttā* that I started discussing; see "Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa," and the posts on the *Mahā Satipaṭṭhāna Sutta* below that.
- I must emphasize that one needs to evaluate this *sutrā* in the context of the profound and self-consistent Buddha Dhamma. One can get a glimpse of this by examining the "Key Dhamma Concepts," "Paṭicca Samuppāda," and "Abhidhamma" sections on this website, where I have only begun to lay out the teachings, especially in the Abhidhamma section.

11. I would be happy to respond (and correct any legitimate errors in the analysis) if anyone can point out any problems with my analysis. Please send me a comment at lal@puredhamma.net.

- This analysis is consistent with the central theme of this website. To point out problems with both Mahāyāna and Theravāda versions as being practiced today. Several posts criticizing both *Mahāyāna* and the current versions of *Theravāda* at "Historical Background."
- It is for the benefit of everyone that we should remove (or at least be aware of) all inconsistencies and untruths. Then the current and future generations will have a version of Buddha Dhamma close to the original version.

14.13 What is Suñyatā or Suññatā (Emptiness)?

Revised (added #6) December 28, 2015; November 26, 2017; December 16, 2017; July 1, 2022; rewritten on November 8, 2025

Suññatā (*suñyatā* in Sanskrit) means the world is empty of anything useful. One believes that the world offers anything substantial or lasting happiness only because one's mind is defiled with *rāga*, *dosa*, and *moha*. One attains *Nibbāna* upon realizing that.

Suñyatā in *Mahāyāna* Buddhism

1. In *Mahāyāna* Buddhism, there are books written about *suñyatā* (it is *suññatā* in Pāli) or emptiness. *Mahāyāna* Buddhism makes a big deal out of *suñyatā* because its founders (the founders of the *Mahāyāna* tradition) could not understand the concept of *Nibbāna*. Unfortunately, many people who are introduced only to *Mahāyāna* teachings (and are unaware of the Buddha's original teachings) believe that *Nibbāna* is an abstract concept.

- In an online discussion forum in 2014, I saw a comment saying that emptiness describes *Paṭicca Samuppāda*. This was a surprise, as *Paṭicca Samuppāda* is not explained in *Mahāyāna* texts.
- I have not seen the *Paṭicca Samuppāda* explained in even a remotely sensible way in a text of *Mahāyāna*, *Zen*, or *Vajrayana*. If you know of such a book, please post a comment on the forum with the book's name (or any other source), and I would appreciate it.

2. However, if one understands pure Buddha Dhamma, *Nibbāna* is a simple concept; see, "Nibbāna – Is it Difficult to Understand?."

- But it can also be examined at deeper levels: "Nibbāna "Exists", but Not in This World."
- See more at "Nibbāna."

What is emptiness?

3. When entity A is devoid of entity B, it can be said that entity A is devoid of B or empty of B. That is the emptiness or *suññatā*.

- For example, if we take a water bottle and pour the water out, we say the bottle is empty. But in reality, there is air in the bottle, so the bottle is empty only of water; it is not empty of air.
- Emptiness is relative. One has to say what it is empty of. There is no absolute "emptiness." It is meaningless to say, "This is emptiness," because there may be something we are unaware of.
- For example, until recently, scientists thought deep space was "empty." But now they know that it is full energy. Still, one could say that "deep space is empty of tangible matter" to a good approximation.

Suññatā in Buddha's Teachings

4. The Buddha said when the mind becomes empty of greed (*rāga*), hate (*dosa*), and ignorance (*moha*), it becomes empty of those defilements: "*rāgakkhayo Nibbānan*, *dosakkhayao Nibbānan*, *mohakkhayo Nibbānan*," and that mind has attained *Nibbāna*. That is emptiness (*suñyatā*) regarding defilements. It is a simple explanation, even though it is not easy to get there.

- When one attains the *Arahant phala*, one's mind becomes empty of *rāga, dosa, and moha*. But one still has *saññā* (perception), *vedanā* (feelings), etc., and lives like a normal human being until death.
- But his/her mind is devoid of greed, hate, and ignorance so that he/she will not do any immoral act under any circumstance.

© 2026 Lal A. Pinnaduwage

- At the death of an *Arahant*, "this world of 31 realms" becomes devoid of any trace of that *Arahant*'s lifestream, except for the *Arahant*'s *nāmagotta* (memory records for previous lives); there is no rebirth. So that is another *suññatā*.

5. One could also say that the world is empty of anything substantial or permanent (other than those *nāmagotta* or memory records).

- The world of 31 realms (with sentient beings and their environments) is maintained by the 'mental energy' (or ***kammic* energy**) generated by those sentient beings.
- That 'mental energy' runs out over time, and thus those sentient beings get new rebirths (and their environments are also renewed over long periods). That is why nothing in this world can be 'maintained to one's satisfaction,' and the efforts of those who try are in vain. **That is the '*anicca* nature' of the world.**
- Sentient beings (including *puthujjana* among humans) generate ***kammic* energy** based on their actions, influenced by *rāga, dosa*, and *moha/avijjā* due to their built-in distorted *saññā*, which gives them an innate feeling that there are 'mind-pleasing things' in the world.
- Until they learn from a Buddha or a disciple of the Buddha about that distorted *saññā* (which is *kāma saññā* for humans), all sentient beings are trapped in the cycle of rebirth.

Cūḷa Suññata Sutta

6. There is a *sutta* in *Tipiṭaka* that is about *suññatā* (emptiness) called the *"Cūḷasuññata Sutta* (MN 121)."

- It describes how one can overcome various types of distorted *saññā* associated with the world and attain *Arahanthood* or *Nibbāna*.
- This is a *sutta* at a deeper level, but we have recently covered enough material to understand its gist.

7. In the "WebLink: suttacentral: *Cūḷasuññata Sutta* (MN 121)," the Buddha tells Ven. Ānanda, that he often spends time in '*suññatā vihāra*.'

- Here, '*vihāra*' indicates how one spent the time, and by '*suññatā vihāra*', the Buddha meant he often spent time without even a trace of agitation in the mind.
- **You may say:** "But I thought the Buddha's mind is free of agitation at all times (since it is free of *rāga, dosa, moha*)."
- Even the Buddha (who was born a human) feels the '*kāma saññā*' as we have discussed. Any mind runs in the 'auto mode' in the '*purāṇa kamma*' stage, and especially at the '*kāma dhātu*' stage. Even the mind of a Buddha can be a 'bit agitated' by the '*kāma saññā*.'
- In the "WebLink: suttacentral: *Nibbānadhātu Sutta* (KN Iti 44)," the Buddha describes the state of mind of an *Arahant* in daily life as follows: "Their five sense faculties still remain. So long as their senses work, **they continue to experience** the **agreeable and disagreeable**, to **feel pleasure and pain**." The critical point is that they not only experience '*kāma sukha*' (a colorful world, tasty foods, etc.) and bodily pains, but also develop a cheerful or depressed mindset upon seeing a person liked or disliked.
- Buddha's encounter with a *yakkha* (spirit/ghost) is a good example. It is described in the "WebLink: suttacentral: *Sūciloma Sutta* (KN Snp 2.5)." The Buddha pulled away from that nasty spirit because its touch was **disagreeable** (like being touched by a skunk).
- **There are several ways the Buddha could have lived in '*suññatā vihāra*:'** in *Arahant-phala samāpatti*, *nirodha samāpatti*, or in the *Satipaṭṭhāna Bhūmi* with *Ānāpānasati samādhi.* **All those are devoid of the '*kāma saññā*.'**

Arahanthood via *Cetovimutti*

© 2026 Lal A. Pinnaduwage

8. Sentient beings in *kāma, rūpa,* and *arūpa lokas* are all born with specific types of "distorted or *viparīta saññā,*" also known as "*saññā vipallāsa*."

- The number or types of '*loka saññā*' present in the 11 realms of *kāma loka* is the highest. '*Kāma assāda*' or 'sensual pleasures with close contact with taste, smell, and touch (and with related sights and sounds) are present only in *kāma loka*, and they have the strongest types of associated '*loka saññā*' (for sex, tasty foods, and enticing sights, sounds, and smells). **These are called "*nānatta saññā*' or a 'wide variety of *saññā*.'**
- Then, in the sixteen *Brahma* realms in '*rūpa loka*,' the mind experiences a smaller number of *saññā*. In these realms, '*jhānic saññā*' is present. **Those are *savitakka, savicāra, pīti, sukha*, and *ekaggatā*.** By the fourth *jhāna*, the four of the '*jhānic saññā*' mentioned above have been eliminated, and one only experiences *ekaggatā*.
- The yogi can then transcend the fourth *jhāna* and enter the *arūpa loka* with a single type of 'distorted *saññā*.'

Cetovimutti per *Anariya Yogis*

9. In the '*arūpa loka*' (four *arūpa Brahma* realms), only the mind is present, and most of the time, the mind is focused on only one *saññā*. For example, in the *Ākāsānañcāyatana* and *Viññāṇañcāyatana* realms, the mind is focused on the infinite space and the infinite *viññāṇa*, respectively. These are the '*arūpa loka samāpatti*' with the least stress!

- The least stress (suffering) is experienced in those highest *Brahma* realms. Here, one feels only a trace of 'distorted *saññā*.'
- Ancient *yogis* thought this was the ultimate release of stress from the mind, and they called it *cetovimutti*.
- But they were still bound to the rebirth process with all ten *saṁyojana*! Those *saṁyojana* can be broken only with *paññā* (wisdom).

An *Ariya* Can Become a *Ubhatovimutti Arahant* via *Cetovimutti*

10. Therefore, if an ***anariya yogi*** moves up systematically from the *kāma loka* to the *rūpa loka*, and eventually to the *arūpa loka*, the number of 'distorted *saññā*' experienced will reduce. That is why *jhānic* experiences are better than *kāma assāda* (sensual pleasures), and *arūpa samāpattis* are even better. However, those attainments are temporary, and they are not even released from rebirths in the *apāyās*.

- However, a ***Sotāpanna*** could "move up the same ladder through *rūpa* and *arūpa loka* to reach the highest *arūpāvacara samāpatti* (*nevasaññānāsaññāyatana*) just as an *anariya yogi*.
- But then, the *Sotāpanna* can contemplate the *anicca* nature of the *nevasaññānāsaññāyatana* and attain *Arahanthood*!
- That is one way to become a ***Ubhatovimutti Arahant*** who is "released both ways." See #3 of "Sammā Samādhi – How to Define It?"

Description in *Cūḷasuññata Sutta*

11. After stating that he often spends time in '*suññatā vihāra*', the Buddha explained to Ven. Ānanda, how a *Sotāpanna* can proceed through the same 'ladder' as an *anariya yogi* to reach the *nevasaññānāsaññāyatana* and attain *Arahanthood* by contemplating the *anicca* nature of it.

- That account starts @marker 4.1. It starts with, "*Seyyathāpi, ānanda, ayaṁ migāramātupāsādo suñño hatthigavassavaḷavena, suñño jātarūparajatena, suñño itthipurisasannipātena atthi cevidaṁ asuññataṁ yadidaṁ—bhikkhusaṅghaṁ paṭicca ekattaṁ*."

© 2026 Lal A. Pinnaduwage

- **Translation**: "The Migāramātupāsāda (where the Buddha resided at the time) is free of elephants, cows, horses, and mares; of gold and silver; and of gatherings of men and women. Only *bhikkhus* live there."
- I will only provide the key points in English of the rest of the *sutta* to keep it brief. You follow along with the English translation in the link.

12. Various types of *saññā* present in a village (experienced by lay people) are absent in the Migāramātupāsāda (built by Visaka, who was also known as 'mother of Migāra'), where only the *bhikkhus* lived. **Thus, there is no stress due to perceptions (*saññā*) of the village or its people** (@marker 4.6). Thus, the *bhikkhus* are only exposed to *araññā saññā* ("*araññā*" is the Migāramātupāsāda).

- At marker 4.10, there is a critical verse: "*Iti yañhi kho tattha na hoti tena taṁ suññaṁ samanupassati, yaṁ pana tattha avasiṭṭhaṁ hoti taṁ 'santamidaṁ atthī'ti **pajānāti**. Evampissa esā, ānanda, **yathābhuccā avipallatthā parisuddhā suññatāvakkanti bhavati**.*"
- **Translation**: A ***Sotāpanna*** can realize with wisdom (***pajānāti***) and get their minds devoid (***suññatāvakkanti***) of the *saññā* present in a village. Thus, their minds are under less stress.

13. Next, a *bhikkhu*—ignoring the perceptions of people (*amanasikaritvā manussa saññaṁ*) and the perception of the *araññā* (*amanasikaritvā araññā saññaṁ*)—**focuses on the oneness dependent on the perception of *pathavī* (*pathavī saññā*)**.

- Then, @5.8: their minds get into *samādhi* based on ***pathavī saññā*** (*pathavīsaññaṁ paṭicca ekattan'ti*)
- That is *kasiṇa* meditation as practiced by *anariya yogis*.
- With that, a *bhikkhu* can go through all **four *jhānic* states** (not explained in the *sutta*).

14. In the next step, they access the **first *arūpa samāpatti*** of ***ākāsānañcāyatana*** (@6.1): "*Puna caparaṁ, ānanda, bhikkhu amanasikaritvā araññasaññaṁ, amanasikaritvā pathavīsaññaṁ, ākāsānañcāyatana saññaṁ paṭicca manasi karoti ekattaṁ*."

- Then they can go through the rest of the ***arūpa samāpatti*** (by successively discarding each *arūpa saññā*) to reach the fourth *arupa samapatti* of *nevasaññānāsaññāyatana* (@9.7)
- Now, from marker 10.1, it describes how the *bhikkhu* can contemplate the *anicca* nature of all those states and overcome all existences in *kāma loka, rūpa loka*, and *arūpa loka*, by **releasing the mind of all *nimittas* with distorted *saññā*** (@11.1): "*Puna caparaṁ, ānanda, bhikkhu amanasikaritvā ākiñcaññāyatanasaññaṁ, amanasikaritvā nevasaññānāsaññāyatanasaññaṁ, **animittaṁ cetosamādhiṁ paṭicca manasi karoti ekattaṁ***."
- Note that the word ***pajānāti*** appears often, indicating that the *bhikkhu* must be an *Ariya*. See "Cognition Modes – Sañjānāti, Vijānāti, Pajānāti, Abhijānāti ."

15. After eliminating all *saṁyojana* associated with rebirths, they still need to eliminate the remaining three *saṁyojana* of *mana, uddhacca*, and *avijjā*.

- Once that is accomplished (@ marker 11.6): "*Tassa evaṁ **jānato** evaṁ **passato** **kāmāsavāpi cittaṁ vimuccati, bhavāsavāpi cittaṁ vimuccati, avijjāsavāpi cittaṁ vimuccati. Vimuttasmiṁ vimuttamiti ñāṇaṁ hoti***."
- **Translation**: "Knowing (***jānato***) and seeing with wisdom (***passato***) like this, **the mind is freed from the *kāma loka* (*kāma āsavā*), and also *rūpa* and *arūpa loka* (*bhava āsava*), and ignorance (*avijjā āsava*). When they're freed, they know they're freed."**
- See "Jānato Passato' and Ājāniya – Critical Words to Remember."

Rebirth Bonds (*Saṁyojana*) Eliminated by Overcoming Various *Saññā* With Wisdom

© 2026 Lal A. Pinnaduwage

16. At marker 12.4: "*So 'suññamidaṁ saññāgataṁ kāmāsavenā'ti* ***pajānāti****, 'suññamidaṁ saññāgataṁ bhavāsavenā'ti* ***pajānāti****, 'suññamidaṁ saññāgataṁ avijjāsavenā'ti* ***pajānāti****, 'atthi cevidaṁ asuññataṁ yadidaṁ—imameva kāyaṁ paṭicca saḷāyatanikaṁ jīvitapaccayā'ti.*"

- That is the critical connection to overcoming all types of *saññā* associated with *kāma loka* (***suññam*** *idaṁ* ***saññāgataṁ kāmāsavenā****'ti pajānāti*), the higher two *lokas* (***'suññam*** *idaṁ* ***saññāgataṁ bhavāsavenā***) and *avijjā* (***'suññam*** *idaṁ* ***saññāgataṁ avijjāsavenā***) with wisdom (***pajānāti***).
- **They are the *ubhatovimutti Arahants*, who can access '*nirodha samāpatti*.'**

14.14 Incorrect Theravāda Interpretations – Historical Timeline

April 29, 2017; revised December 8, 2021; October 30, 2024

1. Degradation of *Theravāda* Buddha Dhamma occurred gradually over the past 1500 years. Still, two drastic changes took place during that time: (i) Buddhaghosa's introduction of Hindu meditation techniques 1500 years ago, (ii) misinterpretation of *anicca* and *anatta* by the European scholars when they translated both *Tipiṭaka* and *Visuddhimagga* to English in the late 1800's.

- I will discuss the complete historical timeline in this post, which is critical to the discussion.
- As I explained in earlier posts in this section, branching out of various sects based on Mahāyāna, Zen, and Tibetan (*Vajrayāna*) led to significant distortions of Buddha Dhamma. This started with the rise of Mahāyāna in India about 500 years after the Buddha.

2. Here we look at the timeline of Theravāda Buddha Dhamma from the beginning, and see whether we can discern when the pure Dhamma started going underground. Most people agree with the following historical facts.

(BCE = Before Current Era, CE = Current Era = AD):

- **563 – 483 BCE:** Buddha Gotama
- **377-307 BCE**: The city of Anuradhapura, Sri Lanka, was established by King Pandukabhaya. But there is evidence that human colonization in Sri Lanka goes back to at least 30,000 years; see the detailed article on Sri Lanka on Wikipedia : WebLink: Wikipedia: History of Sri Lanka
- **247 BCE**: Ven. Mahinda Thero introduced Buddha Dhamma to the Sinhala Kingdom in Anuradhapura, Sri Lanka. It is possible that Buddha Dhamma was already there in the Eastern part of Sri Lanka. However, this has not been confirmed.
- **161-137 BCE**: For the first time in history, King Dutugemunu united all of Sri Lanka under one kingdom.
- **29 BCE**: *Tipiṭaka* (the version recited at the Third Buddhist Council —*Dhamma Sangayana* — around 247 BCE), was written down in Sri Lanka at the Fourth *Sangayana,* which was the last *Sangayana* attended by all *Arahants*. This is the Pāli *Tipiṭaka* that has survived to this date.
- **100-200 CE**: Ven. Maliyadeva, the Last *Arahant* with psychic powers by some accounts, lived in Sri Lanka : WebLink: Wikipedia: Maliyadeva (However, it is likely that there have been "*jāti Sotāpannas*" who attained *Arahanthood* since then but may not be that many).
- **100 BCE**: It is likely that Mahāyāna Buddhism originated when the earliest Mahāyāna sūtras (the *Prajñāpāramitā* series,) along with texts concerning *Akṣobhya* Buddha, probably written in the 1st century BCE in the south of India : WebLink: Wikipedia: Mahāyāna
- **150-250 CE**: Life of Nagarjuna; considered the founder of Mahāyāna Buddhism. Nagarjuna's central concept was the "emptiness" (*shunyata*) of all *dhammas*. The most influential work is *Mulamadhyamakakarika* (Fundamental Verses on the Middle Way).

2. It is clear that the Pāli *Tipiṭaka* that we have today has the Buddha's original teachings since *Arahants* wrote it down. However, Buddha Dhamma started to decline within 100-200 after being written down.

- Still, there was no significant impact on *Theravāda* Buddhism up to the writing of *Visuddhimagga* by Buddhaghosa around 450 CE.
- The other major work that influenced *Theravāda* teachings to date was *Abhidhammattha Sangaha* by *Acariya* Anuruddha, who was there around the same time as *Acariya* Buddhaghosa. However, since not many study Abhidhamma, it has not impacted *Theravāda* as much as *Visuddhimagga.*
- By this time, a critical had already taken place. The *Mahāyāna* influence successfully introduced two new words to the Sinhala language: අනිත්‍ය(*aniyta*) and අනාත්ම(*anātma.*) Those two words replaced the Sinhala words අනිච්ච(*anicca*) and අනත්ත(*anatta*); see #4 below. It is critical to note that many Pāli

© 2026 Lal A. Pinnaduwage

words Like *saṅkhāra* and *viññāṇa* do not have separate Sinhala words, i.e., the exact words (සංඛාර and විඤ්ඤාණ) appear in the Sinhala language.

- Another critical development occurred in the late 1800s, when early European scholars translated the *Tipiṭaka* into English. That was when the key Pāli terms *anicca* and *anatta* were incorrectly translated as impermanence and "no-self." By then, even in *Theravada*, *anicca,* and *anatta* had been established to be the same as the Sanskrit words *aniyta* and *anātma.*

3. To first discuss the influence of Buddhaghosa, let us look at the timeline of events that led to his visit to Sri Lanka roughly 950 years after the *Parinibbāna* of the Buddha. Here is a timeline compiled by *Bhikkhu* Nyanamoli, taken from his introduction to Ref. 1 (see the references below).

King Devanampiyatissa (307-276 BCE):

- The arrival of Ven. Mahinda in Anuradhapura and establishing Dhamma in the kingdom of King Devanampiyatissa.
- Ven. Mahinda founded *Mahāvihāra* monastery.

King Vattagamini (104-88 BCE):

- The King founded the Abhayagiri monastery, which became separate from the Mahāvihāra monastery.
- Sensing insecurity, Mahāvihāra monastery writes down *Tipiṭaka* (away from the royal capital).

King Bhatikabhaya (20 BCE-9 CE):

- Public disputes started to break out between Abhayagiri and Mahāvihāra monasteries.

King Vasabha (66-110 CE):

- No Sinhala commentaries on *Tipiṭaka* were compiled after his reign.

King Voharika-Tissa (215-237 CE):

- King supported both Mahāvihāra and Abhayagiri monasteries.
- Abhayagiri adopts Vetulya (Mahāyāna?) *piṭaka*.
- King suppressed the Vetulya doctrines.

King Gothabhaya (254-267 CE):

- King supports Mahāvihāra monastery.
- The King banished sixty bhikkhus in Abhayagiri for upholding Vetulya doctrines.
- Indian Bhikkhu Sangamitta supports the Abhayagiri monastery.

King Jettha-Tissa (267-277 CE):

- King favors Mahāvihāra monastery; Sangamitta flees to India.

King Mahasena (277-304 CE):

- King supports Sangamitta, who returns from India.
- Persecution of Mahāvihāra by King; its Bhikkhus are driven from the capital for 9 years.
- Mahāvihāra (with its libraries of seven stories) burnt to the ground.
- Sangamitta assasinated.
- Rebuilding of Mahāvihāra.

King Sri Meghavaṇṇa (304-332 CE):

- King favors Mahāvihāra.

© 2026 Lal A. Pinnaduwage

- A Sinhala monastery was established at Buddha Gaya in India.

King Jettha-Tissa II (332-334 CE):

- Dipavamsa composed.
- Some of Buddhadatta Thera's works.

King Mahānama (412-434 CE):

- Buddhaghosa arrives in Sri Lanka and composes *Visuddhimagga* and other works.

4. I recommend reading the Introduction to the English translation of Visuddhimagga by Ven. Nyanamoli (Ref. 1). To quote Ven. Nyanamoli (starting on p. xxvii of Ref. 1):

"…Now by about the end of the first century B.C. E. (dates are very vague), with Sanskrit Buddhist literature just launching out upon its long era of magnificence, Sanskrit was on its way to becoming a language of international culture. In Ceylon the Great monastery (Mahāvihāra), already committed by tradition to orthodoxy based on Pāli, had been confirmed in that attitude by the schism of its rival, which now began publicly to study the new ideas from India. ……In the first century C.E., Sanskrit Buddhism ("Hīnayāna", and perhaps by then Mahāyāna) was growing rapidly and spreading abroad. The Abhayagiri monastery would naturally have been busy studying and advocating some of these weighty developments while the Mahāvihāra has nothing new to offer. …….King Vasabha's reign (66-110 CE) seems to be the last mentioned in the Commentaries as we have them now, from which it may lie dormant, nothing further being added. Perhaps the Mahāvihāra, now living only on its past, was itself getting infected with heresies. ……in King Mahāsena's reign (277-304 CE) things came to a head. With the persecution of Mahāvihāra with royal assent and the expulsion of its *bhikkhus* from the capital, the Abhayagiri monastery enjoyed nine years of triumph. But the ancient institution rallied its supporters in the Southern provinces and the king repented. The *bhikkhus* returned and the king restored the buildings, which had been stripped to adorn the rival".

"Still, the Mahāvihāra must have foreseen, after this affair, that unless it could successfully compete with the "modern" Sanskrit in the field of international Buddhist culture by cultivating Pāli at home and aboard it could assure its position at home. **It was a revolutionary project, involving the displacement of Sinhala by Pāli as the language for the study and discussion of Buddhist teachings, and the founding of a school of Pāli literary composition.** ……It is not known what was the first original Pāli composition in this period; but the *Dipavamsa* (dealing with historical evidence) belongs here (for it ends with Mahāsena's reign and is quoted in the *Samantapasadika*, and quite possibly the *Vimuttimagga* (dealing with practice), was another early attempt by the Mahāvihāra in this period (4th century) to reassert its supremacy through original Pāli literary composition".

5. Here is another account of the destruction of the original Mahāvihāra during the reign of King Mahasena (277-304 CE) from Ref. 2 (p. 46): "..the Mahā-Vihāra, the Brazen Palace, and all such religious edifices, built by generosity of devout kings and pious noblemen for the use of the orthodox Saṅgha, were razed to the ground. Some three hundred and sixty-four colleges and great temples were uprooted and destroyed, says an ancient chronicle (Nikāya-Sangraha, p.14), ..."

6. **Thus it is clear that the historical tradition of compiling Sinhala commentaries (on *Tipiṭaka*) was abandoned somewhere in the 4th century or even before that,** and many of the original Sinhala *Atthakatha* could have been burnt when the original Mahāvihāra was burned. The Mahāvihāra initiated by a concerted effort to compile literature in the Pāli language to counter the onslaught of Sanskrit Mahāyāna literature in India that was benefiting the Abhayagiri monastery. The appearance of Buddhaghosa on the scene in the early fifth century accelerated this effort to compile Pāli literature.

- More details can be found in the *Mahāvaṁsa*, the Pāli historical account of the history of Sri Lanka compiled in the 5th century (Ref. 3).
- **However, most accounts in the *Mahāvaṁsa* — especially regarding the history of Sri Lanka — are not correct.** I will write a post on this issue later.

© 2026 Lal A. Pinnaduwage

- However, since *Mahāvaṁsa* was written around the time of Buddhaghosa, it is possible that accounts about Buddhaghosa may be correct.

7. In the two posts, "Buddhaghosa and Visuddhimagga – Historical Background" and "Buddhaghosa's Visuddhimagga – A Focused Analysis," I discussed the events leading to Buddhaghosa's writing of *Visuddhimagga*, and how it introduced the **first significant contamination** of Buddha Dhamma by incorporating Hindu *vedic* meditations — breath meditation and *kasiṇa* meditation.

The second major contamination — even more damaging — was the incorrect translation of *anicca* and *anatta* as impermanence and "no-self". This is discussed in the last two posts: "Background on the Current Revival of Buddha Dhamma" and "Misinterpretation of Anicca and Anatta by Early European Scholars."

All relevant posts in "Historical Background."

14.15 Buddhaghosa and Visuddhimagga – Historical Background

April 8, 2017; Revised April 29, 2017; August 28, 2022

1. *Ācariya* Buddhaghosa has strongly influenced *Theravāda* Buddhism for the past 1500 years. Before examining his commentaries — especially the *Visuddhimagga* (Path of Purification) —, we will discuss some significant events before his time and why he came to Sri Lanka to compose those commentaries. [***ācariya*** : [m.] teacher.]

- The historical time-lines up to the arrival of Buddhaghosa in Sri Lanka are given in the previous post in this section: "Incorrect Theravāda Interpretations – Historical Timeline."
- I have used material from the three references below to create this post.

2. First, we note that only *Arahants* participated in the first four Buddhist Councils (*Sangāyanā*), and the fourth one was held at the Aluvihāra Monastery (a rock temple) near present-day Mātale in the Central Province of Sri Lanka in 29 BCE; see, "Preservation of the Dhamma."

- The *Tipiṭaka* was **written down fully** (as it exists today) for the first time in this fourth *Sangāyanā* in Pāli with Sinhala script (Pāli does not have its alphabet).
- So, it is important to keep three things in mind: (i) Genuine *Dhamma* existed in 29 BCE with *Arahants* also completing the *Abhidhamma Piṭaka*, (ii) What we have in the *Tipiṭaka* today is this version, and therefore we can have confidence that the true teachings of the Buddha are in the *Tipiṭaka,* (iii) *Tipiṭaka* was written down in Pāli with Sinhala alphabet.

3. Secondly, many parts of the *Tipiṭaka* are in a condensed form, as discussed in "Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa." **Today, there is a tendency to translate *Tipiṭaka suttā* word-by-word**, which has led to significant confusion and many contradictions, as discussed in that post.

- **Starting at the time of the Buddha, commentaries were composed to expand and explain the key concepts in a condensed form designed for easy oral transmission.** We must remember that the *Tipiṭaka* was not written down for around 500 years after the *Parinibbāna* of the Buddha. During that whole time, it survived only because it was in a designed form for ease of remembering; thus, many details were omitted.
- For example, Buddha's first discourse, "WebLink: suttacentral: *Dhammacakkappavattana Sutta* (SN 56.11)," took many hours to deliver, but the *sutta* was condensed to just a few pages of verse. It is impossible to condense all that information in a *sutta* for mostly oral transmission that was available at the time. In those early days, *Bhikkhus* explained the details when they delivered *desanā* or discourses to the public.
- **Therefore, in addition to the *Tipiṭaka* being orally transmitted through generations, the details were also orally transmitted.** However, when Buddha Dhamma started declining around 100-200 CE, those details stopped being transmitted (there were not enough *Ariyā,* or those who attained *magga phala*, to pass down correct explanations). Of course, the easy-to-memorize verses of the *Tipiṭaka* were faithfully transmitted.
- That last bullet explains a key problem that we have today. Even though the *Tipiṭaka* remains intact, there have not been many *Ariyā* within the past hundreds of years to explain the key concepts in the *Tipiṭaka*; but thanks to late Waharaka Thero, that has changed; see, "Parinibbāna of Waharaka Thero."

4. Even though a few commentaries were composed in the time of the Buddha in Pāli (we have three in the *Tipiṭaka;* see below), most of them were written later on in Sinhala (especially after the time of Ven. Mahinda) when written language became more common.

- Up to the time of Buddhaghosa (after about 700 years from the time of Ven. Mahinda), there would have accumulated a vast number of such commentaries called Sinhala *Atthakathā*, which means "accounts of

© 2026 Lal A. Pinnaduwage

the truth" (*attha* + *kathā*). However, most of those were likely destroyed when the *Mahavihara* was burned before Buddhaghosa arrived in Sri Lanka; see below.

- **Buddhaghosa's task was to translate those from Sinhala to Pāli. Instead, he just made a few of his commentaries — especially the *Visuddhimagga* — where he incorporated his *Vedic* concepts in them; see below.**

5. As given in the timeline in the post mentioned in #1, an important event occurred before the arrival of Buddhaghosa in Sri Lanka, which led to the possible destruction of many original commentaries; this was the establishment of the *Abhayagiri Vihara* in Anuradhapura around 100 BCE. This led to the degrading of Buddha Dhamma in Sri Lanka, which was then accelerated by the writing of the *Visuddhismagga*, as we discuss below.

- Over several decades, *Abhayagiri Vihara* became a rival to the *Mahavihara*, which had been the center of religious activity since Ven. Mahinda (King Devanampiyatissa).
- The arrival of a body of monks from Pallarama in India, who belonged to the *Vajjiputta Nikāya*, apparently started this schism between the two *Vihara* (p. 29, Ref. 3). This sect descended from those who were expelled from the *Theravāda* by Ven. Moggaliputta Tissa Thero at the Third *Sangāyanā*.

6. Later, during the reign of King Voharaka Tissa (215-237 CE), *Abhayagiri Vihara* adopted the *Vaitulya Piṭaka*. It is no coincidence that by this time, *Mahāyāna* had become dominant in India.

- When the *Mahavihara* raised objections to this new development, King Voharaka Tissa appointed minister Kapila to investigate and, on his recommendation, ordered all *Vaitulya* books to be burnt.
- A key point to remember is that "Literary activity in Ceylon (Sri Lanka) declined and, it seems, fell into virtual abeyance between 150 CE and 350 CE, as will appear below" (Ref. 1, p. xxiii).

7. During King Gothabhaya's reign (254-267 CE), the *Vaitulyan* heresy raised its head again, and the King took action. He not only burnt their books but branded 60 of their leaders and expelled them.

- Those expelled settled down at Kavira in South India. While they were there, a recruit by the name of Sangamitta joined them.
- One day, while bathing, Sangamitta saw the branding on the backs of the others and learned what had happened in Sri Lanka. He vowed to take revenge.

8. Sangamitta went to Sri Lanka and won the confidence of King Gothabhaya, who appointed Sangamitta to tutor his two sons.

- When King Gothabhaya died, his elder son Jettha Tissa became King, but he was not that attached to Sangamitta, so Sangamitta returned to India. When Jettha Tissa died 14 years later, the younger brother, Mahasena, became King.

9. Mahasena was very much attached to Sangamitta, and Sangamitta decided to return to Sri Lanka, realizing that his time to take revenge had come.

- On Sangamitta's advice, King Mahasena started a process of damaging the *Mahavihara* and the Buddha Dhamma in Sri Lanka. He prohibited providing alms to Mahavihara, and *bhikkhus* at *Mahavihara* migrated to other parts of the country over time.
- By this time, Buddhism in Sri Lanka was in decline due to other factors, including the rise of *Mahāyāna* in India. *Arahants* were scarce on the Island; if there were some, they would have been in remote regions.

10. For nine years, Sangamitta lived in glory, plundering the properties of Mahavihara and eventually burning down the seven story building with its libraries (p. 47 of Ref. 3). People became angry with what happened to *Mahavihara*, and a rebellion was started by a minister of the King named Meghavaranabhaya.

© 2026 Lal A. Pinnaduwage

- However, before a battle took place, the minister was able to meet the King and explain why he needed to make amends to the *Mahavihara* to appease the populace. The King apologized and rebuilt the *Mahavihara*.
- However, people were quite angry at Sangamitta, who was killed on the orders of a queen of the King, probably without the knowledge of the King.

11. The damage had been done. It is also said that when the King rebuilt the *Mahavihara*, it was mostly those at the *Abhayagiri* who took residence at the restored *Mahavihara*. **Therefore, when Buddhaghosa visited the *Mahavihara*, the *bhikkhus* there could have been those originally belonging to the *Abhayagiri* sect.**

- Furthermore, It is possible that many of the original Sinhala *Atthakathā* were destroyed when the *Mahavihara* was burned to the ground. Even though copies of the *Tipiṭaka* were at many different locations scattered throughout the country, it is not known how many of the *Atthakathā* had copies.
- In any case, none of those original Sinhala commentaries exist today.
- *Mahāyāna* was taking root in India and possibly contributed to the degrading of *Theravāda* in Sri Lanka as well. Sanskrit became the "language of the pundits" (with many new Sanskrit *sutras* written by Nagarjuna, Vasudeva, etc), and Pāli was losing the battle; see, "Incorrect Theravāda Interpretations – Historical Timeline."

12. By the time Buddhaghosa arrived in Sri Lanka (during the reign of King Mahanama between 412-434 CE), some of those *Atthakathā* might have still been there.

- Ven. Nyanamoli says (p. xviii of Ref. 1), "..There are references in these works (by Buddhaghosa) to "Ancients (*Porana*) or "Former Teachers (*Pubbacariya*)" as well as to several Sinhalese Commentaries additional to the three referred to in the quotation given earlier. The fact is that a complete body of commentary had been built up during the nine centuries or so that separate Bhandantacariya Buddhaghosa from the Buddha.." and "..This body of material — one may guess that its volume was enormous — Bhandantacariya Buddhaghosa set himself to edit and render into Pāli (the *Tipiṭaka* itself had been left in the original Pāli).."
- By the way, "*Porāna*" is a Sinhala word (now *Purāna*), meaning ancient.
- The detailed explanations in those *Atthakathā* were held in high esteem among the remaining Buddhists in India. As we see below, this is where Buddhaghosa came into the picture.
- So, it appears that even though some of the Sinhala *Atthakathā* were burned with the destruction of the *Mahavihara*, some had survived in other locations and brought back to the rebuilt *Mahavihara*.

13. Buddhaghosa was born into a *vedic brahmin* family who lived close to the *Bodhi* Tree in India. He mastered the three *Vedas* and was a well-known *vedic* scholar. He was converted to Buddhism by a *Bhikkhu* Revata who lived in that region in India.

- Law (p. 6 of Ref. 2) writes that Ven. Revata told Buddhaghosa, "..The Sinhalese *Atthakatha* are genuine. They were composed in the Sinhala language by the inspired and profoundly wise Mahinda, who had previously consulted the discourse of the Buddha, authenticated at the three convocations (*Sangāyanā*), and the dissertations and arguments of Sāriputto and others, and they are extant among the Sinhalese. Repairing thither, and studying the same, translate (them) according to the rules of the grammar of the Maghadhas (Pāli). It will be an act conducive to the welfare of the whole world". Malalasekara (p.66 of Ref 3) gives a very similar account of that request.
- Ven. Nyanamoli also gives a detailed account of how Ven. Revata recruited Buddhaghosa for the project on pp. xxxiv-xxv (Introduction) of Ref. 1. Also see pp. 31-39 of Ref. 2 and pp. 64-69 of Ref. 3.

14. The important position assigned in the *Theravāda* tradition to the work of Buddhaghosa is evident from the following quote from Ref. 1 (p. xli):

© 2026 Lal A. Pinnaduwage

- "..The doctrines (*Dhamma*) of the Theravāda Pāli tradition can be conveniently traced in three main layers. (1) The first of these contains the main books of the Pāli *Sutta Piṭaka*. (2) The *Abhidhamma Piṭaka*, notably the closely related books, the *Dhammasangayani*, *Vibhanga Paṭṭhāna*. (3). The system the author of the Visuddhimagga completed, or found completed, and he set himself to edit and translate back into Pāli ..."
- Even today, many *Theravādins* use the *Visuddhimagga* and don't bother to consult the *Tipiṭaka*.

15. Sinhala tradition assigns the arrival of Buddhaghosa in Sri Lanka 965 years after the *Parinibbāna* of the Buddha, according to Malalasekara (p. 66). This is consistent with the above timeline.

- Upon arriving at the Mahavihara in Anuradhapura, Sri Lanka, Buddhaghosa requested those *Atthakathā* from the authorities. They were initially reluctant, but after verifying that he was a scholar, they gave him access to the books (Refs. 1-3).
- Law (p. 8 of Ref 2) says, "..Taking up his residence in the secluded Ganthakaro viharo at Anuradhapura, he translated, according to the rules of the *Maghdhas*, **which is the root of all languages**, the whole of the Sinhalese *Atthakathā* (into Pāli)".

16. This assertion that Buddhaghosa "**translated** Sinhalese *Atthakathā* into Pāli" is incorrect.

- He incorporated many of his *vedic* concepts (breath meditation, *kasiṇa* meditation, etc) and made his commentaries, as I will discuss in the next post.
- The obvious inconsistencies of the *Visuddhimagga* with the *Tipiṭaka* and the remaining three original Pāli commentaries (still in the *Tipiṭaka*) are discussed in "Buddhaghosa's Visuddhimagga – A Focused Analysis."

17. Law makes the following interesting statement (p. 38 of Ref. 2): "..Buddhaghosa's task of translating was finished in three months. Having observed the *Pavarana*, he informed the congregation's chief of completing his task. **The Samgharaja praised him much and set fire to all the works written by Mahinda in Sinhalese**..." We can make two observations:

- If the work was completed in three months, as Law says, Buddhaghosa did not even have time to go through the whole of the Sinhalese *Atthakathā,* even if only a part of it was left.
- It is hard to believe that the chief *Bhikkhu* set fire to the original books. However, ALL those Sinhalese *Atthakathā* were indeed lost after the Buddhaghosa.

18. In the next post in this section, "Buddhaghosa's Visuddhimagga – A Focused Analysis," I discuss why *Visuddhimagga* does not represent Buddha Dhamma.

- However, as we discussed above, all of the Sinhala *Atthakathā* were lost soon after the publication of *Visuddhimagga*, and *Visuddhimagga* became the sole source for explaining *Tipiṭaka* material.
- It became customary just to use the *Visuddhimagga* and not even consult the *Tipiṭaka* until recent times, especially until the "discovery of Buddhism" by the Europeans who started translating the *Tipiṭaka* and Buddhaghosa's works. See the details in the "Historical Background" section.

19. Furthermore, When Europeans started translating the *Tipiṭaka* (starting with Rhys Davis and others), they translated *suttā* word-by-word to English, a practice that continues today.

- However, It is not a good idea to translate Pāli *suttā* word-by-word, and those early commentaries were critically important to expand on the *Tipiṭaka* material. This is discussed in "Sutta Interpretation – Uddesa, Niddesa, Patiniddesa."
- In addition, those early European scholars made a huge mistake by incorrectly translating the Pāli words *anicca* and *anatta* as impermanent and "not-self"; see, "Misinterpretation of Anicca and Anatta by Early European Scholars."

© 2026 Lal A. Pinnaduwage

- This is why the work of the late Waharaka Thero is so important. He was able to "re-discover" the meanings of the key Pāli words by perusing the remaining three original Pāli commentaries of *Patisambhidamagga*, *Petakopadesa*, and *Nettippakarana*; see "Preservation of the Dhamma."

14.16 Buddhaghosa's Visuddhimagga – A Focused Analysis

April 29, 2017; revised March 16, 2021; major revision September 3, 2021

Two Major Distortions to Buddha Dhamma

1. The first distortion occurred about 1500 years ago with the introduction of "breath meditation" as the Buddhist *Anāpānasati* meditation by Buddhaghosa in his commentary *Visuddhimagga*.

- The second significant distortion took place more recently by European scholars by an honest mistake. They were unable to distinguish between Sanskrit-based Mahayana Buddhism and Pāli-based Theravada Buddha Dhamma. That led to to the mistranslation of *anicca* as impermanence and *anatta* as "no-self."
- We will discuss the background to the first issue in this post.
- An introduction to the second issue is in the post, "Misinterpretation of Anicca and Anatta by Early European Scholars."

Historical Background on Buddhaghosa

2. In the previous post in this series, "Buddhaghosa and Visuddhimagga – Historical Background," we discussed why Buddhaghosa traveled to Sri Lanka. Here is a summary of that post:

- Many parts of the *Tipiṭaka* are in condensed form. Starting from the Buddha's time, commentaries were written to expand and explain the key concepts in the *Tipiṭaka*.
- Most of those commentaries — at least from the time of Ven. Mahinda — was written in the Sinhala language by Ven. Mahinda himself and many Sinhalese *Arahants* for over 950 years up to the time of Buddhaghosa. These were called Sinhala *Atthakathā* (true accounts).
- A certain *bhikkhu* by the name of Ven. Revata in India recruited Bhuddhaghosa to travel to Sri Lanka and translate those Sinhala *Atthakathā* to Pāli (see Refs. 2-4 (Ref. 2, Ref. 3, and Ref. 4) below).
- In this post, I will point out that instead of translating those Sinhala *Atthakathā,* Buddhaghosa incorporated his own *vedic* ideas into his commentaries in Pāli, especially describing *Ānāpānasati* as breath meditation.

Demise of Sinhala *Atthakathā* (Original Commentaries in Sinhala)

3. Those Sinhalese *Atthakathā* disappeared from existence not long after Buddhghosa completed his work (most of them were likely burnt with the *Mahavihara* well before Buddhaghosa's time). Regardless of what happened to those original *Atthakathā*, *Theravāda* tradition accepted *Visuddhimagga* to represent those original *Atthakathā* as well as the *Tipiṭaka*. To date *Visuddhimagga* is regarded in high esteem.

- When he edited those Sinhala *Atthakathā* and composed the *Visuddhimagga*, Buddhaghosa, a scholar in *Vedic* literature, incorporated Hindu *Vedic* concepts to the *Visuddhimagga*.
- In particular, he replaced real Buddhist *Ānāpāna Bhāvanā* with breath meditation and also introduced Hindu *kasiṇa* meditation.
- Buddhaghosa also disregarded the importance of the *Tilakkhaṇa* (*anicca, dukkha, anatta*), but I will show evidence that he never distorted their meanings. That happened only when the Europeans translated the *Tipiṭaka* and the *Visuddhimagga* to English; see, "Misinterpretation of Anicca and Anatta by Early European Scholars."
- He also reportedly wrote other commentaries on *Tipiṭaka*, but they are not widely used.
- I guess that Buddhaghosa did not consult the Sinhala *Atthakathā* even for the *Visuddhimagga*. Certainly, *Visuddhimagga* is not compatible with the remaining original three commentaries and the *Tipiṭaka* regarding meditation techniques.

© 2026 Lal A. Pinnaduwage

Final Buddhist Council Attended by *Arahants*

4. As I discussed in the post, "Buddhaghosa and Visuddhimagga – Historical Background," pure Dhamma existed until the fourth Buddhist Council (*Sangāyanā*) held in 29 BCE in Matale, Sri Lanka.

- By the time Buddhaghosa arrived in Sri Lanka roughly 450 years later, drastic changes had taken place (with the Buddhist center of Anuradhapura *Mahā Vihara* burnt down once) and a Mahayanist sect the landscape for a while; see the above post among other things.
- **So, the degradation of Theravāda Buddha Dhamma occurred gradually over two thousand years. Still, two drastic changes took place during that time: (i) Buddhaghosa's introduction of Hindu meditation techniques in the fifth century, (ii) misinterpretation of *anicca* and *anatta* by the European scholars when they translated both *Tipiṭaka* and *Visuddhimagga* to English in the late 1800s.**
- Even though there was a resurgence of Buddha Dhamma since the late 1800s due to those Europeans' efforts like Rhys Davids, Eugene Burnouf, and Thomas Huxley, unfortunately, it was this "distorted Dhamma" was what spread throughout the world in the past 200 years.

Three Original Commentaries in Pāli

5. Even though those old Sinhala commentaries were lost, three commentaries composed in Pāli (*Paṭisambhidāmagga*, *Petakopadesa*, and *Nettippakarana*) at the time of the Buddha remained intact with the *Tipiṭaka;* see, "Preservation of the Dhamma."

- After Buddhaghosa composed *Visuddhimagga*, *Theravādins* almost exclusively used *Visuddhimagga* instead of the *Tipiṭaka,* and those original Pāli commentaries were totally neglected.
- With the help of those three original Pāli commentaries, Waharaka Thero was able to "re-discover" the Buddha's original teachings over the past 25 years or so. Unfortunately, Wahraka *Thero* attained *Parinibbāna* recently; see, "Parinibbāna of Waharaka Thero."
- After the "re-discovery" of the Buddha's true teachings by Waharaka *Thero* over the past 25 years or so, it became clear that several key misinterpretations crept into Buddha Dhamma over the past two thousand years. But the actual timeline of contamination was not clear.
- For example, it was not clear whether Buddhaghosa himself was responsible for *anicca* and *anatta's* misinterpretations. In this post, I will show that Buddhaghosa was not responsible for that part. In the post, "Misinterpretation of Anicca and Anatta by Early European Scholars," I presented evidence that it was done by the European pioneers when they assumed that the Pāli words *anicca* and *anatta* were derived from *anitya* and *anathma* in Sanskrit.

Buddhaghosa Not Responsible for Misinterpretation of *Anicca* and *Anatta*

6. First, I will show evidence that Buddhaghosa did not distort the meanings of the words *anicca* and *anatta,* even though he did not realize the importance of the *Tilakkhaṇa*.

- **We need to remember that Buddhaghosa was supposed to take material from Sinhala *Atthakathā* and compose his own commentary, *Visuddhimagga*, in Pāli.** One can purchase that original Pāli version, Ref. 1 below, from Amazon.
- When comparing the Pāli and English texts below, I will be using Ref. 2.

7. On p. 271 of the Pāli Visuddhimagga (Ref. 1), for example, it says, "*Catutthacatukke pana aniccānupassi ettha tava aniccata veditabbaṁ. Aniccata veditabba. Aniccānupassanā veditabba. Aniccānupassi veditabbo*."

© 2026 Lal A. Pinnaduwage

- This is translated in the book by *Bhikkhu* Nyanamoli (p. 282, vol. I) as, "But in the fourth tetrad, as to *contemplating impermanence*, here; firstly, the impermanent should be understood, and impermanence, and the contemplation of impermanence, and one contemplating impermanence."
- So, in this case, Buddhaghosa used the correct Pāli words, *anicca*. Still, *Bhikkhu* Nyanamoli incorrectly translated it as "impermanence" following the European pioneers' misinterpretation before him, as we discussed above.

8. Buddhaghosa's original Pāli version also states the relations among the three characteristics, as I discussed in the post, "Anicca, Dukkha, Anatta – Wrong Interpretations." On p. 617 of Ref. 1, "*Yadaniccaṁ taṁ dukkhaṁ"ti* (SN 3.15) *vacanato pana tadeva khandhapancakaṁ dukkhaṁ. Kasmā? Abhiṇhpatipīḷana, abhinhapatipīḷanā kāro dukkhalakkhaṇaṁ.*" AND

"*Yaṁ dukkhaṁ tadanattā"ti* (SN 3.15) *vacanato pana tadeva khandhapancakaṁ anattā. Kasmā? Avasavattanato, avasavattanā kāro anattalakkhaṇaṁ.*"

- This really means, "***dukkha* arises (based on attachments to things of) *anicca* nature, therefore (such attachments are of) *anatta* nature**," as I explained in my post too.

Incorrect Translation by *Bhikkhu* Nynamoli

9. However, *Bhikkhu* Nynamoli, following the incorrect interpretation by the early European pioneers in the 1800's, translates those two verses as (p.663 of Ref. 2): "Those same five aggregates are painful because of the words, '**What is impermanent is painful**' (S. iii,22). Why? Because of continuous oppression. The mode of being continuously oppressed is the characteristic of pain.", AND

"Those same five aggregates are not-self because of the words, '**What is painful is not-self**' (S. iii,22). Why? Because there is no exercising of power over them. The mode of insusceptibility to the exercise of power is the characteristic of not-self."

10. Thus, it is obvious that it was not the Buddhaghosa who interpreted *anicca* as impermanent and *anatta* as not-self, but those early Europeans in the late 1800s. As explained in those previous posts, subsequent scholars from Sri Lanka and other Asian countries propagated those two incorrect interpretations.

- For example, early Sinhala scholars like Malalasekara, Jayathilaka, and Kalupahana, learned Buddhism (and received Doctoral degrees in Buddhism!) from those European pioneers at universities in the United Kingdom.
- One needs to contemplate on how the authority of those early Europeans on Buddha Dhamma. As explained in those other posts, they merely translated the *Tipiṭaka* word-by-word (using perceived etymologies to Sanskrit).
- We must realize that translating *Tipiṭaka* is not the same as translating any other book from one language to another. One has to have a deep background in Buddha Dhamma to do that.
- **The key mistake made by Rhys Davids, Bernouf, and others, was to assume that Pāli *anicca* and *anatta* are the same as Sanskrit *anitya* (which does mean impermanence) and *anathma* (which does mean no-self).**

Buddhaghosa Introduced Breath Meditation as *Ānāpānasati*

11. Now we turn to the issue of Biddhaghosa introducing Hindu *Vedic* meditation techniques to Buddha Dhamma in his *Visuddhimagga*.

Here is a key passage from Buddhaghosa's original Pāli *Visuddhimagga* (p. 254 [p. 274] of Ref. 1): "*Tattha dīghaṁ vā assasantoti dīghaṁ vā assāsaṁ pavattayanto,* ***assāsoti bahi nikkhamanavāto, passāsoti anto pavisanavātoti vinayaṭṭhakathāyaṁ vuttaṁ****. Suttantaṭṭhakathāsu pana uppaṭipāṭiyā āgataṁ. Tattha sabbesampi gabbhaseyyakānaṁ mātukucchito nikkhamanakāle paṭhamaṁ*

© 2026 Lal A. Pinnaduwage

abbhantara vāto bahinikkhamati, pacchā bāhiravāto sukhumarajaṁ gahetvā abbhantaraṁ pavisanto tāluṁ āhacca nibbāyati, evaṁ tāva assāsapassāsā veditabbā."

Bhikkhu Nyanamoli CORRECTLY translates this passage to English as follows (p. 265 of Ref. 2): "Herein, breathing in long (*assasanto*) is producing a long in-breath. **'*assāsa* is the wind issuing out; *passāsa* is the wind entering in'** is said in the *Vinaya* Commentary. But in the *Suttanta* Commentaries, it is given in the opposite sense. Herein, when an infant comes out from the mother's womb, first the wind from within goes out, and subsequently, the wind from without enters in with fine dust strikes the palate and is extinguished [with the infant's sneezing]. This, firstly, is how *assāsa* and *passāsa* should be understood".

- So, above is concrete evidence that Buddhaghosa himself referred to *Ānāpānasati* as breath meditation. He specifically talked about inhaling and exhaling air.
- However, actual Buddhist *Ānāpāna Bhāvanā* is not breath meditation; see, "7. What is Ānapāna?."

Buddhist Meditations Do Not Use *Kasiṇa* Objects

12. The second problem that Buddhaghosa introduced in his *Visuddhimagga* was to present mundane *kasiṇa* meditation as a viable path to *Nibbāna*. He gives detailed explanations on making *kasiṇa* objects in chapters 4 and 5 in Ref. 1.

- For example, he goes to minute details describing how to make an "earth *kasiṇa*" starting on. 118 [p 124] of Ref. 1: "*..Nīlapītalohitodātasambhedavasena hi cattāro paṭhavikasiṇadosā, tasmā nīlādivaṇṇaṁ mattikaṁ agahetvā gaṅgāvahe mattikāsadisāya aruṇavaṇṇāya mattikāya kasiṇaṁ kātabbaṁ,..*".
- *Bhikkhu* Nyanamoli translates (p. 123 of Ref. 2): "..Now the four fruits of the earth *kasiṇa* are due to the intrusion of blue, yellow, red, or white. So instead of using clay of such colors, he should make the *kasiṇa* of clay like that in the stream of Ganga, which is the color of the dawn..."
- In the same way, Buddhaghosa goes into great detail to describe how to make other types of *kasiṇa* objects.

13. The critical point is that true Buddhist *kasiṇa* meditation does not involve any physical *kasiṇa* objects. If anyone can find a reference in the *Tipiṭaka* where it is described how to make a physical *kasiṇa* object, I would appreciate receiving that reference.

- The Buddha describe the true Buddhist *kasiṇa* meditation to Ven. Rahula in the WebLink: suttacentral: *Mahā Rahulovada Sutta* (MN 62) (*Majjhima Nikāya*, MN 62). It was explained to him as a part of *Ānāpānasati Bhāvanā*, which can be done in many ways, but here by contemplating on internal body parts made of *cattāro mahā bhūta* and realizing that external objects are also made with the same *cattāro mahā bhūta.* Furthermore, that means nothing can be considered in one's body as. "me, myself, etc.."

"*..Ekāmantaṁ nisinno kho āyasmā rāhulo bhagavantaṁ etadavoca: "kathaṁ bhāvitā nu kho, bhante, ānāpānassati, kathaṁ bahulīkatā mahapphalā hoti mahānisaṁsā"ti? "Yaṁ kiñci, rāhula, ajjhattaṁ paccattaṁ kakkhaḷaṁ kharigataṁ upādinnaṁ, seyyathidaṁ—kesā lomā nakhā dantā taco maṁsaṁ nhāru aṭṭhi aṭṭhimiñjaṁ vakkaṁ hadayaṁ yakanaṁ kilomakaṁ pihakaṁ papphāsaṁ antaṁ antaguṇaṁ udariyaṁ karīsaṁ, yaṁ vā panaññampi kiñci ajjhattaṁ paccattaṁ kakkhaḷaṁ kharigataṁ upādinnaṁ— **ayaṁ vuccati, rāhula, ajjhattikā pathavīdhātu**. Ya ceva kho pana ajjhattikā pathavīdhātu yā ca **bāhirā pathavīdhātu, pathavīdhāturevesā**. Taṁ 'netaṁ mama, nesohamasmi, na meso attā'ti—evametaṁ yathābhūtaṁ sammappaññāya daṭṭhabbaṁ. Evametaṁ yathābhūtaṁ sammappaññāya disvā pathavīdhātuyā nibbindati, pathavīdhātuyā cittaṁ virājeti.*".

- The other three, *āpo, tejo, vāyo* are discussed in the same way there. One does not need to make *kasiṇa* objects for true Buddhist *kasiṇa* meditation, and as I said there is nowhere in the *Tipiṭaka* that discusses **preparing *kasiṇa* objects**.

© 2026 Lal A. Pinnaduwage

The Second Issue of Misinterpretation of *Anicca* and *Anatta*

14. In the next post, "Misinterpretation of Anicca and Anatta by Early European Scholars," we will wrap up this section on "Historical Background." With that post, I would have summarized the historical background from the Buddha's time to the present day. This is probably the only section that can be said to be "finished," even though I may edit the posts in this section as needed.

14.17 Background on the Current Revival of Buddhism (Buddha Dhamma)

Revised April 29, 2017; January 27, 2020

Critical Role of the British Civil Servants

1. Ironically, the current revival of Buddhism (Buddha Dhamma) is also due to the same reason that led to the decline in Buddha Dhamma in most Buddhist countries for hundreds of years. That decline was in the latter part of the second Millennium, i.e., the colonization of Asia by the Western powers starting with the Portuguese and ending with the British.

- The civil servants of the British East India Company came across ancient Buddhist literature in various Asian countries in the 1800s. Some of them realized the importance of these documents and started deciphering the documents themselves (e.g. Thomas W. Rhys Davids, 1843-1922.) They became motivated and learned Pāli and Sanskrit languages.
- Others sent documents universities in Europe. There, mostly French and English philosophers (e.g., Eugene Burnouf, 1801-1852) studied them and translated them to French and English.
- A thorough account of the efforts by the British civil servants in India, Sri Lanka, and other Asian countries in uncovering the "lost knowledge" has been given by Charles Allen in his excellent book, "The Search for the Buddha" (2003). It also covers restoration of historical Buddhist sites in India.

Early European Scholars

2. These Westerners realized that there was something profound in this ancient doctrine which exposed them for the first time to a religion that was not based on a Creator.

- Thomas Huxley captured the essence this new religion brilliantly as follows (Thomas H. Huxley, Evolution and Ethics and Other Essays, 1894, pp. 68-69): "A system which knows of no God in the Western sense; which denies a soul to man; which counts the belief in immortality a blunder and the hope of it a sin; which refuses any efficacy to prayer and sacrifice; which bids men look to nothing but their own efforts for salvation; which, in its original purity, knew nothing of vows and obedience, abhorred intolerance, and never sought the aid of the secular arm; yet spread over a considerable moiety of the Old World with marvelous rapidity, and is still, with whatever base admixture of foreign superstitions, the dominant creed of a large fraction of mankind".
- It is amazing that even at that early stage, when there must have been some confusion about the mythical aspects of especially the Tibetan and Zen Buddhist practices, Huxley was able to express the essence of Buddha Dhamma.

3. Based on their interest in the documents from Asia on Buddhism and Hinduism, Madame Helena Petrovna Blavatsky and Colonel Henry Steel Olcott founded the Theosophical Society in New York City in 1875. They subsequently traveled to India and Sri Lanka and became Buddhists.

- Olcott published "A Buddhist Catechism" in 1881. This book together with the "Light of Asia" by Edwin Arnold in 1871 (which went through 100 printings), led to much interest in Europe and America about Buddhism. Colonel Olcott opened several Buddhism-oriented schools in Sri Lanka in order to revive the religion. I was fortunate to be able to attend one of those schools.
- These efforts were subsequently augmented by a number of Sri Lankan intellectuals such as Anagarika Dharmapala, G. P. Malasekara, K. N. Jayatilleke, Narada Thera, Walpola Rahula Thera, David Kalupahana, and also by several more Westerners who were impressed by the Buddhist teachings to a point that they came to Sri Lanka, became monks, and wrote many excellent treatises on Theravāda Buddhism; these include Nyanatiloka Thera, Nyanyaponika Thera, and Bhikkhu Bodhi.

A surge of Zen Buddhism

© 2026 Lal A. Pinnaduwage

4. Even though those early publications by Rhys Davids, Arnold, and Olcott in the late 1800s were mainly on the Theravāda Buddhism, beginning in the early part of the 1900s, Zen Buddhism became an object of fascination in the West and continues to be a significant presence in the West.

- In contrast to the earlier introduction of (Theravāda) Buddhism to the West by Westerners, Zen made its way into the Western consciousness via the efforts of an elite group of Japanese intellectuals – most notably D. T. Suzuki. Suzuki, who came to America in 1897, wrote several books including "An Introduction to Zen Buddhism"; this book emphasized the transcendent and mystical nature of Zen.

5. Here is an excerpt from the above book by Suzuki, which clearly states the belief of the Mahāyāna thinkers that the original teachings of the Buddha are "primitive" and Mahāyāna provided the needed improvements (p. 1, footnote 1):

- "..to be accurate, the fundamental ideas of the Mahāyāna expounded in the Prajnaparamita group of Buddhist literature, the earliest of which must have it appeared at the latest within 300 years off the Buddha's death. The germs are no doubt in the writings belonging to the so-called primitive Buddhism. Only their development, that is, a conscious grasp of them as most essential in the teachings of the founder, could not be effected without his followers' actually living the teachings for some time through the variously changing conditions of life. **Thus enriched in experience and matured in reflection, the Indian Buddhists came to have the Mahāyāna form of Buddhism as distinguished from its primitive or original form.** In India two Mahāyāna schools are known the Madhyamika, of Nagarjuna and the Vijnaptimatra or Yogacara of Asanga and Vasubandhu. More schools developed in China: the Tendai, the Kegon, the Jodo, the Zen, etc. In Japan, we have besides these the Hokke, the Shingon, the Shin, the Ji, etc. All of these schools or sects belong to the Mahāyāna wing of Buddhism". (Highlighting is mine).

Problems with Mahāyāna Teachings

6. This is in sharp contrast with the basic presumption in Buddha Dhamma that only a Buddha can discover the laws of nature and those teachings CANNOT be improved upon:

I have discussed key problems with Mahāyāna teachings in "Saddharma Pundarika Sutra (Lotus Sutra) – A Focused Analysis" and "What is Suñyāta or Suññāta (Emptiness)?."

- There is only ONE set of natural laws and those were discovered by the Buddha. As one goes through the content in this website, I hope one would be able to see that statement is justified. Also see, "Dhamma and Science – Introduction"

Role of Dalai Lāma

7. More recently, Tibetan Buddhism (*Vajrayāna*) has gained prominence in the West. This is no doubt the result of the publicity of the Chinese invasion of Tibet in 1953 and the incredible personal charisma of the Dalai Lāma.

- It is unfortunate that the Dalai Lāma has to state that, "My confidence in venturing into science lies in my basic belief that as in science so in Buddhism, understanding the nature of reality is pursued by means of critical investigation: **if scientific analysis were conclusively to demonstrate certain claims in Buddhism to be false, then we must accept the findings of science and abandon those claims."**(highlighting mine) – cited from "The Universe in a Single Atom: The Convergence of Science and Spirituality" (2005).

8. Both the *Mahāyāna* and *Vajrayāna* sects are now realizing that some concepts in those forms of "Buddhism" have to change with the new findings of science. The fundamental teachings of the Buddha as stated in the Theravāda Dhamma, in contrast, remain unchallenged because no such "improvements" were incorporated to "keep up with the times and cultures".

© 2026 Lal A. Pinnaduwage

- The **Pāli *Tipiṭaka*** has remained the same since it was written down 2000 years ago. The reality is that science is only now beginning to confirm many things that the Buddha stated 2500 years ago; see, "Dhamma and Science – Introduction" and the subsequent links.
- Regrettably, the **translated and edited versions** of the *Tipiṭaka*, especially those by Acariya Buddhaghosa, have many misinterpretations.

Scientists' Role in Recent Years

9. Beginning at the end of the twentieth century, there is a renewed interest in "Buddhism" in the West, based on several books by Western scientists.

- It seems to have started with the publication of "The Tao of Physics" by physicist Fritjof Capra (1975). In the book he describes how, one day quietly sitting by the ocean, he realized that there may be a connection between the subtleties of quantum mechanics and Eastern "mysticism," in which he included "Hinduism, Buddhism, Chinese Thought, Taoism, and Zen." It appears that he was trying to make a connection between the world of matter described by quantum mechanics and the "mind" that is predominant in "Eastern mysticism." Even by the time of the 5th edition (2010), he had not realized that Zen was a branch of Buddhism, and had not been exposed to any Theravāda literature. However, the connection he was trying to establish apparently made an impact on the Western audience and this trend will hopefully continue and be directed in the right direction.
- There are others who have contributed to the recent interest in "Buddhism" in the West: "The Art of Happiness" and other books by Dalai Lāma, "The Embodies Mind" by Francisco Varela et al., "Confession of a Buddhist Atheist" and other books by Stephen Batchelor, are some examples.
- However, most these books have incorrect interpretations of Buddha Dhamma because they are heavily influenced by *Mahāyāna* Buddhism, which has totally veered away from the original teachings of the Buddha, as I have discussed in this section, "Historical Background."

Sorting Out the True Teachings of the Buddha

10. The books that I mentioned at the beginning of the essay and several other books by Ven. Ledi Sayadaw, Ven. Bhikkhu Bodhi, Ven. Walpola Rahula, and others (see the References below), are providing the much needed material on *Theravāda* Buddhism to the Western audience, even though they themselves use some incorrect interpretations due to **two main "contamination problems"**.

- One happened 1500 years ago when Buddhaghosa distorted *Ānāpāna Bhāvanā* as "breath meditation" and also introduced Hindu *kasiṇa* meditation to Buddha Dhamma in his commentary, *Visuddhimagga*.
- The other problem of misinterpreting *anicca* and *anatta* as impermanence and "no-self" was done by those early European scholars who translated *Tipiṭaka* to English; see, "Why is Correct Interpretation of Anicca, Dukkha, Anatta so Important?." These incorrect interpretations were adopted by the whole world since the late 1800s.
- **Therefore, all Buddhist literature published in all languages since the late 1800s have both these problems. This is a critical point, see, "Misinterpretation of Anicca and Anatta by Early European Scholars."**
- We need to resort to the Pāli *Tipiṭaka* that still contains the original teachings of the Buddha, and it is the goal of this website to systematically present those original teachings of the Buddha.

14.18 Misinterpretation of Anicca and Anatta by Early European Scholars

April 29, 2017;revised next day (#12); revised August 14, 2018; February 3, 2020; critical revision on July 14, 2021; major revision September 6, 2021; major revision February 24, 2022; revised May 20, 2023

Introduction

1. Degradation of *Theravāda* Buddha Dhamma occurred gradually over the past 1500 years, but two drastic distortions took place during that time:

i. Key Pāli words *anicca* and *anatta* had been mistranslated to give the meanings of the Sanskrit words "*anitya*" and "*anātma*" in the Asian Buddhist countries even before the Buddhaghosa's time 1500 years ago. That happened due to *Mahāyāna*'s influence on *Theravāda* Buddhism. Those changes have taken root with the influence of the early European scholars and the printing press in the late 1800s.

ii. Buddhaghosa introduced Hindu meditation techniques in his Commentary, *Visuddhimagga*, 1500 years ago.

2. To understand the current situation, one needs to understand the historical background in this section, "Historical Background," but at least the posts starting with "Incorrect Theravāda Interpretations – Historical Timeline. "

- As I explained in earlier posts in this section, worse distortions to Buddha Dhamma occurred via branching out of various sects based on *Mahāyāna*, Zen, and Tibetan (*Vajrayāna*). It started with the rise of *Mahāyāna* in India about 500 years after the Buddha, i.e., about 2000 years ago.
- Degradation of *Theravāda* Buddha Dhamma occurred gradually over the past 2000 years. Two drastic changes took place during that time: **(i) misinterpretation of *anicca* and *anatta* as "*anitya*" and "*anātma*" due to Mahāyāna's influence,** and **(ii) Buddhaghosa's introduction of Hindu meditation techniques 1500 years ago.**
- The subsequent adoption of that by the European scholars when they translated BOTH *Tipiṭaka* and *Visuddhimagga* to English in the late 1800s made those widespread.

Background for This Discussion

3. To set up the context for the present discussion, we also need to know the following facts:

- Pāli is a "phonetic language" (sounds give meanings in most cases, especially for keywords). It comes from *Māgadhi* (*Maga Adhi* or Noble Path) language that the Buddha spoke. Attempts to develop Pāli grammar took place about 1000 years ago.
- Furthermore, Pāli does not have an alphabet. The original *Tipiṭaka,* written 2000 years ago, is in Sinhala script. Details at "Historical Background."

4. The root problem of writing a given Pāli word in English must have been a critical issue to address for those English, German, and French scholars who took on the daunting task of translating the *Tipiṭaka* in the late 1800s.

- **Now there are two separate key issues: First, the "*Tipiṭaka* English" convention was adopted in the 1800s** to preserve the Pāli sounds and keep the text short. See, "Tipiṭaka English" Convention Adopted by Early European Scholars – Part 1." Thus the Pāli word "අත්ත" is written as "atta" instead of "aththa" as one would write in "Standard English." This was a good step.
- **The second issue** is even more critical: **Translating of key Pāli words to English**. In this particular case, they translated the word "atta" ("අත්ත") as "self." That translation is incorrect, but it was also a logical step at that time as I briefly explained above.

© 2026 Lal A. Pinnaduwage

- **Now let us see why those early translators like Rhys Davids, Eugene Burnouf, and Edward Muller chose that meaning.**

Tipiṭaka Had Not Been Translated Until Recently

5. Going back to our main discussion. *Tipiṭaka* was not TRANSLATED into the Sinhala language until 2005. It has remained in the Pāli language (written with Sinhala script) since first written down in 29 BCE (2000 years ago). **The practice of translating the *suttas* in the *Tipiṭaka* WORD-FOR-WORD to other languages probably started with the Europeans, as we discuss below.**

- Before being written down 2000 years ago, the *Tipiṭaka* was transmitted orally for over 500 years. It is composed in a special, condensed way to make it easier to recite and remember.
- **It is dangerous to translate the *Tipiṭaka* word-for-word.** That is discussed in detail in "Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa" and "Word-for-Word Translation of the Tipiṭaka."
- **Instead of translating the *Tipiṭaka* to Sinhala, *Arahants* in Sri Lanka (including Ven. Mahinda) wrote Sinhala commentaries (called Sinhala *Atthakathā*) explaining the key concepts in the *Tipiṭaka*.** During oral discourses, *bhikkhus* explained those concepts in detail.
- But all those Sinhala *Atthakathā* were lost, and we only have commentaries written after about 500 CE (including *Visuddgimagga*), and they have many errors. See, "Buddhaghosa and Visuddhimagga – Historical Background." Note that Buddhaghosa wrote *Visuddhimagga* in Pāli (He learned Pāli while in Sri Lanka.) As I pointed out in the previous post, "Buddhaghosa's Visuddhimagga – A Focused Analysis,"

6. Buddhaghosa did use the words *anicca* and *anatta* in *Visuddhimagga* because the words "*anitya*" and "*anātma*" are NOT there in Pāli. But even those days, it is likely that the Sinhala texts used "*anitya*" (අනිත්‍ය)and "*anātma*" (අනාත්ම).Note that the Sinhala words for *anicca* and *anatta* are අනිච්ච and අනාත්ත(same pronunciation.) Even today, while the Pāli *Tipiṭaka* has the words *anicca* and *anatta,* the side-by-side Sinhala translation has අනිත්‍යand අනාත්ම (even though word by word they should be අනිච්චand අනාත්ත.x.)!

- **Thus, when *bhikkhu* Nynamoli translated *Visuddhimagga* to English, he also used the words "impermanence" and "no-self" corresponding to** අනිත්‍ය(*anitya*) and අනාත්ම(*anātma.*)
- In my earlier versions of this post, I had written that European scholars mistranslated *anicca* and *anatta* because they assumed those were the same as the Sanskrit words *anitya* and *anātma*. **But even *Theravāda* Buddhists had already made that transition by that time.** That likely happened during the peak of *Mahāyāna* Buddhism in India around 100-200 AD.

Confusion With Pāli and Sanskrit Texts

7. **Those Europeans first came across Sanskrit *vedic* texts in India.** Later, they found the Pāli texts in Sri Lanka, Burma, and other countries. **That time sequence is critical to note.**

- By the time of the arrival of English, Buddhism in India had totally vanished. There were no Pāli texts in India except those inscribed on the "WebLink: en.wikipedia.org: Pillars of Ashoka, "the stone columns made by Emperor Ashoka about 300 years after the *Parinibbāna* of the Buddha.
- Another critical point is that Pāli was never a widely-used language in India. It appeared in India briefly while Buddhism flourished for a few centuries encompassing Emperor Ashoka's reign.

The Book "The Search of the Buddha" by Charles Allen

8. To get an idea of how those European pioneers struggled to interpret the inscriptions on Ashoka pillars and later translate the *Tipiṭaka* itself, I highly recommend the book "The Search of the Buddha" by Charles

© 2026 Lal A. Pinnaduwage

Allen (2003). His family had been in India for generations serving in the British government, and he was born in India.

- The book has a lot of information and pictures of many historical sites in India before their restoration. It is truly fascinating to read about the efforts of those who dedicated their lives to the effort of uncovering Buddha Dhamma. Even though not shown in that book, historical sites in Sri Lanka and other Buddhist countries were also dilapidated. Also, see #5 of "Elephant in the Room 1" – Direct Translation of the Tipitaka."
- The following video is in the Sinhala language. It provides an account of the restoration of *Ruwanvalisāya*, one of the largest *stupās* in Sri Lanka. That project took over 50 years and was completed with assistance from the British Governor in Sri Lanka. You can see the status of Buddhist temples and *stupās* in the 1800s before their restoration:

  WebLink: suttacentral: History of Ruwanwelisaya |රුවන්වැලිසෑය නැවත ගෙඩිනැඟු නාරද්වීට හාමුදුරුවෝ Naranvita Sumanasara Thero|
- In all those Asian countries (Sri Lanka, India, Burma, Thailand, etc.) Buddhism itself was in much worse shape than today. **Those European scholars were hugely responsible for the current revival of Buddhism.**

9. Those European pioneers thought Sanskrit and Pāli were very much related. They are related, but not in a useful way. Sanskrit adapted many Pāli terms but made them "sound sophisticated." But the true meanings were not as apparent.

- For example, *pabhassara* in Pāli, Pāli became *prabhāsvara* in Sanskrit. While a knowledgeable person can discern the meaning of *pabhassara* from its Pāli roots (see, "Pabhassara Citta, Radiant Mind, and Bhavaṅga"), that is not true for the Sanskrit word *prabhāsvara.*
- Another example is *Paṭicca Samuppāda* (see, "Paṭicca Samuppāda – "Pati+ichcha"+"Sama+uppāda"), which was adapted to Sanskrit as "*Pratittyasamutpāda*," which does not convey any meaning.

Status of Buddhism in the 1800s

10. To complete the historical background relevant to this discussion, let me emphasize Buddhism's "time evolution" starting in the 1700s.

- The invasions by the Portuguese, Dutch, and finally the British spanned over four centuries starting in 1498; see "WebLink: en.wikipedia.org: Portuguese presence in Asia." This led to a drastic decline of Buddha Dhamma in all Asian countries. However, that trend finally changed with the insight of some British civil servants in the 1800s. This is why I recommend the book by Charles Allen in #8 above.
- Due to the efforts of those civil servants and several scholars in European countries, a coordinated effort was undertaken to collect and interpret the vast historical documents found in the Asian countries. Those included not only *Tipiṭaka* documents but *Mahāyāna* and *Vedic* documents too. **However, even Theravāda *bhikkhus* had already made the mistake of mistranslating *anicca* and *anatta* to be the same as Sanskrit *anitya* and *anātma* by that time.**
- There were no true Buddhist scholars with deep insight at that time. We can get an idea about the status of Buddhism in Asian countries at that time by the status of Buddhist temples in the video of #8 above.

Academic Credentials Not Enough to Teach Buddha Dhamma

11. Those European scholars did their best to interpret the vast collection of historical documents. Those efforts are well-documented in Charles Allen's book. **Professor Rhys Davids was among those scholars, and most current interpretations are based on his work.**

© 2026 Lal A. Pinnaduwage

- Following the original translations by Rhys Davids, Eugene Burnouf, and others, contemporary Sinhala scholars like Malalasekara (a doctoral student of Rhys Davids) "learned" Buddhism from the Europeans and thus started using wrong interpretations.
- Other Sinhala scholars like Kalupahana and Jayathilake also learned "Buddhism" at universities in the United Kingdom (received Doctoral degrees in Buddhism) and wrote books in English and Sinhala.
- Of course, scholars in other Buddhist countries did the same in their languages, and the incorrect interpretations spread throughout the world.
- So, I hope I have provided enough information to contemplate why the opinions of "scholars" are likely to be wrong due to reasons beyond their control. Again, I admire and appreciate what Rhys Davids, Burnouf, Muller, and others did in those days, and it was not their intention to distort Buddha Dhamma. It is not the fault of current scholars either.
- **Just to emphasize: Buddha Dhamma needs to be learned from a true disciple of the Buddha who has attained at least the *Sotāpanna* stage.** Academic credentials mean NOTHING as far as teaching Buddha Dhamma is concerned. With all due respect to those European scholars, they DID NOT understand the key message of the Buddha. That message is that the rebirth process is filled with suffering, and the goal of a true Buddhist is to stop the rebirth process and attain *Nibbāna*. See, "Basic Framework of Buddha Dhamma."

Tipiṭaka was written on Ola Leaves

12. It is also important to note that mass printing was not available until recent years and became common only in the 1800s; see, "WebLink: newworldencyclopedia.org: Printing press. "

- In the early days, *Tipiṭaka* was written on specially prepared leaves and needed to be re-written by hand every 100-200 years before they degraded. So, we must be grateful to the *bhikkhus* in Sri Lanka who did this dutifully over almost 2000 years. **That served another important purpose. That process automatically took into account any changes to the Sinhala script over those two thousand years!** See, "Preservation of the Buddha Dhamma."
- Thus mass production of books became possible only with the new rotary printing presses in the middle of the 1800s. By the time those key concepts had been mistranslated, printing had become widespread.
- WebLink: en.wikipedia.org: The Pāli Text Society was founded in 1881 by Rhys Davids, who started printing those translations. So, it was unfortunate that those "distorted English translations" spread throughout the world.
- Luckily, we still have the original Pāli *Tipiṭaka* and three original commentaries.
- With the help of those three original Pāli commentaries, Waharaka *Thero* "re-discovered" the (correct interpretations of) Buddha's teachings over the past 25 years or so. Unfortunately, Waharaka *Thero* attained *Parinibbāna* recently; see, "Parinibbāna of Waharaka Thero."

The Buddha prohibited the translation of *Tipiṭaka* to Sanskrit

13. The Buddha had foreseen the problems of a direct translation of the *Tipiṭaka*. He warned not to TRANSLATE the *Tipiṭaka* to ANY LANGUAGE, particularly to Sanskrit. There were two *Brahmins* by the names of Yameḷa and Kekuṭa who were experts on the *Vedic* Texts. They became *bhikkhus* and asked the Buddha whether they should translate the Pāli *suttā* to Sanskrit.

- The Buddha admonished them that *Sanskrit* was a language with musical overtones developed by the high-minded *Brahmins. Thus,* it was impossible to convey the true meanings of *Maghadhi* (Pāli) words in Sanskrit; see WebLink: tipitaka.fandom.com: Chulavagga 5.33.
- In the Sutta Central English translation, the Pāli word for *Sanskrit* (*Chandasa*) is mistranslated as "metrical"; see, "WebLink: suttacentral: 15. Minor matters (*Khuddaka*)," which is the translation of

© 2026 Lal A. Pinnaduwage

"WebLink: suttacentral: 1. Khuddakavatthu." The relevant Pāli text is located close to the end, and starts as, "*Tena kho pana samayena yameḷakekuṭā nāma…*".

Role of the Commentaries To *Tipiṭaka*

14. Therefore, the *Tipiṭaka* was not translated even to the Sinhala language for 2000 years in Sri Lanka. Instead, commentaries were written in Sinhala to expand and explain the *Tipiṭaka.*

- Unfortunately, ALL those have been lost except for three commentaries in Pāli included in the *Tipiṭaka.* See, "Buddhaghosa and Visuddhimagga – Historical Background."
- With the above explanation, we can understand why those standards established in the late 1800s actually distorted Buddha Dhamma. Of course, it was not intentional.

Pāli Is a Unique Language

15. I cannot emphasize enough that Pāli is unlike any other modern language. Some meanings even come from how one pronounces words. Again to emphasize:

- Pāli does not have its own alphabet. *Tipiṭaka* was written in Pāli with Sinhala script.
- As the Buddha himself admonished, Sanskrit words cannot convey the meaning of Pāli words. That is because many Pāli words have been "Sanskritized," which leads to much confusion. For example, there is no corresponding word for *anatta* in Sanskrit. But the Sanskrit word "*ātma*" is regularly used as the translation of "*anatta*." *Anatta* does not mean "no-self," but "*ātma*" does have that meaning, as mentioned above.
- While a Pāli-English dictionary could be useful in some cases, there are cases where they give wrong interpretations (*anicca, anatta, pabha*, etc.); see, "Pāli Dictionaries – Are They Reliable?."

"*Saŋ*" Is a Unique Word in Pāli

16. A key Pāli word, the meaning of which has been hidden for thousands of years, is "*saŋ*" (pronounced like son). See the section on "What is "Saŋ? Meaning of Sansāra (or Saṁsāra)."

17. In the *Dhammapada* verse,

"*Aneka jāti* ***san****sāraṁ* ***san****dā vis****san*** *anibbi****san*** *gahakaram gavesan to* *dukkhā jāti punappunam*"	*Aneka-jāti-saṁsāraṁ sandhāvissaṁ anibbisaṁ* *Gaha-kāraṁ gavesanto dukkhā jāti punappunaṁ* *Gaha-kāraka diṭṭho'si puna gehaṁ na kāhasi* *Sabbā te phāsukā bhaggā gaha-kūṭaṁ visaṅkhataṁ* *Visaṅkhāra-gataṁ cittaṁ taṇhānaṁ khayam-ajjhagā* For many lifetimes in the round of birth, Wandering on endlessly, For the builder of this house I searched — How painful is repeated birth. House-builder you've been seen, Another home you will not build, All your rafters have been snapped, Dismantled is your ridge-pole; The non-constructing mind Has come to craving's end.

- There are four places above where "*saŋ*" comes in. This verse captures the intense joy felt by the Buddha at the moment of attainment of *Buddhahood.*
- The word "*saŋ*" appears very frequently in the *Tipiṭaka.* But it is often masked by the fact that in many places, it rhymes as "*saṁ*" in many word combinations as in "*saṁsāra*, "*sampādeta*, "*Sammā*"; see, "What is "Saŋ"? Meaning of Sansāra (or Saṁsāra)."

Critical Role of the Printing Press in Widespread Circulation of the Incorrect Interpretations

© 2026 Lal A. Pinnaduwage

18. The printing press became widely available only after the rotary press was invented in 1843: "WebLink: newworldencyclopedia.org: Printing press." As pointed out above, Rhys Davids started publishing the English translations of the *Tipiṭaka* in 1881. **That led to the widespread circulation of the incorrect interpretations of those Early European scholars!**

- Up to that time, the printed version of the Pāli *Tipiṭaka* was on specially prepared ola (palm) leaves; see, "Preservation of the Dhamma." This was a laborious process, as detailed in that post. Fortunately, *bhikkhus* kept re-writing the *Tipiṭaka* material roughly every hundred years when the "old version" started degrading.
- The critical point is that there were only versions of the original *Tipiṭaka*. It was not in wide circulation until the printing press was invented, just in time for the incorrect interpretations to be widely circulated. Rhys Davids started publishing the English translations of the *Tipiṭaka* in 1881.
- This is why there is no record of the correct interpretations of keywords like *anicca* and *anatta* in Sinhala. Those interpretations were in the original Sinhala commentaries (Sinhala *Atthakathā*.) It is safe to assume that the same holds in other Asian countries.
- The invention of the printing press was a critical factor in spreading the incorrect interpretations that early European scholars came up with (unintentionally)!

© 2026 Lal A. Pinnaduwage

14.19 Tipiṭaka Commentaries – Helpful or Misleading?

December 6, 2017; rewritten February 2, 2023; revised April 29, 2023

1. I recently found the following essay on *Tipiṭaka* commentaries: "WebLink: accesstoinsight.org: Beyond the Tipiṭaka : A Field Guide to Post-canonical Pāli Literature". It describes the importance of such commentaries in clarifying critical concepts in the *Tipiṭaka*. I will present evidence to the contrary. Such commentaries have introduced contradictory explanations.

- Over the years, on internet discussion boards, I have also seen heated discussions on critical concepts of Buddha Dhamma, like *anicca*, *anatta*, and *anidassana viññāṇa*. For example, see "Anidassana, Appaṭigha Rūpa Due to Anidassana Viññāna."
- I often wonder about the immense amount of time people waste discussing the meaning of crucial Pāli words in *Tipiṭaka suttā*. They go back and forth between different interpretations without reaching any conclusions. I hardly see any issue resolved fully in such discussions. The same topic is discussed year after year without much progress.
- One key factor contributing to this confusion is those commentaries; they are inconsistent with Buddha's original teachings in the *Tipiṭaka*. The other key factor is the incorrect translation of crucial Pāli words. Both these issues are discussed below.

2. I hope this post will help you think about a new approach to finding the "correct teachings of the Buddha." **By discarding sources of incorrect interpretations once and for all**, one could save a lot of time and focus on making progress.

- When I seriously started studying different versions of Buddhism several years ago, this was the strategy that I used to eliminate "corrupt" or "contaminated" versions. I eliminated Mahāyāna, Vajrayana (Tibetan), and Zen versions first. After I came across *desanās* of Waharaka *Thero*, I could eliminate Visuddhimagga and other relatively recent commentaries. These steps are discussed in detail below.
- Then I was left out with just the *Tipiṭaka* and its three ancient, original commentaries composed during the time of the Buddha; see below. A consistent picture that is crystal clear has emerged for me.
- I hope others can follow the same procedure. **If everything can be understood within that framework, what is the need for more sources?** As the principle of philosophy "WebLink: wiki: Occam's razor" (or Ockham's razor,) says, the simplest explanation without any inconsistencies is the best.

3. My crucial assertion is that the *Tipiṭaka* and the three original commentaries of *Paṭisambhidāmagga*, *Peṭakopadesa*, and *Nettippakarana* are sufficient to clarify the original teachings of the Buddha.

- This was made possible by my Noble teacher Waharaka *Thero*, who was able to discern the true meanings of key Pāli words with the help of those three original commentaries; see, "Parinibbāna of Waharaka Thero."
- On this website I present this self-consistent picture that came out of the efforts of Waharaka *Thero*.
- Note that I am not asking anyone to take what I present on this website as the correct version. It is up to each person to look at the evidence and decide. As far as I can see, everything at this site is consistent with the *Tipiṭaka* and self-consistent. I encourage all to point out inconsistencies, because my goal is 100% consistency.
- Self-consistency, i.e., making sure that there are no contradictions is the scientific procedure used by modern scientists to evaluate the validity of a scientific theory. See "Buddha Dhamma: Non-Perceivability and Self-Consistency."

4. **There is no need to consult any commentary besides the three original ones mentioned above.** I have explained at length why the other critical commentaries used today provide inaccurate and inconsistent explanations; see, "Historical Background."

© 2026 Lal A. Pinnaduwage

The above mentioned essay (in #1) is a good example of some misconceptions about the importance and validity of *Tipiṭaka* commentaries. **When I say "commentaries" from now on below, they do not include the original three commentaries included with the *Tipiṭaka*.**

- In the following, the statements within quotation marks and highlighted in red are from the above essay and are accompanied by my comments pointing out the flaws in those statements.

5. "The Tipiṭaka (Pāli canon) assumed its final form at the Third Buddhist Council (ca. 250 BCE) and was first committed to writing sometime in the 1st c. BCE. Shortly thereafter, Buddhist scholar-monks in Sri Lanka and southern India began to amass a body of secondary literature: commentaries on the Tipiṭaka itself...".

- Not true. The original three commentaries mentioned in #3 above (*Paṭisambhidāmagga*, *Peṭakopadesa*, and *Nettippakarana*) were compiled during the time of the Buddha, and those still are in the *Tipiṭaka* itself.
- Those three original commentaries are in Pāli, but many others were written in the Sinhala language, and all of those have been lost, as discussed below.

6. "Most of these texts were written in Sinhala, the language of Sri Lanka, but because Pāli — not Sinhala — was the *lingua franca* of Theravāda, few Buddhist scholars outside Sri Lanka could study them. It wasn't until the 5th c. CE, when the Indian monk Buddhaghosa began the laborious task of collating the ancient Sinhala commentaries and translating them into Pāli, these books first became accessible to non-Sinhala speakers around the Buddhist world".

- This statement refers to those early Sinhala commentaries that have since been lost.
- **It is correct that Buddhaghosa's** Visuddhimagga and other commentaries, such as Vimuttimagga, were written in Pāli by Indian scholars.
- It is also important to note that incorrect translations of those Pāli words led to more problems when those were translated to English; see #7 below.

7. "These commentaries (*Atthakatha*) offer meticulously detailed explanations and analyses — phrase-by-phrase and word-by-word — of the corresponding passages in the *Tipiṭaka*."

- First, *Atthakatha* (a Sinhala word meaning "true accounts") was the ancient commentaries on *Tipiṭaka* written in Sinhala. **They ALL have been lost;** see "Preservation of the Dhamma."
- **So, it is misleading to refer to those *Atthakatha* as the commentaries in question.** In contrast, the commentaries in circulation today are NOT those of ancient *Atthakatha*, but more recent ones like Visuddhimagga.
- Buddhaghosa's mission was to translate the material in Sinhala *Atthakatha* to Pāli so that those *bhikkhus* in India could read them. **Unfortunately, he incorporated many *Vedic* concepts; see** "Buddhaghosa's Visuddhimagga – A Focused Analysis."
- **Further problems were introduced when Visuddhimagga was translated into English in recent times.** Today, the original Pāli version of Visuddhimagga, and its recent English translation, are available on Amazon; see Refs. 1 and 2 below.

8. "Almost everything we know today about the early years of Buddhism comes to us from these post-canonical books".

- This is entirely false. Those **post canonical commentaries** (such as Visuddhimagga) have "muddied the waters" than helped; see, "Buddhaghosa and Visuddhimagga – Historical Background" and "Buddhaghosa's Visuddhimagga – A Focused Analysis."
- What I am saying is to examine the evidence presented in those posts. **If one agrees, then one can remove Visuddhimagga as a reliable source. That itself will solve half the problem.**

© 2026 Lal A. Pinnaduwage

- **The second problem is the incorrect translation of crucial Pāli words in those commentaries and Tipiṭaka suttā;** see, "Misinterpretation of Anicca and Anatta by Early European Scholars."
- As I have presented evidence throughout this website, the *Tipiṭaka* and the three original commentaries are enough to guide us.

9. "First, the chronicles and commentaries provide a vital thread of temporal continuity that links us, via the persons and historical events of the intervening centuries, to the *Tipitaka's* world of ancient India. A *Tipiṭaka* without this accompanying historical thread would forever be an isolated anachronism to us, its message lost in clouds of myth and fable, its pages left to gather dust in museum display cases alongside ancient Egyptian mummies..."

- **There are no myths or fables in the *Tipiṭaka*.** I would challenge anyone to show any evidence from the *Tipiṭaka*. This is an irresponsible and egregious statement.

10. "Second, almost everything we know today about the early years of Buddhism comes to us from these post-canonical books.."

- Nothing in these commentaries provides any significant information about the time of the Buddha. They may provide information about the time at which they were written. For example, Visuddhimagga was written about 800 years after the Buddha.

11. "One might reasonably wonder: how can a collection of texts written a thousand years after the Buddha's death possibly represent his teachings reliably? How can we be sure they aren't simply derivative works, colored by various irrelevant cultural accretions? First of all, although many of these texts were indeed first written in Pāli a thousand years after the Buddha, most Sinhala versions upon which they were based were written much earlier, having been passed down via an ancient and reliable oral tradition...".

- This is the point I am making. We do know that, for example, Buddhaghosa distorted Buddhist meditation techniques, *Ānāpāna* meditation was misinterpreted as breath meditation and Hindu *kasiṇa* meditations were also incorporated,
- For details, see "Buddhaghosa's Visuddhimagga – A Focused Analysis" and "Is Ānāpānasati Breath Meditation?."

12. "But what of the credentials of the commentators themselves: can their words be trusted? In addition to living a monastic life immersed in Dhamma, the compilers of the commentaries possessed unimpeachable literary credentials: intimate acquaintance with the *Tipiṭaka*, mastery of the Pāli and Sinhala languages, and expert skill in the art of careful scholarship. We have no reason to doubt either their abilities or the sincerity of their intentions".

- This is also a critical issue. As I discussed in those posts mentioned above, Buddhaghosa was a Vedic Brahmin who distorted *Ānāpānasati* to "breath meditation" and incorporated *kasiṇa* meditations into Visuddhimagga; no such *kasiṇa* meditations are to be found anywhere in the *Tipiṭaka*.
- Like so many late commentators, Buddhaghosa was just another philosopher like Nagarjuna. By the way, Nagarjuna was also a commentator, and his work led to the rising of the Mahāyāna version of Buddhism.
- I have discussed the drawbacks of Mahāyāna; see, for example, "Key Problems with Mahāyāna Teachings" and "Saddharma Pundarika Sutra (Lotus Sutra) – A Focused Analysis."
- The same kind of arguments can be applied to Tibetan Buddhism (Vajrayāna) and Chinese Zen Buddhism; all these are offshoots of the original teachings in the *Tipiṭaka*; see, "Historical Background." It is well-worth the time to read this section before coming to conclusions.

13. "And what of their first-hand understanding of Dhamma: if the commentators were scholars first and foremost, would they have had the sufficient meditative experience to write with authority on meditation? This is more problematic".

© 2026 Lal A. Pinnaduwage

- This is the only statement that I agree with. They were just "scholars" and philosophers, who had not progressed in practice.
- This is true today as well. Many "scholars" have written books on Buddha Dhamma without making significant progress in following the Noble Path. Many are not even nominally Buddhists; some are "secular Buddhists" who do not believe in rebirth or *Nibbāna*; see, "Buddhism without Rebirth and Nibbāna?."
- I am not trying to put them down. They serve a meritorious purpose in teaching how to live a moral life. However, those books/journal papers/websites cannot be used to **clarify more profound teachings** in the *Tipiṭaka*.

14. A key point missing in the current discussion is that it is impossible to comprehend the critical concepts like *anicca* and *anatta* without at least attaining the *Sotāpanna* stage of *Nibbāna*. However, these days, people tend to gauge their qualifications by checking only whether a given person is an "academic scholar".

- Like only a practicing physician can genuinely understand and diagnose a patient, not one who has just studied medical textbooks.
- Only an *Ariya* (a Noble person) — who has practiced the actual teachings and at least attained the *Sotāpanna* stage of *Nibbāna* — can comprehend deep concepts like *anicca*, *anatta*, *viññāṇa*, and *saññā*. **One cannot fully understand such deep concepts by just studying or reading about them.** For example, see, "What is Saññā (Perception)?."

15. The most referred to commentaries (these days) are Buddhaghosa's WebLink: wiki: Visuddhimagga and Upatissa's WebLink: wiki: Vimuttimagga (to a much less extent). The original Pāli text for the latter was long believed to have been lost. For centuries, discussions about the text relied on a 5th-century Chinese edition.

- As we have established, those later commentaries — including Visuddhimagga and Vimuttimagga — were written in Pāli.

16. Therefore, those late commentaries lead to confusion in two ways:

- One is the erroneous interpretations by the commentators themselves, as discussed above.
- The other is incorrect translations — initially done by early European scholars — in mistranslating key Pāli terms; see, for example, "Misinterpretation of Anicca and Anatta by Early European Scholars." This has made the situation even worse.

These are two critical points to consider by those tempted to refer to those late commentaries. I cannot emphasize the importance of those two points enough.

17. Then, some people quote from Chinese *Āgama*. Even though those original Chinese documents COULD BE authentic, my point is that they were also derived from the *Tipiṭaka* and **thus serve no purpose as additional resources.**

- They could be valuable for those proficient in Chinese but cannot read Pāli, Sinhala, or English.

18. Finally, to re-emphasize my main point: The *Tipiṭaka* and the three original commentaries (*Paṭisambhidāmagga*, *Peṭakopadesa*, and *Nettippakarana*) included there are sufficient to clarify the Buddha's original teachings. See "Preservation of the Buddha Dhamma."

- Using just the *Tipiṭaka*, I have also pointed out some current misinterpretations in Theravāda Buddhism, mainly due to the influence of Buddhaghosa's Visuddhimagga; see, "Incorrect Theravāda Interpretations – Historical Timeline" and posts referred there.
- There still could be some minor inconsistencies on the website, and I appreciate those readers who have pointed out some of them, which has led to improvements. But I have high confidence in the correctness of key concepts.

© 2026 Lal A. Pinnaduwage

- Please do not hesitate to comment on any inconsistency with the *Tipiṭaka* or within the website. However, for the reasons I have detailed above, please do not quote from other sources. This website aims to have a consistent explanation of Buddha's teachings in English in one place.

I have recently started a new section highlighting some apparent contractions in many English translations of the *Tipiṭaka*: "Elephants in the Room."

15.1 Buddhist Chanting – Introduction

Revised February 11, 2021

1. This section on Chanting helps cultivates *saddhā* (faith) in the Buddha, Dhamma, and Saṅgha. Which also helps calm the mind and grasp more profound concepts. For those who believe that there is no value in these "ritual-like" procedures, it may be a good idea to read the post, "Panca Indriya and Panca Bala- Five Faculties and Five Powers."

- If done with understanding, these are not rituals as in "*silabbata paramasa*".
- Therefore, as I keep adding items to this section, I will try to provide the deep meanings behind these "seemingly ritualistic" chantings.
- In addition to the deeper meanings, there are subtle benefits in listening to chantings, especially those by *Ariyā* or Noble Persons. This is why I decided to add the sound recordings by the Venerable Thero.

2. The Buddha said that the mind takes precedence over everything else. Our thoughts control our speech and bodily actions. And these thoughts get their moral power from wisdom (*paññā*) and the joyful state (*pīti* or "*preethi*") of the mind.

- One can make a given meritorious deed much more powerful by doing it with joy and understanding. The most potent *kusala citta* is done with "joy and understanding" (a *somanassa-sahagata, ñāṇa-sampayutta citta*); see, "Javana of a Citta – Root of Mental Power."
- Recent scientific studies are beginning to illustrate the power of the focused mind. See, for example, "The Biology of Belief" by Bruce H. Lipton (2008) and "Biocentrism" by Robert Lanza (2009).
- Thus chanting done with understanding can have benefits, especially for those who have a dominant "*saddhā indriya*" or have a high degree of faith in the Buddha or Buddha Dhamma.

3. **However, one should not force anything on the mind.** If chanting is not something that appeals to someone, then it should not be forced. Different people start off with different tendencies (i.e., they have a dominant faculty or power, see, "Panca Indriya and Panca Bala- Five Faculties and Five Powers"). Out of *sati, saddhā, viriya, samādhi,* and *paññā*, the dominant one should be the focus. As one cultivates the Path, the other four will also grow.

- This is also related to the concept of how one's character (*gathi*) and habits change as one follows the Path. Then one's tendencies, associations, etc., will also gradually change; see, "The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavas)."
- Thus one may want to concentrate just on the topics on the site that are appealing to oneself. Once in a while, one can take a look at other sections and see whether their opinions on those sections have changed or not.
- The main thing is to stay on the path of least resistance and the topics that can be easily comprehended.

3. **A useful resource is** "WebLink: buddhistelibrary.org: *Vandanā*: The Album of Pāḷi Devotional Chanting & Hymns. "

Next, "Namaskaraya – Homage to the Buddha", ……

© 2026 Lal A. Pinnaduwage

15.2 Namaskaraya – Homage to the Buddha

1. In the *Theravāda* tradition, it is customary to pay homage to the Buddha (*Namaskāraya*; pronounced "namaskāraya), recite the Three Refuges (*Tisarana*, where "*ti*" is three and "*sarana*" means refuge or protection; pronounced "Thisarana") and undertake to observe the five precepts (*Panca Sīla*; pronounced "pancha seela") on visiting a place of worship or before starting a meditation session.

- Some people just do the Namaskāraya if they do not have time to recite the Tisarana (Refuge in Buddha, Dhamma, Saṅgha) or the Panca Sīla (five precepts; sometimes eight or ten precepts).

2. One can recite the following stanza three times by oneself or at more formal occasions (e.g., visiting a temple) a Buddhist monk administers them.

"Namo tassa bhagavato arahato sammā sambuddhassa"

- A brief translation is, "I pay homage to the fully Enlightened One who found the truth about the existence and became free of all defilements".
- Another conventional translation is, "I pay homage to the Blessed One, the Exalted One, the fully Enlightened One".
- The deeper meaning is discussed below.

3. **Both interpretations are important.** For someone starting out, without much knowledge of Dhamma (but still sees the value in Dhamma) and thus wishes to pay respects to the Buddha, the conventional meaning itself is the dominant.

- But the Buddha himself said that the best way to pay homage to him is to learn Dhamma and to follow the Path. That is the more deeper meaning of the *Namaskāraya*. But they also have the reverence for the Buddha himself. As the knowledge in Dhamma grows, the second interpretation becomes clear, while not losing the first.

4. Here is a recital of the *Namaskāraya* by a Venerable *Thero* (volume adjustment on the right). It is normally recited three times:

WebLink: Listen to verse of : Namaskāraya

You can download the file below by clicking "DOWNLOAD". You can play it there or right-click on the screen and choose "save as.." to save to your computer.

Download

More audio files are at: "Sutta Chanting (with Pāli Text)."

Namaskāraya – What Does it Really Mean?

"*Namo tassa bhagavato arahato sammā sambuddhassa*"

1. Most Pāli verses have two (or more) meanings: one is the conventional ("*padaparama*") meaning, and the other is the deeper meaning that helps understand the deeper idea behind the verse. Unfortunately, most times it is the conventional idea that that is brought out when translating even whole *suttā*.

- In the case of *suttā*, a *sutta* that was delivered over an hour (sometimes many hours, like the *Dhamma chakka pavattana sutta*) is normally translated word-to-word in a few pages; see, "Sutta Interpretations."
- As I explained in the post, "Preservation of the Dhamma", most existing *sutta* translations are incomplete at best, and erroneous most of the time.
- Even the conventional meaning can be useful in some cases, like in *namaskāraya*, *Tisarana*, and the five precepts. For those who do not have a deeper understanding, the deeper meanings may not serve the

© 2026 Lal A. Pinnaduwage

purpose of bringing "joy to the heart" or "*citta pasāda*" (pronounced "*citta pasāda*"); for a deeper discussion on *citta pasāda*, see, "Javana of a Citta – The Root of Mental Power."

- Thus for those who are new to the deeper meanings in Dhamma, the conventional interpretations may be a good start. As knowledge in Dhamma grows, the second interpretation becomes clear without losing the first, i.e., reverence to the person himself can also only grow as one learns how valuable his Dhamma is.

2. What we have here is a short phrase that can be correctly translated in a short essay. Let us see what is really meant by this verse.

- "*Namo*" means incline as in accepting something with this reverence because of its value; "*tassa*" means "to this" or "because of this". This is why we bend our heads to signify this.
- "*bhaga*" is to separate and "*vata*" is the usually translated as body, but it has more wider meaning to anything in this world. The Buddha, in trying to show that uselessness of clinging to one's body, advised to separate the body into 32 parts and see that there is nothing substantial in any of the parts. Even though we highly value our bodies, it will decay with old age, and will eventually give us only sicknesses and ailments. And it will last only about 100 years.
- In the wider sense, anything in this world can be divided into parts and be shown that there is nothing substantial in them.
- Once we see that it is unfruitful to cling our bodies (and anythings in general), we lose the craving ("*raha*" in Pāli or Sinhala) and become "*arahant*"(from "*a*" + "*raha*"). The word Arahant also comes from this meaning, i.e., someone who has given up craving for worldly things, by comprehending the true nature.
- As we saw in the post, "What is "Saŋ?" – the Meaning of Saṁsāra", "*saŋ*" means accumulating worldly things. "*ma*" means become free of doing that. Thus "*sammā*" (*saŋ+ma*) means "stop accumulating worldly stuff that will only cause suffering in the end".
- The accumulation of worldly things lead to preparation of future births or "*bhava*".*Sambuddhassa* (*saŋ+bhu+uddassa*) means "remove from the root the causes for preparing bhava via accumulating *saŋ*", i.e., become free of the rebirth process or to work towards *Nibbāna*.

3. Now we can see the whole verse:

"By analyzing my body and other worldly things with wisdom, I have come to understand the unfruitfulness of clinging to such things, and I incline to rout out the rebirth process (i.e., existence in the 31 realms) and attain *Nibbāna*".

- Here incline means one keeps "bent on attaining that goal". With deeper understanding of Dhamma one's resolve will be strengthened. As with most things in Buddha Dhamma, it is always about one's mind.
- The resolve has to come through understanding. There is no one watching, and no one else monitoring the progress; it is one's own mind that is doing all that.

4. Finally, the word *namaskāraya* (*nama+as+kāraya*, where "*nama*" is one's name, "*as*" pronounced like "us" means remove, and "*kāraya*" means doing) conveys the idea that one is making a resolve to get rid of the attachment one has for one's worldly things. It is a condensed version of the verse.

- Of course the conventional meaning of "*namaskāraya*" is "paying homage".

15.3 Supreme Qualities of Buddha, Dhamma, Sangha

May 28, 2016 ; revised October 1, 2018; April 26,2020; August 27, 2022

Introduction

1. It is traditional to start a meditation session with an homage to the Buddha (*Namaskāraya*):

- *Namo tassa bhagavato arahato sammāsambuddhassa*
- *Namo tassa bhagavato arahato sammāsambuddhassa*
- *Namo tassa bhagavato arahato sammāsambuddhassa*

and then recite the supreme qualities of the Buddha, Dhamma, and Saṅgha.

Here is a recital of the *Namaskāraya* by the Venerable *Thero* (you need to adjust the volume control on your computer). It is normally recited three times: WebLink: mp3 audio: Namaskāraya – Homage to the Buddha

- The meaning of the above phrase is described in "Namāskaraya – Homage to the Buddha."

The 24 Supreme Qualities

2. There are nine, six, and nine supreme qualities attributed to the Buddha, Dhamma, and Saṅgha respectively.

- These are listed and discussed in several suttā in the *Dīgha Nikāya* of the *Tipiṭaka*.
- For example, see "10. *Dhammādāsadhammapariyāya*" section of the "Mahā Parinibbāna Sutta (DN 16)."
- The Buddha tells Ven. Ananda that when one becomes a *Sotāpanna*, one would begin to understand these qualities and will have "unbreakable faith" in the Buddha, Dhamma, Saṅgha (*Tiratana,* or Three Jewels.)

3. The 24 supreme qualities are called "*suvisi guṇa*," where *suvisi* means 24 and *guṇa* are the qualities. There are two main ways to interpret and utilize these 24 qualities.

- Chanting of these qualities can provide a calming effect on the mind and is normally done before a formal meditation session; see "Tisarana Vandanā and Its Effects on One's Gati."
- The meaning of the word "*vandanā*" is "*va*" + "*andha*" + "*nā*", where "*va*" is for "*vaya*" or destroy, "*andha*" is for blind, and "*nā*" is for "*nyāya*" or the procedure for getting rid of moral blindness and attaining *Nibbāna*. The path to attaining *Nibbāna* is encoded in the *Tiratana vandanā.* We will discuss this in detail in a future post.
- Also, this chanting is alternatively called *Tiratana vandanā* (where *Tiratana* means the Three Jewels) OR *Tisarana vandanā* (where *Tisarana* means "guidance from the Three Jewels"). It is imperative to recite them correctly.

  Here is a recording of the *Tiratana Vandanā* by the Venerable *Thero* (You need to control the volume level on your computer):

  WebLink: Listen to the verses of Tiratana Vandana
- The recital should break at places where there is a coma to state each quality separately and should not break in the middle (e.g., no breaks in *anuttaro purisadamma sārathi)*; see below.

4. These qualities can only be partially understood and never fully grasped. If a person with a mathematics Ph.D. teaches addition/subtraction to a first-grade student, that student cannot fully appreciate the capabilities

© 2026 Lal A. Pinnaduwage

or qualifications of the teacher. When the same student grows up and learns higher mathematics later from the same teacher at a university, he can appreciate the teacher's capabilities more.

- In the same way, the qualities of the Three Jewels can be appreciated only with more learning of Dhamma. When I first wrote the original post on this subject more than a year ago, my understanding was much less than now. In the meantime, I have understood more and also experienced the power of the recital of these qualities.

Supreme Qualities of the Buddha

5. **Correct Recital:** *itipi so bhagavā arahaṁ sammāsambuddho vijjācaraṇasampanno sugato lokavidū anuttaro purisadammasārathi satthā devamanussānaṁ buddho bhagavā'ti.*

- It is imperative to break the phrase "*itipi so*" into two words; "*so*" means "him."
- **Most people recite it as a single word "*itipiso*" and that gives not only an incorrect but a derogatory meaning: "*piso*" is for "*pisācha*" or a "lowly being like a *preta*."**
- "*itipi so Bhagavā*" means "because of (the following qualities) he (Buddha) is."

6. There are nine qualities of the Buddha stated in the above verse. Each quality is impossible for a human being to describe fully.

- As one learns more and more Dhamma, one truly begins to understand the value of a Buddha. It is said that an *Anāgāmī* can better understand the qualities of a Buddha than a *Sotāpanna*, and an *Arahant* even better.

7. Here is the list of the nine qualities:

- *Arahaṁ* – "*A*" + "*rahaṁ*" or not a trace of defilement (attachment for sense pleasures) left.
- *Sammāsambuddho* – – "*Saŋ*" + "*mā*" + "*sambhava*" + "*uddha*", or who discovered the way to dissociate from this suffering-filled world by removing "*saŋ*"; see, "What is "Saŋ"? Meaning of Sansāra (or Saṁsāra)."
- *Vijjacharaṇasampanno* – "*Vijjā*" (science or knowledge) + "*caraṇa*" + "*saŋ*" + "*panno*" or perfectly knowledgeable about how the world arises (out of "*saŋ*").
- *Sugato* – Ultimate in "*su*" + "*gati*" or "good qualities."
- *Lokavidü* – "*Loka*" + "*vidu*," or having the ability to examine and explain any of the three worlds that encompass everything: world of mental formations (*Sankharaloka*), the world of beings (*Sattaloka*), the world of things (*Okasaloka*).
- *Anuttaro purisadammasārathi* – "*Purisa*" here is not a gender: *purisa dhamma* is the highest qualities; "*anuttara*" means unmatched. [***purisadammasārathi*** : the modesty of the man. ***damma*** :[adj.] tamed or trained. ***sārathi*** :[m.] a charioteer; a coachman; a driver.]
- *Satthā devamanussanan* – Teacher of celestial and human beings.
- *Buddho* – Perfectly Enlightened, uprooted all "*bhava*" (*bhava uddha*).
- *Bhagavā* or *Bhagavath* – "*Bha*" + "*ga*" + "*vatha*" – Able to examine a living being's origin in many different ways. Here "*Bha*" is *bhava* or existence, and "*ga*" means connection or relationship, and "*vatha*" is the form of any being.

8. The above is, of course, not the only meaning. Since each word describes the infinite qualities of the Buddha, there are other meanings. Thus it is best not to get hang-up on the translations above.

- It is best to get an idea of these qualities and ALWAYS recite them in Pāli. As one's understanding grows, one will realize the meanings better.

© 2026 Lal A. Pinnaduwage

- Pāli is a phonetic language. Meanings come via sounds. Thus what is imperative is to be able to recite the Pāli phrase above to the best of one's ability. I provided the recordings at the end of the post, where my teacher *Thero* recites them as they should be.

Supreme Qualities of the Dhamma

9. There are six supreme qualities of Dhamma:

"Svākkhāto bhagavatā dhammo sandiṭṭhiko akāliko ehipassiko opaneyyiko paccattaṁ veditabbo viññūhī'ti"

First, *Bhagavathā Dhammo* is the Dhamma taught by the Buddha.

- *Svākkātho* – leads to the removal of *sansāric* suffering via getting out of the 31 realms. Here "*svakkata*" ("*sva*" for "self" and "*akkata*" or "*akrutha*" or "*akriya*" means putting out of action) **means getting rid of the concept of a "me"** (*asmai māna*). It is not about whether a "self" exists; it is rather to realize that nothing in this world is worth being considered "mine."
- *Sandiṭṭhika* – It **allows one to comprehend "*saŋ*"** ("*saŋ*" + "*diṭṭhi*"), the key reason for the existence in this world; see, "What is "Saŋ"? Meaning of Sansāra (or Saṁsāra)."
- *Akaliko* – This **Dhamma does not change over time**; it is the same Dhamma that is delivered by all Buddhas ("*a*" + "*kālika*"). Another meaning is that it leads to the removal of darkness (due to *avijjā*); here, "*kalu*" means "black" or "darkness." [***kālika*** :[adj.] temporal = relating to time.]
- *Ehipassiko* – "*Ehi*" + "*passika*" or **defilements can be removed** ("*passika*") **when each *ārammaṇa* comes to the mind** ("*Ehi*"). One does not wait to remove defilements in a formal meditation session. Rather, one takes care of that at each instant when an immoral thought comes to the mind (with *Ānāpāna* or *Satipaṭṭhāna*). See "Is Ānāpānasati Breath Meditation?." [***ehi*** :[imper. of eti] come, come here.]
- *Opanayiko* – "*Opa*" + "*naiko*," where "*Opa*" means "*upata*" or "origins" and "*nyāya*" means the principle or nature. Thus, **one can comprehend how each existence (*bhava* and *jāti*) arises**.
- *Paccattam vedittabbo vinnuhi-* "*paccaya*" can be understood by looking at the origins (*veda* or *vedic*): *vedittabbo*. *"Vinnu"* means the hidden can be seen (like something hidden in a vessel by piercing it). Anything in this world arises due to *Paṭicca Samuppāda*. **Thus, *Dhamma* allows one to "see-through" how this whole world, together with all the suffering, arises.**

Supreme Qualities of the Saṅgha

10. Here it must be noted that *Saṅgha* is not *bhikkhus*. *Saṅgha* means the Nobles or *Ariyā*, those who have attained one of the *magga phala*. (*Saṅgha* means one who has removed "*saṅg*," i.e., "*saŋ*" + "*gha*").

"Suppaṭipanno bhagavato sāvakasaṅgho, ujuppaṭipanno bhagavato sāvakasaṅgho, ñāyappaṭipanno bhagavato sāvakasaṅgho, sāmīcippaṭipanno bhagavato sāvakasaṅgho yadidaṁ cattāri purisayugāni aṭṭha purisapuggalā, esa bhagavato sāvakasaṅgho āhuneyyo pāhuneyyo dakkhiṇeyyo añjalikaraṇīyo anuttaraṁ puññakkhettaṁ lokassā'ti.

11. *Bhagavato savakasangho* means Noble disciples of the Buddha. The first four phrases describe four Noble qualities: *Suppaṭipanno, ujuppaṭipanno, ñāyappaṭipanno,* and *sāmīcippaṭipanno*.

- *Paṭipanno* means "having such quality": "*Su*" means goodness and morality; "*uju*" means straightforward and not crooked in character; "*nāya*" means *ñāṇa* or wise; "*sāmicī*" means pleasant to associate. Thus, it is easy to understand what those phrases mean. But as with all these qualities, it is not possible to describe them fully in words.

© 2026 Lal A. Pinnaduwage

12. "*Yadidaṁ cattāri purisayugāni* ***aṭṭha purisapuggalā***" means thus described eight types of persons (*aṭṭha purisapuggalā*) of four Noble (*purisa*) lineages. Eight types come when each stage is divided into two: e.g., *Arahant magga* and *Arahant phala*.

13. Then, starting with "*esa bhagavato sāvakasaṅgho*" (i.e., those Noble disciples of the Buddha), five more qualities are stated: *āhuneyyo pāhuneyyo dakkhiṇeyyo añjalikaraṇīyo anuttaraṁ puññakkhettaṁ lokassa.*

- In those words, "*neyyo*" means *niyama dhamma* or core principle of nature; also called "*nyāma*." Then "*āhu*" means "grasped," "*pāhu*" means "inseparable" or "fused together", "*dakkhi*" means "see." Thus those disciples have seen the core principles of nature (*Paṭicca Samuppāda*), have grasped them, and will not be separated from them ever.
- Because of that, they can dissolve and remove the causes (food) that fuel the *sansāric* journey: *anjalikaraneeyo*. Here "*an*" means "*āhāra*" or causes, "*jali*" is water (dissolve), and *karaṇīyo* means "do." Another meaning of "*an*" is "horn" with sharp tips (as in a bull), which can hurt others; here, *añjalikaraṇīyo* means dissolving them (by cultivating *Metta*) so that they cannot hurt others.
- *Anuttaraṁ puññakkhettaṁ: anuttara* is unmatched, *puñña* is meritorious, and *khetta* is for a field. Thus, these disciples are like fertile fields, that can provide unlimited resources to others (just like a well-cultivated field can provide food for many).

Here is a recital of the *Namaskaraya* by the Venerable *Thero* (you need to adjust volume control on your computer). It is normally recited three times:

15.4 The Five Precepts – Pañca Sila

Revised February 12, 2020

1. The five precepts (*pañca sīla*; pronounced "pancha seela") are normally recited after paying homage to the Buddha (*Namaskāraya*), and then taking the refuge (*Tisarana*), i.e., one says nine times that one takes the refuge in the Buddha, Dhamma, and the Saṅgha. In the following they are combined, as customary; see the previous post for pronunciations and details.

- Even for a Buddhist, it is not necessary to recite the precepts.
- It is important to keep in mind that JUST BY RECITING PRECEPTS does not do anything to purify the mind. The Buddha said, "*Yaṁ samādānaṁ taṁ vataṁ, Saṁvaraṭṭena sīlaṁ*," or "reciting precepts is a ritual ("*vata*"), moral behavior is attained by seeing and controlling '*san*'."
- However, it is good to recite *Namaskāraya*, *Tisarana*, and the precepts, to attain *citta pasāda* or calmness and joy of mind, especially before a formal meditation session. If one does it WITH UNDERSTANDING and RESOLVE, it can bring benefits.
- Furthermore, reciting precepts and *suttā* is preferred by those with developed *saddhā* (faith) *indriya*; see, "Pañca Indriya and Pañca Bala – Five Faculties and Five Powers." For those who lack *saddhā indriya*, this may be something they want to consider doing.

2. It is important to realize that the five precepts have deep meanings, and thus should not be taken lightly; see, "The Five Precepts – What the Buddha Meant by Them." The true meaning of the five precepts are discussed there.

- Only an *Arahant* is capable of strictly keeping those precepts (abstaining from all ten defilements or *dasa akusala*); **thus one needs to recite with the intention of doing one's best to keep the precepts. Otherwise, we will be lying from the outset.**

Here a Venerable Thero is reciting the *Namaskāraya, Tisarana*, and the five precepts with the audience repeating them (volume adjustment on the right):

WebLink: Listen to verse of : Pansil

Here is a pdf file with the text and translation:

WebLink: PDF File: Pañca Sīla (click to open)

3. To emphasize, these English translations are the conventional ("*padaparama*") or mundane ones and the real meanings are discussed in "The Five Precepts – What the Buddha Meant by Them." Also, while reciting, one needs to keep in mind that one is promising to do one's best to keep the precepts.

15.5 Sutta Chanting (with Pali Text)

Revised August 14, 2016: Added more *suttā* at the end.; **October 1, 2018 (better audio format)**

May 16, 2024: It is essential to chant *suttās* at a regular pace without "too much dragging." In the following discourse (in Sinhala language), Waharaka *Thero* explains why it is necessary. That introduction is 14 minutes long, and then *Thero* chants all three *suttās* in #1 through #3 in one sitting to illustrate how to chant them properly.

WebLink: Download Recording to Listen: Pirith - පිරිත්-34-වන-සඤ්ඤානතාලිය-.mp3 [Dhamma points mentioned in this sermon: Pirith Sajjāyanā Life problems and solutions Rituals.]

- Following are recordings of three popular *suttā* by a Venerable Thero and the corresponding Pāli texts. At some point, I will make English translations. Most existing translations provide only the mundane ("*padaparama*") meanings.

Please note that a few *suttā* are translated and discussed in the section "Sutta Interpretations."

1. Karaniya Metta Sutta (volume adjustment on the right):

15.6 Sādhu – Symbolizes Purified Hadaya Vatthu (Mind)

Revised February 21, 2019

1. It is customary to say "*Sādhu*! *Sādhu*! *Sādhu*!" before and after reciting precepts, a meditation session, chanting sutta, or a meritorious act (by oneself or another). Since anything is done for a purpose in Buddha Dhamma, it is good to understand why it is done.

- *Sādhu* comes from "*sa*" and "*hadaya*" or a purified heart (not the physical heart, but the *hadaya vatthu* where thoughts arise).

2. It is important to realize that our minds are associated with the *hadaya vatthu*, which is in the *manomaya kāya* and is aligned close to the physical heart; see, "Ghost in the Machine – Synonym for the Manomaya Kāya?" This is why in a traumatic or joyful event we feel it in the heart, and not in the brain. Brain is like a computer, and when it is overworked, it causes headaches. But our feelings of love, hate etc. are felt close to the physical heart, in the *hadaya vatthu*.

How is one's heart (and mind) purified?

- "*Kāyena sanvaro sādhu, sādhu vācaya sanvaro; manasā sanvaro sādhu, sādhu sabbatta sanvaro*"
- "The heart is purified via moral discipline; one needs to act, speak, and think morally"

Thus when a meritorious deed is done by oneself or another, it is customary to say, "*sādhu*". It reinforces the "goodness" of the deed and one makes a determination to do more; the lightness of the heart can be felt if one does it with understanding.

3. Our hearts are darkened with greed, hate, and ignorance of *Tilakkhaṇa*. As we purify the mind, the darkness fades away and the "white light emerges"; it is like lighting a lamp gets rid of the darkness. Heart becomes joyful.

We get rid of greed, hate, and ignorance via staying away from the ten defilements:

- When we abstain from killing, stealing, and inappropriate conduct (including but not limited to sexual conduct), we are cultivating **moral discipline through bodily acts.**
- Abstinence from lying, vain talk, gossiping, and hateful speech leads to **moral discipline through speech.**
- When we forcefully control our bodily acts and speech, the mind will gradually calm down because we thus reduce *abhijjā [abhijjhā]* (strong greed) and *vyāpāda* (strong hate). Then we can cultivate *sammā diṭṭhi* via comprehending the *Tilakkhaṇa*; this leads to reduction of *micchā diṭṭhi* too (***abhijjā [abhijjhā], vyāpāda*, and *micchā diṭṭhi* are the three *akusala kamma* done with the mind**). This is the step-by-step procedure that is discussed in the Bhāvanā (meditation) section.

4. Thus we can see that by saying "*sādhu*" mindfully, what we are doing is to make a firm determination to get rid of the ten defilements (*dasa akusala*) and thus to purify the mind and heart. Or, we are agreeing with a good deed done by someone else, and share the merits of that deed.

5. Now, what is the significance of putting the open hands together when saying "*Sadhu*!"?

- The gesture that we make by opening the hands fully, putting them together, and bringing them close to the heart or top of head also signify this determination. "With all my heart I make a commitment", or "this commitment stands above everything else", or "I agree wholeheartedly".

The strengthening of the fingers versus making a fist embody two basic characteristics of human nature.

- One makes a fist when hitting someone in anger. Also, someone caught doing a misdeed has clenched hands in addition to a bent posture (you have seen pictures of criminals being hauled off to jail in such timid postures).

© 2026 Lal A. Pinnaduwage

- In contrast, open hands indicate "I have not aggressive intentions" as when putting up hands indicating one has no desire to fight. Furthermore, as you may have noticed, people when say "*Sādhu*!" normally have their backs straight too, especially if they are doing with a joyful mind.

6. As mentioned above, one can make a given meritorious deed much more powerful by doing it with joy and knowledge; such thoughts should be there during that act and also when saying "*Sādhu*!" at the beginning and end. The most potent *kusala citta* are done with "joy and understanding" ("a *somanassa-sahagata, ñāṇa-sampayutta citta*"; see, "Javana of a Citta – Root of Mental Power".

16.1 Manopubbaṅgamā Dhammā..

May 5, 2018; revised August 22, 2019; November 17, 2019; September 15, 2020; August 29, 2022 (added #6); November 10, 2022 (#6); January 3, 2023

"*Manopubbangamā Dhammā*" encompasses the critical idea in Buddha Dhamma: That mind is the precursor to all living and non-living things in the world.

Mano pubbaṅgammā dhammā,
mano seṭṭhā manomayā;
manasā ce paduṭṭhena,
bhāsati vā karoti vā;
tato naṁ dukkhamanveti,
cakkaṁ va vahato padaṁ.

Mano pubbaṅgammā dhammā,
mano seṭṭhā manomayā;
manasā ce pasannena,
bhāsati vā karoti vā;
tato naṁ sukhamanveti,
chāyā va anapāyinī.

(Dhammapada verses 1 and 2)

1. These two verses encompass the critical idea in Buddha Dhamma: That mind is at the forefront. This whole world is made of the mind and has the mind as the basis for everything.

- *Mano* is, of course, the mind. ***Dhammā*** (plural, not Buddha Dhamma) are the **energies** the mind generates (via *javana* power.) ***Dhammā*** means "to bear," meaning "everything arises due to ***Dhammā***."
- Those *dhammā* then **give rise to everything (all phenomena) in this world** – whether living or inert.
- *Pubbaṅgama* (*pubba* + *aṅga*) means what comes first. The first line (in both verses) says the mind creates all *dhammā* that give rise to everything in this world. The second line says, everything is prepared (*settā*) and manifests in mind (*manomayā*).
- The mind creates those ***Dhammā*** with thoughts (*saṅkhāra.*) That requires a lengthy explanation that can go to profound levels: "Kamma and Paṭicca Samuppāda," "Buddha Dhamma – A Scientific Approach" and "Worldview of the Buddha."

2. Depending on whether one speaks (*bhāsati*) and acts (*karoti*) with a defiled (*padutta*) or a pleasant (*pasanna*) mind, those *dhammā* that are generated by the mind lead to (*tato nam*) suffering (*dukkhamanveti*), or happiness (*sukhamanveti*).

- In the case of a defiled mind (acting with *lobha*, *dosa*, *moha*), suffering will follow just as a wheel of a cart follows the footsteps of the ox pulling it (*cakkamva vahato padam*).
- In the case of a pleasant, moral mind (acting with *alobha*, *adosa*, *amoha*), happiness will follow one just as one's shadow follows oneself (*chāyāva anapāyani*).

3. These two verses can be interpreted mundanely, as outlined in #2 above. Any given task with an un-defiled mind will always lead to a pleasant and joyous state of mind.

- There is a more in-depth interpretation. Thoughts, speech, and actions done with a defiled mind (*lobha*, *dosa*, *moha*) can lead to births in the *apāyā* and, thus, to a high degree of suffering. Those done with a pleasant mind (*alobha*, *adosa*, *amoha*) will lead to births in the "good realms," and will eventually lead to *Nibbāna*, the end of all suffering.
- The first several subsections of the "Origin of Life," discuss viewpoints about the origin of life. That extensively discusses religious and scientific viewpoints and the Buddha's worldview.

4. Now, we can loosely translate the two verses as follows:

- All phenomena have the mind as their forerunner; they all are mind-made. If one speaks or acts with an evil mind (i.e., engages in *dasa akusala*), then suffering (***dukha***) will follow just as the wheels of a cart follow the footsteps of the ox pulling the cart.

© 2026 Lal A. Pinnaduwage

- All phenomena have the mind as their forerunner; they all are mind-made. If one speaks or acts with a purified mind (i.e., engages in *dasa kusala* and *puñña kamma*), happiness (***sukha***) follows one like one's own shadow. That is the source of "*nirāmisa sukha*," which eventually leads to *Nibbāna.*

5. I found a youtube video with the Pāli recital; it may take a minute to download. The two verses start respectively at 0.30 and 2.18 minutes:

WebLink: Youtube: Dhammapada - Yamaka Vaggo - Part 01

6. Some scientists are beginning to realize that the mind could be the precursor to matter. See "Matter Creates Mind or Mind Creates Matter?"

- The mind creates matter, not the other way around: "The Origin of Matter – Suddhaṭṭhaka."
- A detailed explanation is in the "Origin of Life" section.

© 2026 Lal A. Pinnaduwage

16.2 Sabba Pāpassa Akaraṇaṃ….

Revised June 6, 2020; October 28, 2020

"*Sabba pāpassa akaraṇaṁ,*

kusalassa upasampadā;

Sacitta pariyo dapanaṁ,

etaṁ Buddhānasāsanaṁ"

(Dhammapada verse 183)

Let us see what is meant by the verse:

- *Sabba* = all; *pāpassa* = immoral deeds/speech/thoughts; *akarana* = (*a* + *karana*) = do not engaged in
- *kusalassa* = moral deeds/speech/thoughts; *upasampadā* = *upa* + *saŋ* + *padā* = sort out "*saŋ*" and embrace *kusala*; see, "What is "Saŋ?"
- *sacitta* = *sa* + *citta* = one's own thoughts; *pariyo dapanaṁ* = *pari* + *yo* + *dapanaṁ* = control at the onset (where "*dapaṇa*" means control and "*yo*" means origin and "*pari*" means around)
- Buddha *āna* = All Buddhas' *niyama* or principle. Another meaning is *Buddha* + *anusāsana* = Buddha's advice or his "doctrine."

Note: The process of "cleansing the mind" is what this website is about. See, "Sīla, Samādhi, Paññā to Paññā, Sīla, Samādhi" and "Living Dhamma."

Therefore, we can summarize as follows:

"Discard all that is immoral, what should not be done

Take in what is moral by sorting out "*saŋ*."

Do this by controlling one's own thoughts (mind)

This is the doctrine of the Buddhas."

Here is a recording of the verse recited by a Venerable *Thero*; it keeps repeating several times:

WebLink: Listen to verse of : Sabba pāpassa akaraṇaṁ

When you click the "DOWNLOAD" button, it will open the file in a new window. Right-click on the screen and choose, "Save as.." to save the file to your computer.

WebLink: PureDhamma: DOWNLOAD the recording of "Sabba-Pāpassa-Akaraṇaṁ"

16.3 Appamādo Amata Padam….

Appamādo amata padam
pamādo maccuno padam
appamattā na meeyanthi
ye pamattā yathā matā.

(Dhammapada verse Verse 21, *Samavati Vatthu*)

- *Appamāda* is "doing without delay" and *pamāda* is being delayed.
- *Mata* (pronounced "matha") is death, and *amata* is deathless, another word for *Nibbāna. Maccuno* (pronounced "machchuno") is also death, so is *meeyanthi.*
- *Pada* means "word" (most of these words are also Sinhala words).
- *Appamattā* is one who is not delayed, *pamattā* is one who is delayed.
- *Yathā* is "true status".

Now we can extract the MEANING of the verse as:

Hastening is a "deathless word"

Delay is a "death sentence"

One who makes haste attains the deathless status

One who negligent is like already dead

1. Thus someone who is delayed in seeking *Nibbāna* (either due to not knowing Buddha Dhamma or just procrastinates in following the Path) is like a dead person even while living. He/she will be facing innumerable deaths in the future.

- But someone who strives and attains *Nibbāna* has already reached the "deathless state". Because after attaining *Nibbāna*, all future deaths are stopped: No more future rebirths and thus no more deaths.
- One actually attains the "deathless state" when one becomes one of the 8 Noble Persons (*attha purisa puggala*). This is because once one becomes an *Ariya* (Nobel Person), one will never lose it, and will never be born in an *apāya*. Thus one can be said to "born" as an *Ariya*, when one becomes a *Sotāpanna Anugāmi;* see,"Sotāpanna Anugāmi – No More Births in the Apāyā."

2. There are two reasons for the urgency:

a. The time of death is unpredictable. Even a young, healthy person may die via an accident or other unforeseeable cause.

b. As we get old, our brains start to degrade and thus our minds will not be able to grasp the Dhamma.

3. Many Buddhists that I know say they want to "enjoy life while young" and then start focusing on *Nibbāna* at old age long after retirement. But one may not reach the old age, and even if did, the mind may not be able to grasp the deep message of the Buddha.

- Most people come to the conclusion of postponing practice, because they think attaining *Nibbāna* (or the *Sotāpanna* stage) is a mere act of following some rituals that can be done at any time. This would be a big mistake. The *Sotāpanna* stage is reached via comprehending the true nature of this world, *anicca*, *dukkha*, *anatta*, and that needs a sharp mind and a lot of contemplation.

4. The Buddha was once traveling with some *bhikkhus* and they saw an old beggar couple. The Buddha told the *bhikkhus* that the man's name was Mahādana (meaning rich), and he was indeed a very rich person, and the woman was his wife; they both were of "tihetuka birth", i.e., they were born due to a very potent good kamma (done with all three good roots of non-greed, non-hate, and wisdom) from a previous life.

© 2026 Lal A. Pinnaduwage

- Thus, the Buddha said, if they started on the Path when they were very young, the man could have become an *Arahant* and the woman an *Anāgāmī*; if they started when they were young (20's), they could have become *Anāgāmī*/*Sakadāgāmī*, and if they started on the Path in the middle age they could have attained *Sakadāgāmī*/*Sotāpanna* stages. Instead, they lived a very lavish life, wasted their wealth, and became beggars. Now they were too old to comprehend anything.
- It is unfortunate to see many people today postponing the practice to their "old age". It is a good idea to start early and at least keep a slow pace.
- There are four factors that contribute to the capability of attaining *Nibbāna*: *Āyu* (age), *vaṇṇa* (lively), *sukha* (comfort), *bala* (ability.) These are due to past *puñña kamma*. See #13 of "Kaṇha (Dark) and Sukka (Bright) Kamma and Kammakkhaya."
- Some people may have sufficient *vaṇṇa* and *bala* even at a very old age. Thus a normal person cannot look at a given old person and say, "this person seems too old to attain *Nibbāna*". Only a Buddha can determine whether a person is too old to grasp the Dhamma. Yet, in general, as one becomes older the brain gets weaker.

5. Here is a recording of the verse recited by a Venerable *Thero*:

Next, "Najajja Vasalo Hoti..", …….

© 2026 Lal A. Pinnaduwage

16.4 Na Jacca Vasalo Hoti……

Revised May 2, 2020

"Na jaccā vasalo hoti, na jaccā hoti brāhmano

Kammanā vasalo hoti, kammanā hoti brāhmano"

(*Vasala Sutta*, Sutta Nipāta 1.7)

When I started writing this post, I erroneously assumed that the above verse is from *Dhammapada*. But it turned out that it is actually from the *Vasala sutta*. (It is the last verse of the *Sutta*.) However, I decided to put the post in the *Dhammapada* section. It is a succinct verse providing insight into the core message of the Buddha.

Let us look at the meaning of different key terms:

- "*Ja*" means birth and "*jaccā*" means "by birth" or "related to birth".
- "*Vasala*" (or "*vasalaya*" in Sinhala)is a derogatory term identifying someone as an "unworthy" person. Not merely "useless" but "someone not to be associated with", as if the person has a communicable disease. Even today, there are such "untouchables" in India even though their conditions have improved since 1995: WebLink: WIKI: Dalit.
- In those days, a *Brahmin* was supposed to be the opposite of a *vasalaya*, having the highest social rank. Of the 31 realms of existence, *Brahmā* live the highest 20 realms. They have the highest level of mental states (greedy or hateful thoughts normally do not arise in them.) Thus a *Brahmin* (who lives like a *Brahma*) is supposed to be of the highest moral values.
- *Kamma* is of course action, and *kammunā* means according to one's actions.

So, the meaning of the verse is clear:

"It is not the birth that makes a noble person or an ignoble person, but it is one's actions (the way one lives one's life) that determines whether one is a noble person or an ignoble person".

- Here one could substitute a Noble Person with a *Brahmin* and ignoble person with an untouchable, AND that does not come about by birth but by one's moral values.

We can make the following deductions using Buddha Dhamma:

- One is determined to be a Noble Person not by birth but by one's character.
- One change from being an ignoble person to a noble person and even a Noble Person (*Ariya*) by changing one's character (*gathi*). There are several posts on how to change habits; use the "Search" box on right to find the posts (just search for "habit" or "*gathi*"). This search box is a good resource to find relevant posts using a keyword.
- Sometimes a noble person can change to an ignoble person too, but a Noble Person (*Ariya*) never (even in future lives) changes to an ignoble person.
- Some people are very high-minded because of their birth, wealth, beauty, fame, among many other possibilities. But we need to be always aware of the fact that we have been born much worse than even the poorest human. We all have been born animals and worse. There is no reason to be high-minded for a span of 100 years in a rebirth process that has no beginning!
- Contemplating on the "bigger world view" with the 31 realms (with four realms of much suffering) can make one humble, and be compassionate; see, "Implications of the Rebirth Process in Daily Life and Society." During the hard-to-comprehend time scale of *saṁsāra*, we have been born in almost all of the 31 realms, good and bad.
- Also, we need to remember that even a lowly worm may have a potent *kamma* seed that could make it in its next life a king. (Even though chances are extremely low.) See, "How to Evaluate Weights of

© 2026 Lal A. Pinnaduwage

Different Kamma"), and if we do not act with wisdom we could have a rebirth worse than a worm. Actually, high-mindedness (*uddhacca*; pronounced uddachcha) can make one be born in a lower realm.

Next, "Arogya Parama Labha", …….

© 2026 Lal A. Pinnaduwage

16.5 Ārogya Paramā Lābhā..

Revised September 27, 2017; revised January 30, 2019; April 18, 2020; June 28, 2020; June 14, 2022

Ārogya paramā lābhā
Santuṭṭhiparamaṁ dhanaṁ
vissāsa paramā ñāti
Nibbānaṁ paramaṁ sukhaṁ

(Dhammapada verse 204)

Here is a recital by the Venerable Thero:

WebLink: Listen to Venerable Thero recital

1. As with many Dhammapada verses (and *sutta* interpretations), the conventional (or "*padaparama*") interpretation is the one that is widely known, which goes as: **"Health is the ultimate profit, happiness is the ultimate wealth, a trusted friend is the best relative, *Nibbāna* is the ultimate bliss".**

- The deeper meaning remains hidden for many. In some hospitals in Sri Lanka, the verse, "*Ārogya Paramā Lābhā*" is displayed in big letters to emphasize the benefits of being healthy.
- While it is good to abide by those conventional meanings while we live this life, we should also try to grasp the deeper meanings to embark on the Noble Eightfold Path; see, "Buddha Dhamma in Chart" and "What is Unique in Buddha Dhamma."

2. First "*parama*" means "ultimate" or "prominent". By the way, the word "*padaparama*" above means the interpretation that makes the "conventional meaning of a word prominent"; "*pada*" is "word". Now let us look at the other words in the verse.

3. "*Roga*" means "disease", so *ārogya* means not subject to disease. The bodies of all beings below the *Deva lokā* (human and below) are subject to disease. We cannot remove the possibility of disease until we remove causes for us to be reborn in the human realm or the lowest four realms, i.e., attain the *Sakadāgāmī* stage of *Nibbāna*. [***ārogya*** : [nt.] health.]

- "*Lābha*" is "profit". **The ultimate profit (better than any amount of wealth) of "disease-free" status is attained at the *Sakadāgāmī* stage of *Nibbāna*.**

4. "*Santuṭṭhi*" comes from "*saŋ*" + "*tuṭṭhi*." Here "*tuṭṭhi*" is "joy" and *santuṭṭhi* is the joy achieved by removing "*saŋ*." *Santuṭṭhi* and the more common Sinhala word "*santhosa*" means happy. When one removes "*saŋ*," one gains the *nirāmisa sukha* of *Nibbāna* or "cooling down".

- "*Dhanaṁ*" means "wealth"; the Sinhala word is "*dhanaya*." **Thus ultimate wealth is achieved by getting rid of "*saŋ*" or defilements of greed, hate, and ignorance**; see, "What is "Saŋ"?".

5. "*Vissāsa*" comes from "*vis*" + *"āsā"*, where *"āsā" means "āsava"* or cravings. Thus it means getting rid of cravings that make one bound to the *saṁsāra* (round of rebirths).

- "*Ñāti*" means "relative." **Thus ultimate relative or refuge is reached via giving up the cravings for worldly things.**

6. The last one, *Nibbanaṁ paramaṁ sukhaṁ,* or "***Nibbāna* is the ultimate bliss**" is the only one that has the same meaning as the conventional or "*padaparama*" version in #1 above.

- Therefore, when one embarks on the *Sotāpanna magga*, one should be able to understand the correct version.

7. Buddha dhamma has no language, cultural, or social barriers. But the Buddha advised never to translate *Tipiṭaka* to any language, particularly to Sanskrit, because the meanings of certain words can get distorted; see, "Preservation of the Dhamma."

© 2026 Lal A. Pinnaduwage

- It is ironic that this is exactly what has happened during the past 1500 years or so, at least since Buddhaghosa wrote *Visuddhimagga*, probably even earlier. The most damaging is the replacement of the Pāli words *anicca* and *anatta* with the Sanskrit words *anitya* and *anātma*. The latter is likely to have happened more recently. See, "Misinterpretation of Anicca and Anatta by Early European Scholars."
- On the other hand, the Buddha also advised that what really matters is to get the "meaning of a given word or phrase across". He said to use the words and phrases (and examples) appropriate for a given locale to convey the MEANINGS of these key Pāli words. While we should keep the *Tipiṭaka* intact in Pāli, we should interpret its content in a way that is most conducive to getting the ideas across depending on the audience.
- The correct way to interpret the *Tipiṭaka* material is outlined in "Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa."

8. It is interesting to note that this verse was a popular one among the *Vedic Brahmins* of the day of the Buddha. In the WebLink: suttacentral: *Māgandhiya sutta* (MN 75), it is described how Māgandhiya *brahmin* tells the Buddha that his teacher also taught him the same verse. When the Buddha asked him to explain the meaning that his teacher taught him, Māgandhiya gave the same interpretation that was given in #1 above.

- The Buddha told Māgandhiya that this *gāthā* (verse) came to the *Vedic* literature from the previous Buddha (Buddha Kassapa,) whose Buddha Sāsana had since disappeared: "***Pubbakehesā, māgaṇḍiya, arahantehi sammāsambuddhehi gāthā bhāsitā***."
- It is important to note that there had been three Buddhas before Buddha Gotama in this *mahā kappa*, and there will be another, Maithree Buddha, in the future after the present Buddha *Sāsana* disappears in about 2500 years.
- This is why only "conventional meanings" of pure Dhamma survive when *Ariyā* (Noble Persons) who can correctly interpret the deep meanings in the *suttā* and verses like this are absent for a long time in this world. Either a Noble Person or a Buddha has to be born to bring back the true meanings.
- This is exactly what has happened during the past hundreds of years, where true meanings of many keywords like *anicca, dukkha, anatta, Paṭicca Samuppāda*, and *Ānāpānasati Bhāvanā*, have been not known. See, "Anicca, Dukkha, Anatta – Wrong Interpretations."

9. For those who like to dig deeper into *Tipiṭaka*, the "WebLink: suttacentral: *Santuttha Sutta* (SN 16.1)" clearly illustrates that "***santuṭṭha***" is with one who lives a simple life, with minimal cravings, as **Ven. Kassapa** did: "..***Santuṭṭhāyaṁ****, bhikkhave,* ***kassapo*** *itarītarena cīvarena, itarītaracīvarasantuṭṭhiyā ca vaṇṇavādī; na ca cīvarahetu anesanaṁ appatirūpaṁ āpajjati; aladdhā ca cīvaraṁ na paritassati; laddhā ca cīvaraṁ agadhito amucchito anajjhāpanno ādīnavadassāvī nissaraṇapaññho paribhuñjati..*"

- The WebLink: suttacentral: English and WebLink: suttacentral: Sinhala translations at the Sutta Central site are correct, for this *sutta*.

16.6 Anicca vata Saṅkhārā…

Revised August 16, 2019; February 25, 2020; June 8, 2020; December 21, 2020

Aniccā vata saṅkhārā

Uppāda vaya dhammino

Uuppajjitvā nirujjhanti

Tesaṁ vūpa samo sukho

(*Mahā Parinibbāna Sutta*)

This verse is not in the Dhammapada, but it is a very common verse. In Sri Lanka (and possibly in other Buddhist countries), it is displayed at funerals to emphasize the "fleeting nature" of life. It has a deep meaning and explains why we face sorrow inevitably (because death is inevitable). We generate our future rebirths via our own (*abhi*)*saṅkhāra*! We need to stop creating *abhisaṅkhāra* (with *lobha*, *dosa*, *moha*) to attain the *Nibbānic* bliss.

- This verse was uttered by Sakka, the King of the *Devas,* just after the *Parinibbāna* (passing away) of the Buddha. It is in the *Mahā Parinibbāna Sutta* (DN 16) and also in a short sutta: "WebLink: suttacentral: *Parinibbāna Sutta* (SN 6.15)."

A common and incorrect translation is:

- All things are impermanent
- They arise and pass away
- Having arisen they come to an end
- Their coming to peace is bliss

Let us examine the correct interpretation of the verse.

1. *Anicca* is, of course "cannot be maintained to our satisfaction." It is NOT just impermanence, because even permanent things (relative to our lifetime) cannot be maintained to our satisfaction; see, "Anicca, Dukkha, Anatta – Wrong Interpretations."

Vata (pronounced as "vatha") here means "surely" or "indeed."

(There are other meaning for "*vata*": In the verse, "*yaṁ samādānaṁ taṁ* ***vataṁ****. Sanvaraṭṭena sīlaṁ*," or "reciting precepts is a **ritual**, moral behavior, or *sīla*, is attained by controlling "*saṃ*." Thus, there "*vata*" means ritual. Another meaning is "**action**." One needs to pick the right meaning for the given situation).

We think, speak, and take actions based on our *mano, vacī*, and *kāya saṅkhāra.* They are all thoughts (we cannot even lift a finger without an associated thinking). Those *saṅkhāra* lead to *viññāṇa* via "*saṅkhāra paccayā viññāṇa*" in *Paṭicca Samuppāda*. Strong *viññāṇa* produced via "*abhisaṅkhāra*" (or strong *saṅkhāra*) lead to future rebirths. But all births end up in death. See, "Saṅkhāra – What It Really Means" and "Saṅkhāra, Kamma, Kamma Bīja, Kamma Vipāka."

- Thus the first line implies that any rebirth (which inevitably arises due to our *abhisaṅkhāra* cannot be maintained to our satisfaction. Any birth ends up in death and suffering.

2. *Uppāda* means to arise, and *vaya* means that arising can be stopped.

- But we can stop those things that lead to suffering to come into existence by stopping *saṅkhāra* from arising. That is *vaya*. That is the ultimate message embedded in Buddha Dhamma. *Dhammino* (or *dhammathā*) means the "Nature's way."

© 2026 Lal A. Pinnaduwage

- Thus the second line says, "those *saṅkhāra* are types of *dhammā* that can be stopped from arising," i.e., they are "*vaya dhammā*." That is also stated in another famous verse, "*vaya dhammā saṅkhārā."*
- The Buddha attained *Parinibbāna* (i.e., end of rebirth) because he was able to figure out how to stop *saṅkhāra* from arising (via removal of *avijjā*.)

3. *Uppajjitvā* means that which comes to existence (due to *saṅkhāra.*) Those things that come to existence in this world lead to suffering.

- *Nirujja* means those things will thus not arise anymore (by stopping *saṅkhāra* from arising.)

4. *Te* means "those," and thus "*tesaṁ*" ("*te*" + "*saŋ*") means those (three) "*saŋ*" or *lobha, dosa, moha;* see, "What is "Saŋ"?."

vūpa sama means "remove and get to *samādhi*." In the *Paṭisambhidā Magga Pakaraṇa* (*Jhāna Vibhaṅga* section) on p. 55, it explains that, "*vitakkavicārānaṁ vūpasamā*" means "getting rid of *vitakka* and *vicāra* and attaining *savitakka, savicāra*." See, "Vitakka, Vicāra, Savitakka, Savicāra, and Avitakka, Avicāra." *Sukha* is happiness.

- Thus the fourth line says, "by removing *lobha, dosa, moha* (three bad "*saŋ*"s) from our minds; we can reach (the ultimate) happiness or *Nibbāna*."

Here is a recording of the verse by the Venerable *Thero* (repeated three times; note the volume control on the right):

WebLink: Listen to verse of : Anichchavatha sankara

- This verse is a very good *kammaṭṭhāna* (meditation subject) for cultivating the "*anicca saññā*." One could recite the verse and contemplate its meaning. Think about all those loved ones who passed away and led to much suffering. And one's death is also inevitable.
- We have been through this process in perpetuity, being distressed as loved ones are lost and also thinking about one's own demise, at every birth.
- But there is a way to stop this suffering, by following the Path and stopping *saṅkhāra* from arising.
- Thus, instead of getting depressed about the inevitability of death, one WILL start feeling better if one can really cultivate the "*anicca saññā*"; see, "How to Cultivate the Anicca Saññā."
- This *kammaṭṭhāna* will also cultivate the "*udayavaya ñāṇa*" or "the knowledge about arising and stopping the arising of a *saṅkhata."* See, "Udayavaya Ñāṇa."

16.7 Attā Hi Attano Nātho

March 4, 2017; revised November 13, 2018; October 25, 2019; February 15, 2021; July 14, 2022; October 3, 2023

"Attā hi attano nātho
ko hi nātho paro siyā
***attanā** hi sudantena*
nāthaṁ labhati dullabhaṁ"

(Dhammapada verse 160)

1. This is an important verse where the word "*atta*/*attā*" (pronounced "aththa"/"aththā") is used with two very different meanings in two places within the same verse.

- **In the conventional sense, "*attā*"** means "a person". There is no negation for **"*attā*"** with this meaning.
- **The deeper meaning of "*attā*" (and also "*atta*" without the long "a")** is "beneficial," "fruitful," etc. The opposite of that is "*anatta/anattā*" or "unfruitful."
- Depending on the context, one needs to pick the correct meaning.

2. When one attains the true "*atta*" state (*Nibbāna*), one has become "*nātha*" or "*sanātha*" or "found refuge or salvation". As long as one remains in the 31 realms (this world), one is "*anātha*" (which is the opposite of "*sanātha*") or "helpless". See, "WebLink: suttacentral: *Paṭhama Nātha Sutta* (AN 10.17)."

- "*Attano nātho*" means "the refuge is within oneself." Thus, "*Attā hi attano nātho*" means "one's refuge is within oneself."
- "*paro siyā*" means "outside oneself." Thus "*ko hi nātho paro siyā*" means "How can one find refuge outside oneself"?
- "*Sudda*" means "clean." Thus, "*attanā hi sudantena*" means (by cleansing one's own (mind)"
- *Labhati* means get, *dullabhaṁ* means rare, and as we saw above "*nātha*" is attaining *Nibbāna*. So, *nāthaṁ labhati dullabhaṁ* means "it is not easy to get to salvation (*Nibbāna*)".

Therefore, we can translate the verse as follows:

"One is one's own refuge

How can another be a refuge to one?

(one reaches salvation) by purifying one's own mind

getting to the refuge (*Nibbāna*) is rare"

Here is a recording of the verse recited by me (I could not find a recording by Venerable Waharaka Thero):

WebLink: Play Dhammapada verse 160

A detailed discussion on "*atta/attā*" is given in the posts, "Pāli Dictionaries – Are They Reliable?" and "Anatta – the Opposite of Which Atta?"

October 25, 2019: *Attā* is used as "a person" in many of the verses in the "WebLink: suttacentral: Attavagga" of the Dhammapada.

17.1 Ānāpāna – Adopting Buddha's Worldview and Discarding 'Mundane Views'

May 8, 2026

Ānāpānasati Sutta outlines three major steps to *Nibbāna*. The first stage is where one attains the *Sotāpanna* stage of *Nibbāna* by adopting the Buddha's worldview ('*āna*') and discarding the mundane worldviews ('*āpāna*').

Introduction

1. The *Ānāpānasati Sutta* has the title "Mindfulness of Breathing" in the English translations by *Bhikkhu* Sujato ("WebLink: suttacentral: Ānāpānasati Sutta (MN 118)"), *Bhikkhu* Bodhi ("WebLink: suttacentral: 118. Mindfulness of Breathing"), and Thanissaro *Bhikkhu* ("WebLink: accesstoinsight.org: Ānāpānasati Sutta: Mindfulness of Breathing").

- This is why most people think that *Ānāpānasati* is primarily about 'breath meditation.'
- In this post, I will briefly explain why that interpretation is inconsistent not only with the *Ānāpānasati Sutta* (MN 118) but also with the Buddha's teachings as recorded in the *Tipiṭaka*.
- I will also point out the fact that the Buddha summarized the path to *Nibbāna* in three major stages in the *Ānāpānasati Sutta.*
- In the next post, I will provide further details on the second and third stages of *Ānāpānasati* (*Satipaṭṭhāna*) as outlined in the *Mahāsatipaṭṭhāna Sutta.*

Anariya Interpretation of *Ānāpānasati*

2. In a general sense, the Pāli word *ānāpāna*, '*āna*' includes anything that needs to be 'taken in', and '*āpāna*' the opposite of 'discarding.' For example, we should eat only foods that are good for the body and avoid or discard those that are bad.

- In another mundane usage, '*āna*' is taken to be 'breathe in,' and '*āpāna*' is assumed to be 'breathe out.' Now, '*sati*' means mindfulness, and thus, the word '*ānāpānasati*' is interpreted as 'mindfully breathing in and mindfully breathing out.'
- In **Hinduism**, the term ***ānāpānasati*** (Sanskrit: ***ānāpānasmṛti***) literally means **"mindfulness of breathing."**
- **Thus, it is the *anariya* (non-Buddhist) interpretation of '*ānāpānasati*'** that all translators cited in #1 above employed. There are many more English websites and texts describing *Ānāpānasati* as 'breath meditation.'

3. A huge 'selling point' of the 'breath meditation' is the following. They say one should engage in 'breath meditation' to calm the mind ('*Samatha*' by their definition) and then cultivate 'insight meditation' or *Vipassanā*!

- That sounds logical for anyone who has not understood the *Ānāpānasati Sutta* (MN 118), the *Mahāsatipaṭṭhāna Sutta* (DN 22), or the meaning of *Nibbāna*, as explained in #6 below.
- Even though *anariya yogis* labeled the 'breath meditation' as *Samatha* meditation, that is NOT the *Samatha* meditation in Buddha Dhamma. **However, that mundane 'calming effect' from breath meditation is real:** focusing the mind on the breath (or any inert object, like a clay ball or even the rising /falling of the stomach as one breathes) can keep the mind from latching onto 'sensual' or 'angry' thoughts, and that temporarily SUPPRESSES *pañca nīvaraṇa* and calms the mind.

© 2026 Lal A. Pinnaduwage

- If one can do that on a long-term basis (staying away from *pañca nīvaraṇa*), one can even attain *anariya jhāna* as ancient *yogis* like Āḷāra Kālāma did. They moved deep into forests and stayed away from sensory inputs that can trigger *pañca nīvaraṇa* and induce attachment (*taṇhā*) via greed or anger.
- Thus, this breath meditation is the same one that ancient *yogis* used to attain mundane (*anāriya*) *jhānās* even before the Buddha.

4. This confusion was present even among some *bhikkhus* who were closely associated with the Buddha himself. A good example was *bhikkhu* Devadatta, who was the brother of Princess Yasodhara, and became a *bhikkhu* at the same time as Ven. Ānanda did.

- Even though Devadatta undoubtedly listened to many of the Buddha's discourses, he never comprehended the teachings. He took to the 'easy path' of cultivating *anariya jhāna*, and was quite successful. He attained not only all *jhānās*, but also *iddhi* (supernormal) powers.
- Once, he took the form of a snake and appeared on the lap of Prince Ajasattu. The Prince was frightened, and when Devadatta took his own form, the King was quite impressed. That is when Devadatta persuaded the Prince to kill his father to become the King, and decided to take the life of the Buddha so that he could 'become the Buddha'!!
- As we know, Devadatta lost all his supernormal powers and the ability to enter *jhānās* when he injured the Buddha's foot. Because of that, he was born in an *apāya* as well.
- Those who are impressed by *jhānās* must understand that all of us (and even all animals or all sentient beings) have attained the highest *jhānās* uncountable times in this beginningless rebirth process. **What is the use of doing that one more time?**

Buddhaghosa Infused 'Breath Meditation' into *Theravāda*

5. Since the time Buddhaghosa's *Visuddhimagga* was accepted as the basis of *Theravāda* Dhamma (in the fifth century CE), this incorrect interpretation of the *ānāpānasati* as 'breath meditation' has taken hold.

- Buddhaghosa was a Hindu before converting to Buddhism; see "The Life and Work of Buddhaghosa" by B. C. Law (1927). Some say he became a Buddhist to introduce Hindu concepts to the Buddha Dhamma. Either that or he just used whatever he understood to be the *Ānāpānasati* without malicious intentions.
- Either way, correct interpretations have been hidden for all these years; see "Buddhaghosa's Visuddhimagga – A Focused Analysis."
- The real *ānāpānasati bhāvanā* is not described in the *Visuddhimagga*, nor in any *Mahāyāna* or even *Theravāda* texts today (except in the Pāli *Tipiṭaka* written 2000 years ago). Thus, one needs to go directly to the *Tipiṭaka* to find it; it is described in many *suttās*, and I have recently done a complete overview in a series of posts in the subsection "Buddha Dhamma."
- To understand why 'breath meditation' cannot even be associated with a Buddhist meditation, we need to understand what is meant by *Nibbāna*.

Nibbāna Means to Separate from the 'World'

6. The key message that the Buddha taught is that the rebirth process is filled with much suffering because most births are in the lowest four realms or the *apāyās*. Attaining *Nibbāna* means stopping the process of rebirth. As long as **one seeks "pleasure and happiness via worldly things"**, *Nibbāna* will be unreachable.

- Seeking **"pleasure and happiness via worldly things"** is the same as continuing to add to the *pañc**upādāna**kkhandha* (commonly translated as 'five **grasping** aggregates' by many), **which represents things we crave or at least we believe truly exist**.

© 2026 Lal A. Pinnaduwage

- When one attains *Nibbāna*, one would be separated from the 'world of 31 reams.' An *Arahant* attains *Nibbāna* at the moment of reaching the *Arahant-phala*. After that, only the 'physical *vipāka* body' remains until the death of the physical body, and at that point, even that connection to the 'world' ceases. **That is why the Buddha equated *Nibbāna* to '*loka nirodha*,'** as stated in the "WebLink: suttacentral: *Loka Sutta* (AN 4.23)."
- **Therefore, Buddhist meditation never uses a 'worldly thing' as a meditation object (*nimitta*).** The goal is to separate from the world, not to embrace ANYTHING associated with the world.
- That is specifically stated in the *Saññā Sutta.* Let us discuss it now.

Buddhist Meditation Avoids 'Taking' a 'Worldly *Saññā*'

7. Once Ven. Ānanda asked the Buddha whether a *samādhi* can be reached without using the breath (air) or a *kasiṇa* object as the meditation object or "*nimitta*." See "WebLink: suttacentral: *Saññā Sutta* (AN 11.7)."

- Ven. Ānanda asked: "*Siyā nu kho, bhante, bhikkhuno tathārūpo samādhipaṭilābho yathā* ***neva pathaviyaṁ pathavisaññī assa****, na āpasmiṁ āposaññī assa,* ***na*** *tejasmiṁ tejosaññī assa,* ***na vāyasmiṁ vāyosaññī assa****,* ***na*** *ākāsānañcāyatane ākāsānañcāyatanasaññī assa,* ***na*** *viññāṇañcāyatane viññāṇañcāyatanasaññī assa,* ***na*** *ākiñcaññāyatane ākiñcaññāyatanasaññī assa,* ***na*** *nevasaññānāsaññāyatane nevasaññānāsaññāyatanasaññī assa,* ***na*** *idhaloke idhalokasaññī assa,* ***na*** *paraloke paralokasaññī assa, yampidaṁ diṭṭhaṁ sutaṁ mutaṁ viññātaṁ pattaṁ pariyesitaṁ anuvicaritaṁ manasā, tatrāpi* ***na*** *saññī assa; saññī ca pana assā"ti?*
- **The English translation in the link can be improved as follows:** "Could it be, *Bhante*, that a *bhikkhu* might gain a *samādhi* like this? They **would not** focus their minds on ***pathavi* (as using a clay ball in *kasiṇa* meditation) by 'taking in' the '*pathavi saññā*'** OR *āpo* (as using a water bowl in *kasiṇa* meditation) by 'taking in' the '*āpo saññā*' OR *tejo* (as using a fire in *kasiṇa* meditation) by 'taking in' the '*tejo saññā*' OR ***vāyo* (as using air in breath meditation) by 'taking in' the '*vāyo saññā*'**.
- **Therefore, 'breath meditation' takes the *saññā* of *air* as the *nimitta: 'vāyo saññī assa.'***

"*vāyo saññī assa*"- What Does It Mean?

8. When a mind is focused on a specific object, it perceives that object in a certain way. Even though '*saññā*' is commonly translated as 'perception,' it has a deeper meaning in the Buddha Dhamma. Buddha emphasized that all humans who have not comprehended the Buddha Dhamma (*puthujjana*) perceive things in the world incorrectly; i.e., a *puthujjana* has ***saññā vipallāsa*, or 'distorted perception.' I call it 'distorted *saññā*.'** For example, a *puthujjana* believes that colorful things exist in the world, but in reality they don't; see "Without 'Mind-Made' Perception, World Is Colorless, Soundless, Tasteless, Odorless, and Touchless." **This is the worldview that one must discard; see below.**

- Our physical and mental bodies are "programmed/created" (via *Paṭicca Samuppāda*) to provide a **"distorted perception."** We perceive a rock or a diamond as "solid," but even modern science confirms that 99% of "any solid object" is "empty of matter." See "Saññā Vipallāsa – Distorted Perception."
- The Mūlapariyāya *Sutta* (MN 1) describes **"The Root of All Things" in this world**, which is **"*saññā vipallāsa*" or "distorted *saññā*."** See "Mūlapariyāya Sutta – The Root of All Things."
- The verse "*vāyasmiṁ vāyo saññī assa*" literally means "to take in the (distorted *saññā*) of air" while focusing the mind on the breath. Here, "*assa*" means "take in," and "*vāyasmiṁ*" means "in/of air."

© 2026 Lal A. Pinnaduwage

- In the same way, some *yogis* who cultivate *kasiṇa* meditation focus their attention on a hard object (e.g., a clay ball), which is the same as "*pathaviyaṁ pathavi saññī assa*." Some others use a fire as *nimitta* (to get the *tejo saññā*). **Focussing on one's breath is the *kasiṇa* equivalent of taking in the *vāyo saññā*.**

9. In the first part of the verse in #7 above, Ven. Ānanda asks, "Is there a way to get to *samādhi* **without focusing on the breath or another *kasiṇa* object**?"

- Buddha's answer is @ marker 5.1: "*Idhānanda, bhikkhu **evaṁ saññī hoti**:'etaṁ santaṁ etaṁ paṇītaṁ, yadidaṁ sabbasaṅkhārasamatho sabbūpadhipaṭinissaggo taṇhākkhayo virāgo nirodho nibbānan'ti*" OR "Of course, Ānanda. **There is such a *saññā*.** It is the *saññā* of 'cooling down' associated with *Nibbāna*."
- When engaging in *Vipassanā*, one's mind must be devoid of any '*lokiya saññā*' induced by anything in the world, including breath. **That is to focus on the 'cooling down experienced with the non-arising of *rāga, dosa, moha* in the mind'** ('*etaṁ santaṁ etaṁ paṇītaṁ, yadidaṁ sabbasaṅkhārasamatho sabbūpadhipaṭinissaggo taṇhākkhayo virāgo nirodho nibbānan'ti*.)
- That state of mind is attained only in the *Satipaṭṭhāna Bhūmi*, reached via overcoming the '*lokiya saññā*' as a result of cultivating *Satipaṭṭhāna*. See "Sammā Sati Is Ānāpānasati Experienced in Satipaṭṭhāna Bhūmi." **Any *lokiya saññā* will generate at least *moha*/*avijjā*!** I will discuss that in the next post.
- **The point I wanted to make in #7-#9 in this post is the following: A Buddhist meditation NEVER takes a worldly object, such as the breath or a *kasiṇa* object, as the meditation subject!**
- By the way, the verse in #7 above and almost identical discussions are also in "WebLink: suttacentral: *Dutiyasamādhi Sutta* (AN 11.19)," "WebLink: suttacentral: *Catutthasamādhi Sutta* (AN 11.21)," and "WebLink: suttacentral: *Sāriputta Sutta* (AN 10.7)."

Mundane and Noble Eightfold Paths

10. **In the Buddha Dhamma, '*āna*' and '*āpāna*' have two levels, and neither involves the breath.**

- Once one lives a morally upright life on the **'mundane eightfold path'**, one can rid oneself of the **ten types of wrong views**. In particular, one must understand the validity of the laws of *kamma* (that accumulated *kammic* energies can bring their *vipāka*; that possibility goes away completely when one attains *Arahanthood*, but a *Sotāpanna* is also free of certain types of *kamma vipāka*). Therefore, the validity of the laws of *kamma*, in turn, validates the rebirth process.
- At that point, one is capable of understanding the deeper teachings of the Buddha from a Noble Person.
- Both *anariya* and mundane types of '*ānāpāna*' discussed above arise from non-*Ariya* ways of interpreting '*āna*' and '*āpāna*.' **Both belong to '*padaparama*' (taking meanings out of context).** ["***padaparama***" : conventional or mundane] [***padaparama*** : [Adj.] The most important aspect of the text is that it can be further divided into many categories according to the stages of practice. These include practitioners who must practice seven days of meditation (in the most diligent state), and those who must practice for decades before they can attain Arhatship. One can attain Arhatship in youth, but may only attain a lower level of attainment in old age. 20.1*Katamo ca puggalo **padaparamo**?* 20.2*Yassa puggalassa bahumpi suṇato bahumpi bhaṇato bahumpi dhārayato bahumpi vācayato na tāya jātiyā dhammābhisamayo hoti—* 20.3*ayaṁ vuccati puggalo "padaparamo"*. See "WebLink: suttacentral: Abhidhamma Puggalapaññatti 4. Catukkapuggalapaññatti." **20.1** "And what kind of person is one who is ***padaparama*** (one for whom the words are the utmost / who attains at most only the words)? **20.2** A person who, even though hearing much, speaking much, memorizing much, and reciting much, does not in that lifetime attain a breakthrough to the Dhamma (*dhammābhisamaya*) — **20.3** this person is called ***padaparama***."]

Ānāpāna – 'Taking In' Buddha's Worldview and 'Discarding' Mundane Views

11. Once one gets rid of the **ten types of wrong views** (see #3 of "Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage"), one is ready to learn the **deeper meanings of '*āna*' and '*āpāna*'** from a person who has attained a *magga phala*.

- **That is when one starts 'taking in' the previously unheard 'worldview of the Buddha' and discarding the 'mundane worldviews.'**
- **Those are the true meanings of '*āna*' and '*āpāna*.'** When one truly begins to understand '*āna*' and '*āpāna*' and the huge difference between the two worldviews, one becomes an '*assāsappatto*' or '*sandiṭṭhiko*' at the *Sotāpanna Anugāmi* stage. See "Assāsa Passāsa – What Do They Mean?" and "Sandiṭṭhiko – What Does It Mean?"
- Now, let us briefly discuss why those two worldviews are so different. The switch from the 'mundane worldview' to the 'Buddha's worldview' occurs at the *Sotāpanna* stage, **marking a paradigm shift**.

Difference in the Two Worldviews

12. All *puthujjana* (average humans, including those who follow the **'mundane eightfold path'**) have the **wrong idea that 'sensual pleasures' (*kāma assāda*) are in the external world**. That means they think one can be happy by acquiring material things in the world (houses, cars, money, etc.).

- The Buddha taught something more profound. It is a 'previously unheard worldview.'
- **The Buddha taught that any 'pleasure' one feels is made up by the mind. In addition, any pain one feels is also made up by the mind.**
- I tried to explain that in the recent series of posts on "Buddha Dhamma." It culminated in the post "Kāma Assāda and Pain Are Mostly Mind-Made," which explains how the mind itself generates the intense *sukha* or *dukkha vedanā*.
- Those with a good understanding of *Paṭicca Samuppāda* may be able to understand those posts. I feel most people struggle to understand them, so after the next post (which completes this discussion on *Ānāpānasati*), I will start a new series to simplify things further.

Three Stages to *Nibbāna* in *Ānāpānasati*

13. In the Buddha Dhamma, the mind becomes free of the *pañca nīvaraṇa* and **attains '*Samatha*' only while in the *Satipaṭṭhāna Bhūmi***. As long as one is in the *Satipaṭṭhāna Bhūmi* (i.e, while engaged in *Satipaṭṭhāna*), it is impossible for *pañca nīvaraṇa* to arise! That is when one can truly cultivate *Vipassanā*, or insight meditation, thereby fulfilling *Satta Bojjhaṅga* and attaining higher *magga phala*.

- The 'three-stage' process summarized in the *Ānāpānasati Sutta* (MN 118) is discussed in "Ānāpānasati Sutta – Complete Overview" and many other posts in the "Buddha Dhamma" subsection.
- **The three stages are:**

  (i.) Attain the *Sotāpanna* stage by understanding how a mind automatically attaches to ANY sensory input due to the **'built-in *kāma saññā*.'** With that understanding, one's mind enters the *Satipaṭṭhāna Bhūmi* for the first time ever at the moment of attaining the *Sotāpanna* stage. Note that this REQUIRES one to embrace the 'Buddha's worldview' (*āna*) and to reject the 'mundane worldviews' (*āpāna*); **hence the name *Ānāpānasati***.

  (ii.) Now, a *Sotāpanna* must cultivate *Satipaṭṭhāna Bhāvanā* to be able to enter the *Satipaṭṭhāna Bhūmi* at will.

© 2026 Lal A. Pinnaduwage

(iii.) *Satta Bojjhaṅga* leading to higher *magga phala* can be cultivated only when the mind is in the *Satipaṭṭhāna Bhūmi.*

- The second and third stages are discussed in detail in the *Mahāsatipaṭṭhāna Sutta* (DN 22). Thus, while the *Ānāpānasati Sutta* (MN 118) summarizes all three stages, the *Mahāsatipaṭṭhāna Sutta* (DN 22) discusses only the last two stages, but in more detail.

14. Thus, one can cultivate *Vipassanā* meditation (that can lead to higher *magga phala*) only after attaining the *Sotāpanna* stage because a *puthujjana* cannot cultivate *Satipaṭṭhāna* to enter the *Satipaṭṭhāna Bhūmi* that is free of not only '*kāma saññā*' but of any *saññā* belonging to any of the 31 realms, i.e., any '*lokiya saññā*.' This is evident in the *Saññā Sutta* discussed in "Is Ānāpānasati Breath Meditation?" where "*Saññā Sutta – Ānāpānasati* Is Not 'Breath Meditation'."

- One should compare that with the prevailing ideas about *Vipassanā* pointed out in #3 above.
- **It is imperative to discuss the first stage of *Ānāpānasati* (i.e., the difference between 'worldview of the Buddha' and 'mundane worldviews') in detail. That is the key to attaining the *Sotāpanna* stage; see #13 above.**
- I will do that in the new series of posts. It would be a good idea to understand the complex meanings of ***saññā*** in the meantime; see, for example, "Saññā – What It Really Means" and "Saññā – Hidden Aspect of Paticca Samuppāda."

Summary

15. Translating *Ānāpānasati* as "Mindfulness of Breathing" is blatantly wrong! It goes against the very definition of *Nibbāna*!

- One attains the *Sotāpanna* stage of *Nibbāna* by comprehending/grasping the Buddha's worldview (*āna*) and discarding all mundane worldviews (*āpāna*).
- That paradigm shift in one's mind takes hold when one attains the *Sotāpanna* stages of *Nibbāna*. In other words, one attains the *Sotāpanna* stage by fulfilling the first stage of *Ānāpānasati* per the *Ānāpānasati Sutta* (MN 118).
- I will briefly discuss the second and third stages of *Ānāpānasati* in the next post. **These two posts provide the basis for other posts on *Ānāpānasati* and *Satipaṭṭhāna.***
- Anyone can ask questions or point out errors in this post (or those mentioned above) in the discussion forum.

17.2 Ānāpānasati – Mindfulness (Sati) Based on Buddha's Worldview

May 15, 2026

The second and third stages of *Ānāpānasati* in the *Ānāpānasati Sutta* are about establishing '*Sammā Sati*' (free of '*loka saññā*') and engaging in *Vipassanā* to attain higher *magga phala*. Those two stages are described in detail in the *Mahāsatipaṭṭhāna Sutta.*

Overview of the First Stage of *Ānāpānasati*

1. In the previous post, "Ānāpāna – Adopting Buddha's Worldview and Discarding 'Mundane Views'", I discussed the first stage of *Ānāpānasati* by focusing on *Ānāpāna* (*āna* + *āpāna*).

- One attains the *Sotāpanna* stage by 'seeing with wisdom' ('*pajānāti*') the futility/danger of attaching to 'worldly things' (switching from '*vijānāti*' to the early stage of '*pajānāti*).' One must understand the difference between *vijānāti* and *pajānāti*: "Cognition Modes – Sañjānāti, Vijānāti, Pajānāti, Abhijānāti" and "Vijānāti, Pajānāti, Abhijānātī – Better Levels of Human Understanding."
- Simply stated, '*vijānāti*' is the understanding of a *puthujjana*, and '*pajānāti*' is the better understanding of a Noble Person above the *Sotāpanna* stage.
- We attach with greed when that greed generates a (mind-generated) *sukha vedanā*; attachment via anger is based on (mind-generated) *dukkha vedanā*. As we have discussed, those *vedanā* start as *manāpa* and *amanāpa*, which are much weaker than *sukha* and *dukkha vedanā* (only a trace of like/dislike); **the mind itself elevates them to 'pleasure' or 'pain.'** See "Kāma Assāda and Pain Are Mostly Mind-Made."
- However, the Buddha taught that we also attach to all other sensory inputs (which only generate a neutral or *adukkhamasukha vedanā*) with ignorance (*avijjā* or *moha*) about the 'true nature of the world.' While it is easy to see attachment (*taṇhā*) arising from greed or anger (both rooted in *avijjā*), it is not easy to see attachment arising from pure *avijjā*, i.e., without greed or anger.

Why We Attach via Even the 'Neutral *Vedanā*'

2. To attain the *Sotāpanna* stage, one must understand why even attachment to neutral *vedanā* is dangerous because that also moves the mind away from *Nibbāna* and binds it to 'the world.'

- To give an example, when we see the blue sky or a patch of green grass, we don't think twice about it. We assume the sky is blue and the grass is green.
- However, the reality is that sky and grass have no colors. Nothing in this world has 'color.' In the same way, nothing in this world has intrinsic taste, smell, musical overtones, or 'sensation of touch.' **Thus, color is part of '*kāma saññā*' generated by the mind.**
- Modern science recently confirmed that. See "Without 'Mind-Made' Perception, World Is Colorless, Soundless, Tasteless, Odorless, and Touchless." Unfortunately, scientists are trying to explain that with the 'theory of evolution,' so they are on the wrong track. **Thus, even if others can discover parts of Buddha's teachings, the 'complete explanation' can be discovered only by a Buddha.**
- This is another way to describe the 'previously unheard teachings of a Buddha.' Can you imagine a world without colors? No colors means not even black and white; one would not see anything! See "Human Life is Unlivable in a 'Colorless' World." The 'perception of color' is built into us (all living beings) via *Paṭicca Samuppāda*.

Kāma Saññā Triggers Attachment via *Rāga*, *Dosa*, *Moha*/*Avijjā*

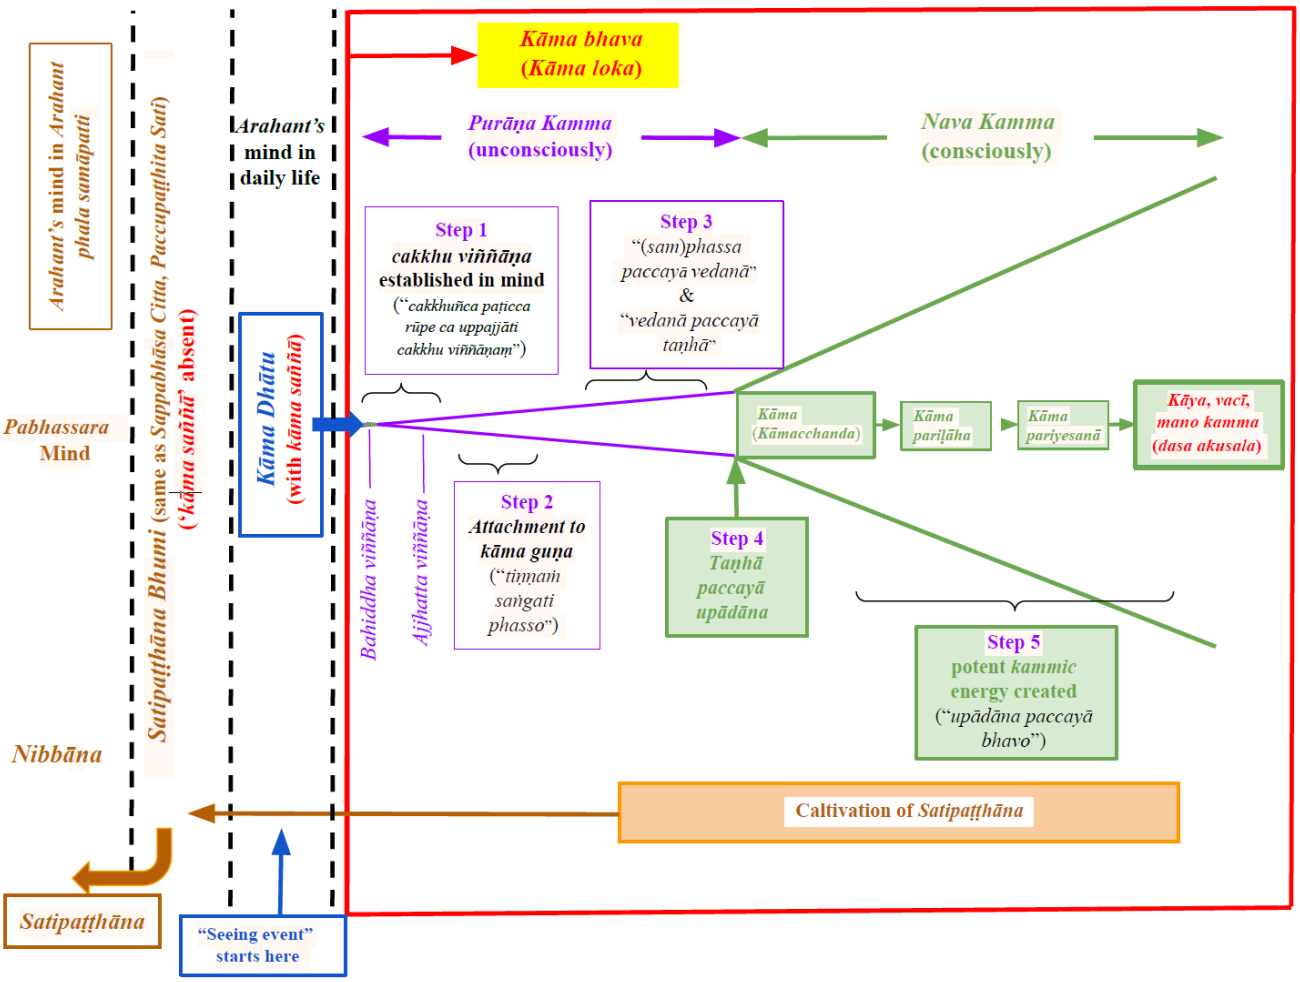
3. **I just wanted to point out that what I summarized above in #2 is the 'Buddha's worldview' that one must understand to become a *Sotāpanna*.**

© 2026 Lal A. Pinnaduwage

- However, some are able to see that without going through such a specific analysis. In the days of the Buddha, millions of people attained the *Sotāpanna* stage by listening to a couple of discourses. They had fulfilled their '*pāramitā*' in previous lives and only needed a 'little nudge.'
- Attaining the *Sotāpanna* stage in the present day requires a real effort. On the positive side, we are also lucky to live in a time when modern science has just confirmed Buddha's worldview.
- I will discuss Buddha's worldview in detail, starting with the next post. Now, let us complete the overview of the *Ānāpānasati Sutta* by highlighting the key features of the second and third stages.

'*Loka Saññā*' Is Absent in *Satipaṭṭhāna Bhūmi*

4. Our minds automatically generate the perception that 'grass is green' or the 'sky is blue' via the built-in '*kāma saññā*.'



- While we experience '*kāma saññā*' in the '*kāma loka*,' *Brahmās* in the *rūpa loka* and *arūpa loka* experience '*jhāna saññā*' and '*arūpa samāpatti saññā*.' All three types of *saññā* belong to the 'world' and can be collectively called '*loka saññā*.'
- As humans, we need to overcome *kāma saññā* to avoid the 'false perceptions.' Cultivation of *Satipaṭṭhāna* allows the mind to enter *Satipaṭṭhāna Bhūmi* free of *kāma saññā*.
- That is when one can engage in insight meditation (*Vipassanā*) without the interference from the *kāma saññā*.

Satipaṭṭhāna Bhūmi – Where *Samatha* Is Present

5. **Whether or not one had known about the *Satipaṭṭhāna Bhūmi*, one's mind enters it for the first time ever at the moment of attaining the *Sotāpanna* stage.** It happens in a split second while listening to a discourse or while in contemplation about the Dhamma concepts one has learned.

- If a mind is fully focused on a Dhamma concept, it has no opportunity to entertain any other worldly thoughts. As I pointed out in the previous post ("Ānāpāna – Adopting Buddha's Worldview and Discarding 'Mundane Views'"), focusing on the breath may suppress greedy and angry thoughts, but it does not suppress thoughts of ignorance, because 'the breath' also belongs to 'this world.'
- ***Satipaṭṭhāna Bhūmi* is where the mind becomes free from the influence of '*kāma saññā*' built into us.** Since '*kāma saññā*' cannot trigger *avijjā*, the mind would be temporarily free of *avijjā* while in the *Satipaṭṭhāna Bhūmi*. **This is the '*Samatha* state' in the Buddha Dhamma.**
- The following chart illustrates those key points.

© 2026 Lal A. Pinnaduwage

Overcoming Kāma Saññā - 3

Download/Print: "WebLink: PDF File Download: Overcoming Kāma Saññā - 3"

- In the case of looking at the blue sky (and being fooled by thinking the sky is indeed blue), we don't generate any 'potent *kamma*' that can lead to rebirths (because the mind does not defile beyond the '*purāṇa kamma*' stage). However, the mind still moves into the '*kāma loka*' by automatically entering the '*purāṇa kamma*' stage; this should be clear from the chart above, but I will discuss it further in upcoming posts.

Samatha in Buddha Dhamma

6. The "WebLink: suttacentral: Samathavipassanā Sutta (SN 43.2)" states that the way to attain *Nibbāna* is via *Samatha* and *Vipassanā*. As I have explained in previous posts, one must overcome the '*kāma saññā*' (and bypass the possibility of *pañca nīvaraṇa* arising in the mind) and enter the *Satipaṭṭhāna Bhūmi* to cultivate *Vipassanā*, i.e., ***Samatha* is attained only when one is in the *Satipaṭṭhāna Bhūmi***.

- The chart above is a modified version of the chart in "Origin of Attachment – Rāga Triggered by Saññā." That post discusses the opposite, i.e., how the mind is defiled in a step-by-step sequence.
- The "WebLink: suttacentral: Samatha Sutta (AN 10.54)" confirms that by first providing an analogy of how one knows one has *Samatha*. That analogy is the following. Anyone can check their reflection in a clean mirror to see whether their face has any blemishes, such as dirt or pimples.
- (@marker 2.6): In the same way, anyone (above the *Sotāpanna* stage) should check to see whether their minds are "blemished/contaminated' by *pañca nīvaraṇa*: *kāmacchanda*, *byāpāda*, *thinamiddha*, *uddhaccakukkucca*, *vicikicchā*. There, '*ajjhattaṁ cetosamathassa*' refers to '***samatha***.'
- When a mind is under the influence of '*kāma saññā*' (which holds for a *puthujjana* ALWAYS), it is inevitably contaminated with *pañca nīvaraṇa*; i.e., *avijjā* has arisen. **That is why *avijjā* arises even**

© 2026 Lal A. Pinnaduwage

when seeing the blue sky! It will happen to everyone who has not eliminated *kāma rāga*, i.e., anyone below the *Anāgāmi* stage.

- **Thus, one experiences *Samatha* for the first time ever upon attaining the *Sotāpanna* stage of *Nibbāna*!** That is when their minds enter the *Satipaṭṭhāna Bhūmi* for the first time.

Kāya in *Ānāpānasati* Is '*Pañcupādānakkhandha Kāya*'

7. It is a good idea to discuss the "WebLink: suttacentral: Kāya Sutta (SN 46.2)" at this point because it clarifies two ideas relevant to this post.

- First, @marker 1.2: When the Buddha says, "*Bhikkhus*, this ***kāya*** is sustained by *āhāra*. It depends on *āhāra* to continue, and without *āhāra* it cannot continue," he is referring to the '***pañcupādānakkhandha kāya***' and NOT the **physical body**. From the moment one attains the *Arahant* stage, the **'*pañcupādānakkhandha kāya*' will stop arising (because *pañca nīvaraṇa* stop arising)**, even though that *Arahant* will live with the physical body sustained by physical food.
- While *pañca nīvaraṇa* are *āhāra* for the '***pañcupādānakkhandha kāya***,' each of the *pañca nīvaraṇa* has its own *āhāra.*
- Thus, as explained in this *sutta*, *subha nimitta* and *paṭigha nimitta* are *āhāra* for *kāmacchanda* and *byāpāda*, while *ayoniso manasikāra* is *āhāra* for *thinamiddha*, *uddhaccakukkucca*, and *vicikicchā*.
- At marker 8.1: Therefore, *subha nimitta* (attractive sense inputs), *paṭigha nimitta* (displeasing sense inputs), and *ayoniso manasikāra* (not comprehending how '*kāma saññā*' triggers automatic *taṇhā* via *rāga*, *dosa*, or at least *moha*/*avijjā*) are *āhāra* for the '***pañcupādānakkhandha kāya***.'

8. The "WebLink: suttacentral: Kāyagatāsati Sutta (SN 43.1)" states that the way to *Nibbāna* is '***Kāya***gatāsati' (***kāya*** *gatā sati* or mindfulness of the '**body**'), which is translated in that link as 'Mindfulness of the body,' implying the 'physical body.'

- From the above discussion, it should be clear that ***kāya*** refers to the '***pañcupādānakkhandha kāya***.'
- Focusing the mind on the physical body cannot lead to *Nibbāna* (defined @marker 1.5 as '*rāgakkhayo dosakkhayo mohakkhayo*').
- By the way, ***Kāya***gatāsati is detailed in the "WebLink: suttacentral: Kāyagatāsati Sutta (MN 119)." It is specifically about attaining *Ariya jhāna* via the '*purāna kamma*' stage of the '***pañcupādānakkhandha kāya***.' *Anariya yogis* transition to *anariya jhānās* before the mind gets to that stage. See #3 of "Overcoming Kāma Saññā – Satipaṭṭhāna Bhumi or Jhāna."

Samatha Is Present In *Satipaṭṭhāna Bhūmi*

9. At marker 8.2 of the *Kāya Sutta* (SN 46.2), the Buddha points out that, on the opposite side, *Satta Bojjhaṅga* (seven awakening factors) lead one to *Nibbāna*, and are sustained by *yoniso manasikāra* (the opposite of *ayoniso manasikāra*).

- As I have discussed in "Satipaṭṭhāna Bhūmi – Free of Loka Saññā," *Satta Bojjhaṅga* can be cultivated only while the mind is in the *Satipaṭṭhāna Bhūmi* free of *pañca nīvaraṇa.*
- In other words, *Vipassanā* (cultivation of *Satta Bojjhaṅga* that leads one to *Nibbāna*) is possible only when the mind is in *Samatha*, free of *pañca nīvaraṇa.*
- Now, we have consistency everywhere from #6 through #8. **To summarize:** To cultivate *Vipassanā* to attain *magga phala*, a mind must first get to *Samatha* by entering the *Satipaṭṭhāna Bhūmi*, which is free of *pañca nīvaraṇa*. That is because, as long as a mind is under the influence of '*kāma saññā*,' it is 'covered by *pañca nīvaraṇa*. Since *pañca nīvaraṇa* are *āhāra* for the '***pañcupādānakkhandhakāya***,' cultivation of *Satta Bojjhaṅga* (i.e., engaging in *Vipassanā*) is not possible without *Samatha*.

© 2026 Lal A. Pinnaduwage

10. The "WebLink: suttacentral: Sāriputta Sutta (AN 3.33)" and "WebLink: suttacentral: Udayamāṇavapucchā (KN Snp 5.14)" are two other *suttās* that state one must remove the '*kāma saññā*' (and the accompanying *pañca nīvaraṇa*) so that one can **fully focus (*purejavaṁ*)** on **Dhamma concepts ('*dhammatakka purejavaṁ*')**. The reference to '*dhammatakkapurejavaṁ*' appears at markers 5.2 and 3.2 in the respective *suttās*.

- One can enter the *Satipaṭṭhāna Bhūmi*, i.e., one can get to 'mindfulness' or '*sati*' only by cultivating the four *Satipaṭṭhāna*: "WebLink: suttacentral: Sati Sutta (SN 47.44)." This involves fully comprehending **the '*purāna kamma*' stage** or **'*kāye kāya*'** within the whole '***pañcupādānakkhandha kāya***.'
- This is why the first stage of *Ānāpānasati* involves '*Kāyānupassanā*' (contemplation of the whole '*pañcupādānakkhandha kāya*') and the second stage involves '*Kāye Kāyānupassanā*' (contemplate only the '*purāṇa kamma'* stage of the *pañcupādānakkhandha kāya*).

'*Purāṇa Kamma*' and '*Nava Kamma*' – Both Must be Overcome

11. Ancient *yogis* like Āḷāra Kālāma (who attained *jhānās* via 'breath meditation') thought all they had to do was to abstain from *akusala kamma* (done via the physical body, speech, and mind) in the '*nava kamma*' stage. They did not know about the '*purāṇa kamma*' stage. **Most Buddhists today are in the same place as those *yogis*!**

- However, until one overcomes the 'initial *kamma* generation' in the '*purāṇa kamma*' stage, it is not possible to break the bonds to the cycle of rebirth (ten *saṁyojana*, seven *anusaya*, four *āsava*, etc., state the same in different ways).
- That '*purāṇa kamma*' stage is triggered automatically via the built-in '*kāma saññā*' for us in the '*kāma loka*.' **Thus, abstaining from the '*nava kamma*' stage does not stop the automatic 'initial mind contamination process.'** That is succinctly stated in the "WebLink: suttacentral: Kammanirodha Sutta (SN 35.146)" and discussed in other *suttās*, including "WebLink: suttacentral: Vappa Sutta (AN 4.195)," "WebLink: suttacentral: Niganṭha Sutta (AN 3.74)," "WebLink: suttacentral: Devadaha Sutta (MN 101)." Note that the English translations in the links incorrectly translate '*purāṇa kamma*' as 'old *kamma*,' but it should be 'initial *kamma*.' **Only a Buddha can discover that *kamma* generation occurs in two steps**: "Purāṇa and Nava Kamma – Sequence of Kamma Generation."
- We will discuss some of the above *suttās* in the future.

Kāya Saṅkhāra in the First Stage of *Ānāpānasati*

12. As we discussed above, the '*kāya*' in the first stage of *Ānāpānasati* ("WebLink: suttacentral: Ānāpānassati Sutta (MN 118)") is '***pañcupādānakkhandha kāya***.'

- Therefore, *Kāyānupassanā* in the first stage of *Ānāpānasati* focuses on any type of *saṅkhāra* associated with the whole '***pañcupādānakkhandha kāya***.'
- Thus, the verse "'*passambhayaṁ* ***kāya saṅkhāraṁ*** *assasissāmī'ti sikkhati, 'passambhayaṁ kāyasaṅkhāraṁ passasissāmī'ti sikkhatī*" in the first stage (@marker 18.4) refers to 'calming down ***saṅkhāra*** generation throughout the whole '***pañcupādānakkhandha kāya***.' Here, '*passambhayaṁ*' refers to 'calming or stopping of **all *saṅkhāra*** associated with the whole ***pañcupādānakkhandha kāya.***
- In the days of the Buddha, some *puthujjana* attained the *Sotāpanna* stage (via the first stage of *Ānāpānasati*) by listening to a single discourse by the Buddha. Their minds, starting at the '*nava kamma*' stage, gradually progressed to the '*purāna kamma*' stage and, for a brief period, overcame the '*kāma saññā*' to attain the *Sotāpanna phala* moment; see the chart above. They had fulfilled '*paramita*' to a good extent and also had the opportunity to get any 'loose ends' clarified by a Buddha!

Second Stage of *Ānāpānasati* on 'Subtle *Saṅkhāra*' in '*Kāye Kaya*'

© 2026 Lal A. Pinnaduwage

13. Once attaining the *Sotāpanna* stage, one must then cultivate the second stage of *Ānāpānasati* to enter the *Satipaṭṭhāna Bhūmi* at will. That is a time-consuming effort because it is not easy to overcome '*kāma saññā*' AND keep the mind in the *Satipaṭṭhāna Bhūmi* for long periods.

- The cultivation of *Satipaṭṭhāna* involves many steps, including *indriya saṁvara*, *sati sampajañña*, and others, which is why it is explained in greater detail in the *Mahāsatipaṭṭhāna Sutta* (DN 22).
- A *Sotāpanna* (with *Ariyakanta Sīla* attained with that *magga phala*) can relatively easily move the mind to the '*purāṇa kamma*' stage (**'*kāya*' within the '*pañcupādānakkhandha kāya*'**). That is why it is called '*Kāye Kāyānupassanā*,' and the subsequent steps of *indriya saṁvara*, *sati sampajañña*, etc., can be cultivated in 'formal meditation sessions.'
- The *Mahāsatipaṭṭhāna Sutta* (DN 22) describes that second stage in detail, with the parallel sections on '*Vedanāsu Vedanānupassanā*, '*Citte Cittānupassanā*,' and '*Dhamme Dhammānupassanā*.' All four sections are on the '*purāṇa kamma*' stage of the '***pañcupādānakkhandha kāya***.'
- The result of that effort is to overcome the '*Kāye Kāya*' stage and enter the *Satipaṭṭhāna Bhūmi* free of *kāma saññā*, i.e., *Samatha* state, where one can engage in *Vipassanā* to attain higher *magga phala*.
- Thus, now the blueprint in the *Ānāpānasati Sutta* should be clear. **Before cultivating *Satipaṭṭhāna*, one MUST attain the *Sotāpanna* stage.**

The Third Stage of *Ānāpānasati*

14. With the *Sotāpanna* stage of *Nibbāna*, one attains (the initial stage of) *Sammā Diṭṭhi*. With that, a *Sotāpanna* has a certain level of ***sati*** that is permanent. With that *sati*, a *Sotāpanna* is incapable of engaging in '*apāyagāmi* deeds.' That is why a *Sotāpanna* is free of rebirths in the *apāyās*.

- However, a *Sotāpanna* must cultivate *Satipaṭṭhāna* to enter the *Satipaṭṭhāna Bhūmi* at will to attain higher *magga phala*. That is where '*Sammā Sati*' (or *Sati Subbojjhaṅga*) is present. Cultivating that ability is the first step of the seven steps to *Nibbāna* (*Satta Bojjhaṅga*). In other words, one has *Sati Subbojjhaṅga* only while in the *Satipaṭṭhāna Bhūmi*.
- Then, while in the *Satipaṭṭhāna Bhūmi* (i.e., with *Sati Subbojjhaṅga*), one can engage in *Dhammavicaya Subbojjhaṅga* or *Vipassanā*. That leads to the remaining steps in *Satta Bojjhaṅga* and to the higher *magga phala*.

Critical Clarifications

15. Some people refer to the following verse in the "WebLink: suttacentral: Ānāpānassati Sutta (MN 118)" as evidence that '*assāsapassāsa*' means 'breathing in and out': "***Kāyesu kāyaññatarāhaṁ**, bhikkhave, evaṁ vadāmi yadidaṁ—**assāsapassāsā**.*"

- In fact, the English translation in the link is: "For I say that the *in-breaths and out-breaths* are **an aspect of the body**."
- Thus, they seem to translate ***Kāyesu kāyaññatarāhaṁ*** or '**another body** associated with the **physical body**' and that '**other body**' as 'breathing in and out.'
- However, the correct explanation is that ***Kāyesu kāyaññatarāhaṁ*** refers to the '***purāṇa kamma***' (initial *kamma* generation) stage, which is the initial part of the '***pañcupādānakkhandha kāya***.' In particular, at the last stages of *Satipaṭṭhāna* (just before one enters the *Satipaṭṭhāna Bhūmi*), it specifically refers to the initial part of '***purāṇa kamma***' stage, i.e., ***ajjhatta*** and ***bahiddha kāya*** ('*Iti **ajjhattaṁ** vā **kāye kāyānupassī** viharati*, ***bahiddhā** vā **kāye kāyānupassī** viharati*'; see #8 of "Kāye Kāyānupassanā – Details in Satipaṭṭhāna").
- The correct translation of the verse "***Kāyesu kāyaññatarāhaṁ**, bhikkhave, evaṁ vadāmi yadidaṁ—**assāsapassāsā**" is: "*Bhikkhus*, I say that one must learn about (*assāsa*) the 'other *kāya* within the '***pañcupādānakkhandha kāya***' and also must comprehend it fully (*passāsa*)."

© 2026 Lal A. Pinnaduwage

- Also, note that *assāsa/passāsa* is the same as *jānato/passato*; see "Jānato Passato" and Ājāniya – Critical Words to Remember."
- In the same way, '*assa sati*' and '*passa sati*' mean to 'learn how to establish *sati*' and 'comprehend that well.' See, "Assāsa Passāsa – What Do They Mean?"

16. That becomes even clearer by looking at the following verse @marker 25.6 in the "WebLink: suttacentral: Ānāpānassati Sutta (MN 118)": "***Vedanāsu vedanāññatarāhaṁ***, *bhikkhave*, *evaṁ vadāmi yadidaṁ*—***assāsapassāsānaṁ sādhukaṁ manasikāraṁ***."

- That verse is translated in the above link as "For I say that careful application of mind to the in-breaths and out-breaths is an aspect of feelings." I am not even sure what that means.
- When one engages in *Satipaṭṭhāna*, one is examining all four parts: *Kāye Kāyānupassanā,* '*Vedanāsu Vedanānupassanā*, '*Citte Cittānupassanā*,' and '*Dhamme Dhammānupassanā*.' One examines the *vedanā*, *citta*, and *dhamma* (*Paṭicca Samuppāda dhamma*) associated with the '***kāye kāya***' or the '***purāṇa kamma***' stage.
- So, that verse says: "*Bhikkhus*, I say that one must comprehend how the 'mind-made *vedanā*' arises at a weak stage and could become strong even in the '*purāṇa kamma*' stage. The part '***sādhukaṁ manasikāraṁ***' means 'pay good attention to that aspect of *vedanā*.'
- I explained that aspect in the post "Kāma Assāda and Pain Are Mostly Mind-Made."

17. **Finally, some people raise the following question:** In the *Icchānaṅgala Sutta* (SN 54.11), the Buddha explicitly states he spent his three-month rains retreat dwelling in *Ānāpānasati*. Why would the fully awakened Buddha spend three months "subduing the five hindrances" (*pañca nīvaraṇa*) when he had already permanently eradicated them at the root?

- That confusion arises because they do not understand the difference between *vijānāti* and *pajānāti*. The Buddha was not cultivating *Ānāpānasati*. He spent the time in '*sukha vihārāya*' (free of the *kāma saññā*) in *Ānāpānasati samādhi*, which is the same as being in the *Satipaṭṭhāna Bhūmi.*
- I have explained that *sutta* in the post, "Ānāpānasati Not About Breath – Icchānaṅgala Sutta."

Summary

18. Together with the previous post ("Ānāpāna – Adopting Buddha's Worldview and Discarding 'Mundane Views'"), I have completed the overview of the *Ānāpānasati Sutta* with this post. These two posts provide a broad overview of both the *Ānāpānasati Sutta* (MN 118) and the *Mahāsatipaṭṭhāna Sutta* (DN 22).

- I will start a new series of posts to explain the first stage of *Ānāpānasati*, i.e., how to attain the *Sotāpanna* stage by comprehending the Buddha's worldview (*āna*) and discarding mundane views (*āpāna*).
- These two posts on *Ānāpānasati* are in the "Sutta Interpretations" section. Recent posts building up to them are in the "Buddha Dhamma" section and in other sections over the past three years: "New / Revised Posts."

17.3 Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa

Revised April 10, 2017; August 28, 2018; January 7, 2019; December 8, 2020; revised April 15, 2021, with the new title. revised March 1, 2022; rewritten February 9, 2023

[Old Title: Sutta Introduction; New Title: Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa]

Explanation of *dhamma* concepts in the *Tipiṭaka* comes under three categories: "*uddesa, niddesa, paṭiniddesa*." One should not translate the *uddesa* version directly from Pāli to other languages.

Word-by-Word Translations Lead to Confusion

1. Many *suttās* are in the "*uddesa"* or "utterance" form; see #2 below. The word-for-word translation of such *suttās* can lead to utter confusion Keywords like *viññāṇa,* and *saṅkhāra* have different meanings depending on the context.

- Most *suttās* only give only the *uddesa* form of the *Paṭiloma* (reverse) *Paṭicca Samuppāda,* for example, "***avijjā nirodhā.. viññāṇa nirodho***." If that is translated word-by-word as **"when ignorance ceases,. . consciousness ceases," that leads to utter confusion**. Did the Buddha lose consciousness upon attaining Enlightenment? Would an *Arahant* lose consciousness upon attaining *Arahanthood*? That is the danger of direct word-for-word translations! Not only that, those direct translations say sensory contacts, and *vedanā,* also stop arsing with the cessation of *avijjā!* See, for example, "WebLink: suttacentral.net: *Paṭiccasamuppāda Sutta* (SN 12.1)."
- Many terms in *Paṭicca Samuppāda (saṅkhāra, viññāṇa, phassa, vedanā*) need to be explained in detail. Many online discussions illustrate the confusion: "WebLink: dhammawheel.com: Do Arhats experience contact with their sixfold sense media? What about vedanā?" "WebLink: discourse.suttacentral.net: Cessation of DO?" and "WebLink: dhammawheel.com: Vedana" are just a few examples.
- I discussed that problem in "Distortion of Pāli Keywords in Paṭicca Samuppāda."

Dhamma Concepts Explained at Three Levels

2. Explanation of dhamma concepts in the *Tipiṭaka* comes under three categories: "*uddesa, niddesa, paṭiniddesa."* A fundamental concept is first stated ("*uddesa*" or "utterance"). "*Niddesa*" is a "brief explanation". Finally, "*paṭiniddesa*" explains in detail with examples to clarify complex or "knotty" points.

[***uddesa*** : [fr. uddisati] -- 1. pointing out, setting forth, proposition, exposition, indication, programme M. III, 223 (u. uddiṭṭha), 239; S. IV, 299; SnA 422. -- 2. explanation S. V, 110 sq. ; sa-uddesa (adj.) with (the necessary) expln. , point by point, in detail, D. I, 13, 81; III, 111; A. III, 418; It. 99; Nd2 6171. -- 3. samaṇuddesa one marked as a Samaṇa, a novice (cp. sāmaṇera) D. I, 151; M. III, 128; A. IV, 343; uddesa-bhatta special or specified food Vin. I, 58 = 96, cp. II. 175, propounding, recitation, repetition.

niddesa : [m.] description; analytic explanation.]

- For example, "*ye dhammā hetuppabbavā.Tesaṁ hetuṁ tathāgato āha; Tesañca yo nirodho, Evaṁvādī mahāsamaṇo"* is the ***uddesa* version**.
- In English, the *uddesa* version is: "Of those phenomena which arise from causes. Those causes have been taught by the *Tathāgata* (Buddha), And their cessation too – thus proclaims the Great Ascetic."
- The fundamental characteristics of "this world" state that everything arises due to causes. But that explanation is not enough to understand the embedded deep concepts. Upatissa (who later became Ven. Sāriputta) attained the *Sotāpanna* stage by hearing that *uddesa* version from Ven. Assaji. See "Ye Dhammā Hetuppabhavā.. and Yam Kiñci Samudaya Dhammam.."

3. Therefore, word-for-word translation is NOT enough to convey the teachings of the Buddha to an average person.

© 2026 Lal A. Pinnaduwage

- The next level of explanation is the **"*niddesa*" version**. A teacher must explain that "*dhammā*" here refers to the *kammic* energies created by the three root causes (*hetu*): *lobha*, *dosa*, and *moha*. Cessation of *avijjā* (ignorance of the Four Nobel Truths) leads to eliminating those root causes and thus to *Nibbāna*.
- Clarification of each term in *Paṭicca Samuppāda* (*avijjā*, *saṅkhāra*, *viññāṇa*, *nāmarūpa*," leading to "*upādāna*, *bhava*, *jāti*, and suffering), requires long explanations with examples. That is the ***paṭiniddesa* explanation.**

4. Some sections of the *Tipiṭaka* have an explicit ***niddesa*** version. However, that is mainly in the Original commentaries that explain certain concepts in SOME detail.

- For example, the correct *Ānāpānasati* and *Paṭicca Samuppāda* are discussed in detail in "WebLink: suttacentral.net: *Ānāpānassatikathā* (KN Ps 1.3)," and "WebLink: suttacentral.net: *Paticcasamuppādavibhaṅga* (Abhidhamma Vb 6)."

Paṭiniddesa (Detailed Explanation) in Commentaries and Discourses

5. During the Buddha's time, other *bhikkhus* explained each *sutta* in detail to audiences when they delivered discourses. That is the "*paṭiniddesa*" version. Especially after the *Buddha's Parinibbāna*, **many *Arahants* started composing "*Attakathā*" or commentaries on fundamental concepts. But a few were composed during the time of the Buddha.** Of course, these were also composed in a way suitable for oral transmission and, thus, do not have lengthy explanations.

- Three original early commentaries remain preserved in the *Tipiṭaka*: *Patisambidhā Magga Prakarana*, *Nettipparakana*, and *Petakopadesa*. Of these, the *Paṭisambidhā Magga Prakarana* consists of the analyses by Ven. Sāriputta, one of the chief disciples of the Buddha, and the *Nettipparakana* by Ven. Mahā Kaccāyana. Thus we are lucky to have these three original commentaries still with us.
- These three books contain "*niddesa*/*paṭiniddesa*" versions of many essential *suttā*, which describe the keywords/phrases in a given *sutta*. Other excellent commentaries have been lost; see "Incorrect Theravada Interpretations – Historical Timeline" and "Buddhaghosa and Visuddhimagga – Historical Background."

Most People Today Need *Paṭiniddesa* (Detailed Explanation)

6. During the time of the Buddha, some could comprehend just the *uddesa* version. For example, Upatissa and Kolita (who became Ven. Sāriputta and Ven. Moggallāna later) became *Sotāpannas* upon hearing the verse, "*ye Dhamma hetupabbhavā*.…". They had done much in their past lives and needed "just a little push" to complete that understanding. They are called *ugghaṭitaññā* or "persons with high wisdom."

- And many could understand the *niddesa* version. Those were *vipañcitaññā* and needed a bit more explanation to grasp the concepts. "WebLink: suttacentral: *Ugghaṭitaññū Sutta* (AN 4.133)" discusses the four categories of persons — *ugghaṭitaññā, vipañcitaññā, neyya,* and *padaparama.*
- However, most people today are in the lower category of *neyya* and *padaparama*. They need detailed explanations (i.e., *paṭiniddesa*) to grasp a concept. They also belong to two groups. Those with *tihetuka paṭisandhi* (optimum births) can attain *magga phala* in this life. But those with *dvihetuka paṭisandhi* (inferior births) cannot achieve *magga phala* but can accrue merits to attain *magga phala* in future lives. Of course, there is no way for anyone to figure out (except for a Buddha) whether a particular person has a *tihetuka* or *dvihetuka patisandhi.*
- **It is essential to realize that those who are either *ugghaṭitaññā* or *vipañcitaññā* had been *neyya* and *padaparama* persons in previous lives.** They had strived to gain more wisdom and now benefitting from this life. Thus there is no point worrying about whether one is a *tihetuka* or *dvihetuka*. This is the concept of "*pāramitā*"; see "Pāramitā – How a Puthujjana Becomes a Buddha."

© 2026 Lal A. Pinnaduwage

Erroneous Commentaries Are Harmful

7. There are many erroneous commentaries today. The best example is the *Visuddhimagga* of *Buddhaghosa*. It was written around 400 CE (where CE is "Current Era" or AD) when the "pure Dhamma" was already lost, and the conventional meanings were commonplace, just as now.

- The "pure Dhamma" has been lost for an extended period from about 200 CE up to now. See "Incorrect Theravāda Interpretations – Historical Timeline." But the original *suttā* survived because people at least used and preserved them even if they used the "conventional" or "mundane" ("*padaparama*" in Pāli) meanings.
- Thus we can see why people have been translating *suttā* "word for word" and just getting the conventional meanings. But it can also lead to contradictions and confusion, as we saw above. Profound verses in suttā need detailed explanations.

Many *Suttā* Are in *Uddesa* or *Niddesa* Versions

8. Most *suttā* are in *uddesa* or *niddesa* versions (*Dīgha Nikāya* is an exception, even though some verses do have deeper meanings). They require detailed explanations. **Translating word-by-word is not appropriate in many instances.**

- For example, "*anicca, dukkha, anatta*" is only in the *niddesa* version in *Dhamma Cakka Pavattana Sutta* and *Anatta Lakkhana Sutta*. [SN 56.11 Rolling Forth the Wheel of Dhamma – Dhammacakkappavattanasutta, SN 22.59 The Characteristic of Anatta – Anattalakkhaṇasutta]
- However, each *sutta* took many hours to deliver. It was impossible to condense all that information in a *sutta* for primarily oral transmission that was available at the time. Each *sutta* is condensed (most likely by the Buddha himself; see below).

Tipiṭaka Was Compiled for Faithful Oral Transmission

9. The Buddha knew that Buddha Dhamma would go through periods of decline where *bhikkhus* capable of interpreting deep *suttā* would not be present. Thus *suttā* were composed so that only the "conventional" meaning was apparent. **That was necessary to preserve the *suttā*, especially before writing became commonplace.**

- It is important to remember that Ven. Ānanda had memorized all the *suttā* that he recited at the First Buddhist Council, just three months after Buddha's *Parinibbāna*. They are in a format suitable for oral transmission.
- Ven. Ānanda was Buddha's assistant over the last few decades of the Buddha's life. I believe that the Buddha condensed each *sutta* and Ven. Ānanda memorized them. The Buddha synthesized each *sutta* in a "double meaning" way for them to survive the "dark periods." That part is my theory, and I believe it will be proven accurate.
- Then, at the first Buddhist Council, all the *suttā* were recited and sorted into various categories (*Nikāyās*). The Vinaya Piṭaka was also completed.
- The *Abhidhamma Piṭaka* was started at the First Council but finalized at the Third. Having learned *Abhidhamma* from the Buddha, Ven. Sāriputta taught it to his 500 student-*bhikkhus*. They had to expand that summary to the form we have in seven books today. That task was completed only by the Third Council. See #9 and #10 of "Abhidhamma – Introduction."

Deeper Meanings Can Stay Hidden for Long Times

10. There are long periods when the correct teachings remain "underground" or "hidden." That happened just 500 years after the *Parinibbāna* of the Buddha with the emergence of Mahāyāna Buddhism. During

© 2026 Lal A. Pinnaduwage

such times, people use conventional interpretations. **And that served the purpose of keeping the *suttā* intact, especially before written texts became common.**

- A perfect example is the *Ānāpānasati Sutta* (or the *Satipaṭṭhāna Sutta*). The conventional meaning is to tie up "*āna*" with breath inhaling and "*āpāna*" with breath exhaling.
- That was consistent with the breath meditation that has been there in the world at any time. Many *yogis* practiced it even before the time of the Buddha. He learned those methods from such *yogis* before attaining Buddhahood.
- For details, see "Elephant in the Room 3 – Ānāpānasati."

Special Role of *Jāti Sotāpannas* With *Paṭisambidhā Ñāṇa*

11. From time to time, *jāti Sotāpannas* are born. They had attained the *Sotāpanna* stage in a previous life, possibly when Buddha was alive. They likely have had births in the *Deva loka* for a long time and are reborn humans now.

- However, not all *jāti Sotāpannas* can explain Buddha Dhamma to others. Some have the unique capability to interpret the keywords/phrases in the *suttā*. This specialized knowledge is "*Paṭisambidhā Ñāṇa.*"
- Waharaka *Thero* was such a *jāti Sotāpanna* with *Paṭisambidhā Ñāṇa.* He brought out these deeper meanings in recent years. See, "Parinibbāna of Waharaka Thero."

Misinterpretation of *Dhamma* Concepts Is an Offense

12. It is an offense (*pārājika*) to misinterpret *suttā* (and *dhamma* concepts in general.) That is in several *suttā* in the WebLink: suttacentral: Bālavagga of Aṅguttara Nikāya 2.

- For example, WebLink: suttacentral.net: AN 2.25 is a short *sutta* that says: "*Dveme, bhikkhave, tathāgataṁ nābbhācikkhanti. Katame dve? Yo ca neyyatthaṁ suttantaṁ neyyattho suttantoti dīpeti, yo ca nītatthaṁ suttantaṁ nītattho suttantoti dīpeti. Ime kho, bhikkhave, dve tathāgataṁ nābbhācikkhantī" ti.*
- **Translation (to provide the idea)**: "Monks, these two people slander the *Tathāgata*. Which two? One who briefly explains a deep discourse when it needs a detailed explanation. The other explains a discourse in detail whose meaning is already clear. These are two who slander the *Tathāgata*." ["WebLink: suttacentral: A Meaning to be Inferred (AN 2.25)"] [***Tathāgata*** : the 'Perfect One', lit. the one who has 'thus gone', or 'thus come', is an epithet of the Buddha used by him when speaking of himself.]
- Two perfect examples of the first type of slander say that the words *anicca* and *anatta* are fully explained by "impermanence" and "no-self." Those two concepts require detailed explanations. See "Anicca, Dukkha, Anatta."

Checking for Inter-Consistency Among the Three *Piṭakas* Is the Key

13. The Buddha advised resolving any issues by consulting the three *Piṭakā*: *Sutta*, *Vinaya*, and *Abhidhamma*.

- For example, a concept in the *Sutta Piṭaka,* for instance, must be consistent with other places in the *Sutta Piṭaka*. It must also be compatible with explanations in the *Abhidhamma Piṭaka* and the *Vinaya Piṭaka*. See "Buddha Dhamma: Non-Perceivability and Self-Consistency."
- As the Buddha emphasized, what matters is to get the IDEA across and not memorize the Pāli *suttā.* (Memorization is needed only for transmission purposes).

© 2026 Lal A. Pinnaduwage

Summary

14. The following are the key points from the above discussion that I wish to emphasize:

- The *suttā* convey "conventional" meanings while keeping the "deep meanings" embedded in them.
- Those "deep meanings" bring out the uniqueness of Buddha Dhamma.
- Word-for-word translation of a *sutta* does not convey the message of the Buddha. Examples are critical Pāli words like *viññāṇa*, *saṅkhāra*, *anicca*, and *anatta*.
- The surviving three original commentaries in the *Tipiṭaka* can verify the deep meanings of the keywords/phrases.

Good Resource for Pāli *Tipiṭaka*

15. A helpful resource for finding Pāli *Tipiṭaka* (and translations in several languages) is suttacentral.net.

- Once you open a *sutta*, click on the left-most drop-down to choose one of several languages. That is a valuable resource; consider donating if you find it useful.
- **However, as I explained above, those translations (and most English translations elsewhere) are frequently incorrect.**
- But at least one can see the correct Pāli version.

Ānāpānasati Sutta – Complete Overview

17.4.1 Mind – Terminologies in Suttas versus Abhidhamma

June 28, 2025

One must have a good understanding of the Buddha's teachings to clarify various usages of terms in the *suttās*. On the other hand, terminology in *Abhidhamma* is precise. We start with an analysis of the terms related to the mind.

Citta, *Mano*, *Viññāṇa* – Entities Related to the Mind

1. The words *citta*, *mano*, and *viññāṇa* are entities associated with the mind. The "WebLink: suttacentral: *Assutavā Sutta* (SN 12.61)" states, "*Yañca kho etaṁ, bhikkhave, vuccati* ***cittaṁ*** *itipi,* ***mano*** *itipi,* ***viññāṇaṁ*** *itipi, tatrāssutavā puthujjano nālaṁ nibbindituṁ nālaṁ virajjituṁ nālaṁ vimuccituṁ*" OR "But when it comes to mind-related entities of '***citta,***' '***mano,***' and '***viññāṇa,***' an unlearned ordinary person is unable to become disillusioned, dispassionate, or freed."

- Note that the English translation in the link tries to translate the three words as 'mind,' 'sentience,' and 'consciousness' respectively. However, the terms '***citta,***' '***mano,***' and '***viññāṇa***' do not have equivalent English terms (just like *anicca*, for example).

© 2026 Lal A. Pinnaduwage

- Keep in mind that *citta* is pronounced "chiththa." In the 1800s, the Pāli Text Society adopted a convention to write Pāli words with the English alphabet to minimize the word length; see "'Tipitaka English' Convention Adopted by Early European Scholars – Part 1."
- Let us consider a few *suttās* to extract the meanings of those terms. As we will see, only the term "*citta*" is used differently in *suttās* compared to *Abhidhamma*.

Citta – Loose Meaning of 'Mind'

2. The first short *sutta* in "WebLink: suttacentral: *Accharāsaṅghātavagga* (AN 1.51-60)" states: "*Pabhassaramidaṁ* (*Pabhassaraṁ idaṁ*), *bhikkhave*, ***cittaṁ***. *Tañca kho āgantukehi upakkilesehi* ***upakkiliṭṭhaṁ***. *Taṁ* ***assutavā puthujjano*** *yathābhūtaṁ nappajānāti. Tasmā 'assutavato puthujjanassa* ***cittabhāvanā natthī'ti vadāmī"ti***.

Translated: "*Bhikkhus*, a **mind** is of *pabhassara* nature, i.e., without defilements. That 'unblemished mind' is **contaminated by defilements (*keles* or *kilesa*). A normal human who has not heard my Dhamma** (*assutavā puthujjano*) is unaware of this true nature. **I do not recommend *citta bhāvanā* to them**". By "***citta bhāvanā***," the Buddha meant *Cittānupassanā* in ***Satipaṭṭhāna*/*Ānāpānasati***.

- We have discussed in detail how a defilement-free *pabhassara citta* turns into a defiled *pabhasara* (with a single '**s**') *citta* in "Uncovering the Suffering-Free (Pabhassara) Mind" and "Pabhassara Citta, Radiant Mind, and Bhavaṅga".
- In the *suttās*, *citta* could be used to indicate the "state of the mind" at various stages. For example, in *Cittānupassanā* (in *Satipaṭṭhāna*/*Ānāpānasati*), it is described how a mind can be trained to change from a defiled *citta* to a pure *citta* (meaning defiled to a pure, uncontaminated mind).
- **However, in *Abhidhamma*, the word *citta* refers to the fundamental unit of cognition, not to the mind**; see below. This distinction must be kept in mind.

Mano – One of the Six *Āyatana*

3. An *Arahant* has six types of "pure sense faculties" (*indriya*): *cakkhu indriya* through *mana indriya*. Those are used to experience the world, and *rāga*, *dosa*, or *moha* would not arise when *Arahants* use them.

- However, a *puthujjana* NEVER uses those sense faculties that way. They are ALWAYS used with at least *moha* (or *avijjā*) in mind. Then they are called "*āyatana*": *cakkhu āyatana* (*cakkhāyatana*) through *mana āyatana* (*manāyatana*).
- In most *suttās*, "***mano***" is used to convey the above meaning. See, for example, "WebLink: suttacentral: *Upādāya Sutta* (SN 35.105)." From marker 3.4 through marker 15.1, verses refer to *cakkhu āyatana* through *mana āyatana*. Thus, ***mano***, ***mana āyatana***, and ***manāyatana*** all mean the same.
- When referring to an average human, ***mano*** is used to describe the "mind" of a person. It is ALWAYS defiled!

Mano Ceases to Exist in an Arahant

4. Upon reaching the *Arahant* stage (i.e., at the *Arahant phala* moment), all six *āyatanās* cease to exist. They all become "pure sensory faculties" or the six *indriya*.

- Imagine someone listening to a discourse by the Buddha and reaching the *Arahant* stage during that discourse. There will be no outward change in the physical body, but all six of his *āyatana* would have become the corresponding *indriya*.
- This is clearly stated in the "WebLink: suttacentral: *Cetanā Sutta* (AN 4.171)": "***avijjāya tveva asesavirāganirodhā so kāyo na hoti*** *yaṁpaccayāssa taṁ uppajjati ajjhattaṁ sukhadukkhaṁ*, ***sā***

© 2026 Lal A. Pinnaduwage

vācā na hoti *yaṁpaccayāssa taṁ uppajjati ajjhattaṁ sukhadukkhaṁ*, ***so mano na hoti*** *yaṁpaccayāssa taṁ uppajjati ajjhattaṁ sukhadukkhaṁ*" or "**But when ignorance fades away and ceases with nothing left over**, ***kāya, vācā*** and ***mano* cease to exist**, conditioned by which that (mind-made) pleasure and pain arise in oneself."

- Note that the English translation in the link is, "**But when ignorance fades away and ceases with nothing left over**, there is **no body** and **no voice** and **no mind**, conditioned by which that pleasure and pain arise in oneself." **If that were true, one would have lost their physical body and disappear at the moment, becoming an *Arahant*!**
- Thus, an *Arahant* has *mana indriya* but not ***mano*** or ***manāyatana***.

Kāya and *Vacī Saṅkhāra* Also Cease to Exist in an Arahant

5. By the way, losing ***kāya*** and ***vācā*** in the verse in #4 above refers to the stopping of ***kāya*** and ***vacī abhisaṅkhāra***! In fact, in most *suttās*, ***saṅkhāra*** refers to ***abhisaṅkhāra*** or **defiled *saṅkhāra***. This is also why ***kāya saṅkhāra*** in most contexts does not refer to "breathing in and out," and the verse "***assāsapassāsā kāyasaṅkhāro***" does not mean that "breathing in and out" is equivalent to *kāya saṅkhāra.* An *Arahant* would still breathe in and out even though *kāya saṅkhāra* ceases, per the *Cetanā Sutta* in #4 above.

- This is why it is critically important to be able to grasp the meaning of a word in the context of the material discussed in a *sutta*.
- **In some *suttās*, "*kāya*" is used to refer to the physical body.** For example, "*kāya kamma*" refers to actions performed by the body (such as stealing or sexual misconduct).
- For example, the "WebLink: suttacentral: *Kammanirodha Sutta* (SN 35.146)" states "*Yaṁ kho, bhikkhave, etarahi kammaṁ karoti* ***kāyena*** *vācāya manasā*" OR "The (defiled) deeds you perform by way of **body**, speech, and mind." Here, "***kāyena***" means "with or using ***kāya***."
- Again, the English translation in the link above is incorrect. These refer to "*nava kamma*" performed in the "*nava kamma* stage" as discussed in "Purāṇa and Nava Kamma – Sequence of Kamma Generation;" see #8 in that post discusses this *sutta*.
- **However, in many *suttās*** (including those that discuss *Satipaṭṭhāna* or *Ānāpānasati*), **"*kāya*" does not refer to the physical body. For example, *kāyānupassanā* is not about contemplating the physical body.** It is the contemplation of the "*purāṇa kamma* stage" or where the "initial *kamma* generation" takes place without conscious thinking. We will discuss that in upcoming posts.

Viññāṇa – Defiled State of Mind

6. ***Viññāṇa*** represents the "**state of a defiled mind**." As we have discussed, *rūpa*, *vedanā*, *saññā*, and *saṅkhāra* are all "mental entities" or "entities that arise in a mind" upon receiving a sensory input. See "Rūpa, Vedanā, Saññā, Saṅkhāra, Viññāṇa – Mostly Misunderstood."

- Those are the first four of the "five **grasping** aggregates" (*pañca* ***upādānakkhandha***). We could say that *viññāṇa* is the "result of those four." Due to the involvement of the defilements in *rūpa*, *vedanā*, *saññā*, and *saṅkhāra*, a mind reaches wrong conclusions, and ***viññāṇa* represents the wrong conclusions and one's expectations based on them.**
- The word **"*viññāṇa*" means "absence of *ñāṇa*"** or "absence of wisdom about the true nature of the world."
- See "Viññāṇa – What It Really Means" for details.

Viññāṇa Includes "*Rūpa* Grasped by the Mind"

7. This is an aspect that I have not discussed explicitly so far. It is beneficial to discuss this at least briefly.

© 2026 Lal A. Pinnaduwage

- As we have discussed, a sensory experience can be described by the *pañca* ***upādānakkhandha***. Upon receiving sensory input, the mind composes its version of the external *rūpa*; here, "*rūpa*" refers to sights, sounds, tastes, and so on. That "mind-made version" is the *rūpa upādānakkhandha*. **"Distorted *saññā*" (*saññā upādānakkhandha*) is the root cause for compiling that "mind-made *rūpa*."** See "Rūpa, Vedanā, Saññā, Saṅkhāra, Viññāṇa – Mostly Misunderstood."
- Based on that "mind-made *rūpa,*" the mind generates "mind-made *vedanā*" (*samphassa-jā-vedanā*), and that is *vedanā upādānakkhandha*.
- Then, based on all three of them, the mind generates (*abhi*)*saṅkhāra,* and that is *saṅkhāra upādānakkhandha*.
- *Viññāṇa upādānakkhandha* is the net result. It incorporates all those four; in particular, it is *viññāṇa* that combines the "*nāma* aspects" in *vedanā*, *saññā*, *saṅkhāra* with the "*rūpa* aspect" and synthesizes "*nāmarūpa*." This is the "*viññāṇa paccayā nāmarūpa*" step in *Paṭicca Samuppāda*. This "*nāmarūpa* formation" stops at the *Arahant* stage.

Rūpa, *Vedanā*, *Saññā*, *Saṅkhāra*, *Viññāṇa* – Refer to the "Aggregates"

8. It is critical to understand that *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* almost always refer to the respective *upādānakkhandhās*.

- Upon receiving a sensory input, the mind "expands", with those *upādānakkhandhās* growing at a rapid rate. If the mind stays on that sense input, it keeps repeatedly attaching to that sense input. That is what I tried to show in those charts with "two cones." See #6 in "Purāṇa and Nava Kamma – Sequence of Kamma Generation."
- The five *upādānakkhandhās* grow slowly in the '*purāṇa kamma*' stage, and the growth becomes rapid in the '*nava kamma*' stage when the mind starts consciously accumulating *kamma*.
- Also see "Rūpa, Vedanā, Saññā, Saṅkhāra, Viññāṇa – Mostly Misunderstood."
- In old posts, I referred to *viññāṇa* in the '*purāṇa kamma*' stage as "*vipāka viññāṇa*" and that in the '*nava kamma*' stage as '*kamma viññāṇa*.' It is the same *viññāṇa* that continues to grow stronger. Even the '*vipāka viññāṇa*' is defiled; see "Is Cakkhu Viññāṇa Free of Defilements?" In that post, we discussed a "seeing event" as the sensory input.

Differences Between *Sutta* and *Abhidhamma*

9. The above is a brief description of ***citta***, ***mano***, and ***viññāṇa*** in #1 above, as per the *suttās*.

- **Now, we will address the issue of the word "*citta*" being used in a different context in *Abhidhamma*.**
- **Unless one is familiar with *Abhidhamma*, there is no need to read up to #12 from this point; one can skip to #12 below.** It is fine to read through, but don't be discouraged if you don't understand.

Abhidhamma Provides a Clear-Cut Explanation

10. *Suttās* do not directly discuss the issue of where *cittās* (loosely translated as 'thoughts') arise.

- *Abhidhamma* states that *cittās* arise in *hadaya vatthu* ('seat of the mind') in the *manomaya kāya* (also called *gandhabba*). Here, '***manomaya***' means "generated **exclusively** by ***mano***." A new *manomaya kāya* is generated via *kammic* energy whenever a being grasps a new existence. That *kammic* energy was generated by '*mano*' (*manāyatana*) in previous lives.
- In contrast, our physical body (referred to as '*cātumahābhūtikassa kāya*' in the *suttās*) is made from the food we eat; '*cātumahābhūtikassa kāya*' means the 'body made of the four great elements.' See, for example, "WebLink: suttacentral: *Paṭhamakāmabhū Sutta* (SN 41.5)."

© 2026 Lal A. Pinnaduwage

- Many people become dissatisfied with their physical body and even commit suicide; they are fed up with their physical body. However, that does not end suffering since they will be reborn with another physical body.
- To end suffering, one must learn how the *manomaya kāya* arises based on potent *kamma*. **Furthermore, potent *kamma* generation cannot be stopped until one stops the 'initial *kamma* formation' in the '*purāṇa kamma*' stage, which is stopped by removing the ten *saṁyojana* or *saṁsāric* bonds** (this is the previously unknown teachings of a Buddha, and is the reason why ancient *yogis* could not reach 'end of suffering'). See #21 through #23 in "Loka – Each Person Perceives the "External World" Differently."

11. *Abhidhamma* is more precise in its use of words. For example, ***citta*** ALWAYS refers to the **fundamental unit of cognition**. It has at least seven *cetasika* arising with it.

- A ***citta*** does not arise in isolation, i.e., a single *citta* cannot arise by itself. Invariably, a "series of *cittās*" (*citta vīthi*) arises.
- A mind is inactive if it is not focused on a sensory input. For example, it is mostly inactive while we sleep. It is totally inactive if we are unconscious; for example, before a major operation, one is made unconscious.
- Consider a sensory input coming to the mind. It ALWAYS generates a "recognition" of the sense input. The Buddha taught that it is ALWAYS a "false recognition" or a "distorted *saññā*." Within the first *citta vīthi* itself, the mind attaches to that "distorted *saññā*" with like, dislike, or ignorance. **Attachment to the "distorted *saññā*"** leads to the **defiled** "***mano***" state of the mind. This happens in the "*purāṇa kamma*" stage. This is when the *mana indriya* (or the 'pure mind') turns to *mana āyatana*/*manāyatana*/*mano*. This is "***mano***" in "***mano*** *pubbaṅgama dhamma*.."

Don't be Discouraged by These Issues

12. However, please don't be discouraged by any unresolved or unclear issues. I had grappled with some of these issues over the past ten years. It is only within the past three years or so that I have started to gain some deeper insights, and things have become clearer.

- Additionally, there are numerous posts (especially older ones) on the website that require revision. However, I believe it is essential to address some key issues without delay. I intend to revise those posts once I finish this new section on *Satipaṭṭhāna*. If you encounter any difficulties with a contradiction in a post, please let me know, and I will revise it accordingly.
- The main thing is to keep trying to understand things a bit more. Don't hesitate to ask questions.
- If I do not answer a question, it is only because it may not be the right time to discuss it. Please don't think I consider such questions "bad questions." It is just that answering some questions may raise more issues than resolving the key issue involved. With time, such questions will be addressed or may not even arise.

17.4.2 Paṭicca Samuppāda Creates the External World, Too!

August 2, 2025

Paṭicca Samuppāda gives rise not only to the future lives of living beings, but it also prepares the external world for those living beings to live in.

Paṭicca Samuppāda – "*Pati* + *ichcha*" + "*Sama* + *uppāda*"

1. *Paṭicca Samuppāda* is the same as Buddha Dhamma or Buddha's teachings.

"One who sees *Paṭicca Samuppāda*

© 2026 Lal A. Pinnaduwage

sees the (Buddha) Dhamma.

One who sees the (Buddha) Dhamma

sees *Paṭicca Samuppāda*."

- The above quote is from the post "Paṭicca Samuppāda – "Pati + ichcha" + "Sama + uppāda." Here, "*sama uppāda*" (births according to the root causes) also requires a suitable environment for a living being to live.
- To gain a comprehensive understanding of the Buddha's teachings, one must have a solid grasp of *Paṭicca Samuppāda.*
- It is not enough to understand how living beings are born in various existences; they must be born into a "matching environment" which can sustain them by providing appropriate sensory experiences and food. ***Paṭicca Samuppāda* explains the whole process.**

Overview

2. Many people consider the Buddha to be a religious leader or an honorable ascetic. But a Buddha is above and beyond any such titles. Even 99.99% of Buddhists do not realize that. A Buddha is born human, but transcends all existences in the world by comprehending *Paṭicca Samuppāda*, based on which the world operates naturally, i.e., without the need of a "Creator."

- People are astonished and captivated by the recent scientific findings and the new technologies that have resulted from them. They have no idea that those findings are insignificant compared to the Buddha's discoveries. What is the point of 'enjoying life with modern gadgets' for a mere 100 years if one is to be reborn as an animal or worse for millions of years?
- A Buddha discovers the "true nature of the world." That means he explained how the whole world (with living beings in many realms and their diverse environments) is maintained by the "mental energy" (*kammic* energy) generated by the living beings.
- On the other hand, scientists' dream about finding a "Grand Unified Theory" that "explains everything" remains untenable because they focus on material phenomena and believe that mental phenomena are secondary. They have it wrong, because mind comes first: "Manopubbaṅgamā Dhamma.."

3. Many Buddhists are aware that a given living being's actions (*kammic* energy) contribute to their future lives. **However, they do not realize that the collective *kammic* energies of living beings contribute to designing the environments to sustain their lives.** That means the external world is also created by "mental power."

- The reason that nothing in the world can last forever (i.e., the "impermanent nature") is the above. The world as a whole operates on the 'mental energy' (*kammic* energy) generated by living beings, and thus stands on an unstable foundation.
- Modern science confirms that anything created by energy eventually fades away when that energy is depleted or dissipated.
- The Buddha discovered those things 2600 years ago!

Evidence Is Hidden In Two Aspects

4. Even though the *suttās* do not explicitly state the above conclusions, all the evidence needed to verify that statement is hidden in the *suttās*. The following are the two key elements:

I. **Living Beings Require Matching Environments:** Before a particular species of living being can appear, the environment in which it can live must be formed. For example, vegetation is essential for plant-eating animals to survive; therefore, vegetation must appear before such animals can be born. A specific sentient being's actions (i.e., a particular type of *kamma* generated) dictate that being to be

© 2026 Lal A. Pinnaduwage

reborn, for example, as a cow. **But many other living beings also engage in similar actions, and their collective *kammic* energy creates the environment for them to be born into.** The bodies of the cows are designed to be able to digest grass, and they must be born into an environment with ample grass for them to eat.

II. **Everything is made of *suddhaṭṭhaka*:** All the matter in the world — including the bodies of living beings and their physical environment (including vegetation and all inert matter) — is made of one fundamental element, *suddhaṭṭhaka*. However, since a *suddhaṭṭhaka* is made of eight components, an infinite number of entities can be made by varying the proportions of those eight constituents. For example, all programming languages are based on just two digits, 0 and 1; thus, with eight instead of two, an infinite variety of different entities can result. **All types of living beings and things in their environment are composed of various combinations of the four types of *mahā bhūta* (*pathavi*, *āpo*, *tejo*, *vāyo*) and the four *upādāya rūpa*.**

In the following sections, we will discuss these in detail.

Living Beings Must Have Suitable Environments

5. Living beings of a specific realm must have a suitable environment to live in. That environment must provide the sensory experiences relevant to that particular species, and of course, food for them.

- We can gain a better understanding by examining the *Aggañña Sutta* (DN 27) in more detail. In it, the Buddha explained that the universe is not static, i.e., it does not remain the same over time. However, the whole universe is not destroyed at once, nor recreated at once.
- Only a small fraction of the universe (a cluster of 10,000 star systems like our Solar system) is destroyed due to the blowing up of one star in that system. (This is a supernova event recognized by modern science; scientists observe that a few such supernova events occur in our galaxy per year.) Then, after billions of years, they re-emerge via the collective mental energy of an infinite number of living beings who migrated to a high-lying *Brahma* realm that was not destroyed.
- That 'newly-formed Earth' starts with those who had been in that high-lying *Brahma* realm returning as humans with fine bodies; the "new Earth" forms with an environment suitable for them with freely available yogurt-like food. No vegetation or animals.
- As the 'old defiled *gati*' starts coming back, those 'early humans' start engaging in immoral deeds. Then the environment begins to change, with vegetation appearing, before some of those humans are reborn as animals.
- After billions of years of such 'devolution' (opposite of 'evolution' or progress), some start engaging in highly immoral deeds, making them suitable to be reborn in *niraya* (somewhat like the hell in Christianity), and that is when such *niraya* are formed inside the Earth.
- That is a brief summary. More details in "Aggañña Sutta Discussion – Introduction" and "Buddhism and Evolution – Aggañña Sutta (DN 27)." **The critical point is that *Paṭicca Samuppāda* plays a key role in "making suitable environments" for new species to appear.**
- Now, let us look into the second aspect mentioned in #4 above.

Everything in the World Is Made of *Suddhaṭṭhaka*

6. As we have discussed, '*rūpa*' in the *suttās* refers to '*rūpa* created in mind' based on an external *rūpa*. That 'mind-made *rūpa*' arises based on "*kāma saññā*" (and corresponding *kāma rāga*). This is discussed in the "WebLink: suttacentral: *Āneñjasappāya Sutta* (MN 106)" as follows:

- "**Furthermore, a noble disciple reflects as follows:** 'Sensual pleasures (***kāmā***) in this life and in lives to come are based on sensual perceptions (***kāma saññā***). In turn, engaging in sensual pleasures leads to ***rūpa*** arising in the mind. Such (mind-made) ***rūpa*** are composed of *pathavi*, *āpo*, *tejo*, *vāyo* (*cattāri ca*

© 2026 Lal A. Pinnaduwage

mahābhūtā), and those that induce them by ***upādāna*** (*catunnañca mahābhūtānaṁ* ***upādāyarūpa***). Practicing in this way and meditating on it, their mind becomes confident in the *Dhamma*."

- We can discuss the above *sutta* at a later time. I wanted to point out how *kāma saññā* contributes to the creation of **mind-made *rūpa* by generating *taṇhā* with *kāma rāga.*** I have discussed several *suttās* in this context; for example, see "Saññā Nidānā hi Papañca Saṅkha – Immoral Thoughts Based on 'Distorted Saññā'."
- Such **mind-made *rūpa*** is made of the four *mahābhūta* (*pathavi*, *āpo*, *tejo*, *vāyo*) AND another four due to craving/*taṇhā* (referred to as ***upādāya rūpa*** in the *suttās*).
- *Mahā bhūta* are **not** tangible matter found in earth, water, fire, and wind; they are mental versions of them (energies) arising in the mind. **They are the "*nāmarūpa*" in *Paṭicca Samuppāda.*** The four ***upādāya rūpa*** are similarly subtle energies that the mind generates. See "The Origin of Matter – Suddhaṭṭhaka" and "Bhūta and Yathābhūta – What Do They Really Mean."

Upādāya Rūpa – Defined in *Abhidhamma*

7. As discussed in the post "Abhidhamma – Introduction," *Abhidhamma* theory was not finalized in the days of the Buddha; It was finalized centuries after the *Parinibbāna* (passing away) of the Buddha.

- *Abhidhamma* provides a comprehensive description, pointing out that any mind-made *rūpa* has eight components, known as "*suddhaṭṭhaka*."
- *Suddhaṭṭhaka* ('*suddha*' for 'pure' or 'fundamental' + '*aṭṭha*' or 'eight') means a unit of matter consisting of eight fundamental entities (usually translated as the 'pure octad'). Four of these belong to the "*bhūta*" stage of *pathavi*, *āpo*, *tejo*, and *vāyo* arise due to *avijjā*, and the other four of *vaṇṇa*, *gandha*, *rasa*, and *ojā* arise due to *taṇhā.*
- Thus, the ***upādāya rūpa*** in the *sutta* refers to those that arise due to ***upādāna* ("*taṇhā paccaya upādāna*"): *vaṇṇa*, *gandha*, *rasa*, and *ojā***.
- In the 11 realms of *kāma loka*, the root cause of *taṇhā* (reason for ***upādāna***) is ***kāma saññā.*** Similarly, *taṇhā* in *rūpa* and *arūpa loka* is due to '***rūpa saññā***' (for '*jhānic sukha*') and '***arūpa saññā***' (for '*samāpatti sukha*'). Those are the three main types of "**distorted *saññā***" for *kāma*, *rūpa*, and *arūpa loka.*

All Physical Matter Is Made of *Suddhaṭṭhaka*

8. As we will discuss later, "*dhātu manasikāra*" in *Ānāpānasati* or *Satipaṭṭhāna* means to contemplate the fact that the same types of 'elements' (*suddhaṭṭhaka*) are in our physical bodies and external objects. Everything in the world (inert or living) is made of *suddhaṭṭhaka.*

- This is stated in many *suttās*, but a clear example is the "WebLink: suttacentral: *Mahārāhulovāda Sutta* (MN 62)." Venerable Rāhula, before attaining the *Sotāpanna* stage, went to the Buddha and asked how to cultivate *Ānāpānasati.*
- The Buddha instructed him to contemplate the fact that the same elements (*pathavi*, *āpo*, *tejo*, *vāyo*, and the ***upādāya rūpa***) are in our physical bodies as well as in all external objects.
- Although the translation in the link is not perfect, you can still get the general idea. For example, @marker 8.4, the Buddha explained that "The interior earth element (*pathavi* in our physical bodies) and the exterior earth element (*pathavi* in any object in the world) are just the earth element."
- We will discuss the "WebLink: suttacentral: *Mahārāhulovāda Sutta* (MN 62)" in an upcoming post. By the way, Ven. Rāhula attained *Arahanthood* later while listening to the "WebLink: suttacentral: *Cūḷarāhulovāda Sutta* (MN 147)."

Some Examples

© 2026 Lal A. Pinnaduwage

9. Anything in the world is made of *suddhaṭṭhaka.* However, the proportions of each of the eight elements (*pathavi*, *āpo*, *tejo*, *vāyo*, *vaṇṇa*, *gandha*, *rasa*, *and ojā*) vary, and that is what leads to an infinite variety of things and living beings.

- For example, a rock is composed mostly of *pathavi*; it also contains the four elements due to *taṇhā* (*vaṇṇa*, *gandha*, *rasa*, and *ojā*), but these elements are present only in tiny amounts.
- A diamond is also made mostly of *pathavi.* However, it has a significant proportion of *vaṇṇa* (making it attractive to sight), inducing humans to be attracted to it and to generate '*kāma saññā*.' However, a tiger or a cow would not be attracted to a diamond. Thus, while the '*vaṇṇa* component' in the body of a human is made to generate *kāma saññā* for a diamond, the same element (in different proportions) in a tiger would not generate *kāma saññā* for a diamond. That "matching" happens via *Paṭicca Samuppāda*.

10. Let us take another example of a ripened apple, which has significant proportions of *pathavi* (solidity), *rasa* (taste), and *gandha* (smell). A human body's *suddhaṭṭhaka* would have 'matching' *rasa* and *gandha* components to generate *kāma saññā* for that ripened apple.

- As that apple ages, it loses its taste, and also the 'good smell' will change to a 'bad smell' (for humans). However, a pig would still eat a rotten apple, because its *suddhaṭṭhaka* have arisen to like the taste and smell of rotten things.
- In another example, honey would have significant *pathavi*, *āpo* ('liquidness'), and *rasa* (taste) as far as humans and bees are concerned. On the other hand, gasoline has relatively more *āpo* and less *pathavi*; it would not have a 'matching *rasa* component' for humans.
- Wind has mostly *vāyo*, but even that would still have at least trace amounts of the other seven components. Since nothing in the world can arise without both *avijjā* and *taṇhā*, all eight components are always in any *suddhaṭṭhaka.*
- Those are a few simple examples. Hopefully, that would help to get the basic idea. Feel free to ask questions in the forum.

The Mind makes all *Suddhaṭṭhaka*

11. The extensive explanation in *Abhidhamma* clarifies that ***upādāya rūpa*** are *vaṇṇa*, *gandha*, *rasa*, and *ojā*, and that everything (internal or external) is made of *suddhaṭṭhaka.* Furthermore, all *suddhaṭṭhaka* are made by the collective *kammic* energies generated by an infinite number of living beings.

- I have summarized the types of *rūpa* in "Rūpa (Material Form)." The eight types of *rūpa* in a *suddhaṭṭhaka* are #1 through #4 and #10 through #13 in that table. A similar table is also on p. 236 of *Bhikkhu* Bodhi's book on *Abhidhamma;* see #15 below.
- All those *rūpa* are NOT external *rūpa* that we experience. They are very fine *kammic* energies (***nāmarūpa*; see #6 above**) that arise in a mind. **However, they are the root cause of all external *rūpa* arising.**
- It is a good idea to read and comprehend "The Origin of Matter – Suddhaṭṭhāka."
- It is unfathomable for us that all matter in the universe is made of 'mind power.' But that is the 'ultimate truth' ('*paramattha dhamma*') discovered by the Buddha. Until a Buddha is born, that 'ultimate truth' remains hidden.

The Buddha Taught Only a Fraction of What He Comprehended

12. We need to remember that the Buddha taught only the necessary facts about nature. Especially in the early days, he taught the bare minimum, and that was enough for those who had almost fulfilled *pāramitā* (in previous lives) and needed the bare minimum to reach the goal post. I discussed that in #13 in "Satipaṭṭhāna – What Does It Mean?"

© 2026 Lal A. Pinnaduwage

- In the "WebLink: suttacentral: *Sīsapāvana Sutta* (SN 56.31)," the Buddha gave an example to explain how little of his knowledge about the world he taught to us. It is good to read the adequate translation in the link.

Buddha Expanded Explanations in Later Years

13. Those who had almost fulfilled *pāramitā* attained *Arahanthood* in a relatively short time during the first few years following Buddha's Enlightenment.

- The five ascetics all attained *Arahanthood* in a week. Following that, Yasa, the son of a wealthy merchant, attained *Arahanthood* in a single day, and soon afterward, his family and fifty of his friends also attained *Arahanthood*.
- The Buddha then traveled to Uruvela and stayed there for a while (time not specified). While there, Uruvela Kassapa and a thousand of his followers attained *Arahanthood*.
- The chronology of many events in the Buddha's life is described in the book "The Life of the Buddha" by *Bhikkhu* Ñāṇamoli. Also see "'The Life of the Buddha' by Bhikkhu Ñāṇamoli."
- By the way, the book also states (on p. 109) that the Buddha taught *Abhidhamma* to the *Devās* of the *Tāvatiṁsa* realm in the seventh year.

14. After about 20 years, it became harder for the remaining *bhikkhus* and lay persons to attain *magga phala*. The *bhikkhus* were becoming increasingly less focused and unruly, and the Buddha began enacting *Vinaya* rules.

- For example, in the "WebLink: suttacentral: *Saddhammappatirūpaka Sutta* (SN 16.13)" Ven. Mahā Kassapa asked the Buddha, "What is the reason why these days there are more training rules and fewer enlightened *bhikkhus*?"
- The Buddha started delivering *suttās* with more detailed explanations in those latter years. For example, while *Ānāpānasati Sutta* (MN 118) and *Kāyagatāsati Sutta* (MN 119) appear to be early *suttās*, *Mahā Satipaṭṭhāna Sutta* (DN 22) is likely to have been delivered in later years. See #13 of "Satipaṭṭhāna – What Does It Mean?"
- As we can imagine, people today need even more detailed explanations. Such detailed explanations are possible with *Abhidhamma*, as we saw above; a complete description of the 'building block of all matter' (*suddhaṭṭhaka*) is only possible with *Abhidhamma*.
- The Buddha may have envisioned that the *Abhidhamma Piṭaka* would be needed for our times! As we know, it was finalized hundreds of years after the *Parinibbāna* of the Buddha; see "Abhidhamma – Introduction."

Buddha Taught *Abhidhamma* for Our Times

15. On p. 10 of *Bhikkhu* Bodhi's book on *Abhidhamma* ("WebLink: PDF download: Bhikkhu_Bodhi-Comprehensive_Manual_of_Abhidhamma," by Bhikkhu Bodhi (2000), there is a description of how the Buddha provided a summary of *Abhidhamma* (delivered to the *Devās*) to Ven. Sāriputta. The link above provides a downloadable PDF file of the book.

- Having learned *Abhidhamma* from the Buddha, Ven. Sāriputta taught it to his 500 student-*bhikkhus*. They started on the monumental task of compiling the *Abhidhamma Piṭaka*. That task was completed only by the Third Council about 200 years after the *Parinibbāna* of the Buddha!
- The "WebLink: suttacentral: *Lomasakaṅgiyabhaddekaratta Sutta* (MN 134)" confirms that the Buddha spent time in the *Tāvatiṁsa Deva* realm: "*Ekamidaṁ, bhikkhu, samayaṁ bhagavā devesu tāvatiṁsesu viharati pāricchattakamūle paṇḍukambalasilāyaṁ*." OR "One time, the Buddha was staying among the *Devās* of *Tāvatiṁsa* realm."

- See "Abhidhamma – Introduction" for further details.

17.4.3 Kāya Can be Pañcupādānakkhandha or Physical Body

July 5, 2025

Kāya refers to *pañc**upādāna**kkhandha kāya* in most *suttās*. Another possible meaning is "physical body." Both are aggregates or collections. The generic meaning of *kāya* is "aggregate" or "collection."

Kāya as Physical Body

1. *Kāya* means anything made of a collection of many entities.

- Probably most people know the usage of "***kāya***" as the "**physical body**." It is a collection of many body parts. The following are some examples of that usage.
- We experience external sensory inputs via six senses: eyes, ears, tongue, nose, **body**, and the mind. Here, "***kāya**ñca paṭicca phoṭṭhabbe ca uppajjati kāya viññāṇaṁ*" indicates "*kāya viññāṇa*" arising dependent on the physical body (***kāya***) and touches (*phoṭṭhabba*). See "WebLink: suttacentral: *Chachakka Sutta* (MN 148)."
- Another example is in the "WebLink: suttacentral: *Kāya Sutta* (AN 10.23)" where "*Sādhu vatāyasmā **kāya**duccaritaṁ pahāya **kāya**sucaritaṁ bhāvetū'ti*" says to "give up that bad **bodily** conduct and develop good **bodily** conduct." Those refer to *akusala kamma* done by the **physical body** (killing, stealing, sexual misconduct), speech, and the mind, i.e., *kāya*, *vacī*, and *mano kamma*.
- The "WebLink: suttacentral: *Mahāsakuludāyi Sutta* (MN 77)" states "*ayaṁ kho me **kāyo** rūpī cātumahābhūtiko mātāpettikasambhavo*.." meaning, "This **physical body** of mine is made up of the four great elements (*pathavi*, *āpo*, *tejo*, *vāyo*), produced by mother and father."

Kāya Can Also Refer to "Mental Collections"

2. "*Kāya*" is mainly used to refer to many "mental collections."

- The "WebLink: suttacentral: *Saṅgīti Sutta* (DN 33)" describes many types of "mental collections:" *viññāṇa kāyā*, *phassa kāyā*, *vedanā kāya*, *saññā kāya*, *sañcetanā kāya*, *taṇhā kāya*, etc.
- The Buddha explained that the mind generates a complex set of "mental collections" upon receiving a sensory input.
- They fall into five primary types: *rūpa upādānakkhandha* through *viññāṇa upādānakkhandha*.
- **One must keep in mind the following regarding those "*pañca upādānakkhandha*" (commonly translated as "five grasping aggregates"):** (i) In a *puthujjana* (average human), *pañcakkhandha* (widely translated as "five aggregates") NEVER arise, and ALWAYS *pañca upādānakkhandha* arise, (ii) those *pañca upādānakkhandha* are abbreviated as merely *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* (and NOT explicitly as the corresponding *upādānakkhandha*) in most *suttās*.
- **Also, the five *upādānakkhandhās* are collectively referred to as "*kāya*" in many *suttās*.**

Kāya as *Pañcupādānakkhandha*

3. The "WebLink: suttacentral: *Cetanā Sutta* (AN4.171)" says, "*avijjāya tveva asesavirāganirodhā so **kāyo** na hoti*.." OR "When ignorance fades away and ceases with nothing left over (i.e, when one attains the *Arahant* stage of *Nibbāna*), ***kāya*** ceases to exist."

- Clearly, the physical body of an *Arahant* does not disappear upon attaining the *Arahant* stage. Venerable Bāhiya attained *Arahantship* upon hearing a couple of verses from the Buddha. His physical body remained intact!

© 2026 Lal A. Pinnaduwage

- This is the "*pañc**upādāna**kkhandha kāya*," **which arises in the mind** and ceases to arise after the *Arahant* stage; at that time, the *Paṭicca Samuppāda* process also comes to an end.
- **The five *upādānakkhandhās*** stop arising at the *Arahant phala* moment, i.e., at the moment of attaining the *Arahant* stage of *Nibbāna*. Thus, the **five *upādānakkhandhās*** are called "***nirodha dhamma***" or "**those entities that can be stopped from arising**."

What Are *Nirodha Dhamma*?

4. The "WebLink: suttacentral: *Nirodhadhamma Sutta* (SN 23.22)" states that "*rūpa*, *vedanā*, *saññā*, *saṅkhārā*, and *viññāṇa*" are "***nirodha dhamma***." Again, refer to #2 above to ensure that these refer to the respective ***upādānakkhandhās***.

- The English translation in the link translates the verse as "Rādha, form, feeling, perception, choices, and consciousness are **liable to cease**." The translation of "***nirodha***" as "**liable to cease**" is OK. But one must realize that the translation to **form, feeling, perception, choices, and consciousness** is incorrect; those are the respective ***upādānakkhandhās***.
- "Liable to cease" means that these entities can be stopped from arising. In the previous post, we discussed "*loka nirodha*" and pointed out that one can only stop "one's own future existence" in the world of 31 realms and that it does not mean stopping or destroying the external world or one's physical body. That happens when one attains the *Arahant* stage. See "Sensory Inputs Initiate 'Creation of the World'" or 'Loka Samudaya'."
- We also discussed that "*loka samudaya*" (or the creation/sustenance of "one's existence") is an ongoing process for anyone below the *Arahant* stage because *loka samudaya* continues with attachment to each sensory input. Here, "*loka samudaya*" happens (or at least is maintained) every time we attach to a sensory input and generate the **five *upādānakkhandhās***.

5. Furthermore, sensory experience does not stop for an *Arahant*. They continue to experience external *rūpa* and generate mental processes.

- That is why it is incorrect to translate *vedanā*, *saññā*, *saṅkhārā*, and *viññāṇa* in the "WebLink: suttacentral: *Nirodhadhamma Sutta* (SN 23.22)" as **form, feeling, perception, choices, and consciousness.** This is the danger of word-by-word translations that fail to grasp the meaning within the context.
- An *Arahant* who has achieved "*loka nirodha*" can still see external objects; they still experience *vedanā* associated with the physical body; they still perceive honey as sweet; they still generate *vedanā* and *saññā* (the pure form of *saṅkhāra*). However, they do not generate *viññāṇa*, even though they still have consciousness!
- Thus, it is critical to be able to grasp the meanings of words in the *suttās* in the broader context of the specific *sutta*. That should be clear by comparing the *suttās* discussed in #1 and #2 above.

Connection to *Sakkāya Diṭṭhi*

6. "WebLink: suttacentral: *Sakkāya Sutta* (SN 22.105)" asks, "*Katamo ca, bhikkhave,* ***sakkāyo***?" (What is *sakkāya*?). The answer is "***Pañcupādānakkhandhātissa*** *vacanīyaṁ*" ("I say it is ***Pañcupādānakkhandhā***").

- The same answer is given in the "WebLink: suttacentral: *Sakkāyapañhā Sutta* (SN 38.15)": "*Pañcime, āvuso, upādānakkhandhā sakkāyo vutto bhagavatā*" or "*āvuso*, the Buddha said that *pañcupādānakkhandhā* are *sakkāya*."
- Here, "***sakkāya***" is "***sath kāya***" or "**beneficial *kāya***." Furthermore, **"*sakkāya diṭṭhi*" is "to view (*pañcupādānakkhandha*) *kāya* as beneficial."**

© 2026 Lal A. Pinnaduwage

- One will have ***sakkāya diṭṭhi*** as long as they **view** sensory pleasures as beneficial. However, since a *Sotāpanna* has not removed *kāma rāga*, they will still be attached to sensory pleasures; still, they would not do *apāyagāmi* deeds that lead to rebirths in the *apāyās*. That happens automatically, without conscious thinking, i.e., it is a *dhammatā*.

Pañcupādānakkhandha Kāya Is Sustained by *Āhāra*

7. The second "WebLink: suttacentral: *Kāya Sutta* (SN 46.2)" (the first *Kāya Sutta* is discussed in #1 above regarding the physical body) explains what that second type of *kāya* is: "*Seyyathāpi, bhikkhave, ayaṁ* ***kāyo*** *āhāraṭṭhitiko, āhāraṁ paṭicca tiṭṭhati, anāhāro no tiṭṭhati*" OR "This ***kāya*** is sustained by ***āhāra* (food for the mental body)**. It depends on *āhāra* to continue, and it can't be sustained without *āhāra*."

- Four types of *āhāra* are discussed in "WebLink: suttacentral: *Āhāra Sutta* (SN 12.11)": ***phassa, mano sañcetanā, viññāṇa*, and *kabaḷīkāra āhāra.***
- **None of those are *āhāra* for the physical body.** They are *āhāra* for the mental body (*manomaya kāya*/*gandhabba*), which is sustained via repeated generation of *pañc**upādāna**kkhandha kāya* (via attachment to sensory pleasures). As we have discussed, **at a deeper level (per *paramatta Dhamma* of the Buddha)**, such sensory pleasures are "mind-made" (via "distorted *saññā*"): "Saññā – Hidden Aspect of Paṭicca Samuppāda."
- The arising of *pañc**upādāna**kkhandha kāya* with a sensory input is the same as the initiation of another *Paṭicca Samuppāda* cycle. When the ignorance (*avijjā*) about the true nature of the world of 31 realms is fully understood at the *Arahant* stage, the arising of the *pañc**upādāna**kkhandha kāya* stops. When Ven. Bāhiya attained *Arahanthood* by listening to a few verses of the Buddha, his physical body remained the same. **But the arising of the *pañcupādānakkhandha kāya* (and the generation of *Paṭicca Samuppāda* cycles) stopped from that moment** because *āhāra* for the mental body stopped.
- *Āhāra* is discussed in detail in "Āhāra – Food for the Mental Body."

Rūpa, Vedanā, Saññā, Saṅkhāra, Viññāṇa – Refer to the "*Upādānakkhandhā*"

8. It is critical to understand that *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* almost always refer to the respective *upādānakkhandhās*. As we know, numerous *cittās* flow through a mind within a split second upon receiving a sensory input; **a single unit of *rūpa, vedanā, saññā, saṅkhāra*, or *viññāṇa* can never be experienced**; they ALWAYS come in aggregates or collections.

- Upon receiving a sensory input, the mind "expands", with those *upādānakkhandhās* growing at a rapid rate. If the mind remains focused on that sensory input, it repeatedly attaches to it. That is what I tried to show in those charts with "two cones." See #6 in "Purāṇa and Nava Kamma – Sequence of Kamma Generation."
- The five *upādānakkhandhās* grow slowly in the '*purāṇa kamma*' stage, and the growth becomes rapid in the '*nava kamma*' stage when the mind starts consciously accumulating *kamma*.
- Also see "Rūpa, Vedanā, Saññā, Saṅkhāra, Viññāṇa – Mostly Misunderstood."
- In old posts, I referred to *viññāṇa* in the '*purāṇa kamma*' stage as "*vipāka viññāṇa*" and that in the '*nava kamma*' stage as '*kamma viññāṇa*.' It is the same *viññāṇa* that continues to grow stronger. Even the '*vipāka viññāṇa*' is defiled; see "Is Cakkhu Viññāṇa Free of Defilements?" In that post, we discussed a "seeing event" as the sensory input.

9. I also want to emphasize that "*rūpa*" in the context of the five aggregates (*pañca upādānakkhandha*) is *rūpa upādānakkhandha* that arises in the mind. That holds in most of the *suttās*; the *suttās* rarely discuss external objects.

© 2026 Lal A. Pinnaduwage

- Furthermore, *vedanā* (or *vedanā* ***upādāna****kkhandha*) refers to "mind-made" ones and not *vedanā* felt by the physical body (which also arises in *Arahants*).
- **An *Arahant* would not generate *viññāṇa* at any time.** The word **"*viññāṇa*" means "absence of *ñāṇa*"** or "absence of wisdom about the true nature of the world." Specifically, it refers to the absence of knowledge about how the "distorted *saññā*" triggers the accumulation of *kamma*; once one comprehends that, one becomes a "*sandiṭṭhiko*" or a *Sotāpanna*. **However, "*saṃ* generation" completely stops only at the *Arahant* stage**; see "Sandiṭṭhiko – What Does It Mean?"
- If an *Arahant* does not generate *viññāṇa*, how would they experience the sensory inputs? The seeing (or eye consciousness) by an *Arahant* is expressed as "*diṭṭhe diṭṭhamattaṁ bhavissati*" or "seeing without the arising of any defilements (even though the sight has embedded distorted *saññā*)." For example, an *Arahant* would also see a beautiful woman as such; however, since an *Arahant* fully comprehends that "the beauty of the woman" is a false/distorted *saññā* generated by the mind, their minds would not attach to that sight.

Nibbāna Attained by Understanding the *Pañcupādānakkhandha Kāya*

10. One cannot attain *Nibbāna* (and stop future suffering) by investigating the physical body. Modern medical science serves the mundane purpose of maintaining one's physical health. Researchers in that field have studied the physical body in great detail, but have no idea how to prevent future suffering; the medical field can only help alleviate the suffering associated with the physical body.

- On the other hand, Buddha's teachings are not focused on maintaining a healthy physical body. They are focused on stopping unimaginable future suffering associated with the rebirth process. Here, *Kāyānupassanā* in *Satipaṭṭhāna* plays a key role. That *Kāyānupassanā* is about the *pañc****upādāna****kkhandha kāya.*
- *Nibbāna* is reached as soon as the possibility of any defiled thoughts arising is stopped. At the moment of reaching the *Arahant phala* moment, ***pañcupādānakkhandha*** stops arising, and the operation of ***Paṭicca Samuppāda*** stops too.
- Contrary to the prevalent idea that *Nibbāna* is attained after the death of the physical body of an *Arahant*, it is attained at the moment of reaching the *Arahant phala* moment. Any suffering experienced until the death of the physical body is associated with that physical body, not the mind; those are *vipāka* associated with the physical body, and they will persist until the physical body dies.

17.4.4 Ānāpānasati – Connection to Satipaṭṭhāna

July 12, 2025; revised September 8, 2025

Ānāpānasati Sutta (MN 118) describes three stages leading to attaining *Arahanthood*: (i) Attain *Sotāpanna* stage by seeing the dangers of remaining on the rebirth process, i.e., via seeing the dangers of "*pañc****upādāna****kkhandha kāya*," (ii) Cultivation of *Satipaṭṭhāna* (by comprehending the two stages of "*pañc****upādāna****kkhandha kāya*") to attain higher stages of *magga phala*, and (iii) fulfilling *Satta Bojjhaṅga* to attain higher *magga phala* ending in *Arahanthood*.

Introduction

1. *Ānāpānasati* — as described in the "WebLink: suttacentral: *Ānāpānasati Sutta* (MN 118)" — summarizes the sequential steps for a *puthujjana* to reach the *Arahant* stage of *Nibbāna*. We can simplify those steps as follows.

- One is bound to the rebirth process due to the inborn tendency (via "distorted *saññā*" or "*viparīta saññā*") to attach to sensory pleasures. However, it is impossible to remove the built-in "distorted *saññā*" until one attains the *Sotāpanna* stage. [***viparīta*** : [adj.] reversed; changed; wrong.]

© 2026 Lal A. Pinnaduwage

- To reach the *Sotāpanna* stage, one must "see with wisdom" the dangers of attachment to sensory pleasures. Our attachment to sensory pleasures can be understood by seeing how the "*pañc**upādāna**kkhandha kāya*" initiates and grows upon receiving a (pleasing or displeasing) sensory input.
- By '*kāya*,' most suttās refer to the "*pañc**upādāna**kkhandha kāya*." See "Kāya Can be Pañcupādānakkhandha or Physical Body."
- It is only after "seeing with wisdom" the dangers of letting the "*pañc**upādāna**kkhandha kāya*" grow (at the *Sotāpanna* stage) that one can start cultivating *Satipaṭṭhāna* to remove *kāma rāga* and *paṭigha saṁyojana* that arise due to "distorted *saññā*" and attain the *Sakadāgāmi/Anāgāmi* stages.
- In this introductory post, I will systematically analyze the "WebLink: suttacentral: *Ānāpānasati Sutta* (MN 118)" to highlight **only the above key ideas**. Even though the *sutta* clearly states those steps, they have not been correctly identified up to now. The English translation in the link is a good example; it starts by completely distorting the title as "Mindfulness of Breathing."
- In the following, I will not try to translate or interpret the Pāli verses. I will only point out the three steps mentioned in the abstract at the beginning of this post in the *sutta* (in Pāli). We will discuss those Pāli verses in upcoming posts. The English translation in the link may be used with caution to get the basic idea.

2. I will skip the introductory material in the "WebLink: suttacentral: *Ānāpānasati Sutta* (MN 118)" and start the discussion where the above steps are stated @marker 15.1.

- There, it states: "*Ānāpānassati, bhikkhave, bhāvitā bahulīkatā mahapphalā hoti mahānisaṁsā. Ānāpānassati, bhikkhave, bhāvitā bahulīkatā cattāro satipaṭṭhāne paripūreti. Cattāro satipaṭṭhānā bhāvitā bahulīkatā satta bojjhaṅge paripūrenti. Satta bojjhaṅgā bhāvitā bahulīkatā vijjāvimuttiṁ paripūrenti*"
- **Translation** (emphasizing the four stages mentioned in the summary above): @15.1 "*Bhikkhus*, when *Ānāpānassati* is developed and cultivated, **it brings the great benefits (*mahānisaṁsā*) of *magga phala* (*mahapphalā*)**. @15.2 When *Ānāpānassati* is developed and cultivated further, **it cultivates *cattāro satipaṭṭhāna***, whereby one can enter the *Satipaṭṭhāna Bhūmi* at will. @15.3: By engaging in *Vipassanā* while in *Satipaṭṭhāna Bhūmi* one can **fulfills *Satta Bojjhaṅga* (the seven awakening factors)** to **attain higher magga phala**. @5.4: And the seven awakening factors, when developed and cultivated, fulfill knowledge and freedom, i.e., ***Arahanthood* is realized**. [***bhūmi*** : [f.] ground; earth; region; stage; plane.]
- The four stages can be re-stated as follows: (i) In the FIRST stage, a *puthujjana* contemplates the drawbacks of "*pañc**upādāna**kkhandha kāya*" **as a whole** and attains the *Sotāpanna* stage; it is the basic version of *Ānāpāna Sati.* (ii) In the SECOND stage, a *Sotāpanna* examines the ***ajjhatta kāya* and *bahiddha kāya*** in the initial stage of "*pañc**upādāna**kkhandha kāya*" (detailed in *Satipaṭṭhāna*) to understand how *kāma rāga* and *paṭigha* arise due to "distorted *saññā*" and enter the *Satipaṭṭhāna Bhūmi* (same as the cultivation of *Sati Saṁbojjhaṅga*). (iii) Cultivation of ***Satta Bojjhaṅga*** (and the removal of the remaining *saṁyojana*) and reaching higher *magga phala* in the THIRD stage, (iv) Leading to *Arahanthood* in the FOURTH stage.

First Stage of *Ānāpānasati*

3. The FIRST stage is described in the "WebLink: suttacentral: *Ānāpānasati Sutta* (MN 118)" from marker @16.1 through 22.1. The Pāli text is as follows:

- ***Kathaṁ bhāvitā ca, bhikkhave, ānāpānassati kathaṁ bahulīkatā mahapphalā hoti mahānisaṁsā?* (How do you caultivate *Ānāpānassati* to attain the *Sotāpanna* stage?)**

© 2026 Lal A. Pinnaduwage

Idha, bhikkhave, bhikkhu araññagato vā rukkhamūlagato vā suññāgāragato vā nisīdati pallaṅkaṁ ābhujitvā ujuṁ kāyaṁ paṇidhāya parimukhaṁ satiṁ upaṭṭhapetvā. So satova assasati satova passasati.

Dīghaṁ vā assasanto 'dīghaṁ assasāmī'ti pajānāti, dīghaṁ vā passasanto 'dīghaṁ passasāmī'ti pajānāti; rassaṁ vā assasanto 'rassaṁ assasāmī'ti pajānāti, rassaṁ vā passasanto 'rassaṁ passasāmī'ti pajānāti; 'sabbakāyapaṭisaṁvedī assasissāmī'ti sikkhati, 'sabbakāyapaṭisaṁvedī passasissāmī'ti sikkhati; 'passambhayaṁ kāyasaṅkhāraṁ assasissāmī'ti sikkhati, 'passambhayaṁ kāyasaṅkhāraṁ passasissāmī'ti sikkhati. **(This is the basic version of *Kāyānupassanā*).**

'Pītipaṭisaṁvedī assasissāmī'ti sikkhati, 'pītipaṭisaṁvedī passasissāmī'ti sikkhati; 'sukhapaṭisaṁvedī assasissāmī'ti sikkhati, 'sukhapaṭisaṁvedī passasissāmī'ti sikkhati; 'cittasaṅkhārapaṭisaṁvedī assasissāmī'ti sikkhati, 'cittasaṅkhārapaṭisaṁvedī passasissāmī'ti sikkhati; 'passambhayaṁ cittasaṅkhāraṁ assasissāmī'ti sikkhati, 'passambhayaṁ cittasaṅkhāraṁ passasissāmī'ti sikkhati. **(This is the basic version of *Vedanānupassanā*).**

'Cittapaṭisaṁvedī assasissāmī'ti sikkhati, 'cittapaṭisaṁvedī passasissāmī'ti sikkhati; 'abhippamodayaṁ cittaṁ assasissāmī'ti sikkhati, 'abhippamodayaṁ cittaṁ passasissāmī'ti sikkhati; 'samādahaṁ cittaṁ assasissāmī'ti sikkhati, 'samādahaṁ cittaṁ passasissāmī'ti sikkhati; 'vimocayaṁ cittaṁ assasissāmī'ti sikkhati, 'vimocayaṁ cittaṁ passasissāmī'ti sikkhati. **(This is the BASIC version of *Cittānupassanā*).**

'Aniccānupassī assasissāmī'ti sikkhati, 'aniccānupassī passasissāmī'ti sikkhati; 'virāgānupassī assasissāmī'ti sikkhati, 'virāgānupassī passasissāmī'ti sikkhati; 'nirodhānupassī assasissāmī'ti sikkhati, 'nirodhānupassī passasissāmī'ti sikkhati; 'paṭinissaggānupassī assasissāmī'ti sikkhati, 'paṭinissaggānupassī passasissāmī'ti sikkhati. **(This is the basic version of *Dhammānupassanā*).**

- *Evaṁ bhāvitā kho, bhikkhave, ānāpānassati evaṁ bahulīkatā mahapphalā hoti mahānisaṁsā.* **(That is how to cultivate *ānāpānassati* to attain the *Sotāpanna* stage).**

Second Stage of *Ānāpānasati*

4. The SECOND stage is described in the "WebLink: suttacentral: *Ānāpānasati Sutta* (MN 118)" from marker @23.1 through 28.1. The Pāli text is as follows:

- *Kathaṁ bhāvitā ca, bhikkhave, ānāpānassati kathaṁ bahulīkatā cattāro satipaṭṭhāne paripūreti?* **(How do you cultivate *Ānāpānassati* to fulfil *Satipaṭṭhāna* to remove** *kāma rāga* and *paṭigha* and **reach the *Satipaṭṭhāna Bhūmi at will*?)**
- As we know, the *Satipaṭṭhāna Bhūmi* is free of "distorted or *viparīta saññā*" where one can engage in *Vipassanā*. See "Overcoming Kāma Saññā – Satipaṭṭhāna Bhūmi or Jhāna."

- *Evaṁ bhāvitā kho, bhikkhave, ānāpānassati evaṁ bahulīkatā cattāro satipaṭṭhāne paripūreti.* **(That is how to cultivate *Ānāpānassati* to fulfil *Satipaṭṭhāna* and reach the *Satipaṭṭhāna Bhūmi*).**
- In the first verse on ***Kāyānupassanā*, *'kāye kāyānupassī'*** refers to **another *'kāya'* within the *'pañcupādānakkhandha kāya'*** **(*'kāye kāya'*).** This refers to the two-stage **(*'purāṇa kamma'* and *'nava kamma'*)** development of ***'pañcupādānakkhandha kāya'*** (as indicated by the two "cones" in #6 of "Purāṇa and Nava Kamma – Sequence of Kamma Generation.") Thus, ***'kāye kāya'*** refers to the ***'purāṇa kamma'* stage.**
- In the same way, ***vedanāsu vedanānupassī***, ***citte cittānupassī***, and ***dhammesu dhammānupassī*** refer to the corresponding ***vedanā***, ***cittā***, and ***dhammā*** arising in the ***'purāṇa kamma'* stage.** This is where defilements (*rāga*, *dosa*, *moha*, or '*saŋ*') arise automatically due to unbroken *saṁyojana.* See "Sanditthiko – What Does It Mean?"

Third and Fourth Stage of *Ānāpānasati* and Summary

5. Once in the *Satipaṭṭhāna Bhūmi*, the mind is free of the "distorted or *viparita" saññā* (and thus, of the five hindrances or *pañca nīvaraṇa*). This enables the mind to grasp the deeper teachings of the Buddha and attain higher *magga phala* by cultivating the *Satta Bojjhaṅga.*

- The fourth stage is an extension of the third to reach *Arahanthood.*

6. It is critically important to understand the basic layout of the "WebLink: suttacentral: *Ānāpānasati Sutta* (MN 118)" **to understand the following points**.

© 2026 Lal A. Pinnaduwage

- One must be a *Sotāpanna* to practice/cultivate *Satipaṭṭhāna* to attain higher stages of *magga phala*. That is because one must be able to get to the *Satipaṭṭhāna Bhūmi* (alternatively called *sappabhāsa citta*, *Tadaṅga Nibbuta*, or *Paccupaṭṭhita Sati*) to cultivate *Satipaṭṭhāna.* I have discussed this in previous posts. See, for example, "Kāma Saññā – How to Bypass to Cultivate Satipaṭṭhāna" and #6 there. [***Sappabhāsaṁ cittaṁ***: See "WebLink: suttacentral: *Saṅgīti Sutta* (DN 33)", "WebLink: suttacentral: *Vibhaṅga Sutta* (SN 51.21)", and "WebLink: suttacentral: *Samādhibhāvanā Sutta* (AN 4.41)." {***sappabhāsa*** : adj. radiant; luminous; brightened. } ***Sati paccupaṭṭhitā***: See "WebLink: suttacentral: *Mahāsatipaṭṭhāna Sutta* (DN 22)" and "WebLink: suttacentral: *Satipaṭṭhāna Sutta* (MN 10)". { ***paccupaṭṭhita*** : [pp. of *paccupaṭṭhāti*] was present. } { ***tadaṅga*** : [adj.] temporal (?); (nt.) that portion. ***nibbuta*** : [pp. of *nibbāti*] got cold; become passionless; was extinguished. } ***Tadaṅganibbuto***: See "WebLink: suttacentral: *Attadīpasutta* SN 22.43 (Be Your Own Island)." { ***tadaṅga-nibbuta*** : 已確實寂止的 (has definitely ceased); that (*tad*/*taṁ*) factor (*aṅga*) was extinguished (*nibbuta*).}]
- A *puthujjana*'s mind gets to the *Satipaṭṭhāna Bhūmi* **for the first time** at the moment of attaining the *Sotāpanna* stage. Even though the mind retreat from it quickly, it is possible to return to it with an effort; once that capability is developed, one can do that at will. Since that *Satipaṭṭhāna Bhūmi* is free of "distorted *saññā*," **it provides a platform to contemplate Dhamma concepts without the five hindrances (*pañca nīvaraṇa*) arising in the mind. It is impossible to overcome *kāma rāga* without getting to the *Satipaṭṭhāna Bhūmi.*** If one is in an *anariya jhāna*, one can enter the *Satipaṭṭhāna Bhūmi* from there; see #8 of "Four Noble Truths: Connection to Anusotagāmī/Paṭisotagāmī" and #6 of "Sammā Samādhi – How to Define It?"
- I know that many people reading the website may not have attained the *Sotāpanna* stage. However, even for them, it is beneficial to understand the concept of "distorted *saññā*" because it clarifies how our minds are "designed to" automatically attach to sensory inputs. See "Sanditṭhiko – What Does It Mean?"

17.4.5 Kāya Is Pañcupādānakkhandha Kāya in Most Suttās

July 19, 2025; revised May 3, 2026 (added #3)

Kāya in most *suttās* refers to the "*pañc**upādāna**kkhandha kāya*." *Sakkāya* is the **view and conviction/perception** of an average human (*puthujjana*) that "*pañc**upādāna**kkhandha kāya*" is beneficial. First, one becomes a *Sotāpanna* by removing the **wrong view** of *Sakkāya diṭṭhi.* However, a *Sotāpanna* would still be attached to the "*pañcupādānakkhandha kāya*" until they overcome *kāma rāga* arising from the **wrong conviction/perception** (i.e., "distorted *saññā*"). A *Sotāpanna* can overcome *kāma rāga* to attain the *Anāgāmi* stage, but a *puthujjana* cannot.

Sakkāya = Pañcupādānakkhandha Kāya = Kāya

1. *Sakkāya* is defined in the "WebLink: suttacentral: *Sakkāya Sutta* (SN 22.105)."

- "*Katamo ca, bhikkhave, sakkāyo? Pañcupādānakkhandhātissa vacanīyaṁ*." **Translation: "What is *sakkāya*? It means *pañcupādānakkhandha*."**
- At marker 1.7, it clarifies that *pañcupādānakkhandha* refers to the aggregate of five entities: *rūpupādānakkhandha*, *vedanupādānakkhandha*, *saññupādānakkhandha*, *saṅkhārupādānakkhandha*, *viññāṇupādānakkhandha.* (Note: In Pāli, singular words end in "o"; thus, *rūpupādānakkhandha* is written as *rūpupādānakkhandho*.)
- The English translation in the above link translates "*sakkāya*" as "substantial reality." I don't even know what they mean by "substantial reality." Maybe they don't even know! If anyone knows, please post in the forum.
- Instead, "*sakkāya*" (*sath kāya*, where "*sath*" means "good" or "fruitful") is the **view and conviction/perception** of an average human (*puthujjana*) that "*pañc**upādāna**kkhandha kāya*" is beneficial. See "Sakkāya Diṭṭhi – 'Not Seeing the Unfruitful Nature of the World'."

© 2026 Lal A. Pinnaduwage

- A *puthujjana* attaches to *pañc**upādāna**kkhandha* (not to *pañcakkhandha*), adding more to the existing *pañc**upādāna**kkhandha. Pañcakkhandha* refers to the undefiled state, and it never arises in a *puthujjana* even for a moment.

2. @marker 1.9, the Buddha asks: "*Katamo ca, bhikkhave, sakkāya samudayo*?" OR "What is the reason for *sakkāya* (*pañc**upādāna**kkhandha*) to arise?"

- **The answer is "*taṇhā*," the craving for sensory pleasures. As we know, a *puthujjana* becomes attached to the existing *pañcupādānakkhandha* when they attach to sensory inputs.**
- We have discussed the root cause of *taṇhā*: Taṇhā – Result of Saññā Giving Rise to Mind-Made Vedanā and Saññā Gives Rise to Most of the Vedanā We Experience.
- That *taṇhā* also gives rise to *diṭṭhi* (wrong views) and *māna* ("perception of me or I").
- **The *pañcupādānakkhandha kāya* or *sakkāya* is sometimes abbreviated simply as "*kāya*"; let us clarify that next.**

The Physical Body Is Made of the Four Great Elements

3. In most *suttās*, when the Buddha specifically discussed the physical body, he referred to it as "this body made up of the four great elements of *pathavi, āpo, tejo, vāyo*." See, for example, "WebLink: suttacentral: *Assutavā Sutta* (SN 12.61)," where it states, "*assutavā, bhikkhave, **puthujjano** imasmiṁ **cātumahābhūtikasmiṁ kāyasmiṁ** nibbindeyyapi virajjeyyapi vimucceyyapi*."

- **Translation**: "an **ordinary person** might become disillusioned, dispassionate, and freed from **this physical body made up of the four great elements**."
- There, '***cātumahābhūtikasmiṁ***' means '**made up of the four great elements.**'

Kāya Can be Eliminated While Living!

4. The "WebLink: suttacentral: *Cetanā Sutta* (AN 4.171)" states: "***avijjāya tveva asesavirāganirodhā** so kāyo na hoti yaṁpaccayāssa taṁ uppajjati ajjhattaṁ sukhadukkhaṁ, sā **vācā na hoti** yaṁpaccayāssa taṁ uppajjati ajjhattaṁ sukhadukkhaṁ, so **mano na hoti** yaṁpaccayāssa taṁ uppajjati ajjhattaṁ sukhadukkhaṁ.*" **Translation:** "When ignorance fades away and ceases with nothing left over, ***kāya***, ***vācā***, and ***mano* cease to exist (*na hoti*)**. Therefore, any mind-generated *sukha* or *dukkha vedanās* (*yaṁpaccayāssa taṁ uppajjati ajjhattaṁ sukhadukkhaṁ*) also stop arising." As we know, a living *Arahant* will only experience *sukha* or *dukkha vedanā* through the physical body (such as injuries or illnesses).

- Here, ***kāya*** is the *pañc**upādāna**kkhandha kāya* (as pointed out in #2 above), ***vācā*** refers only to defiled speech, and ***mano*** is ***mana āyatana***.
- **All those stop arising in an *Arahant* after the moment of attaining the *Arahant* stage of *Nibbāna*.**
- However, a living *Arahant* can still see, hear, etc. as anyone else, but will NOT have ***upādāna*** for them. They can speak, but will not have defiled speech. They do not have ***mana āyatana***, and instead have undefiled ***mana indriya* (and other undefiled sense faculties).**
- Therefore, it should be clear that ***kāya*** in the *sutta* **does not refer to the physical body**. It refers to the *pañc**upādāna**kkhandha kāya*. An *Arahant* would still have the same physical body, but no longer generates *pañc**upādāna**kkhandha kāya* via *Paṭicca Samuppāda* by attaching to sensory inputs. See "Sensory Experience, Paṭicca Samuppāda, and pañcupādānakkhandha" and "Sensory Inputs Initiate "Creation of the World" or "Loka Samudaya"."
- However, in a few *suttās*, "*kāya*" is also used to refer to the physical body; see "Kāya Can be Pañcupādānakkhandha or Physical Body." As we have discussed, with time, one will be able to figure out which interpretation to use in the context of a given sutta.

© 2026 Lal A. Pinnaduwage

We Attach to Sensory Pleasures With *Taṇhā*, *Diṭṭhi*, and *Māna*

5. We keep adding to the existing ***pañcupādānakkhandha kāya*** by attaching to sensory experiences with *taṇhā*, *diṭṭhi*, and *māna.* See ""Etaṁ Mama, Esohamasmi, Eso Me Attā'ti – Connection to Taṇhā, Māna, Diṭṭhi."

- We must also keep in mind that *rūpupādānakkhandha*, *vedanupādānakkhandha*, *saññupādānakkhandha*, *saṅkhārupādānakkhandha*, and *viññāṇupādānakkhandha* are shortened as *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* in the *suttās*. **In other words, *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* in almost all *suttās* refer to the respective *upādānakkhandha*.** See "Rūpa, Vedanā, Saññā, Saṅkhāra, Viññāṇa – Mostly Misunderstood."
- An average human attaches to the "*pañc**upādāna**kkhandha kāya*" with *taṇhā*, *diṭṭhi*, and *māna*. They all arise due to *avijjā* and *taṇhā.*
- The first to be removed (at the *Sotapanna* stage) is *diṭṭhi,* specifically *sakkāya diṭṭhi (*see #5 below).
- ***Taṇhā* has three components:** *kāma taṇhā*, *bhava taṇhā*, and *vibhava taṇhā*. Here, *vibhava taṇhā* is equivalent to "*uccheda diṭṭhi*" and is eliminated at the *Sotāpanna* stage. *Kāma taṇhā* (*kāma rāga*) is removed at the *Anāgāmi* stage. *Bhava taṇhā* arises from *rūpa rāga* (craving for *rūpāvacara jhāna*) and *arūpa rāga* (craving for *arūpāvacara samāpatti*); these are removed at the *Arahant* stage. See "Kāma Taṇhā, Bhava Taṇhā, Vibhava Taṇhā."
- Finally, *māna* or the "perception of me/I" (together with remaining *avijjā* and *uddhacca*) is also removed at the *Arahant* stage.

Sakkāya Diṭṭhi = Wrong View that *Pañcupādānakkhandha Kāya* Is Beneficial

6. *Sakkāya diṭṭhi* is explained in the "WebLink: suttacentral: *Sakkāyadiṭṭhi Sutta* (SN 22.155)." It says, "***rūpe** kho, bhikkhave, **sati**, **rūpaṁ upādāya**, rūpaṁ abhinivissa sakkāyadiṭṭhi uppajjati.*"

- **It means the following:** *Sakkāya diṭṭhi* arises when attaching to *rūp**upādāna**kkhandha* (as we discussed above, *rūpa* refers to *rūp**upādāna**kkhandha*) and one focuses one's mind (***sati***) on it with the **view** that such *rūpa* can bring happiness, i.e., they are fruitful.
- When one understands the Buddha's teachings, one will cultivate ***Sammā Sati*** instead. That means one would **at least not have the wrong view** that such *rūpa* (*rūp**upādāna**kkhandha*) can be beneficial.
- After eliminating *sakkāya diṭṭhi*, a *Sotāpanna* can proceed to the next step of eliminating *kāma rāga* or *kāma taṇhā*.

Difference Between *Taṇhā* and *Diṭṭhi*

7. Specifically, we must understand the difference between *kāma taṇhā* and *sakkāya diṭṭhi.* We can gain insight by using an analogy. Consider an alcoholic who is trying to get rid of his habit of drinking. That is analogous to a *puthujjana* wanting to eliminate *kāma taṇhā.* As we discuss below, *kāma taṇhā* in a *puthujjana* can elevate to *kāmacchanda*, a stronger level of *kāma rāga*, and engage in *apāyagāmi* deeds.

- When they enroll in a program to help with that effort, the first thing an alcoholic is taught how heavy drinking can be harmful to health, especially for the kidneys and the heart. Many alcoholics end up having life-ending problems.
- Once they go through that information, many of them can "see" (with wisdom) why it is necessary to give up drinking; this is analogous to the removal of *sakkāya diṭṭhi.* That helps them overcome the misconception that drinking is essential because it can be pleasurable.

© 2026 Lal A. Pinnaduwage

- **However, when trying to abstain from drinking (analogous to eliminating *kāma taṇhā*), many of them still cannot resist the temptation to drink.** This is equivalent to *taṇhā* that arises due to the "*saññā*" of "having a good time" after a few drinks (analogous to the arising of *kāma taṇhā* upon encountering attractive sense inputs due to "*kāma saññā*").
- That temptation can be triggered by even seeing a bottle of alcohol. Thus, in rehabilitation programs, alcoholics are kept away from having access to alcohol. Still, even after abstaining from drinking during the rehabilitation program, some are not able to resist the temptation and return to drinking.

A *Sotāpanna* Will Never Get Back *Sakkāya Diṭṭhi*

8. In the same way, even a *Sotāpanna* (who has seen the "*anicca* or unfruitful/dangerous nature" of sensory pleasures) does not have the ability yet to overcome the "*kāma saññā.*" A *Sotāpanna* must make an effort to control their sensory faculties.

- **However, there is a significant difference between the two cases mentioned above.** While a recovered alcoholic can go back to being an alcoholic, a *Sotāpanna* will never get back *sakkāya diṭṭhi.*
- Furthermore, once *sakkāya diṭṭhi* is removed **(a permanent achievement), *kāma taṇhā* is significantly reduced (also permanently)** in a *Sotāpanna*; see below. That is why a *Sotāpanna* is unable to engage in "*apāyagāmi* deeds" that can lead to rebirth in the *apāyās*.
- The stronger level of ***kāma taṇhā* (*kāmaccandha*)** in a *puthujjana* is permanently reduced to the weaker ***kāma rāga*** level for a *Sotapanna*. This is discussed in #11 below.

Mind of a *Sotāpanna* Gets to *Satipaṭṭhāna Bhūmi* at the *Sotāpanna Phala* Moment

9. At the moment of attaining the *Sotāpanna phala* moment (and even before that when getting to the *Sotāpanna Anugāmi* stage), **the mind becomes free of the "distorted *saññā*" for a brief period.** As we discussed, **the mind reaches the "*Satipaṭṭhāna bhūmi*" (also known as *sappabhāsa citta*, *tadaṅga nibbuta*, or *paccupaṭṭhita sati*) during those times. While in the *Satipaṭṭhāna bhūmi*, a mind is free from the "distorted *saññā*," making it easier to resist cravings for sensual pleasures and to contemplate deeper Dhamma concepts.** See #6 of "Kāma Saññā – How to Bypass to Cultivate Satipaṭṭhāna." [***Sappabhāsaṁ cittaṁ***: See "WebLink: suttacentral: *Saṅgīti Sutta* (DN 33)", "WebLink: suttacentral: *Vibhaṅga Sutta* (SN 51.21)", and "WebLink: suttacentral: *Samādhibhāvanā Sutta* (AN 4.41)." {***sappabhāsa*** : adj. radiant; luminous; brightened. } ***Sati paccupaṭṭhitā***: See "WebLink: suttacentral: *Mahāsatipaṭṭhāna Sutta* (DN 22)" and "WebLink: suttacentral: *Satipaṭṭhāna Sutta* (MN 10)". { ***paccupaṭṭhita*** : [pp. of *paccupaṭṭhāti*] was present. }{ ***tadaṅga*** : [adj.] temporal (?); (nt.) that portion. ***nibbuta*** : [pp. of *nibbāti*] got cold; become passionless; was extinguished. } ***Tadaṅganibbuto***: See "WebLink: suttacentral: *Attadīpasutta* SN 22.43 (Be Your Own Island)." { ***tadaṅga-nibbuta*** : 已確實寂止的 (has definitely ceased); that (*tad/taṁ*) factor (*aṅga*) was extinguished (*nibbuta*).}]

- **By cultivating *Satipaṭṭhāna*, a *Sotāpanna* can lengthen the periods that can be spent in the "*Satipaṭṭhāna bhūmi*."** Once there, a deeper level of meditation can be attained to reach higher *magga phala*.
- **That is the key to attaining the *Sakadāgāmi* and *Anāgāmi* stages.**
- Of course, "*Satipaṭṭhāna bhūmi*" can be accessed only by a *Sotāpanna*, and NOT by a *puthujjana* who has not grasped the "*anicca* or unfruitful/dangerous nature" of sensory pleasures.
- Still, avoiding indulgence in sensory pleasures (*indriya saṁvara*) is essential for a *puthujjana* to get to the *Sotāpanna* stage. Let us discuss that now.

Indriya Saṁvara Is Essential for Both *Sotāpanna* and *Puthujjana*

© 2026 Lal A. Pinnaduwage

10. There are five entities that "cover" one's mind and prevent it from seeing the "true nature of the world." They are called the five hindrances (*pañca nīvaraṇa*). Here, *pañca* means five, and a *nīvaraṇa* means a hindrance or an obstacle.

- They are *kāmacchanda*, *vyāpāda*, *thina-middha*, *uddhacca-kukkucca*, and *vicikicchā.*
- In simple terms, those five words refer to craving sensual pleasures, an angry mindset, a lethargic mindset, a tendency to engage in lowly deeds with arrogance, and doubts about the need for morality.
- **The main culprit of the five is *kāmacchanda*** (pronounced "kāmachchandha") or "to be blinded by sensual pleasures" ("*kāma*" + "*icca*" + "*andha*" means blinded by sense desires). Remember that "c" must be pronounced with the "ch" sound; "*icca*" is pronounced "ichcha."
- You can read more about them in "Key to Calming the Mind - The Five Hindrances" and "Pañca Nīvaraṇa and Sensual Pleasures (Kama Raga)."

11. *Indriya saṁvara* or "restraining one's sense faculties" (controlling *kāmacchanda*) is critically important for a ***puthujjana*** because it allows the mind to be relatively free of the *pañca nīvaraṇa.* This enables a mind to "see" (with wisdom) the Buddha's worldview and attain the *Sotāpanna* stage.

- Generally, living a simple, moral life can significantly reduce *pañca nīvaraṇa.*
- As mentioned above, it is critical to control *kāmacchanda* to help reduce all five hindrances. The second post in #9 above discusses that aspect; the first post is an introduction.
- Additionally, it is essential to calm the mind before listening to a discourse or reading posts like this. One should allocate time free from disturbances.

12. Once reaching the ***Sotāpanna*** stage, one's level of *kāmacchanda* is **permanently** reduced. One would no longer be "blinded by sensual pleasures" and engage in highly immoral deeds that can lead to rebirths in the *apāyās*.

- This reduced level of *kāmacchanda* is *kāma rāga.* When practicing *Satipaṭṭhāna*, a *Sotāpanna* must also have *indriya saṁvara* or "restraint of sensory pleasures."
- Then, when a *Sotāpanna* reaches the *Anāgāmi* stage (by cultivating *Satipaṭṭhāna*), *kāma rāga* will also be eliminated. However, an *Anāgāmi* will still have *rūpa rāga* and *arūpa rāga* (weaker levels of *taṇhā*); these are eliminated at the *Arahant* stage.
- Thus, the five hindrances reduce step-wise at each stage of *magga phala*, allowing the mind to comprehend deeper Dhamma. I highly recommend reading the two posts in #9 above.

17.4.6 Satipaṭṭhāna - What Does It Mean?

July 26, 2025

Satipaṭṭhāna means to bring one's mind to a state that is temporarily free of the five hindrances/obstacles or *pañca nīvaraṇa*. One may not have eliminated defilements permanently, but while cultivating *Satipaṭṭhāna* (or while in "*Satipaṭṭhāna Bhūmi*"), thoughts with *rāga*, *dosa*, and *moha* are temporarily blocked.

What Is *Sati* in *Satipaṭṭhāna*?

1. *Satipaṭṭhāna* is conventionally translated as "Mindfulness Meditation." That is correct in a way, but we must understand what is meant by "being mindful" according to the Buddha's teachings.

- When handling a conventional critical task, we might instruct someone to "pay attention and think through carefully before doing it." This can even be an immoral deed. For example, a suicide bomber assembling the bomb must be careful not to make any mistakes and blow himself up while assembling it. Thus, "being mindful" is applicable in that immoral situation in the mundane sense.

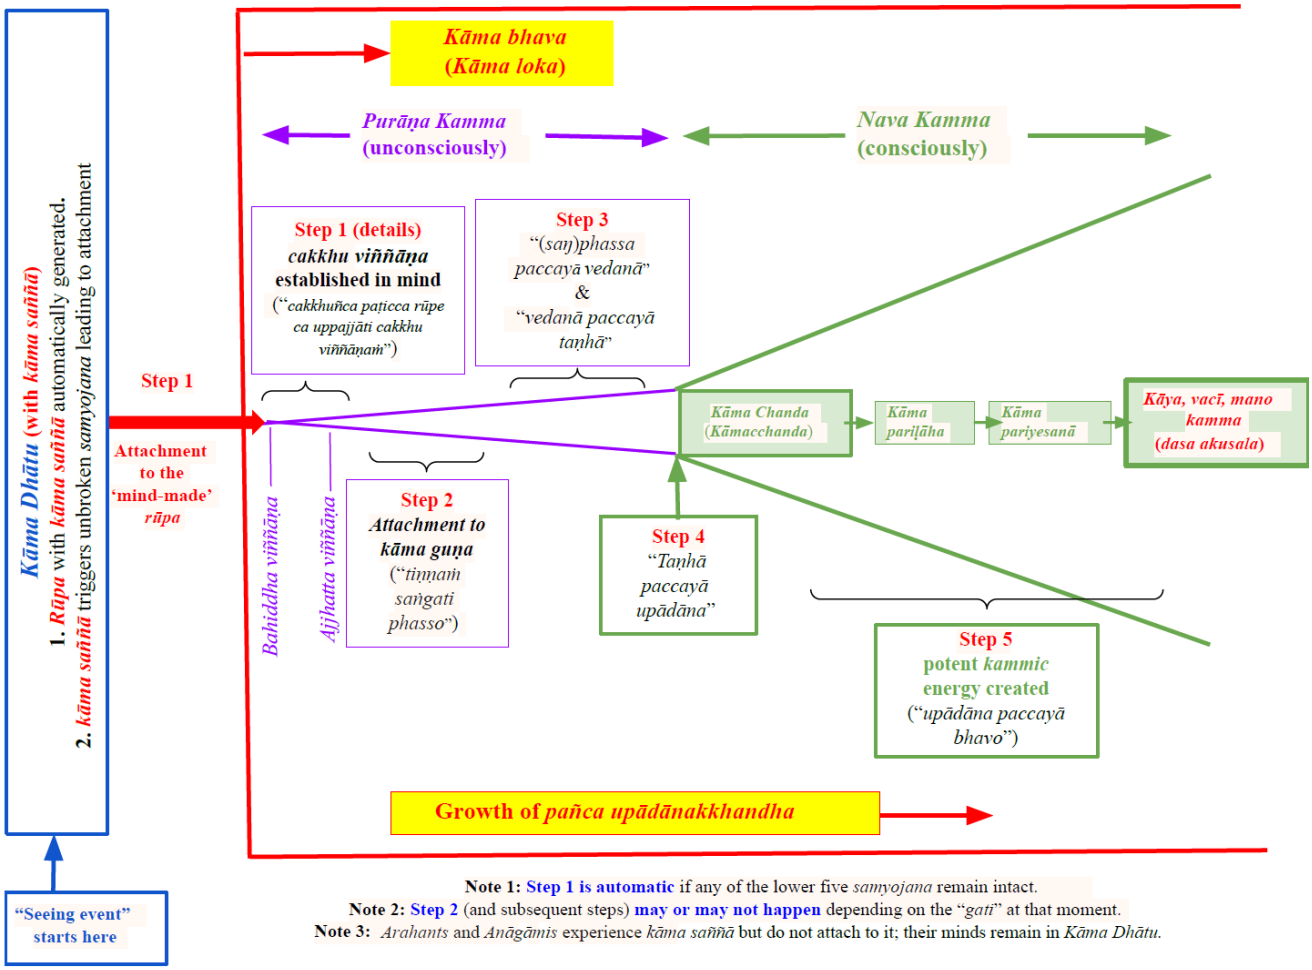
© 2026 Lal A. Pinnaduwage

- But in Buddha's teachings, "*sati*" has a deeper meaning. The mind of an average person (*puthujjana)* is always covered by ignorance (about the true nature of the world), and that leads to the arising of thoughts with *rāga*, *dosa*, and *moha*. Another way to say that is a *puthujjana*'s mind is covered by *pañca nīvaraṇa.*

2. **The "previously unheard Dhamma"** discovered by the Buddha can be stated in the following way: **Those *pañca nīvaraṇa* arise due to "distorted *saññā*."** The true nature of this world is to instill a "distorted *saññā*" of like or dislike in a mind upon experiencing certain sensory inputs. **In *kāma loka*, this "distorted *saññā*" is "*kāma saññā*."** Thus, let us focus on "*kāma saññā*" for the rest of the post.

- **Until one fully understands the origin of *kāma saññā*, one's mind will automatically attach to it.** This is why it is so hard to control urges for sensual pleasures.
- The mind of a *puthujjana* overcomes that **"*kāma saññā*"** for the first time when attaining the *Sotāpanna phala* moment with *Sammā Sati* while inside *Satipaṭṭhāna Bhūmi* (as discussed below); the mind comes off of the **"*kāma saññā*"** for a short time, and one may not even be aware of that. However, a *Sotāpanna* can thereafter access that *Satipaṭṭhāna Bhūmi* (free of the "*kāma saññā*") and, with practice, can stay there for longer periods while engaging in *Satipaṭṭhāna Bhāvanā* (**not during everyday life**).
- **Thus, to be "mindful" (and to have "*sati*"), one must enter that *Satipaṭṭhāna Bhūmi*.** Only a *Sotāpanna* (or above) can cultivate *Satipaṭṭhāna Bhāvanā* to enter the *Satipaṭṭhāna Bhūmi.*
- **However, even a *puthujjana* can approach that mindset free of "*kāma saññā*" by cultivating the first stage of *Satipaṭṭhāna*, as discussed below.** They will enter the *Satipaṭṭhāna Bhūmi* for the first time when the *Sotāpanna phala* moment is attained as a result of that effort.

A Defiled Mind Makes Bad Decisions



3. We all know that when our minds become angry, we make bad decisions. People kill others without thinking of the consequences when getting angry in a confrontation.

- Next to anger, it is greed that makes a mind make unwise decisions. In particular, one may commit rape when overcome with lust, or take a bribe if the price is high enough. We can think of many such situations. All those come under '*kāma rāga*', the desire for sensory pleasures. When a mind becomes blinded by *kāma rāga*, it is elevated to *kāmacchanda.*
- Furthermore, the root of anger is also *kāmacchanda.* One becomes angry when the desired outcome is not attained; then the mind starts to spiral downward with anger, and that is *vyāpāda*.
- In the same way, a mind can get covered with the other three types of *nīvaraṇa* or hindrances/obstacles: *thina-middha*, *uddhacca-kukkucca*, and *vicikicchā.*
- We discussed that in detail in the post "Kāya Is Pañcupādānakkhandha Kāya in Most Suttas."
- To get a general idea about "*sati*" in *Satipaṭṭhāna*, let us go through the steps in the growth of *pañc**upādāna**kkhandha* **(which is the same as how a mind becomes defiled upon receiving an enticing sensory input).**

Overview of the Growth of *Pañcupādānakkhandha* ("*Anusotagāmi*")

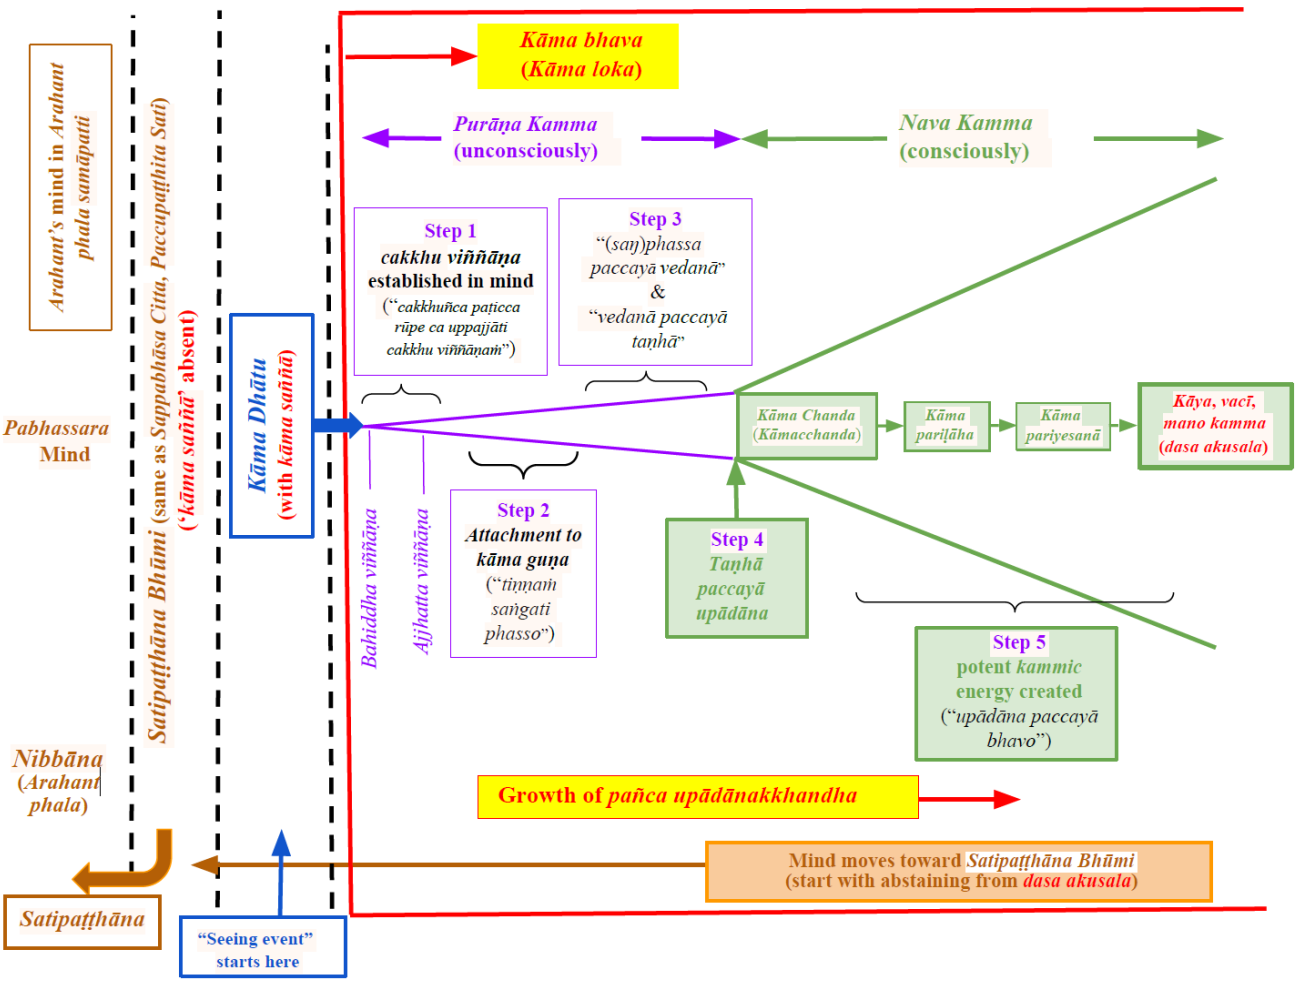
4. I have discussed this in detail in previous posts, but I have made the following simpler chart to make it easy to grasp (hopefully). Following the chart, I have summarized the sequence of main events that occur when a new sensory input is received; we will consider a "seeing event." Do not worry if you don't understand the details of these steps. This is intended to provide an overview of the overall process.

© 2026 Lal A. Pinnaduwage

Growth of Pañcupādānakkhandha

Download/Print: "WebLink: PDF file download: Growth of Pañcupādānakkhandha"

- The mind of anyone born a human falls in "*kāma dhātu*." This is where the mind receives a "representation of the external *rūpa*" (abbreviated by "*rūpa*") captured by the physical eyes and processed by the brain. *Paṭicca Samuppāda* has tailored the human physical body to embed a 'distorted *saññā*' in that '***rūpa***.' Furthermore, as we have discussed, the mind, at that instant, identifies the sight based on previous such sightings. Thus, it is really "***rūpa upādānakkhandha***." This is an extremely fast process occurring within a billionth of a second.
- Suppose even one of the lowest five *saṁyojana* (relevant to *kāma loka*) remains intact. In that case, that 'distorted *saññā*' will trigger automatic attachment to that sensory input and move the mind to "*kāma loka*." This is **STEP 1** in the chart. (**Note:** Since *Arahants* and *Anāgāmis* have broken those five *saṁyojana*, their minds will not move to *kāma loka* and remain in *kāma dhātu*, i.e., their minds do not become defiled, and thus, do not initiate a growth of *pañcupādānakkhandha*). [***Orambhāgiya Saṁyojana*** (*sakkāyadiṭṭhi*, *vicikicchā*, *sīlabbataparāmāso*, *kāmacchando*, *byāpādo*) or five lower fetters/bonds, See "WebLink: suttacentral: *Orambhāgiya Sutta* AN 9.67".]
- Several steps are included in STEP 1, but it is not necessary to worry about them until one becomes a *Sotāpanna*. It is enough to get a rough idea of this sequence. Even within this step, the mind keeps attaching repeatedly to that *rūpa*.



5. The second major step (**STEP 2** in the chart) is where the mind evaluates the *kāma guṇa* (enticing aspects of that *rūpa*). That evaluation depends on the person's particular mindset at that moment. This is in contrast to STEP 1, where the mindset does not matter, and the event takes place based purely on *saṁyojana* (bonds to the rebirth process). For example, one is likely to accept an alcoholic drink while at a party, but not right after waking up or while listening to a dhamma discourse.

© 2026 Lal A. Pinnaduwage

- Furthermore, STEP 2 is not triggered by many sensory events in a day. For example, while traveling in a car, one may look outside and gaze at the scenery for hours without attaching to anything seen.
- You can guess what types of sensory inputs your mind will get triggered by. It depends on the individual and their mindset at that moment.
- If attachment to *kāma guṇa* occurs, then the mind moves to **STEP 3**, where it feels the joy or dislike associated with that *rūpa*. It is the "(*saṇ*)*phassa paccayā* ***vedanā***" step. If that *sukha* or *dukha vedanā* is strong enough, the mind attaches to it with *taṇhā* ("*vedanā paccayā taṇhā*").
- That prompts the mind to move to **STEP 4**, where it **consciously** begins to pursue the *rūpa*. **It must be emphasized that all the events up to this point occur automatically, without one even realizing it.** This is the "*taṇhā paccayā upādāna*" step, where the mind becomes interested in pursuing it; that is called "*upādāna*." See "Difference Between Taṇhā and Upādāna."
- This initiates a series of steps in the "*nava kamma*" stage that I have not discussed in enough detail. I will do that in the next post.

Reversing the *Pañcupādānakkhandha* ("*Paṭisotagāmi*")

6. The following chart indicates how a *puthujjana* can reverse the process of the growth of *pañcupādānakkhandha.* They can start by stopping their engagement in *dasa akusala*, i.e., **avoid doing *kāya*, *vacī*, and *mano kamma.*** We will discuss that process in detail in upcoming posts. I want to provide an overview of the whole process in this post.

Overcoming Kāma Saññā

Download/Print: "WebLink: PDF file download: Overcoming Kāma Saññā"

© 2026 Lal A. Pinnaduwage

- At the end of that process, which is called "***kāyānupassanā***" (an evaluation of the unfruitfulness of the whole *pañcupādānakkhandha*), a *puthujjana*'s mind will enter the *Satipaṭṭhāna Bhūmi* at some point, and that is when they attain the *Sotāpanna phala* moment.
- During that process, "***vedanānupasanā***," "***cittānupassanā***," and "***dhammānupassanā***" will also be accomplished. See below.

Satipaṭṭhāna Bhūmi Is Free of *Pañca Nīvaraṇa*

7. A *Sotāpanna* enters the *Satipaṭṭhāna Bhūmi* for the first time at the moment of attaining the *Sotāpanna* stage of *Nibbāna*, i.e., when attaining *Sammā Sati*.

- Since "*kāma saññā*" is absent in the *Satipaṭṭhāna Bhūmi*, it is also free of *pañca nīvaraṇa*. As we have discussed, *kāma rāga* is the main drive in generating the five hindrances/obstacles (*pañca nīvaraṇa*); thus, one must overcome *kāma rāga* (temporarily) to get to the *Satipaṭṭhāna Bhūmi*. See "Kāya Is Pañcupādānakkhandha Kāya in Most Suttas."
- That is why the *Sotāpanna phala* moment is attained in the *Satipaṭṭhāna Bhūmi*.
- Furthermore, attaining higher *magga phala* requires a *Sotāpanna* to re-access the *Satipaṭṭhāna Bhūmi*, which enables them to engage in *Vipassanā* (insight meditation) and achieve higher *magga phala*.
- In the next post, we will begin a detailed discussion on how a *puthujjana* can work to attain the *Sotāpanna* stage, i.e., to bypass the "*kāma saññā*" and reach the *Satipaṭṭhāna Bhūmi* for the first time.

Key to the *Sotāpanna* Stage

8. A mind begins to gradually move towards *Sammā Sati* (*Satipaṭṭhāna Bhūmi*) when it starts to comprehend the Buddha's teachings, first as a *Sotāpanna Anugāmi*. Then at some point (while listening to a discourse or contemplating), the mind becomes free of *pañca nīvaraṇa* and enters — **for the first time** — the "*Satipaṭṭhāna Bhūmi*" that is free of *pañca nīvaraṇa*.

- The *Sotāpanna phala* moment occurs while in *Satipaṭṭhāna Bhūmi*.
- All subsequent *magga phala* (*Sakadāgāmi*, *Anāgāmi*, *Arahant*) are also realized while the mind is in "*Satipaṭṭhāna Bhūmi*."
- I am describing the basic ideas without quoting too many *suttās* first. This provides an overview of the whole process and expands on the basic outline provided in the post "Ānāpānasati – Connection to Satipaṭṭhāna."
- In that post, we summarized the three main sections in the "WebLink: suttacentral: *Ānāpānasati Sutta* (MN 118)." Let us expand that a bit more to get some insights.

Attaining Higher *Magga Phala*

9. The "WebLink: suttacentral: *Nīvaraṇa Sutta* (SN 46.40)" says, "The five hindrances are destroyers of clear vision (*andhakaraṇā*, where *andhakara* means 'darkness'; *acakkhukaraṇā* means without '*dhamma* eye') and wisdom (*paññā*). They block the path to *Nibbāna*."

- A *puthujjana* must cultivate the **FIRST STAGE of *Satipaṭṭhāna***, i.e., "***kāyānupassanā***," "***vedanānupasanā***," "***cittānupassanā***," and "***dhammānupassanā***" to **temporarily overcome** *pañca nīvaraṇa* to attain the *Sotāpanna* stage.
- The next step of attaining higher *magga phala* requires cultivating the second stage of *Ānāpānasati*.
- The "WebLink: suttacentral: *Nīvaraṇa Sutta* (AN 9.64)" states, "To **permanently eliminate (*pahānāya*)** these five hindrances, you should cultivate *Satipaṭṭhāna*." This *sutta* refers to the final outcome of eliminating the five hindrances, which involves the **SECOND STAGE of *Satipaṭṭhāna***, i.e.,

© 2026 Lal A. Pinnaduwage

"*kāye kāyānupassanā*," "***vedanāsu vedanānupasanā***," "***citte cittānupassanā***," and "***dhamme dhammānupassanā***."

Difference Between "*Kāye Kāyānupassanā*" and "*Kāyānupassanā*"

10. *"Kāye kāyānupassanā*" refers to another "*kāya"* within the "*pañc**upādāna**kkhandha kāya*." Specifically, it is about the first stage of the "*pañc**upādāna**kkhandha kāya*."

- As we have discussed, the "*pañc**upādāna**kkhandha kāya*" can be divided into two parts: (i) "*purāṇa kamma*" stage or the "*purāṇa kāya*" section that arises at the beginning of a new "*pañc**upādāna**kkhandha kāya*" and (ii) the "*nava kamma*" stage or the "*nava kāya*" section that arises at the latter stage of a new "*pañc**upādāna**kkhandha kāya.*"
- Thus, "*kāye kāya"* in "***kāye kāyānupassanā***" refers to the "*purāṇa kamma*" stage or the "*purāṇa kāya.*" This is where the initial attachment to a sensory input takes place **automatically.**
- "***Kāye kāyānupassanā***" focuses on Step 1 of the growth of the "*pañc**upādāna**kkhandha kāya.*" **On the way to the *Sotāpanna* stage, a *puthujjana* doesn't need to understand the details of that process. However, it will be helpful to have an idea of the entire process.**
- In the same way, "*vedanāsu vedanānupasanā*," "***citte cittānupassanā***," and "***dhamme dhammānupassanā***" refer to contemplating *vedanā*, *citta*, and *dhamma* that arise in that initial section. Here, "*dhamma*" refers to all relevant *dhamma* concepts for that initial section of the "*pañc**upādāna**kkhandha kāya.*"
- At this point, you can refer back to the post "Ānāpānasati – Connection to Satipaṭṭhāna" for a better overview of the complete process. That post provided only the main outline.

A *Puthujjana* Starts by Abstaining from *Dasa Akusala*

11. In comparison, in the **first stage of *Satipaṭṭhāna***, one must focus on the **overall features** of the "*pañc**upādāna**kkhandha kāya*" as a whole, and especially the second stage of it, the "*nava kamma*" stage or the "*nava kāya.*"

- As we mentioned above, the mind of a *puthujjana* moves rapidly to the "*nava kamma*" stage. They do not know how to control their minds. They may have heard that one must abstain from *dasa akusala*, but may not have fully grasped WHY one must do so (other than to stay away from the *apāyās*).
- There are two main benefits of getting to the "*Satipaṭṭhāna Bhūmi*," which is free of *pañca nīvaraṇa*: (i) It makes a mind free of the "distorted *saññā*" that one has lived up to that time (through the long journey in *saṁsāra*). This results in an "unburdened mind," which is preferable to *jhānic* experiences. (ii) When the mind becomes free from the incessant stress due to "distorted *saññā*" that makes it the ideal environment to contemplate dhamma concepts (*Tilakkhaṇa*, *Paṭicca Samuppāda*, etc.) and reach higher *magga phala*.

Kāyānupassanā Is the Same as *Kāyagatāsati*

12. Not many people are aware of *Kāyagatāsati*. Here, "*kāyagatā sati"* can be loosely translated as "focusing on *kāya* (*pañc**upādāna**kkhandha kāya*) with *Sammā Sati*." That is the same as *Kāyānupassanā* in *Ānāpānasati* or *Satipaṭṭhāna.*

- There are two *suttās* with the title "*Kāyagatāsati Sutta,*" and we will discuss both in the future to clarify whether they refer to the "physical body" or the "*pañc**upādāna**kkhandha kāya*." Even though the primary focus is on the "*pañc**upādāna**kkhandha kāya,"* some insights can be gained by contemplating the physical body, too (in the early stage, on the way to becoming a *Sotāpanna*).
- Thus, insights on both types of *kāya* (*pañc**upādāna**kkhandha kāya* and the physical body) can be applied to cultivate *Kāyagatāsati* or *Kāyānupassanā.*

© 2026 Lal A. Pinnaduwage

- The key to making progress is not getting stuck in words, but in capturing the key ideas involved.

Some Interesting Historical Facts

13. In addition to discussing the *Kāyānupassanā* (in a similar fashion to *Ānāpānasati Sutta* and relevant parts of *Mahāsatipaṭṭhāna Sutta*), the main *sutta* on *Kāyagatāsati* (*Kāyagatāsati Sutta*) also discusses getting into *jhānās*. **It appears that the *Kāyagatāsati Sutta* was delivered in the early days when many people easily attained *jhānās*.**

- At the end of the "WebLink: suttacentral: *Kāyagatāsati Sutta* (MN 119)," it is stated that one can attain *Arahanthood* by cultivating *Kāyagatāsati*. This is also further evidence that this is one of the early *suttās*.
- As we know, many people attained *magga phala* and even *Arahanthood* (e.g., Ven Bāhiya) upon hearing only a few verses. In those days, there was no need to explain Dhamma in great detail. Thus, the majority of people who attained *magga phala* in the early days were *ugghaṭitaññā* or *vipañcitaññā* who could grasp Dhamma concepts quickly. In this regard, "WebLink: suttacentral: *Ugghaṭitaññu Sutta* (AN 4.133)" discusses the four categories of persons — *ugghaṭitaññā*, *vipañcitaññā*, *neyya*, and *padaparama*. See #6 of "Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa." (This does not mean that people in the *ugghaṭitaññā* or *vipañcitaññā* categories were randomly "lucky." They had strived in past lives, which made it easier for them to get to the "final stretch.")
- **In contrast to the *Kāyagatāsati Sutta*, the *Mahāsatipaṭṭhāna Sutta* (which goes into relatively great detail) was likely delivered close to the *Parinibbāna* of the Buddha** or at least in the latter stages of his life. By that time, most of those in the *ugghaṭitaññā* or *vipañcitaññā* likely had attained *Arahanthood*. The remaining people needed detailed explanations. These days, most are in the *neyya* or *padaparama* categories, and thus, also need detailed explanations.
- **Also note that there is no mention of *jhānās* in the *Mahāsatipaṭṭhāna Sutta*, which, as we discussed above, leads one to at least the *Anāgāmi* stage.** *Jhānās* are not necessary to attain *magga phala*, but if they are achieved, they may help get to *magga phala* sooner. However, there is a danger in "getting trapped" in *jhānic* pleasures.
- In a related matter, no *Vinaya* rules existed in the first twenty years or so, as they were not necessary. The Buddha began enacting the *Vinaya* rules approximately twenty years after attaining Buddhahood.

Summary

14. What we discussed above is a broad overview of the complete process of getting to the *Arahant* stage of *Nibbāna*.

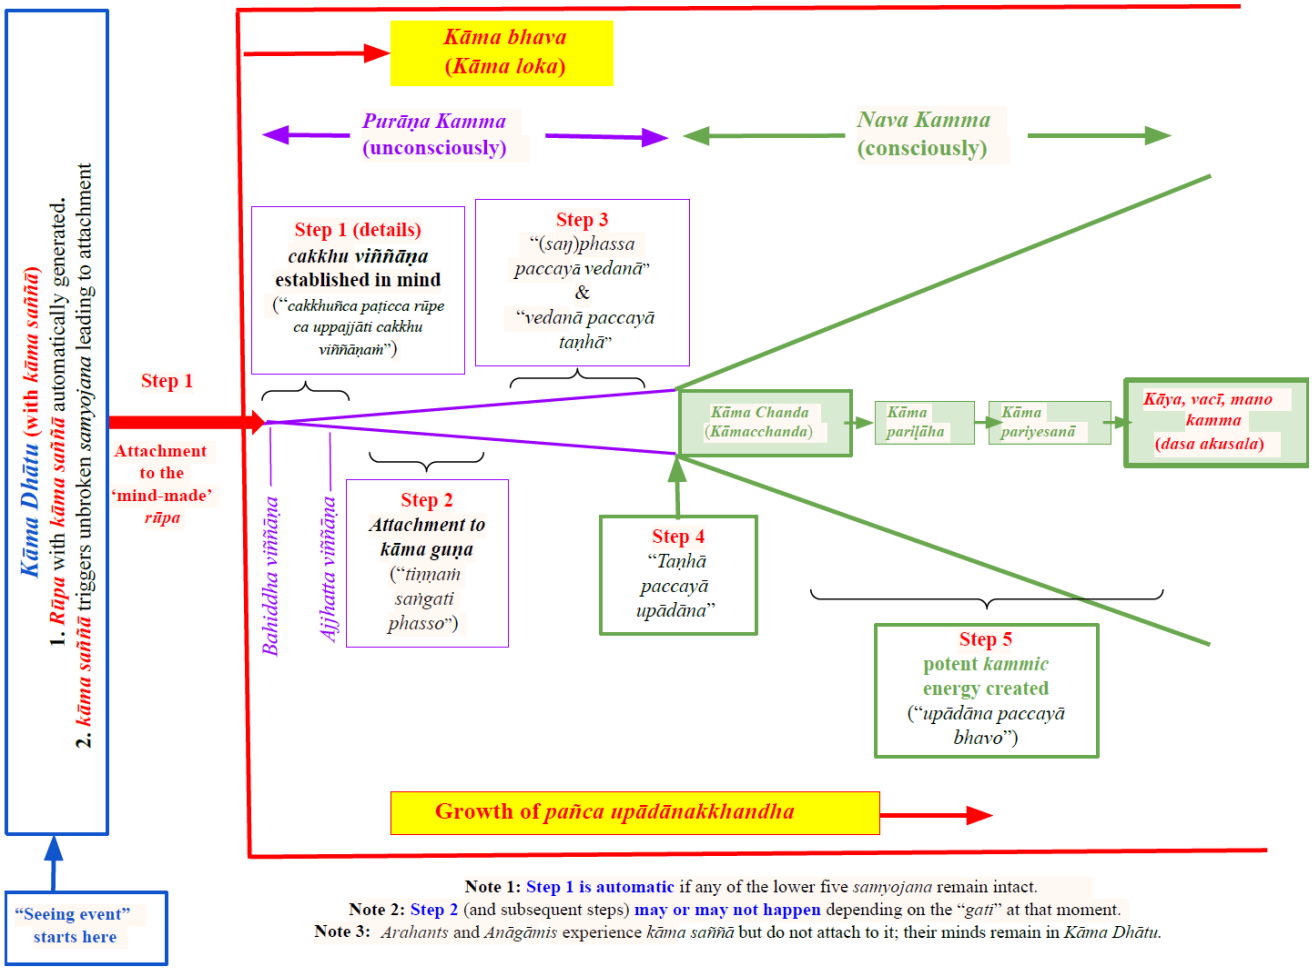
- It is beneficial to have this broad view so that one can avoid areas that are not yet comprehensible.
- For example, until getting to the *Sotāpanna* stage, there is no need to worry about or think deeply about the second stage of *Ānāpānasati* involving "*kāye kāyānupassanā*," "***vedanāsu vedanānupasanā***," "***citte cittānupassanā***," and "***dhamme dhammānupassanā***."
- Still, for the reasons discussed in #13 above, it is beneficial to have some understanding of the "*purāṇa kamma*" stage, even to attain the *Sotāpanna* stage. Being in the *neyya* and *padaparama* categories these days, we need all the help we can get.
- That understanding will be helpful to become a *Sandiṭṭhiko*, one who can discern how "*saŋ*" (*rāga*, *dosa*, *moha*) gets "added" to a "pure mind" (*pabhassara* mind) via attaching to *saññā*. See "Sandiṭṭhiko – What Does It Mean?" Also, note that ***Sappabhāsa Citta*** (another name for the *Satipaṭṭhāna Bhūmi*) is not the same as *pabhassara citta*, which can be attained only by an *Arahant*. While *pañca nīvaraṇa* remain suppressed while in the *Satipaṭṭhāna Bhūmi*, *pabhassara citta* is permanently devoid of *pañca nīvaraṇa*. See #4 of "Kāma Saññā – How to Bypass to Cultivate Satipaṭṭhāna." [***Sappabhāsaṁ cittaṁ***: See "WebLink: suttacentral: *Saṅgīti Sutta* (DN 33)", "WebLink: suttacentral: *Vibhaṅga Sutta*

© 2026 Lal A. Pinnaduwage

(SN 51.21)", and "WebLink: suttacentral: *Samādhibhāvanā Sutta* (AN 4.41)." {***sappabhāsa*** : adj. radiant; luminous; brightened. }]

17.4.7 Growth of Pañcupādānakkhandha – 'Anusotagāmī'

August 9, 2025



Pañcupādānakkhandha of a *puthujjana* restarts at the moment of receiving a new sensory input. It always goes through the "*purāṇa kamma*" stage and may also enter the "*nava kamma*" stage. This growth of *pañcupādānakkhandha* (the same as the defilement of the mind) is called *Anusotagāmī*, or "flowing along with the rebirth process." [See "WebLink: suttacentral: *Anusota Sutta* (AN 4.5)"] [***anusotagāmī*** : adj. going with the stream; headed downstream; going with the flow [*anu* + *sota* + *gāmī* = "*anu*" means **1.** "food" or "defilements" in most cases, or **2.** "according to," and sometimes **3.** "through the understanding of *Tilakkhaṇa*," "*sota*" means "stream," and "*gāmī*" means "one who goes or leading to"; thus, *anusotagāmī* means "one who goes with the stream of defilements."]]

Steps in the Contamination of a Mind

1. Adding to the existing *pañcupādānakkhandha* starts with receiving a new sensory input. **This is equivalent to saying that the mind becomes active upon receiving sensory input.** Then, the mind becomes progressively contaminated (within a split second) through several key steps. This is called '*Anusotagāmī*' or 'moving along the rebirth process.'

- The mind is directed in that "wrong direction" due to the *kāma saññā* that arises automatically; see, for example, "Fooled by Distorted Saññā (Sañjānāti) – Origin of Attachment (Taṇhā)." Also, see the chart below.
- **A mind can reverse that process and go in the reverse direction (toward *Nibbāna*, i.e., '*Paṭisotagāmi*') only by comprehending Buddha's teachings.**
- We started that discussion in #4 of "Satipaṭṭhāna – What Does It Mean?" and will finish it in this post. We used the following chart in that post.

© 2026 Lal A. Pinnaduwage

Growth of Pañcupādānakkhandha

Download/Print: "WebLink: PDF file download: Growth of Pañcupādānakkhandha"

Step 1 – Automatic Attachment to the *Kāma Saññā*

2. New sensory input ALWAYS brings "*kāma saññā*" ("distorted *saññā*" in *kāma loka*) and the mind attaches to it if *kāma rāga saṁyojana* is unbroken (i.e., it happens to anyone below the *Anāgāmi* stage).

- Based on that automatic attachment, **that specific *indriya* becomes defiled, i.e., it is now an *āyatana***. For example, *cakkhu indriya* becomes *cakkhu āyatana* (same as "*cakkhu*" in most *suttās*), and *cakkhu viññāṇa* arises.
- This is the first stage of *cakkhu viññāṇa* (the same as "***bahiddha viññāṇa***," which is immediately elevated to "***ajjhatta viññāṇa***"); see #7 of "Purāṇa and Nava Kamma – Sequence of Kamma Generation."
- Simultaneously, the mind prepares its version of the external *rūpa*. This is the "*cakkhu viññeyya rūpa*" (meaning "the *rūpa* generated by *cakkhu viññāṇa*.")

Step 2 – Attachment to *Kāma Guṇa*

3. Then the mind attaches to that "mind-made *rūpa*" ("*cakkhu viññeyya rūpa*") based on one's *gati* (remember "t" is pronounced as "th") at that moment. That attachment is also automatic and is based on the "value" the mind places on that "mind-made *rūpa*," and that determination is based on "***kāma guṇa***" (values of the six "evaluation criteria" relevant to *kāma loka*; see "Kāma Guṇa – Origin of Attachment (Taṇhā).")

- In this step, the attachment becomes stronger if the "state of mind" (or one's *gati*) at that moment is conducive to pursuing that "mind-made *rūpa*." This is when *kāma rāga* INITIALLY elevates to

© 2026 Lal A. Pinnaduwage

kāmacchanda, where the mind (still subconsciously) begins generating more *sukha vedanā* **(known as "*samphassa–jā–vedanā*")**, entering Step 3 below.
